Printed and bound in the UK from copy supplied by the editors by Cromwell Press, Trowbridge.

Preface

This *Dictionary*, now in its 65th year, aims to provide an entry point into the sum total of our accumulated knowledge on systematic mycology for all those who work with fungi. All organisms traditionally studied by mycologists are covered, including lichens, mushrooms, slime moulds, water moulds and yeasts.

As more molecular data have become available it has been possible to attain greater certainty about the higher-level relationships of fungi and to see some enigmatic taxa at last find a home. While many of the classes and phyla recognized in the ninth edition of this *Dictionary* are retained here, we are aware that further significant change is likely among the fungi *sensu stricto*, with the proposal of several new high-level taxa in the near future. Likewise, we can expect further significant changes in the chromistan and protozoan fungus-like analogues as sequence data for more taxa become available. It has been our aim to recognize such changes while at the same time maintaining a servicable and comprehensive hierarchy for users.

In preparing the tenth edition, therefore, our efforts have been directed most of all to revision of the classification of higher ranks within the *Fungi*, largely based on the results from the AFTOL (Assembling the Fungal Tree of Life) project to which several of the Editors of this *Dictionary* had inputs. Phylogenetic information gained from multi-gene sequence analyses, culminating in 2006-7 with the results of the first phase of the AFTOL project, have revolutionized our understanding of how this kingdom should be classified. Phylogenetic analyses tend to stimulate recognition of many levels of the systematic hierarchy, and in partial response to this trend we now recognize the rank of subphylum in addition to classes and subclasses for the kingdom *Fungi*.

The second major development area for Edition 10 of the *Dictionary of the Fungi* has been to incorporate taxa at family level into the new classificatory framework, as the AFTOL project focused only on ranks at order and above. Where possible this has been carried out using molecular data, but there still remains a substantial number of fungal families for which sequence information is not available. More information may be found in the *Dictionary*'s new sister publication, *Fungal Families of the World* (CABI, 2007).

Many recent phylogenetic studies have been hypothesis-driven, designed to test the accuracy in evolutionary terms of traditional morphology-based classifications. As anamorph taxa have only recently started to be incorporated fully into holomorphic systems, they are substantially under-represented in molecular phylogenetic studies. Edition 9 of this *Dictionary* was the first to abolish separate classification systems for anamorphs and teleomorphs, though for the overwhelming proportion of genera it was only possible to assign them at subphylum level – i.e. to the filamentous *Ascomycota* or *Basidiomycota*. Recent studies have allowed more accurate placement of many asexual taxa, but today we still cannot place two thirds of the 3000-odd anamorph genera included in Edition 10 even to class level. Now the basic classificatory framework has been established to an acceptable degree of certainty, we hope that attention will be shifted towards insertion of these orphan taxa into their rightful place within the fungal system.

The already large and rapidly increasing body of evidence from molecular studies has also led us to the radical decision that this edition should comprise three parts – a Dictionary of the *Fungi*, a Dictionary of the chromistan/stramenopile fungi-like organisms, and a Dictionary of the protozoan fungi-like organisms. Many people, unfamiliar with classifications which have now been accepted by systematists for many years, still think of fungi as 'plants'. But in reality fungi are a disparate assemblage of organisms from at least three different kingdoms, their unifying characteristic being that they are studied by mycologists. In terms of evolutionary origin, the sister group of the kingdom *Fungi* is *Animalia*: *Fungi* are more closely related to the humans who study them than to green plants which they were previously classified with. But this statement also hides the fact that chromistan fungus-like organisms, of which *Phytophthora infestans* (the causal agent of potato blight) is perhaps the best known example, are only very distantly related to *Fungi*, being instead more allied with the brown seaweeds, among others – a clear indication that the mycelial way of life evolved on at least two separate occasions. Surprisingly, however, protozoan fungus-like organisms are closer to the *Fungi*, being classified in the *Amoebozoa* with other protozoan amoebae. *Fungi*, together with *Animalia* and a

few other protozoan groups constitute the *Opisthokonta*; and this group and the *Amoebozoa* form the first major branches at the base of the *Eukaryota*.

In earlier editions, for historical reasons, some biographies and longer entries (i.e. the essay-style accounts of topics relevant to mycologists) seem to have been written from the viewpoint of a native speaker of English and to have treated the fungi as an adjunct of botany. Given that the *Dictionary* is now truly international in character and its theme is clearly not botanical, some effort has been made to adjust these entries so that, in addition to being updated, they are seen from a global and explicitly mycological perspective. One result of this has been a considerable increase in the number of eminent but deceased mycologists commemorated by a biography in these pages, notably from India, Japan and Russia, but also including for the first time scientists native to Argentina, China, Cuba, Pakistan, Portugal, Puerto Rico, Spain and Ukraine. Another has been a sprinkling of new topics covered by long entries, in particular covering the new technologies which have come in, and the gradually developing infrastructure of mycology as a science. Limited resources have meant that the work of updating the essay-style accounts has been incomplete and imperfect, in a few cases to the extent that it has been necessary to flag the entry with a warning note. For this edition, all of the biographies, definitions and other longer entries are located in the first part, even when they might more appropriately belong in one of the other two parts. Resources have also, again, not allowed us to update the keys to families and these continue to be omitted. As higher taxa of fungi are increasingly defined using molecular rather than morphological characteristics, it remains to be seen whether morphology-based keys at this level of the new systematic hierarchy can be made workable.

The overall style of the individual entries in this *Dictionary* remains similar to those of previous editions. References are cited in full throughout the taxonomic name entries. Much bibliographic information is becoming available on the Internet and the tenth edition of this *Dictionary* reflects the increasing availability of information from this source. CABI has been producing the *Bibliography of Systematic Mycology* since 1943 and production was computerized in the late 1980s. This database has been available on the internet since late 1999 and users of this *Dictionary* should visit that web site (www.indexfungorum.org) for up-to-date bibliographic references on the systematics of fungi.

Having been intimately involved in the compilation and proof-stage revisions, we are acutely aware of imperfections and improvements that we would have liked to have made. We can do no more than repeat the comment in the ninth edition that our aspiration is that this edition will at least prove to be the same 'marvellously imperfect work needed by all'.

Do send us your corrections and comment so that the database, and whatever product succeeds this book, will be less imperfect and of even more value to mycologists of all disciplines world-wide.

The tenth edition may well be the last 'ink-on-paper' version of Ainsworth & Bisby's Dictionary of the Fungi – it will certainly be the last for which three of the main editors are at the helm. For like the tenth, in its 65th year, the next edition, if there will be one, will be produced after the retirement from formal, full-time employment of these editors. As such, like so many good things, ...

Acknowledgements

Many people, too numerous to mention here, have provided information on corrections or omissions in the ninth edition; we would, however, particularly like to thank Ove Eriksson for discussion on the system adopted for the *Ascomycota* and David Hunt for assistance with the illustrations.

User's Guide

To extract the maximum amount of information from this *Dictionary* with the minimum of effort it is necessary to understand the scope of the compilation and certain conventions.

Content. The longest series of entries are those of the generic names (both accepted names and synonyms) complied to the end of *Index of Fungi* **7**(15) January 2008. Every accepted generic name is referred to a higher group (family, order, class, or phylum) and brief descriptions are given of these higher taxa. The systematic entries are supplemented by a glossary of terms, some English common names, and the names of important fungal antibiotics, toxins, etc. In addition, there are entries on general mycological topics, ecology and distribution, applied mycology, and historical and biographical notes on some well known mycologists and major reference collections.

Names. Every generic name is followed by the name (abbreviated according to Kirk & Ansell, 1992; see Author) of the author(s) who first proposed the genus and the year of publication. The place of publication of a generic name can be found on the CABI database web site at www.indexfungorum.org where additional information on typification is available. A similar layout is adopted for suprageneric names but only those at the rank of family and accepted names above order can be relied upon as well researched and thus likely to be correct. The available Catalogues of names are listed under 'Literature'.

The list of generic names is as complete as possible. Some dates and authorities differ from those that may be found in the literature, many of which have been checked in the original, some names omitted from previous compilations are included, as are some which are not validly published (included as nevertheless present in the mycological literature).

For generic names consigned to synonymy, the authority for the disposition is usually given. For each accepted genus estimates are given for the number of its species and its geographical distribution. Where possible these data are based on recent revisions or the personal knowledge of specialists, but in the majority of cases they have not been updated in the absence of such authorities. In the case of larger genera particularly, we have not revised species numbers upwards even though many may have been described since the last edition, in the absence of modern treatments (see Numbers of fungi). This policy is adopted as critical reassessments in such genera usually result in reductions in species numbers.

The distributions given are approximate, especially for genera not critically revised in recent years, and should be regarded as indicative rather than comprehensive. Whenever possible users should verify the facts for themselves and draw their own conclusions.

Coding. The coding used for anamorphic fungi follows that of the ninth Edition and is explained under that entry. This system, borrowing from that given in the seventh Edition, uses letters or symbols instead of numbers to provide a 'mnemonic' for the conidiomatal and conidial characters. With the removal of traditional morphological groupings of conidial fungi we hope that the new codes will make it easier to gain an idea of the morphological features. Some recently published generic names have not been assessed and are not coded.

Abbreviations. See p. 1.

Absidiaceae Arx (1982) = Mucoraceae.
Lit.: Kirk (*in litt.*).

absorb, to obtain food by taking up water and dissolved substances across a membrane. Cf. ingest.

Abstoma G. Cunn. (1926), Agaricaceae. 2, widespread. See Wright & Suarez (*Cryptog. Bot.* **1**: 372, 1990; key).

abstriction, abjunction and then abscission, esp. by constriction.

Abundisporus Ryvarden (1999), Polyporaceae. 7, widespread. See Ryvarden (*Belg. Jl Bot.* **131**: 154, 1998), Dai *et al.* (*Ann. bot. fenn.* **39**: 169, 2002; China).

Abyssomyces Kohlm. (1970), Pezizomycotina. 1 (marine, on hydrozoans in deep water), S. Atlantic. See Kohlmeyer (*Ber. dt. bot. Ges.* **83**: 505, 1970), Kohlmeyer & Volkmann-Kohlmeyer (*Bot. Mar.* **34**: 1, 1991), Kohlmeyer & Volkmann-Kohlmeyer (*Bot. Mar.* **46**: 285, 2003).

Acallomyces Thaxt. (1903), Laboulbeniaceae. 3 (on staphylinid beetles), widespread. See Tavares (*Mycol.* **65**: 929, 1973), Tavares (*Mycol. Mem.* **9**: 627 pp., 1985; monogr.), Santamaria *et al.* (*Treb. Inst. Bot. Barcelona* **14**: 123 pp., 1991; European spp.).

Acalyptospora Desm. (1848) nom. dub., Plantae. Based on gland-like hairs.

acantha, a sharp pointed process; a spine.

Acantharia Theiss. & Syd. (1918), Venturiaceae. Anamorphs *Fusicladium*, *Stigmina*-like. 7 (on leaves, necrotrophic), widespread. See Bose & Müller (*Indian Phytopath.* **18**: 340, 1965), Sivanesan (*TBMS* **82**: 507, 1984; anamorphs), Barr (*Sydowia* **41**: 25, 1989; N America), Hsieh *et al.* (*MR* **99**: 917, 1995; key).

Acanthellorhiza P. Roberts (1999), anamorphic *Heteroacanthella*. 2 (saprobic on dead wood), widespread. See Roberts (*Rhizoctonia-forming fungi*, 1999).

Acanthobasidium Oberw. (1965), Stereaceae. 3, Europe. See Oberwinkler (*Sydowia* **19**: 45, 1965), Boidin *et al.* (*BSMF* **101**: 345, 1994).

Acanthocystis (Fayod) Kühner (1926) = Hohenbuehelia fide Singer (*Agaric. mod. Tax.* edn 3, 1975).

acanthocyte, spiny cell produced on a short branch from the vegetative mycelium of *Stropharia* spp. (Farr, *Mycotaxon* **11**: 241, 1980).

Acanthoderma Syd. & P. Syd. (1917), anamorphic *Pezizomycotina*, ?.≡ eH.?. 1, Philippines.

Acanthodochium Samuels, J.D. Rogers & Nagas. (1987), anamorphic *Acanthocystis, Collodiscula, Rosellinia*, Hsp.0eH.10. 2 (on dead bamboo culms), widespread (esp. tropical). See Samuels *et al.* (*Mycotaxon* **28**: 453, 1987), Ju & Rogers (*Mycol.* **82**: 342, 1990; *Rosellinia* teleomorph), Ju & Rogers (*Mycotaxon* **73**: 343, 1999), Kang *et al.* (*Fungal Diversity* **2**: 135, 1999).

Acanthofungus Sheng H. Wu, Boidin & C.Y. Chien (2000), Stereaceae. 3, widespread. See Wu *et al.* (*Mycotaxon* **76**: 154, 2000).

Acanthographina (Vain.) Walt. Watson (1929) ≡ Acanthothecis.

Acanthographis (Vain.) Walt. Watson (1929) = Acanthothecis fide Staiger (*Biblthca Mycol.* **85**, 2002).

Acanthogymnomyces Udagawa & Uchiyama (2000), Gymnoascaceae. 2 (from soil etc.), India; Japan. See Udagawa & Uchiyama (*Mycotaxon* **76**: 412, 2000).

acanthohyphidium, see hyphidium.

Acantholichen P.M. Jørg. (1998), Corticiaceae. 1, Costa Rica. See Jørgensen (*Bryologist* **101**: 444, 1998).

Acanthomyces Thaxt. (1892) [non *Akanthomyces* Lebert 1858] ≡ Rhachomyces.

Acanthonitschkea Speg. (1908), Nitschkiaceae. Anamorph *Acremonium*-like. 8 (on wood and lichens), widespread. See Nannfeldt (*Svensk bot. Tidskr.* **69**: 49, 1975), Subramanian & Sekar (*Kavaka* **18**: 19, 1993; Indian spp.), Huhndorf *et al.* (*MR* **108**: 1384, 2004; phylogeny, rel. with *Nitschkia*).

Acanthophiobolus Berl. (1893), Tubeufiaceae. 2 (saprobic on plants), widespread. See Walker (*Mycotaxon* **11**: 1, 1980), Scheuer (*Biblthca Mycol.* **123**: 274 pp., 1988; Austria), Barr (*Mycotaxon* **64**: 149, 1997), Crane *et al.* (*CJB* **76**: 602, 1998; key), Kodsueb *et al.* (*Fungal Diversity* **21**: 105, 2006; phylogeny).

Acanthophysellum Parmasto (1967), Stereaceae. 3, widespread. See Parmasto (*Izv Akad. Nauk Estonsk*

SSR Ser. Biol. **16**: 377, 1967), Larsson & Larsson (*Mycol.* **95**: 1037, 2003; phylogeny) Close to *Xylobolus*.

Acanthophysiaceae Boidin, Mugnier & Canales (1998) = Stereaceae.

acanthophysis, see hyphidium.

Acanthophysium (Pilát) G. Cunn. (1963), Stereaceae. *c.* 20, widespread. See Cunningham (*Bull. N.Z. Dept. Sci. Industr. Res., Pl. Dis. Div.* **145**: 150, 1963).

Acanthorhynchus Shear (1907), Hyponectriaceae. 1 (saprobic on leaves of *Vaccinium*), N. America. See Barr (*Mycol.* **68**: 611, 1976), Fallah & Shearer (*Mycol.* **93**: 566, 2001; as *Physalospora*).

Acanthorus Bat. & Cavalc. (1967), anamorphic *Capnodiaceae*, Cpt.0eH.?. 1 (on leaves of *Bertholletia*), Brazil. See Batista & Cavalcanti (*Atas Inst. Micol. Univ. Pernambuco* **4**: 246, 1967).

Acanthosphaeria Kirschst. (1939), Trichosphaeriaceae. 2, Europe. See Petrak (*Annls mycol.* **38**: 198, 1940).

Acanthostigma De Not. (1863), Tubeufiaceae. Anamorphs *Helicomyces*, *Helicosporium*. 8 (saprobic on wood or other fungi), widespread. See Réblová & Barr (*Sydowia* **52**: 258, 2000; monogr.), Kodsueb *et al.* (*Mycol.* **96**: 667, 2004; Hong Kong), Kodsueb *et al.* (*Fungal Diversity* **21**: 105, 2006), Tsui *et al.* (*Mycol.* **98**: 94, 2006; rels with *Tubeufia* and helicosporous anamorphs), Tsui *et al.* (*Mycol.* **99**: 884, 2007; phylogeny, anamorph).

Acanthostigmella Höhn. (1905), Tubeufiaceae. Anamorph *Xenosporium*. 6 (saprobic), widespread. See Barr (*Mycotaxon* **6**: 17, 1977; key), Untereiner (*MR* **99**: 897, 1995), Crane *et al.* (*CJB* **76**: 602, 1998).

Acanthostigmella Rick (1933) = Acanthostigma fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Acanthostigmina Höhn. (1909) = Acanthostigma fide Rossman (*Mycol. Pap.* **157**, 1987), Crane *et al.* (*CJB* **76**: 602, 1998), Réblová & Barr (*Sydowia* **52**: 286, 2000; monogr.).

Acanthostoma Theiss. (1912) = Phaeodimeriella Speg. fide Müller & von Arx *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 87, 1973).

Acanthotheca Clem. & Shear (1931) [non *Acanthotheca* DC. 1838, *Compositae*] ≡ Acanthotheciella.

Acanthotheciella Höhn. (1911), Sordariomycetes. Anamorph *Ypsilonia*. 3 (on dead scale insects), Asia (tropical); S. America. See Nag Raj (*CJB* **55**: 1599, 1977), Barr (*Mycotaxon* **39**: 43, 1990; posn).

Acanthotheciopsis Zahlbr. (1923) = Acanthothecis fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995), Staiger (*Biblthca Lichenol.* **85**: 526 pp., 2002; revision).

Acanthothecis Clem. (1909), Graphidaceae (L). 25, S. America (primarily tropical). See Staiger & Kalb (*Mycotaxon* **73**: 69, 1999), Staiger (*Biblthca Lichenol.* **85**, 2002), Archer (*Biblthca Lichenol.* **94**, 2006; revision), Archer (*Systematics & Biodiversity* **5**: 9, 2007; Solomon Is), Makhija & Adawadkar (*Lichenologist* **39**: 165, 2007; India, key).

Acanthothecium Speg. (1889) = Ypsilonia See Nag Raj (*CJB* **55**: 1599, 1977).

Acanthothecium Vain. (1890) ≡ Acanthothecis.

Acanthothecomyces Cif. & Tomas. (1953) ≡ Acanthothecis.

Acanthotrema Frisch (2006), Graphidaceae (L). 1, Africa (tropical); S. America. See Frisch (*Biblthca Lichenol.* **92**: 3, 2006), Frisch *et al.* (*Biblthca Lichenol.* **92**: 517, 2006; phylogeny), Staiger *et al.* (*MR* **110**: 765, 2006; inclusion in *Graphidaceae*).

Acarella Syd. (1927), anamorphic *Morenoina*, Cpt.0eH.?. 3 (saprobic on leaves etc.), C. America. See Farr (*Sydowia* **38**: 65, 1985).

Acarellina Bat. & H. Maia (1960), anamorphic *Pezizomycotina*, Cpt.0eH.?. 1 (on leaves of *Psidium*), Brazil. See Batista & Maia (*Publções Inst. Micol. Recife* **246**: 4, 1960).

Acariniola T. Majewski & J. Wiśn. (1978) = Pyxidiophora fide Lundqvist (*Bot. Notiser* **133**: 121, 1980), Blackwell & Malloch (*MR* **94**: 415, 1990; recognition as ascospores), Weir & Blackwell (*Insect-Fungal Associations* Ecology and Evolution: 119, 2005; biology).

Acaroconium Kocourk. & D. Hawksw. (2008), anamorphic *Pezizomycotina*. 1 (lichenicolous), Europe; N. America. See Kokourcová & Hawksworth (*Lichenologist* **40**: 105, 2008).

Acarocybe Syd. (1937), anamorphic *Pezizomycotina*, Hsy.0eP.28. 3, Africa; Brazil. See Ellis (*Mycol. Pap.* **76**, 1960; key), Mena-Portales *et al.* (*MR* **103**: 1032, 1999; comparison with *Acarocybiopsis*).

Acarocybella M.B. Ellis (1960), anamorphic *Pezizomycotina*, Hso.≡ eP.28. 1, pantropical.

Acarocybellina Subram. (1992), anamorphic *Pezizomycotina*, Hso.≡ eP.26. 1, widespread (tropical). See Lanzoni (*Boll. Gruppo Micol. 'G. Bresadola'* **28**: front & inside, 1985; separation from *Sporidesmium*), Mena-Portales *et al.* (*MR* **103**: 1032, 1999; comparison with *Acarocybiopsis*).

Acarocybiopsis J. Mena, A. Hern. Gut. & Mercado (1999), anamorphic *Pezizomycotina*, Hso.e≡ P.?. 1 (saprobic on wood), Cuba. See Mena-Portales *et al.* (*MR* **103**: 1032, 1999; description), Mercado-Sierra *et al.* (*Nova Hedwigia* **75**: 533, 2002; comparison with *Veracruzomyces*).

Acaromyces Boekhout, Scorzetti, Gerson & Sztejnb. (2003), anamorphic *Exobasidiomycetidae*. 1 (from mites), Israel. See Boekhout *et al.* (*Int. J. Syst. Evol. Microbiol.* **53**: 1662, 2003; phylogeny, family placement), Yasuda *et al.* (*Mycoscience* **47**: 36, 2006; phylogeny).

Acaropeltis Petr. (1937), anamorphic *Pezizomycotina*, Cpt.0eH.?. 1 (on living leaves), C. America. See Petrak (*Annls mycol.* **35**: 95, 1937; orig. description).

Acarospora A. Massal. (1852), Acarosporaceae (L). *c.* 128, widespread. See Weber (*Lichenologist* **4**: 16, 1968; sect. *Xanthothallia*), Golubkova & Shapiro (*Nov. Sist. niz. Rast.* **13**: 150, 1976; sect. *Trochia*), Clauzade & Roux (*Bull. Mus. Hist. nat. Marseille* **41**, 1981; key 69 Eur. spp.), Castello & Nimis (*Lichenologist* **26**: 283, 1994; Antarct.), Stenroos & DePriest (*Am. J. Bot.* **85**: 1548, 1998; DNA), Lutzoni *et al.* (*Am. J. Bot.* **91**: 1446, 2004; posn), Reeb *et al.* (*Mol. Phylogen. Evol.* **32**: 1036, 2004; posn, phylogeny), Temina *et al.* (*Nova Hedwigia* **80**: 433, 2005; Israel and vicinity), Wedin *et al.* (*MR* **109**: 159, 2005; position within *Lecanoromycetes*), Crewe *et al.* (*MR* **110**: 521, 2006; molecular phylogeny), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny), Knudsen *et al.* (*Opuscula Philolichenum* **5**: 1, 2008; S America).

Acarosporaceae Zahlbr. (1906), Acarosporales (L). 11 gen. (+ 10 syn.), 183 spp.

Lit.: Golubkova (*Lishaĭniki semeĭstva Acarosporaceae Zahlbr. v. SSSR*, 1988; keys 8 gen., 91 spp.), Bellemère (*Bull. Soc. linn. Provence* **45**: 355, 1994), Hafellner (*Cryptog. Bot.* **5**: 99, 1995), David & Cop-

pins (*Lichenologist* **29**: 291, 1997), Kocourková-Horáková (*Czech Mycol.* **50**: 271, 1998), Rambold & Hagedorn (*Lichenologist* **30**: 473, 1998), Seppelt *et al.* (*Lichenologist* **30**: 249, 1998), Stenroos & DePriest (*Am. J. Bot.* **85**: 1548, 1998; DNA), Navarro-Rosinés *et al.* (*CJB* **77**: 835, 1999), Lutzoni *et al.* (*Nature* **411**: 937, 2001; posn), Kauff & Lutzoni (*Mol. Phylogen. Evol.* **25**: 138, 2002; posn), Lutzoni *et al.* (*Am. J. Bot.* **91**: 1446, 2004; posn), Miądlikowska & Lutzoni (*Am. J. Bot.* **91**: 449, 2004; posn), Reeb *et al.* (*Mol. Phylogen. Evol.* **32**: 1036, 2004), Wedin *et al.* (*MR* **109**: 159, 2005), Crewe *et al.* (*MR* **110**: 521, 2006), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny), Hofstetter *et al.* (*Mol. Phylogen. Evol.* **44**: 412, 2007; phylogeny).

Acarosporales Reeb, Lutzoni & Cl. Roux (2007). Acarosporomycetidae. 1 fam., 11 gen., 183 spp. Fam.:
Acarosporaceae
For *Lit.* see under fam.

Acarosporina Sherwood (1977), Stictidaceae. Anamorph *Phacidiella*-like. 4, widespread. See Johnston (*Mycotaxon* **24**: 359, 1985; anamorph), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny), Schoch *et al.* (*MR* **110**: 257, 2006; phylogeny).

Acarosporium Bubák & Vleugel ex Bubák (1911), anamorphic *Pycnopeziza*, St.1eH-P.39. 4, north temperate. See Korzenok (*Mikol. Fitopatol.* **25**: 107, 1991; Russia).

Acarosporomyces Cif. & Tomas. (1953) = Pleopsidium fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Acarosporomycetidae Reeb, Lutzoni & Cl. Roux (2004), Lecanoromycetes. Ord.:
Acarosporales
Lit.: Lumbsch *et al.* (*MR* **111**: 257, 2007; phylogeny), Lutzoni *et al.* (*Am. J. Bot.* **91**: 1446, 2004), Miądlikowska *et al* (*Mycol.* **98**: 1088, 2006), Reeb *et al.* (*Mol. Phylogenet. Evol.* **32**: 1036, 2004), Wedin *et al.* (*MR* **109**: 159, 2005).

Acarothallium Syd. (1937) = Wentiomyces fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

acaryallagic, see caryallagic.

acaudate, not having a tail.

Acaulium Sopp (1912) ≡ Scopulariopsis fide Raper & Thom (*Manual of the Penicillia*, 1949).

Acaulopage Drechsler (1935), Zoopagaceae. 27, widespread. See Drechsler (*Mycol.* **27**: 185, 1935), Drechsler (*Mycol.* **28**: 363, 1936), Drechsler (*Mycol.* **30**: 137, 1938), Drechsler (*Mycol.* **31**: 128, 1939), Drechsler (*Mycol.* **33**: 248, 1941), Drechsler (*Mycol.* **34**: 274, 1942), Drechsler (*Mycol.* **37**: 1, 1945), Drechsler (*Mycol.* **38**: 120, 1946), Drechsler (*Mycol.* **39**: 253, 1947), Drechsler (*Mycol.* **40**: 85, 1948), Drechsler (*Mycol.* **47**: 364, 1955), Drechsler (*Mycol.* **51**: 787, 1959), Drechsler (*Am. J. Bot.* **49**: 1089, 1962), Saikawa & Kadowaki (*Nova Hedwigia* **74**: 365, 2002; amoeba capture).

Acaulospora Gerd. & Trappe (1974), Acaulosporaceae. 26, widespread. See Mosse (*Arch. Mikrobiol.* **70**: 167, 1970), Mosse (*Arch. Mikrobiol.* **74**: 120, 1970; life cycle, ultrastr.), Mosse (*Arch. Mikrobiol.* **74**: 146, 1970; life cycle, ultrastr.), Schenck *et al.* (*Mycol.* **76**: 685, 1984; key), Berch (*Mycotaxon* **23**: 409, 1985; emend.), Morton (*Mycol.* **78**: 787, 1986; effect of mountants & fixatives on spores), Błaszkowski (*Karstenia* **27**: 32, 1987), Sieverding & Toro (*Angew. Bot.* **61**: 217, 1987), Sieverding (*Angew. Bot.* **62**: 373, 1988), Błaszkowski (*Mycol.* **82**: 794, 1990), Gazey *et al.* (*MR* **96**: 643, 1992; sporulation), Maia & Kimbrough (*MR* **97**: 1183, 1993; spore wall ultrastr.), Błaszkowski (*Mycorrhiza* **4**: 173, 1994), Ingleby *et al.* (*Mycotaxon* **50**: 99, 1994), Błaszkowski (*MR* **99**: 237, 1995), Yao *et al.* (*Kew Bull.* **50**: 349, 1995), Błaszkowski (*Mycotaxon* **61**: 193, 1997), Morton *et al.* (*MR* **101**: 625, 1997; synanamorph), Saikawa *et al.* (*Mycoscience* **39**: 477, 1998; phylogeny & synanamorph), Zhang *et al.* (*Mycosystema* **17**: 15, 1998), Schultz *et al.* (*Mycol.* **91**: 676, 1999), Redecker & Raab (*Mycol.* **98**: 885, 2006; phylogeny), Velazquez *et al.* (*Mycotaxon* **103**: 171, 2008; Argentina).

Acaulosporaceae J.B. Morton & Benny (1990), Diversisporales. 2 gen., 31 spp.
Lit.: Morton & Benny (*Mycotaxon* **37**: 471, 1990), Maia & Kimbrough (*MR* **97**: 1183, 1993), Azcon-Aguilar & Barea (*Mycorrhiza* **6**: 457, 1996), Morton *et al.* (*MR* **101**: 625, 1997), Sawaki *et al.* (*Mycoscience* **39**: 477, 1998), van der Heijden *et al.* (*Nature* Lond. **396**: 69, 1998), Stürmer & Morton (*Mycol.* **91**: 849, 1999), Rodriguez *et al.* (*New Phytol.* **152**: 159, 2001), Schüßler *et al.* (*MR* **105**: 1413, 2001), Fracchia *et al.* (*Nova Hedwigia* **77**: 383, 2003), Pringle *et al.* (*Mycorrhiza* **13**: 227, 2003), Redecker (*Glomeromycota* Arbuscular mycorrhizal fungi and their relative(s). *In* The Tree of Life Web Project, http://tolweb.org: [unpaginated], 2005).

accumbent, resting against anything.

acellular, not divided into cells, e.g. a myxomycete plasmodium.

Acephala Grünig & Sieber (2005), anamorphic *Vibrisseaceae*, sterile. 1 (associated with conifer roots), Europe; N. America. See Grünig & Sieber (*Mycol.* **97**: 634, 2005), Grünig & Sieber (*Mycol.* **97**: 628, 2005; descr., phylogeny), Grünig *et al.* (*Fungal Genetics Biol.* **43**: 410, 2006; population genetics).

Acephalis Badura & Badurowa (1964) = Syncephalis fide Skirgiełło & Zadara (*Beih. Sydowia* **8**: 366, 1979).

acephalous, not having a head.

Acerbia (Sacc.) Sacc. & P. Syd. (1899) ? = Rosenscheldia fide Eriksson & Yue (*SA* **13**: 129, 1994).

Acerbiella Sacc. & D. Sacc. (1905), Sordariomycetes. 2, S. America; Java.

acerose, needle-like and stiff; like a pine needle (Fig. 23.3).

acervate, massed up; heaped; growth in heaps or groups.

Acerviclypeatus Hanlin (1990), anamorphic *Ophiodothella*, St.0fH.?. 1 (on living leaves of *Vaccinium*), USA. See Hanlin (*Mycotaxon* **37**: 379, 1990; descr.), Hanlin (*Mycol.* **95**: 506, 2003; development).

Acervulopsora Thirum. (1945) = Maravalia fide Cummins & Hiratsuka (*Illustr. Gen. Rust Fungi rev. edit.*, 1983).

acervulus (pl. **-i**; adj. **-lar**), a ± saucer-shaped conidioma (embedded in host tissue) in which the hymenium of conidiogenous cells develops on the floor of the cavity from a pseudoparenchymatous stroma beneath an integument of host tissue which ruptures at maturity; acervular conidioma (Fig. 10 O).

Acervus Kanouse (1938), Pyronemataceae. 4, widespread. See Pfister (*Occ. Pap. Farlow Herb. Crypt. Bot.* **8**: 1, 1974; key), Pant (*TBMS* **71**: 326, 1978), Pfister & Bessette (*Mycotaxon* **22**: 435, 1985),

Kimbrough & Curry (*Mycol.* **78**: 735, 1986; ultrastructure), Zhuang & Wang (*Mycotaxon* **69**: 339, 1998; 3 spp. China), Prasad & Pant (*Journal of Mycology and Plant Pathology* **34**: 147, 2004; spore ornamentation), Perry *et al.* (*MR* **111**: 549, 2007; phylogeny, isolated posn within *Pyronemataceae*).

Acetabula (Fr.) Fuckel (1870) = Helvella fide Dissing (*Dansk bot. Ark.* **25** no. 1, 1966).

Acetabularia (Berk.) Massee (1893) [non *Acetabularia* J.V. Lamour. 1812, *Algae*] ≡ Cyphellopus fide Singer (*Agaric. mod. Tax.*, 1951).

acetabuliform, saucer-like in form.

Achaetobotrys Bat. & Cif. (1963), Antennulariellaceae. Anamorph *Antennariella*. 3 (probably saprobic on plant exudates), widespread (primarily tropical). See Hughes (*Mycol.* **68**: 693, 1976), Barr & Rogerson (*Mycotaxon* **71**: 473, 1999; USA).

Achaetomiaceae Mukerji (1978) = Chaetomiaceae.

Achaetomiella Arx (1970) = Chaetomium fide Udagawa (*TMSJ* **21**: 34, 1980), Cannon (*TBMS* **87**: 50, 1986).

Achaetomium J.N. Rai, J.P. Tewari & Mukerji (1964), Chaetomiaceae. 7 (from soil etc.), widespread (pantropical). See von Arx (*Proc. Indian Acad. Sci.* Pl. Sci. **94**: 341, 1985), Cannon (*TBMS* **87**: 50, 1986; key), Sultana *et al.* (*Biologia* Lahore **34**: 257, 1988; Pakistan spp.), von Arx *et al.* (*Beih. Nova Hedwigia* **94**, 1988), Lee & Hanlin (*Mycol.* **91**: 434, 1999; DNA), Rodríguez *et al.* (*Stud. Mycol.* **50**: 77, 2004; key).

Acharius (Erik; 1757-1819; Sweden). Country doctor, Vadstena. A pupil of Linnaeus (q.v.) defending his dissertation in 1776, and correspondent of Fries (q.v.). Laid scientific basis for the study and classification of lichen-forming fungi, and responsible for the terms thallus, podetium, apothecium, perithecium, soredium, cyphella as applied to those organisms. Described many new species, especially from Europe. Main collections in **H**, other material in **BM**, **UPS**, **LINN** (Smith collection). *Publs. Methodus qua Omnes Detectos Lichenes.* (1803); *Lichenographia Universalis* (1810); *Synopsis Methodica Lichenum* (1814). *Biogs, obits etc.* Galloway (*Bulletin of the British Museum of Natural History* Botany **18**: 149, 1988 [influence on British lichenology, specimens in **BM**]); González Bueno & Rico (*Acta Botanica Malacitana* **16**: 141, 1991 [impact on Spanish lichenology]); Grummann (1974: 469); Vitikainen (Introduction, *Lichenographia Universalis*, 1976 [reprint]); Stafleu & Cowan (*TL-2* **1**: 4, 1976); Stafleu & Mennega (*TL-2*, *Suppl.* **1**: 14, 1992); Tibell (*Annales Botanici Fennici* **24**: 257, 1987 [*Caliciales*]).

Achitonium Kunze (1819) = Pactilia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Achlyella Lagerh. (1890), ? Chytridiales. 1, Europe.

Achlyites Mesch. (1902), Fossil Fungi. 1 (Silurian, Tertiary), Atlantic.

Achlyogeton Schenk (1859), Chytridiales. 1, widespread (north temperate). See Blackwell & Powell (*Mycotaxon* **64**: 91, 1997).

Achorella Theiss. & Syd. (1915), ? Dothideomycetes. 10, widespread. Type material is inadequate. See Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Achorion Remak (1845) = Trichophyton fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Achorodothis Syd. (1926), Mycosphaerellaceae. 2 (in leaves), Costa Rica. See Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Achoropeltis Syd. (1929), anamorphic *Pezizomycotina*, Cpt.0eH.?. 1 (on living leaves), Costa Rica.

achroic (achromatic, achrous), having no colour or pigment; see Colour.

Achroomyces Bonord. (1851) nom. dub, Agaricomycotina. See Donk (*Persoonia* **4**: 145, 1966; syn. of *Platygloea*).

Achrotelium Syd. (1928), Chaconiaceae. *c.* 5 (on dicots, 3 on *Asclepiadaceae*), Philippines; USA; India; Zimbabwe.

Acia P. Karst. (1879) [non *Acia* Schreb. 1791, *Rosaceae*] ≡ Mycoacia.

acicular, slender and pointed; needle-shaped (Fig. 23.33).

Aciculariella Arnaud (1954), anamorphic *Pezizomycotina*, Hso.0fP.?. 2, Europe. The two original spp. were not formally described.

Aciculoconidium D.S. King & S.C. Jong (1976), anamorphic *Saccharomycetales*, Hso.0eH.3. 1, USA. See King & Jong (*Mycotaxon* **3**: 407, 1976), Smith *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 439, 1998), Kurtzman (*Antonie van Leeuwenhoek* **88**: 121, 2005), Suh *et al.* (*Mycol.* **98**: 1006, 2006; phylogeny).

Aciculopsora Aptroot & Trest (2006), ? Ramalinaceae (L). 1, Costa Rica. See Aptroot *et al.* (*J. Hattori bot. Lab.* **100**: 617, 2006; Costa Rica).

Aciculosporium I. Miyake (1908), Clavicipitaceae. Anamorph *Albomyces*. 2 (in living bamboos), Japan. See Kao & Leu (*Pl. Prot. Bull. Taiwan* **18**: 276, 1976), Tubaki & Ando (*Acta Mycol. Sin.* Suppl. **1**: 426, 1987), Tsuda *et al.* (*Bull. natn. Sci. Mus.* Tokyo, B **23**: 25, 1997; host range), Oguchi (*Mycoscience* **42**: 217, 2001), Tanaka *et al.* (*Mycoscience* **43**: 87, 2002; phylogeny), Pažoutová *et al.* (*MR* **108**: 126, 2004; conidial devel.), Walker (*Australas. Pl. Path.* **33**: 211, 2004; comp. with *Cepsiclava*).

Acid rain. The wet acidic deposition of air pollutants can affect fungi including lichen-forming species. While many show a decline, a small number of generalist species may actually increase in incidence in response to this pollution (Kowalski & Stanczykiewicz, *Phytopathologia Polonica* **19**: 69, 2000). Endophytes possibly implicated in pH regulation within leaves of forest trees (Stephan, *Eur. J. For. Path.* **3**: 112, 1973) may be particularly vulnerable (Ei-Ichiro Asai *et al.*, *MR* **102**: 1316, 1998). Lichen-forming fungi with cyanobacterial partners are strongly affected and have declined dramatically in some parts of Europe (Farmer *et al.*, *in* Bates & Farmer, 1992: 284); nitrogenase activity may be affected (Fritz-Sheridan, *Lichenologist* **17**: 27, 1985). Reductions in many mycorrhizal fungi in Europe have been correlated with acid rain, though it is not often clear whether this is a cause of or a result from damage seen in the trees. The decline in fruiting of *Cantharellus cibarius* has been especially noticeable (Jansen & van Doben, *Ambio* **16**: 211, 1987; Derbsch & Schmitt, *Atlas der Pilze des Saarlandes* **2**, 1987). *Russula mustelina* fruiting has been singled out as a valuable early indicator of acid rain problems in European forests (Felher, *Agric. Ecosyst. Envir.* **28**: 115, 1990). *Rhytisma acerinum* is also strongly affected (Greenhalgh & Bevan, *TBMS* **71**: 491, 1978), perhaps because of damage to the delicate mucilaginous sheaths around ascospores during dispersal in wet weather. Mycorrhizal fungi may mollify the ef-

fect of acid rain on trees (Blum *et al.*, *Nature* **417**: 729, 2002). In Europe, with legislation to control acid rain pollution, there has been some amelioration of the problem.

Lit.: Arnolds (*in* Hawksworth (Ed.), *Frontiers in mycology*: 243, 1991), Bates & Farmer (Eds) (*Bryophytes and lichens in a changing environment*, 1992), Pegler *et al.* (Eds) (*Fungi of Europe*, 1993), Richardson (*Pollution monitoring with lichens*, 1992).

See Air pollution, Bioindication.

acid-fast (of bacteria), keeping carbol fuchsin stain after the addition of 25 per cent sulphuric acid (H_2SO_4).

acidiphilous (acidophilous, acidophilic), growing on or in conditions of low hydrogen ion concentration (q.v.); e.g. *Scytalidium acidophilum* with an optimum pH for growth of 3, with good growth even at pH 1 (Miller *et al.*, *Internat. Biodet.* **20**: 27, 1984); also used of lichens on peaty soils or bark of a pH below 5.

Acidomyces B.J. Baker, M.A. Lutz, S.C. Dawson, P.L. Bond & Banfield (2004), ? Teratosphaeriaceae. 1 (from acid mine drainage), California. See Baker *et al.* (*Appl. Environm. Microbiol.* **70**: 6270, 2004), Hoog *et al.* (*Stud. Mycol.* **51**: 33, 2005), Crous *et al.* (*Stud. Mycol.* **58**: 1, 2007; posn).

Aciella (P. Karst.) P. Karst. (1899) [non *Aciella* Tiegh. 1894, *Loranthaceae*] = Asterodon fide Donk (*Taxon* 5: 69, 1956).

Aciesia Bat. (1961) nom. dub. ? = Tricharia Fée fide Lücking *et al.* (*Lichenologist* **30**: 121, 1998).

Acinophora Raf. (1808) nom. dub., Agaricales.

Acinula Fr. (1822), anamorphic *Pezizomycotina*, Sc.-.-. 1, Europe. Apparently sterile.

Acitheca Currah (1985), Gymnoascaceae. 1 (on bark), USA. See Currah (*Mycotaxon* **24**: 1, 1985), Currah (*SA* 7: 1, 1988; key).

Ackermannia Pat. (1902) = Sclerocystis fide Zycha *et al.* (*Mucorales*, 1969).

Acladium Link (1809), Botryobasidiaceae. 20. See Wright (*Cryptog. Bot.* **1**: 26, 1989), Partridge *et al.* (*Mycotaxon* **82**: 41, 2002; key).

Acleistia Bayl. Ell. (1917), anamorphic *Calycina*, Ccu.0eH.15. 1 (saprobic on *Alnus* catkins), Europe. The connexion with *Calycina* is not well established. See Bayliss Elliott (*TBMS* **5**: 417, 1916).

Acleistomyces Bat. (1961) = Sporopodium fide Lücking *et al.* (*Lichenologist* **30**: 121, 1998).

Acmosporium Corda (1839) = Aspergillus fide Hughes (*CJB* **36**: 727, 1958).

Acoliomyces Cif. & Tomas. (1953) = Thelomma fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Acolium (Ach.) Gray (1821), Caliciaceae (L). *c.* 5, widespread. See Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Acolium Trevis. (1862) ≡ Pseudacolium.

Acompsomyces Thaxt. (1901), Laboulbeniaceae. 7 (on insect cuticles), widespread. See Benjamin (*Mem. N. Y. bot. Gdn* **49**: 210, 1989; key, ontogeny), Santamaria (*Mycotaxon* **49**: 313, 1993; Spain), Santamaría (*Fl. Mycol. Iberica* **5**, 2003; Iberian spp.).

Acontiopsis Negru (1961) nom. inval., Nectriaceae. 1 (on twigs of *Crataegus*), Europe. See Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995; ? syn. of *Cylindrocladiella*), Crous (*Taxonomy and Pathology of Cylindrocladium (Calonectria) and Allied Genera*: 278 pp., 2002).

Acontium Morgan (1902), anamorphic *Pezizomycotina*, Hso.0eH.?. 4, N. America.

acquired immunity, see immune.

acquired resistance, see resistance.

acrasin, a chemotactically active substance which controls the streaming together of the myxamoebae of *Dictyostelium discoideum* (Bonner, *J. exp. Zool.* **110**: 259, 1949) and other *Acrasiales*.

Acremoniella Sacc. (1886) nom. illegit. = Harziella Costantin & Matr. fide Groves & Skolko (*Can. J. Res.* C **24**: 74, 1946), Holubová-Jechová (*Folia Geobot. Phytotax.* **9**: 315, 1974), Warcup (*MR* **95**: 329, 1991; synonymy of *A. atra* auct. with *Harziella*).

Acremonites Pia (1927), Fossil Fungi. 1 (Oligocene), Europe.

Acremoniula G. Arnaud (1954) nom. inval. ≡ Acremoniula G. Arnaud ex Cif.

Acremoniula G. Arnaud ex Cif. (1962), anamorphic *Pezizomycotina*, Hso.0eP.1. 6 (on sooty moulds, esp. *Schiffnerula* and *Meliola*), pantropical. See Deighton (*Mycol. Pap.* **118**, 1969), Mercado Sierra *et al.* (*Mycotaxon* **55**: 491, 1995; Mexico), Hosagoudar *et al.* (*J. Econ. Taxon. Bot.* **25**: 281, 2001; India).

Acremonium Link (1809), anamorphic *Hypocreales*, Hso.0eH.15. *c.* 117, widespread. Still polyphyletic and perhaps best considered as a basic structural type rather than a genus. Grass endophytes formerly placed here are now considered to be *Neotyphodium* spp. See Gams (*Cephalosporium-artige Schimmelpilze*, 1971; monograph), Gams (*TBMS* **64**: 389, 1975), Samuels (*N.Z. Jl Bot.* **14**: 231, 1976; teleomorphs), Walz (*Biblthca Mycol.* **147**: 1, 1992; *A. chrysogenum*), Lowen (*Mycotaxon* **53**: 81, 1995; lichenicolous spp.), Alfaro-García *et al.* (*Mycol.* **88**: 804, 1996; on *Cucurbitaceae*), Glenn *et al.* (*Mycol.* **88**: 369, 1996; phylogeny), Abad *et al.* (*Diagnosis and Identification of Plant Pathogens. Proceedings of the 4th International Symposium of the European Foundation for Plant Pathology*: 287, 1997; VCGs), Ito *et al.* (*MR* **104**: 77, 2000), Rossman (*Stud. Mycol.* **45**: 27, 2000; spp. with Hypocrealean affinities), Seifert & Gams *in* McLaughlin *et al.* (Eds) (*The Mycota* A Comprehensive Treatise on Fungi as Experimental Systems for Basic and Applied Research **7A**: 307, 2001; polyphyly), Wang *et al.* (*Mycosystema* **21**: 192, 2002; Chinese spp.), Lin *et al.* (*Plant Pathology Bulletin* Taichung **13**: 91, 2004; *A. lactucae*), Hsiao *et al.* (*J. Clin. Microbiol.* **43**: 3760, 2005; identification using arrays), Ma *et al.* (*Life in Ancient Ice*: 159, 2005; in glacial ice), Rakeman *et al.* (*J. Clin. Microbiol.* **43**: 3324, 2005; mol. analysis of clinical spp.).

acro- (combining form), at the end; apical; terminal.

acroauxic (of conidiophores), growth in length restricted to the apical region.

Acrocalymma Alcorn & J.A.G. Irwin (1987), anamorphic *Massarina*, Cpd.0eH.15. 1 (on *Medicago*), Australia. See Alcorn & Irwin (*TBMS* **88**: 163, 1987), Shoemaker *et al.* (*CJB* **69**: 569, 1991; teleomorph), Aptroot (*Nova Hedwigia* **66**: 89, 1998; tax. placement).

acrochroic, see Colour.

Acrocladium Petr. (1949) [non *Acrocladium* Mitt. 1869, *Musci*] = Periconiella fide von Arx (*Persoonia* **11**: 389, 1981).

Acroconidiella J.C. Lindq. & Alippi (1964) ? = Cladosporium fide Lindquist & Alippi (*Darwiniana* **13**: 612, 1964), Dugan *et al.* (*Schlechtendalia* **11**,

2004).

Acroconidiellina M.B. Ellis (1971), anamorphic *Pezizomycotina*, Hso.1eP.26. 3, widespread (tropical). See Ellis (*Mycol. Pap.* **125**: 22, 1971).

Acrocordia A. Massal. (1854), Monoblastiaceae (L). 10, widespread (esp. north temperate). See Coppins & James (*Lichenologist* **10**: 179, 1978; UK spp.), Harris (*More Florida Lichens*, 1995).

Acrocordiaceae Oksner ex M.E. Barr (1987) = Monoblastiaceae.

Acrocordiella O.E. Erikss. (1982) = Requienella fide Boise (*Mycol.* **78**: 37, 1986; synonymy), Eriksson & Hawksworth (*SA* **7**: 59, 1988).

Acrocordiomyces Cif. & Tomas. (1953) = Acrocordia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Acrocordiopsis Borse & K.D. Hyde (1989), Melanommataceae. 2 (marine), widespread. See Borse & Hyde (*Mycotaxon* **34**: 535, 1989), Alias *et al.* (*Fungal Diversity* **2**: 35, 1999).

Acrocorelia R. Doll (1982) nom. nud., ? Dothideales (L).

Acrocylindrium Bonord. (1851), anamorphic *Pezizomycotina*, Hso.0eH.?. 3, Europe. ? = Sarocladium fide Gams (*in litt.*). See Gams & Hawksworth (*Kavaka* **3**: 60, 1976).

Acrodesmis Syd. (1926) = Periconiella fide Ellis (*Mycol. Pap.* **111**, 1967).

Acrodictyella W.A. Baker & Partridge (2001), anamorphic *Pezizomycotina*. 1, Alabama. See Baker *et al.* (*Mycotaxon* **78**: 30, 2001), Baker & Morgan-Jones (*Mycotaxon* **85**: 371, 2003; contrast with *Pseudacrodictys*).

Acrodictyopsis P.M. Kirk (1983), anamorphic *Pezizomycotina*, Hso.#eP.1. 1, British Isles. See Kirk (*Mycotaxon* **18**: 260, 1983), Kendrick (*CJB* **81**: 75, 2003; morphogenesis).

Acrodictys M.B. Ellis (1961), anamorphic *Pezizomycotina*, Hso.#eP.1/19. *c.* 38 (saprobic on wood etc.), widespread. See Ellis (*Dematiaceous Hyphomycetes*, 1971), Ellis (*More Dematiaceous Hyphomycetes*, 1976), Chang (*Bot. Bull. Acad. sin.* Taipei **38**: 197, 1997), Whitton *et al.* (*Fungal Diversity* **4**: 159, 2000; on *Pandanaceae*;), Cai *et al.* (*Nova Hedwigia* **75**: 525, 2002; Philippines), Baker & Morgan-Jones (*Mycotaxon* **85**: 371, 2003; contrast with *Pseudacrodictys*), Kodsueb *et al.* (*Cryptog. Mycol.* **27**: 111, 2006; Thailand).

Acrodontiella U. Braun & Scheuer (1995), anamorphic *Pezizomycotina*, Hso.?.?. 1, Austria. See Braun & Scheuer (*Sydowia* **47**: 146, 1995), Braun (*Monogr. Cercosporella, Ramularia Allied Genera (Phytopath. Hyphom.)* **2**, 1998).

Acrodontium de Hoog (1972), anamorphic *Pezizomycotina*, Hso.0eH.1. 9, widespread. See de Hoog (*Stud. Mycol.* **1**, 1972), Sutton *et al.* (*Guide to Clinically Significant Fungi*, 1998; clinical taxa), van Wyk *et al.* (*S. Afr. J. Sci.* **96**: 580, 2000; conidiogenesis), Czeczuga *et al.* (*Feddes Repert.* **112**: 81, 2001; Czech Republic).

Acrogenospora M.B. Ellis (1971), anamorphic *Farlowiella*, Hso.0eP.19. 6 (saprobic on wood and bark), widespread. See Hughes (*N.Z. Jl Bot.* **16**: 312, 1978), Goh *et al.* (*MR* **102**: 1309, 1998; key), Zhu *et al.* (*Mycotaxon* **92**: 383, 2005; China).

Acrogenotheca Cif. & Bat. (1963), Dothideomycetes. Anamorph *Hiospira*. 2, widespread (tropical). See Hughes (*N.Z. Jl Bot.* **5**: 504, 1967), Hughes (*Mycol.* **68**: 693, 1976).

acrogenous, development at the apex.

Acrogynomyces Thaxt. (1931), Laboulbeniaceae. 6 (on insect exoskeletons), Africa. See Tavares (*Mycol. Mem.* **9**: 627 pp., 1985), Santamaría (*MR* **99**: 1071, 1995).

acronema, extension of flagellum tip containing the two central microtubules but none of the nine peripheral elements.

acropetal (1) describes chains of conidia in which the youngest is at the apex, basifugal; cf. basipetal; (2) a pattern of apical growth.

Acrophialophora Edward (1961), anamorphic *Pezizomycotina*, Hso.0eH.15. 2, widespread. See Samson & Mahmood (*Acta Bot. Neerl.* **19**: 804, 1970; key), Al-Mohsen *et al.* (*J. Clin. Microbiol.* **38**: 4569, 2000; clinical), Kendrick (*CJB* **81**: 75, 2003; morphogenesis).

Acrophragmis Kiffer & Reisinger (1970), anamorphic *Pezizomycotina*, Hso.≡ eP.19. 4, widespread (esp. tropical). See Kiffer & Reisinger (*Rev. Écol. Biol. Sol* **7**: 16, 1970), Mercado Sierra & Mena Portales (*Acta bot.* Szeged **32**: 189, 1986; Cuba), Rao & Hoog (*Stud. Mycol.* **28**, 1986; India), Wu & Zhuang (*Fungal Diversity Res. Ser.* **15**, 2005; China).

Acrophytum, see *Akrophyton*.

acropleurogenous, formed at the end and on the sides.

Acrorixis Trevis. (1860) = Thelenella fide Mayrhofer & Poelt (*Herzogia* **7**: 13, 1985), Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Acroscyphus Lév. (1846), Caliciaceae (L). 1, widespread. See Tibell (*Symb. bot. upsal.* **32** no. 1: 291, 1997; anam), Tibell (*Biblthca Lichenol.* **71**: 107 pp., 1998), Joneson & Glew (*Bryologist* **106**: 443, 2003; N America), Tibell & Thor (*J. Hattori bot. Lab.* **94**: 205, 2003; Japan).

Acrospeira Berk. & Broome (1857), anamorphic *Pezizomycotina*, Hso.#eP.1. 1 (parasitic on *Castanea*), widespread (north temperate). See Wiltshire (*TBMS* **21**: 211, 1938).

Acrospermaceae Fuckel (1870), Acrospermales. 4 gen. (+ 3 syn.), 15 spp.

Lit.: Webster (*TBMS* **39**: 361, 1956), Eriksson (*Ark. Bot.* **6**: 381, 1967), Eriksson (*Mycotaxon* **15**, 1982), Nograsek (*Biblthca Mycol.* **133**: 271 pp., 1990), Barr (*Mycol.*, 1994; included in *Xylariales*), Winka & Eriksson (*Phylogenetic Relationships Within the Ascomycota Based on 18S rDNA Sequences* Akademisk Avhandling [Thesis (PhD), Department of Ecology and Environmental Science, Umeå University]: [17] pp., 2000).

Acrospermales Minter, Peredo & A.T. Watson (2007). Dothideomycetes. 1 fam., 4 gen., 15 spp. Fam.:
Acrospermaceae

Lit.: Minter *et al.* (*Bol. Soc. Argent. Bot.* **42**: 107, 2007).

Acrospermoides J.H. Mill. & G.E. Thomps. (1940), ? Acrospermaceae. 1, USA. See Miller & Thompson (*Mycol.* **32**: 1, 1940; descr.), Barr (*Mycotaxon* **39**: 43, 1990; family placement).

Acrospermum Tode (1790), Acrospermaceae. Anamorph *Gonatophragmium*. 11 (saprobic, esp. on grasses), widespread. See Webster (*TBMS* **39**: 361, 1956; conidia), Eriksson (*Ark. Bot.* ser. 2 **6**: 381, 1967), Sherwood (*Mycotaxon* **5**: 39, 1977; posn), Winka & Eriksson (*Phylogenetic Relationships Within the Ascomycota Based on 18S rDNA Sequences* Akademisk Avhandling [Thesis (PhD), De-

partment of Ecology and Environmental Science, Umeå University]: [17] pp., 2000; phylogeny), Minter *et al.* (*Bol. Soc. Argent. Bot.* **42**: 107, 2007).

Acrosphaeria Corda (1842) = Xylaria Hill ex Schrank fide Læssøe (*SA* **13**: 43, 1994).

Acrospira Mont. (1857), anamorphic *Pezizomycotina*, Hso.?.?. 1, Europe.

acrospore, an apical spore.

Acrosporella Riedl & Ershad (1977) = Cladosporium fide Sutton (*in litt.*).

Acrosporium Bonord. (1851), anamorphic *Pezizomycotina*, Hso.0eH.?. 1, Germany.

Acrosporium Nees (1816) nom. rej. = Oidium Link (1824) fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

acrosporogenous (of conidial maturation), cells delimited and maturing in sequence from base to apex as the tip of the conidium expands (Luttrell, 1963).

Acrostalagmus Corda (1838), anamorphic *Hypocreales*. 2 (isol. ex soil etc.), widespread. See Zare & Gams (*MR* **108**: 576, 2004), Zare *et al.* (*MR* **108**: 576, 2004; rels with *Verticillium*, connexions), Gams *et al.* (*Taxon* **54**: 179, 2005; nomencl.), Pantou *et al.* (*MR* **109**: 889, 2005; phylogeny).

Acrostaphylus G. Arnaud ex Subram. (1971) = Nodulisporium fide Jong & Rogers (*Tech. Bull. Wash. agric. Exp. Stn* **71**, 1972).

Acrostaurus Deighton & Piroz. (1972), anamorphic *Pezizomycotina*, Hso.0bP.19. 1 (fungicolous), widespread (tropical). See Deighton & Pirozynski (*Mycol. Pap.* **128**: 94, 1972).

Acrostroma Seifert (1987), anamorphic *Batistia*, Hsy.0eH.15. 1, Venezuela. See Seifert (*CJB* **65**: 2197, 1987), Samuels & Rodrigues (*Mycol.* **81**: 52, 1989; connexion).

Acrotamnium Nees (1816) nom. dub. ? = Tomentella Pat. fide Stalpers (*Stud. Mycol.* **24**: 72, 1984).

Acrotellomyces Cif. & Tomas. (1953) ≡ Acrotellum.

Acrotellum Tomas. & Cif. (1952) = Thelidium fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Acrothamnium, see *Acrotamnium*.

Acrotheca Fuckel (1860) = Ramularia Unger fide Braun (*Monogr. Cercosporella, Ramularia Allied Genera (Phytopath. Hyphom.)* **2**, 1998).

Acrotheciella Koord. (1907), anamorphic *Pezizomycotina*, Hsp.≡ eP.?24. 1, Java.

Acrothecium (Corda) Preuss (1851), anamorphic *Pezizomycotina*, Hso.≡ eH.?. *c.* 15, widespread.

acroton, a spinule in lichens bearing side branches.

Actidiographium Lar.N. Vassiljeva (2000), ? Hysteriaceae. 1, Eastern Russia. See Vasil'eva (*Mikol. Fitopatol.* **34**: 4, 2000).

actidione, trade name for cycloheximide (q.v.).

Actidium Fr. (1815), Mytilinidiaceae. 9, Europe; N. America. See Zogg (*Ber schweiz. bot. Ges.* **70**: 195, 1960; key).

Actigea Raf. (1814) = Scleroderma fide Stalpers (*in litt.*).

Actigena, see *Actigea*.

actin and **mycosin** are proteins associated with contraction and relaxation of muscle; also present in several lower eukaryotic organisms and responsible for the periodic reversal of protoplasmic streaming in the plasmodium of *Mycetozoa*.

Actiniceps Berk. & Broome (1876), Pterulaceae. 3, widespread (tropical). See Boedijn (*Persoonia* **1**: 11, 1959), Tanaka & Hongo (*Mycoscience* **42**: 433, 2001; Japan).

Actiniopsis Starbäck (1899) = Trichothelium fide Santesson (*Symb. bot. upsal.* **12** no. 1: 1, 1952), Samuels (*N.Z. Jl Bot.* **14**: 232, 1976), Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Actinobacteria (Actinomycetes; 'Ray Fungi'). A group of morphologically diverse but usually filamentous Gram positive bacteria which have occasionally been mistaken for conidial fungi. *Actinobacteria* are typically saprobes (esp. in soil) but a few are pathogenic for humans, animals, and plants; some (esp. *Streptomyces*) are important sources of antibiotics (see amphotericin, cycloheximide, nystatin, streptomycin); some form lichen-like associations with green algae (see actinolichen).

Lit.: The literature on *Actinobacteria* is extensive. A hierarchical description has been produced by Stackebrandt *et al.* (*Int. J. Syst. Bacteriol.* **47**: 479, 1997). Generic names are listed by Skerman *et al.* (*Approved lists of bacterial names*, Amended Edn, 1989). See Williams *et al.* (Eds) (*Bergey's manual of systematic bacteriology* **4**, The actinomycetes, 1989), Balows *et al.* (*The procaryotes*, 2nd edn, 1992), Goodfellow *et al.* (Eds) (*Biology of the actinomycetes*, 1984), Ortiz-Ortiz *et al.* (Eds) (*Biological, biochemical, and biomedical aspects of actinomycetes*, 1984), Goodfellow *et al.* (Eds) (*Actinomycetes in biotechnology*), Goodfellow & Williams (*Ann. Rev. Microbiol.* **37**: 189, 1983).

Actinocephalum Saito (1905) = Cunninghamella fide Hesseltine (*Mycol.* **47**: 344, 1955).

Actinochaete Ferro (1907) nom. conf., anamorphic *Pezizomycotina*. = Aspergillus (Trichocom.) p.p. and Septobasidium (Septobasid.) p.p. fide Ellis (*in litt.*).

Actinocladium Ehrenb. (1819), anamorphic *Pezizomycotina*, Hso.0bP.1. 5, widespread. See Wu & Zhuang (*Fungal Diversity Res. Ser.* **15**, 2005; China).

Actinocymbe Höhn. (1911), Chaetothyriaceae. 1 or 2, widespread (tropical). See Verma & Kamal (*Indian Phytopath.* **40**: 410, 1988).

Actinodendron G.F. Orr & Kuehn (1963) = Oncocladium fide Hughes (*CJB* **46**: 939, 1968).

Actinodermium Nees (1816) ≡ Sterbeeckia.

Actinodochium Syd. (1927), anamorphic *Pezizomycotina*, Hsp.0eH.3. 2, C. America; India.

Actinodothidopsis F. Stevens (1925) = Venturia Sacc. fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Actinodothis Syd. & P. Syd. (1914) = Amazonia fide Hansford (*Beih. Sydowia* **2**, 1961).

Actinoglyphis Mont. (1856) = Sarcographa fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Actinogyra Schol. (1934) = Umbilicaria fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

actinogyrose (**actinogyr**) (of apothecia), disc gyrose and having no proper margin.

actinolichen, a lichen-like association between a green alga and an actinomycete (e.g. *Chlorella* and *Streptomyces* sp.; Lazo & Klein, *Mycol.* **57**: 804, 1965) occurring in nature and also in mixed laboratory cultures. See Kalakoutskii *et al.* (*Actinomycetes*, n.s. **1**(2): 27, 1990; lab. expts, bibliogr.).

Actinomadura H. Lechev. & M.P. Lechev. (1968), Actinobacteria. q.v.

Actinomma Sacc. (1884) = Atichia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Actinomortierella Chalab. (1968) = Mortierella fide Gams (*Nova Hedwigia* **18**: 30, 1969).

Actinomucor Schostak. (1898), Mucoraceae. 1, widespread. See Benjamin & Hesseltine (*Mycol.* **49**: 240, 1957), Jong & Yuan (*Mycotaxon* **23**: 261, 1985), Voigt & Wöstemeyer (*Gene* **270**: 113, 2001; phylogeny), Zheng & Liu (*Nova Hedwigia* **80**: 419, 2005), Khan *et al.* (*Antonie van Leeuwenhoek* **94**: in press, 2008; zygomycosis, n.sp.).

Actinomyce Meyen (1827) nom. dub., ? Fungi.

Actinomyces Harz (1877), Actinobacteria. q.v.

Actinomycetes, see Actinobacteria.

Actinomycites D. Ellis (1916), Fossil Fungi, Actinobacteria. 1 (Jurassic), British Isles. q.v.

Actinomycodium K.M. Zalessky (1915), Fossil Fungi (anamorphic fungi) or Actinomycetes anamorphic *Pezizomycotina*. 1 (Permo-Carboniferous), former USSR.

Actinomyxa Syd. & P. Syd. (1917), Microthyriaceae. 1, Australia.

Actinonema Fr. (1849) = Spilocaea fide Sutton (*Mycol. Pap.* **141**, 1977).

Actinonema Pers. (1822) nom. dub., anamorphic *Pezizomycotina*. The type contains sterile mycelium, but often used for *Marssonina rosae* (teleomorph *Diplocarpon rosae*) (black spot of rose). See Sutton (*Mycol. Pap.* **141**, 1977).

Actinonemella Höhn. (1916) = Asteroma fide Sutton (*Mycol. Pap.* **141**, 1977).

Actinopelte Sacc. (1913) ≡ Tubakia.

Actinopelte Stizenb. (1861) = Solorinella fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Actinopeltella Doidge (1924) = Actinopeltis fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Actinopeltis Höhn. (1907), Microthyriaceae. 11, widespread. See Ellis (*TBMS* **68**: 145, 1977), Spooner & Kirk (*MR* **94**: 223, 1990), Geel & Aptroot (*Nova Hedwigia* **82**: 313, 2006; fossil taxa).

Actinophora Merr. (1943) ≡ Acinophora.

Actinoplaca Müll. Arg. (1891), Gomphillaceae (L). 4, widespread (primarily tropical). See Vězda & Poelt (*Folia geobot. phytotax.* **22**: 180, 1987), Lücking (*Biblthca Lichenol.* **65**: 1, 1997; Costa Rica), Aptroot *et al.* (*Mycotaxon* **88**: 41, 2003; Yunnan), Farkas (*Biblthca Lichenol.* **88**: 111, 2004; S Africa), Lücking *et al.* (*Lichenologist* **37**: 123, 2005; phenotype cladistics), Lücking (*Cryptog. Mycol.* **27**: 121, 2006; French Guiana).

Actinoplacomyces Cif. & Tomas. (1954) ≡ Actinoplaca.

Actinoplanes Couch (1950), Actinobacteria. q.v.

Actinopolyspora Gochn., K.G. Johnson & Kushner (1975), Actinobacteria. q.v.

Actinoscypha P. Karst. (1888) = Micropeziza fide Nannfeldt (*Bot. Notiser* **129**: 323, 1976).

Actinosoma Syd. (1930) ? = Actinopeltis fide Spooner & Kirk (*MR* **94**: 223, 1990), Eriksson & Hawksworth (*SA* **9**: 6, 1991; status).

Actinospira Corda (1854) ≡ Myxotrichum.

Actinospora Ingold (1952) [non *Actinospora* Turcz. 1835, *Ranunculaceae*] ≡ Actinosporella.

Actinosporella Descals, Marvanová & J. Webster (1999), anamorphic *Miladina*, Hso.1bH.23. 1 (in water), widespread. See Descals (*TBMS* **67**: 208, 1976), Descals & Webster (*TBMS* **70**: 466, 1978; teleomorph), Descals *et al.* (*CJB* **76**: 1647, 1998), Descals (*MR* **109**: 545, 2005).

Actinostilbe Petch (1925), anamorphic *Lanatonectria*, Hsp.0-1eH.15. 3, widespread. See Sutton (*TBMS* **76**: 97, 1981; synonym of *Sarcopodium*), Samuels & Seifert *in* Sugiyama (Ed.) (*Pleomorphic Fungi: The Diversity and its Taxonomic Implications*: 29, 1987), Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Actinostroma Klotzsch (1843) = Cymatoderma fide Donk (*Taxon* **6**: 17, 1957).

Actinosynnema T. Haseg., H. Lechev. & M.P. Lechev. (1978), Actinobacteria. q.v.

Actinoteichus Cavalc. & Poroca (1971) = Asterothyrium Müll. Arg. fide Lücking *et al.* (*Lichenologist* **30**: 121, 1998).

Actinotexis Arx (1960), anamorphic *Pezizomycotina*, Cpt.0fH.?. 1, Brazil. See von Arx (*Publções Inst. Micol. Recife* **289**: 4, 1960).

Actinothecium Ces. (1854), anamorphic *Pezizomycotina*, Cpt.0eH.?. 5, widespread.

Actinothecium Flot. (1855) = Verrucaria Schrad. fide Hawksworth (*Bull. Br. Mus. nat. Hist.* Bot. **14**: 43, 1985; placement), Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Actinothyrella Edward, Kr.P. Singh, S.C. Tripathi, M.K. Sinha & Ranade (1974) nom. dub., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Actinothyrium Kunze (1823), anamorphic *Pezizomycotina*, Cpt.0fH.?. 10, widespread. See Barnes *et al.* (*Stud. Mycol.* **50**: 551, 2004; links with *Dothistroma*).

Actinotrichum Wallr. [not traced] nom. nud., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Actonia C.W. Dodge (1935) nom. dub., Fungi. See Batra *in* Subramanian (Ed.) (*Taxonomy of fungi* **1**: 187, 1978).

Actycus Raf. (1815) nom. dub., Fungi.

aculeate, having narrow spines (Fig. 20.3).

aculeolate, having spine-like processes.

acuminate, gradually narrowing to a point.

Acumispora Matsush. (1980), anamorphic *Pezizomycotina*, Hso.≡ eH-P.1. 3, Taiwan. See Matsushima (*Matsush. Mycol. Mem.* **1**: 2, 1980), Matsushima (*Matsush. Mycol. Mem.* **6**, 1989).

Acurtis Fr. (1849) nom. dub., Physalacriaceae. A sterile form of *Armillaria mellea* s.l. when parasitized by *Entoloma abortivum* (Czederpilz *et al.*, *Mycol.* **93**: 84, 2001), not the opposite (*E. abortivum* as parasitized by *Armillaria* as suggested by Watling (*Bull. Soc. linn. Lyon* **43**(Suppl.): 449, 1970), so technically a hyphal anamorph.

acute (1) pointed (Fig. 23.41); (2) less than a right angle.

Acutocapillitium P. Ponce de León (1976), ? Agaricaceae. 3, America (tropical). See Demoulin (*in litt.*), Calonge *et al.* (*Boll. Gruppo Micol. 'G. Bresadola'* **43**: 51, 2000) ? = Glyptoderma (Lycoperd.) fide.

Adamson's fringe, the downward growing hyphae of a dermatophyte in the region above the bulb of a hair.

adapted race (Magnus), see physiologic race.

adaxial (of a basidiospore), the side next to the long axis of the basidium, usually that with the apiculus (Corner, 1948); cf. abaxial.

Adea Petr. (1928) = Seiridium fide Nag Raj & Kendrick (*Sydowia* **38**: 179, 1986).

Adella Petr. (1936) = Wojnowicia fide Sutton (*Česká Mykol.* **29**: 97, 1975).

Adelococcaceae Triebel (1993), Verrucariales. 2 gen., 13 spp.

Lit.: Triebel (*Biblthca Lichenol.* **35**: 278 pp., 1989), Matzer & Pelzmann (*Nova Hedwigia* **52**: 1, 1991), Triebel (*Sendtnera* **1**: 273, 1993), Hoffmann & Hafellner (*Biblthca Lichenol.* **77**: 181 pp., 2000), Or-

ange (*Mycotaxon* **81**: 265, 2002).

Adelococcus Theiss. & Syd. (1918), Adelococcaceae. 6 (on lichens), Europe. See Matzer & Hafellner (*Biblthca Lichenol.* **37**, 1990), Matzer & Pelzmann (*Nova Hedwigia* **52**: 1, 1991; ascospores), Etayo & Breuss (*Öst. Z. Pilzk.* **7**: 203, 1998).

Adelodiscus Syd. (1931), Helotiales. 1, Philippines.

Adelolecia Hertel & Hafellner (1984), Ramalinaceae (L). 3, Europe; N. America. See Hertel & Rambold (*Biblthca Lichenol.* **57**: 211, 1995), Ekman (*Op. Bot.* **127**, 1996), Lumbsch *et al.* (*Mol. Phylogen. Evol.* **31**: 822, 2004; posn).

Adelomyces Thaxt. (1931) = Phaulomyces fide Tavares (*Mycol. Mem.* **9**, 1985).

Adelomycetes, see Anamorphic fungi (Langeron, *Précis de Mycologie*, edn 1, 1945).

Adelopus Theiss. (1918) = Phaeocryptopus fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

adelphogamy, pseudomictic copulation of mother and daughter cells, as in some yeasts (Gäumann & Dodge, 1928: 13).

adenose, having glands; gland-like.

Aderkomyces Bat. (1961), Gomphillaceae (L). 25, neotropics. See Lücking *et al.* (*Lichenologist* **30**: 121, 1998; synonymy with *Tricharia*), Lücking *et al.* (*Lichenologist* **37**: 123, 2005; accepted genus), Lücking (*Cryptog. Mycol.* **27**: 121, 2006; French Guiana).

Adermatis Clem. (1909) = Lecania fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

adherance (of fungicides), the ability of a fungicide (or other crop protectant) to stick to a surface. Cf. retention.

adhesive disc, see holdfast.

adhesorium, the organ developed from a resting zoospore of *Plasmodiophora* for attachment to, and penetration of, the host (Aist & Williams, *CJB* **49**: 2023, 1971).

Adhogamina Subram. & Lodha (1964) = Gilmaniella fide Barron (*The genera of hyphomycetes from soil*, 1968).

adiaspiromycosis, pulmonary infection in animals (particularly soil-burrowing rodents) and rarely humans by *Emmonsia* spp., esp. *E. parva* (syn. *Haplosporangium parvum*) and *E. crescens* (Jellison, *Adiaspiromycosis* (syn. *Haplomycosis*), 1969); haplomycosis. Cf. adiaspore.

adiaspore, a large spherical chlamydospore produced in the lungs of animals by the enlargement of an inhaled conidium of *Emmonsia* spp.; cf. adiaspiromycosis. *Chrysosporium pruinosum* produces similar spores in culture (Carmichael, *CJB* **40**: 1167, 1962).

adjunct (in brewing), any legally permitted substance lacking nutritional properties added to the fermentation.

adnate (of lamellae or tubes), joined to the stipe; if lamellae, proximal end not notched (cf. sinuate); sometimes restricted to lamellae widely joined to the stipe (Fig. 19C) (cf. adnexed); (of pellicle, scales, etc.), tightly fixed to the surface.

adnexed (of lamellae), narrowly joined to the stipe (Fig. 19B) (cf. adnate); an ambiguous term.

Adomia S. Schatz (1985), Sordariomycetes. 1 (marine, on *Avicennia*), Egypt; Australia. Perhaps part of the *Ceriospora* complex, or related to *Urosporellopsis*. See Schatz (*TBMS* **84**: 555, 1985; descr.).

adpressed, see appressed.

adspersed, of wide distribution; scattered.

aduncate, bent; hooked; crooked.

Adustomyces Jülich (1979), ? Pterulaceae. 1, Europe; Africa. See Jülich (*Persoonia* **10**: 325, 1979).

adventitious septum, see septum.

adventive branching (of fruticose lichens), branching not of the normal pattern; e.g. regenerate branches produced after damage to the original branches in *Cladonia*.

Aecidiconium Vuill. (1892), ? Pucciniales. 1 (on *Pinus* (*Pinaceae*)), France.

Aecidiella Ellis & Kelsey (1897) = Pucciniosira fide Arthur (*N. Amer. Fl.* **7**: 126, 1907).

Aecidiolum Unger (1832), anamorphic *Pucciniales*. 12. Anamorph name for (0).

aecidiospore, see *Pucciniales*.

Aecidites Debey & Ettingsh. (1859), Fossil Fungi. 4 (Cretaceous, Tertiary), Europe.

Aecidium Pers. (1796), anamorphic *Pucciniales*. *c.* 600 (on angiosperms), widespread. Anamorph name for (I). The name originally applied to the aecial stage of *Puccinia* but is also widely used for the 'aecioid' aecial stages of other rust families. A number may be 'duplicate' names; some may be species of *Endophyllum* (q.v.). As with other anamorphic fungi, an *Aecidium* name is sometimes used even when there is a named teleomorphic (telial, III) state.

aecidium, see *Pucciniales*.

aeciospore, see *Pucciniales*.

aeciotelium, see *Pucciniales*.

aecium, see *Pucciniales*.

Aeciure Buriticá & J.F. Hennen (1994), anamorphic *Arthuria*. 1 (on *Croton* (*Euphorbiaceae*)), Brazil. Anamorph name for (II).

Aedispora P.J. Kilochitskii (1997), Microsporidia. 8.

Aedycia Raf. (1808) nom. rej. = Mutinus fide Stalpers (*in litt.*).

Aegerita Pers. (1801), anamorphic *Bulbillomyces*. 1, Europe. See Hennebert (*Persoonia* **7**: 191, 1973), Julich (*Persoonia* **8**: 59, 1974).

Aegeritella Bałazy & J. Wiśn. (1974), anamorphic *Pezizomycotina*, Hsp.0eH.1. 4 (on ants), Europe; Brazil. See Bałazy & Wiśniewski (*Prace Komisji Nauk Rolniczych i Komisji Nauk Leśnych* **38**: 13, 1974), Espadaler & Wisniewski (*Butlletí de la Institució Catalana d'Història Natural* secció de Botànica **54**: 31, 1987; Spain), Bałazy *et al.* (*MR* **94**: 273, 1990; Morocco).

Aegeritina Jülich (1984), anamorphic *Subulicystidium*. 1, Europe. See Jülich (*Int. J Mycol. Lichenol.* **1**: 282, 1984).

Aegeritopsis Höhn. (1903) nom. dub., Fungi.

Aenigmatomyces R.F. Castañeda & W.B. Kendr. (1994), anamorphic *Fungi*, Hso.0eH.1. 1 (on ? *Pythium*), Canada. See Castañeda Ruiz & Kendrick (*Mycol.* **85**: 1023, 1993).

Aenigmatospora R.F. Castañeda Ruiz, Saikawa, Guarro & Calduch (1999), anamorphic *Pezizomycotina*. 1, Cuba. See Castañeda *et al.* (*Cryptog. Mycol.* **20**: 115, 1999).

aequi-hymeniiferous (of hymenial development in agarics), having basidia which mature and shed their spores evenly over the surface of each lamella; the non-*Coprinus* type (Buller, *Researches* **2**: 19, 1922). cf. inaequi-hymeniiferous.

aero-aquatic fungi, fungi that grow under water but produce spores in the air above (van Beverwijk, *TBMS* **34**: 280, 1951). See Aquatic fungi.

aerobe, an organism needing free oxygen for growth; cf. anaerobe.

aerobiological pathway, the process (comprising the source, liberation, dispersion, deposition, and impact on another living organism) by which air-borne microorganisms are dispersed (Edwards, *Aerobiology*, 1979).

aerogenic, describes an organism that produces detectable gas during the breakdown of carbohydrate.

aerole (of lichens), a scale-like area on the thallus delimited by cracks or depressions.

Aerophyton Eschw. (1824) nom. dub., anamorphic *Pezizomycotina*.

Aeruginospora Höhn. (1908), ? Tricholomataceae. 2, Australia; Southeast Asia. See Horak (*N.Z. Jl Bot.* **28**: 255, 1990).

Aessosporon Van der Walt (1970), Sporidiobolaceae R.T. Moore. Anamorphs *Bullera*, *Sporobolomyces*. 2, Netherlands. See van der Walt (*Antonie van Leeuwenhoek Ned. Tijdschr. Hyg.* **36**: 54, 1970).

aethalium (of *Mycetozoa*), a sessile fruit-body made by a massing of all or a part of the plasmodium.

aetiology, the science of the causes of disease; etiology (Amer.).

Aetnensis Lloyd (1910) nom. nud., Fungi.

Aflatoxins. A series of toxic polybutole metabolites (mycotoxins) esp. of *Aspergillus flavus* strains when growing on groundnuts, cereals, etc., particularly in warm and moist conditions; most well known mycotoxin; most developed countries have statutory limits; gene probes available; the cause of **aflatoxicosis** in poultry and cattle and carcinogenic for rats and humans.

Lit.: Abbas (*Aflatoxin and food safety*, 2005), Hesseltine *et al.* (*Bact. Rev.* **30**: 795, 1966), *Aflatoxin bibliography, 1960-67*, 1968), Goldblatt (Ed.) (*Aflatoxin: scientific background, control and implications*, 1969), Racovitza (*J. gen. Microbiol.* **57**: 379, 1969; aflatoxin toxic to the mite *Glyciphagus domesticus*), Heathcote & Hibbert (*Aflatoxins: chemical and biological aspects*, 1978), Eaton & Groopman (*The toxicology of aflatoxins*, 1994), Flannigan (Ed.) (*Internat. Biodet.* **22** (Suppl.), 1986; in cereals and stored products), Williams *et al.* (*Am. J. Clin. Nutrition* **80**: 1106, 2004), Wylie & Morehouse (Eds) (*Mycotoxic fungi, mycotoxins, mycotoxicoses* **1-3**, 1977-8), Mycotoxicoses.

African histoplasmosis, infection of humans or animals by *Histoplasma capsulatum* var. *duboisii*.

African Mycological Association, Founded in 1995; recognized as the Committee for Africa within the International Mycological Association (q.v.); structure comprises individual and corporate members, and an elected executive; organizes Regional Mycology Conferences in Africa. Publications: *Mycoafrica, the AMA Newsletter*. Website: http://194.203.77.69/AfricanMycologicalAssociation.

Afroboletus Pegler & T.W.K. Young (1981), Boletaceae. 7, Africa (tropical). See Pegler & Young (*TBMS* **76**: 130, 1981), Watling & Turnbull (*Edinb. J. Bot.* **49**: 343, 1993; South and East Central Africa), Heinemann & Rammeloo (*Bulletin du Jardin Botanique National de Belgique* **64**: 215, 1995; Burundi).

AFTOL (Assembling the Fungal Tree of Life) is the title of a major project funded by the National Science Foundation of the USA, starting as a proposal in 2002 and in its second stage at the time of this edition going to press. The project has involved more than 100 collaborators in over 20 countries. The objective: to enhance understanding of evolution in the kingdom Fungi, and thereby of life on Earth in general, leading to development of diagnostic tools to aid discovery of the very many fungal species believed to exist but as yet unknown. In its first stage, the project developed broad datasets of molecular and non-molecular (i.e. morphological) characters across the kingdom, leading to the first unified phylogenetic classification system for higher ranks of the Fungi. It also resulted in the first database of fungal subcellular characters and character states, and various informational tools for studying phylogeny. The project has already made a profound impact on fungal systematics, and its findings have been incorporated in this edn of the *Dictionary*. See: Hibbett *et al.* (*MR* **111**: 509, 2007). Website: http://aftol.org.

agamic (agamous), asexual.

agar (agar-agar), a substance from certain red algae (*Gelidium* (Japan, USA), *Gracilaria* (USA), *Gigartina* (UK), *Pterocladia* (NZ), etc.) used to make culture media into gels which few microorganisms can liquefy. See Chapman (*Seaweeds and their uses*, 1950), Newton (*Seaweed utilization*, 1951), Humm (*Econ. Bot.* **1**: 317, 1947); a possible substitute using granulated tapioca or tapioca pearls (*Manihot esculenta*, cassava) has been proposed for use where agar is unavailable or prohibitively priced (Nene & Sheila, *Indian J. mycol. Pl. Path.* **24**: 159, 1994). Cf. gelatin, Media.

agaric (1) one of the *Agaricales*; **fly -**, *Amanita muscaria*; **honey -**, *Armillaria mellea*; (2) (in early medicine, obsol.), species of *Fomes* or *Polyporus*; **female, white**, or **purging -** (agaricum), *F. officinalis*; **male -**, *Phellinus igniarius* (*F. igniarius*).

Agaricaceae Chevall. (1826), Agaricales. 85 gen. (+ 80 syn.), 1340 spp.

Lit.: Kreisel (*Feddes Repert.* **64**: 89, 1962), Homrich & Wright (*Mycol.* **65**: 779, 1973), Kreisel (*Biblthca Mycol.* **36**, 1973; Germany), Brodie (*The Bird's Nest Fungi*: 199 pp., 1975), Brodie (*Lejeunia* n.s. **112**: 1, 1984; suppl.), Pegler (*Kew Bull.* Addit. Ser. **12**: 519 pp., 1986), Singer (*Agaric. mod. Tax.* 4th ed, 1986), Malloch *et al.* (*Mycol.* **79**: 839, 1987), Pegler & Young (*MR* **98**: 904, 1994), Breitenbach & Kränzlin (*Fungi of Switzerland* **4** Agarics, 2nd part: *Entolomataceae, Pluteaceae, Amanitaceae, Agaricaceae, Coprinaceae, Bolbitiaceae, Strophariaceae*: 368 pp., 1995), Sarasini & Pina (*Riv. Micol.* **38**: 237, 1995), Hibbett *et al.* (*Proc. natn Acad. Sci. U.S.A.* **94**: 12002, 1996), Kreisel & Moreno (*Feddes Repert.* **107**: 83, 1996), Sarasini & Pina (*Riv. Agaricales Underw. (1899). Agaricomycetidae. 33 fam., 413 gen., 13233 spp. Mushrooms and toadstools, Gill fungi, Agarics. Terrestrial, lignicolous, sometimes muscicolous or fungicolous, saprobic, mycorrhizal (ectomycorrhizal, exceptionally orchid mycorrhizal), rarely parasitic on plants or fungi; edible, poisonous and hallucinogenic; cosmopolitan.

The mycelium, which is frequently seen in leaf mould and decaying wood, may be perennial (with ages more than thousand years, Smith *et al.*, *Nature* **256**: 428, 1992); the expanding mycelium frequently forms fairly rings (q.v.); some species form sclerotia, hyphal cords or rhizomorphs.

Classification: Fries (*Syst. mycol.* **1-3**, 1821-1832) put almost all fleshy, lamellate toadstools in the genus *Agaricus*, his tribus being the common genera of today. He subsequently elevated several of these infrageneric groups to generic level, but later authors (Staude, Kummer, Quélet, Gillet, Karsten) made most of the changes. Fries based his genera on macroscopic characters of the basidiocarp and colour of spore print and his system had been widely used as it had the advantage that many genera could be identified on field characters. Microscopic studies of basidiocarp structure, initiated by Fayod and Patouillard, have shown a number of Fries's groupings to be unnatural, and new genera and families have been proposed. Singer's monumental work, *The Agaricales in modern taxonomy* (4th ed., 1986), treated three major groups within the *Agaricales* s. l., viz. *Agaricales* s. str., *Boletales*, and *Russulales*. These groups are still accepted in modern treatments based on molecular characters, as the euagarics clade, bolete clade, and russuloid clade (Hibbett & Thorn, *The Mycota*, **7B**, 2001) and are accepted as separate orders in this edition of the *Dictionary*. Hibbett *et al.* (*Proc. nat. Acad. Sci. USA* **94**: 1202, 1997; see also Hibbett & Thorn, *The Mycota* **7B**, 2001) concluded that the lamellate hymenophore has independently arisen in at least 5 out of the 8 clades of the *Homobasidiomycetes*. The results from the AFTOL project now recognize some 20 orders of the *Agaricomycetes* (Hibbett *et al.* (*Mycol.* **98**: 917, 2006; molecular phylogeny), Hibbett *et al.* (*MR* **111**: 109, 2007). The *Agaricales* s. str. (euagarics clade) also contain fungi of the reduced series (cyphelloid fungi; q.v.), some aphyllophorales (q.v.) and gasteromycetes (q.v.). Consequently, the *Agaricales* and most of its families cannot be characterised in morphological terms and for that reason diagnoses are not provided for many of the families. Fams:

Evol.* **44**: 412, 2007; phylogeny), Lumbsch *et al.* (*MR* **111**: 1133, 2007).

Agyriales Clem. & Shear (1931). Ostropomycetidae. 4 fam., 17 gen., 147 spp. Thallus absent. Ascomata apothecial, sometimes elongated, often domed, hymenium usually gelatinous, not blueing in iodine. Interascal tissue of branched and anastomosing paraphyses, sometimes with a well-developed pigmented epithecial layer. Asci varied in form, opening by eversion through a vertical split, and blueing faintly in iodine. Ascospores small, hyaline, aseptate, without a gelatinous sheath. Anamorphs pycnidial. Saprobic on bark and wood, esp. on conifers.

The *Agyriales* was treated for some years as a suborder of the *Lecanorales*, but molecular data confirm its placement within the *Ostropomycetidae*. It may be appropriate to place the order in synonymy with the

Pertusariales, but more studies are required. Fams:
(1) **Agyriaceae**

Air pollution. Human introduction of biological materials, chemicals and particulate matter into the atmosphere can harm fungi. Effects on many foliicolous and stem fungi, and on lichen-forming species on all substrata are well documented.

Lichens are arguably the most sensitive organisms to sulphur dioxide known, some being affected at mean levels of about 30 μg m^{-3}. The algae or cyanobacteria in lichens are particularly sensitive to pollutants such as sulphur dioxide which disrupt membranes leading to chlorophyll breakdown. Nylander (q.v.) suggested lichens could be used to monitor air quality in 1866 and there is now a vast literature on this subject. Fluorides are also highly toxic to lichens but particulate deposits (e.g. smoke), heavy metals, and photochemical smog components have less effect. Differential sensitivity due to physiological, structural, and chemical characters enables zones to

estimate pollution levels to be constructed (Hawksworth & Rose, *Nature* **227**: 145, 1970; Gilbert, *New Phytol.* **69**: 629, 1970); recolonization in response to falling sulphur dioxide levels can be dramatic (Hawksworth & McManus, *Bot. J. Linn. Soc.* **100**: 99, 1989; London); statistical and computer assisted approaches are increasingly used (e.g. Nimis *et al.*, *Stud. Geobot.* **11**, 1991).

Erysiphales and *Pucciniales* are amongst the other most sensitive fungi; *Diplocarpon rosae* (Saunders, *Ann. appl. Biol.* **58**: 103, 1966) and *Rhytisma acerinum* (Bevan & Greenhalgh, *Environ. Pollut.* **10**: 271, 1976) can also be used as pollution monitors. Numerous studies of forest decline, often in response to acid rain, have shown that endophyte and saprobic microfungi can be very strongly affected, with typically a small number of resistant (generalist) species increasing in abundance, and most other species declining in numbers (e.g. Asai *et al.*, *MR* **102**: 1316, 1998). Leaf-dwelling yeasts (*Sporobolomyces*, *Tilletiopsis*) can be cultured and the density of sporing has been found to be directly related to acidic air pollution (Dowding, *in* Richardson, *Biological indicators of pollution*: 137, 1987).

Radiation pollution has become more important since the 1986 Chernobyl disaster. In this and other cases, the amount of metal and radionuclides taken up by lichens has been used to map the extent of affected areas (Steinne *et al.*, *J. Environ. Radioact.* **21**: 65, 1993). Certain hypogeous fungi, particularly species of *Elaphomyces* accumulate radionuclides in greater quantities than almost any other living organism. After Chernobyl, radionuclides were found to be transmitted from those fungi, along a food chain via wild boar into the human population (Vilic *et al.*, *J. Environ. Radioact.* **81**: 55, 2005). Increases in lead contents from traffic, and falls since the introduction of unleaded fuel, are documented by Lawrey (*Bryologist* **96**: 339, 1993).

Fungal spores may themselves be a component of air pollution. This can be particularly problematical in modern buildings where, for example, ventilation is insufficient. In those conditions, fungi may trigger various allergic, toxic or other responses, sometimes collectively described as 'sick-building syndrome'.

Lit.: Bates & Farmer (Eds) (*Bryophytes and lichens in a changing environment*, 1992), Coleman (*J. Building Appraisal* **1**: 362, 2005), Ferry *et al.* (Eds) (*Air pollution and lichens*, 1973; incl. reviews effects on all plants and fungi), Hawksworth & Rose (*Lichens as pollution monitors*, 1976), Henderson (*Lichenologist* 1974-; twice-yearly bibl.), Nash & Wirth (Eds) (*Lichens, bryophytes and air quality*, [*Bibl. Lich.* **30**], 1988), Nieboer *et al.* (*in* Mansfield, 1976: 61; review sulphur dioxide toxicity), Purvis *et al.* (Eds) (Lichens in a changing pollution environment. *Environmental pollution* **146**: 291, 2007), Richardson (*Bot. J. Linn. Soc.* **96**: 31, 1988; *Pollution monitoring with lichens*, 1992). See also Acid rain, Allergy, Bioindicators, Ecology, Index of Atmospheric Purity, lichen desert.

Air spora. Airborne particles originating from fungi and other organisms are collectively referred to as the air spora or bioaerosol. Fungal spores are important components of the air spora. Prevalent genera are *Alternaria*, *Aspergillus*, *Aureobasidium*, *Cladosporium*, *Curvularia*, *Epicoccum*, *Fusarium*, *Geotrichum*, *Nigrospora*, *Neurospora*, *Penicillium*, *Phoma* and *Pithomyces*. Probably most originate from saprobes growing in soil or on leaf surfaces (see e.g. Levetin & Dorsey, *Aerobiologia* **22**: 3, 2006), but some may be animal or plant pathogens. Knowledge of their occurrence in air was revolutionized by use of continuously operating volumetric samplers (Hirst, *Ann. appl. Biol.* **39**: 257, 1952) out of doors and a realization of the importance of the sampling and collection efficiencies of different trapping methods in determining what is caught. The Hirst and subsequent Burkard traps have revealed the importance in the air spora of ascospores and basidiospores that were previously underestimated by using exposed horizontal sticky slides and open Petri dishes. Indoors, fungal spores are often abundant when stored products are handled but their sampling and enumeration require different methods from those used out of doors because of their smaller size and greater concentrations (see Cox & Wathes, *Bioaerosols handbook*, 1994; Elbert *et al.*, *Atmospheric Chemistry and Physics Discussions* **6**: 11317, 2006). Molecular and immunological techniques are now applied in studying and identifying air spora (see Lacey & West, 2006).

Out of doors, fungal spores are almost always present in the air but their numbers and types depend on time of day, weather, season, geographical location and the nearness of large local spore sources. Total spore concentrations may range from fewer than 200 to 2 million m^{-3}. Terrestrial fungi most commonly produce wind-dispersed spores which then settle by sedimentation, impaction or rain-wash. Active spore discharge provides a means to avoid local settling, to reach potentially turbulent air currents for more distant dispersal. In many basidiomycete species stipe and gills provide a vertical escape path for the spores. Then even delicate air current can change the gradual fall and divert them into turbulent air. Violent ascospore release is more moisture dependent; when the turgid ascus bursts, the wall contracts and spores are ejected into the air. Spores released passively (e.g. of powdery mildews, rusts and smuts) are also often abundant in the air spora, since these mostly disseminate from diseased plant material above ground.

Spores of different species exhibit characteristic circadian periodicities in their occurrence in the air spora because their method of liberation is correlated with time of day (see Spore discharge and dispersal). Spores with active mechanisms requiring water are usually most numerous in the air at night, following dew formation, or rain; those dependent on drying are most numerous in the early morning as the sun dries their colonies; those released through mechanical disturbance occur during the middle of the day, when temperatures are highest and wind speeds, turbulence and convection are greatest. However, some discomycetes release their spores after sunrise, those with large apothecia being later than those with smaller, perhaps because some drying is needed to increase pressure on the asci. *Cladosporium* is the most numerous daytime spore type throughout most of the world although, in some seasons it may be exceeded by *Alternaria* in warm dry climates or by *Curvularia* or *Drechslera* in humid climates. At night time, ascospores, basidiospores and the ballistospores of *Sporobolomyces* and related 'mirror' yeasts become most numerous. Rain initially causes an increase in spore concentrations through 'tap and puff' (Hirst & Stedman, *J. gen. Microbiol.* **33**: 335, 1963),

then washes spores from the air, and, afterwards, stimulates release of ascospores.

After exceeding canopy height, fungal spores can migrate long but measurable distances before settling (Nagarajan & Singh, *Ann. Rev. Phytopathol.* **28**: 139, 1990). Intercontinental dispersal of rust spores has been demonstrated for *Puccinia* (Asai, *Phytopathology* **50**: 535, 1960). Variations in the vertical profile of air spora and in their atmospheric concentrations has been used in prognoses for plant disease and allergy development (Lyon *et al.*, *Grana* **23**: 123, 1984; Wu *et al.*, *Atmospheric Environment* **38**: 4879, 2004; Zoppas *et al.*, *Aerobiologia* **22**: 119, 2006). For many fungi, horizontal spore concentration in air is normally minimal at 100-200 m from the source and the vertical concentration decreases logarithmically with height above ground. Fungal spore viability is important in determining migration capacity: rusts spores remain viable for many days and can carry infections great distances.

Large seasonal differences in spore concentrations occur in temperate regions, with few airborne spores in winter (see Li & Kendrick, *Grana* **34**: 199, 1995). In tropical regions, spores may be numerous all the year round although some types may be particularly favoured by wet or dry seasons (see Ogunlana, *Appl. Microbiol.* **29**: 458 (1975); Troutt & Levetin, *International J. Biometeorology* **45**: 64, 2001). Air is rich in spores of common moulds, rusts, downy and powdery mildews in dry weather, and in short-lived ascospores soon after rain. Growing crops form large sources of spores, especially of phytopathogenic fungi, whose occurrence may be correlated with crop growing seasons (see Lacey, *in* Cole & Kendrick (Eds), *Biology of conidial fungi*: 373, 1981). Sometimes, fungi pathogenic to humans can become airborne in dust in desert areas (e.g., *Coccidioides immitis*) or when deposits of guano beneath bird roosts are disturbed (*Histoplasma capsulatum*) (see also Medical mycology).

Indoors, numbers and types of airborne spores are determined by their source and, with stored products, the conditions in which they have been stored, the degree of disturbance of the substrate and the position and amount of ventilation. Concentrations of fungal spores may exceed 100 million m^{-3} air when mouldy hay and grain are handled, with *Aspergillus* and *Penicillium* spp. predominant. *Aspergillus fumigatus*, an opportunistic pathogen and frequent cause of asthma and mycotic abortion in cattle, may also be abundant. Concentrations of oyster mushroom (*Pleurotus ostreatus*) basidiospores may reach 27 million m^{-3} in growing sheds while up to 14 million m^{-3} *Penicillium* spores can be released when mouldy cork is handled. These concentrations may cause occupational allergies (see Allergy). Sampling of air indoors has shown seasonal variation in fungal spore composition, with *Cladosporium* species in one study predominating during warm periods, and *Penicillium* and *Aspergillus* predominating in winter (Medrela-Kuder, *International biodeterioration & biodegradation* **52**: 203, 2003). Species of *Cladosporium* common in indoor air spora can trigger allergic reactions. In Japan, *Trichosporon* sp. present in indoor air spora has been correlated with development of allergic alveolitis (Summerbell *et al.*, *Journal of Medical and Veterinary Mycology* Suppl. **1**: 279, 1992).

Allelochaeta Petr. (1955) = Seimatosporium fide Sutton (*Mycol. Pap.* **141**, 1977).

Alleppeysporonites Ramanujam & Rao (1979), Fossil Fungi, anamorphic *Pezizomycotina*. 1 (Miocene), India. Fossil *Grallomyces*.

Allergy. An acquired, specific, altered capacity to react. It is acquired by exposure to allergenic particles; the sensitivity acquired from a single exposure is specific to one or a few closely related species, although multiple exposures may result in multiple sensitivities; and subsequent re-exposure results in an altered capacity to react or allergic reaction. The form of that reaction depends on the nature of the allergenic particle, for instance, its size and chemical characteristics, the immunological reactivity of the subject and the circumstances of exposure. The two forms of allergy of most concern in this context are an immediate reaction, characterized by rhinitis and hay fever-like symptoms and a late reaction, characterized by alveolitis or pneumonitis. Fungal spores have been implicated as causative agents of both types of allergic reaction. Rhinitis and asthma are caused by normal everyday exposure to airborne allergens in subjects who are constitutionally predisposed (atopic) and who produce specific IgE antibodies against the allergen. Symptoms occur within a few minutes of exposure and may be provoked by 10^4 spores/m^{-3} air, or fewer, typically of fungi with spores larger than 10 µm. The spores may be components of the normal air spora, including *Alternaria*, *Cladosporium* and *Didymella*, or they may be associated with work environments, for instance cereal rusts and smuts, and *Verticillium lecanii* spores when harvesting *Agaricus bisporus* and *Boletus edulis* when preparing mushroom soup, and *Aspergillus flavus* and *A. awamori* from surface fermentations. Asthma may also be associated with exposure to fungal enzymes during their production. Allergic alveolitis occurs in non-atopic subjects after intense exposures to spores, typically 10^6-10^{10} spores/m^{-3}. At least 10^8 spores/m^{-3} may be required for sensitization but species differ in their antigenicity. Symptoms occur about 4 h after exposure and persist for 24-36 h if there is no further exposure. They include influenza-like symptoms, feverishness, chills, a dry cough, breathlessness and weight loss. With repeated exposure, breathlessness becomes increasingly severe and eventually permanent lung damage may occur with fibrosis, and the increased load on the heart may lead to death. Specific IgG antibodies develop and may be an aid to diagnosis although implication of a fungus in the disease may require further tests. The disease is typically occupational and associated with poorly stored agricultural products. The classic form is farmer's lung, usually caused by thermophilic actinomycetes but sometimes by fungi, including *Aspergillus flavus*, *A. versicolor* and *Eurotium rubrum* (syn. *Aspergillus umbrosus*). Other forms of allergic alveolitis include cheese-washer's lung (*Penicillium casei*), malt-worker's lung (*Aspergillus clavatus*, *A. fumigatus*), maple-bark stripper's lung (*Cryptostroma corticale*), mushroom picker's lung (*Aspergillus fumigatus*, *Cephalotrichum stemonitis*, *Pholiota nameko*, *Pleurotus ostreatus*), sawmill worker's lung (*Rhizopus rhizopodiformis*, *Penicillium* spp., *Aspergillus fumigatus*, *Trichoderma viride*), sequoiosis (*Aureobasidium pullulans*, *Graphium* spp.), suberosis (*Penicillium frequentans*), and allergic alveolitis from citric acid fermentations (*Aspergillus fumigatus*, *A. niger*, *Penicillium* spp.). Mouldy lichens have also been reported to cause allergic alveolitis.

Allergic skin reactions may be caused by spores of the *Arthrinium arundinis* state of *Apiospora montagnei* in workers cutting the canes of *Arundo donax* in France, by contact with lichens in wood-cutters and people using lichens in decorations (Richardson, *in* Galun (Ed.), *CRC Handbook of lichenology* **3**: 98, 1988; review), and secondary to dermatophyte infections (see mycid). Allergic reactions are also com-

mon in response to certain fungal products, the best known example being allergy to antibiotics such as penicillin.

For further information, see Pepys (*Hypersensitivity diseases of the lungs due to fungi and organic dusts*, 1969), Wilken-Jensen & Gravesen (*Atlas of moulds in Europe causing respiratory allergy*, 1984), Lacey (*in* Hawksworth (Ed.), *Frontiers in mycology*: 157, 1991), Lacey & Crook (*Ann. occup. Hyg.* **32**: 515, 1988), Lacey & Dutkiewicz (*J. Aerosol Sci.*, 1994).

Allophoron Nádv. (1942), Lecanorales (L). 1, Colombia. See Tibell (*Recollecting Edvard August Vainio*: 95, 1998), Tibell *et al.* (*Mycotaxon* **87**: 3, 2003).

Allophylaria (P. Karst.) P. Karst. (1870), Helotiaceae. *c.* 6, Europe. See Carpenter (*Mem. N. Y. bot. Gdn* **33**: 17, 1981), Arendholz (*Mycotaxon* **36**: 283, 1989; nomencl.), Huhtinen (*Karstenia* **29**: 45, 1989).

Allopsalliota Nauta & Bas (1999), Agaricaceae. 1, Netherlands. See Nauta (*Belg. Jl Bot.* **131**: 189, 1998), Vellinga (*MR* **108**: 354, 2004; phylogeny).

Allopuccinia H.S. Jacks. (1931) = Sorataea fide Cummins & Hiratsuka (*Illustr. Gen. Rust Fungi rev. edit.*, 1983).

Allosoma Syd. (1926), Dothideomycetes. Anamorph *Periconiella*. 1, C. America. See *Acrodesmis*.

Allosphaerium Link (1826) nom. dub., Agaricomycotina. See Saccardo (*Syll. fung.* **15**, 1901; syn. of *Rhizoctonia* s. lat.).

Allotelium Syd. (1939), Raveneliaceae. 1 (on *Calliandra* (*Leguminosae*)), S. America. May include *Diabolidium*.

Allothyriella Bat., Cif. & Nascim. (1959), anamorphic *Pezizomycotina*, Cpt.≡ eP.?. 2, C. America; Africa. See Batista *et al.* (*Mycopath. Mycol. appl.* **11**: 11, 1959).

Allothyrina Bat. & J.L. Bezerra (1964), anamorphic *Pezizomycotina*, Cpt.≡ eH.?. 1, Brazil. See Batista & Bezerra (*Portugaliae Acta Biologica* Série B **7**: 384, 1964).

Allothyriopsis Bat., Cif. & H. Maia (1959), anamorphic *Pezizomycotina*, Cpt.≡ eP.?. 1, Ghana. See Batista *et al.* (*Mycopath. Mycol. appl.* **11**: 14, 1959).

Allothyrium Syd. (1939), Asterinaceae. 1, Ecuador.

Almbornia Essl. (1981), Parmeliaceae (L). 2, S. Africa. See Brusse (*Mycotaxon* **40**: 265, 1991), Thell *et al.* (*Mycol. Progr.* **3**: 297, 2004; phylogeny), Crespo *et al.* (*Mol. Phylogen. Evol.* **44**: 812, 2007; phylogeny).

Almeidaea Cif. & Bat. (1962) [non *Almeidaea* Post & Kuntze 1903, *Rutaceae*] = Chaetothyrium fide von Arx & Müller (*Stud. Mycol.* **9**, 1975), Panwar & Jagtap (*Geobios* New Rep. **9**: 121, 1990).

Alnicola Kühner (1926) = Naucoria fide Reid (*TBMS* **82**: 191, 1984).

Alocospora J.C. Krug (1990) nom. inval., Xylariaceae. 1, Europe. See Krug (*Fourth International Mycological Congress Abstracts*: 30, 1990).

Aloysiella Mattir. & Sacc. (1908) = Antennularia fide von Arx & Müller (*Stud. Mycol.* 9, 1975).

Alpakesa Subram. & K. Ramakr. (1954), anamorphic *Pezizomycotina*, Hso.0eH.1. 4, India. See Morgan-Jones *et al.* (*CJB* **50**: 877, 1972), Matsushima (*Matsush. Mycol. Mem.* **5**, 1987), Punithalingam (*Stud. Mycol.* **31**: 113, 1989; appendages), Abbas *et al.* (*Pakist. J. Bot.* **35**: 249, 2003).

Alpakesiopsis Abbas, B. Sutton, Ghaffar & A. Abbas (2003), anamorphic *Pezizomycotina*. 1, Pakistan. See Abbas *et al.* (*Pakist. J. Bot.* **35**: 249, 2003).

alpha-spore (**A-spore**, **α-spore**), a fertile, fusoid to oblong, biguttulate spore of an anamorph of the *Valsaceae* (*Phomopsis*). Cf. beta-spore.

Alphitomorpha Wallr. (1819) nom. superf. = Erysiphe fide Fries (*Syst. mycol.* **3**: 234, 1829).

Alphitomorphaceae Corda (1842) = Erysiphaceae.

Alphitomyces Reissek (1856) ? = Isaria fide Samson (*Stud. Mycol.* **6**, 1974).

alpine mycology, see Polar and alpine mycology.

Alpova C.W. Dodge (1931), Paxillaceae. 20, widespread (esp. north temperate). See Trappe (*Beih. Nova Hedwigia* **51**: 279, 1975), Bruns *et al.* (*Mol. Ecol.* **7**: 257, 1998; phylogeny), Grubisha *et al.* (*Mycol.* **93**: 82, 2001; genus probably polyphyletic), Nouhra *et al.* (*Mycol.* **97**: 598, 2005).

Alternaria Nees (1816), anamorphic *Lewia*, Hso.#eP.26. 299, widespread. *A. brassicae* (leaf spot of crucifers), *A. cucumerina* (cucurbit leaf spot), *A. longipes*, and others, on tobacco, *A. solani* (early blight of potato) which produces the highly phytotoxic antibiotic alternaric acid (q.v.). A number are common cosmop. Saprobes. See Neergard (*Danish Species of Alternaria and Stemphylium*, 1945; Denmark), Joly (*Le Genre Alternaria*, 1964; monogr.), Simmons (*Mycol.* **59**: 73, 1967; typification), Rao (*Nova Hedwigia* **17**: 219, 1969; India), Simmons (*Mycol.* **61**: 1, 1969; teleomorphs), Ellis (*Dematiaceous Hyphomycetes*, 1971; descriptions), Ellis (*More Dematiaceous Hyphomycetes*, 1976; descriptions), Ando & Takatori (*Mycopathologia* **100**: 17, 1987; keratomycosis), Samson & Frisvad (*Proc. Jap. Assoc. Mycotoxic.* **32**: 3, 1990; mycotoxins), Simmons (*Mycotaxon* **38**: 251, 1990; teleomorphs), Chełkowski & Visconti (*Alternaria. Path.* **55**: 485, 2006; *Triticum*), Schoch *et al.* (*Mycol.* **98**: 1041, 2006; phylogeny), Simmons (*CBS Diversity Ser.* **6**, 2007; revision, nomenclator).

Alternariaceae Earle (1934) = Pleosporaceae.

Alternariaster E.G. Simmons (2007), Pleosporaceae. 1. See Simmons (*Alternaria: an Identification Manual*, 2007).

alternaric acid, a metabolite produced by *Alternaria solani* which inhibits spore germination in some fungi and causes wilting and necrosis in higher plants.

alternate host, one or other of the two unlike hosts of an heteroecious rust. See *Teliomycetes*.

alternation of generations, the succession of gametophyte and sporophyte or sexual and asexual phases in a life cycle: **homologous** when the two generations are like in form; **antithetic** if unlike, when the gametophyte is named the **protophyte** and the sporophyte the **antiphyte** (Celakovsky).

Alutaceodontia (Parmasto) Hjortstam & Ryvarden (2002), Schizoporaceae. 1. See Hjortstam & Ryvarden (*Syn. Fung.* **15**: 8, 2002).

alutaceous, the colour of buff leather.

alveola (1) a small surface cavity or hollow; (2) a pore of a polypore (obsol.).

Alveolaria Lagerh. (1892), Pucciniosiraceae. 2 (on *Cordia* (*Boraginaceae*)), America (tropical). See Buriticá & Hennen (*Fl. Neotrop.* **24**: 22, 1980).

alveolate, marked with ± 6-sided (honey-comb-like) hollows; faveolate.

Alveolinus Raf. (1815) nom. dub., Fungi. No spp. included.

Alveomyces Bubák (1914) = Uromyces fide Nattrass (*First list Cyprus fungi*, 1937).

Alveophoma Alcalde (1952), anamorphic *Pezizomycotina*, Cpd.0eH.10. 1, Spain. See Sutton (*TBMS* **47**: 497, 1964).

Alysia Cavalc. & A.A. Silva (1972) = Vouauxiella fide Sutton (*The Coelomycetes*, 1980), Lücking *et al.* (*Lichenologist* **30**: 121, 1998).

Alysidiella Crous (2006), Pezizomycotina. 1 (on *Eucalyptus* leaves), S. Africa. See Crous (*Fungal Diversity* **23**: 325, 2006).

Alysidiopsis B. Sutton (1973), anamorphic *Pezizomycotina*, Hso.0-1eP.3. 4, widespread. See Sutton (*Mycol. Pap.* **132**: 5, 1973), Currah (*CJB* **65**: 1957, 1987; Mexico), Kendrick (*CJB* **81**: 75, 2003; morphogenesis).

Alysidium Kunze (1817), anamorphic *Botryobasidium*. 4, Europe. See Ellis (*Dematiaceous Hyphomycetes*, 1971), Partridge & Morgan-Jones (*Mycotaxon* **83**: 335, 2002).

Alysisporium Peyronel (1922) = Phragmotrichum fide Sutton & Pirozynski (*TBMS* **48**: 349, 1965).

Alysphaeria Turpin (1827) nom. dub., ? Fungi (L).

Alytosporium Link (1824) nom. dub., Fungi. See Donk (*Taxon* **12**: 156, 1963) See also, Stalpers (*Rev. Mycol.* **39**: 99, 1975).

Alyxoria Gray (1821) = Opegrapha Ach. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

AM, arbuscular mycorrhiza; see Mycorrhiza.

amadou, the context of *Fomes fomentarius* or *Phellinus igniarius* after the addition of saltpetre ($NaNO_3$); tinder; touchwood; punk.

Amallospora Penz. (1897), anamorphic *Pezizomycotina*, Hsp.1bH.?. 1, Java. See Ho *et al.* (*Mycol.* **92**: 582, 2000), Descals (*MR* **109**: 545, 2005).

Amandinea M. Choisy (1950) ≡ Amandinea M. Choisy ex Scheid. & M. Mayrhofer.

Amandinea M. Choisy ex Scheid. & M. Mayrhofer (1993), Caliciaceae (L). 34, widespread. See Sheard & May (*Bryologist* **100**: 159, 1997; N. Am.), Grube & Arup (*Lichenologist* **33**: 63, 2001; polyphyly), Nordin & Mattsson (*Lichenologist* **33**: 3, 2001; morphology, phylogeny), Helms *et al.* (*Mycol.* **95**: 1078, 2003; phylogeny), Peršoh *et al.* (*Mycol. Progr.* **3**: 103, 2004; asci), Simon *et al.* (*J. Mol. Evol.* **60**: 434, 2005; introns), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny).

Amanita Adans. (1763) nom. dub., Agaricales. See Donk (*Beih. Nova Hedwigia* **5**, 1962).

Amanita Dill. ex Boehm. (1760) nom. rej. ≡ Agaricus L.

amanita factor B, see pantherine; - - **C**, see ibotenic acid.

Amanita Pers. (1797), Amanitaceae. *c.* 500, widespread. Many species ectomycorrhizal, but members of subgen. *Lepidella* partly saprobic. Both edible (e.g. *A. caesarea* and poisinous (e.g. *A. phalloides*) species. See Malençon (*Rev. Mycol.* **20**: 81, 1955; development), Bas (*Persoonia* **5**: 285, 1969; key sect. *Lepidella*), Bas (*Beih. Nova Hedwigia* **51**: 53, 1975; relationship to *Amanita*), Campbell & Petersen (*Mycotaxon* **1**: 239, 1975; culture), Horak (*Mycol.* **84**: 64, 1992), Pegler & Shah-Smith (*Mycotaxon* **61**: 389, 1997; key eastern Africa), Wood (*Aust. Syst. Bot.* **10**: 723, 1997; key Australia), Yang (*Biblthca Mycol.* **170**: 1, 1997; key Southwest China), Weiß *et al.* (*CJB* **76**: 1070, 1998; phylogeny), Drehmel *et al.* (*Mycol.* **91**: 610, 1999; phylogeny), Yang *et al.* (*Amanita – Ectomycorrhizal fungi, key genera in profile*, 1999; ecology), Miller & Lodge (*Mycotaxon* **79**: 289, 2001; Dominican Republica), Tulloss *et al.* (*Mycotaxon* **77**: 455, 2001; Pakistan), Bougher & Lebel (*Aust. Syst. Bot.* **15**: 514, 2002), Moncalvo *et al.* (*Mol. Phylog. Evol.* **23**: 357, 2002; nesting within *Amanita*), Oda *et al.* (*Mycoscience* **43**: 351, 2002; Japan), Simmons *et al.* (*Persoonia* **17**: 563, 2002; Guyana), Bhatt *et al.* (*Mycotaxon* **88**: 249, 2003; India), Neville & Hemmes (*Fungi Europaei* **9**: 1120 pp., 2004; Eur.), Yang (*Frontiers in Basidiomycote Mycology*: 315, 2004; Chile), Tulloss (*Mycotaxon* **93**: 189, 2005; distribution).

Amanitaceae R. Heim ex Pouzar (1983), Agaricales. 3 gen. (+ 23 syn.), 521 spp.

Lit.: Hibbett *et al.* (*Nature* **407**: 506, 2000), Moncalvo *et al.* (*Syst. Biol.* **49**: 278, 2000) not supported by other data; see.

Amanitaria E.-J. Gilbert (1941) = Amanita Pers. fide Singer (*Agaric. mod. Tax.* edn 3, 1975).

Amanitella Earle (1909) = Amanita Pers. fide Singer (*Agaric. mod. Tax.* edn 3, 1975).

Amanitella Maire (1913) = Limacella fide Singer (*Agaric. mod. Tax.* edn 3, 1975).

amanitin, see amatoxins.

Amanitina E.-J. Gilbert (1940) = Amanita Pers. fide Singer (*Agaric. mod. Tax.* edn 3, 1975).

Amanitopsis Roze (1876) nom. cons. = Amanita Pers. fide Singer (*Agaric. mod. Tax.* edn 3, 1975) not conserved against *Amanita*.

Amarenographium O.E. Erikss. (1982), anamorphic *Amarenomyces*, St.#eP.15. 1, Europe. See Nag Raj (*CJB* **67**: 3169, 1989; redescr.).

Amarenomyces O.E. Erikss. (1981), Pleosporales. Anamorph *Amarenographium*. 1 (on *Ammophila*), Europe. See Shoemaker & Babcock (*CJB* **67**: 1500, 1989).

Amarrendia Bougher & T. Lebel (2002) = Amanita. The gastroid form has been previously recognised as a separate genus. fide Kuyper (*in litt.*).

Amastigis Clem. & Shear (1931) ≡ Amastigosporium.

Amastigomycètes Clem. & Shear (1931) ≡ Amastigosporium.

Amastigomycota, the zygo-, asco-, and basidiomycetes (Whittaker, 1969).

Amastigosporium Bond.-Mont. (1921) = Mastigosporium fide Hughes (*Mycol. Pap.* **36**, 1951).

amatoxins, cyclic octopeptides (including α-amanitin and β-amanitin, amanin, and the non-toxic amanillin) toxic to humans from *Amanita phalloides*, etc. See Wieland (*Science* **159**: 951, 1968), Wieland (*Peptides of poisonous Amanita mushrooms*, 1986). Cf. phallotoxins.

Amaurascopsis Guarro, Gené & De Vroey (1992), Gymnoascaceae. 2, Burundi; Honduras. See Guarro

et al. (*Mycotaxon* **45**: 171, 1992), Hentic (*BSMF* **116**: 173, 2000; phylogeny), Sugiyama *et al.* (*Stud. Mycol.* **47**: 5, 2002; phylogeny).

Amauroascaceae Arx (1987) ? = Onygenaceae.

Amauroascus J. Schröt. (1893), ? Onygenaceae. Anamorph *Chrysosporium*. 14, widespread. See von Arx (*Persoonia* **6**: 374, 1971), Currah *in* Hawksworth (Ed.) (*Ascomycete Systematics. Problems and Perspectives in the Nineties* NATO ASI Series vol. **269** **269**: 370, 1994), Sugiyama *et al.* (*Mycoscience* **40**: 251, 1999; DNA), Udagawa & Uchiyama (*Mycoscience* **40**: 277, 1999), Udagawa & Uchiyama (*Mycoscience* **40**: 291, 1999), Hentic (*BSMF* **116**: 173, 2000; phylogeny), Sugiyama *et al.* (*Stud. Mycol.* **47**: 5, 2002; phylogeny).

Amauroderma (Pat.) Torrend (1920) = Amauroderma Murrill fide Donk (*Persoonia* **1**: 184, 1960).

Amauroderma Murrill (1905), Ganodermataceae. *c.* 30, widespread (tropical). See Furtado (*Mem. N. Y. bot. Gdn* **34**: 1, 1980), Ryvarden & Johansen (*Prelim. Polyp. Fl. E. Afr.*: 315, 1980; key 11 Afr. spp.), Corner (*Beih. Nova Hedwigia* **75**: 45, 1983; keys S. Am. & Malaysian spp.), Ryvarden (*Syn. Fung.* **18**: 57, 2004), Decock & Herrera Figueroa (*Cryptog. Mycol.* **27**: 3, 2006; neotropical spp.).

Amaurodon J. Schröt. (1888), Thelephoraceae. 9, widespread. See Kõljalg (*Syn. Fung.* **9**: 32, 1996; key), Agerer & Bougher (*Aust. Syst. Bot.* **14**: 599, 2001; blue-spored sp.).

Amaurohydnum Jülich (1978), Meruliaceae. 1, Australia. See Jülich (*Persoonia* **9**: 455, 1978).

Amauromyces Jülich (1978), Meruliaceae. 2, Australia; Japan; Réunion. See Jülich (*Persoonia* **9**: 455, 1978), Chen & Oberwinkler (*Mycol.* **96**: 418, 2004; Japan).

Amazonia Theiss. (1913), Meliolaceae. 29 (from leaves), widespread (pantropical). See Hosagoudar (*Nova Hedwigia* **52**: 81, 1991; ascospore germination), Hosagoudar (*Meliolales of India*: 363 pp., 1996; India), Hu *et al.* (*Flora Fungorum Sinicorum* **4**. Meliolales: 270 pp., 1996; China), Hu *et al.* (*Flora Fungorum Sinicorum* **11**, 1999; China), Hosagoudar (*Zoos' Print Journal* **18**: 1243, 2003; endemism), Hosagoudar (*Sydowia* **55**: 168, 2003; diagnostic formulae).

Amazoniella Bat. & H. Maia (1960) = Amazonia fide Hughes (*in litt.*).

Amazonomyces Bat. & Cavalc. (1964), Arthoniaceae (L). 2, neotropics. See Lücking *et al.* (*Lichenologist* **30**: 121, 1998), Grube & Lücking (*MR* **105**: 1007, 2001; ascogenous hyphae).

Amazonotheca Bat. & H. Maia (1959), Schizothyriaceae. 1, Philippines. See Batista & Maia (*Publções Inst. Micol. Recife* **56**: 408, 1959).

Amazonspora C. Azevedo & E. Matos (2003), Microsporidia. 1. See Azevedo & Matos (*J. Parasit.* **89**: 336, 2003).

Amber. This is an important medium for the study of fossil fungi because soft structures may be retained which are generally lost in rock-preserved fossils. Hyphomycetes and coelomycetes associated with spruce seedlings have been found preserved in baltic amber (Dörfelt & Schmidt, *Bot. J. Linn. Soc.* **155**: 449, 2007), and coelomycetes have been found preserved in Dominican amber (Poinar, *MR* **107**: 117, 2003). Basidiomycetes (including basidiomycete parasites on other basidiomycetes) have been reported from early cretaceous Burmese amber (Poinar & Buckley, *MR* **111**: 503, 2007). For reports of fungi on arthropods in amber, including *Entomophthora* sp. on *c.* 25 million year old winged termite from Oligocene-Miocene (Dominican Republic), and for reports on carnivorous fungi in amber, see Fossil fungi. See Poinar & Thomas (*Mycol.* **74**: 332, 1982; lichens), Rikkinen & Poinar (*MR* **104**: 7, 2000; lichens), Waggoner & Poinar (*J. Protozool.* **39**: 639, 1992; myxomycete). See also Fossil fungi.

ambimobile, systemic fungicides which can move upward in the xylem or downward in the phloem.

ambiregnal (of organisms), ones that can be classified in more than one kingdom according to different systematic viewpoints; esp. of those which can potentially be treated under different *Codes*. See Nomenclature, Corliss (*BioSystems* **28**: 1, 1993), Patterson & Larsen (*Regnum veg.* **123**: 197, 1991).

Ambispora C. Walker, Vestberg & A. Schüssler (2007), Ambisporaceae. 4, widespread. See Walker *et al.* (*MR* **111**: 147, 2007).

Ambisporaceae C. Walker, Vestberg & A. Schüssler (2007), Archaeosporales. 1 gen., 4 spp.

Ambivina Katz (1974), Corticiaceae. 1, USA. See Katz (*Nova Hedwigia* **25**: 811, 1974).

Amblyospora E.I. Hazard & Oldacre (1975), Microsporidia. 19.

Amblyosporiopsis Fairm. (1922) = Oedocephalum fide Clements & Shear (*Gen. Fung.*, 1931).

Amblyosporium Fresen. (1863), anamorphic *Pezizomycotina*, Hso.0eH.40. 3, Europe. *A. botrytis* (on agarics, esp. *Lactarius*). See Nicot & Durand (*BSMF* **81**: 623, 1966), Pirozynski (*CJB* **47**: 325, 1969), Kendrick (*CJB* **81**: 75, 2003; morphogenesis).

Ambrodiscus S.E. Carp. (1988), Helotiales. 1 (bark beetle galleries), USA. See Carpenter (*Mycol.* **80**: 320, 1988).

ambrosia fungi, Fungi, often yeasts (e.g. *Ambrosiozyma*, *Ascoidea* and *Dipodascus* spp., etc.) or yeast-like (conidial *Ophiostomatales*), that grow mutualistically in tunnels of ambrosia beetles (wood-boring *Scolytidae*) and serve as food for larvae and adults; many are specific for the particular insect (Batra, *Trans. Kansas Acad. Sci.* **66**: 213, 1963; *Mycol.* **59**: 981, 1968; key gen.); some are associated with devastating tree diseases.

Lit.: Mueller & Gerardo (*Ann. Rev. Entom.* **36**: 563, 2005), Wingfield *et al.* [Eds] (*Ceratocystis and Ophiostoma: taxonomy, ecology and pathology*, 1993). - **gall**, see gall.

Ambrosiaemyces Trotter (1934), Pezizomycotina. 1 (on wood damaged by ambrosia beetles), Sri Lanka.

Ambrosiella Brader (1964), anamorphic *Ceratocystidaceae*, Hsy.0eH.1/38. 9 (in bark beetle galleries), widespread. Polyphyletic; some species belong to the *Ophiostomataceae*. See Batra (*Mycol.* **59**: 986, 1968; key), Cassar & Blackwell (*Mycol.* **88**: 596, 1996; convergent evolution), Blackwell & Jones (*Biodiv. Cons.* **6**: 689, 1997; biology), Rollins *et al.* (*Mycol.* **93**: 991, 2001; phylogeny), Spatafora (*Cellular Origin and Life in Extreme Habitats* **4**: 591, 2002; symbiosis), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny).

Ambrosiozyma Van der Walt (1972), ? Saccharomycetales. 6, widespread. Perhaps allied to the *Saccharomycopsidaceae*. See Goto & Takami (*J. gen. appl. Microbiol.* Tokyo **32**: 271, 1986), Jones & Blackwell (*MR* **102**: 661, 1998), Smith *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 129,

1998), Suh *et al.* (*Mycol.* **98**: 1006, 2006; phylogeny).

Ameghiniella Speg. (1888), Helotiaceae. 2, N. & S. America. See also *Ionomidotis*. See Zhuang (*Mycotaxon* **31**: 261, 1988; key), Gamundí (*MR* **95**: 1131, 1991), Gamundí & Romero (*Fl. criptog. Tierra del Fuego* **10**, 1998).

amend, the act and result of making an alteration, not necessarily to correct a fault or error. Cf. emend.

Amepiospora Locq. & Sal.-Cheb. (1980), Fossil Fungi. 5, Cameroon.

Ameris Arthur (1906) = Phragmidium fide Arthur (*Manual Rusts US & Canada*, 1934).

Amerobotryum Subram. & Natarajan (1976) = Agaricostilbum fide Subramanian & Natarajan (*Mycol.* **69**: 1224, 1977).

Amerodiscosiella M.L. Farr (1961), anamorphic *Pezizomycotina*, Cpt.0eH.15. 1, Cambodia; Brazil. See Sutton (*TBMS* **60**: 525, 1973), Nag Raj (*CJB* **53**: 2435, 1975), Farr (*Taxon* **26**: 580, 1977; typification), Patil (*Geobios* New Rep. **9**: 173, 1990; India).

Amerodiscosiellina Bat. & Cavalc. (1966), anamorphic *Pezizomycotina*, Cpt.0eH.?. 1, Brazil. See Batista & Cavalcanti (*Atas Inst. Micol. Univ. Pernambuco* **3**: 185, 1966).

Amerodothis Theiss. & Syd. (1915) = Botryosphaeria fide von Arx & Müller (*Beitr. Kryptfl. Schweiz* **11** no. 1, 1954).

Ameromassaria Hara (1918), Pezizomycotina. 1, Japan.

Ameropeltomyces Bat. & H. Maia (1967) = Arthonia fide Lücking *et al.* (*Lichenologist* **30**: 121, 1998).

amerospore, a 1-celled (i.e. non-septate) spore with a length/width ratio < 15:1 (cf. scolecospore); if elongated, axis single and not curved through more than 180° (cf. helicospore); any protuberances < $^1/_4$ spore body length (cf. staurospore). See Anamorphic fungi.

Amerosporiella Höhn. (1916) nom. illegit., anamorphic *Pezizomycotina*, Hso.0eH/1eP.?. 1, Europe.

Amerosporina (Petr.) Petr. (1965) = Amerosporium fide Sutton (*The Coelomycetes*, 1980).

Amerosporiopsis Petr. (1941), anamorphic *Pezizomycotina*, Cpd.0eH.15. 1, Iran. See Sutton (*The Coelomycetes*, 1980), Nag Raj & DiCosmo (*Univ. Waterloo Biol. Ser.* **20**, 1982).

Amerosporis Clem. & Shear (1931) ≡ Amerosporiella.

Amerosporium Speg. (1882), anamorphic *Zoellneria*, St.0eP.15. 2, widespread. See Sutton (*The Coelomycetes*, 1980), Johnston & Gamundí (*N.Z. Jl Bot.* **38**: 493, 2000).

Amerostege Theiss. (1916) nom. dub., ? Fungi. See von Arx & Müller (*Beitr. Kryptfl. Schweiz* **11** no. 1, 1954).

Amerosympodula Matsush. (1996), anamorphic *Pezizomycotina*, Hso.?.?. 1, Peninsular Malaysia. See Matsushima (*Matsush. Mycol. Mem.* **9**: 1, 1996).

Ameson Sprague (1977), Microsporidia. 4.

Amethicium Hjortstam (1983), Phanerochaetaceae. 1, Tanzania. See Hjortstam (*Mycotaxon* **17**: 557, 1983).

ametoecious, see autoecious (q.v.; de Bary).

Amicodisca Svrček (1987), Hyaloscyphaceae. 5, Europe. See Svrček (*Česká Mykol.* **41**: 16, 1987), Huhtinen (*Karstenia* **29**: 45, 1990), Raitviir (*Czech Mycol.* **52**: 289, 2001; key), Raitviir (*Mycotaxon* **87**: 359, 2003), Raitviir (*Scripta Mycologica* Tartu **20**, 2004).

Amidella E.-J. Gilbert (1940) = Amanita Pers. fide Singer (*Agaric. mod. Tax.* edn 3, 1975).

amixis, see heterothallism.

ammonia fungi, a chemoecological group in which reproductive structures develop after the addition of ammonia, urea, etc. or alkalis to the soil (Sagara, *Contrib. biol. Lab. Kyoto Univ.* **24**: 205, 1975).

Amoebochytrium Zopf (1884), Cladochytriaceae. 1, Europe.

amoeboid, not having a cell wall and changing in form, like an amoeba.

amoeboid cell (of *Ameobidiales*), uninucleate cells, formed by protoplasmic cleavage within the fungal thallus, which lack a rigid wall and when released usually encyst, the cysts, in time, producing cystospores.

Amoebomyces Bat. & H. Maia (1965) = Strigula fide Lücking *et al.* (*Lichenologist* **30**: 121, 1998).

Amoebophilus P.A. Dang. (1910), Cochlonemataceae. 4, Europe; N. America. See Drechsler (*Mycol.* **27**: 33, 1935), Drechsler (*Mycol.* **51**: 787, 1959), Barron (*CJB* **61**: 3091, 1983).

Amoenodochium Peláez & R.F. Castañeda (1996), anamorphic *Pezizomycotina*, Hso.?.?. 1, Goa. See Peláez & Castañeda Ruíz (*Mycotaxon* **60**: 258, 1996).

Amoenomyces R.F. Castañeda, Saikawa & Hennebert (1996), anamorphic *Pezizomycotina*, Hso.?.?. 1, Cuba. See Castañeda Ruíz *et al.* (*Mycotaxon* **59**: 453, 1996), Castañeda Ruíz *et al.* (*MR* **104**: 107, 2000; comp. with *Bulbocatenospora*).

Amogaster Castellano (1995), Agaricales. 1, USA. Perhaps *Boletales*. See Castellano (*Mycotaxon* **55**: 186, 1995).

Amorosia Mantle & D. Hawksw. (2006), ? Sporormiaceae. 1 (from intertidal sediment), Bahamas. See Mantle & Hawksworth (*MR* **110**: 1373, 2006).

Amorphomyces Thaxt. (1893), Laboulbeniaceae. 13 (on insect exoskeleton), widespread. See Santamaría (*MR* **104**: 1389, 2000; key), Santamaría (*Fl. Mycol. Iberica* **5**, 2003; Iberian spp.).

Amorphotheca Parbery (1969), Amorphothecaceae. Anamorph *Hormoconis*. 1 (on resin, hydrocarbon products etc.), widespread. *A. resinae* (putative anamorph *Hormoconis resinae*; kerosene fungus, q.v.). See Parbery (*Aust. J. Bot.* **17**: 331, 1969), Sheridan *et al.* (*Tuatara* **19**: 130, 1972), Braun *et al.* (*Mycol. Progr.* **2**: 3, 2003; phylogeny), Seifert *et al.* (*Stud. Mycol.* **58**: 235, 2007; phylogeny, nomenclature).

Amorphothecaceae Parbery (1969), Eurotiomycetidae (inc. sed.). 2 gen. (+ 1 syn.), 2 spp. Possibly allied with *Myxotrichaceae*, but molecular data are contradictory.

Lit.: Parbery (*Aust. J. Bot.* **17**: 331, 1969), Braun *et al.* (*Mycol. Progr.* **2**: 8, 2003), Abliz *et al.* (*FEMS Immunol. Med. Microbiol.* **40**: 41, 2004), Stchigel & Guarro (*MR* **111**: 1100, 2007).

Amparoina Singer (1958), ? Tricholomataceae. 2, S. America. See Singer (*Mycol.* **50**: 110, 1958).

Amparoinaceae Singer (1976) nom. rej. = Tricholomataceae.

Ampelomyces Ces. ex Schltdl. (1852), anamorphic *Phaeosphaeriaceae*, Cpd.0eP.15. 1 or 2 (on *Erysiphales*), widespread. See Foitzik & Triebel (*Arnoldia* **6**: 15, 1993; typification), Kiss (*MR* **101**: 1073, 1997), Kiss & Nakasone (*Curr. Genet.* **33**: 362, 1998), Nischwitz *et al.* (*MR* **109**: 421, 2005; rel. with *Eudarluca*), Szentiványi *et al.* (*MR* **109**: 429, 2005; speciation), Liang *et al.* (*Fungal Diversity* **24**: 225, 2007; phylogeny).

amphi- (prefix), the two (sorts, sides).

Amphiacantha Caullery & Mesnil (1914), Microsporidia. 3.

Amphiamblys Caullery & Mesnil (1914), Microsporidia. 3.

Amphiblistrum Corda (1837) = Oidium Link (1824) fide Linder (*Lloydia* **5**: 165, 1942).

Amphichaeta McAlpine (1904) = Seimatosporium fide Shoemaker (*CJB* **42**: 411, 1964).

Amphichaete Kleb. (1914) ≡ Amphichaetella.

Amphichaetella Höhn. (1916), anamorphic *Pezizomycotina*, Hsp.0eH.?. 1, Europe; Australia. See Morgan-Jones (*CJB* **51**: 1431, 1973), Alcorn (*Australas. Mycol.* **21**: 111, 2002; Australia).

Amphichorda Fr. (1825) = Isaria fide Fries (*Syst. mycol.* **3**: 1, 1832).

Amphiciliella Höhn. (1919) nom. dub., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Amphiconium Nees (1816) nom. dub., Algae. Based on algae fide Fries (*Syst. mycol.* **3** (index): 51, 1832).

Amphicypellus Ingold (1944) = Chytriomyces fide Dogma (*Kalikasan* **5**: 136, 1976), Letcher & Powell (*Mycotaxon* **84**: 447, 2002).

Amphicytostroma Petr. (1921), anamorphic *Amphiporthe*, St.0eH.15. 2, Europe.

Amphididymella Petr. (1928) = Acrocordia fide Yue & Eriksson (*Mycotaxon* **24**: 293, 1985).

Amphidium Nyl. (1891) [non *Amphidium* Schimp. 1856, *Musci*] = Epiphloea fide Gyelnik (*Rabenh. Krypt.-Fl.* **9** 2.2, 1940).

Amphiernia Grüss (1926) = Sporobolomyces fide Derx (*Annls mycol.* **28**: 1, 1930).

amphigenous, making growth all round or on two sides.

amphigynous (of *Pythiaceae*), having an antheridium through which the oogonial incept grows.

Amphilogia Gryzenh., H.F. Glen & M.J. Wingf. (2005), Cryphonectriaceae. 2 (on *Elaeocarpus*), Sri Lanka; New Zealand. See Gryzenhout *et al.* (*Taxon* **54**: 1017, 2005), Gryzenhout *et al.* (*FEMS Microbiol. Letters* **258**: 161, 2006).

Amphiloma Körb. (1855) ≡ Gasparrinia.

Amphiloma Nyl. (1855) = Lepraria fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Amphilomopsis Jatta (1905) = Chrysothrix fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

amphimixis, copulation of two cells and nuclei which are not near relations, e.g. egg and sperm; cf. apomixis, automixis and pseudomixis.

Amphimyces Thaxt. (1931), Laboulbeniaceae. 1, W. Africa; Europe. See Hindley (*Wiltshire Archaeological and Natural History Magazine* **79**: 214, 1985; monogr.), Santamaria *et al.* (*Treb. Inst. Bot. Barcelona* **14**: 1, 1991; Europe).

Amphinectria Speg. (1924) nom. dub., ? Tubeufiaceae. See Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Amphinema P. Karst. (1892), Atheliaceae. 6 (mycorrhizal), widespread. See Sutton & Crous (*MR* **101**: 215, 1997).

Amphinomium Nyl. (1888) = Pannaria fide Galloway & Jørgensen (*Lichenologist* **19**: 345, 1987).

Amphiporthe Petr. (1971), Gnomoniaceae. Anamorph *Amphicytostroma*. 3, Europe; N. America. See Barr (*Mycol. Mem.* **7**, 1978), Zhang & Blackwell (*Mycol.* **93**: 355, 2001; phylogeny).

Amphirosellinia Y.M. Ju, J.D. Rogers, H.M. Hsieh & Vasilyeva (2004), Xylariaceae. 5 (saprobic in bark), north temperate. See Læssøe & Spooner (*Kew Bull.* **49**: 1, 1994; as *Rosellinia*), Ju *et al.* (*Mycol.* **96**: 1393, 2004).

Amphischizonia Mont. (1856) nom. inval. = Cryptodictyon fide Santesson (*Symb. bot. upsal.* **12** no. 1: 1, 1952).

Amphisphaerella (Sacc.) Kirschst. (1934), Xylariales. 8 (from bark), Europe. See Eriksson (*Svensk bot. Tidskr.* **60**: 315, 1966), Kang *et al.* (*Fungal Diversity* **2**: 135, 1999; posn), Wang *et al.* (*Fungal Diversity Res. Ser.* **13**, 2004).

Amphisphaerellula Gucevič (1952), Pezizomycotina. 1, former USSR. See Gucevič (*Bot. Mater. Otd. Sporov. Rast. Bot. Inst. Komarova Akad. Nauk S.S.S.R.* **8**: 142, 1952).

Amphisphaeria Ces. & De Not. (1863) nom. cons., Amphisphaeriaceae. Anamorph *Bleptosporium*. 85 (from wood and bark), widespread. See Kang *et al.* (*Fungal Diversity* **1**: 147, 1998; DNA), Kang *et al.* (*MR* **103**: 53, 1999), Kang *et al.* (*Mycotaxon* **81**: 321, 2002; phylogeny), Jeewon *et al.* (*MR* **107**: 1392, 2003; posn).

Amphisphaeriaceae G. Winter (1885), Xylariales. 32 gen. (+ 47 syn.), 499 spp.

Lit.: Samuels *et al.* (*Mycotaxon* **28**: 473, 1987; anamorphs), Barr (*Mycotaxon* **51**: 191, 1994; family rels), Nag Raj & Mel'nik (*Mycotaxon* **50**: 435, 1994), Okane *et al.* (*CJB* **74**: 1338, 1996), Goh & Hyde (*MR* **101**: 85, 1997), Hyde (*MR* **101**: 609, 1997), Graniti (*Ann. Rev. Phytopath.* **36**: 91, 1998), Kang *et al.* (*Fungal Diversity* **1**: 147, 1998; DNA), Kang *et al.* (*Fungal Diversity* **2**: 135, 1999; excluded genera), Kang *et al.* (*MR* **103**: 53, 1999; genera), Strobel *et al.* (*Syst. Appl. Microbiol.* **22**: 432, 1999), Jeewon *et al.* (*Mol. Phylogen. Evol.* **25**: 378, 2002), Jeewon *et al.* (*Fungal Diversity* **17**: 39, 2004).

Amphisphaerina Höhn. (1919), Pezizomycotina. 3, Europe; N. America.

amphispore, a second, special type of urediniospore; see *Pucciniales*.

amphithallism, see homothallism.

amphithecium, the thalline margin of an apothecium (L).

Amphitiarospora Agnihothr. (1963) = Dinemasporium fide Sutton (*Mycol. Pap.* **141**, 1977).

amphitrichous (amphitrichiate), having one flagellum at each pole.

Amphitrichum T. Nees (1818) nom. dub., Pezizomycotina. See Hughes (*CJB* **36**: 727, 1958).

Amphobotrys Hennebert (1973), anamorphic *Botryotinia*, Hso.0eH/1eP.7. 1, USA. See Hennebert (*Persoonia* **7**: 192, 1973), Holcomb *et al.* (*Pl. Dis.* **73**: 74, 1989), Hong *et al.* (*Pl. Path. J.* **17**: 357, 2001), Kendrick (*CJB* **81**: 75, 2003; morphogenesis).

Amphophialis R.F. Castañeda, W.B. Kendr. & Guarro (1998), anamorphic *Pezizomycotina*, Hso.?.?. 1, Cuba. See Castañeda Ruíz *et al.* (*Mycotaxon* **68**: 12, 1998).

Amphopsis (Nyl.) Hue (1892) = Pyrenopsis fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Amphoridium A. Massal. (1852) = Verrucaria Schrad. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Amphoridium, see *Amphoridium A. Massal.*

Amphoroblastia Servít (1953) = Polyblastia. p.p., Thelidium (Verrucar.) p.p. and Verrucaria (Verrucar.) p.p. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Amphoromorpha Thaxt. (1914) = Basidiobolus fide Blackwell & Malloch (*Mycol.* **81**: 735, 1989).

Amphoropsis Speg. (1918) ? = Pyxidiophora fide Blackwell & Malloch (*Mycol.* **81**: 735, 1989), Blackwell (*Mycol.* **86**: 1, 1994).

Amphoropycnium Bat. (1963), anamorphic *Pezizomycotina*, Cpd.0eH.15. 2, Brazil; Philippines. See Batista (*Quad. Lab. crittogam., Pavia* **31**: 19, 1963).

Amphorothecium P.M. McCarthy, Kantvilas & Elix (2001), ? Myeloconidiaceae (L). 1, Australia. See McCarthy *et al.* (*Lichenologist* **33**: 292, 2001).

Amphorula Grove (1922) = Chaetoconis fide Petrak (*Sydowia* **13**: 180, 1959), Sutton (*CJB* **46**: 183, 1968).

Amphorulopsis Petr. (1959), Pezizomycotina. 1, former Yugoslavia. See Petrak (*Sydowia* **13**: 181, 1959).

amphotericin, A and **B**, polyene antibiotics from actinomycetes (*Streptomyces* spp.); antifungal; **- B** (fungizone) is used in the therapy of systemic mycoses of humans.

Amplariella E.-J. Gilbert (1940) = Amanita Pers. fide Singer (*Agaric. mod. Tax.* edn 3, 1975).

amplectant, covering; embracing.

ampliate, made greater; enlarged.

Ampliotrema Kalb (2004) ≡ Ampliotrema Kalb ex Kalb fide Kalb (*Biblthca Lichenol.* **88**: 302, 2004).

Ampliotrema Kalb ex Kalb (2006), Thelotremataceae (L). 5, pantropical. See Frisch (*Biblthca Lichenol.* **92**: 3, 2006), Frisch *et al.* (*Biblthca Lichenol.* **92**: 517, 2006; phylogeny, links with *Ocellularia*).

ampoule effect, Corner's (*New Phytol.* **47**: 48, 1948) term for the normal working of a basidium which is compared to an ampoule from which the contents are discharged into the basidiospores by the enlargement of a basal vesicle.

ampoule hypha, see hypha.

ampulla (1) the swollen tip of a conidiogenous cell which produces synchronous blastic conidia (as in *Gonatobotrytum*); (2) a conidiophore which develops a number of short branches or discrete conidiogenous cells (as in *Aspergillus*).

Ampullaria A.L. Sm. (1903) [non *Ampullaria* Couch 1963, *Actinomycetes*] = Melanospora Corda fide Cannon & Hawksworth (*J. Linn. Soc.* Bot. **84**: 115, 1982).

Ampullariella Couch (1964), Actinobacteria. q.v.

Ampullifera Deighton (1960), anamorphic *Pezizomycotina*, Hso.0eH.4. 7 (on foliicolous lichens), pantropical. See Hawksworth (*Bull. Br. Mus. nat. hist.* Bot. **6**: 183, 1979), Hawksworth & Cole (*Mycosystema* **22**: 359, 2003; China).

Ampulliferella Bat. & Cavalc. (1964) = Ampullifera fide Hawksworth (*Bull. Br. Mus. nat. hist.* Bot. **6**: 183, 1979).

Ampulliferina B. Sutton (1969), anamorphic *Pezizomycotina*, Hso.1eP.38. 2, Canada; British Isles. See Sutton (*CJB* **47**: 609, 1969).

Ampulliferinites Kalgutkar & Sigler (1995), Fossil Fungi, anamorphic *Pezizomycotina*. 1 (Eocene), Canada. See Kalgutkar & Sigler (*MR* **99**: 515, 1995).

Ampulliferopsis Bat. & Cavalc. (1964) = Ampullifera fide Hawksworth (*Bull. Br. Mus. nat. hist.* Bot. **6**: 183, 1979).

ampulliform, flask-like in form (Fig. 23.30).

Ampullina Quél. (1875) = Leptosphaeria fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Ampulloclitocybe Redhead, Lutzoni, Moncalvo & Vilgalys (2002), Hygrophoraceae. 3, widespread. See Redhead *et al.* (*Mycotaxon* **83**: 36, 2002), Harmaja (*Ann. bot. fenn.* **40**: 213, 2003).

Amygdalaria Norman (1852) ? = Porpidia fide Inoue (*J. Hattori bot. Lab.* **56**: 321, 1984; key), Brodo & Hertel (*Herzogia* **7**: 493, 1987; key 8 spp.), Esnault & Roux (*An. Jard. bot. Madr.* **44**: 211, 1987), Purvis *et al.* (*Lichen Flora of Great Britain and Ireland*, 1992), Buschbom & Mueller (*Mol. Phylogen. Evol.* **32**: 66, 2004; phylogeny), Fryday (*Lichenologist* **37**: 1, 2005; placement).

Amylaria Corner (1955), Bondarzewiaceae. 1, Bhutan. See Stalpers (*Stud. Mycol.* **40**: 48, 1996).

Amylariaceae Corner (1970) = Bondarzewiaceae.

Amylascus Trappe (1971), Pezizaceae. 2 (hypogeous), Australasia. See Trappe (*TBMS* **65**: 496, 1975; key), Hansen *et al.* (*Mycol.* **93**: 958, 2001; phylogeny), Hansen *et al.* (*Mol. Phylogen. Evol.* **36**: 1, 2005; phylogeny), Læssøe & Hansen (*MR* **111**: 1075, 2007; phylogeny).

Amylirosa Speg. (1920) nom. dub., Dothideales. See von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Amylis Speg. (1922), Pezizomycotina. 1, S. America.

Amylo process (Amylomyces process). A method for the commercial production of alcohol by the saccharification of starchy materials by *Amylomyces rouxii* or *Rhizopus* spp. The amylo process is used in preparation of ragi, sufu and tempeh (see Fermented food and drinks). Ragi and ragi-like products from different countries of Asia contain a more or less stable mycota of *Amylomyces*, *Mucor* and *Rhizopus* species as well as various yeasts and bacteria (Hesseltine *et al.*, *Mycopathologia* **101**: 141, 1988). *Amylomyces rouxii*, used in Asia to ferment cassava and rice, has the enzyme glucoamylase which occurs in only one form (Wang *et al.*, *Journal of Food Science* **49**: 1210-1211, 1984). *Rhizopus formosaensis* is a powerful glucoamylase-producing fungus, with one strain suitable for fermentation of a highly concentrated starchy broth (Ling *et al.*, [*Hok Fermentation Engineering Magazine*, Society for Bioscience and Engineering, Japan] **49**: 101, 1971). See Erb & Hildebrandt (*Industr. engin. Chem.* **38**: 792, 1946), Hesseltine (*Mycol.* **57**: 149, 1965; 1991; *Mycologist* **5**: 166, 1991), Johnson (*Ann. Rev. Microbiology* **1**: 159, 1947), Panda (*The complete technology book on starch and its derivatives*, 540 pp., 2004).

Amyloathelia Hjortstam & Ryvarden (1979), ? Amylocorticiaceae. 3, Europe; S. America. See Hjortstam & Ryvarden (*Mycotaxon* **10**: 201, 1979).

Amylobasidium Ginns (1988), Corticiaceae. 1, USA. See Ginns (*Mycol.* **80**: 63, 1988), Ginns (*Mycol.* **90**: 1, 1997).

Amylocarpus Curr. (1859), ? Leotiomycetes. 1 (on wood, marine), Europe. Affinities are unclear. See Crumlish & Curran (*Mycologist* **8**: 83, 1994), Landvik *et al.* (*Mycoscience* **37**: 237, 1996; phylogeny), Landvik *et al.* (*Mycoscience* **39**: 49, 1998; phylogeny), Læssøe & Hansen (*MR* **111**: 1075, 2007; phylogeny).

Amylocorticiaceae Jülich (1982), Agaricales. 10 gen., 45 spp.

Amylocorticiellum Spirin & Zmitr. (2002), Amylocorticiaceae. 4, widespread. See Zmitrovich & Spirin (*Mikol. Fitopatol.* **36**: 22, 2002).

Amylocorticium Pouzar (1959), Amylocorticiaceae. 11, widespread. See Zmitrovich (*Novosti Sistematiki Nizshikh Nov. sist. Niz. Rast.* **36**: 31, 2002; Russian spp.), Gilbertson & Hemmes (*Mem. N. Y. bot. Gdn*

89: 81, 2004; Hawaii).

Amylocystis Bondartsev & Singer (1944), Fomitopsidaceae. 1, Europe.

Amylodontia M.I. Nikol. (1967) = Dentipellis fide Stalpers (*Stud. Mycol.* **40**: 54, 1996; key).

Amyloflagellula Singer (1966), Marasmiaceae. 4, America (tropical); Asia. See Singer (*Darwiniana* **14**: 14, 1966), Antonín (*Czech Mycol.* **54**: 235, 2003), Bodensteiner *et al.* (*Mol. Phylogen. Evol.* **33**: 501, 2004; phylogeny).

Amylofungus Sheng H. Wu (1996), ? Peniophoraceae. 2, New Zealand; Japan. See Wu (*Mycol.* **87**: 886, 1995).

Amylohyphus Ryvarden (1978), Stereaceae. 1, Rwanda. See Ryvarden (*Bulletin du Jardin Botanique National de Belgique* **48**: 81, 1978).

amyloid (of asci, spores, etc.), stained blue by iodine (see Iodine, Stains); cf. dextrinoid. See Dodd & McCracken (*Mycol.* **64**: 1341, 1972; nature of fungal starch), amylomycan.

Amylolepiota Harmaja (2002), Agaricaceae. 1, Europe. See Harmaja (*Karstenia* **42**: 39, 2002).

amylomycan, a name proposed for the I+ blue or red compounds associated with asci (Common, *Mycotaxon* **41**: 67, 1991).

Amylomyces Calmette (1892), Mucoraceae. 1, Asia. See Ellis *et al.* (*Mycol.* **68**: 131, 1976), Voigt & Wöstemeyer (*Gene* **270**: 113, 2001; phylogeny), Abe *et al.* (*Biosc., Biotechn., Biochem.* **70**: 2387, 2006; phylogeny).

Amylonotus Ryvarden (1975), Auriscalpiaceae. 3, widespread (tropical). See Ryvarden (*Norw. Jl Bot.* **22**: 26, 1975) = *Wrightoporia* fide, Stalpers (*Stud. Mycol.* **40**: 129, 1996).

Amylophagus Scherff. (1925), Monad. q.v.

Amyloporia Singer (1944), Polyporaceae. 5, widespread. See Vampola & Pouzar (*Česká Mykol.* **46**: 213, 1993).

Amyloporiella A. David & Tortič (1984), Polyporaceae. 5, Europe; N. America. See David & Tortíc (*TBMS* **83**: 659, 1984; key).

Amylora Rambold (1994), ? Trapeliaceae (L). 1, widespread. See Rambold (*Bull. Soc. linn. Provence* **45**: 344, 1994), Lumbsch & Heibel (*Lichenologist* **30**: 95, 1998), Rambold & Hagedorn (*Lichenologist* **30**: 473, 1998), Lumbsch *et al.* (*MR* **111**: 1133, 2007).

Amylosporaceae Jülich (1982) = Bondarzewiaceae.

Amylosporomyces S.S. Rattan (1977), Stereaceae. 2, widespread. See Rattan (*Biblthca Mycol.* **60**: 244, 1977).

Amylosporus Ryvarden (1973), Bondarzewiaceae. 6, widespread (tropical). See Stalpers (*Stud Mycol.* **40**: 129, 1996; key).

Amylostereaceae Boidin, Mugnier & Canales (1998), Russulales. 1 gen. (+ 2 syn.), 4 spp.

Amylostereum Boidin (1958), Amylostereaceae. 4, widespread. See Boidin (*Revue Mycol.* Paris **23**: 345, 1958), Legon & Pegler (*Mycologist* **16**: 124, 2002; *Amylostereum areolatum*), Larsson & Larsson (*Mycol.* **95**: 1037, 2003; phylogeny), Slippers *et al.* (*South African Journal of Science* **99**: 70, 2003; association with woodwasps).

Amyloxenasma (Oberw.) Hjortstam & Ryvarden (2005), Amylocorticiaceae. 5, widespread. See Hjortstam & Ryvarden (*Syn. Fung.* **20**: 34, 2005).

an-, see a-.

anaerobe, an organism able to grow without free oxygen. An **obligate** - grows only without free oxygen; a **facultative** - grows with or without free oxygen. See Zehnder (Ed.) (*Biology of anaerobic microorganisms*, 1988).

Anaerobic fungi. Most fungi grow only aerobically (obligate aerobes), some prefer oxygen, but can grow anaerobically and others are oxygen indifferent (facultative anaerobes) (Emerson & Held, *Amer. J. Bot.* **56**: 1103, 1969). Anaerobic fungi occur widely in association with large herbivores, in both the foregut of ruminant-like animals and the hindgut of hindgut fermenters. A well-illustrated account of these fungi is provided by Mountfort (*Anaerobic Fungi (Mycology Series)* **12**: 1, 1994). Rumen fungi specifically colonise and grow on plant vascular tissues, produce active cellulases and xylanases (Bauchop, *Biosystems* **23**: 53, 1989). The flagellate gut fungi (Neocallimastigales) are the sole group which lack mitochondria and grow only without oxygen (obligate anaerobes), although they are tolerant of oxygen during transfer between hosts. They use diverse substrata and produce formate, acetate, lactate, ethanol, succinate, CO_2 and H_2. See Li & Heath (*Can. J Microbiol.* **39**: 1003, 1993), Trinci *et al.* (*MR* **98**: 129, 1994; review, bibliogr.). Tetronasin and cycloheximide can reduce populations of anaerobic fungi in the rumen of sheep (Gordon & Phillips, 1993).

Lit.: Bauchop (*Biosystems* **23**: 53, 1989), Gordon & Phillips (*Letters in Applied Microbiology* **17**: 220, 1993), Mountfort *Anaerobic Fungi* Mycology Series, vol. 12. CRC, 1994).

Anaeromyces Breton, Bernalier, Dusser, Fonty, B. Gaillard & J. Guillot (1990), Neocallimastigaceae. 2, France; Australia. See Breton *et al.* (*FEMS Microbiol. Lett.* **70**: 181, 1990).

analogous, showing a resemblance in form, structure, or function which is not considered to be evidence of evolutionary relatedness; cf. homologous.

Anamika K.A. Thomas, Peintner, M.M. Moser & Manim. (2002), Cortinariaceae. 1, China; India; Japan. See Thomas *et al.* (*MR* **106**: 246, 2002), Yang *et al.* (*MR* **109**: 1259, 2005).

anamorph (1) (of shapes), a deformed figure appearing in proportion when correctly viewed; (2) (of fungi), see States of fungi.

Anamorphic fungi (Deuteromycotina, Deuteromycetes, Fungi Imperfecti, asexual fungi, conidial fungi, mitosporic fungi) (a few L). These are fungi that are disseminated by propagules not formed from cells where (by inference from a small number of studied examples) meiosis has occurred. Most of these propagules can be referred to as conidia (q.v.) but some are derived from unspecialized vegetative mycelium. Many are correlated with fungal states that produce spores derived from cells where meiosis has, or is inferred to have, occurred (i.e. the teleomorph). These are, where known, members of the ascomycetes or basidiomycetes however, in many cases, they are still undescribed, unrecognized ('unconnected') or poorly known. Some anamorphs have appeared to have lost sexuality and its functions are sometimes replaced by such mechanisms as the parasexual cycle. These fungi have taken independent evolutionary paths from the related holomorphs (holomorphic anamorphs of Hennebert, 1993). See Kendrick (*Sydowia* **41**: 6, 1989), Sutton (*in* Reynolds & Taylor, *The fungal holomorph*: 27, 1993), Hennebert (*in* Reynolds & Taylor, *The fungal holomorph*: 283, 1993).

TABLE 1. Mitosporic fungi coding for conidiomata and conidia (for conidiogenous events see text).

Conidiomata

Hyphomycetes (H)	**Coelomycetes** (C)	**Other**
Hso solitary (hyphal)	**Cpd** pycnidial	**St** stromatic
Hsy synnematal	**Cpt** pycnothyrial	**Sc** sclerotial
Hsp sporodochial	**Cac** acervular	
	Ccu cupulate	

Conidial shape and septation

shape	septation		H conidia hyaline or bright (hyalo-)	P conidia pigmented or dark (phaeo-)
e ellipsoid	**0** aseptate	amerosporae	hyalosporae	phaeosporae
f filiform	**1** 1-septate	didymosporae	hyalodidymae	phaeodidymae
h helical	≡ 2-multiseptate	phragmosporae	hyalophragmae	phaeophragmae
b branched	# muriform	dictyosporae	hyalodictyae	phaeodictyae
		scolecosporae		
		helicosporae		
		staurosporae		

Although more teleomorph/anamorph state connexions are being established, a permanent residue of unconnected conidial fungi is likely to remain. DNA sequencing makes it possible now to place these remaining taxa within the groups of teleomorphic fungi from which they are or were once derived. On morphological grounds this has already been done for some groups. It is traditional to treat anamorphs of the zygomycetes, *Erysiphales*, and *Pucciniales*, for example, in association with their teleomorphic states. The *Code* (see Nomenclature) provides for the use of separate names for the different states of pleomorphic fungi, but rules that the name of the holomorph (the whole fungus in all its correlated states) is that of the teleomorph. The *Code* also recommends that new names for anamorphs are not introduced when the telemorphic connection is firmly established and there is no practical need for separate names. Anamorphic fungi are some of the most frequently encountered fungi and many of them are of considerable economic significance.

Three morphological groups have been recognized that have in the past been named as classes:

(1) **Hyphomycetes** - mycelial forms which bear conidia on separate hyphae or aggregations of hyphae (as synnematous or sporodochial conidiomata) but not inside discrete conidiomata.

(2) **Agonomycetes** - mycelial forms which are sterile, but may produce chlamydospores, sclerotia and/or related vegetative structures.

(3) **Coelomycetes** - forms producing conidia in pycnidial, pycnothyrial, acervular, cupulate or stromatic conidiomata.

To recognize or delimit a taxonomic entity for the anamorphic fungi, such as subdivision Deuteromycotina, while convenient for practical purposes, is meaningless in terms of natural or phylogenetic classification. Therefore entries for anamorphic genera in this *Dictionary* assign them to the appropriate known level in the teleomorphic hierarchy. Informally, well-known groups of anamorphic genera, e.g. 'hyphomycetes' and 'coelomycetes', are likely to continue to be used but their adoption as formal taxa should be avoided. Integrated systems for Mitosporic fungi as a whole were suggested by Höhnel (1923) and Sutton (1980); see also Luttrell *in* Kendrick (1977). Arrangement of correlated anamorphs with ascomycete systematics has been reviewed by Kendrick & DiCosmo (*in* Kendrick (Ed.), *The whole fungus*: 283, 1979) and Sutton & Hennebert (*in* Hawksworth (Ed.), *Ascomycete systematics*: 77, 1994). For more information on the various approaches to the classification of anamorphic fungi see Sutton (*in* Sutton (Ed.), *A Century of Mycology*: 135, 1996).

Coding system in entries for anamorphic genera. Three categories of information are coded:

(i) **Conidiomatal types** listed in Table 1, e.g. Hso, indicates hyphal, Hsy, synnematal etc.

(ii) **Saccardo's spore groups**. Saccardo arranged 'imperfect' fungi (and also many ascomycetes, particularly those of the Sphaeriales) according to the septation or form of the spores and their colour – whether dark or hyaline – and the coined Latin names for these different groupings are set out in Table 1,

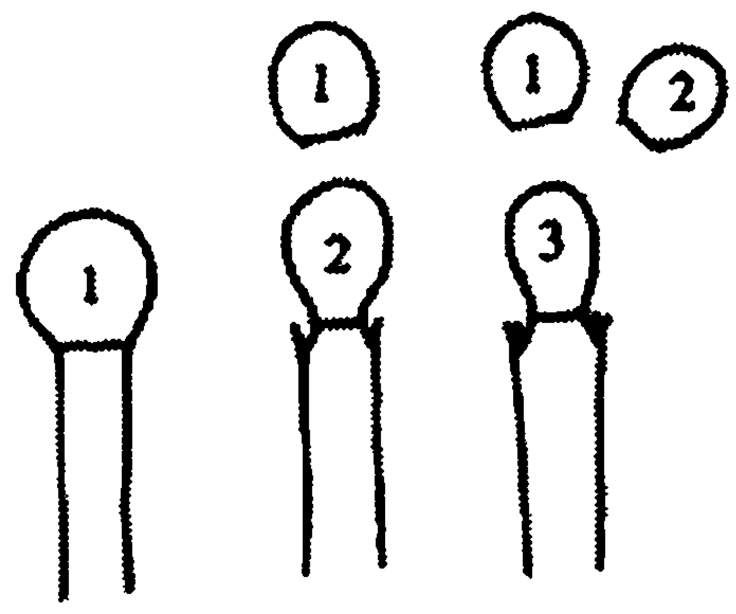
Fig. 1. Conidiogenous events (cc - conidiogenous cell). 1, conidial ontogeny holoblastic, 1 locus per cc, solitary conidia, delimited by 1 septum, maturation by diffuse wall-building, secession schizolytic, no proliferation of cc; 2, conidial ontogeny holoblastic, 1 locus per cc, solitary conidia, delimitation by 2 septa (or a separating cell), secession rhexolytic or by fracture of the cc, maturation by diffuse wall-building, no proliferation of cc; 3, conidial ontogeny holoblastic, apical wall-building random at more than one locus per cc and conidia becoming conidiogenous to form connected branched chains, each conidium delimited by 1 septum, maturation by diffuse wall-building, secession schizolytic, no cc proliferation; 4, conidial ontogeny holoblastic, apical wall-building at 1 locus per cc and each conidium with 1 locus to form a connnected unbranched chain, each conidium delimited by 1 septum, maturation by diffuse wall-building, secession schizolytic, no proliferation of cc; 5, conidial ontogeny holoblastic, apical wall-building randomly at more than 1 locus per cc and conidia becoming conidiogenous to form connected branched chains, each conidium delimited by 2 septa (or a separating cell), secession rhexolytic or by fracture of the cc, maturation by diffuse wall-building, no cc proliferation; 6, conidial ontogeny holoblastic, with localized apical wall-building simultaneously at different loci over the whole cc, each locus forming 1 conidium, delimited by 1 septum, maturation by diffuse wall-building, secession schizolytic, no cc proliferation; 7, conidial ontogeny holoblastic, with localized apical wall-building simultaneously at different loci on denticles over the whole cc, each locus forming 1 conidium, delimited by 1 septum, maturation by diffuse wall-building, secession by rupture of denticle, no cc proliferation; 8, conidial ontogeny holoblastic, with localized apical wall-building simultaneously at different loci over the whole cc, each conidium delimited by 2 septa (or a separating cell), secession rhexolytic or by fracture of the cc, each locus forming 1 conidium, maturation by diffuse wall-building, no cc proliferation; 9, conidial ontogeny holoblastic, apical wall-building simultaneously at several loci per cc and conidia becoming conidiogenous to form connected branched chains, each conidium delimited by 1 septum, maturation by diffuse wall-building, secession schizolytic, no cc proliferation; 10, conidial ontogeny holoblastic, regularly alternating with holoblastic sympodial cc proliferation, maturation by diffuse wall-building, each conidium delimitated by 1 septum, secession schizolytic; 11, conidial ontogeny holoblastic, regularly alternating with holoblastic sympodial cc proliferation, maturation by diffuse wall-building, each conidium delimited by 2 septa (or a separating cell), secession rhexolytic or by fracture of the cc; 12, conidial ontogeny holoblastic, each from apical or lateral loci, delimited by 1 septum, secession schizolytic, holoblastic cc proliferation sympodial or irregular, maturation by diffuse wall-building; 13, conidial ontogeny holoblastic, first from an apical locus, delimited by 1 septum, secession schizolytic, other conidia from lateral loci proceeding down the cc, maturation by diffuse wall-building; 14, conidial ontogeny holoblastic, first from an apical locus, each conidium delimited by 2 septa (or a separating cell), secession rhexolytic or by fracture of the cc, other conidia from lateral loci proceeding down the cc, maturation by diffuse wall-building.

e.g. e≡ H, indicates multiseptate hyaline conidia, hP, helical brown etc.

(iii) **Conidiogenous events**. The matrix system used is based on Minter *et al.* (*TBMS* **79**: 75, 1982; *TBMS* **80**: 38, 1983; *TBMS* **81**: 109, 1983) who showed a continuum of developmental processes associated with conidial production, including ontogeny, delimitation and secession of conidia and proliferation and regeneration of the cells bearing them (see conidiogensis). For the 43 combinations of events so far recognized see Figs 24-26, e.g. 15, indicates a succession of holoblastic conidial ontogeny, delimitation by a transverse septum, schizolytic secession, percurrent enteroblastic conidiogenous cell proliferation followed by holoblastic conidial ontogeny, successive conidia seceding at the same level.



Use of '?' means that insufficient information is available for the feature to be coded, and '-', that the feature is absent, e.g. 'Sc.-.-.' indicates presence of sclerotia but no conidia, and 'Cpd.e1P.?', that pycnidial conidiomata produce 1-septate brown conidia but their genesis is not known.

Andreaea Palm & Jochems (1923) [non *Andreaea* Hedw. 1801, *Musci*] ≡ Andreaeana.

Andreaeana Palm & Jochems (1924) = Acremonium. *fide* Gams (*in litt.*).

Andreanszkya Tóth (1968) = Podospora fide Lundqvist (*Symb. bot. upsal.* **20** no. 1, 1972).

androgynous, having the antheridium and its oogonium on one hypha; in de Bary's original sense (*Bot. Zeit.* **46**: 597, 1888) covers hypogynous, etc. Cf. monoclinous.

androphore, a branch forming antheridia, as in *Pyronema*.

Androsaceus (Pers.) Pat. (1887) = Marasmius fide Saccardo (*Syll. fung.* **5**: 1, 1887).

Anekabeeja Udaiyan & V.S. Hosag. (1992) ? = Pycnidiophora fide Eriksson & Hawksworth (*SA* **12**: 24, 1993), Korf (*Mycotaxon* **54**: 413, 1995; nomencl.).

Anellaria P. Karst. (1879) = Panaeolus fide Dennis *et al.* (*TBMS* **43**, 1960).

Anema Nyl. ex Forssell (1885) nom. cons., Lichinaceae (L). 13, widespread. See Moreno & Egea (*Acta Bot. Barcinon.* **91**: 1, 1992; key), McCune *et al.* (*Conservation and Management of Native Plants and Fungi* Proceedings of an Oregon Conference. Corvallis, Oregon, November 15-17, 1995: 234, 1997; conservation, Oregon), Schultz & Büdel (*Lichenologist* **34**: 39, 2002; key).

Anematidium Gronchi (1931) = Zasmidium fide Ciferri & Montemartini (*Atti Ist. bot. Univ. Lab. crittog. Pavia* sér. 5 **17**: 274, 1959).

anemophilous (of spores), taken about by air currents.

aneuploid, having a chromosome number which is not a multiple of the haploid set.

Angatia Syd. (1914), Saccardiaceae. 4 or 5, widespread (tropical).

Angelina Fr. (1849), Dermateaceae. 1, N. America. See Durand (*J. Mycol.* **8**: 108, 1906).

angio- (of a sporocarp), closed at least till the spores are mature. Cf. endo-, gymno-, hemi-angiocarpous, and cleistocarp.

angiocarpous (of a basidiome), hymenial surface at first exposed but later covered by an incurving pileus margin and/or excrescences from the stipe (Singer, 1975: 26); also used in a parallel way for *Ascomycota*.

Angiococcus E. Jahn (1924) nom. dub., ? Fungi. See Peterson & McDonald (*Mycol.* **58**: 962, 1967).

Angiophaeum Sacc. (1898) ≡ Phaeangium Pat.

Angiopoma Lév. (1841) nom. rej. = Drechslera fide Sutton (*Mycotaxon* **3**: 377, 1976).

Angiopomopsis Höhn. (1912), anamorphic *Pezizomycotina*, Cpd.≡ eP.19. 1, Java. See Sutton (*Česká Mykol.* **29**: 97, 1975), Farr *et al.* (*Mycol.* **90**: 290, 1998).

Angiopsora Mains (1934) = Phakopsora fide Ono *et al.* (*MR* **96**: 825, 1992) See.

Angiosorus Thirum. & M.J. O'Brien (1974) = Thecaphora fide Mordue (*Mycopathologia* **103**: 177, 1988).

Angiotheca Syd. (1939) = Dictyonella fide von Arx (*Persoonia* **2**: 421, 1963).

-angium (**-ange**, suffix), a structure having no opening; a cavity.

ang-kak (red rice), an Oriental food colouring obtained by growing *Monascus purpureus* on polished rice; see Fermented food and drinks.

Anguillomyces Marvanová & Bärl. (2000), anamorphic *Basidiomycota*. 1 (freshwater), Canada. See Marvanová & Bärlocher (*Mycotaxon* **75**: 411, 2000).

Anguillospora Ingold (1942), anamorphic *Pleosporales*, Hso.≡ eH.2. 11 (aquatic), widespread. See Petersen (*Mycol.* **54**: 117, 1962; key), Jooste & van der Merwe (*S. Afr. J. Bot.* **56**: 319, 1990; ultrastr.), Marvanová (*Tropical Mycology*: 169, 1997; tropical spp.), Kendrick (*CJB* **81**: 75, 2003; morphogenesis), Belliveau & Bärlocher (*MR* **109**: 1407, 2005; phylogeny), Descals (*MR* **109**: 545, 2005; diagnostic characters), Baschien *et al.* (*Nova Hedwigia* **83**: 311, 2006; phylogeny, morphology).

Anguillosporella U. Braun (1995), anamorphic *Mycosphaerellaceae*, Hso.?.?. 2 (on lving leaves), USA. See Redhead & White (*CJB* **63**: 1429, 1985; as *Anguillospora*), Braun (*Monogr. Cercosporella, Ramularia Allied Genera (Phytopath. Hyphom.)* **1**: 233, 1995).

anguilluliform, worm-like or eel-like in form.

angular septum, see septum.

Angulimaya Subram. & Lodha (1964), anamorphic *Bombardioidea*, Hso.0eH.19. 1 (coprophilous), India. See Subramanian & Lodha (*Antonie van Leeuwenhoek Ned. Tijdschr. Hyg.* **30**: 329, 1964), Krug & Scott (*CJB* **72**: 1302, 1994; connexion).

Angulospora Sv. Nilsson (1962), anamorphic *Pezizomycotina*, Hso.0fH.2. 1 (aquatic), Venezuela. See Nilsson (*Svensk bot. Tidskr.* **56**: 354, 1962), Goh (*Biodiversity of Tropical Microfungi*: 189, 1997), Marvanová (*Tropical Mycology*: 169, 1997).

Angusia G.F. Laundon (1964) = Maravalia fide Ono (*Mycol.* **76**: 892, 1984).

angustate, narrowed.

anheliophilous, preferring diffuse light. Cf. heliophilous.

Anhellia Racib. (1900), ? Myriangiaceae. 7, widespread (tropical). See von Arx (*Persoonia* **2**: 421, 1963), Barreto & Evans (*MR* **98**: 1107, 1994), Inácio & Dianese (*MR* **102**: 695, 1998), Pereira & Barreto (*Fungal Diversity* **12**: 155, 2003).

Animal mycophagists. Fungi, particularly basidiomycetes and larger ascomycetes, can form an important part of the diet of various mammals, including deer, pigs, rabbits, squirrels and various other rodents (Buller, *TBMS* **6**: 355, 1920; *Researches* **2**: 195, 1922; Hastings & Mottram, *TBMS* **5**: 364, 1916; Minter, *IMI Descriptions of Fungi and Bacteria*, Set 172, 2007). In the case of hypogeous fungi, this has evolved as mutualism, the feeding animal benefiting the fungus by dispersing its spores; the resulting digging and soil aeration carried out by mycophagist mammals in search of fruitbodies can contribute significantly to the dynamics of woodland and forest soils. Animal mycophagists and fungi may also have a role as mutualists in seed dispersal (Pirozynski & Malloch, *in* Pirozynski & Hawksworth (Eds), 1988: 227). Conservation studies in North Am. on the northern spotted owl demonstrated that fungi form a key element in the food chain supporting that highly endangered bird (Minter, *IMI Descriptions of Fungi and Bacteria*, Set 172, 2007). Some fungi accumulate radioactive pollutants sufficiently strongly to impact on the food chains they support (Hughman & Huchschlag, *European J. of Wildlife Res.* **51**: 263,

2005; Iceland moss). Lichens may form an important component of food for reindeer (see Reindeer lichen). Fungi are also consumed by invertebrates, particularly slugs (Elliott, *TBMS* **8**: 84, 1922), snails (*Polygyra thyroides*) (Wolf & Wolf, *Bull. Torrey bot. Cl.* **66**: 1, 1939) and arthropods (see Ambrosia fungi, Insects and fungi, Termite fungi). See also Coevolution; Fungi and radiation; Hypogeous fungi; Iceland moss.

Aniptodera Shearer & M.A. Mill. (1977), Halosphaeriaceae. 9 (aquatic and marine), widespread. See Shearer (*Mycol.* **81**: 139, 1989), Volkmann-Kohlmeyer & Kohlmeyer (*Bot. Mar.* **37**: 109, 1994; table chars 9 spp.), Chen *et al.* (*Mycol.* **91**: 84, 1999; DNA), Hyde *et al.* (*Mycoscience* **40**: 165, 1999), Kong *et al.* (*MR* **104**: 35, 2000; DNA), Hyde (*Cryptog. Mycol.* **23**: 5, 2002), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny).

aniso- (prefix), unequal.

Anisochora Theiss. & Syd. (1915) = Apiosphaeria fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Anisochytridiales Karling (1943) = Hyphochytriales.

anisogamy, the copulation of gametes of unlike form or physiology, i.e. of **-gametes**; heterogamy; cf. isogamy.

Anisogramma Theiss. & Syd. (1917), Valsaceae. 3 (from bark), Europe; N. America. See Osterbauer *et al.* (*Phytopathology* **84**: 1150, 1994; DNA).

anisokont, having flagella of unequal length; heterokont.

Anisomeridium (Müll. Arg.) M. Choisy (1928) nom. cons., Monoblastiaceae (L). *c.* 100, widespread (esp. tropical). See Harris (*More Florida Lichens*, 1995; key 75 spp.), Harada (*Hikobia* **13**: 411, 2001), Komposch (*Lichenologist* **37**: 519, 2005), Aptroot *et al.* (*Biblthca Lichenol.* **97**, 2008; Costa Rica).

Anisomyces Pilát (1940) = Gloeophyllum fide Donk (*Persoonia* **1**: 173, 1960).

Anisomyces Theiss. & Syd. (1914), ? Valsaceae. 1, America (tropical). See Cannon (*Fungal Diversity* **7**: 17, 2001).

Anisomycopsis I. Hino & Katum. (1964), Diaporthales. 1, Japan. See Hino & Katumoto (*J. Jap. Bot.* **39**: 325, 1964).

anisospory, having spores of more than one kind.

Anisostagma K.R.L. Petersen & Jørg. Koch (1996), Halosphaeriaceae. 1 (marine), Denmark. See Petersen & Koch (*MR* **100**: 209, 1996).

Anisostomula Höhn. (1919) = Hyponectria fide Barr (*Mycol.* **68**: 611, 1976).

anisotomic dichotomic branching, branching where one dichotomy becomes stouter and forms a main stem so that the other branch of the dichotomy appears to be lateral, as in *Alectoria ochroleuca* ; cf. isotomic dichotomic branching.

Anixia Fr. (1819) nom. dub., Agaricomycetidae. ? 'gasteromycetes' fide Demoulin (*in. litt.*).

Anixia H. Hoffm. (1862) = Orbicula fide Hughes (*Mycol. Pap.* **42**, 1951).

Anixiella Saito & Minoura ex Cain (1961) = Neurospora fide von Arx (*Persoonia* **7**: 367, 1973), García *et al.* (*MR* **108**: 1119, 2004; phylogeny).

Anixiopsis E.C. Hansen (1897) = Aphanoascus fide Vries (*Mykosen* **12**: 111, 1969), Guého & de Vroey (*CJB* **64**: 2207, 1986; SEM ascospores), Cano & Guarro (*MR* **94**, 1990).

Ankistrocladium Perrott (1960) = Casaresia fide Ellis (*Dematiaceous Hyphomycetes*, 1971).

Ankultur, see Normkultur.

Annajenkinsia Thirum. & Naras. (1955) = Puttemansia fide Pirozynski (*Kew Bull.* **31**: 595, 1977).

Anncaliia I.V. Issi, S.V. Krylova & V.M. Nikolaeva (1993), Microsporidia. 4.

Annella S.K. Srivast. (1976), Fossil Fungi. 2 (Jurassic), British Isles.

annellate (of asci), ones with a thickened apical pore (e.g. *Leotiales*); see ascus; **annellations**; see annellidic.

annellidic (of conidiogenesis), holoblastic conidiogenesis in which the conidiogenous cell (**annellide**, annellophore) by repeated enteroblastic percurrent proliferation produces a basipetal sequence of conidia (**annelloconidia**, annellospores) leaving the distal end marked by transverse bands (**annellations**). See Conidial nomenclature.

Annellodentimyces Matsush. (1985), anamorphic *Pezizomycotina*, Hso.≡ eP.19. 1, Japan. See Matsushima (*Matsush. Mycol. Mem.* **4**: 2, 1985), Ho *et al.* (*Mycol.* **97**: 238, 2005).

Annellodochium Deighton (1969), anamorphic *Pezizomycotina*, Cpd.1eP.19. 1 (on *Diatrype*), Sierra Leone. See Deighton (*Mycol. Pap.* **118**: 28, 1969).

Annellolacinia B. Sutton (1964), anamorphic *Pezizomycotina*, Cac.0eP.19. 2, widespread (tropical). See Frölich *et al.* (*MR* **97**: 1433, 1993).

Annellophora S. Hughes (1952), anamorphic *Pezizomycotina*, Hso.≡ eP.19. 11, widespread (tropical). See Ellis (*Mycol. Pap.* **70**, 1958; key), Manoharachary *et al.* (*Indian Phytopath.* **58**: 454, 2005), Castañeda Ruíz *et al.* (*Mycotaxon* **96**: 151, 2006).

annellophore, see annellidic.

Annellophorella Subram. (1962), anamorphic *Pezizomycotina*, Hso.#eP.19. 1, S. Africa. See Subramanian (*Proc. Indian Acad. Sci.* series B **55**: 6, 1962).

Annellophragmia Subram. (1963), anamorphic *Pezizomycotina*, Hsy.≡ eP.19. 1, India. See Subramanian (*Proc. Indian Acad. Sci.* series B **58**: 349, 1963).

Annellospermosporella P.R. Johnst. (1999), anamorphic *Pezizomycotina*, Hso.?.?. 1, New Zealand. Probably synonymous with *Spermosporella*. See Johnston (*N.Z. Jl Bot.* **37**: 290, 1999).

Annellosympodia McTaggart, R.G. Shivas & U. Braun (2007), Pezizomycotina. 1, Australia. See McTaggart *et al.* (*Australas. Pl. Path.* **36**: 573, 2007).

annular, ring-like; ring-like arrangement.

Annularia (Schulzer) Gillet (1876) [non *Annularia* Sternb. 1825, fossil *Pteridophyta*] = Chamaeota fide Stalpers (*in litt.*).

Annularia Raf. (1815) nom. dub., Fungi. No spp. included.

Annularius Roussel (1806) = Coprinus fide Redhead *et al.* (*Mycotaxon* **50**: 203, 2001).

Annulatascaceae S.W. Wong, K.D. Hyde & E.B.G. Jones (1998), Sordariomycetidae (inc. sed.). 21 gen. (+ 5 syn.), 75 spp.

Lit.: Wong *et al.* (*SA* **16**: 17, 1998), Ho *et al.* (*Mycol.* **91**: 885, 1999), Ho *et al.* (*Fungal Diversity* **3**: 87, 1999), Ranghoo *et al.* (*Fungal Diversity* **2**: 159, 1999), Ho & Hyde (*Fungal Diversity* **4**: 21, 2000), Inderbitzin (*Mycoscience* **41**: 167, 2000), Campbell & Shearer (*Mycol.* **96**: 822, 2004), Réblová (*Mycol.* **98**: 68, 2006).

Annulatascus K.D. Hyde (1992), Annulatascaceae. 14 (wood, aquatic), Australia. See Hyde (*Aust. Syst. Bot.* **5**: 117, 1992), Wong *et al.* (*SA* **16**: 17, 1998), Wong

Anopodium N. Lundq. (1964), Lasiosphaeriaceae. 2, Europe (northern). See Mirza & Cain (*CJB* **47**: 1999, 1969; ? = *Podospora*).

Ansatospora A.G. Newhall (1944) nom. inval. = Mycocentrospora fide Deighton (*Taxon* **21**: 716, 1972).

Anserina Velen. (1934) [non *Anserina* Dumort. 1827, *Chenopodiaceae*] = Ascobolus fide Eckblad (*Nytt Mag. Bot.* **15**: 1, 1968).

antabuse, tetraethylthiuramdisulphate (disulfiram); after ingestion reacts with alcohol to give unpleasant symptoms; used in the treatment of chronic alcoholism; see coprine.

antagonism, a general name for associations of organisms damaging to one or more of the associates (cf. antibiosis, symbiosis). Though parasitism is an example of antagonism, the term is used esp. for the effects of toxic metabolic products (see Staling substances) or of undetermined causes on fungi and bacteria in competition. Much experimental work has been done on the antagonism between bacteria, bacteria and fungi, and fungi; and esp. on the competition between microorganisms in the soil; for example, on the effect of saprobic soil fungi on pathogenic species, e.g. *Trichoderma viride* on *Rhizoctonia*, *Pythium*, and other damping-off fungi.

Lit.: Waksman (*Soil Sci.* **43**: 51, 1937; *Bact. Rev.* **5**: 231, 1941); Porter & Carter, and Weindling (*Bot. Rev.* **4**: 165, 475, 1938) give long reference lists, and Hawksworth (*in* Cole & Kendrick, *Biology of conidial fungi* **1**: 171, 1981) more recent ones; Moreau & Moreau (*BSMF* **72**: 250, 1956) (types of association and antagonism). Cf. antibiotic substances.

antarctic mycology, see Polar and alpine mycology.

Anthracophlous Mattir. ex Lloyd (1913) = Rhizopogon fide Stalpers (*in litt.*).

Anthracophyllum Ces. (1879), Marasmiaceae. 10, widespread (tropical). See Pegler & Young (*MR* **93**: 352, 1989; key).

Anthracostroma Petr. (1954), Dothideomycetes. Anamorph *Camarosporula*. 1, Australia. See Petrak (*Sydowia* **8**: 96, 1954).

Anthracothecium Hampe ex A. Massal. (1860), Pyrenulaceae (L). *c.* 29, widespread (esp. tropical). See Johnson (*Ann. Mo. bot. Gdn* **27**: 1, 1940), Singh (*Feddes Repert.* **93**: 67, 1982), Singh & Raychaudhury (*New Botanist* **9**: 32, 1983; India), Singh (*Geophytology* **14**: 69, 1984), Singh (*Geophytology* **15**: 98, 1985), Harris (*Mem. N. Y. bot. Gdn* **49**: 74, 1989; key 5 N. Am. spp.), Aptroot (*Australasian Lichenology* **60**: 34, 2007; key Australian spp.), Aptroot *et al.* (*Biblthca Lichenol.* **97**, 2008; Costa Rica).

Anthracothecomyces Cif. & Tomas. (1953) = Pyrenula Ach. (1814) fide Harris (*Mem. N. Y. bot. Gdn* **49**, 1989).

Anthropomorphus Seger (1745) nom. inval. = Geastrum fide Stalpers (*in litt.*) Used by Lloyd but see, Donk (*Reinwardtia* **1**: 205, 1951).

anthropophilic (of dermatophytes, etc.), preferentially pathogenic for man. Cf. zoophilic.

Anthurus Kalchbr. & MacOwan (1880) = Clathrus fide Dring (*Kew Bull.* **35**: 1, 1980).

anti- (in combination), against.

antiamoebin, an antibiotic from *Emericellopsis poonensis*, *E. synnematicola*, and *'Cephalosporium' pimprinum*; anti-protozoa and helminths (*Hindustan Antibiot. Bull.* **11**: 27, 1968).

antibiosis, antagonism (q.v.) between two organisms resulting in one overcoming the other.

antibiotic (1) (adj.) damaging to life; esp. of substances produced by microorganisms which are damaging to other microorganisms; (2) (n.) any antibiotic substance, esp. one used as a therapeutant, cf. toxin. See Waksman (*Mycol.* **39**: 565, 1947) for a discussion on the use of this term. **- substances** are produced by fungi (esp. *Penicillium* and *Aspergillus*), actinomycetes (esp. *Streptomyces*; see amphotericin, blasticidin, cycloheximide, streptomycin), and other microorganisms.

Lit.: Grayon (Ed.) (*Antibiotics, chemotherapeutics and antibacterial agents for disease control*, 1982), Chadwick & Whelan (Eds) (*Secondary metabolites: their function and evolution*, 1992), Demain *et al.* (Eds) (*Novel microbial products for medicine and agriculture*, 1989), Jong *et al.* (Eds) (*ATCC names of industrial fungi*, 1994).

Antibiotics. Substances antagonistic to and inhibiting growth of fungi, bacteria and other micro-organisms, even at high dilutions. Fleming (q.v.) is usually credited with their discovery, but several people (e.g. Duchesne, q.v.) made similar observations earlier. Penicillin, discovered by Fleming (q.v.) and exploited by Chain (q.v.), Florey (q.v.) and others, is a fungal product, and many fungi when grown under appropriate conditions are now known to produce antibiotics; see the reviews by Brian (*Bot. Rev.* **17**: 357, 1951) and Broadbent (*PANS* **B 14**: 120, 1968). Important or interesting antibiotics from fungi include antiamoebin, alternaric acid, calvacin, cephalosporins, dendrochin, flammulin, fumigillin, fumigatin, fusidic acid, gliotoxin, griseofulvin, helenin, lepiochlorin, patulin, penatin, penicillic acid, penicillin, phomin, poricin, proliferin, sparassol, statolin, trichomycin, trichothecin, trypacidin, ustilagic acids, variecolin, viridin, wortmannin (q.v.).

The market for antibiotic drugs has been estimated as exceeding US$25 billion annually. In addition to their use in human health, antibiotics are very widely and sometimes indiscriminately used in animal feeds (see Mellon *et al.*, *Hogging it! Estimates of antimicrobial abuse in livestock*, 2001). Misuse of antibiotics has caused a rise in numbers of strains resistant to them.

Fungicolous fungi (e.g. *Trichoderma*) produce a complex range of antibiotics including peptaibols and isonitriles. See Howell (in Harman & Kubicek, *Trichoderma* and *Gliocladium* **2**: 173, 1998).

Some lichen products (q.v.) are antibiotics. In general they are most effective against gram-positive bacteria. Usnic acid is used commercially ('Usno', 'Binan', 'Usniplant') and strongly inhibits *Mycobacterium*. Sodium usnate is effective against tomato canker (*Corynebacterium michiganense*) and several lichen acids are active against *Trichosporon*. Usnic acid inhibits *Neurospora crassa* and this and lichen extracts inhibit wood-rotting fungi (Henningsson & Lundström, *Mater. Organ.* **5**: 19, 1970). Hale (*Biology of lichens*, 1967; edn 2, 1974; review), Virtanen *et al.* (*Suomen Kem.* **B27-B30**, 1954-7; many papers on 'Usno'), Vartia (*in* Ahmadjian & Hale (Eds), *The lichens*: 547, 1974; review), Lowe & Elander (*Mycol.* **75**: 361, 1983; antibiotic industry in USA).

antibody, see antigen.

anticlinal, perpendicular to the surface; cf. periclinal.

antigen, a substance which when introduced into the tissues of a living animal induces the development in the blood serum (see **-serum**) of another substance (see Drouhet *et al.* (Eds), *Fungal antigens*, 1988). (the **-body**) with which it reacts specifically; antibodies may be classified according to whether they cause lysis (**lysins**), agglutination (**agglutinins**), or precipitation (**precipitins**) of the antigen; see anaphylaxis, complement-fixation, ELISA, Serology.

Antilyssa Haller ex M. Choisy (1929) = Peltigera fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Antimanoa Syd. (1930), Pezizomycotina. 1, S. America.

Antimanopsis Petr. (1948) = Monostichella fide von Arx (*Verh. K. ned. Akad. Wet. Amst.* C **51**: 1, 1957).

antimetabolite, a substance which resembles in chemical structure some naturally occurring compound essential in a living process and which specifically antagonizes the biological action of such an essential compound. See Woolley (*Science, NY* **129**: 615, 1959; review).

Antinoa Velen. (1934) ? = Pezizella Fuckel fide Lizoň (*Mycotaxon* **45**: 1, 1992).

antiphyte, see alternation of generations.

Antipodium Piroz. (1974), anamorphic *Ophionectria*, Hso.≡ eH.15. 1, C. America. See Pirozynski (*CJB* **52**: 1143, 1974), Samuels (*Mycol.* **81**: 347, 1989), Bartoshevich *et al.* (*Journal of Basic Microbiology* **30**: 313, 1990), Castañeda Ruiz *et al.* (*Mycotaxon* **100**: 327, 2007).

antiserum, blood serum (the fluid fraction of coagulated blood) containing antibodies to one or more antigens (q.v.).

antithetic, see alternation of generations.

Antlea P.A. Dang. (1890) nom. dub., ? Fungi. or Protozoa.

Antonospora I. Fries, R.J. Paxton, J. Tengö, J.A. da Silva, S.B. Slemenda, N.J. Pieniazek (1999), Microsporidia. 2. See Fries *et al.* (*Eur. J. Protist.* **35**: 183, 1999).

Antrocarpon A. Massal. (1856) = Ocellularia. p.p. and Thelotrema (Thelotremat.) p.p. fide Hale (*Bull. Br. Mus. nat. hist.* Bot. **8**: 227, 1981).

Antrocarpum G. Mey. (1825) ≡ Thelotrema.

Antrodia P. Karst. (1879), Fomitopsidaceae. 46, Europe; N. America. See Donk (*Persoonia* **4**: 339, 1966), Niemelä & Ryvarden (*TBMS* **65**: 427, 1975; typification), Lombard (*Mycol.* **82**: 185, 1990; culture).

Antrodiella Ryvarden & I. Johans. (1980), Phanerochaetaceae. *c.* 50, USA. See Niemelä (*Karstenia* **22**: 11, 1982), Gilbertson & Ryvarden (*Europ. Polyp.* **1**: 147, 1993), Kim *et al.* (*Antonie van Leeuwenhoek* **83**: 81, 2003; phylogeny), Spirin & Zmitrovich (*Karstenia* **43**: 67, 2003; Russia), Dai (*Mycotaxon* **89**: 389, 2004; China).

Antromyces Fresen. (1850), anamorphic *Pezizomycotina*, Hsy.0eH.3/39. 2 (fimicolous), Europe; S. America. See Seifert *et al.* (*Univ. Waterloo Biol. Ser.* **27**, 1983).

Antromycopsis Pat. & Trab. (1897), anamorphic *Pleurotus*. 3, widespread. See Pollack & Miller (*Mem. N. Y. bot. Gdn* **28**: 174, 1976; teleomorph), Moore (*CJB* **55**: 1251, 1977), Moore (*TBMS* **82**: 377, 1984), Stalpers *et al.* (*CJB* **69**: 6, 1991; gen. revision, key), Capelari & Fungaro (*MR* **107**: 1050, 2003; RAPD).

antrorse, directed upwards or forwards.

Anulohypha Cif. (1962), anamorphic *Pezizomycotina*, Hso.-.-. 1, Dominican Republic. See Ciferri (*Atti Ist. bot. Univ. Lab. crittog. Pavia* sér. 5 **19**: 88, 1962).

Anulomyces Bydgosz (1932) nom. dub., Fungi.

Anulosporium Sherb. (1933) nom. dub., Fungi. See Drechsler (*Mycol.* **26**: 135, 1934), Rubner (*Stud. Mycol.* **39**, 1996; = *Arthrobotrys* or *Monacrosporium* (*Orbiliaceae*)).

Anungitea B. Sutton (1973), anamorphic *Venturiaceae*, Hso.1eP.3/9. 15, widespread. See Sutton (*Mycol. Pap.* **132**: 10, 1973), Crous *et al.* (*CJB* **73**: 224, 1995; S Africa), Castañeda Ruíz *et al.* (*Mycotaxon* **65**: 93, 1997; Cuba), Crous *et al.* (*Stud. Mycol.* **58**: 185, 2007; phylogeny).

Anungitopsis R.F. Castañeda & W.B. Kendr. (1990), anamorphic *Venturiaceae*, Hso.≡ eP.?28. 7, widespread. See Castañeda Ruiz & Kendrick (*Univ. Waterloo Biol. Ser.* **33**: 6, 1990), Castañeda Ruíz *et al.* (*Mycotaxon* **59**: 203, 1996; Cuba), Jørgensen (*Symb. bot. upsal.* **32** no. 1: 113, 1997; S Africa), Ho *et al.* (*Mycotaxon* **72**: 115, 1999; key), Crous *et al.* (*Stud. Mycol.* **58**: 185, 2007; phylogeny).

Anzia Garov. (1868) ≡ Lichenothelia.

Anzia Stizenb. (1861) nom. cons., Parmeliaceae (L). 35, widespread. See Culberson (*Brittonia* **13**: 381, 1961), Kurokawa & Jinzenji (*Bull. natn. Sci. Mus. Tokyo*, B **8**: 369, 1965), Yoshimura & Elix (*J. Hattori bot. Lab.* **74**: 287, 1993), Yoshimura *et al.* (*Biblthca Lichenol.* **58**: 439, 1995; New Guinea), Calvelo (*Mycotaxon* **58**: 147, 1996; S. Am.), Yoshimura *et al.* (*J. Hattori bot. Lab.* **82**: 343, 1997; Indian spp.), Kärnefelt *et al.* (*Nova Hedwigia* **67**: 71, 1998), Yoshimura *in* Marcelli & Seaward (Eds) (*Lichenology in Latin America. History, Current Knowledge and Applications* [Proceedings of GLAL-3, Terceiro Encontro do Grupo Latino-Americano de Liquenólogos, São Paulo, Brazil, 24-28 September, 1997]: 117, 1998; Am.), Rikkinen & Poinar (*MR* **106**: 984, 2002; fossil taxa), Thell *et al.* (*Mycol. Progr.* **3**: 297, 2004; phylogeny), Arup *et al.* (*Mycol.* **99**: 42, 2007; phylogeny), Crespo *et al.* (*Mol. Phylogen. Evol.* **44**: 812, 2007; morphology and phylogeny).

Anziaceae M. Satô (1939) = Parmeliaceae.

Anziella Gyeln. (1940) = Placynthium fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Anzina Scheid. (1982), ? Arthrorhaphidaceae (L). 1, Europe. See Scheidegger (*Nova Hedwigia* **41**: 191, 1985), Lumbsch (*J. Hattori bot. Lab.* **83**: 1, 1997), Lumbsch *et al.* (*MR* **105**: 265, 2001; asci), Lumbsch *et al.* (*Mol. Phylogen. Evol.* **31**: 822, 2004; phylogeny), Wedin *et al.* (*MR* **109**: 159, 2005; phylogeny), Lumbsch *et al.* (*MR* **111**: 1133, 2007).

Aorate Syd. (1929) = Titaea fide Boedijn (*Sydowia* **5**: 211, 1951).

Aoria Cif. (1962), anamorphic *Pezizomycotina*, St.0eH.10. 1, Dominican Republic. See Ciferri (*Atti Ist. bot. Univ. Lab. crittog. Pavia* sér. 5 **19**: 89, 1962), Nag Raj & DiCosmo (*Univ. Waterloo Biol. Ser.* **20**, 1982).

apandrous, forming oospores when no antheridia are present.

Aparaphysaria Speg. (1922), Pyronemataceae. 2, India; Tierra del Fuego. See Kimbrough (*Mem. N. Y. bot. Gdn* **49**: 326, 1989).

Apatelomyces Thaxt. (1931), Laboulbeniaceae. 1, W. Africa. See Nannfeldt (*Svensk bot. Tidskr.* **43**: 468, 1949).

Apatomyces Thaxt. (1931), Laboulbeniaceae. 1, Philippines. See Tavares (*Mycol. Mem.* **9**: 627 pp., 1985), Santamaría (*MR* **99**: 1071, 1995).

Apatoplaca Poelt & Hafellner (1980), Teloschistaceae (L). 1, N. America. See Bellemère *et al.* (*Cryptog. Bryol.-Lichénol.* **7**: 189, 1986; ultrastr.), Kantvilas & McCarthy (*Lichenologist* **35**: 397, 2003).

Aphanandromyces W. Rossi (1982), Laboulbeniaceae. 1, Europe. See Rossi (*Mycol.* **74**: 520, 1982), Tavares (*Mycol. Mem.* **9**: 627 pp., 1985), Santamaria *et al.* (*Treb. Inst. Bot. Barcelona* **14**: 1, 1991; Europe), Santamaría (*Fl. Mycol. Iberica* **5**, 2003; Iberian peninsula).

Aphanistis Sorokīn (1889), ? Chytridiales. 1 or 2, former USSR.

Aphanoascus Zukal (1890), Onygenaceae. Anamorph *Chrysosporium*. 12, widespread. See Cano & Guarro (*MR* **94**: 455, 1990; key), Sugiyama *et al.* (*Mycoscience* **40**: 251, 1999; DNA), Cano *et al.* (*Stud. Mycol.* **47**: 153, 2002; phylogeny), Pivkin & Khudyakova (*Mycotaxon* **81**: 7, 2002), Sugiyama *et al.* (*Stud. Mycol.* **47**: 5, 2002).

Aphanobasidium Jülich (1979), Pterulaceae. 15, widespread. See Jülich (*Persoonia* **10**: 326, 1979), Boidin *et al.* (*BSMF* **119**: 333, 2003; subgen. *Aphanobasidium*).

Aphanocladium W. Gams (1971), anamorphic *Nectriaceae*, Hso.0eH.15. 2 (on myxomycetes), widespread. Several species are now placed in *Lecanicillium*. See Gams *et al.* (*CJB* **76**: 1570, 1998), Sung *et al.* (*Nova Hedwigia* **72**: 311, 2001; phylogeny), Zare & Gams (*Rostaniha* Supplement **3**, 2004).

Aphanofalx B. Sutton (1986), anamorphic *Pezizomycotina*, St.0eH.1. 2, Zambia; Pakistan. See Sutton & Abbas (*TBMS* **87**: 640, 1987).

Aphanopeltis Syd. (1927), Asterinaceae. Anamorph *Elachopeltis*. 7, America (tropical); Indonesia. See Hosagoudar *et al.* (*Journal of Mycopathological Research* **39**: 61, 2001).

aphanoplasmodium, see plasmodium.

Aphanopsidaceae Printzen & Rambold (1995), Lecanorales (L). 2 gen. (+ 2 syn.), 3 spp.

Lit.: Eriksson (*SA* **9**: 24, 1990) places it outside of the *Lecanoromycetidae*, Printzen & Rambold (*Lichenologist* **27**: 99, 1995), Kantvilas & McCarthy (*Lichenologist* **31**: 555, 1999).

Aphanopsis Nyl. ex P. Syd. (1887), Aphanopsidaceae (L). 1, Europe. See Coppins & James (*Lichenologist* **16**: 241, 1984), Printzen & Rambold (*Lichenologist* **27**: 91, 1995).

Aphanostigme Syd. (1926), ? Pseudoperisporiaceae. *c.* 12, widespread. See Hansford (*Mycol. Pap.* **15**, 1946), Müller (*Sydowia* **18**: 86, 1965), Rossman (*Mycol. Pap.* **157**, 1987), Verma & Kamal (*Indian Phytopath.* **42**: 561, 1990).

Aphanotria Döbbeler (2007), Bionectriaceae. 1, S. America (tropical). See Döbbeler (*MR* **111**: 1406, 2007).

Apharia Bonord. (1864), Pezizomycotina. 1, Europe.

Aphelaria Corner (1950), Aphelariaceae. 20, widespread. See Roberts (*Kew Bull.* **54**: 517, 1999; Cameroon).

Aphelariaceae Corner (1970), Cantharellales. 3 gen., 22 spp. Basidioma ramarioid.

Lit.: Corner (*Ann. Bot. Mem.* [A monograph of Clavaria and allied genera] **1**: 1, 1950), Corner (*TBMS* **49**: 205, 1966), Petersen & Zang (*Acta Bot. Yunn.* **8**: 281, 1986), Roberts (*Kew Bull.* **54**: 517, 1999).

Aphelariopsis Jülich (1982), ? Septobasidiaceae. 2, Sarawak; S. America. See Jülich (*Persoonia* **11**: 402, 1982).

Aphelidium Zopf (1885) nom. dub., Fungi. Protozoa or fungi in algal cells).

Aphidomyces Brain (1923), ? Saccharomycetales. 5 (in *Insecta*), widespread.

Aphotistus Humb. (1793) = Rhizomorpha Roth fide Mussat (*Syll. fung.* **15**, 1901) nom. dub. fide, Donk (*Taxon* **11**: 79, 1962).

Aphragmia Trevis. (1880) [non *Aphragmia* Nees 1836, *Acanthaceae*] = Ionaspis fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Aphyllophorales. Order proposed by Rea (after Patouillard) for basidiomycetes having macroscopic basidiocarps in which the hymenophore is flattened (*Thelephoraceae*), club-like (*Clavariaceae*), tooth-like (*Hydnaceae*) or has the hymenium lining tubes (*Polyporaceae*) or sometimes on lamellae, the poroid or lamellate hymenophores being tough and not fleshy as in the *Agaricales*. Traditionally the order has had a core of 4 fam. (as indicated above) based on hymenophore shape but detailed microscopic studies of basidiocarp structure and molecular evidence has shown these groupings to be unnatural. Keys to 550 spp. in culture are given by Stalpers (*Stud. mycol.* **16**, 1978).

Aphyllotus Singer (1974), ? Marasmiaceae. 1, Colombia. See Singer (*Sydowia* Beih. **7**: 29, 1974).

Aphysa Theiss. & Syd. (1917) = Coleroa fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Aphysiostroma Barrasa, A.T. Martínez & G. Moreno (1986), Hypocreaceae. Anamorph *Verticillium*-like. 1 (coprophilous), Spain. See Barrasa *et al.* (*CJB* **63**: 2439, 1985), Spatafora & Blackwell (*Mycol.* **85**: 912, 1993; DNA), Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999), Suh & Blackwell (*Mycol.* **91**: 836, 1999; phylogeny), Sung *et al.* (*Nova Hedwigia* **72**: 311, 2001; phylogeny), Sung *et al.* (*Stud. Mycol.* **57**: 1, 2007).

apical, at the end (or **apex**); **- granule**, a deeply staining granule at the hyphal apex, esp. in *Basidiomycetes*; the 'Spitzenkorper' of Brunswik (1924); **- veil**, see annulus; **- wall building**, see wall building.

apiculate, having an apiculus.

apiculus (of a spore), a short projection at one end; a projection by which it was fixed to the sterigma (Josserand); apicule; hilar appendage.

apileate, having no pileus; resupinate.

Apinisia La Touche (1968), Onygenales. Anamorph *Chrysosporium*. 2 or 3, Europe; Australia. See Guarro *et al.* (*Mycotaxon* **42**: 193, 1991), Sugiyama *et al.* (*Mycoscience* **40**: 251, 1999; DNA), Sugiyama *et al.* (*Stud. Mycol.* **47**: 5, 2002; phylogeny).

Apiocamarops Samuels & J.D. Rogers (1987), Boliniaceae. 3, C. & S. America. See Samuels & Rogers (*Mycotaxon* *28: 54, 1987), Rogers & Samuels* (*Mycol.* **80**: 738, 1988), Rogers & Ju (*Sydowia* **55**: 359, 2003).

Apiocarpella Syd. & P. Syd. (1919), anamorphic *Pezizomycotina*, Cpd.1eH.1. 8, widespread. See Mel'nik (*Nov. Sist. niz. Rast.* **13**: 93, 1976), Punithalingam (*Mycol. Pap.* **142**, 1979; synonym of *Ascochyta*), Vanev & Sofia (*Fitologiya* **29**: 39, 1985; key).

Apioclypea K.D. Hyde (1994), ? Clypeosphaeriaceae. 1 (saprobic on palms), Papua New Guinea. See Hyde *et al.* (*Sydowia* **50**: 21, 1998), Kang *et al.* (*Mycoscience* **40**: 151, 1999), Smith *et al.* (*Fungal Diversity* **13**: 175, 2003; rel. to *Apiospora*), Taylor & Hyde (*Fungal Diversity Res. Ser.* **12**, 2003).

Apiocrea Syd. & P. Syd. (1921) = Hypomyces fide Rogerson & Samuels (*Mycol.* **81**: 413, 1989), Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Apiodiscus Petr. (1940), ? Rhytismatales. 1, Iran.

Apiodothina Petr. & Cif. (1932) = Coccoidea fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Apiognomonia Höhn. (1917), Gnomoniaceae. Anamorphs *Discula, Gloeosporidina*. 10 (from stems and leaves), Europe; N. America. *A. erythrostoma* (cherry leaf scorch), *A. quercina* (oak anthracnose). See von Arx (*Antonie van Leeuwenhoek* **17**: 259, 1951), Barr (*Mycol. Mem.* **7**, 1978; key), Monod (*Sydowia* **37**: 222, 1984), Barr (*Mycotaxon* **41**: 287, 1991; N Am. spp.), Haemmerli *et al.* (*Molecular Plant-Microbe Interactions* **5**: 479, 1992; DNA), Viret & Petrini (*MR* **98**: 423, 1994), Butin & Kehr (*Eur. J. For. Path.* **28**: 297, 1998; anam.), Castlebury *et al.* (*Mycol.* **94**: 1017, 2002), Castlebury *et al.* (*Mycoscience* **44**: 203, 2003), Sogonov *et al.* (*Sydowia* **57**: 102, 2005; typification), Sogonov *et al.* (*MR* **111**: 693, 2007; revision).

Apioplagiostoma M.E. Barr (1978), Gnomoniaceae. 3, Europe; N. America. See Mouchacca (*Cryptog. Mycol.* **8**: 141, 1987), Fröhlich & Hyde (*MR* **99**: 727, 1995), Zhang & Blackwell (*Mycol.* **93**: 355, 2001; phylogeny).

Apioporthe Höhn. (1917) = Anisogramma fide Müller & von Arx *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 87, 1973).

Apioporthella Petr. (1929), ? Valsaceae. 1 (from stems etc.), Europe; N. America. See Barr (*Mycotaxon* **41**: 287, 1991).

Apiorhynchostoma Petr. (1923), Clypeosphaeriaceae. 5 (saprobic on wood), Europe. See Sivanesan (*TBMS* **65**: 19, 1975), Rogers *et al.* (*Mycol.* **86**: 700, 1994), Waldner (*Beitr. Kenntn. Pilze Mitteleur.* **11**: 67, 1997), Hyde *et al.* (*Sydowia* **50**: 21, 1998), Réblová (*Sydowia* **50**: 229, 1998), Kang *et al.* (*Mycoscience*

40: 151, 1999; posn).

Apiosordaria Arx & W. Gams (1967), Lasiosphaeriaceae. Anamorph *Cladorrhinum*. 11, widespread. See Krug *et al.* (*Mycotaxon* **17**: 553, 1983), Guarro & Cano (*TBMS* **91**: 587, 1988), Mouchacca & Gams (*Mycotaxon* **48**: 415, 1993; anamorphs), Hyde *et al.* (*Mycoscience* **38**: 437, 1997), Stchigel *et al.* (*Mycol.* **92**: 1206, 2000), Stchigel *et al.* (*Mycol.* **95**: 1218, 2003), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004; phylogeny), Miller & Huhndorf (*Mol. Phylogen. Evol.* **35**: 60, 2005; phylogeny), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny).

Apiosphaeria Höhn. (1909), Phyllachoraceae. Anamorph *Oswaldina*. 5 (from living leaves), widespread (neotropics). See Dianese *et al.* (*Sydowia* **46**: 233, 1994; anamorph), Hyde *et al.* (*Sydowia* **50**: 21, 1998), Hyde & Cannon (*Mycol. Pap.* **175**: 114, 1999; spp. on palms).

Apiospora Sacc. (1875), Apiosporaceae. Anamorphs *Arthrinium*, *Cordella*, *Pteroconium*. 7 (on *Palmae*, grasses etc.), widespread. See Samuels *et al.* (*N.Z. Jl Bot.* **19**: 137, 1981), Müller (*Boln Soc. argent. Bot.* **28**: 201, 1992; key), Hyde *et al.* (*Sydowia* **50**: 21, 1998), Smith *et al.* (*Fungal Diversity* **13**: 175, 2003; phylogeny), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004; phylogeny), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny).

Apiosporaceae K.D. Hyde, J. Fröhl., Joanne E. Taylor & M.E. Barr (1998), Sordariomycetidae (inc. sed.). 6 gen. (+ 16 syn.), 47 spp.
Lit.: Samuels *et al.* (*N.Z. Jl Bot.* **19**: 137, 1981), Müller (*Boln Soc. argent. Bot.* **28**: 201, 1992), Hyde *et al.* (*Sydowia* **50**: 21, 1998), Wang & Hyde (*Fungal Diversity* **3**: 159, 1999), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004).

Apiosporella Höhn. ex Theiss. (1917) = Pseudomassaria fide Barr (*Mycol.* **68**, 1976).

Apiosporella Speg. (1910) ≡ Apiocarpella.

Apiosporella Speg. (1912) = Aplosporidium fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Apiosporina Höhn. (1910) = Venturia Sacc. See also *Dibotryon*. fide Barr (*Sydowia* **41**: 25, 1989), Crous *et al.* (*Stud. Mycol.* **58**: 185, 2007; phylogeny), Winton *et al.* (*Mycol.* **99**: 240, 2007; phylogeny).

Apiosporina Petr. (1925) ≡ Pseudomassaria fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Apiosporium Kunze (1817), anamorphic *Capnodium*, St.0eH.?. 2. See Kunze (*Mykologische Hefte* Leipzig **1**, 1817).

Apiosporopsis (Traverso) Mariani (1911), ? Melanconidaceae. 1, Europe. See Reid & Dowsett (*CJB* **68**: 2398, 1990).

apiosporous (of two-celled spores), where one cell is markedly smaller then the other.

Apiothecium Lar.N. Vassiljeva (1987) = Apioporthella fide Barr (*Mycotaxon* **41**: 287, 1991).

Apiothyrium Petr. (1947), Hyponectriaceae. 1, Finland. See Wang & Hyde (*Fungal Diversity* **3**: 159, 1999).

Apiotrabutia Petr. (1929) = Munkiella fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Apiotrichum Stautz (1931) = Trichosporon fide Middelhoven *et al.* (*FEMS Yeast Res.* **1**: 15, 2001; taxonomy).

Apiotypa Petr. (1925), Pezizomycotina. 1, Philippines. Type material is missing. See Hyde *et al.* (*Sydowia* **50**: 21, 1998), Hyde & Cannon (*Mycol. Pap.* **175**, 1999).

Aplacodina *Ruhland (1900) = Pseudomassaria fide* Barr (*Mycol.* **68**, 1976).

aplanetism, the condition of having non-motile spores in place of zoospores.

Aplanocalenia Lücking, Sérus. & Vězda (2005), Gomphillaceae (L). 1. See Lücking *et al.* (*Lichenologist* **37**: 163, 2005).

aplanogamete, a non-motile gamete.

aplanospore (1) a naked, amoeboid or non-amoeboid mobile cell; (2) a sporangiospore.

Aplanosporites R.K. Kar (1979), Fossil Fungi. 1, India. See Kar (*Palaeobotanist* **26**: 35, 1977).

Aplectosoma Drechsler (1951), Cochlonemataceae. 1, USA. See Drechsler (*Mycol.* **43**: 173, 1951).

aplerotic, of an oospore which occupies ‹ 60% of the oogonial volume (Shahzad *et al.*, *Bot. J. Linn. Soc.* **108**: 143, 1992).

Aplopsora Mains (1921), Chaconiaceae. *c.* 6 (on dicots), N. America; Brazil; Russian far east; China; Japan. See Buriticá (*Revista de la Academia Columbiana de Ciencias Exactas, Físicas y Naturales* **22** no. 84: 325, 1998; neotrop. spp).

Aplosporella Speg. (1880), anamorphic *Botryosphaeriaceae*, St.0eP.1. 66, widespread (esp. tropical). See Petrak (*Sydowia* **6**: 336, 1952), Tilak & Ramchandra Rao (*Mycopath. Mycol. appl.* **24**: 362, 1964), Ramchandra Rao (*Mycopath. Mycol. appl.* **28**: 45, 1966; Indian spp.), Ramchandra Rao (*Mycopath. Mycol. appl.* **28**: 68, 1966; Indian spp.), Pandey (*Perspectives in mycological research* **2**: 77, 1990; review), Pande & Rao (*Nova Hedwigia* **60**: 79, 1995; key to 44 spp.), Damm *et al.* (*Fungal Diversity* **27**: 35, 2007; posn).

Aplosporidium Speg. (1912) = Asteromella fide Sutton (*Mycol. Pap.* **141**, 1977).

Aplotomma A. Massal. ex Beltr. (1858) ? = Buellia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Apoa Syd. (1931) = Pachypatella fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

apobasidiomycete, a gasteromycete having apobasidia.

apobasidium, see basidium.

Apocoryneum B. Sutton (1975) = Massariothea fide Sutton (*Mycol. Pap.* **141**, 1977).

apocyte, multinucleate cell in which the multinucleate condition is accidental, transitory or secondary. See coenocyte.

Apocytospora Höhn. (1924) = Plectophomella fide Petrak (*Annls mycol.* **27**: 368, 1929).

apodial, having no stalk; sessile.

Apodospora Cain & J.H. Mirza (1970), Lasiosphaeriaceae. 4 (coprophilous), N. America; Europe. See Lundqvist (*Symb. bot. upsal.* **20** no. 1, 1972), Barr (*Mycotaxon* **39**: 43, 1990; posn).

Apodothina Petr. (1970), Phyllachoraceae. 1 (on living leaves of *Yucca*), USA. See Petrak (*Sydowia* **23**: 276, 1969).

Apodus Malloch & Cain (1971), ? Lasiosphaeriaceae. 1 (coprophilous), N. America. See Malloch & Cain (*CJB* **49**: 869, 1971), Cai *et al.* (*MR* **110**: 137, 2006; phylogeny), Cai *et al.* (*MR* **110**: 359, 2006; polyphyly).

Apogaeumannomyces Matsush. (2003) nom. inval., ? Chaetosphaeriales. Anamorph *Cercosporula*. 1 (on palm leaf), Peru. See Matsushima (*Matsush. Mycol. Mem.* **10**: 152, 2001).

apogamy, the apomictic development of diploid cells.

Apogloeum Petr. (1954), anamorphic *Pezizomycotina*, St.0eH.?. 1, Tasmania. See Petrak (*Sydowia* **8**: 57, 1954).

Apoharknessia Crous & S.J. Lee (2004), anamorphic *Diaporthales*. 1, pantropical. See Lee *et al.* (*Stud. Mycol.* **50**: 239, 2004).

Apomelasmia Grove (1937), anamorphic *Diaporthales*, St.0eH.15. 2, Europe. See Mel'nik (*Nov. Sist. niz. Rast.* **28**: 69, 1992).

Apomella Syd. (1937) = Botryosphaeria fide Sutton (*in litt.*).

apomixis (adj. **apomictic**), the development of sexual cells into spores, etc., without being fertilized. Cf. amphimixis, automixis, and pseudomixis.

Aponectria (Sacc.) Sacc. (1883) = Nectria fide Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

apophysis, a swelling or a swollen filament, e.g. at the end of a sporangiophore below the sporangium in Mucorales (cf. columella) or on the stem of some species of *Geastrum*; (in basidiomycetes), the swelling at the tip of a sterigma from which the basidiospore develops and which becomes the hilar appendage (q.v.).

Apophysomyces P.C. Misra (1979), Radiomycetaceae. 1, India. See Misra *et al.* (*Mycotaxon* **8**: 377, 1979), Ellis & Ajello (*Mycol.* **74**: 144, 1982), Lakshmi *et al.* (*J. Clin. Microbiol.* **31**: 1368, 1993; zygomycosis), Eaton *et al.* (*J. Clin. Microbiol.* **32**: 2827, 1994; mucormycosis), Meis *et al.* (*J. Clin. Microbiol.* **32**: 3078, 1994; osteomyelitis), Voigt & Wöstemeyer (*Gene* **270**: 113, 2001; phylogeny), Liang *et al.* (*J. Clin. Microbiol.* **44**: 892, 2006; rhino-orbitocerebral mucormycosis).

apoplasmodial (of *Acrasiales*), having non-fusion of the myxamoebae.

apoplastic, movement of substances via the cell walls, not entering the living cell; cf. symplastic.

Aporella Syd. (1939) [non *Aporella* Podp. 1916, *Musci*] ≡ Aporellula fide Sutton (*Mycotaxon* **3**: 377, 1976).

Aporellula B. Sutton (1986), anamorphic *Pezizomycotina*, St.1-≡ eH.15. 1, Ecuador. See Sutton (*Sydowia* **38**: 324, 1985).

Aporhytisma Höhn. (1917) = Diaporthe fide von Arx & Müller (*Beitr. Kryptfl. Schweiz* **11** no. 1, 1954), Petrak (*Sydowia* **24**: 249, 1971), Castlebury *et al.* (*Mycoscience* **44**: 203, 2003).

Aporia Duby (1862) = Lophodermium fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Aporidicellaesporites Frunzescu & Bacaran (1990), Fossil Fungi. 1. See Frunzescu & Bacaran (*Revue roum. Géol., Géophys. Géogr.* Géol. **34**: table 1, 1990).

Aporimonocellasporites Frunzescu & Bacaran (1990), Fossil Fungi. 1. See Frunzescu & Bacaran (*Revue roum. Géol., Géophys. Géogr.* Géol. **34**: 12, 1990).

Aporimonodicellaesporites Frunzescu & Bacaran (1990), Fossil Fungi. 1. See Frunzescu & Bacaran (*Revue roum. Géol., Géophys. Géogr.* Géol. **34**: table 1 + pl. 1, fig. 8, 1990).

Aporimulticellaesporites Frunzescu & Bacaran (1990), Fossil Fungi. 1. See Frunzescu & Bacaran (*Revue roum. Géol., Géophys. Géogr.* Géol. **34**: 24, 1990).

Aporitetracellaesporites Frunzescu & Bacaran (1990), Fossil Fungi. 1. See Frunzescu & Bacaran (*Revue roum. Géol., Géophys. Géogr.* Géol. **34**: table 1, 1990).

Aporitricellaesporites Frunzescu & Bacaran (1990), Fossil Fungi. 1. See Frunzescu & Bacaran (*Revue roum. Géol., Géophys. Géogr.* Géol. **34**: table 1, 1990).

Aporomyces Thaxt. (1931), Laboulbeniaceae. 8 (on *Limnichideae* and *Strophylinidae*), widespread. See Benjamin (*Aliso* **12**: 335, 1989; key), Kaur & Mukerji (*Mycoscience* **37**: 61, 1996), Santamaría (*Fl. Mycol. Iberica* **5**, 2003; Europe).

Aporophallus Möller (1895), Phallaceae. 1, Brazil.

Aporothielavia Malloch & Cain (1973) ? = Chaetomidium fide Malloch & Cain (*Mycol.* **65**: 1055, 1973), Suh & Blackwell (*Mycol.* **91**: 836, 1999; phylogeny), Untereiner *et al.* (*CJB* **79**: 321, 2001; phylogeny, genus concept), Cai *et al.* (*MR* **110**: 359, 2006; phylogeny), Cai *et al.* (*MR* **110**: 137, 2006), Greif & Currah (*MR* **111**: 70, 2007; ontogeny).

Aporpiaceae Bondartsev & Bondartseva (1960) = Auriculariaceae.

Aporpium Bondartsev & Singer (1944) = Protomerulius fide Núñez (*Folia cryptog. Estonica* **33**: 99, 1998).

Aposphaeria Berk. (1860) nom. rej., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Aposphaeria Sacc. (1880) nom. cons., anamorphic *Melanomma*, Cpd.0eH.15. 101, widespread. See Chesters (*TBMS* **22**: 116, 1938), Heiny *et al.* (*Mycotaxon* **44**: 137, 1992).

Aposphaeriella Died. (1912) = Zignoëlla fide Höhnel (*Sber. Akad. Wiss. Wien* Math.-naturw. Kl., Abt. 1 **126**: 283, 1917).

Aposphaeriopsis Died. (1913) = Cephalotheca fide Chesters (*TBMS* **19**: 261, 1935).

Aposporella Thaxt. (1920), anamorphic *Pezizomycotina*, Hso.0eP.38. 1 (on *Insecta*), Africa.

apospory, direct incorporation in a spore of an oogonial or antheridial diploid nucleus with cytoplasm uninfluenced by any meiosis at the time of spore wall formation (Dick, 1972).

Apostemidium P. Karst. (1871) ≡ Apostemium.

Apostemium (P. Karst.) P. Karst. (1870) = Vibrissea fide Graddon (*TBMS* **48**: 639, 1965; key), Sánchez & Korf (*Mycol.* **58**: 733, 1966).

Apostrasseria Nag Raj (1983), anamorphic *Phacidium*, St.0eH.15. 4, New Zealand; N. America. See Kramer (*Stud. Mycol.* **30**: 151, 1987).

Apotemnoum Corda (1833) = Clasterosporium fide Saccardo (*Syll. fung.* **4**: 382, 1886).

apothecium (pl. **apothecia**), a cup-like or saucer-like ascoma in which the hymenium is exposed at maturity, sessile or stipitate, the stipes sometimes lichenized (podetium; q.v.). See the following for terminology of anatomical structures of apothecia: Degelius (*Sym. bot. upsal.* **13** (2), 1954; tabulation of terms), Korf (*Sci. Rep. Yokohama nat. Univ.* II **7**: 7, 1958; *in* Ainsworth *et al.* (Eds), *The Fungi* **4A**: 249, 1973), Letrouit-Galinou (*Bryologist* **71**: 297, 1969), Maas Geesteranus (*Blumea* **6**: 41, 1947), Sheard (*Lichenologist* **3**: 328, 1967).

Apoxona Donk (1969) = Hexagonia Fr. fide Bondartsev & Singer (*Polyporaceae of the European part of the U.S.S.R. and Caucasus*: 1106 pp., 1953).

Appelia (Sacc.) Trotter (1931) = Trichoconis fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

appendage, a process (outgrowth) of any sort. For coelomycete conidial appendage terminology see

Nag Raj (*Coelomycetous anamorphs*, 1993).

Appendichordella R.G. Johnson, E.B.G. Jones & S.T. Moss (1987), Halosphaeriaceae. 1 (marine), Europe; N. America. See Johnson *et al.* (*CJB* **65**: 931, 1987), Kohlmeyer & Volkmann-Kohlmeyer (*Bot. Mar.* **34**: 1, 1991).

Appendicispora Spain, Oehl & Sieverd. (2006) = Ambispora fide Walker & Schüssler (*MR* **112**: 297, 2008).

Appendicisporaceae C. Walker, Vestberg & A. Schüssler (2007) nom. illegit. = Ambisporaceae.
Lit.: Walker *et al.* (*MR* **111**: [253], 2007), Walker *et al.* (*MR* **111**: 137, 2007).

Appendicisporonites R.K. Saxena & S. Khare (1991), Fossil Fungi. 1, India. See Saxena & Khare (*Geophytology* **21**: 40, 1991).

Appendicospora K.D. Hyde (1995), ? Xylariales. 2 (dead palm fronds), widespread (tropical). See Hyde (*Sydowia* **47**: 31, 1995), Yanna *et al.* (*Mycoscience* **38**: 395, 1997), Hyde *et al.* (*Sydowia* **50**: 21, 1998; posn).

Appendicularia Peck (1885) [non *Appendicularia* DC. 1828, *Melastomataceae*] ≡ Appendiculina.

appendiculate (1) (of an agaric basidioma), having the edge of the expanded pileus fringed with tooth-like remains of the veil, as in *Psathyrella candolleana*; (2) (of a spore), having one or more setulae.

Appendiculella Höhn. (1919), Meliolaceae. 250 (from leaves), widespread (tropical). See Hughes (*Mycol. Pap.* **166**, 1993), Song (*Mycosystema* **17**: 214, 1998; China), Song *et al.* (*Mycosystema* **21**: 177, 2002; China), Hosagoudar (*Sydowia* **55**: 162, 2003; placement), Rodríguez & Piepenbring (*Mycol.* **99**: 544, 2007; Panama).

Appendiculina Berl. (1889) = Stigmatomyces fide Thaxter (*Proc. Amer. Acad. Arts & Sci.* **25**: 8, 1890).

Appendispora K.D. Hyde (1994), Didymosphaeriaceae. 2, Brunei. See Hyde (*Sydowia* **46**: 29, 1994), Hyde *et al.* (*Nova Hedwigia* **69**: 449, 1999).

Appendixia B.S. Lu & K.D. Hyde (2000), Xylariaceae. 1, USA. Questionably distinct from *Anthostomella*. See Lu & Hyde (*Fungal Diversity Res. Ser.* **4**: 224, 2000).

Appianoporites S.Y. Sm., Currah & Stockey (2004), Fossil Fungi. 1, Canada. See Smith *et al.* (*Mycol.* **96**: 181, 2004).

applanate, flattened.

apple canker, disease caused by *Nectria galligena*.

appressed (adpressed), closely flattened down.

appressorium, a swelling on a germ-tube or hypha, esp. for attachment in an early stage of infection, as in certain *Pucciniales* and in *Colletotrichum*; the '. expression of the genotype during the final phase of germination', whether or not morphologically differentiated from vegetative hyphae, as long as the structure adheres to and penetrates the host (Emmett & Parbery, *Ann. Rev. Phytopath.* **13**: 146, 1975); the term hyphopodium (q.v.) is probably best treated as a synonym.

Apra J.F. Hennen & F.O. Freire (1979), Raveneliaceae. 1 (on *Mimosa* (*Leguminosae*)), Brazil. See Hennen & Freire (*Mycol.* **71**: 1053, 1979).

Apterivorax S. Keller (2005), Neozygitaceae. 2, widespread. See Keller & Petrini (*Sydowia* **57**: 47, 2005), Keller & Petrini (*Sydowia* **57**: 23, 2005; key), Keller (*Sydowia* **58**: 75, 2006; validation of *A. acaricida*).

Aptrootia Lücking & Sipman (2007), Trypetheliaceae (L). 1, Costa Rica; Papua New Guinea. See Lücking *et al.* (*Lichenologist* **39**: 187, 2007), Aptroot *et al.* (*Biblthca Lichenol.* **97**, 2008; Costa Rica).

apud, in; sometimes used to indicate a name published by one author in the work of another; cf. ex.

Apus Gray (1821) ≡ Schizophyllum.

Apyrenium Fr. (1849) nom. dub., anamorphic *Hypocreales*. See Donk (*Taxon* **7**: 164, 1958).

Aquadiscula Shearer & J.L. Crane (1985), Helotiaceae. 2 (aquatic), USA. See Shearer & Crane (*Mycol.* **77**: 441, 1985), Fallah & Shearer (*Mycol.* **93**: 566, 2001).

Aquadulciospora Fallah & Shearer (2001), Hyponectriaceae. 1, USA.

Aqualignicola V.M. Ranghoo, K.M. Tsui & K.D. Hyde (2001), Annulatascaceae. 1, Hong Kong. See Ranghoo *et al.* (*MR* **105**: 628, 2001).

Aquamarina Kohlm., Volkm.-Kohlm. & O.E. Erikss. (1996), ? Dothideomycetes. 1, North Carolina. See Kohlmeyer *et al.* (*MR* **100**: 393, 1996).

Aquamortierella Embree & Indoh (1967), Mortierellaceae. 1, New Zealand; Japan. See Embree & Indoh (*Bull. Torrey bot. Club* **94**: 464, 1967), Indoh (*TMSJ* **8**: 28, 1967).

Aquaphila Goh, K.D. Hyde & W.H. Ho (1998), anamorphic *Tubeufia*, Hso.?.?. 2, Australia. See Goh *et al.* (*MR* **102**: 588, 1998), Tsui *et al.* (*Mycol.* **99**: 884, 2007; phylogeny, anamorph).

Aquapoterium Raja & Shearer (2008), Helotiales. 1 (from fresh water), USA. See Raja *et al.* (*Mycol.* **100**: 141, 2008).

Aquascypha D.A. Reid (1965), Meruliaceae. 1, C. & S. America. See Reid (*Nova Hedwigia* Beih. **18**: 51, 1965), Ryvarden (*Syn. Fung.* **18**: 76, 2004).

Aquasphaeria K.D. Hyde (1995), ? Annulatascaceae. 1 (submerged wood), Queensland. See Hyde (*Nova Hedwigia* **61**: 119, 1995).

Aquathanatephorus C.C. Tu & Kimbr. (1978) = Thanatephorus fide Stalpers & Anderson *in* Sneh *et al.* (Eds) (*Rhizoctonia Species* Taxonomy, Molecular Biology, Ecology, Pathology and Disease Control: 58, 1996).

Aquatic fungi. Living in water. Over 3000 species of Fungi and almost 150 chromistans have been recorded from freshwater, brackish and marine environments (Shearer *et al.*, *Biodiversity and Conservation* **16**: 49, 2007). Here the term is restricted to freshwater in contrast to Marine fungi (q.v.). The chief zoosporic fungi of freshwater are *Chytridiomycota* and chromistans, esp. *Chytridiales* and *Saprolegniales*: Sparrow (*Aquatic phycomycetes*, 1943 [edn 2, 1960]; *Mycol.* **50**: 797, 1959, phylogeny), Emerson (*Mycol.* **50**: 589, 1959; culture), Fuller & Jaworski (*Zoosporic fungi in teaching and research*, 1987). Many are fish parasites; some parasitize freshwater plankton: Canter & Lund (*Ann. Bot., Lond.*, n.s. **14-15**, 1950-51; *New Phytol.* **47**: 238, 1948; *TBMS* **36**: 13, **37**: 111, 1953-54), Cook (*Am. J. Bot.* **50**: 580, 1943, on desmids), Khulbe (*Manual of aquatic fungi (Chytridiomycetes and Oomycetes)*, 2001), Paterson (*Mycol.* **50**: 85, 483, 1958).

'Hyphomycetes' of freshwater have received much attention (Ingold, *TBMS* **25**: 339, 1942). These fungi frequently have branched or sigmoid spores as an adaptation (typically of convergent evolution, see Tsui & Berbee, *Molecular Phylogenetics and Evolution* **39**: 587, 2006) to life on decaying leaves in fast running water (Ingold, *Mycol.* **58**: 43, 1966), but may also show other forms of adaptation, for example empty cells acting as float chambers in the genus *Ru-*

bikia. Over 100 anamorph gen. and 300 spp. have been recorded (Ingold, *Am. J. Bot.* **66**: 218, 1979; *An illustrated guide to aquatic and water-borne hyphomycetes* [*Publs Freshwater biol. Assn* **30**], 1975, keys, illustr.; *Biol. J. Linn. Soc.* **7**: 1, 1975, convergent evolution), Nilsson (*Symb. bot. upsal.* **18** (2), 1964), Webster & Descals (*in* Cole & Kendrick, *Biology of conidial fungi* **1**: 295, 1981). **Ecology**: Bärlocher (Ed.) (*The ecology of aquatic hyphomycetes*, 1992). **Teleomorphs**: Webster (*in* Bärlocher, *The ecology of aquatic hyphomycetes*: 99, 1992). **Regional surveys. China**: Zhu & Yu (*Acta Mycol. Sin.* **11**: 43, 1992). **Cuba**: Marvanová & Marvan (*Česká Myk.* **23**: 135, 1969). **Ghana**: Dixon (*TBMS* **42**: 174, 1959). **Hawaii**: Ranzoni (*Mycol.* **71**: 786, 1979). **Iceland**: Johnson (*J. Elisha Mitch. sci. Soc.* **84**: 179, 1968). **Jamaica**: Hudson & Ingold (*TBMS* **43**: 469, 1960). **Japan**: Tubaki (*Bull. Nat. Sci. Mus. Tokyo* **41**: 149, 1957). **Malaysia**: Nawawi (*Malayan Nature Journal* **39**: 75, 1985). **New Zealand**. Aimer & Segedin (*N.Z. J. Bot.* **23**: 273, 1985). **Nigeria**: Ingold (*TBMS* **39**: 108, **42**: 479, 1956-59). **N. Am.**: Peterson (*Mycol.* **54**: 117, **55**: 18, 570, 1962-63; gen. key). **Norway**: Bråthen (*Nord. J. Bot.* **4**: 375, 1984). **Puerto Rico**: Santos-Flores & Betancourt-López (*Caribbean J. Sci.* Special Publ. **2**: 1, 1997), Nieves-Rivera & Santos-Flores (*J. Agric. Univ. Puerto Rico* **89**: 97, 2005). **Sierra Leone**: Le'John (*TBMS* **48**: 261, 1965). **S. Am.**: Schoenlein-Crusius & Grandi (*Brazilian J. Microbiol.* **34**: 183, 2003). **Uganda**: Ingold (*TBMS* **41**: 109). **Ukraine**: Dudka ([*Aquatic hyphomycetes of the Ukraine*], 1974). **Venezuela**: Nilsson (*Svensk bot. Tidskr.* **56**: 351, 1962). **Zimbabwe**: Ingold (*TBMS* **41**: 109). See also aero-aquatic fungi.

Over 200 ascomycetes have also been recorded from freshwater habitats (Shearer, *Nova Hedw.* **56**: 1, 1993) and the tropics are now proving extremely rich in novel ascomycete genera (e.g. Hyde, *MR* **98**: 719, 1994).

Some saxicolous lichens, mainly of the *Lichinaceae* and the gen. *Dermatocarpon*, *Hymenelia*, *Placynthium*, *Polyblastia*, *Staurothele*, *Verrucaria* (q.v.), occur in freshwater; some may be always submerged (e.g. *Collema fluviatile*, *Hydrothria venosa*). They can form zones on river and lake margins related to the frequency of submersion (Rosentreter, *Northwest Sci.* **58**: 108, 1984; Santesson, *Medd. Lunds Univ. Limnol. Inst.* **1**, 1939, Sweden; Scott, *Lichenologist* **3**: 368, 1967, Zimbabwe), and can be used in the determination of river channel capacity (Gregory, *Earth Surface Processes* **1**: 273, 1976; Australia); a 'lichen-line' on trees can also indicate highwater levels (Hale, *Bryologist* **87**: 261, 1984).

A small number of smuts are associated with aquatic plants and may show some adaptation themselves to a freshwater environment (Piatek, *Polish Bot. J.* **51**: 173, 2006). In addition to plant debris saprobes and animal parasites, various other substrata in freshwater have been investigated for fungi (Czeczuga *et al.*, *Polish J. Environmental Sci.* **13**: 21, 2004). Yeasts are also known from aquatic environments, and may contribute to water self-purification (Dynowska *et al.*, *Int. J. Ecohydrology and Hydrobiol.* **5**: 147, 2005).

At least some aquatic fungi also occupy dry land habitats, for example as endophytes (Sati *et al.*, *Nat. Acad Sci. Letters* **29**: 351, 2006). The land environment adjacent to fresh water can markedly affect the aquatic mycota. Introduced forest trees, for example, may result in a change in the range of aquatic fungi colonizing fallen leaves (Ferreira *et al.*, *Archiv für Mikrobiol.* **166**: 467, 2006). Diverse fungi are found in polluted water and sewage: Cooke (*Sydowia, Beih.* **1**: 136, 1957, list; *A laboratory guide to fungi in polluted waters, sewage and sewage treatment systems*, 1963; *Our mouldy earth*, 1970 [reprints and summarizes his studies in this field]). There have been many studies of aquatic fungi in relation to pollution (Krauss *et al.*, Aquatic fungi in heavy metal and organically polluted habitats, in Deshmukh & Rai (Eds) *Biodiversity of fungi, their role in human life*, 2005). Some attention has been given to possibilities of using aquatic fungi in bioremediation of oil pollution (Etim & Antai, *Global J. Env. Sci.* **6**: 33, 2007).

Aquaticheirospora Kodsueb & W.H. Ho (2007), anamorphic *Pleosporales*, H?.?.?. 1, Thailand. See Kodsueb *et al.* (*Botanical Journal of the Linnean Society* **155**: 283, 2007; descr.).

Aquaticola W.H. Ho, K.M. Tsui, Hodgkiss & K.D. Hyde (1999), Annulatascaceae. 5, Australia; Hong Kong. See Ho *et al.* (*Fungal Diversity* **3**: 87, 1999), Fallah & Shearer (*Mycol.* **93**: 566, 2001), Tsui *et al.* (*Nova Hedwigia* **77**: 161, 2003), Campbell & Shearer (*Mycol.* **96**: 822, 2004; phylogeny).

Arachniaceae Coker & Couch (1928) = Lycoperdaceae.

Arachnion Schwein. (1822), Agaricaceae. 6, widespread (subtropical). See Demoulin (*Nova Hedwigia* **21**: 641, 1972), Quadraccia (*Mycotaxon* **58**: 331, 1996; Italy).

Arachniopsis Long (1917) [non *Arachniopsis* Spruce 1882, *Hepaticae*] = Arachnion fide Demoulin (*Nova Hedwigia* **21**: 641, 1972).

Arachniotus J. Schröt. (1893), Gymnoascaceae. 3, Poland. See Orr *et al.* (*Mycol.* **69**: 126, 1977), Currah (*Mycotaxon* **24**: 1, 1985), Udagawa & Uchiyama (*Mycoscience* **41**: 303, 2000), Sugiyama & Mikawa (*Mycoscience* **42**: 413, 2001), Solé *et al.* (*Stud. Mycol.* **47**: 141, 2002; synonymy with *Gymnascella*).

Arachnocrea Z. Moravec (1956), Hypocreaceae. Anamorph *Verticillium*-like. 1 (on old polypores and plant tissues), widespread. See Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999), Põldmaa (*Stud. Mycol.* **45**: 83, 2000), Samuels *et al.* (*CBS Diversity Ser.* **4**, 2006; USA).

arachnoid, covered with, or formed of, delicate hairs or fibres; araneose.

Arachnomycelium Grüss (1931), Fossil Fungi. 1.

Arachnomyces Massee & E.S. Salmon (1902), Arachnomycetaceae. Anamorph *Onychocola*. 10, Europe; America. See Malloch & Cain (*CJB* **48**: 839, 1970), Currah (*Mycotaxon* **24**: 1, 1985), Gibas *et al.* (*Medical Mycology* **40**: 573, 2002; anam.), Gibas *et al.* (*Stud. Mycol.* **47**: 131, 2002; phylogeny, links with *Eurotiales*), Sugiyama *et al.* (*Stud. Mycol.* **47**: 5, 2002; phylogeny), Gibas *et al.* (*Stud. Mycol.* **50**: 525, 2004), Geiser *et al.* (*Mycol.* **98**: 1053, 2006; phylogeny).

Arachnomycetaceae Gibas, Sigler & Currah (2002), Arachnomycetales. 2 gen., 11 spp.

Lit.: Gibas *et al.* (*Stud. Mycol.* **47**: 131, 2002), Geiser *et al.* (*Mycol.* **98**: 1053, 2006).

Arachnomycetales Gibas, Sigler & Currah (2002). Eurotiomycetidae. 1 fam., 2 gen., 11 spp. Fam.:

Arachnomycetaceae

For *Lit* see under fam.

Arachnopeziza Fuckel (1870), ? Hyaloscyphaceae. 15, widespread (north temperate). See Korf (*Lloydia* **14**: 129, 1951), Huhtinen (*Mycotaxon* **30**: 9, 1987), Cantrell & Hanlin (*Mycol.* **89**: 745, 1997; DNA), Yu & Zhuang (*Nova Hedwigia* **74**: 415, 2002; China).

Arachnopezizella Kirschst. (1938) = Arachnopeziza fide Korf (*Lloydia* **14**: 129, 1951).

Arachnophora Hennebert (1963), anamorphic *Pezizomycotina*, Hso.≡ eP.1. 4, widespread (esp. north temperate). See Hughes (*N.Z. Jl Bot.* **17**: 139, 1979; descr.), Castañeda Ruíz *et al.* (*Nova Hedwigia* **64**: 473, 1997), Kendrick (*CJB* **81**: 75, 2003; morphogenesis).

Arachnoscypha Boud. (1885) = Arachnopeziza fide Korf (*Lloydia* **14**: 129, 1951), Svrček (*Česká Mykol.* **41**: 193, 1987).

Arachnospora R.F. Castañeda, Minter & Camino (2003), anamorphic *Pezizomycotina*, H?.?.?. 1 (on decaying leaves), Cuba. See Castañeda Ruíz *et al.* (*Mycotaxon* **87**: 386, 2003).

Arachnotheca Arx (1971), Onygenales. Anamorph *Chrysosporium*. 3, widespread. See Currah (*Mycotaxon* **24**: 1, 1985), Uchiyama *et al.* (*Mycoscience* **36**: 211, 1995), Sugiyama & Mikawa (*Mycoscience* **42**: 413, 2001), Sugiyama *et al.* (*Stud. Mycol.* **47**: 5, 2002; phylogeny).

Arachnula Cienk. (1876), Biomyxida. q.v.

Araeocoryne Corner (1950), Gomphaceae. 1, Malaysia. See Corner (*Ann. Bot. Mem.* [A monograph of Clavaria and allied genera] **1**: 194, 1950).

Araneomyces Höhn. (1909), anamorphic *Paranectriella*, Hso.1bH.1. 1 (mycoparasitic), Brazil. See Sutton (*TBMS* **83**: 399, 1984), Rossman (*Mycol. Pap.* **157**: 71 pp., 1987), Wu *et al.* (*MR* **101**: 1318, 1997).

Araneosa Long (1941), Agaricaceae. 1, USA. Basidioma gasteroid. See Long (*Mycol.* **33**: 351, 1941).

araneose (araneous), see arachnoid.

Arberia Nieuwl. (1916) [non *Arberia* C.D. White 1908, fossil ? *Pteridophyta*] ≡ Asteridium.

Arborella Zebrowski (1936), Fossil Fungi ? Chytridiomycetes. 2 (Cambrian to ? Recent), Australia.

arboricolous, growing on trees.

Arborillus Munt.-Cvetk. & Gómez-Bolea (1998), anamorphic *Pezizomycotina*, Hso.?.?. 1 (lichenicolous), Spain. See Muntañola-Cvetkovic & Gómez-Bolea (*Mycotaxon* **68**: 152, 1998).

Arborispora K. Ando (1986), anamorphic *Pezizomycotina*, Hso.1bH.1/10. 3 (aquatic), Japan. See Ando (*TMSJ* **27**: 120, 1986), Gönczöl & Révay (*Fungal Diversity* **12**: 19, 2003; ecology).

arbuscle (arbuscule), see mycorrhiza.

Arbuscula Bat. & Peres (1965) [non *Arbuscula* H.A. Crum, Steere & L.E. Anderson 1964, *Musci*] ≡ Neoarbuscula.

Arbusculidium B. Sutton (1982) [non *Arbusculidium* J. Deunff 1968, fossil *Acritarcha*] ≡ Neoarbuscula.

Arbusculina Marvanová & Descals (1987), anamorphic *Pezizomycotina*, Hso.1bH.19. 2 (aquatic), widespread. See Marvanová & Descals (*TBMS* **89**: 499, 1987), Marvanová (*TBMS* **90**: 607, 1988), Descals (*MR* **109**: 545, 2005; propagules).

Arbusculites Paradkar (1976), Fossil Fungi. 1 (Cretaceous), India. See Paradkar (*Journal of Palynology* **10**: 120, 1974).

Arcangelia Sacc. (1890) = Didymella fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Arcangeliella Cavara (1900) = Lactarius fide Miller *et al.* (*Mycol.* **93**: 344, 2001).

Archaea (archaebacteria), an heterogeneous group of prokaryotic organisms belonging to the Domain Archaea. See bacteria.

archaeascus, see ascus.

Archaeoglomus N. Sharma, R.K. Kar, A. Agarwal & R. Kar (2005), Fossil Fungi, Glomeraceae. 1.

Archaeomarasmius Hibbett, D. Grimaldi & Donoghue (1997), Fossil Fungi. 1, New Jersey. See Hibbett *et al.* (*Am. J. Bot.* **84**: 982, 1997).

Archaeospora Morton & Redecker (2001), Archaeosporaceae. 1, USA. See Morton & Redecker (*Mycol.* **93**: 183, 2001), Redecker & Raab (*Mycol.* **98**: 885, 2006; phylogeny).

Archaeosporaceae J.B. Morton & D. Redecker (2001), Archaeosporales. 1 gen., 1 spp.

Lit.: Azcon-Aguilar & Barea (*Mycorrhiza* **6**: 457, 1996), van der Heijden *et al.* (*Nature* Lond. **396**: 69, 1998), Morton & Redecker (*Mycol.* **93**: 183, 2001), Schüßler *et al.* (*MR* **105**: 1413, 2001), Spain (*Mycotaxon* **87**: 109, 2003), Hafeel (*Mycorrhiza* **14**: 213, 2004), Redecker (*Glomeromycota* Arbuscular mycorrhizal fungi and their relative(s). Version 01 July 2005.
http://tolweb.org/Glomeromycota/28715/2005.07.01
in The Tree of Life Web Project, http://tolweb.org: [unpaginated], 2005), Walker *et al.* (*MR* **111**: 137, 2007).

Archaeosporales C. Walker & A. Schüssler (2001). Glomeromycetes. 3 fam., 3 gen., 6 spp. Fams:
(1) **Ambisporaceae**
(2) **Archaeosporaceae**
(3) **Geosiphonaceae**
For *Lit.* see under fam.

Archagaricon A. Hancock & Atthey (1869), Fossil Fungi (mycel.) Fungi. 5 (Carboniferous), British Isles.

Archecribraria Locq. (1983), Fossil Fungi. 2, Sahara.

Archemycota. Name in the rank of phylum including the groups treated in this *Dictionary* as *Chytridiomycota* and *Zygomycota* (incl. *Trichomycetes*); see Cavalier-Smith (*in* Rayner *et al.* (Eds), *Evolutionary biology of the fungi*: 339, 1987; *in* Osawa & Honjo (Eds), *Evolution of life*: 271, 1991).

Archeomycelites Bystrov (1959), Fossil Fungi (mycel.) Fungi. 1 (Devonian), former USSR.

Archephoma Watanabe, H. Nishida & Kobayashi (1999), Fossil Fungi. 1, Japan. See Watanabe *et al.* (*Int. J. Pl. Sci.* **160**: 436, 1999).

Archeplax Locq. (1985), Fossil Fungi. 1, Sahara.

Archeterobasidium Koeniguer & Locq. (1979), Fossil Fungi, Agaricomycetes. 1 (Miocene), Libya.

Archiascomycetes = Taphrinomycetes. Class of *Ascomycota* provisionally proposed by Nishida & Sugiyama (*Mycoscience* **35**: 361, 1994) for *Pneumocystis*, *Protomyces*, *Saitoella*, *Schizosaccharomyces* and *Taphrina* based on 18S rRNA sequences; considered by the authors to perhaps not be monophyletic but to have originated before *Euascomycetes* and *Hemiascomycetes*.

archicarp (of ascomycetes), the cell, hypha, or coil which later becomes the ascoma or part of it.

Archilichens, lichens in which the algae are bright green (obsol.).

Archimycetes (obsol.). Name used rarely for *Plasmodiophoromycota* and *Chytridiomycota*. *Myxochytridiales*.

Architrypethelium Aptroot (1991), Trypetheliaceae

(L). 3, widespread (tropical). See Aptroot (*Biblthca Lichenol.* **44**: 120, 1991), Aptroot *et al.* (*Biblthca Lichenol.* **97**, 2008; Costa Rica).

archontosome, an electron-dense body occurring near nuclei at all stages from crozier formation to the development of young ascospores in *Xylaria polymorpha*. See Beckett & Crawford (*J. gen. Microbiol.* **63**: 269, 1970).

Arcispora Marvanová & Bärl. (1998), anamorphic *Basidiomycota*. 1 (aquatic), Canada. See Marvanová & Bärlocher (*Mycol.* **90**: 531, 1998).

arctic mycology, see Polar and alpine mycology.

Arcticomyces Savile (1959) = Exobasidium fide Donk (*Persoonia* **4**: 287, 1966).

Arctocetraria Kärnefelt & A. Thell (1993), Parmeliaceae (L). 2, Europe. See Kärnefelt *et al.* (*Bryologist* **96**: 394, 1993), Thell *et al.* (*Mycol. Progr.* **1**: 335, 2002; phylogeny), Mattsson & Articus (*Symb. bot. upsal.* **34** no. 1: 237, 2004; phylogeny), Randlane & Saag (*Central European Lichens*: 75, 2006; key).

Arctoheppia Lynge (1938) ≡ Thelignya fide Jørgensen & Henssen (*Taxon* **39**: 343, 1990).

Arctomia Th. Fr. (1860), Arctomiaceae (L). 5, Europe; N. America. See Henssen (*Svensk bot. Tidskr.* **63**: 126, 1969), Jørgensen (*Lichenologist* **35**: 287, 2003; China), Wedin *et al.* (*MR* **109**: 159, 2005; phylogeny, link with *Hymeneliaceae*).

Arctomiaceae Th. Fr. (1860), Ostropomycetidae (inc. sed.) (L). 3 gen., 7 spp.

Lit.: Jørgensen (*Lichenologist* **35**: 287, 2003), Lumbsch *et al.* (*Lichenologist* **37**: 291, 2005), Jørgensen (*Nordic Lichen Flora* **3**: Cyanolichens: 9, 2007), Lumbsch *et al.* (*MR* **111**: 257, 2007; phylogeny).

Arctoparmelia Hale (1986), Parmeliaceae. 5, widespread. See Thell *et al.* (*Symb. bot. upsal.* **34** no. 1: 429, 2004; biogeography), Blanco *et al.* (*Mol. Phylogen. Evol.* **39**: 52, 2006; phylogeny).

Arctopeltis Poelt (1983), Lecanoraceae (L). 1, Arctic. See Arup & Grube (*Lichenologist* **30**: 415, 1998; DNA), Feige & Lumbsch (*Cryptog. Bryol.-Lichénol.* **19**: 147, 1998; ontogeny), Grube *et al.* (*MR* **108**: 506, 2004; phylogeny).

Arctosporidium Thor (1930) nom. dub., ? Fungi. 1, Svalbard.

Arcuadendron Sigler & J.W. Carmich. (1976), anamorphic *Pezizomycotina*, Hso.0eH.40. 2, India; former Yugoslavia. See Sigler & Carmichael (*Mycotaxon* **4**: 355, 1976).

arcuate, arc-like.

ardella, a small spot-like apothecium, as in the lichen *Arthonia*.

Ardhachandra Subram. & Sudha (1978), anamorphic *Pezizomycotina*, H. 4, widespread. Placed into synonymy with *Rhinocladiella* by some authors. See Onofri & Castagnola (*Mycotaxon* **18**: 337, 1983), Keates & Carris (*Cryptog. Bot.* **4**: 336, 1994; from *Vaccinium macrocarpon*), Chen & Tzean (*MR* **99**: 364, 1995; key to 4 spp.).

ardosiaceous (ardesiaceous), slate-coloured.

Arecacicola Joanne E. Taylor, J. Fröhl. & K.D. Hyde (2001), Sordariomycetes. 1 (on palm trunk), Indonesia. See Taylor *et al.* (*Mycoscience* **42**: 370, 2001).

Arecomyces K.D. Hyde (1996), Hyponectriaceae. 9 (saprobic on palms), widespread. See Hyde (*Sydowia* **48**: 224, 1996).

Arecophila K.D. Hyde (1996), Xylariales. 13 (on *Palmae*), S.E. Asia. Placed in the *Cainiaceae* by some authors, but relationships are obscure. See Hyde (*Nova Hedwigia* **63**: 81, 1996), Jeewon *et al.* (*MR* **107**: 1392, 2003).

Aregma Fr. (1815) = Phragmidium fide Vánky (*in litt.*).

Arenaea Penz. & Sacc. (1901) = Lachnum fide Korf in Ainsworth *et al* (*The Fungi* **4A**, 1973).

Arenariomyces Höhnk (1954), Halosphaeriaceae. 4 (marine), widespread. See Jones *et al.* (*J. Linn. Soc. Bot.* **87**: 193, 1983), Kohlmeyer & Volkmann-Kohlmeyer (*MR* **92**: 413, 1989; key), Jones *et al.* (*CJB* **74** Suppl. 1: S790, 1995; ultrastr.).

Arenicola Velen. (1947) = Entoloma fide Kuyper (*in litt.*).

Areolaria Kalchbr. (1884) = Phellorinia fide Stalpers (*in litt.*).

areolate, having division by cracks into small areas.

Areolospora S.C. Jong & E.E. Davis (1974), Xylariaceae. 1, widespread. Treated as *Phaeosporis* by Hawksworth (*SA* **13**: 1, 1994). See Hawksworth (*Norw. Jl Bot.* **27**: 97, 1980), Krug *et al.* (*Mycol.* **86**: 581, 1994).

arescent, becoming crustose on drying.

Argentinomyces N.I. Peña & Aramb. (1997), ? Sordariomycetes. 1 (on driftwood), Argentina. See Peña & Arambarri (*Mycotaxon* **65**: 333, 1997).

Argomyces Arthur (1912) ≡ Argotelium.

Argomycetella Syd. (1922) = Maravalia fide Mains (*Bull. Torrey bot. Club* **66**: 173, 1939).

Argopericonia B. Sutton & Pascoe (1987), anamorphic *Pezizomycotina*, Hso.0eH.6/10. 2, Australia; India. See Sutton & Pascoe (*TBMS* **88**: 41, 1987), D'Souza *et al.* (*Mycotaxon* **82**: 133, 2002; Andaman Is).

Argopsis Th. Fr. (1857), ? Brigantiaeaceae (L). 3, widespread (sub-Antarctica). See Lamb (*J. Hattori bot. Lab.* **38**: 447, 1974).

Argotelium Arthur (1906) = Puccinia fide Arthur (*Am. J. Bot.* **5**: 485, 1918).

Argylium Wallr. (1833) = Melanogaster fide Stalpers (*in litt.*).

Argynna Morgan (1895), Argynnaceae. 1, N. America. See Shearer & Crane (*TBMS* **75**: 193, 1980).

Argynnaceae Shearer & J.L. Crane (1980), ? Dothideomycetes (inc. sed.). 2 gen., 2 spp.

Lit.: Shearer & Crane (*TBMS* **75**: 193, 1980), Hawksworth (*SA* **6**: 153, 1987).

arid, dry.

Ariefia Jacz. (1922) = Zopfiella fide Cannon (*in litt.*).

Ariella E.-J. Gilbert (1941) = Amanita Pers. fide Singer (*Agaric. mod. Tax.* edn 3, 1975).

Aristadiplodia Shirai (1919) nom. dub., anamorphic *Pezizomycotina*. 1, Japan. See Sutton (*Mycol. Pap.* **141**, 1977).

Aristastoma Tehon (1933), anamorphic *Pezizomycotina*, Cpd.≡ eH.1. 5, widespread. *A. oeconomicum* (zonate leaf spot of cowpea, *Vigna*). See Sutton (*Mycol. Pap.* **97**, 1964; key), Hyde & Philemon (*MR* **95**: 1151, 1991).

Arkoola J. Walker & Stovold (1986), Venturiaceae. 1, Australia. See Walker & Stovold (*TBMS* **87**: 23, 1986).

Armata W. Yamam. (1958), ? Micropeltidaceae. 1, Japan. See Yamamoto (*Science Reports of the Hyogo University of Agriculture* Series Agricultural Biology **3**: 89, 1958).

Armatella Theiss. & Syd. (1915), Meliolaceae. 12 (from leaves), widespread (tropical). See von Arx (*Fungus* Wageningen **28**: 1, 1958), Hosagoudar (*J.

Econ. Taxon. Bot. **15**: 195, 1991; India), Hosagoudar & Abraham (*J. Econ. Taxon. Bot.* **25**: 560, 2001), Hosagoudar (*Sydowia* **55**: 162, 2003; family placement).

Armatellaceae Hosag. (2003) = Meliolaceae.
Lit.: Hosagoudar (*Sydowia* **55**: 162, 2007).

armilla, see annulus.

Armillaria (Fr.) Staude (1857), Physalacriaceae. 35, widespread. Most species cause serious root diseases in woody plants; some form orchid mycorrhizas. Application of a biological species concept has led to recognition of a larger number of biological species, which cannot always be recognised morphologically. See Ullrich & Anderson (*Exp. Mycol.* **2**: 119, 1978; karyology), Shaw & Kile (*Armillaria root disease*, 1991), Anderson & Stasovski (*Mycol.* **84**: 506, 1992; phylogeny), Smith *et al.* (*Nature* **256**: 428, 1992; population biology), Piercey-Normore *et al.* (*Mol. Phylogen. Evol.* **10**: 49, 1998; phylogeny), Fox (*Armillaria root rot: biology and control of honey fungus*, 2000).

Armillariella (P. Karst.) P. Karst. (1881) = Armillaria fide Dennis *et al.* (*TBMS* **37**: 33, 1954).

armillate, edged; fringed; frilled.

Arnaudia Bat. (1960) = Acantharia fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Arnaudiella Petr. (1927), Microthyriaceae. Anamorph *Xenogliocladiopsis*. 3 or 6, widespread. See Crous & Kendrick (*CJB* **72**: 59, 1994).

Arnaudina Trotter (1931), anamorphic *Pezizomycotina*, Hsp.≡ eP.?. 1, Brazil. See Carmichael *et al.* (*Genera of Hyphomycetes*, 1980).

Arnaudovia Valkanov (1963) = Polyphagus fide Karling (*Chytriomyc. Iconogr.*, 1977).

Arniella Jeng & J.C. Krug (1977), Lasiosphaeriaceae. 2 (coprophilous), USA; Venezuela. See Jeng & Krug (*Mycol.* **69**: 73, 1977), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004).

Arnium Nitschke ex G. Winter (1873), Lasiosphaeriaceae. 12 (mostly coprophilous), widespread. See Krug & Cain (*CJB* **50**: 367, 1972; key), Krug & Cain (*CJB* **55**: 83, 1977), Lorenzo & Havrylenko (*Mycol.* **93**: 1221, 2001; Argentina), Miller (*Sydowia* **55**: 267, 2003; ascomata), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004).

Arnoldia A. Massal. (1856) [non *Arnoldia* Cass. 1824, *Compositae*] = Lempholemma fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Arnoldia D.J. Gray & Morgan-Jones (1980) ≡ Arnoldiomyces.

Arnoldiella R.F. Castañeda (1984), anamorphic *Pezizomycotina*, Hso.0-≡ hP.10. 1, Cuba. See Castañeda (*Revta Jardin bot. Nac.* Univ. Habana **5**: 58, 1984), Goos (*Mycol.* **79**: 1, 1987).

Arnoldiomyces Morgan-Jones (1980), anamorphic *Hypomyces*, Hso.≡ eH.10. 2, Americas. See Morgan-Jones (*Mycotaxon* **11**: 446, 1980), Samuels & Seifert *in* Sugiyama (Ed.) (*Pleomorphic Fungi: The Diversity and its Taxonomic Implications*: 29, 1987).

Arongylium, see *Strongylium (Ach.) Gray*.

Aropsiclus Kohlm. & Volkm.-Kohlm. (1994), Xylariales. 1, USA. Perhaps related to *Phomatospora*. See Kohlmeyer & Volkmann-Kohlmeyer (*SA* **11**: 95, 1993), Kohlmeyer & Volkmann-Kohlmeyer (*SA* **13**: 24, 1994).

Aroramyces Castellano & Verbeken (2000) = Hysterangium fide Hosaka *et al.* (*Mycol.* **98**: 949, 2006; systematic position, nested in *Hysterangium*).

Arpinia Berthet (1974), Pyronemataceae. 4, Europe. See Hohmeyer (*Mycol. Helv.* **3**: 221, 1988; key), Häffner (*Mitt. Arbeitsg. Pilzk. Niederrhein* **7**: 132, 1989; key), Perry *et al.* (*MR* **111**: 549, 2007; phylogeny).

arrect, stiffly upright.

Arrhenia Fr. (1849), Tricholomataceae. *c.* 25, widespread (temperate). Recognition of *Arrhenia* makes *Omphalina* paraphyletic. See Redhead (*CJB* **62**: 865, 1984), Lutzoni & Vilgalys (*CJB* **73** Suppl. 1: S649, 1995), Lutzoni (*Syst. Biol.* **46**: 373, 1997), Redhead *et al.* (*Mycotaxon* **83**: 19, 2002; phylogeny), Barrasa & Rico (*Mycol.* **95**: 700, 2003; Iberian Peninsula).

Arrhenosphaera Stejskal (1974), Ascosphaeraceae. 1 (from bee hives), Venezuela. See Stejskal (*J. Apicult. Res.* **13**: 39, 1974).

Arrhytidia Berk. & M.A. Curtis (1849) = Dacrymyces fide Donk (*Persoonia* **4**: 269, 1966).

arsenic detection, see *Scopulariopsis*.

Artallendea Bat. & H. Maia (1960) = Armatella fide Katumoto (*Bull. Fac. Agr. Yamag. Univ.* **13**: 291, 1962).

Artheliopsis Vain. (1896) = Echinoplaca fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Arthonaria Fr. (1825) ? = Enterographa fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Arthonia Ach. (1806) nom. cons., Arthoniaceae (±L). Anamorph *Septocyta*. *c.* 491 (partly on lichens), widespread. See Santesson (*Symb. bot. upsal.* **12** no. 1: 1, 1952; foliicolous spp.), Coppins (*Lichenologist* **21**: 195, 1989; Brit. Isl.), Tehler (*CJB* **68**: 2458, 1990; cladistics), Grube *et al.* (*Lichenologist* **27**: 25, 1995; key 9 spp. on lichens), Lücking (*Lichenologist* **27**: 127, 1995; Costa Rica), Myllys *et al.* (*Bryologist* **101**: 70, 1998; phylogeny), Sundin & Tehler (*Lichenologist* **30**: 381, 1998; phylogeny), Wedin & Hafellner (*Lichenologist* **30**: 59, 1998; lichenicolous spp.), Grube & Lücking (*MR* **105**: 1007, 2001; ascogenous hyphae), Follmann & Werner (*J. Hattori bot. Lab.* **94**: 261, 2003; on *Roccellaceae*).

Arthoniaceae Rchb. (1841), Arthoniales (±L). 12 gen. (+ 48 syn.), 603 spp.
Lit.: Santesson (*Symb. bot. upsal.* **12** no. 1: 1, 1952; foliicolous spp.), Coppins (*Lichenologist* **21**: 195, 1989), Diederich (*Flechten Follmann* Contributions to Lichenology in Honour of Gerhard Follmann: 179, 1995), Lücking (*Lichenologist* **27**: 127, 1995; 25 foliicolous spp. Costa Rica), Ferraro & Lücking (*Phyton* **37**: 61, 1997; foliicolous spp.), Grube & Matzer (*Biblthca Lichenol.* **68**: 1, 1997), Thor (*Symb. bot. upsal.* **32** no. 1: 267, 1997), Grube (*Bryologist* **101**: 377, 1998), Makhija & Patwardhan (*Mycotaxon* **67**: 287, 1998), Myllys *et al.* (*Bryologist* **101**: 70, 1998), Sundin & Tehler (*Lichenologist* **30**: 381, 1998), Wedin & Hafellner (*Lichenologist* **30**: 59, 1998), Lutzoni (*Am. J Bot.* **91**: 1446, 2004).

Arthoniactis (Vain.) Clem. (1909) = Lecanactis Körb. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Arthoniales Henssen ex D. Hawksw. & O.E. Erikss. (1986), (±L). Arthoniomycetes. 3 fam., 74 gen., 1538 spp. Sister-group of the *Dothideomycetes*.

Thallus varied, crustose but sometimes very poorly developed or absent; ascomata usually apothecial but sometimes with a poroid opening, often elongated and branched, ascomatal wall poorly to well-developed. Interascal tissue composed of branched paraphysoids in a gel matrix. Asci thick-walled, ±

fissitunicate, usually with a large apical dome, blueing in iodine; ascospores simple or septate, sometimes becoming brown and ornamented, without sheath. Anamorph pycnidial. Forming crustose lichens with green photobionts (esp. trentepohlioid), lichenicolous or saprobes; on a wide range of substrata, incl. many trop. foliicolous and corticolous spp. Fams:
(1) **Arthoniaceae**
(2) **Chrysothricaceae**
(3) **Roccellaceae** (syn. *Opegraphaceae*)
Lit.: Grube (*Bryologist* **101**: 377, 1998; phylogeny), Henssen & Thor (in Hawksworth (ed.), *Ascomycete Systematics*: *Problems and Perspectives in the Nineties*: 43, 1994), Letrouit-Galinou *et al.* (*Bull. Soc. linn. Provence* **45**: 389, 1994; ultrastr. asci), Myllys *et al.* (*Bryologist* **101**: 70, 1998; phylogeny), Renobales & Barreno (*Anales jard. bot. Madrid* **46**: 263, 1989; asci), Spatafora et al. (*Mycol.* **98**: 1018, 2006), Tehler (*CJB* **68**: 2458, 1990, phylogeny; *Crypt. Bot.* **5**: 82, 1995, molec. & morph. phylogeny).

Arthoniomyces E.A. Thomas ex Cif. & Tomas. (1953) = Arthonia.

Arthoniomycetes O.E. Erikss. & Winka (1997), Pezizomycotina. 1 ord., 4 fam., 78 gen., 1608 spp. Ord.: **Arthoniales**
For *Lit.* see ord. and fam.

Arthoniomycetidae, see *Arthoniomycetes*.

Arthoniopsis Müll. Arg. (1890) = Arthonia fide Santesson (*Symb. bot. upsal.* **12** no. 1: 1, 1952).

Arthophacopsis Hafellner (1998), Arthoniales (±L). 1, widespread. See Grube (*Bryologist* **101**: 377, 1998; phylogeny), Hafellner (*Cryptog. Bryol.-Lichénol.* **19**: 159, 1998), Diederich (*Herzogia* **16**: 41, 2003; USA).

Arthopyrenia A. Massal. (1852), Arthopyreniaceae (±L). *c.* 117, widespread. See Swinscow (*Lichenologist* **3**: 55, 1965), Harris (*Mich. Bot.* **12**: 1, 1973), Riedl (*Sydowia* **29**: 115, 1977; *A. punctiformis*-group), Coppins (*Lichenologist* **20**: 305, 1988; Brit. Isl.), Foucard (*Graphis Scripta* **4**: 49, 1992; key 13 spp. on bark, Sweden), Gams (*Taxon* **41**: 99, 1992; nomencl.), Harris (*More Florida Lichens*, 1995), Aptroot *et al.* (*Biblthca Lichenol.* **64**: 220 pp., 1997; New Guinea), Kainz *et al.* (*Nova Hedwigia* **72**: 209, 2001; Namibia), Mohr *et al.* (*MR* **108**: 515, 2004), Del Prado *et al.* (*MR* **110**: 511, 2006; phylogeny), Aptroot *et al.* (*Biblthca Lichenol.* **97**, 2008; Costa Rica).

Arthopyreniaceae Walt. Watson (1929), Pleosporales (±L). 3 gen. (+ 11 syn.), *c.* 162 spp.
Lit.: Coppins (*Lichenologist* **20**: 305, 1988), Upreti & Pant (*Bryologist* **96**: 226, 1993), Harris (*More Florida Lichens*, 1995), Aptroot (*Nova Hedwigia* **64**: 169, 1997), Sérusiaux & Aptroot (*Bryologist* **101**: 144, 1998), Del Prado *et al.* (*MR* **110**: 511, 2006; phylogeny).

Arthopyreniella J. Steiner (1911) = Mycoglaena fide Harris (*in litt.*).

Arthopyreniomyces Cif. & Tomas. (1953) ≡ Pyrenyllium fide Aguirre-Hudson (*Bull. Br. Mus. nat. hist.* Bot. **21**: 85, 1991).

Arthotheliomyces Cif. & Tomas. (1953) = Arthothelium fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Arthotheliopsidomyces Cif. & Tomas. (1953) ≡ Arthotheliopsis.

Arthotheliopsis Vain. (1896), Gomphillaceae (L). 4, neotropics. See Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Arthothelium A. Massal. (1852), Arthoniales (±L). *c.* 121, widespread. See Santesson (*Symb. bot. upsal.* **12** no. 1: 1, 1952), Coppins & James (*Lichenologist* **11**: 27, 1979; key Brit. spp.), Tehler (*CJB* **68**: 2451, 1990; posn), Makhija & Patwardhan (*J. Hattori bot. Lab.* **78**: 189, 1995; India), Makhija & Patwardhan (*Trop. Bryol.* **10**: 205, 1995; nomencl.), Grube & Giralt (*Lichenologist* **28**: 15, 1996; Mediterranean), Grube (*Bryologist* **101**: 377, 1998; phylogeny).

arthric (of conidiogenesis), thallic conidiogenesis characterized by the conversion of a pre-existing, determinate hyphal element into a conidium (**arthroconidium**, thallic-arthroconidium, arthrospore), as in *Geotrichum*. See arthrocatenate.

Arthriniaceae Nann. (1934) = Apiosporaceae.

Arthriniites Babajan & Tasl. (1977), Fossil Fungi. 1 (Tertiary), former USSR.

Arthrinium Kunze (1817), anamorphic *Apiospora*, Hso.0eP.37. *c.* 31, widespread (temperate). See Ellis (*Mycol. Pap.* **103**, 1965; key), Minter (*Proc. Indian Acad. Sci.* Pl. Sci. **94**: 281, 1985; relationships with other anamorphic fungi), Rai (*Mycoses* **32**: 472, 1989; *A. phaeospermum* var. *indicum* in humans), Scheuer (*Öst. Z. Pilzk.* **5**: 1, 1996), Kang *et al.* (*Mycotaxon* **81**: 321, 2002; phylogeny).

arthro- (prefix), jointed.

Arthroascus Arx (1972) = Saccharomycopsis Schiønning See von Arx (*Fungus* Wageningen **28**: 1, 1958), Smith *et al.* (*Antonie van Leeuwenhoek* **58**: 249, 1990; DNA), Hosagoudar (*J. Econ. Taxon. Bot.* **15**: 195, 1991; India), Kurtzman & Robnett (*Antonie van Leeuwenhoek* **73**: 331, 1998), Hosagoudar & Abraham (*J. Econ. Taxon. Bot.* **25**: 560, 2001), Hosagoudar (*Sydowia* **55**: 162, 2003; family placement), Naumov *et al.* (*J. gen. appl. Microbiol.* Tokyo **49**: 267, 2003; reinstatement of genus), Naumov & Kondrat'eva (*Doklady Biological Sciences* **403**: 298, 2005; Japan), Naumov *et al.* (*Int. J. Syst. Evol. Microbiol.* **56**: 1997, 2006; phylogeny).

Arthrobotryaceae Corda (1842) = Orbiliaceae.

Arthrobotryella Sibilia (1928) ? = Cordana fide Hughes (*N.Z. Jl Bot.* **16**: 326, 1978).

Arthrobotryomyces Bat. & J.L. Bezerra (1961) nom. dub., anamorphic *Pezizomycotina*, Hsy.≡ eH.? (L). 1, Brazil. See Lücking *et al.* (*Lichenologist* **30**: 121, 1998).

Arthrobotrys Corda (1839), anamorphic *Orbilia*, Hsy.1eH.6. 63 (nematophagous), widespread. See also Predacious fungi. See Haard (*Mycol.* **60**: 1140, 1969; key), Jarowaja (*Acta Mycologica* Warszawa **6**: 337, 1970; key), van Oorschot (*Stud. Mycol.* **26**: 61, 1985; key), Werthmann-Cliemas & Lysek (*TBMS* **87**: 656, 1987; synnema formation), Rubner (*Stud. Mycol.* **39**, 1996), Liou & Tzean (*Mycol.* **89**: 876, 1997; phylogeny), Ahrén *et al.* (*FEMS Microbiol. Lett.* **158**: 179, 1998; phylogeny), Hagedorn & Scholler (*Sydowia* **51**: 27, 1999; phylogeny), Scholler *et al.* (*Sydowia* **51**: 89, 1999; gen. concept, comb. Novs), Zhang *et al.* (*Mycosystema* **20**: 51, 2001; morphogenesis), Mo *et al.* (*Fungal Diversity* **18**: 107, 2005; synanamorphs), Li *et al.* (*Mycol.* **97**: 1034, 2005; phylogeny).

Arthrobotryum Ces. (1854), anamorphic *Pezizomycotina*, Hsy.≡ eP.19. 4, widespread. See Hughes (*Naturalist* Hull: 171, 1951), Illman & White (*CJB* **63**: 423, 1985).

Arthrobotryum O. Rostr. (1916) ≡ Gonyella.

arthrocatenate (of thalloconidia), formed in chains by the simultaneous or random fragmentation of a hypha.

Arthrocladia Golovin (1956) [non *Arthrocladia* Duby 1830, *Algae*] ≡ Arthrocladiella.

Arthrocladiella Vassilkov (1960), Erysiphaceae. Anamorph *Oidium* subgen. *Graciloidium*. 3, widespread. See Vassilkov (*Botanicheskiĭ Zhurnal* **45**: 1368, 1960), Braun *et al.* (*The Powdery Mildews* A Comprehensive Treatise: 13, 2001; review), Cunnington *et al.* (*Australas. Pl. Path.* **32**: 421, 2003; diagnosis), Takamatsu (*Mycoscience* **45**: 147, 2004; phylogeny), Cook *et al.* (*MR* **110**: 672, 2006; on *Catalpa*), Wang *et al.* (*Mycol.* **98**: 1065, 2006; phylogeny).

Arthrocladium Papendorf (1969), anamorphic *Pezizomycotina*, Hso.≡ eP.1/10. 1 (from soil), S. Africa. See Papendorf (*TBMS* **52**: 483, 1969).

arthroconidium, see arthric.

Arthrocristula Sigler, M.T. Dunn & J.W. Carmich. (1982), anamorphic *Pezizomycotina*, Hso.0eP.40. 1, USA; Sri Lanka. See Sigler *et al.* (*Mycotaxon* **15**: 409, 1982).

Arthroderma Curr. (1860), Arthrodermataceae. Anamorphs *Microsporum*, *Trichophyton*. 25 (on skin etc.), widespread. See Padhye & Carmichael (*CJB* **49**: 1525, 1971; key 13 spp.), Currah (*Mycotaxon* **24**: 1, 1985), Takashio *et al.* (*Mycol.* **77**: 166, 1985; ontogeny), Weitzman *et al.* (*Mycotaxon* **15**: 505, 1986), Kawasaki *et al.* (*Mycopathologia* **118**: 95, 1992), Ito *et al.* (*Mycoses* **41**: 133, 1998; ultrastr.), Kano *et al.* (*Curr. Microbiol.* **37**: 236, 1998; chitin synthase phylogeny), Makimura *et al.* (*J. Clin. Microbiol.* **36**: 2629, 1998; phylogeny), Harmsen *et al.* (*Mycoses* **42**: 67, 1999; DNA), Kano *et al.* (*Mycoses* **42**: 71, 1999; primers), Blanz *et al.* (*Mycoses* **43** Suppl. 1: 11, 2000; diagnosis), Gräser *et al.* (*Medical Mycology* **38**: 143, 2000; phylogeny), Kuraishi *et al.* (*Antonie van Leeuwenhoek* **77**: 179, 2000; ubiquinones), Simpanya (*Revta Iberoamer. Micol.* **17** [Special]: 1, 2000; ecology), Kim *et al.* (*Mycoses* **44**: 157, 2001; populations), Gupta *et al.* (*Stud. Mycol.* **47**: 87, 2002; diagnosis), Kano *et al.* (*Mycoses* **45**: 277, 2002; Japan), Kano *et al.* (*Stud. Mycol.* **47**: 49, 2002; chitin synthase genes), Sugiyama *et al.* (*Stud. Mycol.* **47**: 5, 2002; phylogeny), Summerbell *et al.* (*Stud. Mycol.* **47**: 75, 2002; biological species), Takahashi *et al.* (*Jap. J. Med. Mycol.* **44**: 31, 2003; epidemiology), Bedard *et al.* (*MR* **110**: 86, 2006; clonal spp.), Geiser *et al.* (*Mycol.* **98**: 1053, 2006; phylogeny).

Arthrodermataceae Locq. ex Currah (1985), Onygenales. 5 gen. (+ 29 syn.), 65 spp.

Lit.: Currah (*Mycotaxon* **24**: 1, 1985), Weitzman *et al.* (*Mycotaxon* **25**: 505, 1986), Currah (*SA* **7**: 1, 1988), Amer *et al.* (*Int. J. Dermat.* **32**: 97, 1993), Guillamón *et al.* (*Antonie van Leeuwenhoek* **69**: 223, 1996), Chandler (*Topley & Wilson's Microbiology and Microbial Infections* Edn 9. Vol. 4 Medical Mycology: 111, 1998), Hoog *et al.* (*Medical Mycology* **36** Suppl. 1: 52, 1998), Bastert *et al.* (*Mycoses* **42**: 525, 1999), Gräser *et al.* (*Medical Mycol.* **37**: 105, 1999; phylogeny), Harmsen *et al.* (*Mycoses* **42**: 67, 1999), Kano *et al.* (*Mycoses* **42**: 71, 1999), Makimura *et al.* (*J. Clin. Microbiol.* **37**: 807, 1999; phylogeny), Sugiyama *et al.* (*Mycoscience* **40**: 251, 1999), Gräser *et al.* (*Medical Mycology* **38**: 143, 2000), Simpanya (*Revta Iberoamer. Micol.* **17** [Special]: 1, 2000), Summerbell (*Revta Iberoamer. Micol.* **17**: 30, 2000).

Arthrodochium R.F. Castañeda & W.B. Kendr. (1990), anamorphic *Agaricomycetes*, Hsp.0eH.38. 1 (with clamp connexions), Cuba. See Castañeda & Kendrick (*Univ. Waterloo Biol. Ser.* **32**: 6, 1990).

Arthrographis G. Cochet ex Sigler & J.W. Carmich. (1976), anamorphic *Eremomyces*, Hso.0eH.38. 8, widespread. See Sigler & Carmichael (*Mycotaxon* **18**: 495, 1983), Ayer & Nozawa (*Can. J. Microbiol.* **36**: 83, 1990; inhibitory metabolite), Sigler *et al.* (*Can. J. Microbiol.* **36**: 77, 1990; n.sp.), Uchida *et al.* (*TMSJ* **34**: 275, 1993; *A. cuboidea*), Chin-Hong *et al.* (*J. Clin. Microbiol.* **39**: 804, 2001; epidemiology).

Arthrographium Ces. (1854) = Arthrobotryum Ces. fide Mussat (*Syll. fung.* **15**, 1901).

Arthromitus Leidy (1849) nom. dub., Bacteria. 1, USA. Bacteria occurring as trichomes in intestines of millipedes, cockroaches and toads; formerly incorrectly placed in *Trichomycetes*.

Arthromyces T.J. Baroni & Lodge (2007), Tricholomataceae. 2, C. America. See Baroni *et al.* (*MR* **111**: 572, 2007).

Arthroon Renault (1894), Fossil Fungi ? Fungi. 1 (Carboniferous), France.

Arthropsis Sigler, M.T. Dunn & J.W. Carmich. (1982), anamorphic *Onygenales*, Hso.0eH/1eP.38. 4, widespread. See Ulfig *et al.* (*Mycotaxon* **54**: 281, 1995).

Arthropycnis Constant. (1992), anamorphic *Rhynchostoma*, Cpd.0eP.39. 1, widespread. See Constantinescu & Tibell (*Nova Hedwigia* **55**: 174, 1992).

Arthrorhaphidaceae Poelt & Hafellner (1976), Ostropomycetidae (inc. sed.) (±L). 2 gen. (+ 4 syn.), 12 spp.

Lit.: Galloway & Bartlett (*N.Z. Jl Bot.* **24**: 393, 1986), Obermayer (*Nova Hedwigia* **58**: 275, 1994), Santesson & Tønsberg (*Lichenologist* **26**: 295, 1994), Hansen & Obermayer (*Bryologist* **102**: 104, 1999), Wedin *et al.* (*MR* **109**: 159, 2005), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny), Lumbsch *et al.* (*MR* **111**: 257, 2007; phylogeny).

Arthrorhaphis Th. Fr. (1860) nom. cons., Arthrorhaphidaceae (±L). 11, widespread (temperate; montane). See Galloway & Bartlett (*N.Z. Jl Bot.* **24**: 393, 1986; NZ spp.), Obermayer (*Nova Hedwigia* **58**: 275, 1994; key 5 Eur. spp.), Hafellner & Obermayer (*Cryptog. Bryol.-Lichénol.* **1 6**: 177, 1995; key fungi on), Obermayer (*J. Hattori bot. Lab.* **80**: 331, 1996; Himalaya), Hansen & Obermayer (*Bryologist* **102**: 104, 1999; Greenland), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny).

Arthrorhynchus Kolen. (1857), Laboulbeniaceae. 3 (on insects), widespread. See Benjamin *in* Thaxter (*Mem. Am. Acad. Arts Sci. 1896-1931* **12-16**, 1971), Blackwell (*Mycol.* **72**: 159, 1980; morphology), Santamaria (*Nova Hedwigia* **82**: 349, 2006).

Arthrospora Th. Fr. (1861) ≡ Arthrosporum.

arthrospore (1) see arthric; (2) a specialized uninucleate cell functioning as a spore and derived from the disarticulation of cells of a formerly vegetative branch (*Asellariales*).

Arthrosporella Singer (1970), ? Tricholomataceae. Anamorph *Nothoclavulina*. 1, S. America. See Singer (*Fl. Neotrop.* Monogr. **3**: 17, 1970).

Arthrosporia Grigoraki (1925) = Trichophyton fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Arthrosporium Sacc. (1880), anamorphic *Pezizomycotina*, Hsy.≡ eH.10. 2, Italy; N. America. See Wang

(*Mycol.* **64**: 1175, 1972), Kendrick (*CJB* **81**: 75, 2003; morphogenesis).

Arthrosporum A. Massal. (1853), Ramalinaceae (L). 1, Europe. See Timdal (*Op. Bot.* **110**, 1991), Ekman (*MR* **105**: 783, 2001; phylogeny).

arthrosterigma (of lichens), a septate conidiophore (spermatiophore) (obsol.).

Arthrowallemia R.F. Castañeda, D. García & Guarro (1998), anamorphic *Pezizomycotina*, Hso.?.?. 1, Cuba. See Castañeda Ruíz *et al.* (*MR* **102**: 17, 1998).

Arthroxylaria Seifert & W. Gams (2002), anamorphic *Xylariaceae*. 1 (on dung), USA. See Seifert *et al.* (*Czech Mycol.* **53**: 299, 2002).

Arthur (Joseph Charles; 1850-1942; USA). Botanist, Agricultural Experiment Station, Geneva, NY (1884-1887); Purdue University (1887-1915). Noted for his work on *Uredinales*: the 'Arthur Herbarium' at Purdue is one of the most important collections of rusts (75,000 specimens; see Baxter & Kern, *Proceedings of the Indiana Academy of Science* **71**: 228, 1962). *Publs.* Pucciniales *North American Flora* **7** (1907-1927); *Plant Rusts* (1929); *Manual of the Rusts in United States and Canada* (1934). *Biogs, obits etc.* Cummins (*Annual Review of Phytopathology* **16**: 19, 1978); Kern (*Phytopathology* **32**: 833, 1942); Mains (*Mycol.* **34**: 601, 1942); Stafleu & Cowan, (*TL-2* **1**: 70, 1976); Stafleu & Mennega (*TL-2, Suppl.* **1**: 173, 1992); Urban (*Česká Mykologie* **25**: 185, 1971).

Arthurella Zebrowski (1936), Fossil Fungi ? Chytridiomycetes. 1 (Cambrian to ? Recent), Australia.

Arthuria H.S. Jacks. (1931), Phakopsoraceae. Anamorph *Aeciure*. 6 (on *Euphorbiaceae*, 1 on *Asclepiadaceae*), S. America; Carribean; India. See Buriticá (*Revista de la Academia Columbiana de Ciencias Exactas, Físicas y Naturales* **22**: 325, 1998; neotrop. sp.).

Arthuriomyces Cummins & Y. Hirats. (1983), Phragmidiaceae. 3 (on *Rubus* (*Rosaceae*)), N. America; Russia; China; Japan. See Cummins & Hiratsuka (*Illustr. Gen. Rust Fungi rev. edit.*: 114, 1983), Cummins & Hiratsuka (*Illustr. Gen. Rust Fungi* edn 3: 225 pp., 2003; syn. of *Gymnoconia*).

Articularia Höhn. (1909), anamorphic *Pezizomycotina*, Hsy.0eH.?. 1, N. America. See Charles (*Mycol.* **27**: 74, 1935).

Articulariella Höhn. (1909) = Microstoma Bernstein fide von Arx (*Gen. Fungi Sporul. Cult.*, 1970).

articulated, jointed.

Articulis Clem. & Shear (1931) ≡ Articulariella.

Articulophora C.J.K. Wang & B. Sutton (1982), anamorphic *Pezizomycotina*, Hso.#eP.11. 1, USA. See Wang & Sutton (*Mycol.* **74**: 489, 1982).

Articulospora Ingold (1942), anamorphic *Hymenoscyphus*, Hso.0-≡ bH.10. 6 (aquatic), widespread. See Petersen (*Mycol.* **54**: 143, 1962; key), Jooste *et al.* (*MR* **94**: 947, 1990; S Africa), Sivichai *et al.* (*Mycol.* **95**: 340, 2003; Thailand), Belliveau & Bärlocher (*MR* **109**: 1407, 2005; phylogeny), Descals (*MR* **109**: 545, 2005; propagules).

Artocarpomyces Subram. (1996), anamorphic *Pezizomycotina*. 1, S.E. Asia. See Subramanian (*Kavaka* **22/23**: 52, 1994).

Artocreas Berk. & Broome (1875) nom. ambig., Fungi.

Artolenzites Falck (1909) = Trametes fide Donk (*Verh. K. ned. Akad. Wet.* tweede sect. **62**: 1, 1974).

Artomyces Jülich (1982) = Clavicorona fide Stalpers (*in litt.*).

Artymenium Berk. ex E. Fisch. (1933) nom. inval. = Secotium fide Stalpers (*in litt.*).

Arualis Katz (1980), anamorphic *Agaricomycetes*, Hso.0eH-P.1. 1 (with clamp connexions), USA. See Katz (*Mycotaxon* **11**: 230, 1980).

Arwidssonia B. Erikss. (1974), Hyponectriaceae. 2 (on *Empetrum* and *Loiseleuria*), Europe. See Eriksson (*Svensk bot. Tidskr.* **68**: 199, 1974), Holm *et al.* (*Karstenia* **39**: 59, 1999), Wang & Hyde (*Fungal Diversity* **3**: 159, 1999).

Arx (Joseph Adolf, von; 1922-1988; Switzerland, later Netherlands). Student of Gäumann (q.v.) [and contemporary of E. Müller (q.v.) with whom he collaborated for many years], Zürich (1942-1948); Phytopathologist, Willie Commelin Scholten Phytopathological Laboratories, Baarn (1949); Director of **CBS** (1963-1987). An outstanding general mycologist, noted for his review of the fungal kingdom (1970, expanded in 1974 and 1987). He was able to recognize and carry out necessary taxonomic rationalization, leading to publications synonymizing many redundant names, particularly in *Gloeosporium*. *Publs.* Beiträge zur Kenntnis der Gattung *Mycosphaerella*. *Sydowia* (1949); (with Müller) Die Gattungen der amerosporen Pyrenomyceten. *Beiträge zur Kryptogamenflora der Schweiz* (1954); Revision der zu *Gloeosporium* gestellten Pilze. *Verhandelingen der Koninklijke Nederlandse Akademie van Wetenschappen afd. Natuurkunde* Tweede Sectie (1957); (with Müller) Die Gattungen der didymosporen Pyrenomyceten. *Beiträge zur Kryptogamenflora der Schweiz* (1962); (with Müller) Pyrenomycetes: Meliolales, Coronophorales, Sphaeriales. In Ainsworth, Sparrow & Sussman [eds] *The Fungi. An Advanced Treatise* **4A** (1973); *The Genera of Fungi Sporulating in Pure Culture* (1981) [edn 3]. *Biogs, obits etc.* van der Aa *et al.* (*Studies in Mycology* **31**, 1989) [bibliography, portrait]; Arnold (*Boletus* **13**: 24, 1989) [portrait]; Müller (*Sydowia* **41**: 1, 1989) [portrait].

Arxiella Papendorf (1967), anamorphic *Pezizomycotina*, Hso.1eH.9. 2, widespread. See Papendorf (*TBMS* **50**: 73, 1967), Matsushima (*Matsush. Mycol. Mem.* **6**, 1989), Mercado-Sierra *et al.* (*Mycotaxon* **63**: 369, 1997; Cuba).

Arxiomyces P.F. Cannon & D. Hawksw. (1983), ? Ceratostomataceae. 2 (from wood etc.), Europe; Japan. See Horie *et al.* (*Mycotaxon* **25**: 229, 1986).

Arxiozyma Van der Walt & Yarrow (1984) = Kazachstania fide Augustyn *et al.* (*Syst. Appl. Microbiol* **13**: 44, 1990; fatty acids), Kurtzman *et al.* (*J. Clin. Microbiol.* **43**: 101, 2005; phylogeny).

Arxula Van der Walt, M.T. Sm. & Y. Yamada (1989) = Blastobotrys fide Yamada & Nogawa (*J. gen. appl. Microbiol.* Tokyo **36**: 425, 1990; molecular phylogeny), Kunze & Kunze (*Microbiol. Eur.* **2**: 24, 1994; comparative morphology), Kunze & Kunze (*Antonie van Leeuwenhoek* **65**: 29, 1994; DNA fingerprinting of *A. adeninivorans*), Smith *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 441, 1998), Kurtzman & Robnett (*FEMS Yeast Res.* **7**: 141, 2007).

Asahina (Yasuhiko; 1881-1975; Japan). Assistant, University for Pharmacognosy, Tokyo (*c.* 1907); Professor, University of Tokyo (1912-1941). Natural product chemist and later lichenologist; established use of chemotaxonomy for lichen-forming fungi and introduced use of PD (see Metabolic products) in 1934 and microcrystal tests in 1936-1940 (*Journal of Japanese Botany* **12** 516, 1936). *Publs. Lichens of*

Japan 3 vols (1950-1956); (with Shibata) *Chemistry of Lichen Substances* (1954) [reprint 1971]; *Atlas of Japanese Cladoniae* (1971). *Biogs, obits etc.* Culberson & Culberson (*Bryologist* **79**: 258, 1976) [portrait]; Grummann (1974: 585); Kurokawa (*Lichenologist* **8**: 93, 1976) [portrait]; Lichenological Society of Japan *Dr Yasuhiko Asahina's Lichenological Bibliography* 1980 [281 titles]); Stafleu & Cowan (*TL-2* **1**: 72, 1976); Stafleu & Mennega (*TL-2, Suppl.* **1**: 184, 1992).

Asahinea W.L. Culb. & C.F. Culb. (1965), Parmeliaceae (L). 3, widespread (circumpolar). See Gao (*Nordic Jl Bot.* **11**: 483, 1991), Saag (*Dissertationes Biologicae Universitatis Tartuensis* **34**, 1998; evolution), Thell *et al.* (*Mycol. Progr.* **1**: 335, 2002; phylogeny), Thell *et al.* (*Symb. bot. upsal.* **34** no. 1: 429, 2004; Scandinavia), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny), Randlane & Saag (*Central European Lichens*: 75, 2006; key).

Asaphomyces Thaxt. (1931), Laboulbeniaceae. 4, widespread. See Rossi & Máca (*Sydowia* **58**: 110, 2006).

Asbolisia Bat. & Cif. (1963), anamorphic *Aithaloderma*, Cpd.0eH.?. 6, widespread. See Batista & Ciferri (*Quaderno Ist. Bot. Univ. Pavia* **31**: 37, 1963), Reynolds & Gilbert (*Cryptog. Mycol.* **27**: 249, 2006; Panama).

Asbolisia Speg. (1918) nom. dub., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Asbolisiomyces Bat. & H. Maia (1961) nom. dub., anamorphic *Pezizomycotina*, Cpd.0eH.? (L). 1, Brazil. See Lücking *et al.* (*Lichenologist* **30**: 121, 1998).

Ascagilis K.D. Hyde (1992) = Jahnula fide Hyde (*Aust. Syst. Bot.* **5**: 109, 1992), Hyde & Wong (*Nova Hedwigia* **68**: 489, 1999).

ascending (ascendent) (of an annulus), having the free edge above attached, cf. descending; (of conidiophores), curving up, cf. erect; (of lamellae), on a cone-like or an unexpanded pileus.

Aschersonia Endl. (1842) nom. rej. ≡ Laschia Jungh.

Aschersonia Mont. (1848) nom. cons., anamorphic *Hypocrella*, St.0-1eH.15. *c.* 21 (on whiteflies (*Aleyrodidae*) and scale insects (*Coccidae*)), widespread (subtropical). See Petch (*Ann. R. bot. Gdns Peradeniya* **7**: 167, 1921), Mains (*Lloydia* **22**: 215, 1960), Hywel-Jones & Evans (*MR* **97**: 871, 1993; ecology), Evans (*MR* **98**: 165, 1994; spore germination), Obornik *et al.* (*Pl. Protection Science* **35**: 1, 1999; molecular characterization and phylogeny), Evans (*Mycology Series* **19**: 517, 2003; biocontrol), Liu *et al.* (*Mycol.* **97**: 246, 2005), Liu *et al.* (*MR* **110**: 537, 2006; *A. aleyrodis* group), Chaverri *et al.* (*Stud. Mycol.* **60**, 2008; phylogeny, monogr. Neotropics).

Aschersoniopsis Henn. (1902) = Munkia fide Höhnel (*Sber. Akad. Wiss. Wien* Math.-naturw. Kl., Abt. 1 **126**: 283, 1917).

Aschion Wallr. (1833) ≡ Tuber.

Aschizotrichum Rieuf (1962) = Wiesneriomyces fide Carmichael *et al.* (*Genera of Hyphomycetes*, 1980).

Ascidiophora Rchb. [not traced] ? = Mucor Fresen. fide Mussat (*Syll. fung.* **15**, 1901).

Ascidium Fée (1824) nom. rej. = Ocellularia fide Hale (*Bull. Br. Mus. nat. hist.* Bot. **8**: 227, 1981).

Ascidium Tode (1782) nom. dub., Fungi. Based on insect eggs fide Fries (*Syst. mycol.* **3**, Index: 52, 1832).

ascigerous, having asci.

ascigerous centrum, the special tissue which produces the asci and hamathecium.

Ascitendus J. Campb. & Shearer (2004), Annulatascaceae. 1 (on wood in freshwater), Austria. See Campbell & Shearer (*Mycol.* **96**: 829, 2004).

Ascluella DiCosmo, Nag Raj & W.B. Kendr. (1983), Dermateaceae. 1 (from living leaves), India. See DiCosmo *et al.* (*Mycotaxon* **21**: 1, 1984).

asco- (prefix), pertaining to an ascus.

Ascoblastomycetes, see *Blastomycota*.

Ascobolaceae Boud. ex Sacc. (1884), Pezizales. 6 gen. (+ 9 syn.), 129 spp.

Lit.: van Brummelen (*Persoonia* Suppl. **1**: 1, 1967; monogr.), Dissing (*Op. bot.* **100**: 43, 1989), van Brummelen (*Persoonia* **14**: 203, 1990), Gargas (*Fungal Genetics Newsl.* Suppl. **38**: 26, 1991), Wu & Kimbrough (*Taiwania* **41**: 7, 1996; devel.), Jahn *et al.* (*Z. Mykol.* **63**: 133, 1997), Landvik *et al.* (*Nordic Jl Bot.* **17**: 403, 1997), Prokhorov (*Mikol. Fitopatol.* **31**: 27, 1997), Landvik *et al.* (*Mycoscience* **39**: 49, 1998; DNA), Ranalli & Mercuri (*Mycotaxon* **67**: 505, 1998), van Brummelen (*Persoonia* **16**: 425, 1998), Wu & Kimbrough (*Int. J. Pl. Sci.* **162**: 91, 2001), Hansen & Pfister (*Mycol.* **98**: 1029, 2006; phylogeny).

Ascobolus Pers. (1792), Ascobolaceae. Anamorph *Rhizostilbella*. 61 (mainly coprophilous), widespread. See van Brummelen (*Persoonia* Suppl. **1**: 1, 1967; key), Wells (*Univ. Calif. Publs Bot.* **62**, 1972; ontogeny), Paulsen & Dissing (*Bot. Tidsskr.* **74**: 67, 1979; key 20 spp.), Kaushal & Thind (*J. Indian bot. Soc.* **62**: 16, 1983; W. Himalayas, key 12 spp.), Parrettini (*Boll. Gruppo Micol. 'G. Bresadola'* **28**: 140, 1985; col. pls), Dissing (*Op. Bot.* **100**: 43, 1989), Kempken (*Biblthca Mycol.* **128**, 1989; extrachromosomal DNA), Prokhorov (*Mikol. Fitopatol.* **28**: 17, 1994; key to Russian spp.), Landvik *et al.* (*Nordic Jl Bot.* **17**: 403, 1997), Landvik *et al.* (*Mycoscience* **39**: 49, 1998; DNA), Antonín & Moravec (*Czech Mycol.* **52**: 295, 2001; variation), Wu & Kimbrough (*Int. J. Pl. Sci.* **162**: 91, 2001; ultrastructure), Dokmetzian *et al.* (*Mycotaxon* **92**: 295, 2005; isozymes), Hansen & Pfister (*Mycol.* **98**: 1029, 2006; phylogeny).

Ascobotryozyma J. Kerrigan, M.T. Sm. & J.D. Rogers (2001), Saccharomycetales. Anamorph *Botryozyma*. 2 (associated with nematodes), Italy; USA. See Kerrigan *et al.* (*Antonie van Leeuwenhoek* **79**: 15, 2001), Kerrigan *et al.* (*MR* **107**: 1110, 2003), Suh *et al.* (*Mycol.* **98**: 1006, 2006; phylogeny).

Ascocalathium Eidam ex J. Schröt. (1893), ? Pyronemataceae. 1, Europe.

Ascocalvatia Malloch & Cain (1971), Onygenaceae. 1 (coprophilous), Canada. See Sugiyama *et al.* (*Mycoscience* **40**: 251, 1999; DNA).

Ascocalyx Naumov (1926), Helotiaceae. Anamorph *Bothrodiscus*. 6, widespread. See Groves (*CJB* **46**: 1273, 1968; key), Schlapfer-Bernard (*Sydowia* **22**: 1, 1969), Müller & Dorworth (*Sydowia* **36**: 193, 1983; key, 6 spp.), Petrini *et al.* (*CJB* **67**: 2805, 1989), Bernier *et al.* (*Appl. Environm. Microbiol.* **60**: 1279, 1994; DNA), Wang (*MR* **101**: 1195, 1997; genetic variation), Wang *et al.* (*CJB* **75**: 1460, 1997; population structure, as *Gremmeniella*), Hamelin *et al.* (*Phytopathology* **88**: 582, 1998; N. Am. introd., as *Gremmeniella*).

ascocarp, see ascoma.

Ascocephalophora K. Matsush. & Matsush. (1995), ? Endomycetaceae. Anamorphs *Fusidium*, *Trichosporiella*. 1, Japan. See Matsushima & Matsu-

shima (*Matsush. Mycol. Mem.* **8**: 45, 1995).

Ascochalara Réblová (1999), Chaetosphaeriaceae. Anamorph *Chalara*-like. 1 (from coniferous wood), Czech Republic. See Réblová (*Sydowia* **51**: 210, 1999).

Ascochyta Lib. (1830), anamorphic *Didymella*, Cpd.1eH.15. 388, widespread. *A. fabae* (on *Vicia*), *A. phaseolorum* (on *Phaseolus*), *A. pisi* (on pea), *A. rabiei* (on chickpea), and others. The genus is in need of redefinition using molecular data. See Armstrong *et al.* (*Can. J. Pl. Path.* **23**: 110, 2001; genetic diversity), Barve *et al.* (*Fungal Genetics Biol.* **39**: 151, 2003; mating types), Fatehi *et al.* (*Mycopathologia* **156**: 317, 2003; genetic diversity), Chongo *et al.* (*Pl. Dis.* **88**: 4, 2004; genetic diversity), Peever *et al.* (*Mol. Ecol.* **13**: 291, 2004; population structure), Lichtenzveig *et al.* (*Eur. J. Pl. Path.* **113**: 15, 2005; mating types), Priest (*Fungi of Australia: Septoria* **0**, 2006; Australian spp.), Schoch *et al.* (*Mycol.* **98**: 1041, 2006; phylogeny), Henson (*Eur. J. Pl. Path.* **119**: 141 pp., 2007; special issue on leume-associated spp.), Peever *et al.* (*Mycol.* **99**: 59, 2007; on legumes).

Ascochytella Tassi (1902) = Ascochyta fide Buchanan (*Mycol. Pap.* **156**, 1987).

Ascochytites Babajan & Tasl. (1973), Fossil Fungi. 1 (Tertiary), former USSR.

Ascochytites Barlinge & Paradkar (1982), Fossil Fungi, anamorphic *Pezizomycotina*. 1 (Cretaceous), India.

Ascochytopsis Henn. (1905), anamorphic *Pezizomycotina*, Ccu.0fH.15. 5 (on *Leguminosae*), widespread. See Sutton (*The Coelomycetes*, 1980), Matsushima (*Matsush. Mycol. Mem.* **10**, 2001).

Ascochytula (Potebnia) Died. (1912) = Ascochyta fide Buchanan (*Mycol. Pap.* **156**, 1987).

Ascochytulina Petr. (1922), anamorphic *Pezizomycotina*, Cpd.1eP.15. 3, Europe. See Buchanan (*Mycol. Pap.* **156**, 1987), Mel'nik (*Opredelitel' Gribov Rossii* Klass Coelomycetes Byp. **1**. Redkie i Maloizvestnye Rody, 1997).

Ascoclavulina Y. Otani (1974), Helotiaceae. Anamorph *Gliomastix*-like. 1, Japan. See Otani (*TMSJ* **15**: 5, 1974).

Ascocodinaea Samuels, Cand. & Magni (1997), Hypocreomycetidae. Anamorph *Dictyochaeta*-like. 2 (on old polypores), USA. See Samuels *et al.* (*Mycol.* **89**: 156, 1997), Réblová *et al.* (*Sydowia* **51**: 49, 1999), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004; phylogeny).

Ascocoma H.J. Swart (1987), ? Phacidiaceae. Anamorph *Coma*. 1, Australia. See Swart (*TBMS* **87**: 603, 1987), Beilharz & Pascoe (*Mycotaxon* **91**: 273, 2005; microconidial state).

ascoconidiophore, the phialide bearing an ascoconidium in *Ascoconidium* (Seaver, *Mycol.* **34**: 412, 1942).

Ascoconidium Seaver (1942), anamorphic *Sageria*, Hsp.≡ eH.15. 2, widespread (north temperate). See Funk (*CJB* **44**: 39, 1966), Nag Raj & Kendrick (*Monogr. Chalara Allied Genera*, 1975).

ascoconidium, a conidium formed directly from an ascospore, esp. when still within the ascus (e.g. *Claussenomyces*).

Ascocorticiaceae J. Schröt. (1893), ? Helotiales. 1 gen., 2 spp.

Lit.: Vellinga & Vries (*Coolia* **30**: 50, 1987).

Ascocorticiellum Jülich & B. de Vries (1982), Pezizomycotina. 1, Europe. See Jülich & de Vries (*Persoonia* **11**: 410, 1982), Vries (*Coolia* **39**: 18, 1996).

Ascocorticium Bref. (1891), Ascocorticiaceae. 2, widespread (temperate). See Cooke (*Ohio J. Sci.* **68**: 161, 1968), Eriksson *et al.* (*Göteborgs Svampkl. Årsskr.*: 1, 1981).

Ascocoryne J.W. Groves & D.E. Wilson (1967), Helotiales. Anamorph *Coryne*. *c.* 8, widespread (north & south temperate). See Christiansen (*Friesia* **7**: 75, 1963; anamorph, Danish spp.), Roll-Hansen & Roll-Hansen (*Norw. Jl Bot.* **26**: 193, 1979), Verkley (*MR* **99**: 187, 1995; asci), Gamundí & Romero (*Fl. criptog. Tierra del Fuego* **10**, 1998), Wang *et al.* (*Mycol.* **98**: 1065, 2006; phylogeny).

Ascocorynium S. Ito & S. Imai ex S. Imai (1934) = Neolecta fide Korf (*Phytologia* **21**: 201, 1971).

Ascocratera Kohlm. (1986), ? Lophiostomataceae. 1 (marine), Belize. Possibly belongs to the *Trypetheliaceae* fide Erikssson (*in litt.*). See Kohlmeyer (*CJB* **64**: 3036, 1986), Harris *in* Aptroot (Ed.) (*Biblthca Lichenol.* **44**, 1991), Kohlmeyer & Volkmann-Kohlmeyer (*Bot. Mar.* **34**: 1, 1991).

Ascocybe D.E. Wells (1954) = Cephaloascus fide von Arx (*Antonie van Leeuwenhoek* **38**: 289, 1972).

Ascodesmidaceae J. Schröt. (1893), Pezizales. 3 gen. (+ 2 syn.), 21 spp. Clusters within *Pyronemataceae* in a recent molecular study.

Lit.: Currah (*Mycol.* **78**: 198, 1986), Brummelen (*Persoonia* **14**: 1, 1989), Kimbrough (*Mem. N. Y. bot. Gdn* **49**: 326, 1989; fam. limits), van Brummelen (*Persoonia* **14**: 1, 1989; ascus ultrastr.), Landvik *et al.* (*Nordic Jl Bot.* **17**: 403, 1997; DNA), Landvik *et al.* (*Mycoscience* **39**: 49, 1998), Hansen & Pfister (*Mycol.* **98**: 1029, 2006; phylogeny), Hansen *et al.* (*Mycol.* **97**: 1023, 2005), Perry *et al.* (*MR* **111**: 549, 2007; phylogeny).

Ascodesmis Tiegh. (1876), Ascodesmidaceae. 6, widespread. See Obrist (*CJB* **39**: 943, 1961; key), Delattre-Durand & Janex-Favre (*BSMF* **95**: 49, 1979; ontogeny), van Brummelen (*Persoonia* **11**: 377, 1981), Patil & Ghadge (*Indian Phytopath.* **40**: 30, 1987; 5 spp.), van Brummelen (*Persoonia* **14**: 1, 1989), van Brummelen (*Stud. Mycol.* **31**: 41, 1989; ultrastr.), Landvik *et al.* (*Nordic Jl Bot.* **17**: 403, 1997), Landvik *et al.* (*Mycoscience* **39**: 49, 1998; DNA), Hansen & Pfister (*Mycol.* **98**: 1029, 2006; phylogeny), Perry *et al.* (*MR* **111**: 549, 2007; phylogeny, paraphyly of *Pyronemataceae*).

Ascodesmisites Trivedi, Chaturv. & C.L. Verma (1973), Fossil Fungi. 1 (Eocene), Malaysia. See Korf (*Mycotaxon* **6**: 193, 1977).

Ascodichaena Butin (1977), Ascodichaenaceae. Anamorph *Polymorphum*. 2, widespread (esp. temperate). See Hawksworth (*Taxon* **32**: 212, 1983; nomencl.), Butin & Marmolejo (*Sydowia* **42**: 8, 1990).

Ascodichaenaceae D. Hawksw. & Sherwood (1982), Rhytismatales. 5 gen. (+ 10 syn.), 11 spp.

Lit.: Hawksworth & Sherwood (*Mycotaxon* **16**: 262, 1982), Butin & Marmolejo (*Sydowia* **42**: 8, 1990), Minter (*Shoot and Foliage Diseases in Forest Trees* Proceedings of a Joint Meeting of the Working Parties: Canker & Shoot Blight of Conifers, Foliage Diseases: 65, 1995), Yuan *et al.* (*Australas. Pl. Path.* **29**: 215, 2000).

Ascofascicula Matsush. (2003), ? Pezizales. 1, Japan. See Matsushima (*Matsush. Mycol. Mem.* **10**: 190, 2001).

ascogenous (ascogenic), ascus-producing or ascus-

supporting.

ascogonium, the cell or group of cells in Ascomycotina fertilized by a sexual act.

Ascographa Velen. (1934), ? Helotiales. 1, former Czechoslovakia.

Ascohansfordiellopsis D. Hawksw. (1979) = Koorder-siella fide Hawksworth (*Bull. Br. Mus. nat. hist.* Bot. 6, 1979).

Ascohymeniales Nannf. (1932). *Ascomycota* having asci (and paraphyses) developing as a hymenium and not in a pre-formed stroma, as in *Pyrenomycetes* and *Discomycetes* (Nannfeldt, 1932); *Hymenoascomycetes*. Cf. *Ascoloculares*.

Ascoidea Bref. (1891), Ascoideaceae. 4, widespread. See Batra & Francke-Grossman (*Mycol.* **56**: 632, 1964; key), von Arx & Müller (*Sydowia* **37**: 6, 1984), de Hoog *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 136, 1998), Suh *et al.* (*Mycol.* **98**: 1006, 2006; phylogeny).

Ascoideaceae J. Schröt. (1894), Saccharomycetales. 1 gen., 4 spp.

Lit.: von Arx & Müller (*Sydowia* **37**: 6, 1984), Batra (*Stud. Mycol.* **30**: 415, 1987), Hoog *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 136, 1998), Kurtzman & Blanz *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 69, 1998), Kurtzman & Robnett (*Antonie van Leeuwenhoek* **73**: 331, 1998), Suh *et al.* (*Mycol.* **98**: 1006, 2006; phylogeny).

Ascoideales = Saccharomycetales.

Ascolacicola Ranghoo & K.D. Hyde (1998), Sordariales. Anamorph *Trichocladium*. 1 (on wood in freshwater), Austria; Hong Kong. See Ranghoo & Hyde (*Mycol.* **90**: 1055, 1998), Ranghoo *et al.* (*Fungal Diversity* **2**: 159, 1999; DNA), Réblová & Winka (*Mycol.* **93**: 478, 2001), Campbell & Shearer (*Mycol.* **96**: 822, 2004).

Ascolanthanus Cailleux (1967) = Pyxidiophora fide Lundqvist (*Bot. Notiser* **133**: 121, 1980).

Ascolectus Samuels & Rogerson (1990), Saccardiaceae. 1, Brazil. See Samuels & Rogerson (*Mem. N. Y. bot. Gdn* **64**: 177, 1990).

Ascoloculares Nannf. (1932). *Ascomycota* having asci (and paraphyses) developing in cavities in a preformed stroma, as in *Loculoascomycetes* (Nannfeldt, 1932). Cf. *Ascohymeniales*.

ascoma (pl. **ascomata**), an ascus-containing structure, ascocarp.

Ascomauritiana Ranghoo & K.D. Hyde (1999), Pezizomycotina. 1, Mauritius. See Ranghoo & Hyde (*MR* **103**: 938, 1999).

Ascominuta Ranghoo & K.D. Hyde (2000), ? Dothideomycetes. 1 (in freshwater), Hong Kong. See Ranghoo & Hyde (*Mycoscience* **41**: 1, 2000).

Ascomyces Mont. & Desm. (1848) = Taphrina. Sometimes used for *Ginanniella* (Tillet.) anamorphs. fide Mussat (*Syll. Fung.* **15**: 51, 1901).

ascomycete, one of the *Ascomycota*.

Ascomycetella Peck (1881) = Cookella fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Ascomycetella Sacc. (1886) ≡ Myriangiopsis.

Ascomycetes. Originally introduced by Berkeley (*Intr. Crypt. Bot.*: 270, 1857) but without a clear indication of rank; see Whittaker (*Quart. Rev. Biol.* **34**: 210, 1959) and Hibbett *et al.* (*MR* **111**: 509, 2007). Commonly used in an equivalent sense to *Ascomycota* and/or *Pezizomycotina* in this *Dictionary*.

Ascomycota Caval.-Sm. (1998), Fungi. 15 class., 68 ord., 327 fam., 6355 gen., 64163 spp. (Ascolichenes, Ascomycoptera, Thecamycetes); sac fungi; ascomycetes. Saprobes, parasites (esp. of plants), or lichen-forming; cosmop. The largest group of *Fungi*, for which the ascus (q.v.) is the diagnostic character. The presence of lamellate hyphal walls with a thin electron-dense outer layer and a relatively thick electron-transparent inner layer also appears diagnostic; this enables anamorphic fungi to be recognized as ascomycetes even in the absence of asci. In the past they have often been grouped on fruit-body type and ascus arrangement (e.g. *Hemiascomycetes*, *Plectomycetes*, *Pyrenomycetes*, *Discomycetes*, *Loculoascomycetes*; q.v.). In recent decades the development of the ascomata, especially the structure and discharge method of the asci, were considered important, but in the last 5-10 years molecular sequence data (especially of the ribosomal genome) have come to the fore.

The size of the group makes it difficult to embrace the enormous range of structures in the group, and to determine which morphological features should be stressed in the recognition of higher categories in addition to sequence data. In many instances, molecular and morphological data are congruent, but integration of these data have proved to be intractable in some cases. Further problems have been encountered with the need to assign families and orders to higher taxa where molecular data are not available. The desire of many systematic and applied mycologists to begin the process of amalgamating anamorph genera into the overall ascomycete system has become rapidly more volubly expressed (see for example Seifert *et al.*, *Stud. Mycol.* **45**, 2000) and in response to this all genera of anamorphic fungi in this *Dictionary* with ascomycetous affinities have been provisionally assigned at least to a higher taxon of *Ascomycota*.

The classification in this edition of the *Dictionary* is based on a series of major phylogenetic studies of fungi under the umbrella of the 'Deep Hypha' and AFTOL ('Assembling the Fungal Tree of Life') projects, as well as other resources including *Myconet*. See esp. Blackwell *et al.* (*Mycol* **98**: 829, 2006), Hibbett *et al.* (*MR* : **111**: 509, 2007), James et al. (*Nature* **443**: 818, 2006) and Lutzoni et al. (*Am. J. Bot.* **91**: 1446, 2004).

Three Subphyla are accepted here. However, many accepted families are not referred to any specific order or class within these subphyla, and over 3200 genera could not be assigned with confidence to any family.

Subphyl.:

(1) **Pezizomycotina** (syn. *Ascomycotina*)
(2) **Saccharomycotina**
(3) **Taphrinomycotina**

A significant number of orders and many families have yet to have any members in them sequenced, and this lack of molecular data means that any current phylogenetic framework contains many 'holes'. As in previous editions, we have attempted to place non-sequenced taxa within the overall classification structure, but many further changes are to be expected. The *Fungi* are treated in more detail at family level in a companion publication (Cannon & Kirk, *Fungal Families of the World*, 2007).

Lit.: **General**: von Arx (*in* Kendrick (Ed.), *The whole fungus* **1**: 201, 1979, classif., anamorphs; *Genera of fungi sporulating in pure culture*, edn 3, 1981; keys gen., lit.; *Plant Pathogenic Fungi*, 1987), von

Ascomycotina. = *Pezizomycotina*.

ascoparaphysis, see paraphysis.

Ascophanella Faurel & Schotter (1965) = Thecotheus fide Korf *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 249, 1973).

Ascophanopsis Faurel & Schotter (1965) = Thecotheus fide Krug & Khan (*Mycol.* **79**: 200, 1987).

Ascophanus Boud. (1869), ? Ascobolaceae. 20 (mostly on dung), widespread (temperate). See Kimbrough (*CJB* **44**: 697, 1966), Moravec (*Česká Mykol.* **25**: 150, 1971), Pouzar & Svrček (*Česká Mykol.* **26**: 25, 1972; typification), van Brummelen *in* Hawksworth (Ed.) (*Ascomycete Systematics. Problems and Perspectives in the Nineties* NATO ASI Series vol. **269** **269**: 398, 1994; posn), Prokhorov (*Mikol. Fitopatol.* **31**: 27, 1997), Huhtinen & Spooner (*Kew Bull.* **58**: 749, 2003).

Ascophora Tode (1790) nom. rej. = Mucor Fresen. fide Hesseltine (*Mycol.* **47**: 344, 1955).

ascophore (1) an ascus-producing hypha, esp. the stalk-like hyphae supporting asci in *Cephaloascus*; (2) apothecium (obsol.).

ascophyte, hypothetical autotrophic ancestor of the *Ascomycota* (Cain, 1972), see Phylogeny, cf. basidiophyte.

ascoplasm, epiplasm (q.v.).

Ascopolyporus Möller (1901), Cordycipitaceae. 5, C. & S. America. See Heim (*BSMF* **69**: 417, 1954), Doi *et al.* (*Bull. natn. Sci. Mus.* Tokyo, B **3**: 22, 1977), Bischoff *et al.* (*Mycol.* **97**: 710, 2005; ecology, phylogeny).

Ascoporia Samuels & A.I. Romero (1993) = Pseudosolidum fide Samuels & Romero (*Bolm Mus. paraense 'Emílio Goeldi'* sér. bot. **7**: 263, 1991), Kutorga & Hawksworth (*SA* **15**: 1, 1997), Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Ascoporiaceae Kutorga & D. Hawksw. (1997), ? Dothideomycetes (inc. sed.). 1 gen. (+ 1 syn.), 1 spp.

Lit.: Samuels & Romero (*Bolm Mus. paraense 'Emílio Goeldi'* sér. bot. **7**: 263, 1991), Kutorga & Hawksworth (*SA* **15**: 1, 1997).

TABLE 2. Classification of the Ascomycota from the 9th Edition and as adopted in the 10th Edition

Dictionary 2001 (9th Edition)	Dictionary 2008 (10th Edition)
Agyriales (Lecanoromycetidae)	Acarosporales (Acarosporomycetidae)
Arthoniales (Arthoniomycetidae)	Acrospermales (Dothideomycetes)
Boliniales (Sordariomycetidae)	Agyriales (Ostropomycetidae)
Calosphaeriales (Sordariomycetidae)	Arachnomycetales (Eurotiomycetidae)
Capnodiales (Dothideomycetidae)	Arthoniales (Arthoniomycetes)
Chaetothyriales (Chaetothyriomycetidae)	Ascosphaerales (Eurotiomycetidae)
Coryneliales (Dothideomycetidae)	Baeomycetales (Ostropomycetidae)
Diaporthales (Sordariomycetidae)	Boliniales (Sordariomycetidae)
Dothideales (Dothideomycetidae)	Botryosphaeriales (Dothideomycetes)
Elaphomycetales (Eurotiomycetidae)	Calosphaeriales (Sordariomycetidae)
Erysiphales (Erysiphomycetidae)	Candelariales (Lecanoromycetes)
Eurotiales (Eurotiomycetidae)	Capnodiales (Dothideomycetidae)
Gyalectales (Lecanoromycetidae)	Chaetosphaeriales (Sordariomycetidae)
Halosphaeriales (Sordariomycetidae)	Chaetothyriales (Chaetothyriomycetidae)
Helotiales (Leotiomycetidae)	Coniochaetales (Sordariomycetidae)
Hypocreales (Sordariomycetidae)	Coronophorales (Hypocreomycetidae)
Hysteriales (Dothideomycetidae)	Coryneliales (Eurotiomycetidae)
Laboulbeniales (Laboulbeniomycetidae)	Cyttariales (Leotiomycetes)
Lahmiales (Dothideomycetidae)	Diaporthales (Sordariomycetidae)
Lecanorales (Lecanoromycetidae)	Dothideales (Dothideomycetidae)
Lichinales (Lecanoromycetidae)	Erysiphales (Leotiomycetidae)
Lulworthiales (Sordariomycetidae)	Eurotiales (Eurotiomycetidae)
Medeolariales (Leotiomycetidae)	Helotiales (Leotiomycetes)
Meliolales (Meliolomycetidae)	Hypocreales (Sordariomycetidae)
Microascales (Sordariomycetidae)	Hysteriales (Dothideomycetes)
Microthyriales (Dothideomycetidae)	Jahnulales (Dothideomycetes)
Mycocaliciales (Incertae sedis)	Laboulbeniales (Laboulbeniomycetidae)
Mycosphaerellales (Dothideomycetidae)	Lahmiales (Pezizomycotina)
Myriangiales (Dothideomycetidae)	Lecanorales (Lecanoromycetidae)
Neolectales (Neolectomycetidae)	Lecideales (Lecanoromycetidae)
Onygenales (Eurotiomycetidae)	Leotiales (Leotiomycetidae)
Ophiostomatales (Sordariomycetidae)	Lichinales (Lichinomycetes)
Ostropales (Incertae sedis)	Lulworthiales (Spathulosporomycetidae)
Patellariales (Dothideomycetidae)	Medeolariales (Pezizomycotina)
Peltigerales (Lecanoromycetidae)	Melanosporales (Hypocreomycetidae)
Pertusariales (Lecanoromycetidae)	Meliolales (Meliolomycetidae)
Pezizales (Pezizomycetidae)	Microascales (Hypocreomycetidae)
Phyllachorales (Sordariomycetidae)	Microthyriales (Dothideomycetes)
Pleosporales (Dothideomycetidae)	Mycocaliciales (Mycocaliciomycetidae)
Pneumocystidales (Pneumocystidomycetidae)	Myriangiales (Dothideomycetidae)
Pyrenulales (Dothideomycetidae)	Neolectales (Neolectomycetidae)
Pyxidiophorales (Laboulbeniomycetidae)	Onygenales (Eurotiomycetidae)
Rhytismatales (Leotiomycetidae)	Ophiostomatales (Sordariomycetidae)
Saccharomycetales (Saccharomycetidae)	Orbiliales (Orbiliomycetes)
Schizosaccharomycetales (Schizosaccharomycetidae)	Ostropales (Ostropomycetidae)
Sordariales (Sordariomycetidae)	Patellariales (Dothideomycetes)
Spathulosporales (Spathulosporomycetidae)	Peltigerales (Lecanoromycetidae)
Taphrinales (Taphrinomycetidae)	Pertusariales (Ostropomycetidae)
Teloschistales (Lecanoromycetidae)	Pezizales (Pezizomycetidae)
Thelebolales (Leotiomycetidae)	Phyllachorales (Sordariomycetes)
Triblidiales (Incertae sedis)	Pleosporales (Pleosporomycetidae)
Trichosphaeriales (Sordariomycetidae)	Pneumocystidales (Pneumocystidomycetidae)
Trichotheliales (Incertae sedis)	Pyrenulales (Chaetothyriomycetidae)
Verrucariales (Incertae sedis)	Pyxidiophorales (Laboulbeniomycetidae)
Xylariales (Sordariomycetidae)	Rhizocarpales (Lecanoromycetidae)
	Rhytismatales (Leotiomycetes)
	Saccharomycetales (Saccharomycetidae)
	Schizosaccharomycetales (Schizosaccharomycetidae)
	Sordariales (Sordariomycetidae)
	Taphrinales (Taphrinomycetidae)
	Teloschistales (Lecanoromycetidae)
	Thelebolales (Leotiomycetes)
	Triblidiales (Pezizomycotina)
	Trichosphaeriales (Sordariomycetes)
	Trypetheliales (Dothideomycetes)
	Umbilicariales (Lecanoromycetes)
	Verrucariales (Chaetothyriomycetidae)
	Xylariales (Xylariomycetidae)

Ascorhiza Lecht.-Trinka (1931), Pezizomycotina. 1, Europe. See Benny & Kimbrough (*Mycotaxon* **12**: 1, 1980; referral to *Ascosphaerales*).

Ascorhizoctonia Chin S. Yang & Korf (1985), anamorphic *Tricharina*, Sc.-.-. 7, widespread (cool temperate). See Yang & Korf (*Mycotaxon* **23**: 468, 1985), Yang & Kristiansen (*Mycotaxon* **35**: 313, 1989), Barrera & Romero (*Mycotaxon* **77**: 31, 2001).

Ascorhombispora L. Cai & K.D. Hyde (2007), Pleosporales. 1, China. See Cai & Hyde (*Cryptog. Mycol.* **28**: 291, 2007).

Ascoronospora Matsush. (2003), ? Pleosporales. Anamorph *Coronospora*. 1, Japan. See Matsushima (*Matsush. Mycol. Mem.* **10**: 179, 2001).

Ascosacculus J. Campb., J.L. Anderson & Shearer (2003), Halosphaeriaceae. 2, Australia. See Campbell *et al.* (*Mycol.* **95**: 545, 2003).

Ascosalsum J. Campb., J.L. Anderson & Shearer (2003), Halosphaeriaceae. 3, France; USA. See Campbell *et al.* (*Mycol.* **95**: 546, 2003), Pang & Jones (*Nova Hedwigia* **78**: 269, 2004).

Ascoscleroderma Clémencet (1932) = Elaphomyces fide Trappe (*Mycotaxon* **9**: 247, 1979).

Ascosorus Henn. & Ruhland (1900), Pezizomycotina. 1, N. America.

Ascosparassis Kobayasi (1960), Pyronemataceae. 1, widespread (tropics). See Korf (*Lloydia* **26**: 23, 1963), Pfister & Halling (*Mycotaxon* **35**: 283, 1989), Wang & Chou (*Fungal Science* Taipei **11**: 45, 1996; Taiwan).

Ascospermum Schulzer (1863) nom. dub., Fungi. Based on sterile mycelium.

Ascosphaera L.S. Olive & Spiltoir (1955), Ascosphaeraceae. Anamorph *Chrysosporium*-like. 17 (associated with bees), widespread (north temperate; esp. Europe). *A. apis* on larvae of honey bees causing chalk brood. See McManus & Youssof (*Mycol.* **76**: 830, 1984), Rose *et al.* (*Mycotaxon* **19**: 41, 1984; key 7 spp., N. Am.), Bisset (*CJB* **66**: 2541, 1988; key), Skou (*Mycotaxon* **31**: 173, 1988; 7 spp. nov. Japan), Bisset *et al.* (*Mycol.* **88**: 797, 1996; key), Anderson & Gibson (*Aust. Syst. Bot.* **11**: 53, 1998; Australia), Anderson *et al.* (*MR* **102**: 541, 1998; phylogeny), James & Skinner (*J. Invert. Path.* **90**: 98, 2005; PCR diagnosis), Aronstein *et al.* (*Mycol.* **99**: 553, 2007; mating type genes).

Ascosphaeraceae L.S. Olive & Spiltoir (1955), Ascosphaerales. 3 gen. (+ 1 syn.), 19 spp.

Lit.: Skou (*Friesia* **10**: 1, 1972; monogr.), Brady (*IMI Descr. Fungi Bact.* **62**: [1, 1979), Skou (*Mycotaxon* **15**: 487, 1982; emended concept), Kowalska (*Polskie Arch. Wet.* **24**: 7, 1984; biochem. syst.), Skou (*Aust. J. Bot.* **32**: 225, 1984; spp.), Bissett (*CJB* **66**: 2541, 1988), Kish *et al.* (*Mycol.* **80**: 312, 1988), Skou (*Mycotaxon* **31**: 191, 1988; rank), Berbee & Taylor (*BioSystems* **28**: 117, 1992), Landvik *et al.* (*Mycoscience* **37**: 237, 1996), Anderson & Gibson (*Aust. Syst. Bot.* **11**: 53, 1998), Anderson *et al.* (*MR* **102**: 541, 1998), Geiser & LoBuglio *in* McLaughlin *et al.* (Eds) (*The Mycota* A Comprehensive Treatise on Fungi as Experimental Systems for Basic and Applied Research **7A**: 201, 2001).

Ascosphaerales Gäum. ex Benny & Kimbr. (1980). Eurotiomycetidae. 1 fam., 3 gen., 19 spp. Fam.:
Ascosphaeraceae

Apparently nests within *Onygenales*, but further molecular studies are needed and the limits of that order also require research.

For *Lit.* see under fam.

Ascosphaeromycetes = Eurotiomycetes. Used by Skou (*Mycotaxon* **31**: 191, 1988) to accommodate the single order (and family) *Ascosphaerales* (*Ascosphaeraceae*).

Ascospora Fr. (1825) = Mycosphaerella fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Ascospora Mont. (1849) nom. conf., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Ascosporaceae Bonord. (1851) = Mycosphaerellaceae.

ascospore, a spore produced in an ascus by 'free cell formation'; the ascospore wall is multilayered, it consists of an outer **perispore**, an intermediary layer, the proper wall (**epispore**) and sometimes an internal **endospore**; major differences in which layers are thickened, folded or pigmented can give rise to considerable variation even in a single family (e.g. *Lasiosphaeriaceae*); see Bellemère (*in* Hawksworth (Ed.), *Ascomycete systematics*: 111, 1994), basidiospore, spore wall.

Ascosporium Berk. (1860) = Taphrina fide Saccardo (*Syll. fung.* **8**: 817, 1889).

ascostome, a pore in the apex of an ascus (obsol.).

Ascostratum Syd. & P. Syd. (1912), ? Dothideomycetes. 1, S. Africa.

Ascostroma Bonord. (1851) = Kretzschmaria fide Læssøe (*SA* **13**: 43, 1994).

ascostroma, a stroma in or on which asci are produced, usually restricted to groups with ascolocular ontogeny.

Ascosubramania Rajendran (1997) = Microascus Zukal fide Rajendran (*J. Med. Vet. Mycol.* **35**: 336, 1997), Guarro (*Medical Mycology* **36**: 349, 1998; synonymy).

Ascotaiwania Sivan. & H.S. Chang (1992), ? Sordariales. Anamorphs *Brachysporiella*, *Trichocladium*, *Monotosporella*. 12 (mostly from wood), widespread (tropical). See Wong *et al.* (*SA* **16**: 17, 1998), Ranghoo *et al.* (*Fungal Diversity* **2**: 159, 1999; DNA), Chang (*Fungal Science* Taipei **16**: 35, 2001; anamorph), Réblová & Winka (*Mycol.* **93**: 478, 2001), Wong & Hyde (*Cryptog. Mycol.* **22**: 19, 2001), Campbell & Shearer (*Mycol.* **96**: 822, 2004; phylogeny).

Ascotremella Seaver (1930), Helotiaceae. 2, widespread (north & south temperate). See Gamundí & Dennis (*Darwiniana* **15**: 14, 1969; status), Gamundí & Romero (*Fl. criptog. Tierra del Fuego* **10**, 1998).

Ascotremellopsis Teng & S.H. Ou ex S.H. Ou (1936) = Myriodiscus fide Liu & Guo (*Acta Mycol. Sin.* Suppl. **1**: 97, 1988).

Ascotricha Berk. (1838), Xylariaceae. Anamorph *Dicyma*. 15, widespread. See Hawksworth (*Mycol. Pap.* **126**, 1971; key), Horie *et al.* (*TMSJ* **34**: 123, 1993), Læssøe (*SA* **13**: 43, 1994; posn), Udagawa *et al.* (*Mycotaxon* **52**: 215, 1994), Lee & Hanlin (*Mycol* **91**: 434, 1999; DNA), Stchigel *et al.* (*Mycol.* **92**: 805, 2000).

Ascotrichella Valldos. & Guarro (1988), ? Coniochaetaceae. Anamorph *Humicola*-like. 1, Chile. See Valldosera & Guarro (*TBMS* **90**: 601, 1988), Læssøe (*SA* **13**: 43, 1994; posn).

Ascovaginospora Fallah, Shearer & W.D. Chen (1997), ? Hyponectriaceae. 1 (dead submerged stems), USA. See Fallah *et al.* (*Mycol.* **89**: 812, 1997; DNA), Chen *et al.* (*Mycol.* **91**: 84, 1999; DNA), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004; phylogeny).

Fitopatol.* **31**: 27, 1997), Landvik *et al.* (*Mycoscience* **39**: 49, 1998; DNA), van Brummelen (*Persoonia* **16**: 425, 1998; ultrastr.), Brummelen & Richardson (*Persoonia* **17**: 487, 2000), Hoog *et al.* (*Stud. Mycol.* **51**: 33, 2005).

ascus (pl. **asci**), term introduced by Nees (*Syst. Pilze*: 164, 1817) for the typically sac-like cell (first figured in *Pertusaria* by Micheli in 1729; q.v.) characteristic of *Ascomycota* (q.v.), in which (after karyogamy and meiosis) ascospores (generally 8) are produced by 'free cell formation' (Fig. 11). Asci vary considerably in structure, and work in the last two decades has shown previous separation into only 2-3 categories (e.g. **bitunicate, prototunicate, unitunicate**) to be an over simplification. Sherwood (1981) illustrated 9 main types distinguishable by light microscopy (reproduced on p. 36 of edn 7 of this *Dictionary*): prototunivate, bitunicate, astropalean, annellate, hypodermataceous, pseudoperculate, operculate, lecanoralean, and verrucariod). Eriksson (1981) distinguished 7 types of dehiscence in bitunicate asci with an ectotunica and distinct endotunica (see p. 37 of edn 7). These classifications mask a much wider range of variation; Bellemère (1994) recognized 3 predehiscence types and 11 dehiscence categories (Fig. 1). The details of the asci are stressed in ascomycete systematics, esp. in lichen-forming orders where reactions with iodine are emphasized (q.v.) (Hafellner, 1984).

Bitunicate asci with two functional wall layers; those splitting at discharge (**fissitunicate**; 'jack-in-the-box') had been correlated with an ascolocular ontogeny by Luttrell (1951). Reynolds (1989) critically examined this paradigm and found the term to be applied to different ascus types and that an exclusive link to ascostromatic fungi could not be upheld; he also introduced the term **extenditunicate** for asci which extend without any splitting of the wall layers (Reynolds, *Cryptog. Mycol.* **10**: 305, 1989).

Much variation depends on the modifications in the various wall layers, especially the thickness of the walls and the *c* and *d* layers, and the details of apical differentiation (Bellemère, 1994) (Fig. 2). Caution is needed in comparing ascus staining reactions (see iodine) and structures in the absence of ultrastructural data. For terms used to describe the various structures see Fig. 2.

Also encountered are - **crown** (annular thickenings in *Phyllachora*), and - **plug** (thickening in the apex through which the spores are forcibly discharged).

Mycol.* **59**: 75, 2007; section *Candidi*), Varga *et al.* (*Stud. Mycol.* **59**: 89, 2007; section *Clavati*), Peterson (*Mycol.* **100**: 205, 2008; 4-locus phylogeny).

Asperisporium Maubl. (1913), anamorphic *Pezizomycotina*, Hsp.1eP.10. 12, America. *A. caricae* (*Carica papaya* leaf spot). See Baker *et al.* (*Mycotaxon* **76**: 247, 2000), Schubert & Braun (*Fungal Diversity* **20**: 187, 2005).

Asperopilum Spooner (1987), Hyaloscyphaceae. 1 (on *Juncus*), Australasia. See Spooner (*Biblthca Mycol.* **116**, 1987).

Asperotrichum, see *Asporothrichum*.

asperulate, delicately asperate.

Aspicilia A. Massal. (1852) nom. cons., Megasporaceae (L). *c.* 230, widespread. See Clauzade & Roux (*Bull. Soc. bot. Centre-Ouest* Nouv. sér. **15**: 127, 1984; Eur., gen. concept.), Laundon & Hawksworth (*Taxon* **37**: 478, 1988; nomencl.), Rosentreter *in* Glenn *et al.* (Eds) (*Lichenogr. Thomsoniana*: 163, 1998), Wedin *et al.* (*MR* **109**: 159, 2005; posn), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny), Schmitt *et al.* (*J. Hattori bot. Lab.* **100**: 753, 2006; phylogeny), Nordin *et al.* (*Biblthca Lichenol.* **96**: 247, 2007; phylogeny, chemistry), Nordin *et al.* (*Lichenologist* **40**: 127, 2008; phylogeny).

Aspiciliella M. Choisy (1932) = Aspicilia fide Purvis *et al.* (*Lichen Flora of Great Britain and Ireland*: 710 pp., 1992).

aspicilioid (of lecanorine apothecia), more or less immersed in the thallus, at least when young.

Aspiciliomyces Cif. & Tomas. (1953) ≡ Pachyospora.

Aspiciliopsis (Müll. Arg.) M. Choisy (1929), Trapeliaceae (L). 2. See Schmitt *et al.* (*Mycol.* **95**: 827, 2003; phylogeny), Lumbsch *et al.* (*MR* **111**: 1133, 2007).

Aspidelia Stirt. (1900) = Parmelia fide Culberson (*Bryologist* **69**: 113, 1966), Hale (*Bull. Br. Mus. nat. hist.* Bot. **8**: 227, 1981).

Aspidella E.-J. Gilbert (1941) = Amanita Pers. fide Singer (*Agaric. mod. Tax.* edn 3, 1975).

Aspidopyrenis Clem. & Shear (1931) ≡ Aspidopyrenium.

Aspidopyrenium Vain. (1890) = Aspidothelium fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995), Lücking (*Willdenowia* **29**: 299, 1999).

Aspidothea Syd. (1927) = Inocyclus fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Aspidotheliaceae Räsänen ex J.C. David & D. Hawksw. (1991), Pezizomycotina (inc. sed.) (L). 1 gen. (+ 6 syn.), 13 spp.

Lit.: Aptroot & Sipman (*Lichenologist* **25**: 121, 1993), Malcolm & Vězda (*Australas. Lichenol. Newsl.* **37**: 13, 1995), Lücking & Sérusiaux (*Nordic Jl Bot.* **16**: 661, 1996), Lücking (*Willdenowia* **29**: 299, 1999), Arie *et al.* (*J. gen. appl. Microbiol.* Tokyo: 257, 2000).

Aspidotheliomyces Cif. & Tomas. (1953) ≡ Aspidothelium.

Aspidothelium Vain. (1890), Aspidotheliaceae (L). 13, widespread (tropical). See Santesson (*Symb. bot. upsal.* **12** no. 1: 1, 1952), Lücking (*Trop. Bryol.* **15**: 45, 1998; Guyana), Lücking (*Willdenowia* **29**: 299, 1999; Ecuador), McCarthy (*Flora of Australia* **58** A: 242 pp., 2001), Flakus & Wilk (*J. Hattori bot. Lab.* **99**: 307, 2006; Bolivia), Aptroot *et al.* (*Biblthca Lichenol.* **97**, 2008; Costa Rica).

Aspilaima Bat. & H. Maia (1961), anamorphic *Pezizomycotina*, Cpt.0eP.?. 1, Brazil. See Batista & Maia (*Publções Inst. Micol. Recife* **338**: 5, 1961).

Aspilidea Hafellner (2001), Lecanorales (L). 1. See Hafellner & Türk (*Stapfia* **76**: 149, 2001).

A-spore, see alpha-spore.

asporogenic (asporogenous), not forming spores.

asporogenic yeasts, see Yeasts.

Asporomyces Chaborski (1918) = Torulopsis Berl. fide Mrak *et al.* (*Mycol.* **34**: 139, 1942), Barnett *et al.* (*Yeasts: Characteristics and Identification* 3rd edn, 2000).

Asporothrichum Link (1809) nom. dub., anamorphic *Agaricomycetidae*. Based on mycelium fide Fries (*Syst. mycol.* **3**, index: 1832). = Sporotrichum (Agaricomycetidae, inc. sed.) fide Streinz (*Nom. fung.*, 1862).

Asproinocybe R. Heim (1970), ? Tricholomataceae. 5, Africa (tropical). See Heinemann & Thoen (*Fl. Illustr. Champ. Afr. centr.* **5**: 102, 1977), Guzmán *et al.* (*Docums Mycol.* **33** no. 131: 23, 2004).

Aspropaxillus Kühner & Maire (1934) = Leucopaxillus fide Singer (*Agaric. mod. Tax.* edn 3, 1975).

assimilative (1) taking in; (2) (of hyphae) having to do with the growth phase before reproduction; non-reproductive; vegetative.

Assoa Urries (1944), Pezizomycotina. 1, Spain.

association, see phytosociology.

astatocoenocytic (of nuclear behaviour in basidiomycetes), haplont mycelium cells coenocytic, diplont binucleate but coenocytic and without clamps when aeration insufficient, basidioma binucleate; in contrast to **holocoenocytic** (haplont and diplont coenocytic, only developing basidium binucleate), **heterocytic** (haplont regularly coenocytic), and the **normal** condition when the haplont is uninucleate, the diplont binucleate (Boidin, *in* Petersen (Ed.), *Evolution in the higher basidiomycetes*: 129, 1971).

Astelechia Cif. (1962), anamorphic *Pezizomycotina*, Hso.≡ eP.?. 2, Dominican Republic. See Ciferri (*Atti Ist. bot. Univ. Lab. crittog. Pavia* sér. 5 **19**: 90, 1962).

Asterella (Sacc.) Sacc. (1891) [non *Asterella* P. Beauv. 1805, *Hepaticae*] = Asterina fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Asterella Hara (1936) [non *Asterella* P. Beauv. 1805, *Hepaticae*] = Astrosphaeriella fide Hawksworth (*J. Linn. Soc.* Bot. **82**: 35, 1981).

Asteridiella McAlpine (1897), Meliolaceae. 300, widespread (tropical). See Hansford (*Sydowia* **10**: 41, 1956), Hughes (*Mycol. Pap.* **166**, 1993), Song *et al.* (*Acta Mycol. Sin.* **15**: 247, 1996; China), Dianese & Furlanetto (*Progress in Microbial Ecology* Proceedings of the Seventh International Symposium on Microbial Ecology. Santos, São Paulo, Brazil 1995: 207, 1997; Brazil), Hosagoudar *et al.* (*The Meliolineae* A Supplement: 201 pp., 1997; India), Mibey & Hawksworth (*Mycol. Pap.* **174**: 108 pp., 1997; Kenya), Hsieh *et al.* (*Taiwan Ascomycetes* Pyrenomycetes and Loculoascomycetes, 2000; Taiwan), Song & Li (*Mycotaxon* **89**: 201, 2004; China).

Asteridiellina Seaver & Toro (1926) = Actinopeltis fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Asteridium (Sacc.) Speg. ex Sacc. (1891) = Meliola fide Höhnel (*Sber. Akad. Wiss. Wien* Math.-naturw. Kl., Abt. 1 **119**: 414, 1910), Hosagoudar (*Sydowia* **55**: 162, 2003).

Asterina Lév. (1845), Asterinaceae. Anamorphs *Asterostomella*, *Clasterosporium*-like. *c.* 336 (on leaves), widespread (esp. tropical). See Doidge (*Bothalia* **4**: 273, 1942), Hansford (*Mycol. Pap.* **15**, 1946), Reynolds (*Cryptog. Mycol.* **8**: 251, 1987; asci), Rahayu & Parbery (*MR* **95**: 731, 1991; Australia), Mibey & Hawksworth (*Mycol. Pap.* **174**, 1997; Kenya), Hosagoudar & Abraham (*J. Econ. Taxon. Bot.* **24**: 557, 2000; nomenclator), Hosagoudar *et al.* (*Journal of Mycopathological Research* **39**: 61, 2001; posn), Song & Li (*Mycotaxon* **84**: 407, 2002; China), Hosagoudar (*Zoos' Print Journal* **18**: 1280, 2003; India), Hofmann & Piepenbring (*Mycol. Progr.* **7**: 87, 2008; Panama).

Asterinaceae Hansf. (1946), ? Capnodiales. 46 gen. (+ 39 syn.), 653 spp.

Lit.: Doidge (*Bothalia* **4**: 273, 1942; S. Afr.), Farr (*Mycol.* **78**: 269, 1986), Swart (*TBMS* **87**: 81, 1986), Farr (*Mycol.* **79**: 97, 1987), Reynolds (*Cryptog. Mycol.* **8**: 251, 1987), Rahayu & Parbery (*MR* **95**: 731, 1991), Hosagoudar & Goos (*Mycotaxon* **52**: 467, 1994), Hosagoudar *et al.* (*Mycotaxon* **58**: 489, 1996), Mibey & Hawksworth (*Mycol. Pap.* **174**: 108 pp., 1997), Mibey & Hawksworth (*Mycol. Pap.* **174**, 1997; Kenya), Goos (*Mycotaxon* **73**: 455, 1999).

Asterinales M.E. Barr ex D. Hawksw. & O.E. Erikss. (1986) = *Capnodiales*. Perhaps synonymous with *Capnodiales*, but very few molecular data are available. See *Asterinaceae*.

Asterinella Theiss. (1912), Microthyriaceae. Anamorphs *Asterostomula*, *Asteromella*-like. *c.* 6, widespread (subtropical). See Hosagoudar *et al.* (*Mycotaxon* **58**: 489, 1996), Hosagoudar & Abraham (*MR* **102**: 184, 1998).

Asterinema Bat. & Gayão (1953), Microthyriaceae. Anamorph *Eriothyrium*. 1, Brazil. See Farr (*Mycol.* **75**: 1036, 1983).

Asterinites Doub. & D. Pons ex Kalgutkar & Janson. (2000), Fossil Fungi. 1, Colombia. See Kalgutkar & Jansonius (*AASP Contributions Series* **39**: 31, 2000).

Asterinites Doub. & D. Pons (1973), Fossil Fungi. 2 (Paleocene), Colombia.

Asterinites Krassilov (1967), Fossil Fungi. 2 (Cretaceous), former USSR.

Asterinopeltis Bat. & H. Maia (1958) = Platypeltella fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Asterinotheca Bat. & H. Maia (1958) ? = Asterina fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Asterinothyriella Bat. & Cif. (1959), anamorphic *Pezizomycotina*, Cpt.≡ eH.?. 1, Uganda. See Batista & Ciferri (*Atti Ist. bot. Univ. Lab. crittog. Pavia* sér. 5 **16**: 85, 1959).

Asterinothyrium Bat., Cif. & H. Maia (1959), anamorphic *Pezizomycotina*, Cpt.0eH.?. 1, S. Africa. See Batista *et al.* (*Mycopath. Mycol. appl.* **11**: 27, 1959).

Asterinula Ellis & Everh. (1889) = Leptothyrella fide Saccardo (*Syll. fung.* **10**: 1, 1892).

Asterisca G. Mey. (1825) = Sarcographa fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Asteristion Leight. (1870) = Chapsa fide Hale (*Bull. Br. Mus. nat. hist.* Bot. **8**: 227, 1981).

Asteristium Clem. (1909) ≡ Asteristion.

Asteritea Bat. & R. Garnier (1961), ? Microthyriaceae. 1, Brazil. See Batista & Garnier (*Broteria* ser. bot. **30**: 41, 1961).

Asterobolus Redhead & P.W. Perrin (1972) = Valdensia fide Redhead & Perrin (*CJB* **50**: 2083, 1972).

Asterocalyx Höhn. (1912), Sclerotiniaceae. 2, widespread. See Dumont & Carpenter (*Mycol.* **70**: 68, 1978), Spooner (*Biblthca Mycol.* **116**, 1987).

Asterochaete (Pat.) Bondartsev & Singer (1941) [non *Asterochaete* Nees 1834, *Cyperaceae*] ≡ Echinochaete.

Asteroconium Syd. & P. Syd. (1903), anamorphic *Pezizomycotina*, Cac.1bH.1/10. 2, C. America; India; China. See Sutton (*The Coelomycetes*, 1980).

Asterocyphella W.B. Cooke (1961), Cyphellaceae. 3, widespread. See Cooke (*Beih. Sydowia* **4**: 118, 1961; key).

Asterocystis De Wild. (1893) = Olpidium fide Sampson (*TBMS* **23**: 199, 1939).

Asterodon Pat. (1894), Hymenochaetaceae. 1, widespread (north temperate). See Corner (*TBMS* **31**: 234, 1948), Müller *et al.* (*MR* **104**: 1485, 2000).

Asterodontaceae Parmasto (2001) = Hymenochaetaceae.

Asterodothis Theiss. (1912), Asterinaceae. Anamorph *Asterostromina*. 1, Africa. See Hosagoudar *et al.* (*Journal of Mycopathological Research* **39**: 61, 2001).

Asterogastraceae R. Heim (1934) = Russulaceae.

asteroid body, a stellate cell of *Sporothrix schenckii*

(more rarely *Aspergillus* or other pathogens) in animal tissues resulting from an antigen-antibody complex precipitate deposited on the cell wall (Lurie & Snell, *Sabouraudia* **7**: 64, 1969).

Asteroides Puntoni & Léon (1940) nom. dub., Fungi.

Asterolibertia G. Arnaud (1918), Asterinaceae. *c.* 18, widespread (subtropical). See Hosagoudar & Abraham (*Journal of Mycopathological Research* **35**: 55, 1997; India).

Asteroma DC. (1815), anamorphic *Gnomoniella, Plagiostoma*, Cac.0eH.15. 14, widespread (esp. north temperate). See Sutton (*The Coelomycetes*, 1980).

Asteromassaria Höhn. (1917), Pleomassariaceae. Anamorph *Scolicosporium*. 11, Europe; N. America. See Barr (*Mycotaxon* **15**: 349, 1982), Spooner & Kirk (*TBMS* **78**: 247, 1982; anamorph), Sivanesan (*TBMS* **91**: 317, 1988; key 9 spp.), Mehrotra & Sivanesan (*MR* **93**: 557, 1989), Barr (*Mycotaxon* **49**: 129, 1993; key 8 N. Am. spp.), Tanaka *et al.* (*Mycoscience* **46**: 248, 2005; Japan).

Asteromella Pass. & Thüm. (1880), anamorphic *Dothideomycetes*, Cpd.0eH.15. 234, widespread. Almost certainly polyphyletic. See Batista *et al.* (*Saccardoa* **1**: 17, 1960), Sutton (*The Coelomycetes*, 1980), Vanev & van der Aa (*Persoonia* **17**: 47, 1998; annotated list).

Asteromellopsis H.E. Hess & E. Müll. (1951), anamorphic *Dothidea*, St.0eH.15. 1, Switzerland. See Hess & Müller (*Ber. schweiz. bot. Ges.* **61**: 18, 1951), Goodwin & Zismann (*Mycol.* **93**: 934, 2001; phylogeny).

Asteromidium Speg. (1888), anamorphic *Pezizomycotina*, Cac.≡ eH.10. 3, Brazil. See Petrak & Sydow (*Annls mycol.* **34**: 14, 1936), Ferreira & Muchovej (*Mycotaxon* **30**: 97, 1987; addit. spp.), Pomella *et al.* (*Mycotaxon* **64**: 83, 1997).

Asteromites Poinar (2003), Fossil Fungi. 1, Chiapas. See Poinar (*MR* **107**: 121, 2003).

Asteromyces Moreau & M. Moreau ex Hennebert (1962), anamorphic *Pezizomycotina*, Hso.0eP.11/14. 1, France. See Hennebert (*CJB* **40**: 1211, 1962), Kohlmeyer & Volkmann-Kohlmeyer (*Bot. Mar.* **34**: 1, 1991).

Asteromyxa Theiss. & Syd. (1918) ≡ Dimeriella.

Asteronaevia Petr. (1929) = Diplonaevia fide Hein (*Nova Hedwigia* **38**: 669, 1983).

Asteronectrioidea Cant. (1949), anamorphic *Pezizomycotina*, St.1eH.15. 1, Africa.

Asteronema Trevis. (1845) nom. dub., ? Fungi.

Asteronia (Sacc.) Henn. (1895), Microthyriaceae. 2, Brazil. See Sutton (*Mycol. Pap.* **141**, 1977).

Asteropeltis Henn. (1904) = Trichothelium fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Asterophlyctis H.E. Petersen (1903) = Diplophlyctis fide Dogma (*Nova Hedwigia* **25**: 121, 1974).

Asterophoma D. Hawksw. (1981), anamorphic *Chaenothecopsis*, Cpd.0eH.15. 1 (on *Calicium*), widespread. See Tibell (*CJB* **69**: 2427, 1991; ultrastr.).

Asterophora Ditmar (1809), Lyophyllaceae. Anamorph *Ugola*. 3 (2 on other agarics, esp. *Russula*), widespread (temperate). On basidioma of *Russula* and *Lactarius*. See Redhead & Seifert (*Taxon* **50**: 243, 2001; nomencl.), Walther *et al.* (*MR* **109**: 525, 2005; conidiogenesis).

asterophysis, see seta.

Asteroporomyces Cif. & Tomas. (1953) ≡ Asteroporum.

Asteroporum Müll. Arg. (1884), Arthoniales (±L). 3, widespread (tropical). See McCarthy (*Flora of Australia* **58** A: 242 pp., 2001).

Asteropsis Gonz. Frag. (1917), anamorphic *Pezizomycotina*, Cpd.0eP.?. 1, Spain.

Asteroscutula Petr. (1948), anamorphic *Pezizomycotina*, Cpt.0eP.?. 1, Ecuador.

asteroseta (1) see cystidium; (2) see seta.

Asterosphaeria (Höhn.) Syd. (1913) = Astrosphaeriella fide Hawksworth (*J. Linn. Soc.* Bot. **82**: 35, 1981).

Asterosporales = Russulales.

Asterosporium Kunze (1819), anamorphic *Pezizomycotina*, Cac.0bP.1. 5, widespread (temperate). See Murvanishvili & Dekanoidze (*Mikol. Fitopatol.* **26**: 27, 1992; key).

Asterostomella Speg. (1886), anamorphic *Asterina*, Cpt.0eP.?. 39, widespread (tropical). See Batista & Ciferri (*Mycopathologia* **11**: 44, 1959), Hosagoudar & Goos (*Mycotaxon* **52**: 467, 1994; India), Hofmann & Piepenbring (*Mycol. Progr.* **7**: 87, 2008; Panama).

Asterostomidium Lindau (1900) ≡ Asteromidium.

Asterostomopora Bat. & H. Maia (1960), anamorphic *Pezizomycotina*, Cpt.0eP.?. 1, Jamaica. See Batista & Maia (*Publções Inst. Micol. Recife* **221**: 5, 1960).

Asterostomopsis Bat., Cif. & H. Maia (1959), anamorphic *Pezizomycotina*, Hsp.0eP.?. 1, Ghana. See Batista *et al.* (*Mycopath. Mycol. appl.* **11**: 56, 1959).

Asterostomula Theiss. (1916), anamorphic *Pezizomycotina*, Cpt.0eP.?. 4, widespread (tropical).

Asterostomulina Bat., J.L. Bezerra & H. Maia (1964), anamorphic *Pezizomycotina*, Cpt.0eH.?. 1, Brazil. See Batista *et al.* (*Portugaliae Acta Biologica* Série B **7**: 385, 1964).

Asterostroma Massee (1889), Lachnocladiaceae. 14, widespread. See Boidin (*BSMF* **113**: 269, 1997; key), Wagner (*Mycotaxon* **79**: 235, 2001; phylogenetics).

Asterostromataceae Pouzar (1983) = Hymenochaetaceae.

Asterostromella Höhn. & Litsch. (1907) = Vararia fide Burt (*Ann. Mo. bot. Gdn* **9**: 1, 1922).

Asterostromina Bat. & A.F. Vital (1957), anamorphic *Asterodothis*, Cpt.0eH.?. 1, S. Africa. See Batista & Vital (*Revta Biol.* Lisb. **1**: 116, 1957).

Asterotexis Arx (1958), Asterinaceae. 2, America (tropical); Nepal. See von Arx (*Fungus* Wageningen **28**: 6, 1958), Hosagoudar *et al.* (*Journal of Mycopathological Research* **39**: 61, 2001; posn).

Asterotheca I. Hino (1938) [non *Asterotheca* C. Presl 1846, fossil *Pteridophyta*] ≡ Astrotheca.

Asterothecium Wallr. (1836) ≡ Stephanoma.

Asterothelium, see *Astrothelium*.

Asterothrix Kütz. (1843) [non *Asterothrix* Cass. 1827, *Compositae*] ≡ Asteronema.

Asterothyriaceae Walt. Watson ex R. Sant. (1952), Ostropales (L). 3 gen. (+ 12 syn.), 59 spp.

Lit.: Santesson (*Symb. bot. upsal.* **12** no. 1: 1, 1952), Sérusiaux & de Sloover (*Veröff. geobot. Inst., Zürich* **91**: 260, 1986; hypophores), Sérusiaux & Sloover (*Veröff. geobot. Inst., Zürich* **91**: 260, 1986), Hansen *et al.* (*Herzogia* **7**: 367, 1987), Vězda & Poelt (*Phyton* Horn **30**: 47, 1990), Vězda & Poelt (*Nova Hedwigia* Beih. **53**: 99, 1991), Etayo & Vezda (*Lichenologist* **26**: 333, 1994), Boom & Vězda (*Mycotaxon* **54**: 421, 1995), Lücking (*Cryptog. Mycol.* **20**: 193, 1999; phylogeny, inclusion of *Solorinellaceae*), Lücking (*Willdenowia* **29**: 299, 1999), Henssen & Lücking (*Ann. bot. fenn.* **39**: 273, 2002),

Lücking *et al.* (*Mycol.* **96**: 283, 2004).

Asterothyriomyces Cif. & Tomas. (1953) ≡ Asterothyrium Müll. Arg.

Asterothyrites Cookson (1947), Fossil Fungi. 4 (Tertiary), widespread. = Phragmothyrites (Fossil fungi) fide Selkirk.

Asterothyrium Henn. (1904) ≡ Septothyrella.

Asterothyrium Müll. Arg. (1890), Asterothyriaceae (L). 24, widespread (tropical). See Santesson (*Symb. bot. upsal.* **12** no. 1: 1, 1952), Vězda & Poelt (*Phyton* Horn **30**: 47, 1990; posn), Henssen & Lücking (*Ann. bot. fenn.* **39**: 273, 2002; anatomy, ontogeny), Lücking *et al.* (*Mycol.* **96**: 283, 2004; phylogeny, links with *Gomphillaceae*).

Asterotrema Müll. Arg. (1884) ? = Arthonia fide Aptroot (*Biblthca Lichenol.* **44**, 1991).

Asterotremella Prillinger, Lopandic & Sugita (2007), anamorphic *Trichosporonaceae*. 5, widespread. See Prillinger *et al.* (*J. gen. appl. Microbiol.* **53**: 167, 2007).

Asterotremellaceae Prillinger, Lopandic & Sugita (2007) = Trichosporonaceae.

Asterotrichum Bonord. (1851) = Asterophora fide Saccardo (*Syll. fung.* **4**: 1, 1886).

Asterotus Singer (1943) = Resupinatus fide Thorn *et al.* (*Mycol.* **97**: 1140, 2005).

Asterula (Sacc.) Sacc. (1891) = Venturia Sacc. fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Astiothyrium Bat. (1964) = Eudimeriolum fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Astoma Gray (1821) = Sclerotium fide Rabenhorst (*Deutsch. Krypt. Fl.* **1**: 1, 1844).

astomate (astomous), lacking an ostiole.

Astomella Thirum. (1947), Pezizomycotina. 1, India.

Astrabomyces Bat. (1961) nom. dub., anamorphic *Pezizomycotina*, Hso.≡ eP.? (L). 1, Brazil. See Lücking *et al.* (*Lichenologist* **30**: 121, 1998).

Astraeaceae Zeller ex Jülich (1982) = Diplocystidiaceae.

Astraeus Morgan (1889), Diplocystidiaceae. 2, widespread. *A. hygrometricus*, a mycorrhizal earth-star common in dry places. See Phosri *et al.* (*Mycotaxon* **89**: 453, 2004; Thailand), Sarasini (*Gasteromiceti Epigei*: 406 pp., 2005), Phosri *et al.* (*MR* **111**: 275, 2007).

Astragoxyphium Bat., Nascim. & Cif. (1963) = Leptoxyphium fide Hughes (*Mycol.* **68**: 693, 1976), Inácio & Dianese (*MR* **102**: 695, 1998).

Astrocitum Raf. (1806) ≡ Astrycum.

Astrocystidaceae Hara (1913) = Xylariaceae.

Astrocystis Berk. & Broome (1873), Xylariaceae. Anamorph *Acanthodochium*. 15 (esp. on bamboo and palms), widespread (tropical). See Diehl (*Mycol.* **17**: 185, 1925; morphology), Ju & Rogers (*Mycol.* **82**: 342, 1990; as *Rosellinia*), Læssøe & Spooner (*Kew Bull.* **49**: 1, 1994; key, monograph), Dulymamode *et al.* (*MR* **102**: 1325, 1998), Smith & Hyde (*Fungal Diversity* **7**: 89, 2001), Petrini (*N.Z. Jl Bot.* **41**: 71, 2003; New Zealand), Bahl *et al.* (*Mycol.* **97**: 1102, 2005; phylogeny).

Astrodochium Ellis & Everh. (1897), anamorphic *Pezizomycotina*, Hsp.0eP.?. 1, N. America. See Harrison (*Pl. Dis.* **77**: 1263, 1993), Carris (*Sydowia* **47**: 150, 1995).

astrogastraceous fungi, gasteroid members of the *Russulales*. See also *Hymenogastrales*, *Podaxales*.

Astronatelia Bat. & H. Maia (1962), anamorphic *Pezizomycotina*, Cpt.0eH.?. 1, USA. See Batista & Maia (*Publções Inst. Micol. Recife* **209**: 8, 1962).

Astroplaca Bagl. (1858) = Placolecis fide Hafellner (*Beih. Nova Hedwigia* **79**: 241, 1984).

Astrosphaeriella Syd. & P. Syd. (1913), ? Melanommataceae. Anamorph *Pleurophomopsis*. 51, widespread. See Hawksworth (*J. Linn. Soc.* Bot. **82**: 35, 1981), Hawksworth & Boise (*Sydowia* **38**: 114, 1986; key 10 spp.), Hyde & Fröhlich (*Sydowia* **50**: 81, 1998; spp. on palms), San Martín *et al.* (*Acta Bot. Mexicana* **46**: 19, 1999), Hyde *et al.* (*Nova Hedwigia* **70**: 143, 2000), Zhou *et al.* (*Cryptog. Mycol.* **24**: 191, 2003), Chen & Hsieh (*Bot. Bull. Acad. sin.* Taipei **45**: 171, 2004).

Astrosporina J. Schröt. (1889) = Inocybe fide Kauffman (*N. Amer. Fl.* **10**, 1924) See, Horak (*Persoonia* **10**: 157, 1979; key to 30 spp. from Indomalaya, Australasia).

Astrotheca I. Hino (1938) = Astrosphaeriella fide Hawksworth (*J. Linn. Soc.* Bot. **82**: 35, 1981).

Astrotheliaceae Zahlbr. (1898) = Trypetheliaceae.

Astrothelium Eschw. (1824), Trypetheliaceae (L). *c.* 40, widespread (tropical). See Harris (*Acta Amazon.* Supl. **14**: 55, 1984; key 13 spp. Brazil), Makhija & Patwardhan (*Biovigyanam* **15**: 61, 1989; fam. status), McCarthy (*Flora of Australia* **58** A: 242 pp., 2001; Australia), Aptroot *et al.* (*Biblthca Lichenol.* **97**, 2008; Costa Rica).

Astrycum Raf. (1809) ? = Geastrum fide Stalpers (*in litt.*).

Astylospora Fayod (1889) = Psathyrella fide Singer (*Agaric. mod. Tax.* edn 3, 1975).

asymmetric (of spores), having one side flattened or concave.

Asymmetricospora J. Fröhl. & K.D. Hyde (1998), Melanommataceae. 1, Australia. See Fröhlich & Hyde (*Sydowia* **50**: 183, 1998).

Asyregraamspora Locq. & Sal.-Cheb. (1980), Fossil Fungi. 1, Cameroon.

ATBI (All-Taxon Biodiversity Inventory), a record of the total diversity of living organisms present in one area. See Cannon (*Inoculum* **46**(4): 1, 1995), Inventorying.

ATCC, American Type Culture Collection (Rockville, Md, USA); a not-for-profit service collection founded in 1925; see *American Type Culture Collection profile* (1992).

Ateleothylax M. Ota & Langeron (1923), anamorphic *Pezizomycotina*, Hso.?.?. 1, Sweden.

Atelocauda Arthur & Cummins (1933), Pileolariaceae. 2 (on *Leguminosae*: *Faboideae*), C. America; Australia. See Walker (*Australasian Mycologist* **20**: 3, 2001; monogr., emend., key).

Atelosaccharomyces Beurm. & Gougerot (1909) = Cryptococcus Vuill. fide von Arx *et al.* (*Stud. Mycol.* **14**: 1, 1977).

Atelosaccharomycetaceae Guilliermd. (1928) = Filobasidiaceae.

Atestia Trevis. (1861) = Oropogon fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Athecaria Nyl. (1897) ? = Aspicilia fide Santesson (*ING* **1**: 155, 1979; typification).

Athelia Pers. (1822), Atheliaceae. Anamorph *Fibularhizoctonia*. 28, widespread. See Jülich (*Willdenowia* Beih. **7**, 1972), Jülich (*Persoonia* **10**: 149, 1978; key 'lichenized' spp.) *A. arachnoidea* is an important pathogen of lichens, esp. *Lecanora conizaeoides*, also epiphytic green algae (causing brownish white lesions in its colonies; see, Arvidsson

(*Svensk bot. Tidskr.* **72**: 285, 1979), Okabe & Matsumoto (*MR* **107**: 164, 2003; phylogeny *Athelia rolfsii*) See also *Sclerotium*.

Atheliaceae Jülich (1982), Atheliales. 22 gen. (+ 3 syn.), 106 spp.

Lit.: Gilbertson & Lindsey (*Mem. N. Y. bot. Gdn* **49**: 138, 1989), Nakasone (*Mycol. Mem.* **15**: 412 pp., 1990), Ryvarden (*Syn. Fung.* **5**: 363 pp., 1991), Harlton *et al.* (*Phytopathology* **85**: 1269, 1995), Adams & Kropp (*Mycol.* **88**: 464, 1996), Stalpers & Andersen *in* Sneh *et al.* (Eds) (*Rhizoctonia Species* Taxonomy, Molecular Biology, Ecology, Pathology and Disease Control: 58, 1996), Boidin *et al.* (*Mycotaxon* **66**: 445, 1998), Ginns (*Mycol.* **90**: 19, 1998), Kirschner & Oberwinkler (*Mycoscience* **40**: 345, 1999), Hibbett *et al.* (*Nature* Lond. **407**: 506, 2000), Larsson *et al.* (*MR* **108**: 983, 2004), Binder *et al.* (*Systematics and Biodiversity* **3**: 113, 2005).

Atheliales Jülich (1981). Agaricomycetidae. 1 fam., 22 gen., 106 spp. Fam.:

Atheliaceae

For *Lit.* see under fam.

Athelicium K.H. Larss. & Hjortstam (1986), Atheliaceae. 2, Europe. See Larsson & Hjortstam (*Windahlia* **15**: 49, 1986).

Athelidium Oberw. (1966), Stephanosporaceae. 1, Europe. See Oberwinkler (*Sydowia* **19**: 62, 1965).

Athelium Nyl. (1886) = Thelocarpon fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Atheloderma Parmasto (1968), Hymenochaetales. 2, Europe; Asia. See Parmasto (*Consp. System. Corticiac.*: 73, 1968).

Athelopsis Oberw. ex Parmasto (1968), Atheliaceae. 10, widespread. Polyphyletic. See Hjortstam (*Mycotaxon* **42**: 149, 1991), Kotiranta & Saarenoksa (*Ann. bot. fenn.* **42**: 335, 2005; Finland).

Athrismidium Trevis. (1860) ? = Tomasellia fide Harris (*More Florida Lichens*, 1995).

Atichia Flot. (1850), anamorphic *Seuratia*, Hsy/Ccu.0bH-P.1. 6, widespread. See Meeker (*CJB* **53**: 2483, 1975), Parbery & Brown (*Microbiology of the Phyllosphere*: 101, 1986), Kendrick (*CJB* **81**: 75, 2003; morphogenesis).

Atichiaceae Racib. (1900) = Seuratiaceae.

Atichiopsis R. Wagner (1900) = Seuratia fide Meeker (*CJB* **53**: 2462, 1975).

Atkinson (George Francis; 1854-1918; USA). Professor of Botany, Cornell University (1896-1918). His work did much to stimulate interest in the *Agaricaceae* in the USA. *Publs. Mushrooms Edible and Poisonous* (1901) [edn 2]; Phylogeny and relationships in the ascomycetes. *Annals of the Missouri Botanical Garden* (1915); also other papers on the *Agaricaceae*, phylogeny, and plant diseases. *Biogs, obits etc.* Farlow *et al.* (*American Journal of Botany* **6**: 301, 1919); Stafleu & Cowan (*TL-2* **1**: 78, 1976); Stafleu & Mennega (*TL-2, Suppl.* **1**: 200, 1992).

Atkinsonella Diehl (1950), Clavicipitaceae. Anamorphs *Ephelis*, *Sphacelia*. 2, widespread (north temperate). See Leutchmann & Clay (*Mycol.* **81**: 692, 1989), Morgan-Jones & White (*Mycotaxon* **35**: 455, 1989), Schardl *et al.* (*Pl. Syst. Evol.* **178**: 27, 1991; phylogeny), Morgan-Jones & White (*Mycotaxon* **44**: 89, 1992; culture), Leutchmann & Clay (*Am. J. Bot.* **83**: 1144, 1996; isozymes), Reddy *et al.* (*Mycol.* **90**: 108, 1998; DNA).

Atkinsonia Lloyd (1916) [non *Atkinsonia* F. Muell. 1865, *Loranthaceae*] = Sebacina fide Donk (*Persoonia* **4**: 305, 1966).

atlantic, confined to the Atlantic seaboard. For classification of different types of atlantic distribution in Europe see Ratcliffe (*New Phytol.* **67**: 365, 1968).

Atmospheric pollution, see Air pollution.

atomate, having a powdered surface.

Atopospora Petr. (1925), ? Venturiaceae. Anamorph *Didymochora*. 2, widespread (north temperate). See Sivanesan (*Bitunicate Ascomycetes and their Anamorphs*, 1984), Barr (*Sydowia* **41**: 25, 1989).

Atractiella Sacc. (1886), Phleogenaceae. 6, widespread. See Donk (*Persoonia* **4**: 209, 1966), Bandoni & Inderbitzin (*Czech Mycol.* **53**: 265, 2002; n.sp.), Aime *et al.* (*Mycol.* **98**: 896, 2006; phylogeny).

Atractiellaceae R.T. Moore (1996) = Phleogenaceae.

Atractiellales Oberw. & Bandoni (1982). Atractiellomycetes. 3 fam., 10 gen., 34 spp. Fams:

(1) **Atractogloeaceae**

(2) **Mycogelidiaceae**

(3) **Phleogenaceae** (syn. *Atractiellaceae*, *Hoehnelomycetaceae*)

Lit.: Oberwinkler & Bauer (*Sydowia* **41**: 224, 1989), Bauer *et al.* (*Mycol. Progress* **5**: 41, 2006).

Atractiellomycetes R. Bauer, Begerow, J.P. Samp., M. Weiss & Oberw. (2007). Pucciniomycotina. 1 ord., 3 fam., 10 gen., 34 spp. Ord.:

Atractiellales

Lit.: Bauer *et al.* (*Mycol. Progress* **5**: 41, 2006).

Atractilina Dearn. & Barthol. (1924), anamorphic *Pezizomycotina*, Hso/Hsy.≡ eH-P.10. 2 (on leaf ascomycetes), widespread (tropical). See Deighton & Pirozynski (*Mycol. Pap.* **128**, 1972).

Atractina Höhn. (1904) = Sterigmatobotrys fide Hughes (*CJB* **36**: 727, 1958).

Atractium Link (1809), anamorphic *Pezizomycotina*, Hsy.≡ eH.?. 5, widespread.

Atractobasidium G.W. Martin (1935) = Patouillardina Bres. fide Rogers (*Mycol.* **28**: 398, 1936).

Atractobolus Tode (1790), Pezizomycotina. 1, Europe. See Spooner (*Biblthca Mycol.* **116**: 1, 1987).

Atractocolax R. Kirschner, R. Bauer & Oberw. (1999), Microbotryomycetes. 1 (associated with bark beetles), Europe. See Kirschner *et al.* (*Mycol.* **91**: 542, 1999).

Atractodorus Klotzsch (1832) nom. dub., Fungi.

Atractogloea Oberw. & Bandoni (1982), Atractogloeaceae. 1, USA. See Oberwinkler & Bandoni (*Mycol.* **74**: 634, 1982).

Atractogloeaceae Oberw. & R. Bauer (1989), Pucciniomycotina (inc. sed.). 1 gen., 1 spp.

Lit.: Oberwinkler & Bandoni (*Mycol.* **74**: 634, 1982), Oberwinkler (*Stud. Mycol.* **30**: 61, 1987), Oberwinkler & Bauer (*Sydowia* **41**: 224, 1989).

Atrichophyton Castell. & Chalm. (1919) = Chrysosporium fide Carmichael *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 390, 1973).

Atricordyceps Samuels (1983) = Podocrella fide Samuels (*N.Z. Jl Bot.* **21**: 171, 1983), Samson *et al.* (*Atlas of Entomopathogenic Fungi*, 1988), Shimazu & Glockling (*MR* **101**: 1371, 1997), Chaverri *et al.* (*Mycol.* **97**: 433, 2005).

Atrocybe Velen. (1947), ? Helotiales. 1, former Czechoslovakia.

Atropellis Zeller & Goodd. (1930), Dermateaceae. 4, N. America. *A. pinicola* (pine canker). See Reid & Funk (*Mycol.* **58**: 428, 1966; key), Smith *et al.* (*Quarantine Pests for Europe* Edn 2, 1997).

Atroporus Ryvarden (1973) = Polyporus P. Micheli ex

Adans. fide Reid (*Mem. N. Y. bot. Gdn* **28**: 197, 1976).

Atrosetaphiale Matsush. (1995), anamorphic *Pezizomycotina*, Hso.0fH.15. 1, Peru. See Matsushima (*Matsush. Mycol. Mem.* **8**: 14, 1995), Mel'nik *et al.* (*Mycol. Progr.* **3**: 19, 2004).

Atrotorquata Kohlm. & Volkm.-Kohlm. (1993), Cainiaceae. 1, USA. Very similar and possibly related to *Cainia*. See Kohlmeyer & Volkmann-Kohlmeyer (*SA* **12**: 7, 1993), Kang *et al.* (*MR* **103**: 1621, 1999).

Attamyces Kreisel (1972), anamorphic *Leucoagaricus*. 1 (in ants nests), Cuba. See Singer (*Nova Hedwigia* **26**: 435, 1975).

attenuate (1) narrowed; (2) (of a pathogen), having lowered pathogenicity or virulence.

Atylospora, see *Astylospora*.

atypical, not normal.

Auerswaldia Rabenh. (1857) = Melanospora Corda fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Auerswaldia Sacc. (1883), ? Dothideaceae. 30, widespread (pantropical). See von Arx & Müller (*Stud. Mycol.* **9**, 1975), Hyde & Cannon (*Mycol. Pap.* **175**, 1999).

Auerswaldiella Theiss. & Syd. (1914), ? Botryosphaeriaceae. 4, widespread (tropical). See Sivanesan & Hsieh (*MR* **93**: 340, 1989; key), Eriksson & Hawksworth (*SA* **14**: 45, 1995; posn).

Auerswaldiopsis Henn. (1904) ? = Patouillardiella fide Höhnel (*Sber. Akad. Wiss. Wien* Math.-naturw. Kl., Abt. 1 **119**: 432, 1910).

Aulacographa Leight. (1854) = Graphis fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Aulacostroma Syd. & P. Syd. (1914), Parmulariaceae. 5, pantropical. See Luttrell & Muthappa (*Mycol.* **66**: 563, 1974), Magnes (*Biblthca Mycol.* **165**, 1997), Inácio & Cannon (*MR* **107**: 82, 2003).

Aulaxina Fée (1825), Gomphillaceae (L). 12, widespread (tropical). See Santesson (*Symb. bot. upsal.* **12** no. 1: 1, 1952), Vězda & Poelt (*Folia geobot. phytotax.* **22**: 179, 1987).

Aulaxinomyces Cif. & Tomas. (1953) = Arthonia fide Lücking & Hawksworth (*Taxon* **56**: 1274, 2007).

auleate (of gasteromycete basidiomata), a closed basidioma in which pleated plates of trama project into the glebal cavity from top and sides. See Dring (1973); after Kreisel (1969).

Aulographaceae Luttr. ex P.M. Kirk, P.F. Cannon & J.C. David (2001), Microthyriales. 2 gen., 31 spp.

Lit.: Batista (*Publções Inst. Micol. Recife* **56**, 1959), McKenzie & Foggo (*N.Z. Jl Bot.* **27**: 91, 1989), Petrini *et al.* (*Mycol. helv.* **3**: 263, 1989).

Aulographella Höhn. (1917) = Morenoina fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Aulographina Arx & E. Müll. (1960), ? Asterinaceae. Anamorph *Thyrinula*. 3, widespread. See Wall & Keane (*TBMS* **82**: 257, 1984).

Aulographopsis Petr. (1938) nom. nud., anamorphic *Pezizomycotina*.

Aulographum Lib. (1834), Aulographaceae. 30, widespread. See Petrini *et al.* (*Mycol. Helv.* **3**: 263, 1989).

Aulospora Speg. (1909), Pezizomycotina. 1, Argentina. See Eriksson & Hawksworth (*SA* **5**: 120, 1986).

Aurantiochytrium R. Yokoy. & D. Honda (2007), Thraustochytriaceae. (marine). See Yokoyama, R.; Honda, D. (*Mycoscience* **48**: 199, 2007).

Aurantiosacculus Dyko & B. Sutton (1979), anamorphic *Pezizomycotina*, St.0fH.1. 1 (on *Eucalyptus*), Australia. See Dyko & Sutton (*Mycol.* **71**: 922, 1979).

Aurantiosporium M. Piepenbr., Vánky & Oberw. (1996), Ustilentylomataceae. 4 (on *Cyperaceae*), widespread (tropical). See Piepenbring *et al.* (*Pl. Syst. Evol.* **199**: 62, 1996), Aime *et al.* (*Mycol.* **98**: 896, 2006; phylogeny).

Aurantiporellus Murrill (1905) = Pycnoporellus fide Pegler (*The polypores [Bull. BMS Suppl.]*, 1973).

Aurantiporus Murrill (1905), Polyporaceae. 5, north temperate. See Ryvarden (*Syn. Fung.* **5**: 363 pp., 1991).

Aurapex Gryzenh. & M.J. Wingf. (2006), anamorphic *Cryphonectriaceae*. 1, Colombia. See Gryzenhout *et al.* (*Mycol.* **98**: 112, 2006), Gryzenhout *et al.* (*FEMS Microbiol. Lett.* **258**: 161, 2006).

Auraspora J. Weiser & Purrini (1980), Microsporidia. 1.

Aureobasidiaceae Cif. (1958) = Dothioraceae.

Aureobasidium Viala & G. Boyer (1891), anamorphic *Discosphaerina*, Hsy.0eP.16. 7, widespread. *A. pullulans*, a variable sp. with many syn. See Cooke (*Mycopathologia* **17**: 1, 1962), Joly (*BSMF* **81**: 402, 1965; 149 refs), Pugh & Buckley (*TBMS* **57**: 227, 1971; endophytic in trees), Hermanides-Nijhof (*Stud. Mycol.* **15**: 141, 1977; 14 spp., distinction from *Hormonema* and *Sarcinomyces*), Park (*TBMS* **78**: 385, 1982; Y-M dimorphism), Yoshikawa & Yokoyama (*Ann. phytopath. Soc. Japan* **53**: 606, 1987; *A. microstictum* on *Hemerocallis*), Elinov *et al.* (*Mikol. Fitopatol.* **23**: 425, 1989; physiology and biochemistry), Mokrousov & Bulast (*Genetika* **28**: 31, 1992; DNA unhybridizable UP-PCR patterns in *A. pullulans*), Untereiner & Naveau (*Mycol.* **91**: 67, 1999; phylogeny), Urzì *et al.* (*J. Microbiol. Meth.* **36**: 95, 1999; infraspecific diversity), Yurlova *et al.* (*Stud. Mycol.* **43**: 63, 1999), Nelson *et al.* (*BioTechniques* **29**: 874, 2000; image analysis), Bolignano & Criseo (*J. Clin. Microbiol.* **41**: 4483, 2003; clinical strain), Abliz *et al.* (*FEMS Immunol. Med. Microbiol.* **40**: 41, 2004; molecular diagnostics), Hsiao *et al.* (*J Clin. Microbiol.* **43**: 3760, 2005; arrays), Rakeman *et al.* (*J. Clin. Microbiol.* **43**: 3324, 2005; molecular diagnostics), Ruibal *et al.* (*Mycol. Progr.* **4**: 23, 2005; rock-inhabiting fungi), Schoch *et al.* (*Mycol.* **98**: 1041, 2006; phylogeny), Sterflinger (*The Yeast Handbook* **[1]**: 501, 2006; ecology).

Aureobasis Clem. & Shear (1931) ≡ Aureobasidium.

Aureoboletus Pouzar (1957), Boletaceae. 5, widespread. See Wolf (*Biblthca Mycol.* **69**, 1980), Watling *et al.* (*British Fungus Flora. Agarics and Boleti* Rev. & Enl. Edn **1**: 173 pp., 2005; Brit. spp.).

Aureofungus Hibbett, Binder & Wang (2003), Agaricales. 1, Dominican Republic. See Hibbett *et al.* (*Mycol.* **95**: 685, 2003).

Aureohyphozyma Hosoya & Y. Otani (1995) = Gelatinipulvinella fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Aureomyces Ruokola & Salonen (1970) = Cephaloascus fide von Arx *et al.* (*Antonie van Leeuwenhoek* **38**: 289, 1972).

Auricula Battarra ex Kuntze (1891) [non *Auricula* Castrac. 1873) nom. cons., *Algae*] ≡ Auricularia.

Auricula Lloyd (1922) = Punctularia fide Donk (*Taxon* **6**: 21, 1957).

Auricularia Bull. ex Juss. (1789), Auriculariaceae. *c.* 8, widespread. The edible *A. polytricha* is cultured on

poles of *Quercus* in China; *A. auricula-judae*, Jew's ear fungus, is sometimes parasitic, esp. on *Sambucus*. See Lowy (*Mycol.* **43**: 351, 1951; key), Lowy (*Mycol.* **44**: 656, 1952), Donk (*Taxon* **7**: 168, 1958), Donk (*Persoonia* **4**: 154, 1966; nomencl.), McLaughlin (*Am. J. Bot.* **67**: 1225, 1980; meta basidium ultrastr.), Yan *et al.* (*Mycosystema* **21**: 47, 2002; RAPD), Cao & Pan (*Mycosystema* **24**: 53, 2005; ERIC).

Auriculariaceae Fr. (1838), Auriculariales. 7 gen. (+ 12 syn.), 112 spp.

Lit.: Wong & Wells (*Mycol.* **79**: 847, 1987), Corner (*Beih. Nova Hedwigia* **96**: 218 pp., 1989; as *Aporpiaceae*), Lü & McLaughlin (*Mycol.* **83**: 322, 1991), Ryvarden (*Syn. Fung.* **5**: 363 pp., 1991), Reid (*Persoonia* Suppl. **14**: 465, 1992), Roberts (*MR* **97**: 473, 1993), Lü & McLaughlin (*CJB* **73**: 315, 1995), Núñez (*Mycotaxon* **61**: 177, 1997), Begerow *et al.* (*CJB* **75**: 2045, 1998), Núñez (*Folia cryptog. Estonica* **33**: 99, 1998), Roberts (*Mycotaxon* **69**: 209, 1998; key), Yan *et al.* (*Mycosystema* **18**: 206, 1999), Weiss & Oberwinkler (*MR* **105**: 403, 2001), Larsson *et al.* (*MR* **108**: 983, 2004), Weiss *et al.* (*MR* **108**: 1003, 2004), Wells *et al.* (*Frontiers in Basidiomycote Mycology*: 237, 2004).

Auriculariales J. Schröt. (1887). Agaricomycetes. 1 fam., 32 gen., 198 spp. Basidiocarps hemiangiocarpous and sessile; metabasidium cylindrical and horizontally septate, 1-4 cells each bearing a sterigma and basidiospore; hyphae with septal dolipores. Fam.: **Auriculariaceae** (syn. *Exidiaceae*)

Lit.: Donk (1951-63) VIII; (1966: 208), Bandoni (*Trans. mycol. Soc. Japan* **25**: 521, 1984).

Auriculariella (Sacc.) Clem. (1909) = Auricularia fide Donk (*Persoonia* **4**: 158, 1966).

Auriculariopsidaceae Jülich (1982) = Schizophyllaceae.

Auriculariopsis Maire (1902), Schizophyllaceae. 1, widespread. See Donk (*Persoonia* **1**: 76, 1959).

Auriculibuller Samp. & Fonseca (2004), Tremellaceae. Anamorph *Bullera*. 1, Portugal. See Sampaio *et al.* (*Int. J. Syst. Evol. Microbiol.* **54**: 988, 2004).

Auriculora Kalb (1988), Lecanorales (L). 1, S. America. See Henssen & Titze (*Bot. Acta* **101**: 131, 1990), Ekman (*Op. bot.* **127**: 148 pp., 1996).

autecology, ecological studies on a single species and its relationship to the biological and physiochemical aspects of its environment.

aut-eu-form, an autoecious rust having all the spore stages.

authentic (of specimens, cultures, etc.), identified by the author of the name of the taxon to which they are referred.

author citations, see Nomenclature.

Authors' names. It is customary to cite Authors' names as authorities for the scientific names of taxa, to provide a clue where the name was published. There is frequently much variation and ambiguity in the ways such names are cited by different writers and uniformity in usage is desirable. For the fungi, Kirk & Ansell (Authors of fungal names. *Index of Fungi Supplement*, 1992) provided a list of over 9,000 authors of scientific names of fungi with recommended forms of their names, including abbreviations. This source, also available on-line in an updated form (see Internet), is now generally accepted as providing the standard. The format adopted by Kirk & Ansell for an author is the surname, or an abbreviation of it, or rarely a contraction of it, with or without initials or other distinguishing appendages. Among the more important criteria used in determining a standard form are: (1) names are in Roman characters; (2) every standard form must be unique to one person; (3) the same surname (i.e. identical spelling) must always be given in the same form, unless it is part of a compound name, and different surnames must not be given the same form; (4) all abbreviations and contractions are terminated by a full-stop but the full-stop does not make a standard form different from the same spelling without a full-stop; (5) the standard forms recommended in *TL-2* (see Literature) are retained in most cases, one of a few exceptions being conflict with particularly well established abbreviations used elsewhere; (6) names are never abbreviated before a consonant; (7) names are usually not abbreviated unless more than two letters are eliminated and replaced by a full-stop.

The above cited list was produced in collaboration with a similar scheme for botanists (Brummitt & Powell (Eds), *Authors of plant names*, 1992) and covers names of authors of all fungal taxa whose nomenclature is governed by the international code of nomenclature used for fungi (see Nomenclature).

The following list of deceased authors for which there are **biographical notices** in this *Dictionary* provides a representative series of examples of author abbreviations. Letters after the authors' dates refer to *Index Herbariorum* codes for the major location of the collections.

For further information on particular authors see also History (Literature), Internet, Literature (Bibliographies), Medical and veterinary mycology, Reference Collections. Currently active mycologists are listed in society membership lists and regional compilations (e.g. Anon, *Revista Iberoamer. Micol.* **10**: ix, 1993 [Latin Am.]; Bakloushinskaya & Minter *Vorontsov's Who's Who in Biodiversity Sciences*, 2001 [countries formerly in the Soviet Union]; Buyck & Hennebert, *Directory of African Mycology*, 1993).

auto- (prefix), self-inducing, -producing, etc.

autobasidium, see basidium.

autochthonous (1) indigenous; cf. allochthonous; (2) (of soil organisms), continuously active, as opposed to **zymogenous** organisms which become active when a suitable substrate becomes available (Winogradsky, 1924); cf. exochthonous (Park, 1957).

autodeliquescent (of lamellae and pileus of *Coprinus*), becoming liquid by **-digestion**.

autoecious, completing the life cycle on one host (esp. of rusts; cf. heteroecious); ametoecious (de Bary).

autogamy, the fusion of nuclei in pairs within the female organ, without cell fusion having taken place.

Autoicomyces Thaxt. (1908), Ceratomycetaceae. 27, widespread. See Majewski (*Acta Mycologica* Warszawa **34**: 7, 1999; Poland), Santamaría (*Fl. Mycol. Iberica* **5**, 2003; Iberian peninsula), Ye & Shen (*Mycosystema* **22**: 2, 2003; China).

autolysis, self digestion of a cell or tissue by endogenous enzymes.

automictic sexual reproduction, karyogamy between daughter nuclei of different meioses in the same gametangium (Dick, 1972).

automixis, self-fertilization by the fusion of two closely related sexual cells or nuclei; cf. amphimixis, apomixis, pseudomixis.

Autophagomyces Thaxt. (1912), Laboulbeniaceae. 24, widespread. See Tavares (*Mycol. Mem.* **9**: 627 pp., 1985), Benjamin (*Aliso* **19**: 99, 2000).

autotroph (adj. **autotrophic**) (of a living organism), one not using organic compounds as primary sources of energy, i.e. using energy from light or inorganic reactions as do green plants, lichen-forming fungi, and the photosynthetic iron and sulphur bacteria. See Fry & Peel (Eds) (*Autotrophic micro-organisms*, 1954), Lees (*Biochemistry of autotrophic bacteria*, 1955); cf. heterotrophic.

auxanogram, the differential growth of a yeast in Petri dishes prepared by the auxanographic method of Beijerinck (as modified by Lodder, *Die anaskosporogenen Hefen*, 1934, and Langeron, 1952: 430) for determining the carbon and nitrogen requirements of the organism. See also Lodder & van Rij (1952), Pontecorvo (*J. gen. Microbiol.* **3**: 122, 1949; auxanographic techniques in biochemical genetics).

Auxarthron G.F. Orr & Kuehn (1963), Onygenaceae. Anamorph *Malbranchea*-like. 15, widespread. See Samson (*Acta Bot. Neerl.* **21**: 517, 1972), Sugiyama *et al.* (*Mycoscience* **40**: 251, 1999; DNA), Kuraishi *et al.* (*Antonie van Leeuwenhoek* **77**: 179, 2000; ubiquinones), Sugiyama & Mikawa (*Mycoscience* **42**: 413, 2001; phylogeny), Sigler *et al.* (*Stud. Mycol.* **47**: 111, 2002; anamorphs), Solé *et al.* (*MR* **106**: 388, 2002; phylogeny), Solé *et al.* (*Stud. Mycol.* **47**: 103, 2002), Skinner *et al.* (*Mycol.* **98**: 447, 2006; ontogeny).

auxiliary zoospore, first-formed zoospore, formed and flagellate within the sporangium, in a species with dimorphic zoospores (Dick, 1973); flagellar insertion apical or sub-apical.

auxotroph, a biochemical mutant which will only grow on the minimal medium (q.v.) after the addition of one or more specific substances.

avenacein, see enniatin.

avenacin, a fungus inhibitor from oats (*Avena*) (Turner, *Nature* **186**: 325, 1960).

aversion, the inhibition of growth at the adjacent edges of colonies of microorganisms, esp. in a culture of one species. Cf. antagonism; barrage.

Avesicladiella W.P. Wu, B. Sutton & Gange (1997), anamorphic *Pezizomycotina*, Hso.?.?. 2, Europe; China. See Wu *et al.* (*Mycoscience* **38**: 11, 1997).

Avettaea Petr. & Syd. (1927), anamorphic *Pezizomycotina*, Cpd.0eP.15. 3, widespread. See Abbas & Sutton (*TBMS* **90**: 491, 1988).

Avrainvillea Decne. (1842), Algae. Algae.

Awasthia Essl. (1978), Physciaceae (L). 1, India. See Esslinger (*Bryologist* **81**: 445, 1978).

Awasthiella Kr.P. Singh (1980), Verrucariaceae (L). 1, India. See Singh (*Norw. Jl Bot.* **27**: 34, 1980), Singh & Sinha (*Lichen Flora of Nagaland*, 1994; India).

axenic (of cultures), consisting of one organism; uncontaminated; a pure culture. Cf. gnotobiotic.

axeny, inhospitality; 'passive' as opposed to 'active' resistance of a plant to a pathogen (Gäumann, 1946).

axial canal (**- mass**), see ascus.

Axisporonites Kalgutkar & Janson. (2000), Fossil Fungi. 1, India. See Kalgutkar & Jansonius (*AASP*

Contributions Series **39**: 36, 2000).

axoneme, the main core of a flagellum composed of 2 central microtubules surrounded by 9 double microtubules.

Aylographum, see *Aulographum*.

Ayria Fryar & K.D. Hyde (2004), ? Annulatascaceae. 1, Brunei. See Fryar & Hyde (*Cryptog. Mycol.* **25**: 248, 2004), Vijaykrishna *et al.* (*Fungal Diversity* **23**: 351, 2006).

Azbukinia Lar.N. Vassiljeva (1989), Pezizomycotina. 1, Europe; Russia. Possibly belongs to the Thyridiaceae, but identity of the type is uncertain. See Vasil'eva (*Mycotaxon* **35**: 395, 1989), Eriksson & Hawksworth (*SA* Reprint of Volumes 1-4 (1982-1985) **8**: 97, 1990; typific.).

Azosma Corda (1831) = Cladosporium fide Fries (*Syst. mycol.* **3** Index: 55, 1832).

azotodesmic, nitrogen-fixing (Pike & Carroll, *in* Alexopoulos & Mims, *Introductory mycology*, edn 3, 1980).

Azureothecium Matsush. (1989), ? Eurotiomycetes. 1 (from soil), Australia. See Matsushima (*Mycol. Mem.* **6**, 1989).

Azygites Fr. (1832) = Syzygites fide Hesseltine (*Mycol.* **47**: 344, 1955).

azygospore, a parthenogenetic zygospore; characteristic of some *Mucorales*. See Benjamin (*Aliso* **5**: 235, 1963; list).

Azygozygum Chesters (1933) = Mortierella fide Plaats-Niterink *et al.* (*Persoonia* **9**: 85, 1976).

Azymocandida E.K. Novák & Zsolt (1961) = Candida fide Lodder (*Yeasts, a taxonomic study* 2nd edn, 1970).

Azymohansenula E.K. Novák & Zsolt (1961) = Pichia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Azymomyces E.K. Novák & Zsolt (1961) = Torulaspora fide Lodder (*Yeasts, a taxonomic study* 2nd edn, 1970), Batra *in* Subramanian (Ed.) (*Taxonomy of fungi* **1**: 187, 1978).

Azymoprocandida E.K. Novák & Zsolt (1961) = Candida fide Lodder (*Yeasts, a taxonomic study* 2nd edn, 1970).

B, Botanischer Garten und Botanisches Museum Berlin-Dahlem (Berlin, Germany); founded 1815; from 1995 part of the Free University of Berlin; see Kohlmeyer (*Willdenowia* **3**: 63, 1962).

Babjevia Van der Walt & M.T. Sm. (1995) = Dipodascopsis fide Smith *et al.* (*Antonie van Leeuwenhoek* **67**: 177, 1995), Smith *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 141, 1998), Suh *et al.* (*Mycol.* **98**: 1006, 2006; phylogeny), Kurtzman *et al.* (*FEMS Yeast Res.* **7**: 1027, 2007; phylogeny).

baccate, soft throughout like a berry.

baccatin, a wilt toxin from *Gibberella baccata* (Gäumann *et al.*, *Phytopath. Z.* **36**: 114, 1959); antibacterial.

Bachmannia Zschacke (1934) [non *Bachmannia* Pax 1897, *Capparaceae*] = Verrucaria Schrad. fide Swinscow (*Lichenologist* **4**: 34, 1968).

Bachmanniomyces D. Hawksw. (1981), anamorphic *Pezizomycotina*, Cpd.0eH.19. 1 (on lichens, *Cladonia*), Europe; N. America. See Hawksworth (*Bull. Br. Mus. nat. Hist.* Bot. **9**: 10, 1981), Zhurbenko & Alstrup (*Symb. bot. upsal.* **34** no. 1: 477, 2004).

Bacidia De Not. (1846), Ramalinaceae (±L). *c.* 229, widespread. Molecular data suggest placement within *Ramalinaceae*. See Vězda (*Čas. Slez. Mus.* Ser. A, Hist. Nat. **10**: 103, 1961), Vězda (*Folia geobot. phytotax.* **15**: 75, 1980; key foliicolous spp.), Awasthi & Mathur (*Proc. Indian Acad. Sci.* Pl. Sci. **97**: 481, 1987; key 8 spp. India), Sérusiaux (*Nordic Jl Bot.* **13**: 447, 1993; differentiation 9 segr. gen.), Ekman (*Op. Bot.* **127**, 1996; N. Am.), Farkas *et al.* (*Sauteria* **9**: 133, 1998; Hungary), Aptroot & Herk (*Lichenologist* **31**: 121, 1999), Llop & Gómez-Bolea (*Mycotaxon* **72**: 79, 1999), Ekman & Wedin (*Pl. Biol.* **2**: 350, 2000), Kalb *et al.* (*Mycotaxon* **75**: 281, 2000; segregate), Ekman (*MR* **105**: 783, 2001; phylogeny), Lücking *et al.* (*Lichenologist* **33**: 189, 2001), Haug (*Mycol. Progr.* **1**: 167, 2002; key to Iberian spp.), Aragón & Martínez (*Bryologist* **106**: 143, 2003), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny), Llop *et al.* (*Nova Hedwigia* **85**: 445, 2007; *B. rubella* group).

Bacidiaceae Walt. Watson (1929) = Ramalinaceae.

Lit.: Bellemère & Letrouit-Galinou (*Biblthca Lichenol.* **25**: 137, 1987), Brako (*Mycotaxon* **35**: 1, 1989), Brako (*Fl. Neotrop.* Monogr.: 67 pp., 1991), Boom (*Nova Hedwigia* **54**: 229, 1992), Rambold (*Sendtnera* **1**: 281, 1993), Kalb & Elix (*Biblthca Lichenol.* **57**: 265, 1995), Kantvilas & Elix (*Biblthca Lichenol.* **58**: 199, 1995), Ekman (*Op. bot.* **127**, 1996), Ekman (*Op. bot.* **127**: 148 pp., 1996), Ekman (*Symb. bot. upsal.* **32**: 17, 1997), Feige *et al.* (*Biblthca Lichenol.* **67**: 25, 1997), Aptroot & Herk (*Lichenologist* **31**: 121, 1999), Ekman & Wedin (*Pl. Biol.* **2**: 350, 2000), Kalb *et al.* (*Mycotaxon* **75**: 281, 2000), Ekman (*MR* **105**: 783, 2001), Lumbsch *et al.* (*Mol. Phylogen. Evol.* **31**: 822, 2004).

Bacidiactis M. Choisy (1931) ? = Lecanactis Körb. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Bacidina Vězda (1991), Ramalinaceae (L). 11, widespread. Probably congeneric with *Woessia*, but *Bacidina* is the more familiar name. See Santesson (*Lichens and lichenicolous fungi of Sweden and Norway*, 1993), Sérusiaux (*Biblthca Lichenol.* **58**: 411, 1995), Ekman (*Op. Bot.* **127**, 1996), Ekman (*MR* **105**: 783, 2001; phylogeny, reln with *Woessia*), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny).

Bacidiomyces Cif. & Tomas. (1953) = Bacidia.

Bacidiopsis Bagl. (1861) = Pachyphiale fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Bacidiopsora Kalb (1988), Ramalinaceae (L). 1, S. America. See Ekman (*Op. Bot.* **127**, 1996), Aptroot *et al.* (*J. Hattori bot. Lab.* **100**: 617, 2006; Costa Rica).

bacillar (bacilliform), rod-like in form (Fig. 23.4*a*).

Bacillaria Mont. (1840) [non *Bacillaria* J.F. Gmel. 1791, *Angiospermae*] nom. nud. ≡ Camillea.

Bacillidium Janda (1928), Microsporidia. 5.

Bacillina Nyl. (1897) = Toninia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Bacillispora Sv. Nilsson (1962) = Cylindrocarpon fide Marvanová & Descals (*TBMS* **89**: 499, 1987).

Bacillopeltis Bat. (1957), anamorphic *Pezizomycotina*, Cpt.0eH.?. 1, Brazil. See Batista (*An. Soc. Biol. Pernambuco* **15**: 400, 1957).

Bacillopsis Petsch. (1908) nom. dub., ? Saccharomycetales.

Backusella Hesselt. & J.J. Ellis (1969), Mucoraceae. 3, widespread. See Benny & Benjamin (*Aliso* **8**: 301, 1975; key), Stalpers & Schipper (*Persoonia* **11**: 39, 1980), Roux *et al.* (*Proc. Microsc. Soc. S. Afr.* **27**: 56,

1997; ultrastr.), O'Donnell *et al.* (*Mycol.* **93**: 286, 2001; phylogeny), Voigt & Wöstemeyer (*Gene* **270**: 113, 2001; phylogeny), Nyilasi *et al.* (*Clin. Microbiol. Infect.* **14**: 393, 2008; molecular identification).

Backusia Thirum., M.D. Whitehead & P.N. Mathur (1965) = Monascus fide Cole & Kendrick (*CJB* **46**: 987, 1968).

Bacteria. Heterogeneous group of (usually) unicellular prokaryotic organisms. In the three-domain classification of life, two prokaryotic domains were proposed the *Archaea* (formerly *Archaebacteria*) and *Bacteria* (formerly *Eubacteria*) (Woese *et al.*, *Proc. Natl. Acad. Sci.* **87**: 4576, 1990). The informal name 'bacteria' is occasionally used loosely in the literature to refer to all of the prokayrotes, and care should be taken to interpret its meaning in any particular context. See Woese (*Proc. Natl. Acad. Sci.* **97**: 8392, 2000). Some bacteria are pathogenic for plants, a few are pathogenic for fungi: *Bacillus polymyxa* (bacterial pit) of cultivated mushroom; *Pseudomonas agarici* (drippy gill) of cultivated mushroom (see Geels *et al.*, *J. Phytopathol.* **140**: 249, 1994); *Pseudomonas tolaasi* (brown blotch) of cultivated mushroom (see Cole & Skellerup, *TBMS* **87**: 314, 1986); *Pantoea agglomerans* pv. *uredovora* (syn. *Erwinia uredovora*) a parasite of rust uredinia. Bacteria, in particular *Actinomycetes*, *Bacillus* spp. and *Pseudomonas* spp. produce a variety of biologically active molecules (antibiotics, enzymes etc.) and have been used as biological control agents against fungal plant diseases.

bacteriostatic, of a substance, or a concentration of a bactericide, which will not let growth of bacteria take place but which is not bactericidal.

bactivory, bacteria-feeding; known in fungi only amongst certain marine *Thraustochytriales* (Raghukumar, *Mar. Biol.* **113**: 165, 1992).

bactobiont, see photobiont.

Bactrexcipula Höhn. (1918) ? = Rhizothyrium fide Petrak (*Sydowia* **15**: 185, 1962).

Bactridiopsis Gonz. Frag. & Cif. (1927) = Phillipsiella fide Rossman *et al.* (*Sydowia* **46**: 66, 1994).

Bactridium Kunze (1817), anamorphic *Pezizomycotina*, Hsp.≡ eH.1. 5, widespread. See Hughes (*N.Z. Jl Bot.* **4**: 522, 1966), Berch (*Mycotaxon* **14**: 227, 1982), Yuan *et al.* (*Mycosystema* **17**: 376, 1998; China), Kendrick (*CJB* **81**: 75, 2003; morphogenesis).

Bactroboletus Clem. (1909) ≡ Filoboletus.

Bactrodesmiastrum Hol.-Jech. (1984) ? = Janetia.

Bactrodesmiella M.B. Ellis (1959), anamorphic *Pezizomycotina*, Hsp.≡ eP.19/40. 2, British Isles; NZ. See Ellis (*Mycol. Pap.* **72**: 14, 1959), Hughes (*N.Z. Jl Bot.* **27**: 449, 1989), Dianese & Câmara (*Sydowia* **46**: 225, 1994).

Bactrodesmiites Babajan & Tasl. (1977), Fossil Fungi. 1 (Tertiary), former USSR.

Bactrodesmium Cooke (1883), anamorphic *Stuartella*, Hsp.≡ eP.1. 30, widespread. See Ellis (*Mycol. Pap.* **72**, 1959; key), Hughes & White (*Fungi Canad.*, 1983), Rao & Hoog (*Stud. Mycol.* **28**, 1986; India), Matsushima (*Matsush. Mycol. Mem.* **5**, 1987), Zucconi & Lunghini (*Mycotaxon* **63**: 323, 1997).

Bactropycnis Höhn. (1920) = Coleophoma fide Sutton (*Mycol. Pap.* **141**, 1977).

Bactrosphaeria Penz. & Sacc. (1897), Pezizomycotina. 1, Java.

Bactrospora A. Massal. (1852), Roccellaceae (L). 20, widespread (esp. temperate). See Egea & Torrente (*Lichenologist* **25**: 211, 1993; key), Letrouit-Galinou *et al.* (*Bull. Soc. linn. Provence* **45**: 389, 1994; ultrastr.), Nordin (*Lichenologist* **28**: 287, 1996; Scandinavia), Kantvilas (*Symb. bot. upsal.* **34** no. 1: 183, 2004), Ponzetti & McCune (*Bryologist* **109**: 85, 2006; N Am.), Sparrius *et al.* (*Lichenologist* **38**: 27, 2006; SE Asia).

Bactrosporaceae Rabenh. (1870) = Roccellaceae.

Bactrosporomyces Cif. & Tomas. (1953) ≡ Bactrospora.

baculate (1) (**baculiform**) (of spores), rod-shaped; (2) (of surface ornamentation), rod-shaped (Fig. 20.8).

Baculea Loubès & Akbarieh (1978), Microsporidia. 1.

Baculifera Marbach & Kalb (2000), Caliciaceae (L). 14, pantropical. See Marbach (*Biblthca Lichenol.* **74**: 113, 2000).

Baculospora Zukal (1887), Pezizomycotina. 1, Europe. See Lundqvist (*SA* **7**: 62, 1988).

Badarisama Kunwar, J.B. Manandhar & J.B. Sinclair (1986), anamorphic *Pezizomycotina*, Hso.#eP.1. 1 (bulbil-forming), USA. See Kunwar *et al.* (*Mycotaxon* **27**: 120, 1986).

Badimia Vězda (1986) nom. cons., Ectolechiaceae (L). 11 (on leaves), widespread (tropical). See Lücking *et al.* (*Bot. Acta* **107**: 393, 1994), Lücking & Vězda (*Taxon* **44**: 227, 1995), Aptroot *et al.* (*Biblthca Lichenol.* **64**: 220 pp., 1997; New Guinea), Lücking (*Trop. Bryol.* **15**: 45, 1998; Guyana), Lücking (*Cryptog. Mycol.* **27**: 121, 2006; French Guiana).

Badimiella Malcolm & Vězda (1994), Ectolechiaceae (L). 2, south temperate. See Malcolm & Vězda (*Nova Hedwigia* **59**: 518, 1994), Garnock-Jones & Malcolm (*Biblthca Lichenol.* **78**: 65, 2001), Lücking *et al.* (*Global Ecology and Biogeography* **12**: 21, 2003; ecology).

Baeoderma Vain. (1922) = Sphaerophorus fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Baeodromus Arthur (1905), Pucciniosiraceae. 8 (on *Compositae*, *Urticaceae*, *Ranunculaceae* (0, III)), America; Russian Far East. Probably heterogeneous. See Buriticá (*Rev. Acad. Colomb. Cienc.* **18**: 131, 1991), Hernández (*Mycotaxon* **76**: 329, 2000).

Baeomyces Pers. (1794), Baeomycetaceae (L). *c.* 9, widespread. See Thomson (*Bryologist* **70**: 285, 1967), Jahns (*Herzogia* **2**: 133, 1971; ontogeny), Honegger (*Lichenologist* **15**: 57, 1983; asci), Sérusiaux (*Taxon* **32**: 646, 1983; gen. nomencl.), Kumar (*Geophytology* **15**: 159, 1985; key 4 spp. India), Gierl & Kalb (*Herzogia* **9**: 593, 1993; concept), Rambold *et al.* (*Biblthca Lichenol.* **53**, 1993), Stenroos & DePriest (*Am. J. Bot.* **85**: 1548, 1998), Platt & Spatafora (*Lichenologist* **31**: 409, 1999), Stenroos *et al.* (*Mycol. Progr.* **1**: 267, 2002; phylogeny), Peršoh *et al.* (*Mycol. Progr.* **3**: 103, 2004; asci), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny), Lumbsch *et al.* (*MR* **111**: 257, 2007; phylogeny).

Baeomycetaceae Dumort. (1829), Baeomycetales (L). 2 gen. (+ 6 syn.), 14 spp.

Lit.: Christensen & Alstrup (*Nova Hedwigia* **51**: 469, 1990), Gierl & Kalb (*Herzogia* **9**: 593, 1993), Rambold *et al.* (*Biblthca Lichenol.* **53**, 1993), Ihlen (*Nova Hedwigia* **64**: 137, 1997), Stenroos & DePriest (*Am. J. Bot.* **85**: 1548, 1998), Platt & Spatafora (*Lichenologist* **31**: 409, 1999), Galloway (*Lichenologist* **32**: 294, 2000), Kauff & Lutzoni (*Mol. Phylogen. Evol.* **25**: 138, 2002), Lumbsch *et al.* (*Mol. Phylogen. Evol.* **31**: 822, 2004), Peršoh *et al.* (*Mycol. Progr.* **3**:

103, 2004), Wedin *et al.* (*MR* **109**: 159, 2005), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny), Hofstetter *et al.* (*Mol. Phylogen. Evol.* **44**: 412, 2007; phylogeny).

Baeomycetales Lumbsch, Huhndorf & Lutzoni (2007). Ostropomycetidae. 2 fam., 3 gen., 16 spp. Ascomata sessile or stalked, apothecial, discoid, the true exciple hyaline or pigmented, annular or cupulate. Interascal tissue composed of branched paraphyses, the hymenium not blueing in iodine. Asci thin-walled, with a non-amyloid or slightly amyloid apical portion, 8-spored. Ascospores hyaline, septate or aseptate, sometimes with a sheath. Fam.:
(1) **Baeomycetaceae**
(2) **Trapeliaceae**
Lit.: Hibbett *et al.* (*MR* **111**: 509, 2007); Lumbsch *et al.* (*MR* **111**: 1133, 2007).

Baeomycetomyces E.A. Thomas ex Cif. & Tomas. (1953) ≡ Dibaeis.

Baeomycomyces, see *Baeomycetomyces*.

Baeopodium Trevis. (1857) = Gomphillus fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Baeospora Singer (1938), ? Marasmiaceae. 10, widespread (north temperate; tropical). See Singer (*Revue Mycol.* Paris **3**: 193, 1938), Clémençon (*Persoonia* **18**: 411, 2004; basidiome development).

Baeostratoporus Bondartsev & Singer (1944) = Flaviporus fide Donk (*Persoonia* **1**: 173, 1960).

Baetimyces L.G. Valle & Santam. (2002), Legeriomycetaceae. 1 (in *Baetis*), Spain. See Valle & Santamaria (*Mycol.* **94**: 321, 2002).

Baeumleria Petr. & Syd. (1927), ? Phyllachoraceae. 2, widespread. See Clements & Shear (*Gen. Fung.*, 1931), Sutton (*Mycol. Pap.* **141**, 1977), von Arx (*SA* **6**: 213, 1987), Johnston (*N.Z. Jl Bot.* **37**: 703, 1999).

Bagcheea E. Müll. & R. Menon (1954), Valsaceae. 3, India; Taiwan. See Hsieh & Li (*MR* **95**: 895, 1991).

Baggea Auersw. (1866), ? Patellariaceae. 1, Europe. See Kutorga & Hawksworth (*SA* **15**: 1, 1997), Magnes *et al.* (*Mycotaxon* **68**: 321, 1998).

Bagliettoa A. Massal. (1853), Verrucariaceae (L). 1, widespread (esp. temperate). Perhaps synonymous with *Verrucaria*. See Santesson (*Lichens and lichenicolous fungi of Sweden and Norway*, 1993), Halda (*Acta Musei Richnoviensis* Sect. Natur. **10**, 2003), Gueidan & Roux (*Bull. Soc. linn. Provence* **58**: 181, 2007), Gueidan *et al.* (*MR* **111**: 1145, 2007; phylogeny).

Bagliettoaceae Servít (1954) = Verrucariaceae.

Bagnisiella Speg. (1880), ? Dothioraceae. 20, S. America; India. See Patil & Patil (*Indian J. Mycol. Pl. Path.* **13**: 169, 1985), Rajak *et al.* (*J. Econ. Taxon. Bot.* **18**: 546, 1995), Hyde & Cannon (*Mycol. Pap.* **175**, 1999), Barr (*Harvard Pap. Bot.* **6**: 25, 2001).

Bagnisimitrula S. Imai (1942), ? Helotiales. 1, Japan. Position uncertain; previously placed in the *Geoglossaceae*.

Bagnisiopsis Theiss. & Syd. (1915), Phyllachoraceae. 10 (on living leaves of *Melastomataceae*), S. America. See Hyde & Cannon (*Mycol. Pap.* **175**, 1999).

Bahianora Kalb (1984), Lecideaceae (L). 1, Brazil. See Kalb (*Lichenes Neotropici* Fascicle **VIII** (nos 301-350) **8**: 4, 1984).

Bahuchashaka Subram. (1978), anamorphic *Pezizomycotina*, Hso.≡ eP.1. 1, Japan. See Subramanian (*Kavaka* **5**: 97, 1977).

Bahugada K.A. Reddy & V.G. Rao (1984) ? = Monodictys.

Bahukalasa Subram. & Chandrash. (1979), anamorphic *Pezizomycotina*, Hso.0eH.10/12. 1, India. See Subramanian & Chandrashekara (*Kavaka* **6**: 42, 1978).

Bahupaathra Subram. & Lodha (1964) = Cladorrhinum fide Mouchacca & Gams (*Mycotaxon* **48**: 415, 1993).

Bahusaganda Subram. (1994) nom. inval., anamorphic *Pezizomycotina*, Hso.≡ eP.3. 2, India; Panama. See Subramanian & Srivastava (*Proc. Indian natn Sci. Acad.* Part B. Biol. Sci. **60**: 277, 1994), Kirschner & Piepenbring (*Fungal Diversity* **21**: 93, 2006).

Bahusakala Subram. (1958), anamorphic *Dothideomycetes*, Hso.≡ eP.39/40. 7, widespread (esp. tropical). See Sigler & Carmichael (*Mycotaxon* **4**: 349, 1976), Matsushima (*Matsush. Mycol. Mem.* **6**, 1989).

Bahusandhika Subram. (1956), anamorphic *Pezizomycotina*, Hso.≡ eP.3. 2, India. See Subramanian (*J. Indian bot. Soc.* **35**: 469, 1956).

Bahusutrabeeja Subram. & Bhat (1977), anamorphic *Pezizomycotina*, Hso.0eH.15. 5, Australia; India. See Subramanian & Bhat (*CJB* **55**: 2204, 1977), McKenzie (*Mycotaxon* **61**: 303, 1997).

Bainieria Arnaud (1952) nom. inval., anamorphic *Pezizomycotina*, Hso.0eH.19. 1, Europe.

Bakanae disease, of rice (*Gibberella fujikuroi*); see gibberellin.

Bakeromyces Syd. & P. Syd. (1917) = Trichosphaeria fide Höhnel (*Annls mycol.* **16**: 77, 1918).

Bakerophoma Died. (1916) nom. dub., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Balaniopsis P.M. Kirk (1985), anamorphic *Pezizomycotina*, Hso.0eP.40. 3, paleotropical. See Kirk (*Mycotaxon* **23**: 308, 1985), Whitton *et al.* (*Mycoscience* **43**: 67, 2002).

Balanium Wallr. (1833), anamorphic *Pezizomycotina*, Hso.1eP.8. 1, Europe. See Hughes (*CJB* **39**: 1505, 1961), Whitton *et al.* (*Mycoscience* **43**: 67, 2002), Kendrick (*CJB* **81**: 75, 2003; morphogenesis).

balanoid, acorn-shaped.

Balansia Speg. (1885), Clavicipitaceae. Anamorph *Ephelis*. 27 (on grasses), widespread (subtropical). See Diehl (*USDA agric. Monogr.* **4**, 1950), Morgan-Jones & White (*Mycotaxon* **44**: 89, 1992; culture), Phelps & Morgan-Jones (*Mycotaxon* **50**: 61, 1994; anamorph), White *et al.* (*Mycol.* **87**: 172, 1995; development), White *et al.* (*Mycol.* **88**: 89, 1996; endophytes), Reddy *et al.* (*Mycol.* **90**: 108, 1998; DNA), White *et al.* (*Stud. Mycol.* **45**: 95, 2000), Lewis *et al.* (*Mycol.* **94**: 1066, 2002; Mexico), Lewis *et al.* (*Mycology Series* **19**: 151, 2003), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny).

Balansiella Henn. (1904) = Claviceps fide Rogerson (*Mycol.* **62**: 865, 1970).

Balansina G. Arnaud (1918) = Dothidasteromella fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Balansiopsis Höhn. (1910), Clavicipitaceae. 3 (on grasses), America. See Diehl (*USDA agric. Monogr.* **4**, 1950), Reddy *et al.* (*Mycol.* **90**: 108, 1998; DNA).

Balazucia R.K. Benj. (1968), Laboulbeniaceae. 2, Mexico; Japan. See Terada (*TMSJ* **21**: 193, 1980), Tavares (*Mycol. Mem.* **9**: 627 pp., 1985).

Balladyna Racib. (1900), Parodiopsidaceae. Anamorph *Tretospora*. c. 16 (on *Rubiaceae*), widespread (tropical). See Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962), Eboh & Cain (*CJB* **51**: 61, 1973).

Balladynastrum Hansf. (1941) = Balladynopsis fide

Sivanesan (*Mycol. Pap.* **146**, 1981).

Balladynella Theiss. & Syd. (1918) = Dysrhynchis fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Balladynocallia Bat. (1965), Parodiopsidaceae. 3, pantropical. See Sivanesan (*Mycol. Pap.* **146**, 1981; key), Hosagoudar & Abraham (*New Botanist* **20**: 109, 1993).

Balladynopsis Theiss. & Syd. (1918), Parodiopsidaceae. Anamorph *Tretospora*. 13, widespread (tropical). See Sivanesan (*Mycol. Pap.* **146**, 1981; monogr., key), von Arx & Müller (*Sydowia* **37**: 6, 1984; synonym of *Balladyna*).

ballistospore, a forcibly abjected basidiospore. See Nyland (*Mycol.* **41**: 688, 1950); **- discharge**, see Buller (*Researches* **2-6**, 1922-34), Olive (*Science, N.Y.* **146**: 524, 1964), Ingold (*Friesia* **9**: 66, 1969; review). See also Buller's drop, *Itersonilia*.

Ballistosporomyces Nakase, G. Okada & Sugiy. (1989), anamorphic *Sporidiobolales*. 2 (ballistosporic yeasts), Japan. See Nakase *et al.* (*J. gen. appl. Microbiol.* Tokyo **35**: 289, 1989).

Ballocephala Drechsler (1951), Meristacraceae. 3 (on tardigrades), widespread. See Richardson (*TBMS* **55**: 307, 1970), Pohlad & Bernard (*Mycol.* **70**: 130, 1978), Tucker (*Mycotaxon* **13**: 481, 1981; key), Saikawa & Oyama (*TMSJ* **33**: 305, 1992; EM of infection of tardigrades), Saikawa & Sakuramata (*TMSJ* **33**: 237, 1992; zygospores).

Balsamia Vittad. (1831), Helvellaceae. 6, widespread. See Gilkey (*N. Amer. Fl.* **2**, 1954; key N. Am. spp.), Hawker (*Phil. Trans. R. Soc. Lond.* **237**: 429, 1954; key Eur. spp.), Pegler *et al.* (*British truffles*, 1993), O'Donnell *et al.* (*Mycol.* **89**: 48, 1997; phylogeny), Harrington *et al.* (*Mycol.* **91**: 41, 1999; phylogeny), Percudani *et al.* (*Mol. Phylogen. Evol.* **13**: 169, 1999; phylogeny), Agerer (*Mycol. Progr.* **5**: 67, 2006; mycorrhizas), Hansen & Pfister (*Mycol.* **98**: 1029, 2006; phylogeny).

Balsamiaceae E. Fisch. (1897) = Helvellaceae.

Baltomyces Cafaro (1999), ? Asellariaceae. 1 (in *Isopoda*), USA. See Cafaro (*Mycol.* **91**: 517, 1999), White *et al.* (*Mycol.* **98**: 872, 2006; phylogeny).

Balzania Speg. (1899), Thyridiaceae. 1 (from dead wood), S. America. See Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Bangia Lyngb. (1819), Algae. Algae.

Banhegyia Zeller & Tóth (1960), Patellariaceae. 1, Europe. See Kohlmeyer & Kohlmeyer (*Icones fung. maris*, 1968), Kutorga & Hawksworth (*SA* **15**: 1, 1997; posn).

Bankera Coker & Beers ex Pouzar (1955), Bankeraceae. 2 (mycorrhizal), widespread. See Stalpers (*Stud. Mycol.* **35**: 29, 1993; key), Dickson (*Field Mycology* **1**: 99, 2000; key British spp.), Arnolds (*Coolia* **46** 3, Suppl.: 96 pp., 2003; Netherlands and Belgium).

Bankeraceae Donk (1961), Thelephorales. 6 gen. (+ 2 syn.), 98 spp.

Lit.: Donk (*Persoonia* **3**: 199, 1964) see also under *Hydnaceae*, Baird (*Biblthca Mycol.* **104**: 156 pp., 1986), Baird & Khan (*Brittonia* **30**: 171, 1986), Harrison & Grund (*Mycotaxon* **28**: 419, 1987), Arnolds (*Atti del IV Convegno Internazionale di Micologia, Borgo val di Taro – I, Funghi Atque Loci Natura (Funghi ed Ambiente)*: 163, 1989), Agerer (*Nova Hedwigia* **55**: 501, 1992), Stalpers (*Stud. Mycol.* **35**: 168 pp., 1993), Hibbett *et al.* (*Nature* Lond. **407**: 506, 2000), Kõljalg & Renvall (*Karstenia* **40**: 71, 2000), Hibbett & Binder (*Proc. R. Soc. Lond.* B. Biol. Sci. **269**: 1963, 2002), Ainsworth (*English Nature Research Reports* **600**: 115 pp., 2004; conservation status in UK), Larsson *et al.* (*MR* **108**: 983, 2004), Hrouda (*Czech Mycol.* **57**: 57, 2005; Europe), Hrouda (*Czech Mycol.* **57**: 279, 2005; Europe).

Banksiamyces G.W. Beaton (1982), ? Helotiaceae. 4 (on *Banksia* cones), Australia. See Zhuang (*Mycotaxon* **32**: 97, 1988; ? = *Encoelia* (Sclerotin.)), Fuhrer & May (*Victorian Nat.* **110**: 73, 1993; host specificity).

Bannoa Hamam. (2002), anamorphic *Erythrobasidiales*. 1, Japan. See Hamamoto *et al.* (*Int. J. Syst. Evol. Microbiol.* **52**: 1027, 2002).

Bapalmuia Sérus. (1993), Pilocarpaceae (L). 17, widespread (tropical). See Ekman (*Op. bot.* **127**: 148 pp., 1996), Kalb *et al.* (*Lichenologist* **75**: 281, 2000; key).

Barbariella Middelh. (1949) = Asaphomyces fide Benjamin (*Mycol.* **47**, 1955).

Barbarosporina Ķirulis (1942), anamorphic *Pezizomycotina*, Cac.0eH.?. 1 (on *Rhytisma*), former USSR.

barbate, having one or more groups of hairs; bearded.

Barbatosphaeria Réblová (2008), Sordariomycetes. Anamorphs *Sporothrix*-like, *Ramichloridium*-like. 1, Europe; N. America. See Réblová (*Mycol.* **99**: 723, 2007).

Barbatospora M.M. White, Siri & Lichtw. (2006), Legeriomycetaceae. 1 (in *Simuliidae*), USA. See White *et al.* (*Mycol.* **98**: 335, 2006).

Barcheria T. Lebel (2004), Agaricaceae. 1, Australia. See Lebel *et al.* (*MR* **108**: 210, 2004).

Barclayella Dietel (1890) = Chrysomyxa fide Dietel (*Nat. Pflanzenfam.* **6**, 1928).

Bargellinia Borzí (1888) = Wallemia fide von Arx (*Gen. Fungi Sporul. Cult.* Edn 3, 1981).

Barklayella Sacc. (1892) [non *Barclayella* Dietel 1890] = Neobarclaya fide Nag Raj (*CJB* **56**: 706, 1978).

Barlaea Sacc. (1889) [non *Barlaea* Rchb. 1876, *Orchidaceae*] ≡ Barlaeina.

Barlaeina Sacc. & P. Syd. (1899) = Lamprospora fide Eckblad (*Nytt Mag. Bot.* **15**: 1, 1968).

barm (1) the froth on the surface of fermenting malt liquids; (2) baker's yeast.

Barnettella D. Rao & P. Rag. Rao (1964), anamorphic *Pezizomycotina*, St.#eP.43. 3, India. See Satyanarayana & Rao (*Mycopath. Mycol. appl.* **45**: 267, 1971), Rao & Rao (*Indian Phytopath.* **26**: 233, 1973; key).

Barnettia Bat. & J.L. Bezerra (1962) = Microcallis fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Barr Bigelow (Margaret Elizabeth; 1923-2008; Canada, later USA). BS (1950 then MS (1952), University of British Columbia; PhD under Wehmeyer, University of Michigan (1957); Instructor (1957) then Professor and, eventually, Ray Ethan Torrey Professor (1986-1989), University of Massachusetts, Amherst. An outstanding systematist and expert on the bitunicate ascomycetes, with enormous experience of the diversity of that group; contributed to activities of the Mycological Society of America with time and money, as Editor-in-Chief of *Mycol.* (1976-1980), Vice President (1979-1980) and President (1980-1981). Specimens are mostly in the fungal reference collection of New York Botanic Garden (**NY**) with some in **DAOM**. *Publs.* The Diaporthales in North America with emphasis on *Gnomonia* and its segregates. *Mycologia Memoir* (1978); *Prodromus to*

Class Loculoascomycetes (1987); Some dictyosporous genera and species of Pleosporales in North America. *Memoirs of the New York Botanical Garden* (1990); Prodromus to nonlichenized, pyrenomycetous members of class Hymenoascomycetes. *Mycotaxon* (1990); Melanommatales (Loculoascomycetes). *North American Flora* Series II (1990).

barrage, the space between two mycelia which have an aversion for one another (Vandendries & Brodie, 1933). Cf. zone lines.

Barrella Ahn & Shearer (1995) = Pseudoyuconia fide Eriksson & Hawksworth (*SA* **15**: 139, 1997).

Barria Z.Q. Yuan (1994), ? Phaeosphaeriaceae. 1, China. See Yuan (*Mycotaxon* **51**: 313, 1994), Jaklitsch *et al.* (*Öst. Z. Pilzk.* **11**: 93, 2002).

Barrina A.W. Ramaley (1997), Coniochaetaceae. Anamorph *Phialophora*-like. 1, USA. See Ramaley (*Mycol.* **89**: 962, 1997), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004), García *et al.* (*MR* **110**: 1271, 2006; phylogeny).

Barrmaelia Rappaz (1995), Xylariaceae. Anamorph *Libertella*-like. 6, Europe; N. America. See Rappaz (*Mycol. Helv.* **7**: 99, 1995; monogr.), Winka & Eriksson (*Mycoscience* **41**: 97, 2000; DNA).

Barssia Gilkey (1925), Helvellaceae. 2, widespread. Close to *Balsamia*. See Ławrynowicz & Skirgiełło (*Acta Mycologica* Warszawa **20**: 277, 1986), Kimbrough *et al.* (*Mycol.* **88**: 38, 1996; ultrastr.), O'Donnell *et al.* (*Mycol.* **89**: 48, 1997; phylogeny), Landvik *et al.* (*Mycol.* **91**: 278, 1999), Percudani *et al.* (*Mol. Phylogen. Evol.* **13**: 169, 1999; phylogeny), Hansen & Pfister (*Mycol.* **98**: 1029, 2006; phylogeny).

Bartalinia Tassi (1900), anamorphic *Amphisphaeriaceae*, Hso.≡ eH.19. 16, widespread. See Morgan-Jones *et al.* (*CJB* **50**: 877, 1972), Roux & Van Warmelo (*MR* **94**: 109, 1990; conidioma ontogeny), Jeewon *et al.* (*MR* **107**: 1392, 2003; phylogeny), Wong *et al.* (*CJB* **81**: 1083, 2003; ultrastr.).

Bartaliniopsis S.S. Singh (1974) = Doliomyces fide Sutton (*Mycol. Pap.* **141**, 1977).

Bartheletia Arnaud (1954) nom. inval., anamorphic *Pezizomycotina*, Hsp.?.?. 1, France.

Bartlettiella D.J. Galloway & P.M. Jørg. (1990), Lecanorales (L). 1, New Zealand. See Galloway & Jørgensen (*N.Z. Jl Bot.* **28**: 5, 1990).

Barubria Vězda (1986), Ectolechiaceae (L). 1 (on leaves), Africa; C. America. See Vězda (*Folia geobot. phytotax.* **21**: 207, 1986), Lücking (*Phyton* Horn **39**: 131, 1999).

Barya Fuckel (1864) [non *Barya* Klotzsch 1854, *Begoniaceae*] ≡ Neobarya.

Baryeidamia H. Karst. (1888) = Papulaspora fide Saccardo (*Syll. fung.* **9**: 339, 1891).

Baryella Rauschert (1988) ≡ Neobarya.

basal body (1) (of *Blastocladiaceae*), the part of the thallus fixed to the substratum by rhizoids at the lower end (Indoh, 1940); (2), see blepharoplast.

basal frill (of a spore), the apical part of a conidiogenous cell, or basal part of a cell which is carried away with the detached conidium following rhexolytic secession (Sutton, *CJB* **45**: 1251, 1967). Cf. marginal frill.

Basauxia Subram. (1995), anamorphic *Pezizomycotina*, Hso.≡ eP.1/21. 1, Malaysia. See Subramanian (*Kavaka* **20/21**: 58, 1992/1993).

basauxic (of conidiophores), elongating by a basal growing point (Hughes, *CJB* **31**: 650, 1953). See meristem arthrospore.

Basavamyces V.B. Hosag. (2005), Meliolaceae. 1, India. See Biju *et al.* (*Nova Hedwigia* **80**: 480, 2005).

base ratio, see Molecular biology.

Basiascella Bubák (1914) ? = Piggotia fide Sutton (*Mycol. Pap.* **141**, 1977).

Basiascum Cavara (1888) = Spilocaea fide Hughes (*CJB* **36**: 727, 1958).

Basididyma Cif. (1962), anamorphic *Pezizomycotina*, Hso.0eH.10. 1, Dominican Republic. See Ciferri (*Atti Ist. bot. Univ. Lab. crittog. Pavia* sér. 5 **19**: 94, 1962).

Basidiella Cooke (1878) = Aspergillus fide Subramanian (*Hyphomycetes*, 1971) See, Seifert (*TBMS* **85**: 123, 1985).

Basidioascus Matsush. (2003), Dipodascaceae. Anamorph *Geotrichum*-like. 1, Australia. See Matsushima (*Matsush. Mycol. Mem.* **10**: 98, 2001).

Basidioblastomycetes. Class used by Moore (*Bot. Mar.* **23**: 361, 1980; key 13 gen.) for *Malasseziales* and *Sporobolomycetales*, and placed by him in *Blastomycota*.

Basidiobolaceae Engl. & E. Gilg (1924), Basidiobolales. 1 gen. (+ 1 syn.), 4 spp.

Lit.: Dykstra (*Mycol.* **86**: 494, 1994), Dykstra & Bradley-Kerr (*Mycol.* **86**: 336, 1994), Humber (*J. gen. Path.* **60**: 1, 1974; biology), Chien (*TMSJ* **28**: 445, 1987), Cochrane *et al.* (*Mycol.* **81**: 504, 1989; isozymes), Nelson *et al.* (*Exp. Mycol.* **14**: 197, 1990; ribosomal DNA), Dykstra (*Mycol.* **86**: 494, 1994; spore formation), Dykstra & Bradley-Kerr (*Mycol.* **86**: 336, 1994; ultrastr.), James *et al.* (*Nature* **443**: 818, 2006; phylogeny), Liu *et al.* (*BMC Evolutionary Biology* **6**: 1, 2006; phylogeny), van den Berk *et al.* (*BMC infectious diseases* **6**: 140, 2006; basidiobolomycosis).

Basidiobotrys Höhn. (1909) = Xylocladium fide Jong & Rogers (*Tech. Bull. Wash. agric. Exp. Stn* **71**, 1972).

basidiocarp, see basidioma.

Basidiodendron Rick (1938), Auriculariales. *c.* 15, widespread. See Wells (*Mycol.* **51**: 541, 1960; key), Luck-Allen (*CJB* **41**: 1033, 1963; key N. temp. spp.), Oberwinkler (*Ber. bayer. bot. Ges.* **36**: 42, 1963; Bavarian spp.), Wells & Raitviir (*Mycol.* **67**: 909, 1975), Weiss & Oberwinkler (*MR* **105**: 403, 2001; phylogeny), Kotiranta & Saarenoksa (*Annales Botanici Fennici* **42**: 11, 2005; Finland).

basidiograph, the straight-line graph obtained by plotting the ratio of the length (l) to the width (w) against

the length of the basidia of a species of agaric (Corner, 1947: 214). Cf. sporograph.

basidiole, a basidium-like hymenial element that lacks sterigmata because it is either young or permanently sterile; best restricted to immature basidia fide Singer (1962).

Basidiolum Cienk. (1861), ? Zoopagales. 1. See White (*MR* **107**: 245, 2003).

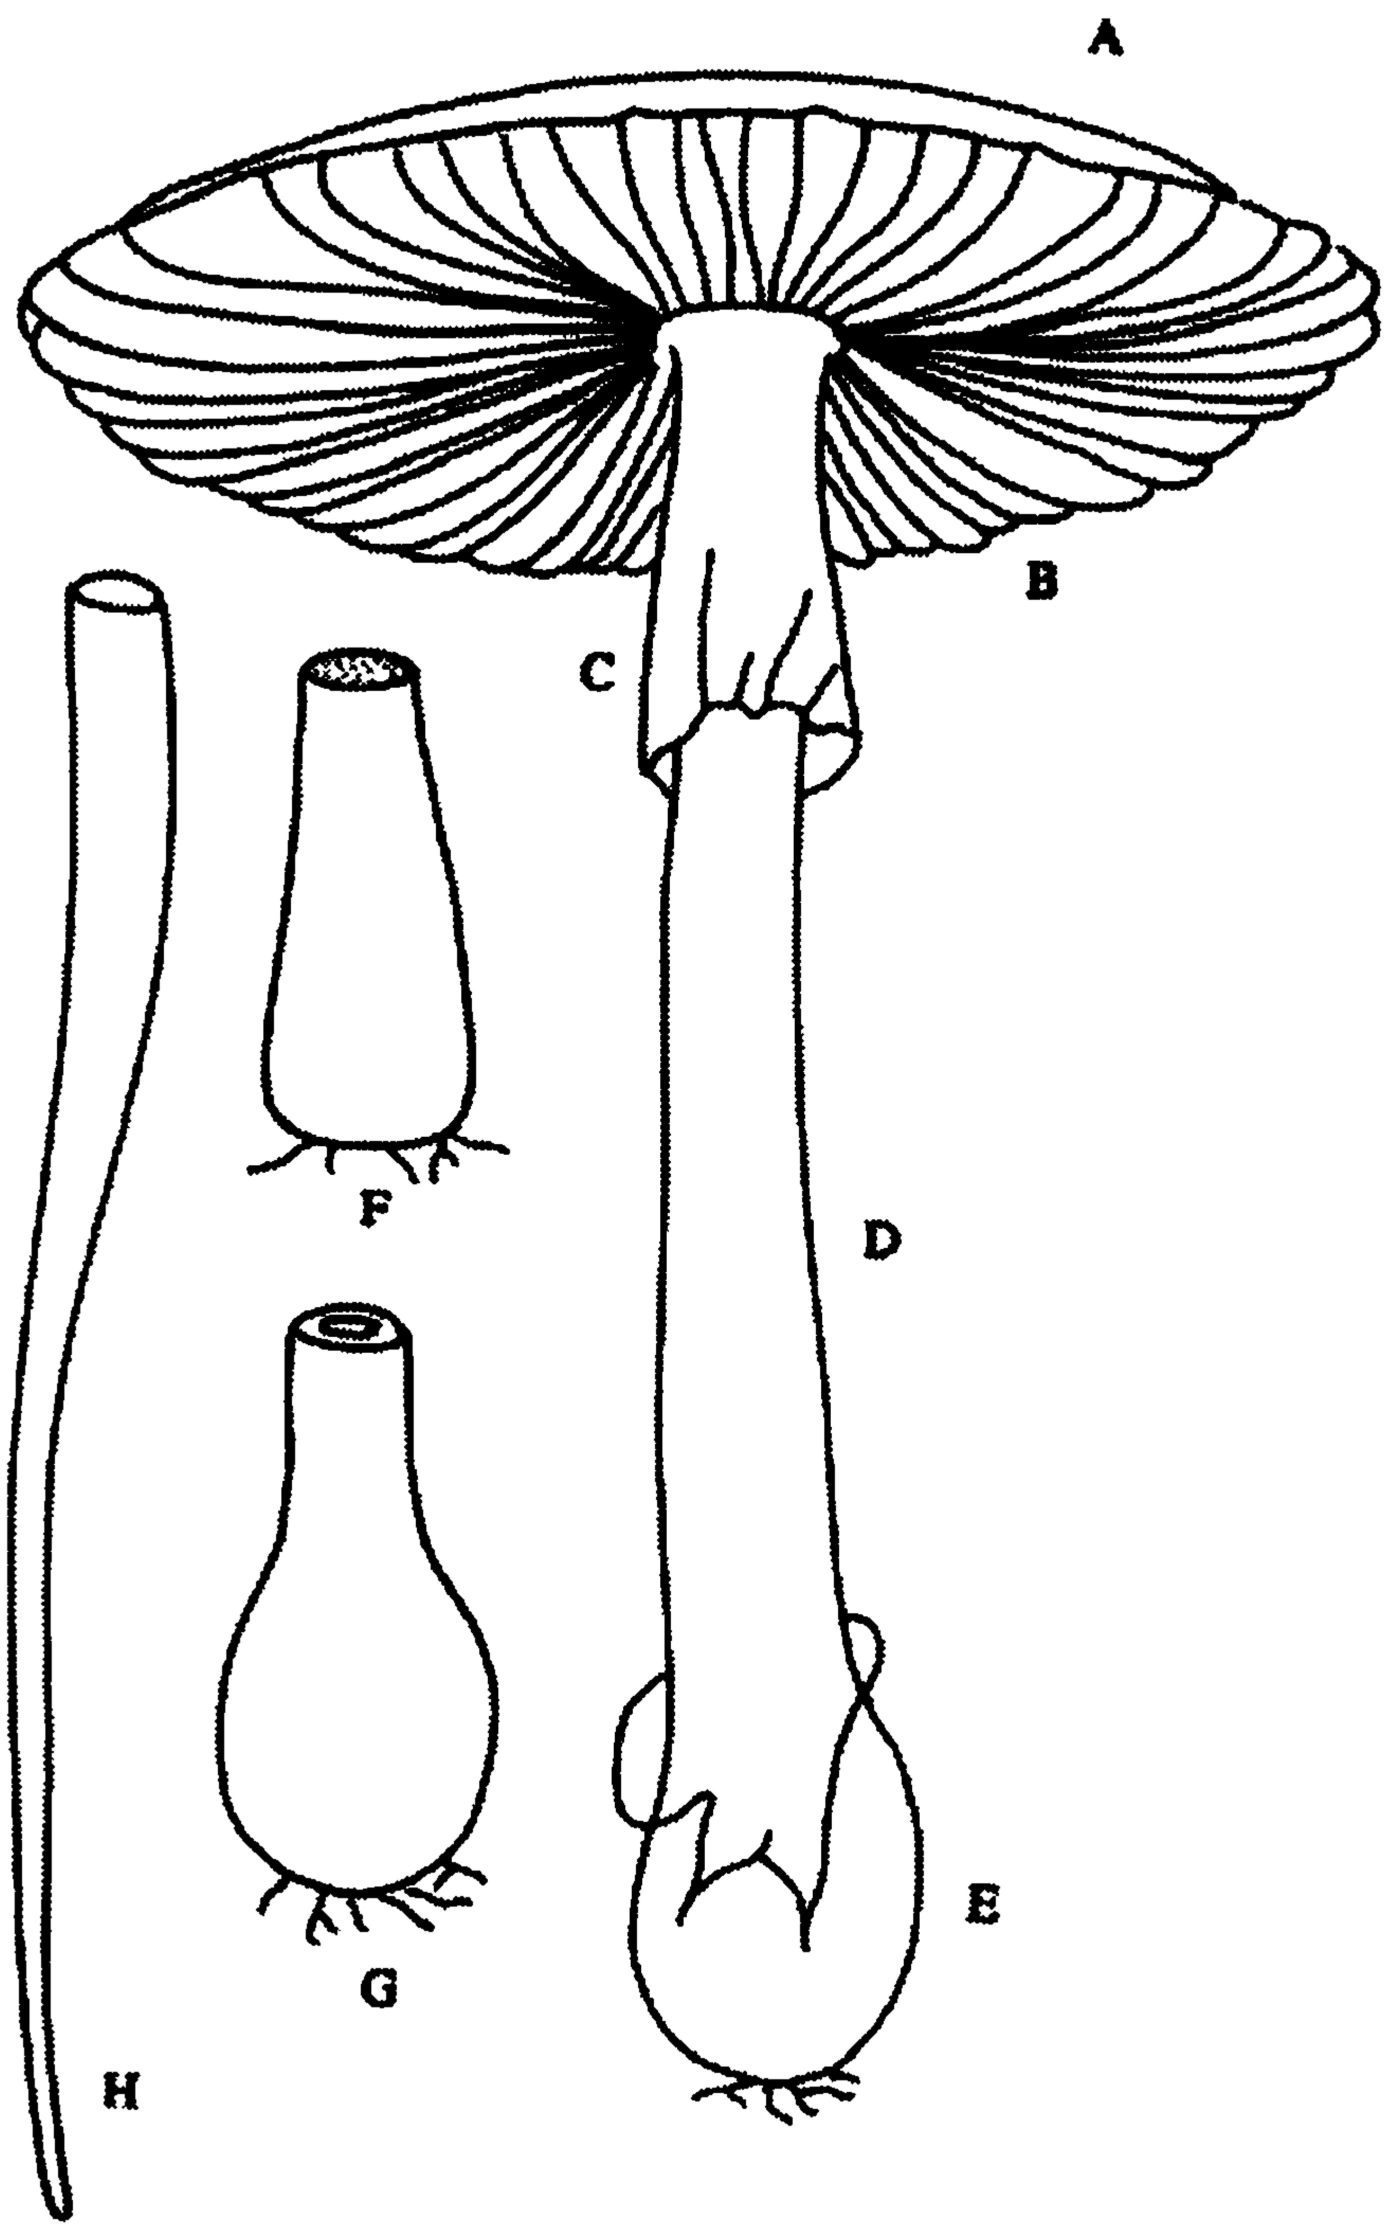

Fig. 6. Basidioma (sporophore) of *Amanita phalloides*. A, pileus (cap); B, lamellae (gills); C, annulus (ring); D, stipe (stalk); E, volva. Other types of stipe: F, stuffed, with base truncate; G, hollow, with base bulbous; H, solid with base radicate.

basidioma (pl. **-ata**), a basidium-producing organ; basidiome (Donk, *Taxon* **18**: 666, 1969); basidiocarp; carpophore; fruit-body; hymenophore; sporophore. See Fig. 4.

basidiomycete, one of the *Basidiomycota*.

Basidiomycetes G. Winter (1880), see *Agaricomycotina.*

Basidiomycota R.T. Moore (1980). Fungi. 16 class., 52 ord., 177 fam., 1589 gen., 31515 spp. (Basidiomycotina, basidiomycetes). 3 subphyla and 6 'unassigned' classes, cosmop. The diagnostic character of this phylum is the presence of a basidium (q.v.) bearing basidiospores. A typical basidium is aseptate and has four 1-celled haploid basidiospores (ballisto- or statismospores) dispersed by air currents but the basidium may be transversely or longitudinally septate and the number of spores (which may be statismospores) are occasionally fewer or more than four. Other diagnostic characters are clamp connexions (Fig. 9), dolipore septa (Fig. 13), and a double-layered wall, lamellate and electron-opaque in electron microscopy. *Basidiomycota* are typically mycelial but some are yeasts (or have a yeast-like state). Such yeasts may be distinguished from ascomycetous yeasts by the morphology of the bud scars, giving a red colour with diazonium blue B, being urease +, having a high GC percentage (see base ratio), and other ultrastructural characters (see Moore, *Bot. Mar.* **23**: 361, 1980; vonArx, 1987) some of which may apply to basidiomycetes in general; molecular sequence data can also clearly place other fungi in the phylum.

The typical life cycle (on which there are variations) involves the germination of the basidiospore to give a septate primary (haploid) mycelium which may produce 'oidia' but anamorphic states (except for yeasts, rusts, and smuts) have been neglected (see Kendrick & Watling, *in* Kendrick (Ed.), *The whole fungus* **2**: 473, 1979). Later by diploidization, the homo- or heterothallic primary mycelium becomes a secondary (dikaryotic) mycelium which frequently has clamp connexions. There is nuclear fusion in the young basidium and meiosis before basidiospore development. The mycelium may be perennial in soil or wood and may form 'fairy rings', sclerotia, rhizomorphs or mycorrhizas. The basidiomata are typically macroscopic and take a variety of forms.

While there is widespread agreement on the use of certain families within the *Basidiomycota* there is less uniformity in grouping the families into orders and esp. supraordinal taxa because of the lack of good differential characters. During recent years the acceptance of supraordinal taxa by specialists has been based on microscopical basidial characters. Talbot (*Taxon* **17**: 620, 1968; 1971), after separating the *Uredinales* and *Ustilaginales* as the *Teliomycetes* grouped the remaining orders as the *Phragmobasidiomycetes* and *Holobasidiomycetes* and distinguished 'gasteromycetes' within the last. Donk (*Proc. K. nederl. Akad. Wet.* C **75**: 365; **76**: 109, 1972-73) separated the *Ustilaginales* as the *Hemibasidiomycetes* and classified the remaining forms as the *Heterobasidiomycetes* (which included the *Uredinales*) and the *Homobasidiomycetes*. Shaffer (*Mycol.* **67**: 1, 1975) advocated no supraordinal groupings of the 14 orders (59 fams.) of *Basidiomycetes* which he recognized. Khan & Kimbrough (*Mycotaxon* **15**: 103, 1982) proposed the adoption of four classes based mainly on septal ultrastructure: *Teliomycetes*, *Hemibasidiomycetes*, *Phragmobasidiomycetes* and *Holobasidiomycetes*.

The classification in this edition of the *Dictionary* is based on a series of major phylogenetic studies of fungi under the umbrella of the 'Deep Hypha' and AFTOL ('Assembling the Fungal Tree of Life') projects. See esp. Blackwell *et al.* (*Mycol* **98**: 829, 2006), Hibbett *et al.* (*MR* : **111**: 509, 2007), James et al. (*Nature* **443**: 818, 2006). The pragmatic subdivisions in the 9th Edition can no longer be supported. The presence or absence of a macroscopic basidioma, the life-form and life-style (including host specialization) and the traditional 'hymenomycetes' and 'gasteromycetes' can only be regarded as informal and not monophyletic categories; a consequence of this is that some of the older literature cited may be in conflict with the taxon it is cited under.

Three Subphyla are accepted here. However, the *Entorrhizomycetes* and *Wallemiomycetes* are not referred to any of these subphyla, and a number of

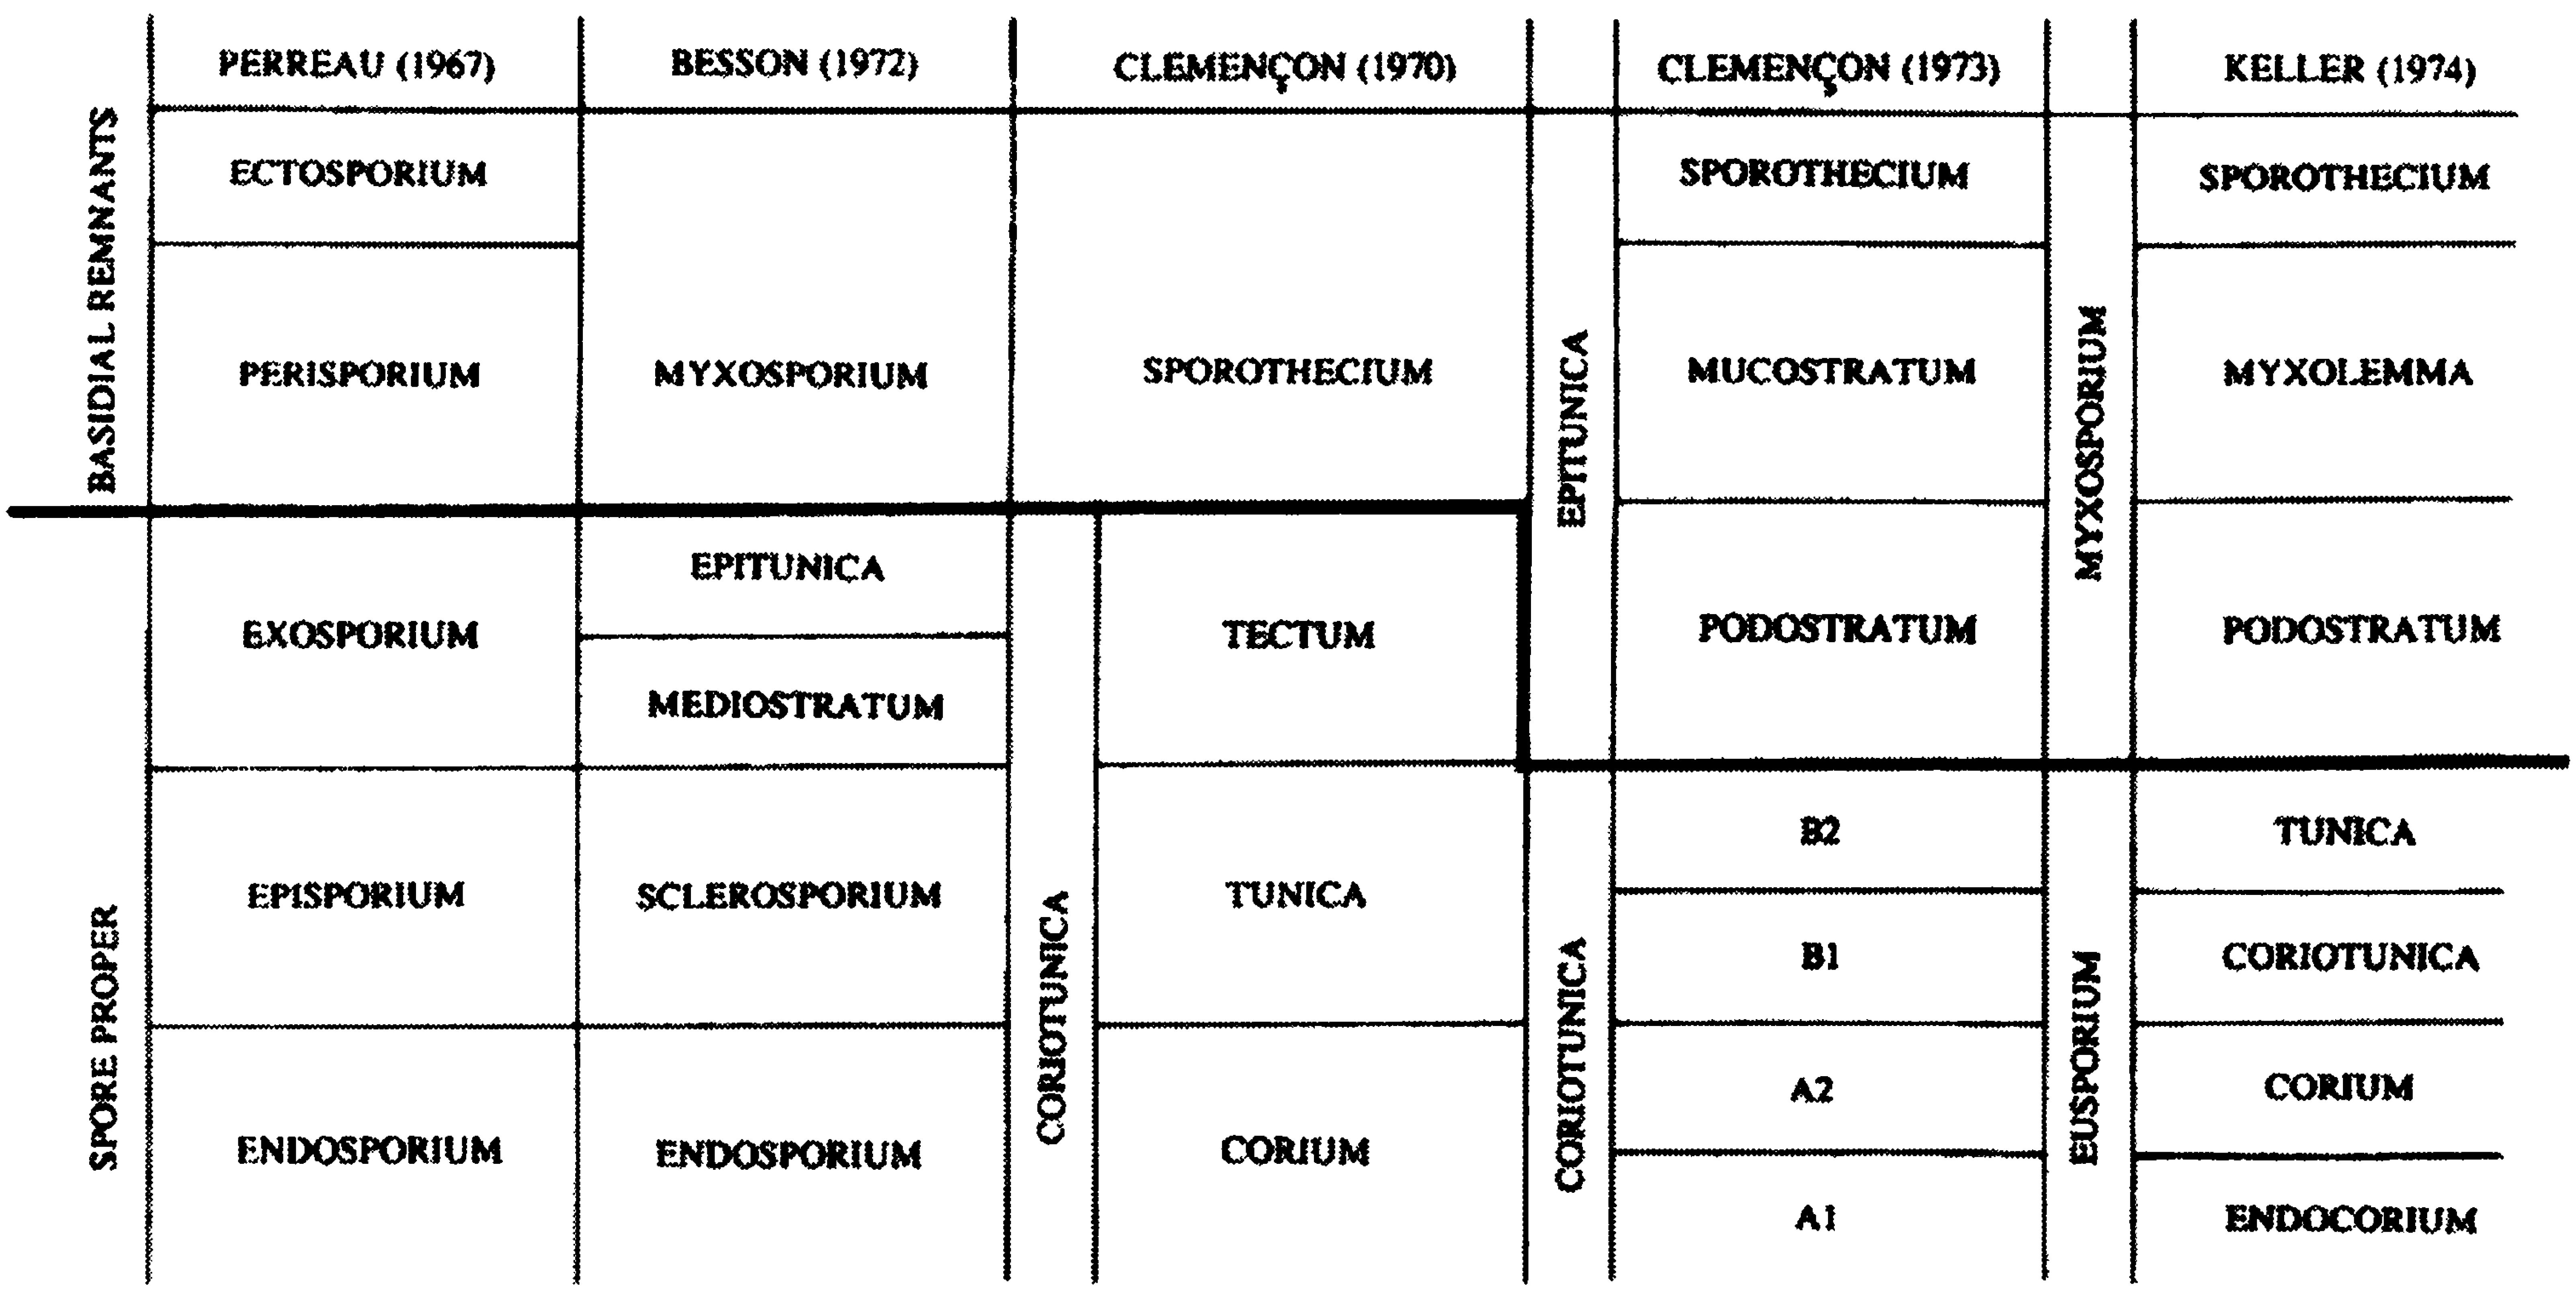

Fig. 7. Basidiospore wall-layer terminology, based on transmission electron microscopy (TEM) sections.

genera could not be assigned with confidence to any family.

Subphyl.:
(1) **Agaricomycotina**
(2) **Pucciniomycotina**
(3) **Ustilaginomycotina**

Basidiomycotina Ainsw. (1966), see *Basidiomycota, Agaricomycotina, Pucciniomycotina, Ustilaginomycotina.*

basidiophytes, Cain's (1972) term for hypothetical autotrophic ancestors of basidiomycetes; see Phylogeny. Cf. ascophyte.

Basidiopycnis Oberw., R. Kirschner, R. Bauer, Begerow & Arenal (2006), Phleogenaceae. 1, Germany. See Oberwinkler *et al.* (*Mycol.* **98**: 639, 2006), Hausner *et al.* (*Mycotaxon* **103**: 279, 2008).

Basidioradulum Nobles (1967), Schizoporaceae. 1, Europe; N. America. See Nobles (*Mycol.* **59**: 192, 1967), Legon (*Mycologist* **19**: 81, 2005) Also considered a syn. of *Hyphodontia* s.l.

basidiospore, a propagative cell (typically a ballistospore but in gasteromycetes a statismospore) containing one or two haploid nuclei produced, after meiosis, on a basidium (Fig. 8). The colour, form and ornamentation of the basidiospore are fundamental to basidiomycete classification and an essential part of any specific description. Greater use of electron microscopy has revealed an increasing complexity of the wall layers or teguments (for a comparison of the terminologies applied to these layers see Fig. 5). Also see Spore wall.

Lit.: Perreau (*Ann. Sci. nat., Bot.* sér. 12, **8**: 639, 1967; homobasidiomycetes), Clemençon (*Z. Pilzkde* **36**: 113, 1970; wall ultrastr.), Pegler & Young (*Beih. Nova Hedw.* **35**, 1971; morphology in *Agaricales*), Kühner (*Persoonia* **7**: 217, 1973), Locquin (*Bull. Soc. bot. Fr., Coll. Palyn.*: 135, 1975).

Basidiosporites Elsik (1968), Fossil Fungi. 1 (Paleocene), USA.

basidium (pl. **-ia**), (1) the cell or organ, diagnostic for basidiomycetes, from which, after karyogamy and meiosis, basidiospores (generally 4) are produced externally each on an extension (sterigma, q.v.) of its wall (Fig. 8); (2) a conidiophore or phialide (obsol.).

The confused terminology applied to basidia (sense 1) and their parts has been traced by Clémençon (*Z. Mykol.* **54**: 3, 1988) and is analyzed by Talbot (*TBMS* **61**: 497, 1973) whose recommended usage (basically that of Donk) and synonymy is adopted in the series of definitions which follow (see Fig. 8): **pro-**, the morphological part or developmental stage of the basidium in which karyogamy occurs; primary basidial cell; probasidial cyst; **hypo-** (Martin) p.p.; teliospore of Uredinales. **meta-**, (1) the morphological part or developmental stage in which meiosis occurs; hypo- (Martin) p.p.; **epi-** (Martin) p.p.; promycelium of *Pucciniales*. (When the whole meta- includes pro- remnants the distal and functional part may be distinguished as a **pario-** (Talbot, 1973).) (2) See proto- below. **holo-**, a basidium (e.g. of *Agaricus*) in which the meta- is not divided by primary septa (see septum) but may become adventitiously septate (see septum) (Talbot, *Taxon* **17**: 625, 1968). A holo- may be a **sticho-**, cylindrical, with nuclear spindles longitudinal and at different levels, or a **chiasto-**, clavate, with nuclear spindles across the basidium and at the same level (see Fig. 8A,B). **phragmo-**, a basidium in which the meta- is divided by primary septa, usually cruciate (e.g. *Tremella*) or transverse (e.g. *Auricularia*) (Talbot, 1968).

Among other terms applied to basidia are: **apo-**, one with non-apiculate spores borne symmetrically on the sterigmata and not forcibly discharged (Rogers, *Mycol.* **39**: 558, 1947); **auto-**, one with spores borne asymmetrically and forcibly discharged; **endo-**, one developing within the basidioma, as in gasteromycetes; **epi-**, Martin's term for protosterigma, see sterigma; **hetero-**, a basidium of the *Heterobasidiomycetes*, usually a phragmo-; **homo-**, a

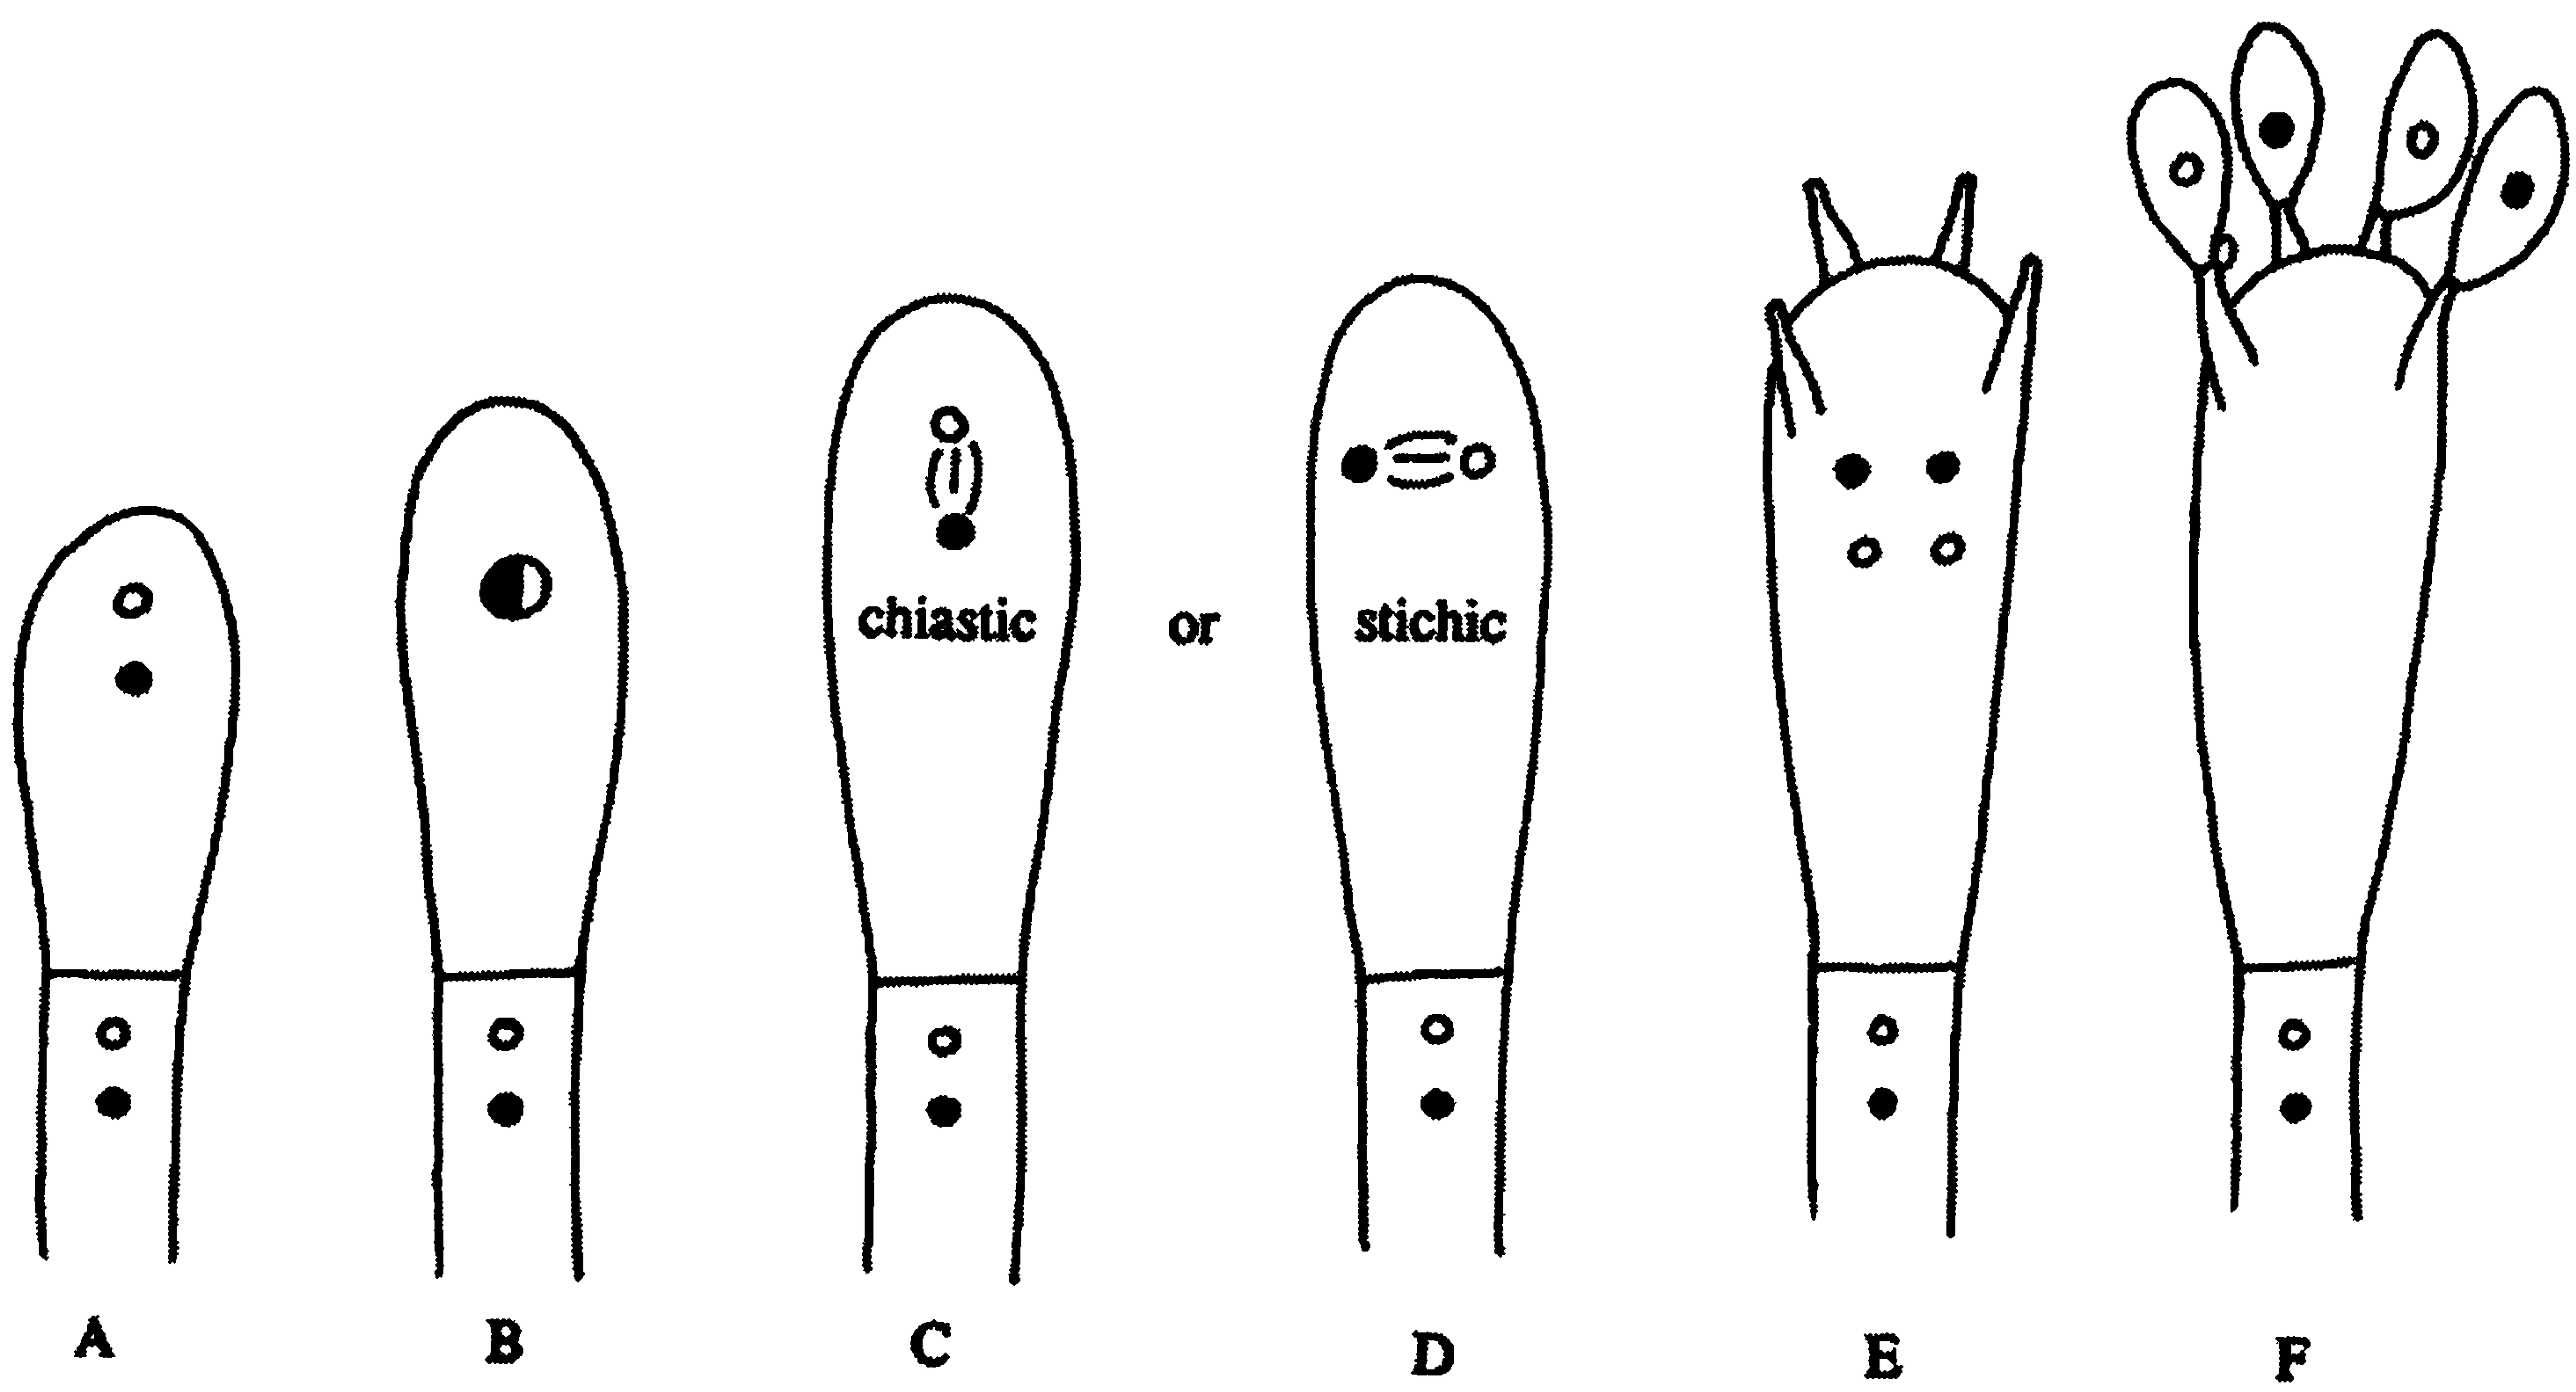

Fig. 8. Basidiospore development (diagrammatic). A-E meiosis (C, stichic, and D, chiastic). E, diploid probasidium; F, basidium (metabasidium) with four basidiospores on sterigmata.

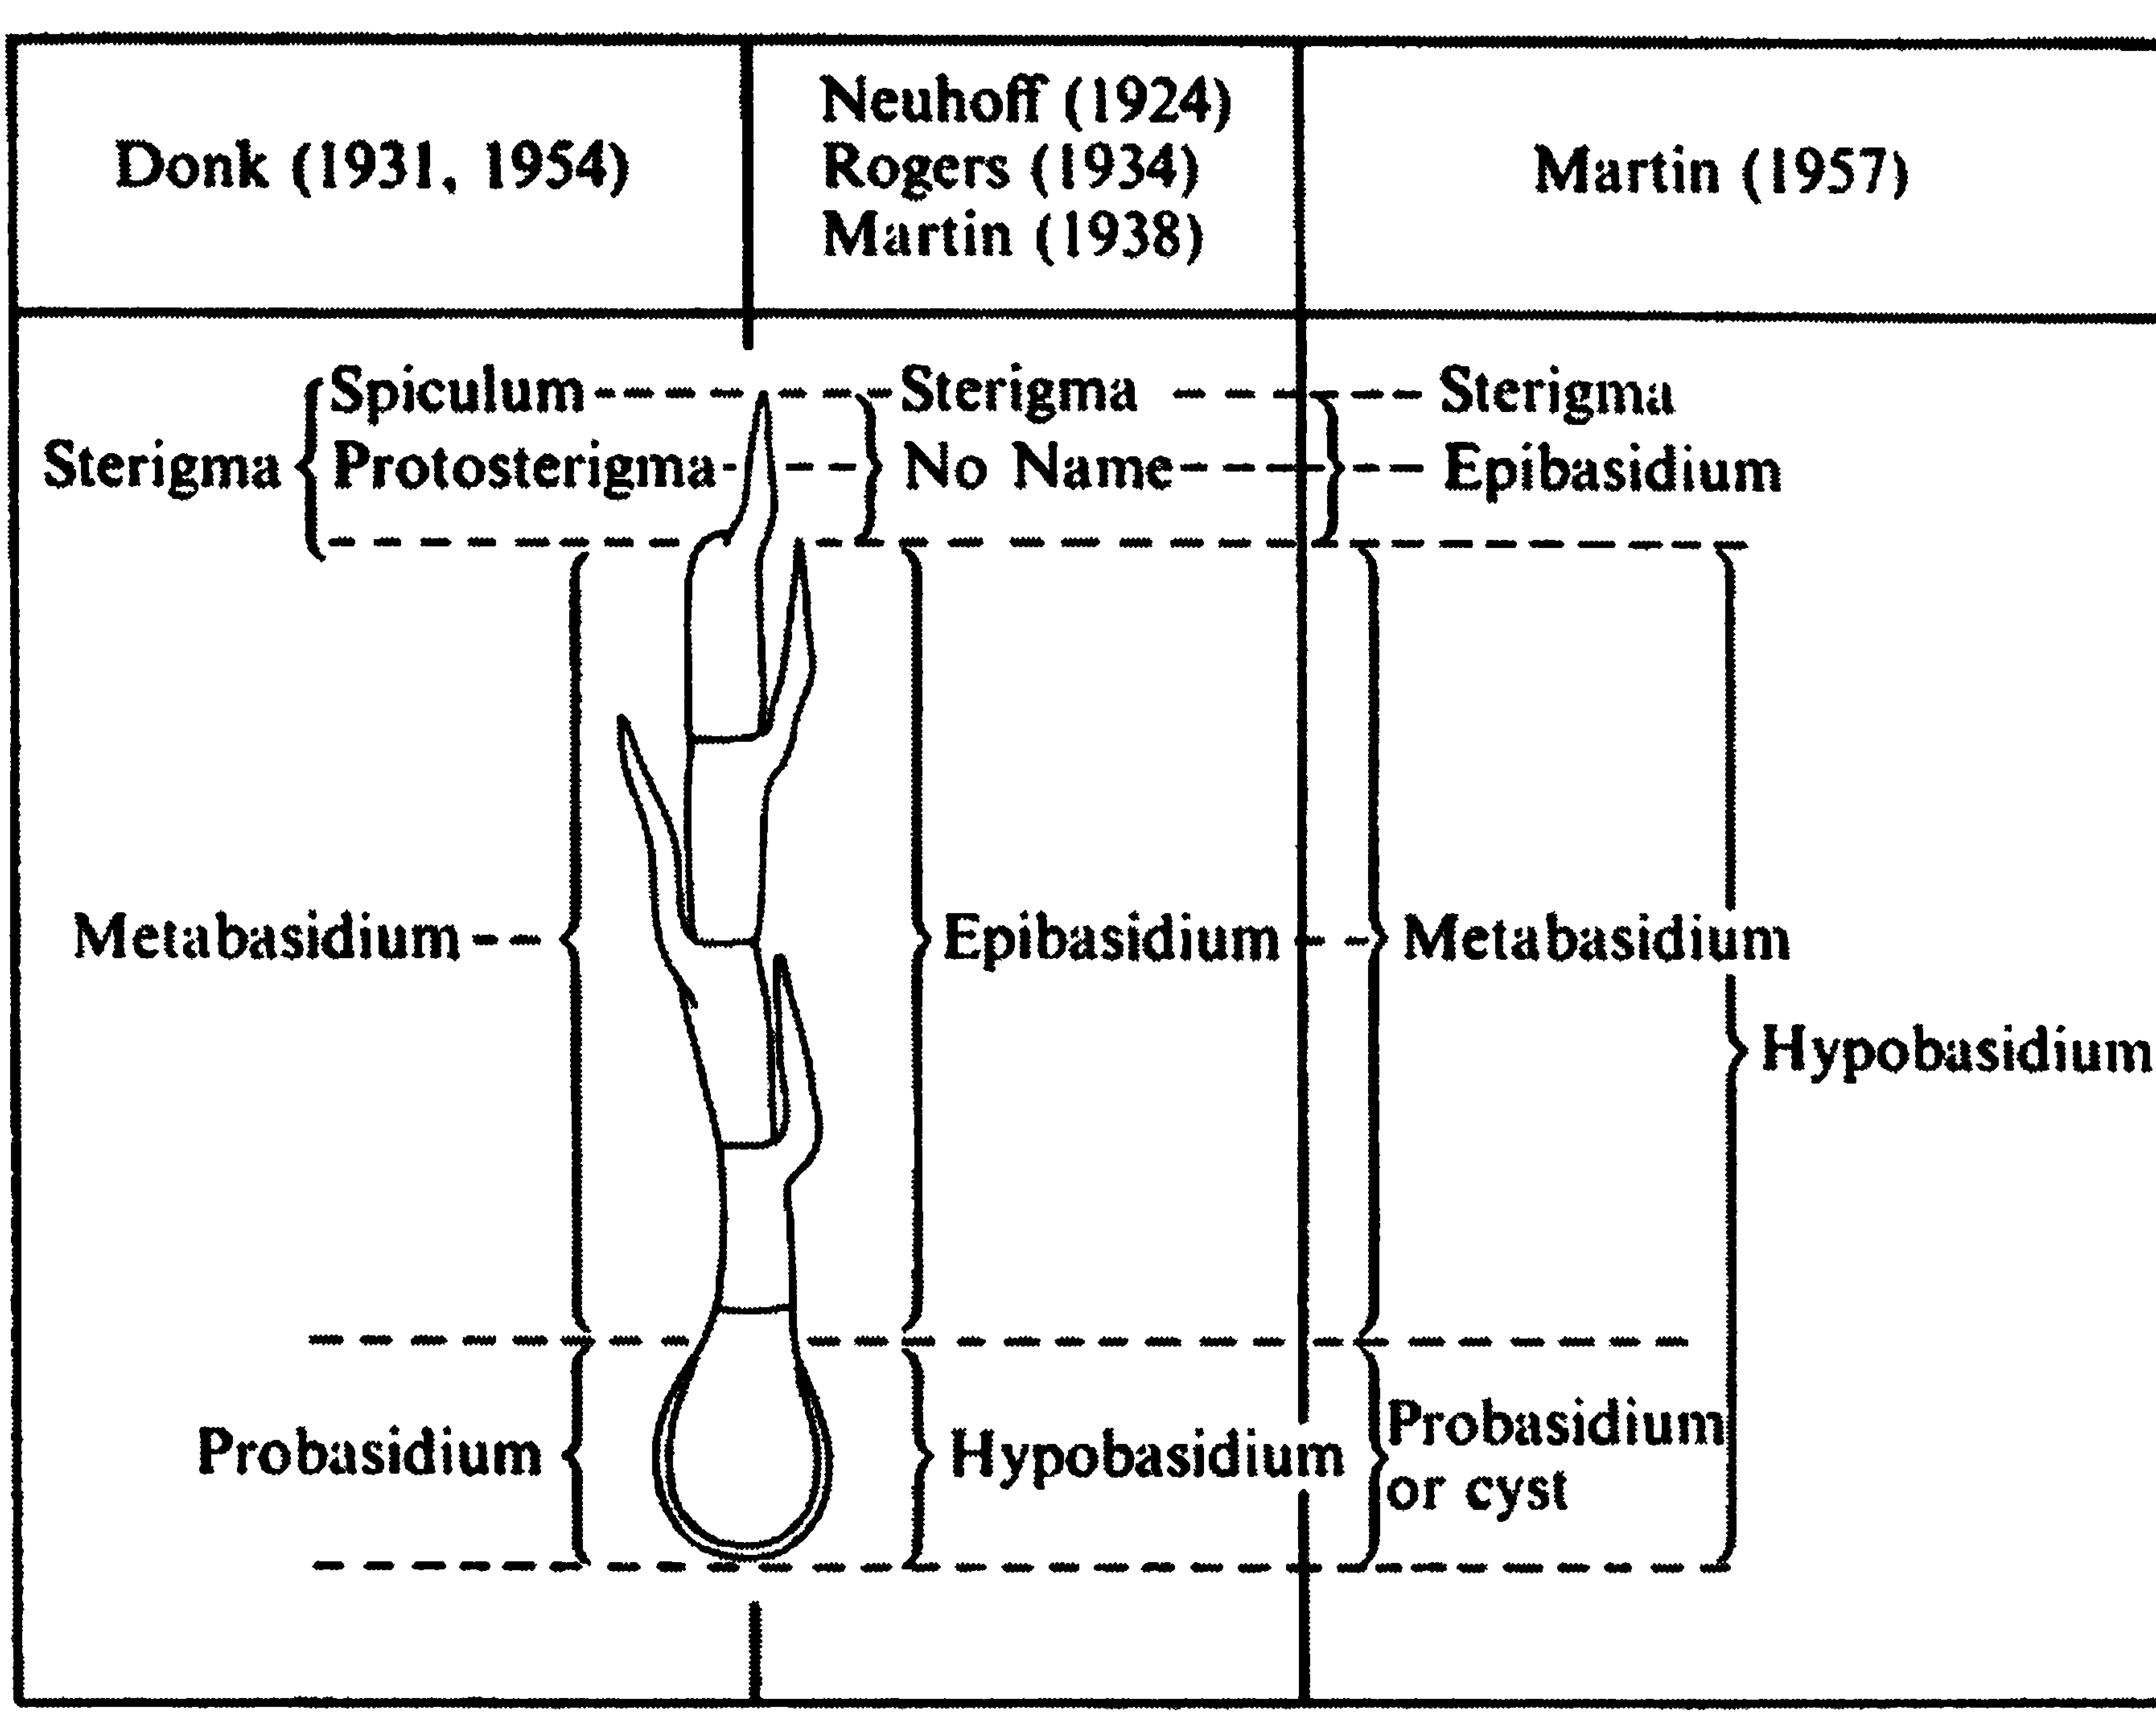

Fig. 9. Basidium terminology, to compare the terminology of different authors, illustrated with reference to the *Septobasidium*-type (Talbot, 1973). Note that in this extreme case the metabasidium of Donk coincides with that of Martin.

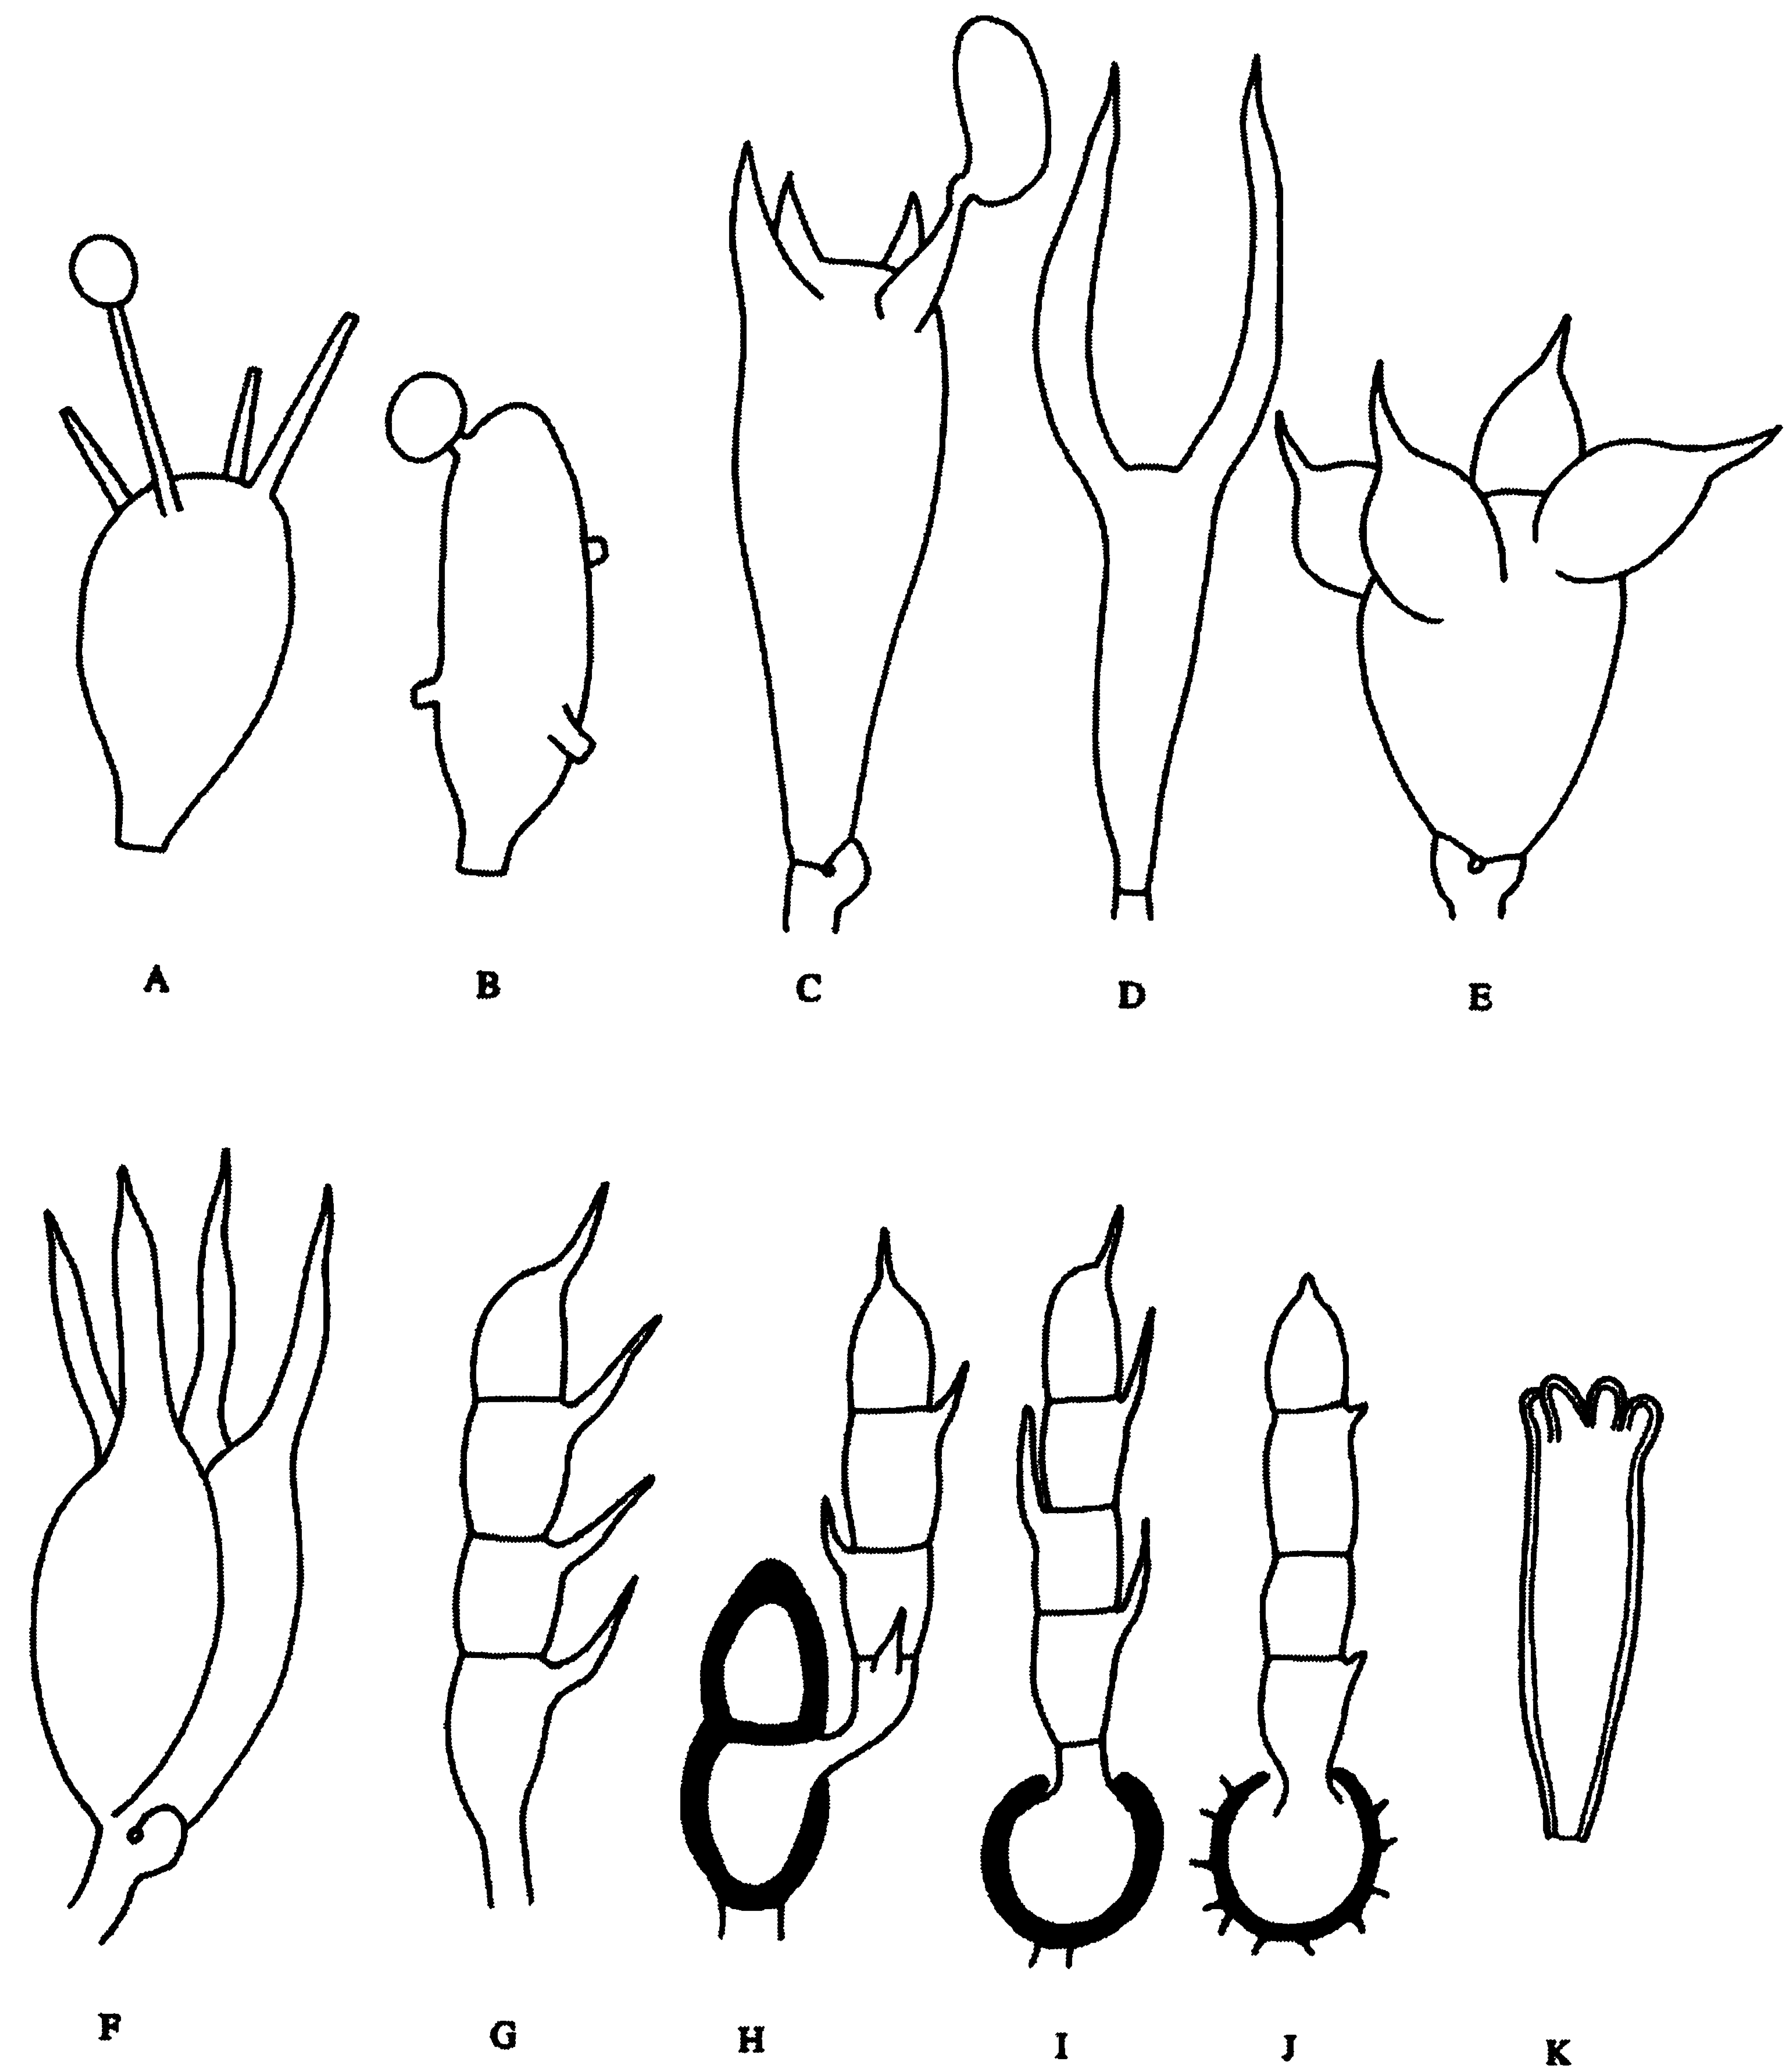

Fig. 10. Basidial types. A-E, holobasidial (A-B, apobasidial; C-E, autobasidial). A, *Lycoperdales*; B, *Tulostomatales*; C, *Agaricales*; D, *Dacrymycetales*; E, *Tulasnellales*. F-K, phragmobasidial (F-G, *Basidiomycetes*; H-I, *Teliomycetes*; J-K, *Ustomycetes*). F, *Tremellales*; G, *Auriculariales*; H, *Uredinales*; I, *Septobasidiales*; J, *Ustilaginales*; K, *Cryptobasidiales*.

basidium of the *Homobasidiomycetes*, usually a holo-; **hypo-**, = pro- (Donk), meta- (Martin); (of *Septobasidium*) = basidium (Martin); **pleuro-**, one relatively broad at the base and with bifurcated spreading 'roots', as in *Pleurobasidium* (Donk); **proto-**, a primitive basidium; the opposite of meta- in the sense of changed or degenerate basidium; **repeto-**, see Chadefaud (*Rev. mycol.* **39**: 173, 1975); **sclero-**, the thick-walled, encysted, gemma-like pro- of the *Pucciniales* (teliospore) and the *Auriculariales* (Janchen,

1923). See also Wells & Wells (*Basidium and basidiocarp evolution, cytology, function and development* 1982).

Basidopus Earle (1909) = Mycena fide Singer (*Agaric. mod. Tax.* edn 3, 1975).

Basifimbria Subram. & Lodha (1968), anamorphic *Xylariales*, Hso.0eH.13. 1 (coprophilous), India. See von Arx (*Sydowia* **35**: 10, 1982; syn. with *Dicyma*).

basifugal, development from the base up, acropetal.

Basilocula Bubák (1914) ? = Ceuthospora Grev. fide Sutton (*Mycol. Pap.* **141**, 1977).

basionym (basinym, basonym) (in nomenclature, q.v.), the name-bringing or epithet-bringing synonym on which a new transfer or new combination is based. Donk (*Bull. Jard. bot. Buitenz.* sér. 3 **18**: 274, 1949) uses **isonym** for a name derived from a basionym. Cf. synisonym, synonym.

basipetal, describes a chain of conidia in which new spores are formed at the base, the oldest at the apex, cf. acropetal.

Basipetospora G.T. Cole & W.B. Kendr. (1968), anamorphic *Monascus*, Hso.0eH.36. 1, widespread. See Cole & Kendrick (*CJB* **46**: 991, 1968), Stchigel *et al.* (*Stud. Mycol.* **50**: 299, 2004).

Basipilus Subram. (1961) = Seimatosporium fide Sutton (*Mycol. Pap.* **88**, 1963), Shoemaker (*CJB* **42**: 411, 1964).

Basisporium Molliard (1902) = Nigrospora fide Mason (*Mycol. Pap.* **3**: 60, 1933).

Basitorula Arnaud (1954) = Gliomastix fide Dickinson (*Mycol. Pap.* **115**, 1968).

basket fungi, *Clathrus* spp.

basocatenate (of conidia), formed in chains with the youngest conidium at the basal or proximal end of the chain.

Basramyces Abdullah, Abdulk. & Goos (1989), anamorphic *Pezizomycotina*, Hso.0-≡ hP.1. 1, Germany; Iraq. See Abdullah *et al.* (*Int. J. Mycol. Lichenol.* **4**: 182, 1989).

Bassi (Agostino; 1773-1856; Italy). A lawyer who later became a farmer. He elucidated the etiology of muscardine disease of silkworms (*Beauveria bassiana*) and was thereby the first to demonstrate by experiment pathogenicity of a fungus for an animal. *Publs. Del Mal del Segno* (1835-1836) [for English translation of part I, 1835, see *Phytopathological Classics* **10**, 1958, portrait]; *Opere do Agostino Bassi*, Pavia (1925) [collected works]. *Biogs, obits etc.* [bicentenary tributes] Verona (*Agostino Bassi nel 200 Anno dalla Nascita*, 1973) [bibliography, portrait]; Porter (*Bacteriological Reviews* **37**: 284, 1973) [portrait].

Bastien treatment, treatment for amanitin poisoning, involving: (1) twice-daily injection of 1g vitamin C, (2) 2 capsules of nifurazide, three times a day, (3) 2 tablets of dihydrostreptomycin, three times a day, (4) penicillin therapy, (5) maintenance of fluid and electrolyte balance.

Batarrea, see *Battarrea*.

Batcheloromyces Marasas, P.S. van Wyk & Knox-Dav. (1975), Teratosphaeriaceae. 4, widespread. See Sutton & Pascoe (*MR* **92**: 210, 1989), Taylor *et al.* (*MR* **103**: 1478, 1999), Taylor *et al.* (*MR* **107**: 653, 2003), Crous *et al.* (*CBS Diversity Ser.* **2**, 2004), Crous *et al.* (*Stud. Mycol.* **58**: 1, 2007; phylogeny).

Bathelium Ach. (1803) nom. rej. = Trypethelium.

Bathelium Trevis. (1861) nom. cons., Trypetheliaceae. *c.* 30. fide Harris (*More Florida Lichens*, 1995), Prado *et al.* (*MR* **110**: 511, 2006; phylogeny), Aptroot *et al.* (*Biblthca Lichenol.* **97**, 2008; Costa Rica).

Bathyascus Kohlm. (1977), Halosphaeriaceae. 5 (marine), widespread. See Ravikumar & Vittal (*MR* **95**: 370, 1991).

Bathystomum Füisting (1868) ? = Massaria fide Saccardo (*Syll. fung.* 326 **19**: 142, 1910).

Batista (Augusto Chaves; 1916-1967; Brazil). Professor of Phytopathology, Escola Superior de Agricultura; founder and Director, Instituto de Micologia da Universidade do Recife [now Universidade Federal de Pernambuco]. A visit to IMI in 1951 (Batista, *Boletim da Secretaria de Agricultura, Industria e Comercio do Estado de Pernambuco* **22**: 29, 1953) influenced his decision to establish the Instituto de Micologia in Recife. Pioneered study of tropical ascomycetes in Brazil. Most collections in Recife (**URM**), some in **IMI**. *Publs.* Author of more than 600 papers and monographs, mainly accounts and revisions of Brazilian ascomycetes, often with various co-workers; most of these works appeared as a numbered series, *Publicações. Instituto de Micologia da Universidade do Recife* [IMUR] (1954 on), some published in a range of journals, others in a long series of offset printed pamphlets published by the IMUR itself [*Publicação* **301** lists the titles of nos 1-300; *Publicação* **674** the titles of nos 301-673]. *Biogs, obits etc.* Carmeiro (*Mycol.* **60**: 1137, 1969) [portrait]; Singer (*Sydowia* **22**: 343, 1969); Aguilar (*Acta Amazonica* **18**: 39, 1988 [list of Batista types in INPA]); Da Silva & Minter (*Mycological Papers* **169**, 1995 [checklist of 3,340 species, with host, substratum and state indexes, and a bibliography); Grummann (1974: 771).

Batistaella Cif. (1962) = Phaeosaccardinula fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Batistamnus J.L. Bezerra & Cavalc. (1967) nom. dub., Fungi. See von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Batistia Cif. (1958), Batistiaceae. Anamorph *Acrostroma*. 1, Brazil. See Samuels & Rodrigues (*Mycol.* **81**: 52, 1989), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004; phylogeny).

Batistiaceae Samuels & K.F. Rodrigues (1989), ? Sordariomycetes (inc. sed.). 2 gen., 2 spp.

Lit.: Samuels & Rodrigues (*Mycol.* **81**: 52, 1989), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004), Lumbsch & Huhndorf (*MR* **111**: 1064, 2007).

Berengeria Trevis. (1853) = Rinodina fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Berggrenia Cooke (1879), ? Pezizales. 1 or 2, New Zealand. See Buchanan & May (*N.Z. Jl Bot.* **41**: 407, 2003; NZ conservation).

Bergorea Nieuwl. (1916) ≡ Robergea.

Berkelella (Sacc.) Sacc. (1891), Clavicipitaceae. Anamorph *Polycephalomyces*. 2 (on *Myxomycetes*), widespread. See Seifert (*Stud. Mycol.* **27**, 1985; as *Byssostilbe*), Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999), Bischoff *et al.* (*Mycotaxon* **86**: 433, 2003).

Berkeley (Miles Joseph; 1803-1889; England). Studied at Cambridge University; became a priest, working first in Margate and later Northamptonshire, living at King's Cliffe till 1868, then at Sibbertoft. A great mycologist, once described as 'the last of the old race', Berkeley's chief work was with fungi (including lichen-forming species), though his interests in natural history were very wide: he also wrote about molluscs, mosses, algae, and gardening. He recognized that potato blight was caused by a fungus (1846). He was in touch with Fries, Montagne, and other mycologists, and from 1848 did much work with Broome. Berkeley's early work was done with great care but later, because of the large number of microfungi sent to him, there were more errors. In 1879 his collections were amalgamated with those of the Royal Botanic Gardens, Kew (**K**). *Publs.* His first printed mycological work was *British Fungi* (for which he distributed exsiccati) in Smith's *English Flora* (**5** (2), 1836) [= Hooker's *British Flora*, **2** (2)]; he supplemented this (in collaboration with Broome) by *Notices of British Fungi* (1837-1885) [index in *TBMS* **17**: 308, 1933; reprint, 1967]; in other papers he provided accounts of fungi from the then British colonies, the USA (especially collections of Curtis, q.v.), and other countries, and names for about 6,000 new species; of his 400 papers on mycology, some were short notes, such as those in the *Gardeners' Chronicle* (1845 onwards, including the group of papers on 'vegetable pathology', 1854-1857 [see *Phytopathological Classics* **8**, with biography and portrait]), and others books, e.g. *Introduction to Cryptogamic Botany* (1857) and *Outlines of British Fungology* (1860). *Biogs, obits etc.* Ainsworth (*Mycologist* **21**: 126, 1987) [portrait]; Buczacki (*British Mycological Society Symposium Series* **17**: 1, 1991); Grummann (1974: 368); Stafleu & Cowan (*TL-2* **1**: 192, 1976); Stafleu & Mennega (*TL-2, Suppl.* **2**: 98, 1993).

Berkeleyna Kuntze (1898) ≡ Cephalotrichum Link.

Berkleasmium Zobel (1854), anamorphic *Pleosporales*, Hsp.#eP.1. 21, widespread. See Moore (*Mycol.* **51**: 734, 1961; key), Ellis (*Dematiaceous Hyphomycetes*, 1971), Ellis (*More Dematiaceous Hyphomycetes*, 1976), Yip (*Australas. Pl. Path.* **17**: 31, 1988), Bussaban *et al.* (*Fungal Diversity* **8**: 73, 2001; Thailand), Somrithipol & Jones (*Fungal Diversity* **12**: 169, 2003), Zhao & Zhang (*Mycotaxon* **89**: 241, 2004; China), Pinnoi *et al.* (*Mycol.* **99**: 378, 2007; phylogeny), Wang *et al.* (*MR* **111**: 1268, 2007; phylogeny).

Berlese (Augusto Napoleone; 1864-1903; Italy). Professor of Plant Pathology, School of Agriculture, Milan. Responsible for parts of Saccardo's *Sylloge* and for starting (with his brother, Antonio Berlese, the zoologist) the *Rivista di Patologia Vegetale* (1892 onwards). *Publs. Fungi Moricolae* (1885-1889); *Icones Fungorum ad usum Sylloges Saccardianae Adcommodatae* (1890-1905); papers on *Pleospora* (1888), the *Lophiostomataceae* (1890), *Dematophora* and *Rosellinia* (1892), *Cladosporium* and *Dematium* (1895), and many more. *Biogs, obits etc.* Antonio Berlese (*Rivista di Patologia Vegetale* **10**: 347, 1904); Cavara (*Annales Mycologici* **1**: 178, 1903); Grummann (1974: 513); Stafleu & Cowan (*TL-2* **1**: 197, 1976); Stafleu & Mennega (*TL-2, Suppl.* **2**: 101, 1993).

Berlesiella Sacc. (1888) = Capronia fide Müller *et al.* (*TBMS* **88**: 63, 1987; synonymy), Barr (*Mycotaxon* **41**: 419, 1991), Untereiner & Naveau (*Mycol.* **91**: 67, 1999).

Berteromyces Cif. (1954) = Passalora fide Deighton (*Mycol. Pap.* **112**, 1967), Crous & Braun (*CBS Diversity Ser.* **1**: 571 pp., 2003).

Bertia De Not. (1844), Bertiaceae. 14 (from wood), widespread. See Corlett & Krug (*CJB* **62**: 2561, 1985), Subramanian & Sekar (*Kavaka* **18**: 19, 1993;

Indian spp.), Huhndorf *et al.* (*MR* **108**: 1384, 2004; phylogeny), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny).

Bertiaceae Smyk (1981), Coronophorales. 1 gen., 14 spp.
Lit.: Subramanian & Sekar (*Kavaka* **18**: 19, 1993), Huhndorf *et al.* (*MR* **108**: 1384, 2004; phylogeny).

Bertiella (Sacc.) Sacc. & P. Syd. (1899) = Massarina fide Eriksson & Yue (*Mycotaxon* **27**: 247, 1986).

Bertiella Kirschst. (1906) ≡ Kirschsteinia.

Bertossia Cif. & Tomas. (1953) = Mycoglaena fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Bertramia Mesnil & Caullery (1897), Chytridiomycota. 1, widespread. See Weiser & McCauley (*Z. Parasitkde* **43**: 299, 1974).

Bertrandia R. Heim (1936) = Hygrocybe fide Kuyper (*in litt.*).

Bertrandiella R. Heim (1966) = Lactocollybia fide Singer (*Agaric. mod. Tax.* edn 3, 1975).

Berwaldia J.I.R. Larsson (1981), Microsporidia. 2. See Larsson (*Parasitology* **83**: 325, 1981).

Bessey (Ernst Athearn; 1877-1957; USA). Professor of Botany and Mycology, Michigan Agricultural College, East Lansing, 1910-1946. Author of the first American textbook of mycology (1935, 1950 [edn 2]) [see Literature]. *Biogs, obits etc.* Barnett (*Mycol.* **50**: 1, 1958) [bibliography, portrait]; Grummann (1974: 204); Stafleu & Cowan (*TL-2* **1**: 219, 1976); Stafleu & Mennega (*TL-2, Suppl.* **2**: 141, 1993).

beta-spore (**B-spore**, **β-spore**), a fertile, usually hamate, spore of an anamorph of the *Valsaceae* (*Phomopsis*). Cf. alpha-spore.

Bettsia Skou (1972), Ascosphaeraceae. Anamorph *Chrysosporium*-like. 1 (in pollen on honeycomb), Europe. See Skou (*Friesia* **11**: 62, 1975), Maghrabi & Kish (*Mycol.* **78**: 676, 1986), Maghrabi & Kish (*Mycol.* **79**: 519, 1987; isozymes), Kuraishi *et al.* (*Antonie van Leeuwenhoek* **77**: 179, 2000; ubiquinones), James & Skinner (*J. Invert. Path.* **90**: 98, 2005; molecular diagnostics).

Bharatheeya D'Souza & Bhat (2002), anamorphic *Pezizomycotina*, H?.?.?. 2, India. See D'Souza & Bhat (*Mycotaxon* **83**: 399, 2002).

Bhargavaella Sarj. Singh & K.S. Srivast. (1980), anamorphic *Pezizomycotina*, Hso.#eP.3. 1, India. See Singh & Srivastava (*J. Indian bot. Soc.* **58**: 391, 1979).

bi- (prefix), twice; having two; two-.

biallelic (of an incompatibility system), having 2 alleles per locus; cf. multiallelic.

Biannularia Beck (1922) = Catathelasma fide Singer (*Agaric. mod. Tax.* edn 3, 1975).

Biannulariaceae Jülich (1982) nom. rej. = Tricholomataceae.

Biatora Ach. (1809) = Stenhammarella fide Hertel (*Beih. Nova Hedwigia* **24**, 1967).

Biatora Fr. (1817), Ramalinaceae (L). *c.* 42, widespread (temperate). See Hafellner (*Herzogia* **8**: 53, 1989), Printzen (*Biblthca Lichenol.* **60**, 1995), Printzen (*Cryptog. bot.* **5**: 105, 1995), Printzen & Tønsberg (*Bryologist* **102**: 692, 1999; N Am.), Printzen *et al.* (*Lichenologist* **31**: 491, 1999; RAPDs), Ekman (*MR* **105**: 783, 2001; phylogeny), Printzen & Tønsberg (*Biblthca Lichenol.* **86**: 133, 2003; pigments), Printzen & Tønsberg (*Symb. bot. upsal.* **34** no. 1: 343, 2004; N Am.), Printzen & Otte (*Graphis Scripta* **17**: 56, 2005; key to European and Macaronesian spp.).

Biatoraceae A. Massal. ex Stizenb. (1862) = Ramalinaceae.

Biatorella De Not. (1846), Biatorellaceae (L). *c.* 31, widespread. See Magnusson (*Rabenh. Krypt.-Fl.* **9** 5.1: 15, 1935), Magnusson (*Annals Cryptog. Exot.* **7**: 115, 1935), Hafellner & Casares-Porcel (*Nova Hedwigia* **55**: 309, 1992; typification), Weber & Nash (*Lichenologist* **24**: 101, 1992; N Am.), Hafellner (*Cryptog. bot.* **5**: 99, 1995).

Biatorellaceae M. Choisy ex Hafellner & Casares (1992), Lecanorales (L). 2 gen. (+ 3 syn.), 33 spp.
Lit.: Hafellner & Casares-Porcel (*Nova Hedwigia* **55**: 309, 1992), Weber & Nash (*Lichenologist* **24**: 101, 1992).

Biatorellina Henn. (1903) ? = Tryblidiopsis fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Biatorellopsis C.W. Dodge (1965) = Pleopsidium fide Castello & Nimis (*Lichenologist* **26**: 283, 1994).

Biatoridina Schczedr. (1964) = Epithyrium fide Sutton (*Mycol. Pap.* **141**, 1977).

Biatoridium J. Lahm ex Körb. (1860), Pezizomycotina (L). 3, widespread (temperate). See Hafellner (*Acta Bot. Fenn.* **150**: 39, 1994), Jørgensen (*Taxon* **53**: 521, 2004; nomencl.), Reeb *et al.* (*Mol. Phylogen. Evol.* **32**: 1036, 2004; phylogeny).

Biatorina A. Massal. (1852) nom. rej. = Catinaria fide Jørgensen & Santesson (*Taxon* **42**: 881, 1993).

biatorine (of apothecia), of the lecideine type, pale or more or less coloured and soft in consistency.

Biatorinella Dechatres & Werner (1974) = Fuscidea fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Biatorinopsis Müll. Arg. (1881) = Coenogonium Ehrenb. fide Rivas Platas *et al.* (*Fungal Diversity* **23**: 255, 2006).

Biatoropsis Räsänen (1934), Tremellaceae. Anamorph *Hormomyces*-like. 1 (causing galls, 'carpoids', on *Usnea*), widespread. See Diederich & Christiansen (*Lichenologist* **26**: 47, 1994).

Biatriospora K.D. Hyde & Borse (1986), Dothideomycetes. 1 (on mangrove wood), Seychelles. See Hyde & Borse (*Mycotaxon* **26**: 263, 1986), Kohlmeyer & Volkmann-Kohlmeyer (*Bot. Mar.* **34**: 1, 1991).

Bibanasiella R.F. Castañeda & W.B. Kendr. (1991), anamorphic *Pezizomycotina*, Hsp.1bH.12. 1, Cuba. See Castañeda Ruiz & Kendrick (*Univ. Waterloo Biol. Ser.* **35**: 14, 1991).

Bibbya J.H. Willis (1956) = Toninia fide Santesson (*Muelleria* **1**: 91, 1959).

Bibliography of Systematic Mycology. Produced by CABI, and appearing twice annually since 1943, this lists new and recently published work on systematic mycology, arranged in categories which include the major taxonomic groups of fungi, biographies, checklists, obituaries, regional mycotas etc., and fungal generic name indexes. The great thesauri of mycological literature produced by Ciferri, Lindau and Sydow

provided coverage of mycological literature up to the year 1930. The *Bibliography of Systematic Mycology* provides a current continuation of these works, from the early 1940s onwards. The years between still remain uncovered by any single publication. See also Literature.

Bibulocystis J. Walker, Beilharz, Pascoe & Priest (2006), Raveneliaceae. 2 (on on *Albizia*, *Daviesia* (*Leguminosae*)), Australia; New Caledonia. See Walker *et al.* (*Australas. Pl. Path.* **35**: 11, 2006).

bibulous (of the surface of a pileus), able to take up water.

bicampanulate, like two bells arranged mouth to mouth (Fig. 23.20).

Biciliopsis Diederich (1997), ? Chaetothyriaceae. 1 (lichenicolous), Papua New Guinea. See Aptroot *et al.* (*Biblthca Lichenol.* **64**, 1997), Hoffmann & Hafellner (*Biblthca Lichenol.* **77**: 1, 2000).

Biciliospora Petr. (1952) = Nitschkia fide von Arx (*Sydowia* **34**: 13, 1981), Subramanian & Sekar (*Kavaka* **18**: 19, 1993).

Biciliosporina Subram. & Sekar (1993), Nitschkiaceae. 1 (from bark), India. See Subramanian & Sekar (*Kavaka* **18**: 19, 1993).

biconic (of spores), like two cones attached base to base (Fig. 23.27).

Biconiosporella Schaumann (1972), Sordariomycetidae. 1 (from wood, marine), Europe. See Kohlmeyer & Volkmann-Kohlmeyer (*Bot. Mar.* **34**: 1, 1991), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004).

Bicornispora Checa, Barrasa, M.N. Blanco & A.T. Martínez (1996), ? Coryneliaceae. Anamorph *Exophiala*. 1 (dead stems), Spain. See Checa *et al.* (*MR* **100**: 500, 1996).

Bicricium Sorokīn (1889) nom. conf., Chytridiales.

Bicrouania Kohlm. & Volkm.-Kohlm. (1990), Melanommataceae. 1 (marine), France. See Kohlmeyer & Volkmann-Kohlmeyer (*MR* **94**: 685, 1990).

Bidenticula Deighton (1972) = Fusarium fide Booth & Sutton (*in litt.*).

Bidonia Adans. (1763) = Hydnum fide Donk (*Taxon* **5**, 1956).

bifarious, in two lines or series; distichous.

bifid, having a crack or division near the middle; forked.

Bifidocarpus Cano, Guarro & R.F. Castañeda (1994), ? Onygenaceae. 2, Cuba. See Cano *et al.* (*Mycotaxon* **52**: 53, 1994), Udagawa & Uchiyama (*Cryptog. Mycol.* **21**: 75, 2000).

Biflagellospora Matsush. (1975), anamorphic *Pezizomycotina*, Hso.0eH.1/19. 1, Japan. See Matsushima (*Icon. microfung. Matsush. lect.*: 16, 1975), Sivichai & Hywel-Jones (*MR* **103**: 908, 1999; Thailand).

Biflagellosporella Matsush. (1993), anamorphic *Pezizomycotina*, Hso.1bH.1. 1, Peru. See Matsushima (*Matsush. Mycol. Mem.* **7**: 44, 1993).

Biflua Jørg. Koch & E.B.G. Jones (1989), Pezizomycotina. 1, Denmark. See Koch & Jones (*CJB* **67**: 1187, 1989), Kohlmeyer & Volkmann-Kohlmeyer (*Bot. Mar.* **34**: 1, 1991).

Bifrontia Norman (1872) = Naetrocymbe Körb. fide Keissler (*Rabenh. Krypt.-Fl.* **9**, **1**, 1933).

Bifusella Höhn. (1917), Rhytismataceae. Anamorph *Crandallia*. 10, widespread. *B. faullii* (needle-cast in *Abies*), *B. linearis* (on pine). See Cannon & Minter (*Mycol. Pap.* **155**, 1986), Hansen & Lewis (*Compendium of Conifer Diseases*, 1997), Hou *et al.* (*CJB* **83**: 37, 2005; Canada).

Bifusepta Darker (1963), Rhytismataceae. 1, N. America. See Darker (*Mycol.* **55**: 816, 1963).

Biharia Thirum. & Mishra (1953) = Stenella fide Ellis (*Dematiaceous Hyphomycetes*, 1971), Braun (*Monogr. Cercosporella, Ramularia Allied Genera (Phytopath. Hyphom.)* **2**: 374, 1998), Braun *et al.* (*Mycol. Progr.* **2**: 3, 2003).

bilabiate (1) two-lipped; (2) (of asci), ones in which the ectotunica splits in a lip-like manner to expose the endotunica (e.g. *Pertusaria*).

bilaminate, two-layered.

Bilboque Viégas (1960), anamorphic *Pezizomycotina*, Hso.1eP.?. 1, Brazil. See Viégas (*Bragantia* **19**: 903, 1960).

Bilgrami (Krishna Sahai; 1933-1996; India). Student (1954-1957) then Lecturer (1958-1963), Allahabad University; Reader, Jodhpur University (1963-1970); Professor & Head, Botany Department, Bhagalpur University (1970-1993). Noted for his work on environmental pollution, mycotoxin contamination of animal and human food, and environmental biology, specifically in relation to ecology of the Ganga river and thermal springs of Bihar; compiled the first comprehensive checklist of India's fungi. *Publs.* (with Jamaluddin & Rizwi) *Fungi of India, Lists and References* edn 2 (1991). *Biogs, obits etc.* Tandon (*Indian Phytopathology* **50** (1): 159, 1997).

Bilgramia Panwar, Purohit & Chouhan (1974), anamorphic *Pezizomycotina*, Hso.#eP.3. 1, India. See Carmichael *et al.* (*Genera of Hyphomycetes*, 1980).

Bilimbia De Not. (1846), Lecanorales (L). Probably close to *Lecania*. See Veldkamp (*Lichenologist* **36**: 191, 2004), Llop (*Lichenologist* **38**: 279, 2006), Naesborg *et al.* (*MR* **111**: 581, 2007; phylogeny).

Bilimbiospora Auersw. (1861) nom. rej. = Leptosphaeria fide Holm (*Taxon* **24**: 475, 1975).

Bimeris Petr. (1949), anamorphic *Pezizomycotina*, Cpd.1eH.?. 1, Ecuador.

Bimuria D. Hawksw., Chea & Sheridan (1979), ? Montagnulaceae. 1 (from soil), New Zealand. See Hawksworth (*SA* **6**: 238, 1987; posn), Kruys *et al.* (*MR* **110**: 527, 2006; posn), Schoch *et al.* (*Mycol.* **98**: 1041, 2006; phylogeny).

binate, in two parts.

binding hyphae, see hyphal analysis.

binucleate-phase, the dikaryo-phase.

Binucleospora A.M. Bronnvall & J.I.R. Larsson (1995), Microsporidia. 1. See Bronnvall & Larsson (*Eur. J. Protist.* **31**: 63, 1995).

bio- (prefix), pertaining to life.

biocide, a substance which kills living organisms. Cf. biostat.

Bioconiosporium Bat. & J.L. Bezerra (1964), anamorphic *Pezizomycotina*, Hso.#eP.1. 3, widespread. See Batista & Bezerra (*Publções Inst. Micol. Recife* **417**: 4, 1964), Castañeda Ruiz & Heredia (*Mycotaxon* **76**: 125, 2000).

biocontrol, see Biological control.

bioconversion, the conversion of one material, usually a waste, into a product of increased value (e.g. of lignocellulosic residues for ethanol production); see Saddler (Ed.) (*Bioconversion of forest and agricultural plant residues*, 1993), Biodegradation, Biodeterioration, Biotechnology.

Biodegradation. A term sometimes used synonymously with Biodeterioration (q.v.). However, it is more correctly employed to describe breakdown of materials in a manner beneficial to man, e.g. the re-

moval of and/or use of wastes. It has been defined as 'the harnessing, by man, of the decay abilities of organisms to render a waste material more useful or acceptable' (Allsopp & Seal, *Introduction to biodeterioration*, 1986), and as such covers use of fungi and other organisms (mainly bacteria) in solid or liquid state fermentations to improve digestibilities of, for example, lignocellulosic wastes to ruminants or to produce single cell proteins from wastes. Examples of economically beneficial fungal biodegradation (often in combination with other organisms) include: composting of straw, manure, agricultural waste and bark; mushroom cultivation, including biodegradation of logs by shiitake fungi; production of single cell proteins using alkanes, brewery wastes, molasses and sulphite waste liquids; solid waste treatment of sludge, sewage; pulp and paper mill effluent treatment; waste water treatment, particularly from distilleries and tanneries. Although the term 'biodegradable' is sometimes used to describe decay of natural materials such as forest leaf litter, the concept of biodegradability has come to be used more colloquially in recent years in connexion with detergents, plastics etc. which may break down when discarded into the environment. There is as yet no universally accepted definition of the term **biodegradable**, particularly when applied to these materials. There are outstanding questions regarding whether the term implies complete mineralization and hence removal of the waste from the environment or whether degradation to a small non-toxic molecule will suffice. Several bodies are working to produce a satisfactory definition, e.g. International Biodeterioration Research Group (IBRG), American Society for the Testing of Materials (ASTM).

See Bioconversion, Biodegradation, Bioremediation. See Bennett *et al.* (*Use of fungi in biodegradation* in Hurst [Ed.], *Manual of Environmental Microbiology* edn 2, 2002). See also: Biodeterioration, Bioremediation, Biotransformation.

Biodeterioration. Any undesirable change in the properties of a material caused by the vital activities of organisms (Hueck, 1965). Fungi play an important part in biodeterioration. Some representative examples of fungal damage are: to **animal feeding stuffs**, Snow *et al.* (*Ann. appl. Biol.* **31**: 102, 1944); **building materials**, Batista *et al.* (*Atas Inst. Mycol. Recife* **5**: 311, 1967; fungi, incl. lichens), Martin & Johnson (*Biodet. Abstr.* **6**: 101, 1992; bibl. control lichens), May *et al.* (*Biodet. Abstr.* **7**: 109, 1993; review), Richardson (*The vanishing lichens*, 1975), Singh (*Building mycology*, 1994), see also monuments (below), weathering; **stone**, May *et al.* (*Biodet. abstr.* **7**: 109, 1993); **electrical equipment**, Wasserbauer (*Internat. Biodet. Bull.* **3**: 1, 1967); **food**, see Food spoilage; **fuel**, see kerosene fungus; **glass and optical equipment**, Ohtsuki (*Bot. Mag. Tokyo* **75**: 221, 1962), Nagamuttu (*Internat. Biodet. Bull.* **3**: 25, 1967); **grain**, Christensen & Kauffman (*Grain storage. The role of fungi in quality and loss*, 1969); **gunpowder**, Lacey (*TBMS* **74**: 195, 1980); **leather**, Musgrave (*Ann. appl. Biol.* **34**, 1947), Gordon (*in* O'Flaherty *et al.* (Eds) (*The chemistry and technology of leather*, **4**, 1965); **meat**, Jensen (*Microbiology of meats*, 1942); **monuments**, Nimis *et al.* (*Licheni i conservazione dei monumenti*, 1992), see also building materials (above), weathering; **paint**, Eveleigh (*Ann. appl. Biol.* **49**: 403, 1961; *TBMS* **44**: 573, 1961, esp. *Phoma violacea*), 7th Paint Research Institute Symposium (*J. Coatings Technology* **50**: 35, 1978); **paper**, Sée (*Les maladies du papier piqué*, 1919), Wang (*Tech. Publ. Sta. Univ. Coll. Forestry Syracuse* **87**, 1965; fungi of pulp and paper; cellulolytic fungi); **polyurethane**, Pathirana & Seal (*Internat. Biodet.* **20**: 163, 229, 1984); **structural timber**, see Wood-attacking fungi; **textiles**, Thaysen & Bunker (*The microbiology of cellulose, hemicellulose, pectins and gums*, 1927), Prindle (*Microbiology of textile fibres, Textile Rev.* 1933-6), Morris (*J. Text. Inst.* **18**: T99, 1927), Galloway (*J. Text. Inst.* **26**: T123, 1935); **tobacco**, Papavassiliou *et al.* (*Mycopath.* **44**: 117, 1971; cigarettes); **wood, archaeological**, Blanchette (*Biodet. Abstr.* **9**: 113, 1995). (*Building mycology*, 1994), *Biodeterioration Abstracts* (1987-2001; quarterly), *International Biodeterioration & Biodegradation* (1965-; originally as *International Biodeterioration Bulletin*). See also: Biodegradation, Bioremediation.

Biodiversity (Biological diversity). The variety and value of Life on Earth from the genetic through the organismal to the ecological levels.

The variety and value of fungi at all of those levels is no smaller than for animals or plants: for fungi, the very small proportion which are satisfactorily known (Cannon & Hawksworth, *Adv. Pl. Path.* **11**: 277, 1995), the large numbers of species (see Numbers of fungi), and their importance in ecosystem functioning (Christensen, *Mycol.* **81**: 1, 1989) are all factors arguing for prioritized attention in biodiversity studies. There is a pressing need for inventories (q.v.), which are one of the principal ways of assessing biodiversity, since in many parts of the world, many ecosystems remain almost unexplored for fungi, and biodiversity 'hotspots' for fungi may be different from those for animals or plants.

The UN Convention on Biological Diversity, negotiated in Rio de Janeiro in 1992, became effective at the end of 1993; by June 2008, 191 governments were parties to the convention (but not Andorra, the Holy See, Iraq, Somalia or the USA). The Convention has focused the subject of biodiversity in political circles; many countries have now developed or are developing programmes to survey and value their natural biotic resources and investigate how they can best be conserved and sustainably used. Initiatives such as the IUBS/UNESCO/SCOPE DIVERSITAS programme, the GEF/UNEP Global Biodiversity Assessment and the Species 2000 and Systematics Agenda 2000 projects are prominent elements of such research and development efforts.

Although the convention explicitly states that it covers all forms of biodiversity, it is worded in terms of 'animals, plants and microorganisms', categories into which fungi do not easily fit. Not surprisingly, therefore, many (perhaps most) of the reports and biodiversity strategy and action plans produced by

individual countries in response to the convention contain no mention of fungi. To date, the convention has not been subjected to critical evaluation by the mycological community in respect of its impact on conservation of fungal diversity and the sustainable use of fungi.

Lit.: Allsopp *et al.* (Eds) (*Microbial Diversity and Ecosystem Function*, 1995); Aptroot (*Fungal Diversity* **6**: 1, 2001) [200 spp. on one tree]; Galloway (*Biodiv. Conserv.* **1**: 312, 1992) [lichens]; Groombridge (Ed.) (*Global Biodiversity*, 1992); Hawksworth (*MR* **95**: 641, 1991); Hawksworth (Ed.) Conserv.* **1**: 293, 1992); Rossman *et al.* (*Protocols for an All Taxa Biodiversity Inventory of Fungi.*, 1998); Schulze & Mooney (Eds) (*Biodiversity and Ecosystem Function*, 1994); Solbrig *et al.* (Eds) (*Biodiversity and Global Change*, edn 2, 1994).

biogenous, living on another living organism; parasitic.

Biographical notices, for list see Authors' names.

Bioindication. The use of organism(s) (**bioindicators**) expressing particular symptoms or responses to indicate changes in some environmental influence; various fungi, including leaf-inhabiting, mycorrhizal and lichen-forming species, are used as bioindicators of acid rain (q.v.), air pollution (q.v.), ammonium eutrophication (Brown, *in* Bates & Farmer, 1992: 259), dating surfaces (see Lichenometry), ecological continuity (see RIEC), fire (Wolseley *et al.*, *Global Ecol. Biogeogr. Lett.* **4**: 116, 1995), heavy metals (Gordon *et al.*, *J. Trop. Ecol.* **11**: 1, 1995; Sosak-Świderska, *Geophysical Res. Abstracts* **10**: EGU2008-A-11527, 2008), radionuclides (see air pollution), and water levels (see Aquatic fungi).

Lit.: Bates & Farmer (Eds) (*Bryophytes and lichens in a changing environment*, 1992), Boddy *et al.* (Eds) (*Fungi and ecological disturbance* [*Proc. R. Soc. Edinb.* B **94**], 1988), Burton (*Biological monitoring of environmental contaminants: plants*, 1986), Ellenberg *et al.* (*Biological monitoring: signals from the environment*, 1991), Fellner (*Agriculture Ecosystems and Environment* **28**, 115, 1989), Hawksworth (*in* Swaminathan & Jana, *Biodiversity· implications for global food security*: 184, 1992), Jeffrey & Madden (Eds) (*Bioindicators and environmental management*, 1991), Richardson (*Pollution monitoring with lichens*, 1992).

biologic form (Marshall Ward) or **race** (Klebahn), see physiologic race.

Biological control (Biocontrol). The use of one or more organisms (agents) to maintain another organism (pest) at a level at which it is no longer a problem. Fungal pathogens, parasites and antagonists are being exploited to control a range of agricultural pests, including arthropods, nematodes, weeds and crop diseases (Association of Applied Biologists, *The exploitation of micro-organisms in applied biology*, 1990; Burge, *Fungi in biological control systems*, 1988; Butt *et al*, *Fungi as biocontrol agents: progress, problems and potential*, 2001); although rarely openly discussed, they have also been used in political and military contexts (see Bioterrorism and fungi). They may be used alone or as part of an integrated pest management scheme (see Maredia *et al.*, *Integrated pest management in the global arena*, 2003). Two distinct approaches can be adopted: classical, involving the release of a coevolved fungal pathogen into an exotic environment where the target pest is an alien or non-indigenous species; inundative, through the application of a mass-produced, typically necrotrophic fungus as a mycopesticide (q.v.). Entomopathogenic fungi in genera such as *Beauveria*, *Metarhizium*, *Paecilomyces* and *Verticillium*, are being used for inundative biological control (see mycopesticides), while *Entomophthora radicans* has been classically introduced into Australia for control of Lucerne aphid (Milner *et al.*, *J. Aust. Ent. Soc.* **21**: 113, 1982).

Nematophagous fungi include the nematode trapping fungi (*Arthrobotrys*, *Dactylella*, *Geniculifera*, *Monacrosporium*), endoparasites (*Hirsutella*, *Catenaria*, *Meria*, *Nematoctonus*, *Nematophthora*) and highly specific egg parasites (*Dactylella oviparasitica*, *Paecilomyces lilacinus*, *Verticillium chlamydosporium*) (Stirling, *in* Burge, 1988). Immediate prospects for the exploitation of nematophagous fungi as biological control agents are uncertain since problems of formulation and application still have to be overcome (Stirling, *Biological control of plant parasitic nematodes*, 1992; Mankau, *J. Nematology* **12**: 244, 1980).

Fungal pathogens for the biological control of weeds have been extensively investigated (Charudattan & Walker (Eds), *Biological control of weeds with plant pathogens*, 1982; TeBeest (Ed.), *Microbial control of weeds*, 1991), using both the classical approach with obligate pathogens such as rusts and smuts, and the inundative approach, with necrotrophic pathogens in the genera *Colletotrichum* and *Phytophthora* (see mycopesticides). Successful control of skeleton weed has been achieved in Australia following release of the European rust *Puccinia chondrillina* (Hasan, *Ann. appl. Biol.* **99**: 119, 1981), and of mistflower in Hawaii with the white smut *Entyloma ageratinae* from the Caribbean (Trujillo, *Proc. VI Int. Symp. Biol. Control Weeds* 25, 1985; Barreto & Evans, *TBMS* **91**: 81, 1988), and of blackberry in Chile with the imported rust *Phragmidium violaceum* (Oehrens, *FAO Pl. Prot. Bull.* **25**: 26, 1977). For risk assessment see Evans (*Aust. Pl. Path.* **29**: 1, 2000).

Mycoparasites and antagonistic fungi, particularly in the genera *Gliocladium*, *Sphaerellopsis*, *Trichoderma* and *Verticillium*, have been evaluated for biological control of crop diseases (Cook & Baker, *The nature and practice of biological control of plant pathogens* 1984; Hornby (Ed.), *Biological control of soil-borne plant pathogens*, 1990), Kubicek & Harman (*Trichoderma and Gliocladium* **1**. Basic biology, taxonomy and genetics, 1998), Harman & Kubicek (*Trichoderma & Gliocladium* **2**. Enzymes, biological control and commercial applications, 1998); see Mycopesticides for more details; bacteria and protozoa as well as other fungi have been tried against *Phytophthora cinnamomi* (Scott, *Adv. Pl. Path.* **11**: 131, 1995).

Biological control is particularly important in forestry where economics rarely permit other options. A classic example is control of the conifer pathogen *Heterobasidion annosum* which colonizes stumps of freshly felled trees, then spreading to adjacent living trees, by stump application of spores of a competitor, *Phlebiopsis gigantea* (Rishbeth, *Ann. Appl. Biol.* **52**:

63, 1963).

Fungal diseases may themselves be subject to biological control by other organisms. *Streptomyces* has been used to suppress fungi causing damping off of alfalfa seedlings (Jones & Samac, *Biological control* 7: 196, 1996) and transmissible hypovirulence using dsRNA viruses (q.v.) has been used with considerable success as a form of biological control for chestnut blight caused by *Cryphonectria parasitica* (see Diamandis & Perlerou, *Advances in hort. sci.* **20**: 50, 2006).

Biological warfare and fungi. see Bioterrorism and fungi.

bioluminescence, see Luminescent fungi.

biomass, the quantity (vol., wt, etc.) of organisms (or living material) in a particular environment (e.g. fungi in soil); sometimes extended to the quantity of organic matter in a material (e.g. domestic refuse). See Boucher & Stone (*in* Carroll & Wicklow, *The fungal community*, edn 2 : 538, 1992; in lichens on trees), Frankland (*Soil Biol. Biochem.* **7**: 339, 1975; **10**: 323, 1978; estimation live biomass), Newell (*in* Carroll & Wicklow, 1992: 521; in litter), Ritz *et al.* (Eds) (*Beyond the biomass*, 1994).

biomass support particles (ESPs), large open structures made from knitted stainless steel and crushed into spheres or reticulated polyurethane foam cut into cubes used for immobilization (q.v.) of fungal cells.

Bionectria Speg. (1919), Bionectriaceae. Anamorph *Clonostachys*. 4 (on living and dead leaves, and old woody tissues), widespread. See Rossman *et al.* (*Mycol.* **85**: 685, 1993), Schroers & Samuels (*Z. Mykol.* **63**: 149, 1997), Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999), Schroers *et al.* (*Mycol.* **91**: 365, 1999), Schroers *et al.* (*Stud. Mycol.* **45**: 63, 2000), Samuels *et al.* (*Tropical Mycology* **2**: 13, 2002; key), Samuels *et al.* (*CBS Diversity Ser.* **4**, 2006; USA), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny), Hirooka & Kobayashi (*Mycoscience* **48**: 81, 2007; Japan).

Bionectriaceae Samuels & Rossman (1999), Hypocreales. 35 gen. (+ 24 syn.), 281 spp.

BioNET-INTERNATIONAL (BI). Established in June 1993 and with a secretariat hosted by CABI, BioNET is an international not-for-profit initiative dedicated to promoting taxonomy, especially in the biodiversity rich but economically poorer countries of the world. Focused on less industrialised countries and working via ten regional partnerships, BioNET provides a forum for collaboration for all taxonomists and other users of taxonomy. Working with partners locally and internationally, our work contributes to raising awareness of the importance of taxonomy to society, building and sharing of capacity, and meeting taxonomic needs via innovative tools and approaches. BioNET supports implementation of UNEP's Global Taxonomy Initiative having been cited as an actor over forty times in key decisions of the Convention on Biological Diversity. See also: www.bionet-intl.org (website).

biont, a living organism; commonly used as a suffix to a word indicating the nature or position of the biont; see Symbiosis.

biophagous, see biogenous.

biophilous, see biogenous.

Biophomopsis Petr. (1931), anamorphic *Pezizomycotina*, St.0eH.?. 1, West Indies.

Bioporthe Petr. (1929), Diaporthales. 1. See Müller & von Arx *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 87, 1973), Barr (*Mycol. Mem.* **7**, 1978), Cannon (*Fungal Diversity* **7**: 17, 2001).

Bioprospecting. The action of surveying natural ecosystems for economically valuable biotic products. For fungi, such products might include novel edible fungi, valuable enzymes for biotechnology companies, metabolites for pharmaceutical investigation, or new biological control agents. The extent to which the provisions of the Convention on Biological Diversity (1992) will impinge on bioprospecting will depend on national legislation and regulation systems relating to indigenous intellectual property rights (yet to be developed by most countries); for aspects of the Convention relating to microbial groups see Kelley (*in* Allsopp *et al.* (Eds), *Microbial diversity and ecosystem function*: 415, 1995), Sands (*in* Kirsop & Hawksworth (Eds), *The biodiversity of microorganisms and the role of microbial resource centres*: 9, 1994), Reid *et al.* (Eds) (*Biodiversity prospecting*, 1993). Bioprospecting may also relate to use of organisms to detect and even extract valuable minerals. Some macrofungi are known to accumulate gold (Borovička *et al.*, *MR* **109**: 951, 2005). See Bioindication, Patent protection.

Bioremediation. The use of fungi and other organisms to remove, reduce or ameliorate pollution or potentially polluting materials from the environment. This may be brought about by adding suitable nutrients or selected strains or mixtures of organisms to the substratum; they may be naturally occurring or genetically manipulated. There is an extensive literature on this topic. Fungi (particularly white rot fungi) have been used for degradation of lignocellulosic wastes and more recently for xenobiotics. There have also been studies of possible use of fungi for decomposing dyes in industrial effluents (e.g. Muthezhilan *et al.*, *Res. J. Microbiol.* **3**: 204, 2008; see also Marine fungi), for degrading chlorpyrifos (Fang *et al.*, *International Biodet. & Biodeg.* **61**: 294, 2008) and polycyclic aromatic hydrocarbons (Wu *et al.*, *Biodegradation* **19**: 247, 2008) in contaminated soils. The recent discovery that some fungi appear to be attracted by and grow better in the presence of nuclear radiation has aroused considerable interest with further possibilities for fungal bioremediation. See Alexander (*Biodegradation and bioremediation*, 1994), Baker & Herson (Eds) (*Bioremediation*, 1994), Gadd (*MR* **111**: 3, 2007; review), Kerr (*Handbook of bioremediation*, 1994), Lamar *et al.* (*in* Leather (Ed.), *Frontiers in industrial mycology*: 127, 1992), Scheremaker *et al.* (*in* Betts (Eds), *Biodegradation: natural and synthetic materials*: 157, 1992), Zhdanova *et al* (*MR* **108**: 1089, 2004). See also: Biodegradation, Biodeterioration.

bios, a mixture of aneurin (thiamin, vitamin B1), 'biotin', and other substances in yeasts which, on addition to culture media, gives a better growth of yeast (Wildiers, 1901; see Bonner, *Bot. Rev.* **3**: 616, 1937).

Bioscypha Syd. (1927), Helotiaceae. Anamorph *Chalara*-like. 2, C. America. See Carpenter (*Mem. N. Y. bot. Gdn* **33**, 1981), Samuels & Rogerson (*Brittonia* **42**: 105, 1990), Paulin & Harrington (*Stud. Mycol.* **45**: 209, 2000; anamorph).

biostat, a substance which causes living organisms to stop growing. Cf. biocide.

Biostictis Petr. (1950), Stictidaceae. Anamorph *Rhinocladiella*-like. 4, widespread. See Sherwood (*Occ. Pap. Farlow Herb. Crypt. Bot.* **15**: 105, 1980; key).

biosystematics (1) biological systematics (see systematics); (2) (in botany), experimental taxonomy, including genetical, cytological and ecological aspects. The first usage has a wide currency amongst zoologists and is the preferred term for use in a general context.

biotechnology (1) (in mycology and microbiology), 'all lines of work by which products are produced from raw materials with the aid of living organisms' (Ereky, 1919); see Arora (*Fungal biotechnology in agriculture, food and environmental applications*, 2003), Bud (*Nature* **337**: 10, 1989), Coombs (*Macmillan dictionary of biotechnology*, 1986), Hui & Khachatourians (Eds) (*Food biotechnology: microorganisms*, 1995), Tkacz & Lange (*Advances in fungal biotechnology for industry, agriculture and medicine*, 2004), Wainwight (*An introduction to fungal biotechnology*, 1992); (2) technology concerned with machines in relation to human needs (obsol.).

See Genetic engineering, Industrial mycology, Molecular biology.

Bioterrorism and fungi. Biological weapons are devices which disseminate disease-causing organisms or poisons to kill or harm humans, animals or plants. They generally comprise two parts – an agent and a delivery device. In addition to their military use as strategic weapons or on a battlefield, they can be used for assassinations (having a political effect), can cause social disruption (for example, through enforced quarantine), kill or remove from the food-chain livestock or agricultural produce (thereby causing economic losses), or create environmental problems.

Almost any disease-causing organism (such as bacteria, viruses, fungi, prions or rickettsiae) or toxin (poisons derived from animals, plants or microorganisms, or similar substances synthetically produced) can be used in biological weapons. Historical efforts to produce biological weapons have included: aflatoxin; anthrax; botulinum toxin; foot-and-mouth disease; glanders; plague; Q fever; rice blast; ricin; Rocky Mountain spotted fever; smallpox; and tularaemia. The agents can be altered from their natural state to make them more suitable for use as weapons.

Delivery devices can also take any number of different forms. Some more closely resemble weapons than others. Past programmes have constructed missiles, bombs, hand grenades and rockets. A number of programmes also constructed spray-tanks to be fitted to aircraft, cars, trucks, and boats. Efforts have also been documented to develop delivery devices for use in assassination or sabotage missions, including a variety of sprays, brushes, and injection systems as well as contaminated food and clothes.

As well as concerns that these weapons could be developed or used by states, modern technology is making it increasingly likely they could be acquired by private organisations, groups of people or even individuals. Biological weapons have been used in politically-motivated or criminal acts on a number of occasions (United Nations Office at Geneva, www.unog.ch). Fungi thus have known and potential applications as biological weapons. Their use in this way is not new (there are documented examples, both government-sponsored and by private individuals). But such use is now prohibited by the Biological Weapons Convention. Those now involved in weaponizing fungi are thus unsurprisingly secretive, public awareness is generally low, and the topic has received little public debate, although there are many websites devoted to the issue. *Lit.*: Casadevall & Pirofski (*Medical mycol.* **44**: 689, 2006; weapon potential of human pathogenic fungi), Evans (*Phytopathol.* **97**: 1640, 2007; use of plant pathogen by private individuals for political purposes), Klassen-Fischer (*Clinics in Lab. Medicine* **26**: 387, 2006; review of fungi as bioweapons), Madden & Wheelis (*Ann. Rev. Phytopath.* **41**: 155, 2005; review of plant pathogens as weapons), Meselson & Robinson (The yellow rain affair: lessons from a discredited allegation. *In* Clunan *et al*, *Terrorism, war or disease? Unraveling the use of biological weapons*, 2008; alleged use of *Fusarium* toxins in Indo-China), Paterson (*MR* **110**: 1003, 2006; review of fungi and fungal toxins as weapons). See also Biological control, Hallucinogenic fungi, Mycopesticides, Mycotoxicoses.

Biotransformation. Also known as biological or microbial transformation, or more generally bioconversion; the use of fungi and other organisms to modify organic compounds to produce industrially, medically or environmentally important products. These are usually enzymatic reactions where the substrate may be metabolized or co-metabolized. The most useful reactions are quoted as oxidations, reductions, hydrolysis, condensation, isometisation, formation of new c-c bonds and introduction of hetero functions (Crueger & Crueger, 1990). Many transformations have been described but few are used industrially (e.g. transformations of antibiotics, steroids and sterols). *Rhizopus stolonifer* has been used to produce 11α-hydroxyprogesterone from progesterone. *Chaetomium gracile* is widely used in the sugar industry to supply dextranase needed during processing of bagasse (Eggleston & Monge, *Process Biochemistry* **40**: 1881, 2005). In several processes fungal spores are used directly to catalyze biotransformations. See Crueger & Crueger (*Microbial transformations in biotechnology: a textbook of industrial microbiology*, 1990), O'Sullivan (*in* Fogarty & Kelley (Eds), *Microbial enzymes and biotechnology*, edn 2: 295, 1990). See also: Biodegradation.

biotroph (adj. **-trophic**), an obligate parasite (cf. necrotroph, saprotroph), growing on another organism, in intimate association with its cytoplasm.

Biotyle Syd. (1929) = Pseudomeliola fide von Arx (*Acta Bot. Neerl.* **7**: 503, 1958).

biotype (1) (Scheibe) = physiologic race; (2) one individual; a group of individuals having a like genetic make up (Christensen & Rodenhiser, *Bot. Rev.* **6**: 389, 1940; Waterhouse & Watson, *Proc. Linn. Soc. NSW* **66**: 269, 1941).

bipartite, having division into two.

bipolar (1) (of spore), at the two ends (poles); (2) (of an incompatibility system), having 1 locus; unifactorial; cf. tetrapolar; (3) occurring in both Arctic and Antarctic regions;.

Bipolaris Shoemaker (1959), anamorphic *Cochliobolus*, Hso.≡ eP.26. *c.* 73, widespread. See Luttrell (*Revue Mycol.* Paris **41**: 271, 1977), Alcorn (*Mycotaxon* **13**: 339, 1981), Alcorn (*Mycotaxon* **17**: 1, 1, 1983; gen. concepts), Sivanesan (*Mycol. Pap.* **158**, 1987; keys), Alcorn (*Ann. Rev. Phytopath.* **26**: 37, 1988; gen. taxonomy), Muchovej *et al.* (*Fitopatol. Brasil* **13**: 211, 1988; keys), Hanau *et al.* (*Exp. Mycol.* **13**: 337, 1989; conidiogenous cell development), Alcorn (*Mycotaxon* **39**: 361, 1990; additions to genus), Alcorn (*Mycotaxon* **41**: 329, 1991; n. combs and syns), Khasanov (*Opredelitel' Gribov-Vozbul. Appl. Microbiol.* **41**: 61, 2005; RT-PCR).

biseriate (biserial), in two series.

Biseucladinomyces Cif. & Tomas. (1953) = Cladonia.

Bispora Corda (1837), anamorphic *Pezizomycotina*, Hso.1eP.4. 7, widespread (temperate). See Sutton (*CJB* **47**: 609, 1969), Wang (*Mem. N. Y. bot. Gdn* **49**: 20, 1989; pleomorphism), Hawksworth & Cole (*Fungal Diversity* **11**: 87, 2002; exclusion of lichenicolous spp.).

Bispora Fuckel (1870) ≡ Bisporella.

Bisporella Sacc. (1884), Helotiales. Anamorph *Bloxamia*. 19, widespread. The taxonomic position is inconclusive in preliminary phylogenetic studies. See Korf & Carpenter (*Mycotaxon* **1**: 57, 1974), Dumont & Korf (*Caldasia* **12**: 339, 1978), Sharma & Korf (*Mycotaxon* **16**: 326, 1982), Korf & Bujakiewicz (*Agarica* **6**: 302, 1985), Seifert & Carpenter (*CJB* **65**: 1262, 1987; anamorph), Johnston (*Mycotaxon* **31**: 345, 1988; anamorph), Lizoň & Korf (*Mycotaxon* **54**: 471, 1995), Gamundí & Romero (*Fl. criptog. Tierra del Fuego* **10**, 1998), Wang *et al.* (*Mol. Phylogen. Evol.* **41**: 295, 2006; phylogeny), Wang *et al.* (*Mycol.* **98**: 1065, 2006; phylogeny).

Bisporomyces J.F.H. Beyma (1940) = Chloridium fide Hughes (*CJB* **36**: 727, 1958).

Bisporostilbella Brandsb. & E.F. Morris (1971), anamorphic *Microascales*, Hsy.1eP.?. 1, USA. See Brandsberg & Morris (*Mycol.* **63**: 1078, 1971), Seifert *et al.* (*Czech Mycol.* **53**: 297, 2002).

Bisseomyces R.F. Castañeda (1985), anamorphic *Pezizomycotina*, Hso.#eP.10. 1, Cuba. See Castañeda (*Deuteromycotina de Cuba* Hyphomycetes **II**: 3, 1985).

Bitancourtia Thirum. & Jenkins (1953) = Elsinoë fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Bitrimonospora Sivan., Talde & Tilak (1974) = Monosporascus fide von Arx (*Kavaka* **3**: 33, 1976).

bitunicate (1) having two walls; (2) (of asci), with two functional layers, that may or may not rupture or extend at discharge; see ascus.

Bitunicostilbe M. Morelet (1971) = Spiropes fide Morelet (*Bulletin de la Société des Sciences naturelles et d'Archéologie de Toulon et du Var* **195**: 7, 1971), Deighton (*MR* **94**: 1096, 1990).

Bitzea Mains (1939) = Chaconia fide Thirumalachar & Cummins (*Mycol.* **41**: 523, 1949).

biuncinate, two-hooked.

Bivallum P.R. Johnst. (1991), Rhytismataceae. 6 (on conifers), Australasia; Chile. See Johnston (*Aust. Syst. Bot.* **4**: 355, 1991), Johnston (*Aust. Syst. Bot.* **14**: 377, 2001; Australasia).

bivalvate (1) (of spores), lens-shaped and having a hyaline rim, as in *Arthrinium*; (2) (of asci), see ascus.

Biverpa (Fr.) Boud. (1907) ? = Helvella fide Eckblad (*Nytt Mag. Bot.* **15**: 1, 1968).

biverticillate (of a penicillus), having branching at two levels, i.e. having metulae bearing phialides.

Bivonella (Sacc.) Sacc. (1891) = Thyridium Nitschke fide Cannon (*SA* **8**: 78, 1989).

Bizozzeria, see *Bizzozeria Sacc. & Berl.*

Bizzozeria Sacc. & Berl. (1885) = Lasiosphaeria See Lundqvist (*Symb. bot. upsal.* **20** no. 1, 1972).

Bizzozeria Speg. (1889) ≡ Thaxteria Sacc.

Bizzozeriella Speg. (1888), anamorphic *Pezizomycotina*, Hsp.0eH.?. 1, S. America. See Donk (*Persoonia* **1**: 189, 1960; nomencl.).

Bjerkandera P. Karst. (1879), Meruliaceae. 2, widespread (north temperate). See Ryvarden & Gilbertson (*Europ. Polyp.* **1**: 168, 1993), Anon. (*Mycologist* **18**: 174, 2004; *Bjerkandera adusta*).

Bjerkanderaceae Jülich (1982) = Hapalopilaceae.

black blotch, of clovers (*Cymadothea trifolii*): **- crottle**, see crottle; **- dot** of potato (*Colletotrichum coccodes*); **- jelly fungus**, basidioma of edible *Auricularia* spp.; **- knot** of plum and cherry (*Apiosporina morbosa*); **- leg** of beet (*Phoma betae*, *Pythium*, etc.); of pelargonium (*Pythium* spp.); **- line**, see zone lines; **- mildews**, *Meliolales*; **- piedra**, infection of hair shafts by *Piedraia hortae*; **- pustule** of *Ribes* (*Plowrightia ribesia*); **- root rot** of tobacco and other plants (*Thielaviopsis basicola*); of grapes (*Vitis*) (*Guignardia bidwellii*); **- scurf** of potato (*Thanatephorus cucumeris*, syn. *Corticium solani*); **- slime** of hyacinth (*Sclerotinia bulborum*); **- spot** of apple, see scab, apple; of rose (*Diplocarpon rosae*); **- stem rust** of cereals (*Puccinia graminis*); **- tip** of banana (*Musa*) (*Deightoniella torulosa*); **- tree lichen** (*Bryoria fremontii*) (Turner, *Econ. Bot.* **31**: 461, 1977); **- yeasts**, see yeasts.

blackfellows' bread (or native bread), the sclerotium (*Mylitta australis*) of the Australian *Polyporus mylittae*. See McAlpine (*J. Dep. Agric. Vict.* **2**, 1904), Willis (*Muelleria* **1**: 203, 1967; bibliogr.), Macfarlane *et al.* (*TBMS* **71**: 359, 1978; structure). There are similar sclerotia in India ('little mans' bread') and China.

Blakeslea Thaxt. (1914), Choanephoraceae. 2, widespread (esp. tropical). See Thaxter (*Bot. Gaz.* **58**: 353, 1914), Mehrotra & Baijal (*J. Elisha Mitchell scient. Soc.* **84**: 207, 1968), Kirk (*Mycol. Pap.* **152**: 61 pp., 1984; key), Zheng & Chen (*Acta Mycol. Sin.* Suppl. **1**: 40, 1986), Voigt & Wöstemeyer (*Gene* **270**: 113, 2001; phylogeny), Ho & Chang (*Taiwania* **48**: 232, 2003; Taiwan), Idnurm *et al. in* Heitman *et al.* (Eds.) (*Sex in Fungi*: 407, 2007; mating).

Blarneya D. Hawksw., Coppins & P. James (1980), anamorphic *Pezizomycotina*, Hso.1eH.38 (L). 1, Europe (western). See Hawksworth *et al.* (*J. Linn. Soc.* Bot. **79**: 358, 1979).

Blasdalea Sacc. & P. Syd. (1902), Vizellaceae. Anamorph *Chrysogloeum*. 1, Brazil. See Petrak (*Sydowia* **7**: 343, 1953).

Blasiphalia Redhead (2007), Agaricomycetes. 1, USA. *Hymenochaetales* or *Agaricales* (*Rickenella* clade). See Redhead (*Mycol.* **98**: 934, 2007).

Blastacervulus H.J. Swart (1988), anamorphic *Pezizomycotina*, Cac.0eP.4. 1, Australia. See Swart (*TBMS* **90**: 289, 1988).

Blastenia A. Massal. (1852) = Caloplaca fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Blasteniomyces Cif. & Tomas. (1953) ≡ Protoblastenia.

Blasteniospora Trevis. (1853) nom. rej. = Xanthoria fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

blasteniospore, a polarilocular (q.v.) ascospore.

blastic (of conidiogenesis), one of the two basic sorts of conidiogenesis (cf. thallic), characterized by a marked enlargement of a recognizable conidial initial *before* the initial is delimited by a septum. The conidium is differentiated from *part* of a cell (Kendrick, 1971: 255); **entero-**, when the inner wall (see tretic) or neither wall (see phialidic) of the blastic conidiogenous cell contributes to the formation of the **conidium** (blastic conidium) (cf. holoblastic); **holo-**, when both outer and inner walls of the blastic conidiogenous cell contribute to the formation of the conidium (cf. enteroblastic and see annellidic); **mono-**, when a conidiogenous cell has only one conidiogenous locus; **poly-**, when a conidiogenous cell has several conidiogenous loci.

Blasticomyces I.I. Tav. (1985), Laboulbeniaceae. 2, Asia. See Tavares (*Mycol. Mem.* **9**: 155, 1985), Majewski (*TMSJ* **29**: 249, 1988).

blastidium, a lichen propagule produced by the budding of thalli in a yeast-like manner (Poelt, *Flora, Jena* **169**: 23, 1980). Fig. 22E.

Blastobasidiomycetes, see *Basidiomycota*, *Ustomycetes*.

Blastobotrys Klopotek (1967), anamorphic *Trichomonascus*, Hso.0eH.6. 13, widespread. See Marvanová (*TBMS* **66**: 217, 1976), de Hoog *et al.* (*Antonie van Leeuwenhoek* **51**: 79, 1985; keys), de Hoog *in* Sugiyama (Ed.) (*Pleomorphic Fungi: The Diversity and its Taxonomic Implications*: 221, 1987; developmental cycle), Hoog & Smith *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 443, 1998), Suh *et al.* (*Mycol.* **98**: 1006, 2006; phylogeny), Blackwell *et al.* (*British Mycological Society Symposium Series* **25**: 357, 2007; ecology), Kurtzman (*Int. J. Syst. Evol. Microbiol.* **57**: 1154, 2007), Kurtzman & Robnett (*FEMS Yeast Res.* **7**: 141, 2007).

Blastocapnias Cif. & Bat. (1963) = Aithaloderma fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Blastocatena Subram. & Bhat (1989), anamorphic *Pezizomycotina*, Hsy.≡ eP.4. 1, India. See Subramanian & Bhat (*Kavaka* **15**: 43, 1987).

blastocatenate (of blastoconidia), formed in chains with the youngest at the apical or distal end of the chain.

Blastocladia Reinsch (1877), Blastocladiaceae. *c.* 15 (saprobes in water), widespread. See Emerson & Cantino (*Am. J. Bot.* **35**: 157, 1948), Das Gupta & John (*Indian Phytopath.* **41**: 521, 1988), Steciow (*Darwiniana* **37**: 335, 1999; Argentina).

Blastocladiaceae H.E. Petersen (1909), Blastocladiales. 5 gen. (+ 4 syn.), 40 spp.

Lit.: Olson (*Op. bot.* **73**: 1, 1984), Remy *et al.* (*Am. J. Bot.* **81**: 690, 1994), Bullerwell *et al.* (*Nucl. Acids Res.* **31**: 1614, 2003), Tanabe *et al.* (*J. gen. appl. Microbiol.* Tokyo **51**: 267, 2005).

Blastocladiales H.E. Peterson (1909). Blastocladiomycetes. 5 fam., 14 gen., 179 spp. Thallus monocentric

or polycentric; zoospores with a prominent nuclear cap of ribosomes, microtubule root consisting of 27 microtubules in groups of 3 extending from proximal end of kinetosome; freshwater or terricolous, saprobic or parasitic (*Coelomomyces* on mosquito larvae); cosmop. Fams:
(1) **Blastocladiaceae**
(2) **Catenariaceae**
(3) **Coelomomycetaceae**
(4) **Physodermataceae**
(5) **Sorochytriaceae**

Lit.: Sparrow (1960: 605; 1973), Fitzpatrick (1930: 130), Emerson & Robertson (*Am. J. Bot.* **61**: 303, 1974), Karling (1977, 1978), Dewel & Dewel (*CJB* **68**: 1968, 1977), Lange & Olson (*TBMS* **74**: 449, 1980), Olson (*Opera Bot.* **73**: 1, 1984; key fams), Dewel (*CJB* **63**: 1525, 1985), James *et al.* (*Mycol.* **98**: 860, 2006; molecular phylogeny), Hibbett *et al.* (*MR* **111**: 109, 2007), and see under Familes.

Blastocladiella V.D. Matthews (1937), Blastocladiaceae. 13, widespread. See Couch & Whiffen (*Am. J. Bot.* **29**: 582, 1942), Sparrow (*Aquatic Phycomycetes* Edn 2: 660, 1960; key), Cantino *in* Meynell & Gooder (Eds) (*Microbial reaction to environment*: 243, 1961; morphogenesis), Karling (*Mycopath. Mycol. appl.* **49**: 169, 1973; subgen.).

Blastocladiomycetes Doweld (2001). Blastocladiomycota. 1 ord., 5 fam., 14 gen., 179 spp. Ord.: **Blastocladiales**

Lit.: James *et al.* (*Mycol.* **98**: 860, 2006; molecular phylogeny), and see under Fam. and Ord.

Blastocladiomycota T.W. James (2007), Fungi. 1 class., 1 ord., 5 fam., 14 gen., 179 spp. Class: **Blastocladiomycetes**

Lit.: James *et al.* (*Mycol.* **98**: 860, 2006; molecular phylogeny), and see under Classes and Orders.

Blastocladiopsis Sparrow (1950), Blastocladiaceae. 2, USA; Cuba. See Sparrow (*Journal of the Washington Academy of Science* **40**: 52, 1950).

blastoconidium, a blastic (q.v.) conidium.

Blastoconium Cif. (1931), anamorphic *Pezizomycotina*, Hso.#eP.?. 2, widespread (tropical).

Blastodendrion (M. Ota) Cif. & Redaelli (1925) = Candida fide Zobel (*Arch. Hyg. Berlin* **130**: 205, 1943), Bai *et al.* (*Int. J. Syst. Evol. Microbiol.* **50**: 417, 2000).

Blastoderma B. Fisch. & Brebeck (1894) nom. ambig., anamorphic *Pezizomycotina*.

Blastodesmia A. Massal. (1852), Arthopyreniaceae (L). 1 (on *Fraxinus*), Europe. See Keissler (*Rabenh. Krypt.-Fl.* **9**: 384, 1937), Aptroot (*Biblthca Lichenol.* **44**, 1991; posn).

Blastodictys M.B. Ellis (1976), anamorphic *Pezizomycotina*, Hso.#eP.10. 1, Uganda. See Ellis (*More Dematiaceous Hyphomycetes*: 149, 1976).

Blastofusarioides Matsush. (1996), anamorphic *Pezizomycotina*, Hso.?.?. 1, Japan. See Matsushima (*Matsush. Mycol. Mem.* **9**: 2, 1996).

Blastomyces Costantin & Rolland (1888), Ajellomycetaceae. 1, Africa; America. See *Ajellomyces*, blastomycosis. See van Oorschot (*Stud. Mycol.* **20**, 1980), Watts *et al.* (*Am. Jl Clin. Path.* **93**: 575, 1990; giant forms of *B. dermatitidis*), Geber *et al.* (*J. Gen. Microbiol.* **138**: 395, 1992; phylogeny, rRNA sequence and phylogeny in *B. dermatitidis*), Hurst & Kaufman (*J. Clin. Microbiol.* **30**: 3043, 1992; serology), Walsh *et al.* (*Manual of Clinical Microbiology* Edn 6: 749, 1995; review), Guého *et al.* (*Mycoses* **40**: 69, 1997; epidemiology), Di Salvo (*Topley & Wilson's Microbiology and Microbial Infections* Edn 9. Vol. **4** Medical Mycology: 337, 1998; review), Larone *et al.* (*Manual of Clinical Microbiology*: 1259, 1999; review), Huerre *et al.* (*J. Mycol. Médic.* **12**: 5, 2002; morphology), Untereiner *et al.* (*Mycol.* **96**: 812, 2004; phylogeny), Bialek *et al.* (*FEMS Immunol. Med. Microbiol.* **45**: 355, 2005; molecular diagnosis), Pounder *et al.* (*J. Clin. Microbiol.* **44**: 2977, 2006; molecular diagnosis).

Blastomyces Gilchrist & W.R. Stokes (1898) = Zymonema fide Dodge (*Medical Mycology*, 1935).

Blastomycetes. Class often used for anamorphic yeasts (q.v.) and then divided into two Orders, (1) *Cryptococcales* (reproduction by budding, ballistospores absent; ascomycetous affinities, but see under Order), and (2) *Sporobolomycetales* (reproduction by budding and ballistospores; basidiomycetous affinities). This simplistic scheme is no longer tenable (see Kendrick, *The fifth kingdom*, edn 2, 1992). Included as anamorphic fungi in this edition of the *Dictionary*.

blastomycin, an antigen made from *Blastomyces dermatitidis*, esp. for skin testing; **- S**, an antifungal antibiotic from *Streptomyces griseochromogenes* (Fukunage *et al.*, *Bull. agric. chem. Soc. Japan* **19**: 181, 1955) used against rice blast (*Pyricularia oryzae*).

Blastomycoides Castell. (1928) ≡ Zymonema.

blastomycosis (1) a disease in humans caused by *Blastomyces dermatitidis* (teleomorph *Ajellomyces dermatitidis*; see Al-Doory & Di Salvo, *Blastomycosis*, 1992); **N. American -**; Gilchrist's disease; (2) any mycotic disease in humans having budding cells in the parasitized tissues; **cheloidal -**, see lobomycosis; **European -**, see cryptococcosis; **S. American -**, see *Paracoccidioides*.

Blastomycota. Proposed for *Ascoblastomycetes* and *Basidioblastomycetes*, anamorphic yeasts with ascomycetous and basidiomycetous affinities respectively (Moore, *Bot. Mar.* **23**: 361, 1980).

Blastophoma Kleb. (1933) ? = Sclerophoma fide Sutton (*Mycol. Pap.* **141**, 1977).

Blastophorella Boedijn (1937), anamorphic *Pezizomycotina*, Hsy.1eP.6. 1, Java; Sumatra.

Blastophorum Matsush. (1971), anamorphic *Pezizomycotina*, Hso.≡ eH.10/18. 4, Papua New Guinea. See Matsushima (*Microfungi of the Solomon Islands and Papua-New Guinea*: 8, 1971), Matsushima & Matsushima (*Matsush. Mycol. Mem.* **9**: 31, 1996).

Blastophragma Subram. (1995), anamorphic *Pezizomycotina*. 2, S.E. Asia. See Subramanian (*Kavaka* **20/21**: 57, 1995).

Blastoschizomyces Salkin, M.A. Gordon, Sams. & Rieder (1982) = Dipodascus fide Polachek *et al.* (*J. Clin. Microbiol.* **30**: 2318, 1992; taxonomic review), Kurtzman & Fell (*Yeasts, a taxonomic study* 4th edn, 1998), D'Antonio *et al.* (*J. Clin. Microbiol.* **37**: 2927, 1999; onychomycosis).

Blastospora Dietel (1908), Mikronegeriaceae. 3 (on *Rosaceae* or *Cupressaceae* (0, I); on *Smilacaceae* or *Betulaceae* (II, III)), Japan; China; Korea; Nepal. See Mains (*Am. J. Bot.* **25**: 677, 1938), Kaneko & Hiratsuka (*Mycol.* **73**: 577, 1981), Ono *et al.* (*Mycol.* **78**: 253, 1986).

blastospore, a spore formed by marked enlargement of a recognizable conidium initial before the initial is delimited by a septum. The conidium differentiates from part of the cell. See Kendrick (Ed.) (*Taxonomy of fungi imperfecti*, 1971).

Blastosporella T.J. Baroni & Franco-Mol. (2007), Lyophyllaceae. 1, Colombia. See Baroni *et al.* (*MR* **111**: 572, 2007).

Blastosporidium M. Hartmann (1912) ? = Coccidioides fide Sutton (*in litt.*).

Blastostroma C.Z. Wei, Y. Harada & Katum. (1998), anamorphic *Mycodidymella*, Hso.?.?. 1, Japan. See Wei *et al.* (*Mycol.* **90**: 337, 1998).

Blastotrichum Corda (1838) nom. dub., anamorphic *Pezizomycotina*, Hso.≡ eH.?. 5, widespread (esp. Europe). See Gams & Hoozemans (*Persoonia* **6**: 99, 1970).

blematogen (blematogen layer), the undifferentiated tissue which becomes the universal veil in agarics (Atkinson, *Am. J. Bot.* **1**: 3, 1914).

Blennorella Kirschst. (1944) ? = Colletotrichum fide Sutton (*Mycol. Pap.* **141**, 1977).

Blennoria Moug. & Fr. (1825), anamorphic *Pezizomycotina*, St.0eH.15. 1, Europe. See Sutton (*Taxon* **21**: 319, 1972).

Blennoriopsis Petr. (1920), anamorphic *Pezizomycotina*, Hso.0eH.?. 1, Europe.

Blennothallia Trevis. (1853) = Collema F.H. Wigg. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Blepharia (Pers.) Ainsw. & Bisby (1943) nom. inval. = Dematium fide Mussat (*Syll. fung.* **15**: 62, 1901).

blepharoplast (of zoospores), the basal body or granule (**kinetosome**) from which arise the longitudinal fibres constituting the axoneme of a flagellum; joined to the nucleus by a **rhizoplast.**

Bleptosporium Steyaert (1961), anamorphic *Amphisphaeriaceae*, Cpd.≡ eP.19. 1, Argentina. See Sutton (*Mycol. Pap.* **88**, 1963).

blewits (blewitt, blue leg, bluette), basidiomata of the edible *Lepista saeva* (syn. *Tricholoma personatum*); **wood -**, *L. nuda* (syn. *T. nudum*).

blight, a common name for a number of different diseases of plants (and for insect attack), esp. when leaf damage is sudden and serious; **potato -**, **late -** (*Phytophthora infestans*); **early -** (*Alternaria solani*).

blister rust (of 5-needled pines), *Cronartium ribicola*.

Blistum B. Sutton (1973), anamorphic *Clavicipitaceae*. 2 (on myxomycetes), widespread. See Seifert (*in litt.*), Bischoff *et al.* (*Mycotaxon* **86**: 433, 2003; phylogeny).

Blitridium De Not. (1863) = Triblidium fide Nannfeldt (*Nova Acta R. Soc. Scient. upsal.*, 1932).

Blodgettia E.P. Wright (1881) ≡ Blodgettia Harv.

Blodgettia Harv. (1858), anamorphic *Pezizomycotina*, Hso.-.-. 2 (mycophycobionts; marine), widespread. See Kohlmeyer & Kohlmeyer (*Marine Mycology*, 1979), Hawksworth (*Notes R. bot. Gdn Edinb.* **44**: 549, 1987), Kohlmeyer & Volkmann-Kohlmeyer (*Bot. Mar.* **34**: 1, 1991).

Blodgettiomyces Feldmann (1939) ≡ Blodgettia Harv. fide Hawksworth (*Notes R. bot. Gdn Edinb.* **44**: 549, 1987).

Blogiascospora Shoemaker, E. Müll. & Morgan-Jones (1966), Amphisphaeriaceae. Anamorph *Seiridium*. 1, Europe. See Shoemaker *et al.* (*CJB* **44**: 247, 1966), Kang *et al.* (*MR* **103**: 53, 1999).

Bloxamia Berk. & Broome (1854), anamorphic *Bisporella*, Hsp.0eP.22. 8, widespread. See Nag Raj & Kendrick (*Monogr. Chalara Allied Genera*, 1975), Johnston (*Mycotaxon* **31**: 345, 1988; teleomorph), Arambarri *et al.* (*Mycotaxon* **43**: 327, 1992; key).

blue cheeses, ripened and flavoured by *Penicillium roqueforti* (Mitosp. fungi), e.g. Roquefort, Stilton, Gorgonzola, Danish Blue etc.

blue stain, blue-grey colouration of wood caused by the growth of brown fungal hyphae in the surface layers.

Blumenavia Möller (1895), Phallaceae. 3, S. America; Africa. See Vargas-Rodriguez & Vázquez-García (*Mycotaxon* **94**: 7, 2005; Mexico).

Blumeria Golovin ex Speer (1975), Erysiphaceae. Anamorph *Oidium* subgen. *Oidium*. 1, widespread. *B. graminis* (cereal and grass mildew). See Braun (*Beih. Nova Hedwigia* **89**, 1987), Caffier *et al.* (*Pl. Path.* **48**: 582, 1999; genetic diversity), Mori *et al.* (*Mycoscience* **41**: 437, 2000; phylogeny), Salari *et al.* (*Iran. Jl agric. Res.* **34**: 353, 2003; physiological races), Wyand & Brown (*Molecular Plant Pathology* **4**: 187, 2003; infraspecific variation), Takamatsu (*Mycoscience* **45**: 147, 2004; phylogeny), Wang *et al.* (*Mycol.* **98**: 1065, 2006; phylogeny), Inuma *et al.* (*Mol. Phylogen. Evol.* **44**: 741, 2008; phylogeny).

Blumeriaceae V.P. Gelyuta (1988) = Erysiphaceae.

Blumeriella Arx (1961), Dermateaceae. Anamorphs *Microgloeum*, *Phloeosporella*. 5 (on *Rosaceae*), N. America; Europe. *B. jaapii* (anamorph *P. padi*), cherry leaf spot. See von Arx (*Phytopath. Z.* **42**: 161, 1961), Jakobsen & Jørgensen (*Tidsskr. Plant.* **90**: 161, 1986), Williamson & Bernard (*CJB* **66**: 2048, 1988; on *Spiraea*), Nauta & Spooner (*Mycologist* **14**: 21, 2000; UK).

blusher, the, basidioma of the edible *Amanita rubescens*.

Blytridium, see *Blitridium*.

Blyttiomyces A.F. Bartsch (1939), Chytridiaceae. *c.* 10, widespread. See Dogma & Sparrow (*Mycol.* **61**: 1149, 1970), Dogma (*Kalikasan* **8**: 237, 1979; key), Letcher *et al.* (*Australasian Mycologist* **22**: 99, 2004; Australia).

BM, The Natural History Museum (London, UK); founded 1753; known by official name The British Museum (Natural History) up to 1989; governed by a Board of Trustees and funded through the Office of Arts and Libraries; most non-lichenized fungi were transferred to **K** in 1969 (Brenan & Ross, *Lichenologist* **4**: 157, 1970); see Anon. (*The history of the collections contained in the Natural History Department of the British Museum*, **1**, 1904), Stearn (*The Natural History Museum at South Kensington*, 1981).

boathook hair, characteristic terminally bifid hair, produced intracellularly in principal-form zoospore of *Saprolegnia*, and which ornaments the cyst formed by this zoospore; principal-form cyst or secondary cyst (see Beakes, 1983).

Bodinia M. Ota & Langeron (1923) = Trichophyton fide Sutton (*in litt.*).

Boedijnopeziza S. Ito & S. Imai (1937) = Cookeina fide Denison (*Mycol.* **59**: 306, 1967), Pfister (*Phytologia* **27**: 55, 1973), Weinstein *et al.* (*Mycol.* **94**: 673, 2002), Iturriaga & Pfister (*Mycotaxon* **95**: 137, 2006).

Boehmia Raddi (1806) nom. rej. = Arrhenia fide Kuyper (*in litt.*) Rejected against *Leptoglossum* but should also be rejected against *Arrhenia*.

Boeomycomyces, see *Baeomycomyces*.

Boerlagella Penz. & Sacc. (1897) [non *Boerlagella* Cogn. 1891, *Sapotaceae*] ≡ Boerlagiomyces.

Boerlagellopsis C. Ramesh (1988) nom. nud., ? Dothideales. 1, India. See Eriksson & Hawksworth (*SA* **8**: 62, 1989).

Boerlagiomyces Butzin (1977), Tubeufiaceae. 6, widespread (tropical). See Crane *et al.* (*CJB* **76**: 602, 1998), Kodsueb *et al.* (*Fungal Diversity* **21**: 105, 2006; phylogeny).

Bogoriella Zahlbr. (1928), ? Verrucariaceae (L). 1, Java.

Bogoriellomyces Cif. & Tomas. (1954) ≡ Bogoriella.

Bohleria Trevis. (1860) = Placidiopsis fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Bohuslavia J.I.R. Larsson (1985), Microsporidia. 1.

Boidinia Stalpers & Hjortstam (1982), Russulaceae. 10, widespread. Polyphyletic. See Ginns & Freeman (*Biblthca Mycol.* **157**, 1994), Wu & Buchanan (*Mycotaxon* **67**: 123, 1998).

Bojamyces Longcore (1989), Legeriomycetaceae. 3 (in *Ephemeroptera*), Spain; Mexico; USA. See Longcore (*Mycol.* **81**: 482, 1989), Valle & Santamaría (*Mycol.* **96**: 1386, 2004; Spain), White (*MR* **110**: 1011, 2006; phylogeny), Valle *et al.* (*Mycol.* **100**: 149, 2008; Mexico).

Bolacotricha Berk. & Broome (1851) = Chaetomium fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Bolbitiaceae Singer (1948), Agaricales. 17 gen. (+ 16 syn.), 287 spp.

Lit.: Watling & Gregory (*Biblthca Mycol.* **82**, 1981; nomenclator), Pegler (*Kew Bull.* Addit. Ser. **12**: 519 pp., 1986), Singer (*Agaric. mod. Tax.* 4th ed, 1986), Watling & Taylor (*Biblthca Mycol.* **117**: 61 pp., 1987), Singer & Hausknecht (*Pl. Syst. Evol.* **159**: 107, 1988), Watling (*Op. bot.* **100**: 259, 1989), Young (*Aust. Syst. Bot.* **2**: 75, 1989), Singer & Hausknecht (*Pl. Syst. Evol.* **180**: 77, 1992), Fukihara & Hongo (*Mycoscience* **36**: 425, 1995), Gerhardt (*Biblthca Botanica* **147**: 149 pp., 1996), Guidot *et al.* (*Appl. Environm. Microbiol.* **65**: 903, 1999), Aanen *et al.* (*Mycol.* **92**: 269, 2000), Moncalvo *et al.* (*Syst. Biol.* **49**: 278, 2000)

Lit.:, Peintner *et al.* (*Am. J. Bot.* **88**: 2168, 2001), Hallen *et al.* (*MR* **107**: 969, 2003), Walther *et al.* (*MR* **109**: 525, 2005), Walther & Weiss (*Mycol.* **98**: 792, 2006).

Bolbitius Fr. (1838), Bolbitiaceae. *c.* 25, widespread. See Singer (*Sydowia* **30**: 216, 1977; keys world spp.), Watling & Gregory (*Biblthca Mycol.* **82**, 1981), Watling (*British fungus flora* **3**, 1982; key 6 Br. spp.), Arnolds (*Persoonia* **18**: 201, 2003; The Netherlands), Walther & Weiss (*Mycol.* **98**: 792, 2006; anam.).

Boletaceae Chevall. (1826), Boletales. 35 gen. (+ 26 syn.), 787 spp.

Lit.: Pegler & Young (*TBMS* **72**: 353, 1979), Alessio (*Boletus Dill. ex L.*: 712 pp., 1985), Singer (*Agaric. mod. Tax.* 4th ed, 1986), Thiers (*Mem. N. Y. bot. Gdn* **49**: 355, 1989), Watling & Hollands (*Notes R. bot. Gdn Edinb.* **46**: 405, 1990), Singer *et al.* (*Beih. Nova Hedwigia* **102**: 99 pp., 1991), Lannoy & Estadès (*Monographie des Leccinum d'Europe*: 229 pp., 1995), Lakhanpal (*Stud. Cryptog. Bot.* **1**: 170 pp., 1996), Bruns *et al.* (*Mol. Ecol.* **5**: 257, 1998), Kretzer & Bruns (*Mol. Phylogen. Evol.* **13**: 483, 1999), Binder & Besl (*Micologia 2000*: 75, 2000), Watling (*Aust. Syst. Bot.* **14**: 407, 2001), Binder & Bresinsky (*Mycol.* **94**: 85, 2002), Binder & Bresinsky (*Feddes Repert.* **113**: 36, 2002), Lebel & Castellano (*Mycol.* **94**: 327, 2002), Trappe *et al.* (*Mycotaxon* **81**: 195, 2002), Peintner *et al.* (*MR* **107**: 659, 2003), Bakker & Kuyper (*Mycol.* **96**: 102, 2004), Bakker *et al.* (*New Phytol.* **163**: 201, 2004), Mello *et al.* (*J. Biotechn.* **121**: 318, 2006).

Boletales E.-J. Gilbert (1931). Agaricomycetidae. 17 fam., 96 gen., 1316 spp. Terrestrial or lignicolous, saprobic (when lignicolous usually causing brown rot), ectomycorrhizal, sometimes parasitic on ectomycorrhizal members of the Boletales, edible, a few species poisonous, cosmopolitan. Formerly used for the 'boletes', a group of fungi with fleshy fruitbodies and poroid hymenophore, usually growing terrestrially. The poroid hymenophore has arisen at least 5 times in the 8 clades of the Homobasidiomycetes (Hibbett & Thorn, *The Mycota* **7B**, 2001).

Classification: Fries (*Syst. mycol.* **1-3**, 1821-1832) put the fleshy poroid fungi in the genus *Boletus*. A number of his infragenerc groups have subsequently been raised to generic level, and a number of genera have been added. In general, bolete taxonomy reflected its eurocentric bias but Singer (*Agaricales mod. taxon.*, 4th ed., 1986) pointed out that bolete taxonomy can only be understood on the basis of knowledge of tropical species. The *Boletales* as accepted in this edition of the Dictionary also contain lamellate forms, gastroid forms (both epigeous and hypogeous). Consequently, they cannot be characterised in morphological terms, and diagnoses for the various families are not provided. Chemotaxonomic classifications (Gill & Steglich, *Progr. Chem. Nat. Prod.* **51**, 1987) are largely consistent with molecular data; see Binder & Hibbett (*Mycol.* **98**: 971, 2006), Hibbett *et al.* (*MR* **111**: 109, 2007). Fams:

(1) **Boletaceae**
(2) **Boletinellaceae**
(3) **Calostomataceae**
(4) **Coniophoraceae**
(5) **Diplocystidiaceae**
(6) **Gastrosporiaceae**
(7) **Gomphidiaceae**
(8) **Gyroporaceae**
(9) **Hygrophoropsidaceae**
(10) **Paxillaceae**
(11) **Protogastraceae**
(12) **Rhizopogonaceae**
(13) **Sclerodermatacea**
(14) **Serpulaceae**
(15) **Suillaceae**

Lit.: Singer (*Agaricales mod. taxon.*, 4th ed., 1986), Arpin & Kühner (*Bull. Soc. linn. Lyon* **46**: 83-108, 181-208, 1977; classification), Clémençon (*Anatomie der Hymenomyceten*, 1997), Gill & Steglich (*Progr. Chem. Nat. Prod.* **51**, 1987; pigment chemistry, Horak (*Synopsis generum Agaricalium*, 1967), Donk (*Reinwardtia* **3**: 275, 1955; nomenclature), Høiland (*Nord. J. Bot.* **7**: 705, 1987; chemotaxonomy).

No. 10, 1983), Singer, Araujo & Ivory (*Beih. Nova Hedw.* **77**, 1983), and under fams.

bolete, one of the *Boletales*.

Boletellaceae Jülich (1982) = Boletaceae.

Boletellites P. Briot, Lar.-Coll. & Locq. (1983), Fossil Fungi. 1, Australia.

Boletellus Murrill (1909), Boletaceae. *c.* 50, widespread (esp. subtropical). Separation of *Boletellus* and *Boletus* is still controversial, as spores with longitudinal ridges also occur in *Boletus*. See Singer (*Sydowia* **30**: 221, 1978; key), Singer *et al.* (*Beih. Nova Hedwigia* **105**: 3, 1992; key C. Am. spp.), Binder & Fischer (*Boll. Gruppo Micol. 'G. Bresadola'* **40**: 79, 1997; phylogeny, relationship with *Boletus*).

Boletinellaceae P.M. Kirk, P.F. Cannon & J.C. David (2001), Boletales. 2 gen. (+ 2 syn.), 14 spp.

Lit.: Corner (*Beih. Nova Hedwigia* **33**: 1, 1970), Cotter & Miller (*Mycol.* **77**: 927, 1985), Watling & Meijer (*Edinb. J. Bot.* **54**: 231, 1997), Bruns *et al.* (*Mol. Ecol.* **7**: 257, 1998; phylogeny), Deschamps & Moreno (*Mycotaxon* **72**: 205, 1999), Kretzer & Bruns (*Mol. Phylogen. Evol.* **13**: 483, 1999; phylogeny).

Boletinellus Murrill (1909), Boletinellaceae. 2 (on roots of *Fraxinus* but not forming ectomycorrhiza), N. America; Japan. See Brundrett & Kendrick (*Symbiosis* **3**: 315, 1987; ecology), Gruhn *et al.* (*Mycol.* **84**: 528, 1992; ecology), Nagasawa (*Rep. Tottori Mycol. Inst.* **39**: 1, 2001).

boletinoid (of hymenophores), having a structure intermediate between pores and gills.

Boletinus Kalchbr. (1867) = Suillus Gray fide Smith & Thiers (*The Boletes of Michigan*, 1971) See, Singer (*Sydowia* **30**: 227, 1977; key).

Boletium Clem. (1909) ≡ Volvoboletus.

Boletochaete Singer (1944), Boletaceae. 3, Africa; S.E. Asia. See Singer (*Mycol.* **36**: 359, 1944), Zang & Petersen (*Acta Bot. Yunn.* **26**: 619, 2004; Tibet).

Boletogaster Lohwag (1926) = Boletellus fide Singer (*Farlowia* **2**: 223, 1945).

Boletolichen Juss. (1789) = Helvella fide Mussat (*Syll. fung.* **15**, 1901).

Boletopsidaceae Bondartsev & Singer ex Jülich (1982) = Bankeraceae.

Boletopsis Fayod (1889), Bankeraceae. 5 (mycorrhizal), Europe. See Stalpers (*Stud. Mycol.* **35**: 29, 1993; key), Lohmeyer (*Mycologia Bavarica* **6**: 41, 2003), Bohlin (*MR* **108**: 3, 2004; conservation in Europe).

Boletopsis Henn. (1898) = Suillus Gray fide Singer (*Lilloa* **22**: 654, 1951).

Boletus Fr. (1821), Boletaceae. *c.* 300 (ectomycorrhizal), widespread. Some are edible (see cep). See Corner (*Boletus in Malaysia*, 1972), Singer (*Sydowia* **30**: 227, 1978; key), Lannoy & Estadès (*Docums Mycol.* Mémoire Hors Série **44**: 253, 2001; Europ.), Redeuilh & Simonini (*BSMF* **118**: 139, 2002; nomencl.), Beugelsdijk (*A Taxonomic Review of Boletus, Section Boletus in The Netherlands Using Molecular Tools, Part 1: Report; Part 2: Appendices*: 129 pp., 2004; Netherlands), Šutara (*Czech Mycol.* **57**: 1, 2005; anatomical characters), Watling *et al.* (*British Fungus Flora. Agarics and Boleti* Rev. & Enl. Edn **1**: 173 pp., 2005; Brit.).

Boletus L. (1753) = Phellinus fide Donk (*Persoonia* **1**: 173, 1960).

Boletus Tourn. ex Adans. (1763) = Morchella fide Donk (*Reinwardtia* **3**: 275, 1955).

Bolinia (Nitschke) Sacc. (1882) = Camarops fide Nannfeldt (*Svensk bot. Tidskr.* **66**: 335, 1972).

Boliniaceae Rick (1931), Boliniales. 7 gen. (+ 11 syn.), 40 spp.

Lit.: Nannfeldt (*Svensk bot. Tidskr.* **66**: 335, 1972), Samuels & Rogers (*Mycotaxon* **28**: 45, 1987), Rogers & Samuels (*Mycol.* **80**: 738, 1988), Untereiner (*Mycol. Soc. Amer. Newsl.* **39**: 52, 1988), Andersson *et al.* (*SA* **14**: 1, 1995; posn), Vasilyeva (*Mikol. Fitopatol.* **31**: 5, 1997), Park & Jong (*Mycoscience* **44**: 25, 2003), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004).

Boliniales P.F. Cannon (2001). Sordariomycetidae 2 fam., 8 gen., 41 spp. Stromata immersed to erumpent, crustose or pulvinate, sometimes absent, usually soft-textured, composed of thin-walled hyphal tissue. Ascomata perithecial, long-necked, sometimes vertically elongate, the ostiole periphysate. Interascal tissue of narrow true paraphyses, sometimes thin-walled and evanescent. Asci cylindrical, persistent, thin-walled, not fissitunicate, with a usually small, J- apical ring. Ascospores hyaline or brown, aseptate or transversely septate, sometimes with germ pores. Anamorphs not known. Saprobic in wood and bark, widespr. Affinities of this order are unclear; *Camarops* was traditionally linked to the *Xylariaceae* but molecular data indicates a closer relationship with the *Sordariales*. However, that assemblage has been unacceptably loosely defined in recent years. Fams:

(1) **Boliniaceae**

(2) **Catabotrydaceae**

Lit.: Andersson *et al.* (*SA* **14**: 1, 1995; posn).

Bolosphaera Syd. & P. Syd. (1917) = Phaeostigme fide Hansford (*Mycol. Pap.* **15**, 1946).

Bolton (James; 1750-1799; England). An amateur mycologist (probably in the weaving trade). Produced the first book in the English language dedicated to fungi. *Publs. An History of Fungusses, Growing about Halifax* [Yorkshire], 4 parts (1788-1791) [in German, by Willdenow, as *Geschichte der Merkwurdigsten Pilze*, 1795-1820). *Biogs, obits etc.* Grummann (1974: 257); Laplanche, (*Dictionnaire Iconographique des Champignons Superieurs (Hymenomycetes)*, 1894 [gives Friesian names for figures by Bolton, Bulliard, Paulet, Persoon, Sowerby, and others]); Petersen (*Mycotaxon* **5**: 498, 1977, index); Sartory & Maire (*Interpretation des Planches de J. Bolton An history of fungusses, vols. 1 & 2*, Paris); Shear (*TBMS* **17**: 302, 1933); Stafleu & Cowan (*TL-2* **1**: 264, 1976); Stafleu & Mennega (*TL-2, Suppl.* **2**: 296, 1993); Watling & Seaward (*Archives of Natural History* **10**: 89, 1981, biographical data, bibliography).

Bombardia (Fr.) P. Karst. (1873), Lasiosphaeriaceae. 1 (from wood), Europe; N. America. See Lundqvist (*Symb. bot. upsal.* **20** no. 1, 1972), Jensen (*Mycol.* **77**: 688, 1985; anatomy), Miller (*Sydowia* **55**: 267, 2003; anatomy), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004;

phylogeny), Miller & Huhndorf (*Mol. Phylogen. Evol.* **35**: 60, 2005; anatomy, phylogeny), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny).

Bombardiastrum Pat. (1893), Pezizomycotina. 1, S. America.

Bombardiella Höhn. (1909), Sordariales. 1, Java. See Eriksson & Hawksworth (*SA* **6**: 116, 1987).

Bombardioidea C. Moreau ex N. Lundq. (1972), Lasiosphaeriaceae. Anamorph *Angulimaya*. 4 (coprophilous), widespread. See Lundqvist (*Symb. bot. upsal.* **20** no. 1, 1972), Krug & Scott (*CJB* **72**: 1302, 1994; key), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004), Miller & Huhndorf (*Mol. Phylogen. Evol.* **35**: 60, 2005; anatomy, phylogeny).

Bombyliospora De Not. (1852) = Megalospora Meyen fide Hafellner & Bellemère (*Nova Hedwigia* **35**: 207, 1982).

Bombyliosporomyces Cif. & Tomas. (1953) = Megalospora Meyen.

bombysine, like silk.

Bommerella Marchal (1885), Chaetomiaceae. Anamorph *Scopulariopsis*-like. 1 (from soil), widespread. See von Arx *et al.* (*Beih. Nova Hedwigia* **84**, 1986; as *Chaetomium*).

Bomplandiella Speg. (1886), anamorphic *Pezizomycotina*, Hsp.0eP.?. 1, S. America.

Bonanseja Sacc. (1906), ? Rhytismatales. 1, Mexico.

Bonaria Bat. (1959), Micropeltidaceae. 3, widespread (tropical). See Batista (*Publções Inst. Micol. Recife* **56**: 438, 1959).

Bondarcevomyces Parmasto (1999), Tapinellaceae. 1, Asia. See Parmasto & Parmasto (*Mycotaxon* **70**: 219, 1999).

Bondartsev (Apollinaris Semenovich; 1877-1968; Russia). Head of the Phytopathology Department (1913-1931) then Head of Mycology, Department of Cryptogamic Plants (1931-1950), V.L. Komarov Botanical Institute, Leningrad; survived the siege of Leningrad (1941-1943) and awarded Defence of Leningrad medal and Order of Lenin. One of the founders of Russian mycology and plant pathologist; he collaborated with Singer (q.v.) proposing a new taxonomic system for polypores. *Publs.* [*Diseases and Protection of Cultivated Plants*] edn 3 (1931) [in Russian]; [*The Polyporaceae of the European USSR and the Caucasus*] (1953) [in russian; English translation, 1971]; [*Manual for Identification of Domestic Fungi*] (1956) [text in Russian]. *Biogs, obits etc.* Anon. ([*Mikologiya i Fitopatologiya*] **1**: 506, 1967, portrait [in Russian]); Anon. ([*Mikologiya i Fitopatologiya*] **3**: 550, 1969, bibliography, portrait [in Russian]).

Bondarzewia Singer (1940), Bondarzewiaceae. 3, widespread. See Corner (*Beih. Nova Hedwigia* **78**: 205, 1984; key S. E. Asia spp.), See Stalpers (*Stud. Mycol.* **40**: 48, 1996).

Bondarzewiaceae Kotl. & Pouzar (1957), Russulales. 8 gen. (+ 4 syn.), 48 spp.

Lit.: Donk (*Persoonia* **3**: 199, 1964), Korhonen (*Evolutionary Biology of the Fungi* Symposium of the British Mycological Society held at the University of Bristol, April 1986: 301, 1987), Redhead & Norvell (*Mycotaxon* **48**: 371, 1993), Stenlid *et al.* (*MR* **98**: 57, 1994), Stalpers (*Stud. Mycol.* **40**: 185 pp., 1996), Garbelotto *et al.* (*CJB* **76**: 397, 1998), Ginns (*Mycol.* **90**: 19, 1998), Niemelä & Korhonen (*Heterobasidion annosum, Biology, Ecology, Impact and Control*: 27, 1998), Schulze (*J. Phytopath.* **147**: 125, 1999), Ryvarden (*Karstenia* **40**: 153, 2000), Binder & Hibbett (*Mol. Phylogen. Evol.* **22**: 76, 2002), Binder *et al.* (*Systematics and Biodiversity* **3**: 113, 2005).

Bondarzewiales Jülich (1981) = Russulales.

Bondiella Piroz. (1972), ? Mesnieraceae. 1 (*Palmae*), Tanzania. See Pirozynski (*Mycol. Pap.* **129**, 1972), Hyde (*Mycotaxon* **57**: 347, 1996).

Bonia Pat. (1892) [non *Bonia* Balansa 1890, *Gramineae*] ≡ Mycobonia.

Boninogaster Kobayasi (1937), Hysterangiaceae. 1, Bonin Island.

Boninohydnum S. Ito & S. Imai (1940) = Gyrodontium fide Maas Geesteranus (*Persoonia* **3**: 187, 1964).

Bonordenia Schulzer (1866) = Hypomyces fide Rogerson (*Mycol.* **62**: 865, 1970), Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Bonordeniella Penz. & Sacc. (1901) = Coniosporium fide Ellis (*Dematiaceous Hyphomycetes*, 1971).

booted, see peronate.

Boothiella Lodhi & Mirza (1962), Sordariaceae. 1 (from soil), Asia. See Udagawa & Furuya (*TMSJ* **18**: 302, 1977), von Arx *et al.* (*Beih. Nova Hedwigia* **94**, 1988), Cai *et al.* (*MR* **110**: 137, 2006).

Boothiomyces Letcher (2006), Terramycetaceae. 1 (from soil), New Zealand. See Letcher *et al.* (*MR* **110**: 898, 2006).

boot-lace fungus, the honey agaric, *Armillaria mellea*.

Bordea Maire (1916), Laboulbeniaceae. 14 (on beetles), widespread. See Thaxter (*Memoirs of the American Academy of Arts and Sciences* **16**: 1, 1931), Benjamin (*Aliso* **19**: 99, 2000).

Bordeaux mixture, A spray first used by Millardet in 1883-85 against vine (*Vitis*) mildew (*Plasmopara*), and still in general use for controlling numbers of plant diseases. A common mixture is the '4-4-50': copper sulphate 1.8 kg, quick lime 1.8 kg (or hydrated lime 2.7 kg), water 227 l. When making small amounts the copper sulphate is put in some of the water, the lime in the rest, and the two liquids then mixed. See Ainsworth (*Introduction to the history of plant pathology*, 1981).

Boreoplaca Timdal (1994), Ophioparmaceae (L). 1, Siberia. See Timdal (*Mycotaxon* **51**: 503, 1994), Wedin *et al.* (*MR* **109**: 159, 2005), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny).

Boreostereaceae Jülich (1982) = Gloeophyllaceae.

Boreostereum Parmasto (1968), Gloeophyllaceae. 4, widespread (north temperate). See Parmasto (*Consp. System. Corticiac.*: 186, 1968).

Borinquenia F. Stevens (1917) nom. dub., Tubeufiaceae. ? = *Malacaria*, but type material is exhausted. See Rossman (*Mycol. Pap.* **157**: 71 pp., 1987).

Bornetina L. Mangin & Viala (1903), anamorphic *Diacanthodes*. 1. See Donk (*Beih. Nova Hedwigia* **5**, 1962).

Borrera Ach. (1809) [non *Borreria* G. Mey. 1818) nom. cons., *Rubiaceae*] nom. rej. = Teloschistes fide Kurokawa (*Beih. Nova Hedwigia* **6**, 1962).

Bostrichonema Ces. (1867), anamorphic *Pezizomycotina*, Hso.1eH.?. 5, Europe; N. America. See Braun (*Monogr. Cercosporella, Ramularia Allied Genera (Phytopath. Hyphom.)* **2**, 1998), Kendrick (*CJB* **81**: 75, 2003; morphogenesis).

Bostrychia Fr. (1821) = Cytospora fide Fries (*Syst. mycol.* **2**: 1, 1823).

Bostrychonema, see *Bostrichonema*.

Botanamphora Nograsek & Scheuer (1990) = Trematosphaeria fide Nograsek & Scheuer (*SA* **12**: 31, 1993).

Bothia Halling, T.J. Baroni & Binder (2007), Boletaceae. 1, N. America. See Halling *et al.* (*Mycol.* **99**: 310, 2007; descr., phylogeny).

Bothrodiscus Shear (1907), anamorphic *Ascocalyx*, St.≡ eH.10. 3, N. America; former USSR. See Groves (*CJB* **46**: 1273, 1968).

bothrosome (sagenogen, sagenogenetosome), an invaginated organelle at the cell surface which connects the plasma membrane to the network membranes in *Labyrinthulomycota* (see Porter, 1990).

Botryandromyces I.I. Tav. & T. Majewski (1976), Laboulbeniaceae. 2, widespread. See Tavares & Majewski (*Mycotaxon* **3**: 195, 1976), Tavares (*Mycol. Mem.* **9**: 627 pp., 1985), Santamaría (*Fl. Mycol. Iberica* **5**, 2003).

Botrydiaceae Lindl. (1846) = Sclerotiniaceae.

Botrydiella Badura (1963) = Staphylotrichum fide Ellis (*Dematiaceous Hyphomycetes*, 1971).

Botrydina Bréb. ex Menegh. (1844) nom. utique rej. = Lichenomphalia fide Kuyper (*in litt.*; syn. of *Lichenomphalina* but the name has been used for the anamorph of this genus), Gams (*Öst. bot. Z.* **109**: 376, 1962), Poelt & Jülich (*Herzogia* **1**: 331, 1969), Oberwinkler (*Deutsch. bot Ges.* N.F. **4**: 139, 1970), Redhead & Kuyper (*Arctic & Alpine Mycology* **2**: 319, 1987), Redhead & Kuyper (*Mycotaxon* **31**: 221, 1988), Jørgensen & Ryman (*Taxon* **38**: 305, 1989).

Botrydiplis Clem. & Shear (1931) ≡ Botryodiplodia.

Botrydium Wallr. (1815), Algae. Algae.

Botryella Syd. & P. Syd. (1916) = Sphaerellopsis Cooke fide Sutton (*Mycol. Pap.* **141**, 1977).

botryo-aleuriospore, one of an apical cluster of aleuriospores developed basipetally from the conidiogenous cells.

Botryoascus Arx (1972) = Saccharomycopsis Schiønning fide Kurtzman & Robnett (*CJB* **73** Suppl. 1: S824, 1995), Matsushima (*Matsush. Mycol. Mem.* **9**: 1, 1996).

Botryobasidiaceae Jülich (1982), Cantharellales. 5 gen. (+ 5 syn.), 83 spp.

Lit.: Maekawa (*Trans. Mycol. Soc. Japan* **33**: 317, 1992), Langer (*Biblthca Mycol.* **158**: 459 pp., 1994), Ginns (*Mycol.* **90**: 19, 1998), Langer *et al.* (*MR* **104**: 510, 2000), Langer *et al.* (*Mycoscience* **41**: 201, 2000), Binder & Bresinsky (*Mycol.* **94**: 85, 2002).

Botryobasidium Donk (1931), Botryobasidiaceae. 55, widespread. See Eriksson & Ryvarden (*Cortic. N. Europ.* **2**: 145, 1973; key 11 Eur. spp.), Langer (*Biblthca Mycol.* **158**, 1994; world key).

Botryobasidium Rick (1959), Thelephoraceae. 3, Brazil. See Rick (*Iheringia* Série Botânica **4**: 98, 1959).

botryoblastospore, clusters of conidia borne on the swollen apex (ampulla) of a conidiogenous cell, arising synchronously or asynchronously, either singly or in chains.

Botryobolus Arnaud (1952) = Ballocephala fide Humber (*in litt.*).

Botryochaete Corda (1854) ≡ Phleogena fide Donk (*Persoonia* **4**: 160, 1966).

Botryochaete Rick (1959), Basidiomycota. 3, Brazil. See Rick (*Iheringia* Série Botânica **4**: 122, 1959).

Botryochora Torrend (1914), ? Dothioraceae (?L). 1, Africa. See von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Botryocladium Preuss (1851) = Nematogonum fide Saccardo (*Syll. fung.* **4**: 170, 1886).

Botryoconiaceae Cif. & Vegni (1963) = Cryptobasidiaceae.

Botryoconis Syd. & P. Syd. (1906), Cryptobasidiaceae. 3, Brazil; Japan. See Donk (*Reinwardtia* **4**: 114, 1956), Begerow *et al.* (*Mycol. Progr.* **1**: 187, 2002), Hendrichs *et al.* (*Sydowia* **55**: 33, 2003).

Botryocrea Petr. (1949) = Fusarium fide Samuels *et al.* (*Mycol. Pap.* **164**, 1991).

Botryodeorsum T.P. Devi, N. Mathur, Chowdhry, Jasvir Singh & O. Prakash (2006), anamorphic *Pezizomycotina*. 1, India. See Devi *et al.* (*Indian Phytopath.* **59**: 215, 2006).

Botryoderma Papendorf & H.P. Upadhyay (1969), anamorphic *Pezizomycotina*, Hso.0eH.14. 3, S. Africa; Brazil. See Papendorf & Upadhyay (*TBMS* **52**: 257, 1969), Lopez *et al.* (*Mycotaxon* **55**: 269, 1995).

Botryodiplis Clem. & Shear (1931) ≡ Botryodiplodia.

Botryodiplodia (Sacc.) Sacc. (1884) nom. dub., Diaporthales. See *Lasiodiplodia* for *B. theobromae* and relatives. See Stevens (*Mycol.* **33**: 69, 1941), Zambettakis (*BSMF* **70**: 219, 1954), Crous & Palm (*Sydowia* **51**: 167, 1999).

Botryodiplodina Dias & Sousa da Câmara (1954), anamorphic *Pezizomycotina*, St.1eP.?. 1, Portugal. See Dias & Sousa da Câmara (*Agron. lusit.* **16**: 13, 1954).

Botryodontia (Hjortstam & Ryvarden) Hjortstam (1987), ? Hymenochaetaceae. 6, widespread. Polyphyletic. See Hjortstam (*Mycotaxon* **28**: 20, 1987).

Botryogene Syd. & P. Syd. (1917) nom. dub., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Botryohypochnaceae Jülich (1982) = Botryobasidiaceae.

Botryohypochnus Donk (1931) = Botryobasidium Donk fide Langer (*Biblthca Mycol.* **158**, 1994).

Botryohypoxylon Samuels & J.D. Rogers (1986), Dothideomycetes. Anamorph *Iledon*. 1, Brazil. See Samuels & Rogers (*Mycotaxon* **25**: 631, 1986).

Botryola Bat. & J.L. Bezerra (1964), ? Nitschkiaceae. 1, Brazil. See Batista & Bezerra (*Publções Inst. Micol. Recife* **431**: 11, 1964).

Botryolepraria Canals, Hern.-Mar., Gómez-Bolea & Llimona (1997), Lecanorales. 1, Europe. See Canals *et al.* (*Lichenologist* **29**: 339, 1997), Ekman & Tønsberg (*MR* **106**: 1262, 2002; phylogeny), Baruffo *et al.* (*Nova Hedwigia* **83**: 387, 2006; Italy).

Botryomonilia Goos & Piroz. (1975), anamorphic *Pezizomycotina*, Hso.0eH.38. 1, Panama. See Goos & Pirozynski (*CJB* **53**: 2927, 1975), Kendrick (*CJB* **81**: 75, 2003; morphogenesis).

Botryomyces de Hoog & C. Rubio (1982) ≡ Ybotromyces.

Botryomyces Greco (1916), anamorphic *Pezizomycotina*, Hso.?.?. 1 (from man, also in rocks), Argentina. See Benoldi *et al.* (*J. Med. Vet. Mycol.* **29**: 9, 1991; agent of phaeohyphomycosis), Sterflinger (*The Yeast Handbook* **[1]**: 501, 2006; ecology).

Botryonipha Preuss (1852) nom. rej., anamorphic *Pezizomycotina*.

Botryophialophora Linder (1944) = Myrioconium Syd. fide von Arx (*Gen. Fungi Sporul. Cult.*, 1970).

Botryophoma (P. Karst.) Höhn. (1916) = Sclerodothiorella fide Sutton (*Mycol. Pap.* **141**, 1977).

Botryorhiza Whetzel & Olive (1917), Chaconiaceae. 1 (on *Hippocratea* (*Hippocrateaceae*)), Carribean; Brazil.

botryose, racemose; grouped like grapes.

Botryosphaeria Ces. & De Not. (1863), Botryosphaeriaceae. Anamorphs *Diplodia, Dothiorella, Fusicoccum, Lasiodiplodia, Sphaeropsis. c.* 36, widespread. Many important plant pathogens; molecular species concepts are narrower than traditional morphology-based taxa. See von Arx & Müller (*Beitr. Kryptfl. Schweiz* **11** no. 1, 1954), Barr (*Contr. Univ. Mich. Herb.* **9**: 523, 1972), Jacobs & Rehner (*Mycol.* **90**: 601, 1998; DNA, anams), Denman *et al.* (*Mycol.* **91**: 510, 1999), Silva-Hanlin & Hanlin (*MR* **103**: 153, 1999; DNA), Denman *et al.* (*Stud. Mycol.* **45**: 129, 2000), Smith & Stanosz (*Mycol.* **93**: 505, 2001), Zhou & Stanosz (*Mycol.* **93**: 516, 2001; phylogeny), Ma & Michailides (*Phytopathology* **92**: 519, 2002; California), Phillips (*Phytopath. Mediterr.* **41**: 3, 2002; on grape), Slippers *et al.* (*Mycol.* **96**: 83, 2004; *B. dothidea* s.l.), Slippers *et al.* (*Mycol.* **96**: 1030, 2004; *B. dothidea*, phylogeny), Phillips *et al.* (*Mycopathologia* **159**: 433, 2005; on *Olea*), Crous *et al.* (*Stud. Mycol.* **55**: 235, 2006; phylogeny), Schoch *et al.* (*Mycol.* **98**: 1041, 2006; phylogeny).

Botryosphaeriaceae Theiss. & P. Syd. (1918), Botryosphaeriales. 26 gen. (+ 60 syn.), *c.* 1517 spp.

Lit.: von Arx & Müller (*Beitr. Kryptfl. Schweiz* **11** no. 1, 1954), Sivanesan (*Bitunicate Ascomycetes and their Anamorphs*, 1984), Pennycook & Samuels (*Mycotaxon* **24**: 445, 1985), Bissett (*Mycotaxon* **25**: 519, 1986), Barr (*Prodr. Cl. Loculoasc.*, 1987), Morgan-Jones & White (*Mycotaxon* **30**: 117, 1987), Bissett & Palm (*CJB* **67**: 3378, 1989), Hyde (*Sydowia* **47**: 180, 1995), Jacobs *et al.* (*Phytopathology* **85**: 1206, 1995), Jacobs & Rehner (*Mycol.* **90**: 601, 1998), Denman *et al.* (*Stud. Mycol.* **45**: 129, 2000), Rodrigues *et al.* (*MR* **108**: 45, 2004), Slippers *et al.* (*Mycol.* **96**: 83, 2004), Van Niekerk *et al.* (*Mycol.* **96**: 781, 2004), Barber *et al.* (*MR* **109**: 1347, 2005), Crous *et al.* (*Stud. Mycol.* **55**: 235, 2006), Schoch *et al.* (*Mycol.* **98**: 1041, 2006; phylogeny), Slippers *et al.* (*Pl. Path.* **56**: 128, 2007; on *Rosaceae*), de Wet *et al.* (*Mol. Phylogenet. Evol.* **46**: 116, 2008; phylogeny, host association).

Botryosphaeriales C.L. Schoch, Crous & Shoemaker (2007). Dothideomycetes. 1 fam., 28 gen., 1628 spp. Fam:

Botryosphaeriaceae

For *Lit.* see under fam.

Botryosphaerostroma Petr. (1921) = Botryodiplodia fide Sutton (*Mycol. Pap.* **141**, 1977).

Botryosphaerostroma Petr. & Syd. (1926) ≡ Sphaeropsis Sacc. fide Sutton (*Mycol. Pap.* **141**, 1977).

Botryosporium Corda (1831), anamorphic *Pezizomycotina*, Hso.0eH.6. 4, widespread. See Mason (*Mycol. Pap.* **2**: 27, 1928), Vincent & Blackwell (*Taxon* **36**: 158, 1987; nomencl.), Zhang & Kendrick (*Acta Mycol. Sin.* **9**: 31, 1990; key 4 spp.).

Botryosporium Schwein. (1832) ? = Dictyosporium fide Sutton (*in litt.*).

Botryostroma Höhn. (1911), anamorphic *Venturiaceae*. 2, America (tropical). See Hughes & Seifert (*Sydowia* **50**: 192, 1998).

Botryothecium Syd. (1937) = Rosenscheldiella fide Hansford (*Mycol. Pap.* **15**, 1946).

Botryotinia Whetzel (1945), Sclerotiniaceae. Anamorph *Botrytis. c.* 19, widespread. See Hennebert & Groves (*CJB* **41**: 341, 1963), Jarvis (*Can. Dept. Agric. Monogr.* **15**, 1977; taxonomy, physiology, pathogenicity), Giraud *et al.* (*Mol. Biol. Evol.* **14**: 1177, 1997; genetics), Holst-Jensen *et al.* (*Mycol.* **89**: 885, 1997; phylogeny), Giraud *et al.* (*Phytopathology* **89**: 967, 1999; sibling spp.), Holst-Jensen *et al.* (*Nordic Jl Bot.* **18**: 705, 1999; phylogeny), Nielsen & Yohalem (*Mycol.* **93**: 1064, 2001; polyploidy), Nielsen *et al.* (*Pl. Dis.* **86**: 682, 2002; PCR detection), Yohalem *et al.* (*Mycotaxon* **85**: 175, 2003; on onions), Beever & Weeds (*Botrytis: Biology, Pathology and Control*: 29, 2004; review), Fukumori *et al.* (*J. Gen. Pl. Path.* **70**: 256, 2004; spermatia), Staats *et al.* (*Mol. Biol. Evol.* **22**: 333, 2005; phylogeny).

Botryotrichum Sacc. & Marchal (1885), anamorphic *Chaetomium*, Hso.0eP.?. 8, widespread. See Hawksworth (*Persoonia* **8**: 167, 1975), Kushwaha & Agrawal (*TMSJ* **17**: 18, 1976), Santos *et al.* (*Mycotaxon* **48**: 271, 1993; parasitic on nematode eggs), Untereiner *et al.* (*CJB* **79**: 321, 2001; phylogeny).

Botryoxylon Cif. (1962) = Conoplea fide Hughes (*CJB* **36**: 727, 1958).

Botryozyma Shann & M.T. Sm. (1992), anamorphic *Ascobotryozyma*, Hso.0eH.1. 3, widespread. See Smith *et al.* (*Antonie van Leeuwenhoek* **61**: 281, 1992), Kerrigan *et al.* (*Antonie van Leeuwenhoek* **79**: 7, 2001), Kerrigan *et al.* (*MR* **107**: 1110, 2003), Kerrigan *et al.* (*FEMS Yeast Res.* **4**: 849, 2004), Suh *et al.* (*Mycol.* **98**: 1006, 2006; phylogeny).

Botrypes Preuss (1852) nom. dub ? = Ciliciopodium fide Saccardo (*Syll. fung.* **4**: 577, 1886), Seifert (*TBMS* **88**: 123, 1985).

Botrysphaeris Clem. & Shear (1931) = Sphaeropsis Sacc. fide Sutton (*in litt.*).

Botrytis P. Micheli ex Pers. (1794), anamorphic *Botryotinia*, Hso.0eH.6. *c.* 54, widespread. *B. cinerea* (the common grey mould, frequently parasitic); *B. allii* and other spp. (neck rot of onions); *B. paeoniae* (paeony blight); *B. tulipae* (tulip fire). See Hennebert (*Persoonia* **7**: 185, 1973; segregates), Jarvis (*Can. Dept. Agric. Monogr.* **15**, 1977), Coley-Smith *et al.* (*The biology of Botrytis*, 1981), Harrison (*Pl. Path.* **37**: 168, 1987; review of spp. on beans), Shirare *et al.* (*Phytopathology* **79**: 728, 1989; nuclei and mitotic chromosomes in *Botrytis* spp.), Lu & Wu (*Acta Mycol. Sin.* **10**: 27, 1991; *Botryotinia fabae* teleomorph of *Botrytis fabae*, chocolate spot), Verhoeff *et al.* (*Recent advances in Botrytis research*, 1992), van der Vlugt-Bergmans *et al.* (*MR* **97**: 1193, 1993; genetic variation and DNA polymorphisms in *B. cinerea*), van Kan *et al.* (*Neth. Jl Pl. Path.* **99** Suppl. 3: 119, 1993; electrophoretic karyotypes in *B. cinerea*), Giraud *et al.* (*Mol. Biol. Evol.* **14**: 1177, 1997), Holst-Jensen *et al.* (*Nordic Jl Bot.* **18**: 705, 1998; phylogeny), Förster & Adaskaveg (*Phytopathology* **90**: 171, 2000; detection with DNA primers), Nielsen & Yohalem (*Mycol.* **93**: 1064, 2001; polyploidy), Albertini *et al.* (*MR* **106**: 1171, 2002; speciation), Muñoz *et al.* (*MR* **106**: 594, 2002; Chile), Nielsen *et al.* (*Pl. Dis.* **86**: 682, 2002; on onion), Fournier *et al.* (*Mycol.* **95**: 251, 2003; VCG markers), Moyano *et al.* (*Eur. J. Pl. Path.* **109**: 515, 2003; population genetics), Yohalem *et al.* (*Mycotaxon* **85**: 175, 2003; nomencl.), Beever & Weeds (*Botrytis: Biology, Pathology and Control*: 29, 2004; review), Chilvers *et al.* (*Australas. Pl. Path.* **33**: 29, 2004; on onion in Australia), Fukumori *et al.* (*J. Gen. Pl. Path.* **70**: 256, 2004; spermatia), Fournier *et al.* (*Mycol.* **97**: 1251, 2006; phylogeny), Ma & Michailides (*Pl. Dis.* **89**: 1083, 2005; California), Rehner & Buckley (*My-

col. **97**: 84, 2005; cryptic speciation), Staats *et al.* (*Mol. Biol. Evol.* **22**: 333, 2005; phylogeny).

Botrytites Mesch. (1892), Fossil Fungi. 1 (Oligocene), Europe.

Botrytoides M. Moore & F.P. Almeida (1937) ≡ Rhinocladiella Nannf. fide Schol-Schwarz (*Antonie van Leeuwenhoek* **34**: 140, 1968).

Bottaria A. Massal. (1856) = Mycoporum Flot. ex Nyl. fide Harris (*Evansia* **4**: 28, 1987).

Bottariomyces Cif. & Tomas. (1953) = Pyrenula Ach. (1809) fide Harris (*Mem. N. Y. bot. Gdn* **49**, 1989).

botuliform, cylindrical with rounded ends; sausage-like in form; see allantoid.

Boubovia Svrček (1977), Pezizales. 6, widespread (esp. temperate). See Yao & Spooner (*MR* **100**: 193, 1996), van Brummelen & Kristiansen (*Persoonia* **17**: 265, 1999; Norway), Perry *et al.* (*MR* **111**: 549, 2007; phylogeny).

Boudier (Jean Louis Émile; 1828-1920; France). A pharmacist of Montmorency. An expert on discomycetes, producing some of the finest illustrations of these fungi. Boudier's microscopic measurements are usually *c.* 10% too high (van Brummelen, *Persoonia* **5**: 233, 1969). *Publs. Histoire et Classification des Discomycètes d'Europe* (1907) [reprint 1968]; *Icones Mycologicae ou Iconographie des Champignons de France, Principalement Discomycètes* 5 vols (1905-1910) [reprint 1981-1986]. *Biogs, obits etc.* Mangin (*BSMF* **36**: 181, 1920); Lamy (*BSMF* **100**: CXXXIX, 1984 [correspondence]); Grummann (1974: 268); Stafleu & Cowan (*TL-2* **1**: 290, 1976).

Boudiera Cooke (1877), Pezizaceae. 10, Europe; N. America. See Hirsch (*Wissen. Z. Fried.-Schiller-Univ.* **32**: 1013, 1983), Landvik *et al.* (*Nordic Jl Bot.* **17**: 403, 1997; DNA), Norman & Egger (*Mycol.* **91**: 820, 1999; phylogeny), Hansen *et al.* (*Mol. Phylogen. Evol.* **36**: 1, 2005; phylogeny), Hansen & Pfister (*Mycol.* **98**: 1029, 2006; phylogeny).

Boudiera Lázaro Ibiza (1916) = Phellinus fide Donk (*Verh. K. ned. Akad. Wet.* tweede sect. **62**: 1, 1974).

Boudierella Costantin (1897) ≡ Delacroixia.

Boudierella Sacc. (1895), ? Pyronemataceae. 1, Europe. See Kimbrough & Korf (*Am. J. Bot.* **54**: 9, 1967).

bouillon, meat broth used as a culture medium.

Bourdot (Hubert; 1861-1937; France). Priest, Saint-Priest-en-Murat, Allier (1898-1937). Noted for his studies on *Hymenomycetes*, esp. *Thelephoraceae* and resupinate fungi. Collections in **PC**. *Publs.* (with Galzin) *Hymenomycètes de France* (1928) [reprint 1969]. *Biogs, obits etc.* Gilbert (*BSMF* **55**: 137, 1939) [bibliography, portrait]; Grummann (1974: 268); Stafleu & Cowan (*TL-2* **1**: 294, 1976); Stafleu & Mennega (*TL-2, Suppl.* **2**: 391, 1992).

Bourdotia (Bres.) Bres. & Torrend (1913), Auriculariales. 1, widespread. See Weiss & Oberwinkler (*MR* **105**: 403, 2001; phylogeny).

bourrelet, see ascus.

Bouvetiella Øvstedal (1986), ? Hymeneliaceae (L). 1, Antarctica. See Øvstedal (*Norsk Polarinstitutt Skrifter*: 35, 1986), Timdal *in* Hawksworth (Ed.) (*Ascomycete Systematics. Problems and Perspectives in the Nineties* NATO ASI Series vol. **269 269**: 381, 1994; posn).

Bovetia Onofri & Persiani (1982) = Sarophorum fide Samson & Seifert (*Advances in Penicillium and Aspergillus Systematics* **102**: 397, 1985).

Bovicornua Jørg. Koch & E.B.G. Jones (1993), Halosphaeriaceae. 1 (marine), Europe. See Yusoff *et al.* (*CJB* **71**: 346, 1993), Yusoff *et al.* (*CJB* **72**: 1550, 1994).

Bovilla Sacc. (1883) = Cercophora fide Lundqvist (*Symb. bot. upsal.* **20** no. 1, 1972).

Bovista Pers. (1794), Agaricaceae. *c.* 55, widespread. See Kreisel (*Beih. Nova Hedwigia* **25**, 1967; monogr.), Calonge (*Mycol.* **96**: 1152, 2004; Mexico), Baseia (*Mycotaxon* **91**: 81, 2005; Brazil).

Bovistaria (Fr.) P. Karst. (1889) ≡ Langermannia.

Bovistella Morgan (1892) = Lycoperdon Pers. fide Larsson & Jeppson (*MR* **112**: 4, 2008).

Bovistina Long & Stouffer (1941) = Disciseda fide Ponce (*Fieldiana, Bot.* **38**: 23, 1976).

Bovistoides Lloyd (1919) = Myriostoma fide Suárez & Wright (*Mycotaxon* **71**: 251, 1999).

Boydia A.L. Sm. (1919) = Vialaea fide Redlin (*Sydowia* **41**: 296, 1989).

BPI, US National Fungus Collection (Beltsville, Md, USA); founded 1869, part of the United States Department of Agriculture's (USDA) Agricultural Research Service (ARS): see Cross *et al.* (*Systematic collections of the Agricultural Research Service*, 1977).

BR, National Botanic Garden of Belgium (Meise, Belgium); founded 1870; supported by the Ministry of Agriculture.

Brachiola A. Cali, P.M. Takvorian, S. Lewin, M. Rendel, C.S. Sian, M. Wittner, H.B. Tanowitz, E. Keohane & L. Weiss (1998), Microsporidia. 4. See Cali *et al.* (*Acta Protozool.* **43**: 73, 1998).

Brachiosphaera Nawawi (1976), anamorphic *Aliquandostipitaceae*, Hso.1bH.19. 2 (aquatic), pantropical. See Nawawi (*TBMS* **67**: 213, 1976), Chan *et al.* (*Fungal Diversity* **5**: 89, 2000; Hong Kong), Descals (*MR* **109**: 545, 2005; propagules), Campbell *et al.* (*CJB* **85**: 873, 2007; phylogeny).

brachy- (prefix), short.

Brachyascus Syd. (1917) ≡ Microdiscus Sacc.

Brachybasidiaceae Gäum. (1926), Exobasidiales. 4 gen. (+ 1 syn.), 10 spp.

Lit.: Donk (*Taxon*: 243, 1951-63), Gäumann (*Belg. Jl Bot.*: 358, 1964), Cunningham *et al.* (*Mycol.* **68**: 642, 1976; key), Ingold (*TBMS* **84**: 542, 1985), Oberwinkler (*Stud. Mycol.* **30**: 61, 1987), Barreto & Evans (*TBMS* **91**: 81, 1988), Gruèzo (*Nat. Hist. Bull. Siam Soc.* **38**: 89, 1990), Bauer *et al.* (*CJB* **75**: 1273, 1997), Berndt & Sharma (*MR* **102**: 1484, 1998), Begerow *et al.* (*Mycol. Progr.* **1**: 187, 2002).

Brachybasidiales Donk (1964) = Exobasidiales.

Brachybasidium Gäum. (1922), Brachybasidiaceae. 1 (on *Palmae*), Java. See Gäumann (*Annls Mycol.* **20**: 269, 1922).

Brachycarphium Berk. (1849), Fossil Fungi, anamorphic *Pezizomycotina*. 1 (Oligocene), Baltic.

Brachycladites Mesch. (1892) ≡ Brachycarphium.

Brachycladium Berk. (1848) ≡ Brachycarphium.

Brachycladium Corda (1838), anamorphic *Crivellia*. 1, widespread. See Saccardo (*Syll. fung.* **4**: 489, 1886).

Brachyconidiella R.F. Castañeda & W.B. Kendr. (1990), anamorphic *Dothideomycetes*, Hsy/Hsp.0bP.1. 1, Cuba. See Castañeda Ruiz & Kendrick (*Univ. Waterloo Biol. Ser.* **33**: 11, 1990), Decock *et al.* (*Cryptog. Mycol.* **25**: 137, 2004).

Brachyconidiellopsis Decock, R.F. Castañeda & Adhikari (2004), anamorphic *Microascaceae*. 1 (on dung), Nepal. See Decock *et al.* (*Cryptog. Mycol.* **25**: 140, 2004).

brachycyclic, see *Pucciniales* and Table 5.

Brachydesmiella G. Arnaud ex S. Hughes (1961), anamorphic *Pezizomycotina*, Hso.≡ eP.26. 5, widespread. See Nicot (*BSMF* **86**: 705, 1971), Sivichai *et al.* (*Mycoscience* **39**: 239, 1998), Castañeda Ruiz *et al.* (*Mycotaxon* **85**: 211, 2003; Venezuela), Castañeda Ruíz *et al.* (*Mycotaxon* **95**: 261, 2006; Brazil).

Brachydesmium (Sacc.) Costantin (1888) = Clasterosporium fide Saccardo (*Syll. fung.* **4**: 386, 1886).

brachyform, see *Pucciniales* and Table 5.

Brachyhelicoon Arnaud (1952), anamorphic *Pezizomycotina*, Hso.0-≡ hH.?. 1, Europe. See Arnaud (*BSMF* **68**: 208, 1952), Goos (*Mycol.* **79**: 1, 1987).

brachymeiosis (obsol.), a third division, once claimed to occur in the ascus.

Brachymyces G.L. Barron (1980), Helicocephalidaceae. 1 (from soil), Canada. See Barron (*CJB* **58**: 2450, 1980).

Brachyphoris J. Chen (2007), anamorphic *Hyalorbilia*. 5, widespread. See Chen *et al.* (*Fungal Diversity* **26**: 127, 2007).

Brachysporiella Bat. (1952), anamorphic *Ascotaiwania*, Hso.≡ eP.1. 6, widespread. See Ellis (*Mycol. Pap.* **72**, 1959; key), Ranghoo & Hyde (*Mycol.* **90**: 1055, 1998; key), Fallah *et al.* (*CJB* **77**: 87, 1999), Partridge *et al.* (*Mycotaxon* **73**: 303, 1999), Yanna & Ho (*Cryptog. Mycol.* **25**: 129, 2004).

Brachysporiellina Subram. & Bhat (1989), anamorphic *Pezizomycotina*, Hso.≡ eP.10. 1, India. See Subramanian & Bhat (*Kavaka* **15**: 46, 1987).

Brachysporiopsis Yanna, W.H. Ho & K.D. Hyde (2004), anamorphic *Pezizomycotina*. 1 (on palms), Hong Kong. See Yanna & Ho (*Cryptog. Mycol.* **25**: 130, 2004).

Brachysporisporites R.T. Lange & P.H. Sm. (1971), Fossil Fungi. 2 (Eocene), Australia; Canada.

Brachysporium Sacc. (1886), anamorphic *Cryptadelphia*, Hso.≡ eP.11. 11, widespread. See Ellis (*Dematiaceous Hyphomycetes*, 1971; key), Scheuer & Chlebicki (*Acta Mycologica* Warszawa **32**: 147, 1997), Réblová & Seifert (*Mycol.* **96**: 343, 2004).

brand, a leaf disease caused by a microscopic fungus, esp. a rust or smut (sometimes named the **- fungus**) (obsol.); **- spore**, urediniospore; smut spore.

brandy, see spirits.

Brasiliomyces Viégas (1944), Erysiphaceae. Anamorph *Oidium*. 7, widespread. See Hanlin & Tortolero (*Mycol.* **76**: 439, 1984; key), Zheng (*Mycotaxon* **19**: 281, 1984), Braun (*Beih. Nova Hedwigia* **89**, 1987; key), Mori *et al.* (*Mycol.* **92**: 74, 2000; phylogeny), Braun *et al.* (*The Powdery Mildews* A Comprehensive Treatise: 13, 2001; review), To-Anun *et al.* (*Mycoscience* **44**: 447, 2003), Wang *et al.* (*Mycol.* **98**: 1065, 2006; phylogeny).

Brassia A. Massal. (1860) [non *Brassia* R. Br. 1813, *Orchidaceae*] = Thelotrema fide Hale (*Bull. Br. Mus. nat. hist.* Bot. **8**: 227, 1981).

Braunia Rick (1934) [non *Braunia* Bruch & Schimp. 1846, *Musci*] = Brauniella fide Stalpers (*in litt.*).

Brauniella Rick ex Singer (1955), ? Strophariaceae. 1, S. America. See Singer (*Proc. K. ned. Akad. Wet.* Ser. C, Biol. Med. Sci. **66**: 115, 1963).

Brauniellaceae Singer (1962) = Strophariaceae.

Brauniellula A.H. Sm. & Singer (1959) = Chroogomphus fide Miller (*Mycol.* **95**: 176, 2003).

breathing pore, raised aperture in the upper cortex of *Parmelia exasperata* from the medulla to the exterior.

Brefeld (Julius Oscar; 1839-1925; Germany). Son of a pharmacist in Westphalia; Professor at the Forestry Academy, Eberswaldeln (1876), then Professor of Botany at Münster, and later Breslau. Brefeld is noted for his development of pure culture methods in connexion with work on life-histories and growth of fungi. From the first he saw how necessary it was for culture media and apparatus to be sterile and, 10 years before Koch, was using gelatin to make solid media. Working in turn with different groups of fungi, his writings are still a mine of details on spore germination, and growth and development of fungi. For 25 years he had the use of only one eye and from about 1914 was blind. *Publs. Botanische Untersuchungen über Schimmelpilze* (later *Untersuchungen aus dem Gesammtgebeit der Mykologie*) 15 parts (1872-1912) [in these publications, with the help of beautiful figures, he provided detailed accounts of his investigations]; also responsible for more than 40 papers on mycology and plant diseases. *Biogs, obits etc.* Anon. (*Nature* **116**: 369, 1925); Grummann (1974: 16); Sopp (*Norske Videnskaps-Akademi i Oslo Årbok* **1925**: 83, 1926); Stafleu & Cowan (*TL-2* **1**: 314, 1976); Stafleu & Mennega (*TL-2*, *Suppl.* **3**: 47, 1995).

Brefeldiella Speg. (1889), Brefeldiellaceae. 2, pantropical. See Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962), Eriksson (*Op. Bot.* **60**, 1981), Reynolds & Gilbert (*Aust. Syst. Bot.* **18**: 265, 2005; Australia), Reynolds & Gilbert (*Cryptog. Mycol.* **27**: 249, 2006; Panamá).

Brefeldiellaceae E. Müll. & Arx (1962), ? Dothideomycetes (inc. sed.). 1 gen., 2 spp.

Brevicatenospora R.F. Castañeda, Minter & Saikawa (2006), anamorphic *Pezizomycotina*. 1 (submerged leaves), Cuba. See Castañeda Ruíz *et al.* (*Mycotaxon* **96**: 152, 2006).

Brevicellicium K.H. Larss. & Hjortstam (1978), Hydnodontaceae. 13, widespread. See Larsson & Hjortstam (*Mycotaxon* **7**: 117, 1978), Hjortstam (*Mycotaxon* **79**: 181, 2001; tropical and subtropical species).

brevicollate, short-necked.

Brewing. The process of beer making. Classical brewing comprises a number of stages: (1) **malting**, when water soaked barley grain is allowed to germinate and endogenous enzymes attack the starch and certain proteins of the grain; (2) grinding the malted grain to form **grist**; (3) **mashing**, mixing the grist with water when there is further enzyme action after which (4) the resulting liquid, **wort**, is boiled with female hop (*Humulus lupulus*) flowers and on cooling (5) fermented by *S. cerevisiae* or another yeast. See beer, Wine making, yeast.

Briania D.R. Reynolds (1989), anamorphic *Meliolina*, Hso.0eH.15. 1, Hawaii. See Reynolds (*Pacific Sci.* **43**: 161, 1989).

Briansuttonia R.F. Castañeda, Minter & Saikawa (2004), anamorphic *Pleosporales*. 1, Australia. See Castañeda Ruíz *et al.* (*Mycotaxon* **89**: 304, 2004).

See Hawksworth *et al.* (*Lichenologist* **12**: 18, 1980; nomencl.), Kantvilas (*Muelleria* **16**: 65, 2002; Australian taxa), Kauff & Lutzoni (*Mol. Phylogen. Evol.* **25**: 138, 2002; phylogeny), Lumbsch *et al.* (*Mol. Phylogen. Evol.* **31**: 822, 2004; phylogeny).

Bryophilous fungi. Fungi growing on *Bryophyta*: muscicolous species on mosses, hepaticolous species on liverworts. A wide range of fungi are restricted to bryophytes (obligate bryophilous fungi). For example, *Synchytrium pyriforme* (*Chytridiomycetes*), *Eocronartium muscicola* and species of *Galerina* (*Strophariaceae*) grow on the gametophytes of mosses, *Epicoccum plagiochilae* (anamorphic *Ascomycota*) on those of hepatics. However, the most such fungi by far belong to the *Pezizomycotina* (*c.* 350 species in 90 genera). They represent an array of taxa of quite different systematic positions (e.g. *Dothideales*, *Hypocreales*, *Leotiales*, *Ostropales*, *Pezizales*), mode of nutrition, infection of host organs and host selection. Several genera are unknown elsewhere (e.g. *Bryodiscus*, *Bryonectria*, *Bryoscyphus*, *Hypobryon*, *Octospora*, *Octosporella*). In other cases mainly non-bryophilous genera contain obligate parasites of mosses and hepatics, for example *Acrospermum adeanum*, *Dactylospora heimerlii*, *Muellerella frullaniae*, *Nectria egens*.

The bryophilous habit has evoked surprising adaptations, e.g. the formation of tiny, frequently gelatinous ascomata which generally prefer those parts of a plant which prevent too rapid loss of moisture and allow at the same time effective spore discharge (leaf axils, border of the ventral leaf side, or perforation of the leaves or perianths in hepatics, interspaces of the photosynthetic leaf lamellae in *Polytrichales*). Some species are necrotrophic (*Belonioscypha hypnorum*, *Bryostroma necans*, *Lizonia emperigonia*, *Nectria muscivora*) with intracellular hyphae, causing necrotic lesions. Necrotic rings in moss cushions in polar regions can be conspicuous (Longton, *The Biology of Polar Bryophytes and Lichens*, pp. 101-104, 1988). Lesions in liverwort colonies are known, too (Hawksworth, *Fld Stud.* **4**: 391, 1976).

Most species represent biotrophic parasites which

do not cause severe damage to their hosts. Hyphae of these species grow over the cell walls or within or between them. Hyphal appendages like appressoria, haustoria or conidiogenous cells are most useful taxonomic characters. Endophytic VA mycorrhizal-like fungi regularly occur inside hepatics; most are sterile and part of a coevolved mutualism (Boullard, 1988; see mycothalli). *Octospora* infects the underground rhizoids of acrocarpic mosses with large appressoria and intracellular haustoria, sometimes causing conspicuous rhizoid galls. *Lizonia* is specific to antheridial cups of *Polytrichum* and related genera. Systematically different species colonizing the spaces betwen the leaf lamellae of *Polytrichales*, a phylogenetically ancient and stable microhabitat, offer striking examples of convergent evolution. Even heavy infections with hundreds of fruit-bodies in a single leaf of *Dawsonia superba* do not induce visible symptoms. Many species have a restricted host range and are specific to a certain host species or group of hosts. The presence of bryophilous fungi in colonies of mosses or hepatics seems to be a very frequent, universal phenomenon. Some hosts apparently never occur without their parasites. These fungi are generally totally neglected despite their number and frequency. *Vezdaea aestivalis* is ± lichenized but intimately associated also with moss leaves. Some lichens can overgrow and kill mosses (Faegri, *Lichenologist* **12**: 248, 1980).

Bucholtzia Lohwag (1924) = Russula fide Singer & Smith (*Mem. Torrey bot. Club* **21**, 1960; as *Macowanites*).

Buchwaldoboletus Pilát (1969), Boletaceae. 3, Europe; Australia. See Pilát (*Friesia* **9**: 217, 1969), Basezzi & Bottaro (*Rivista di Micologia* **42**: 155, 1999), Watling (*Edinb. J. Bot.* **61**: 41, 2004).

buck-eye rot, a disease of tomato fruits (*Phytophthora nicotianae* var. *parasitica*).

buckle, see clamp-connexion.

budding, a process of multiplication in 1-celled fungi or in spores, in which there is a development of a new cell from a small outgrowth; cf. fission.

Buellia De Not. (1846) nom. cons., Caliciaceae (±L). *c.* 453, widespread. See Sheard (*Lichenologist* **2**: 225, 1964; UK), Schauer (*Mitt. bot. StSamml., München* **5**: 609, 1965), Lamb (*Br. Antarct. Surv. Sci. Rep.* **61**, 1968), Sheard (*Bryologist* **72**: 220, 1969), Hafellner (*Beih. Nova Hedwigia* **62**, 1979; gen. concept), Scheidegger & Ruef (*Nova Hedwigia* **47**: 433, 1988; xanthone spp. Eur.), Scheidegger (*Bot. Chron.* **10**: 211, 1991; distrib. Medit. spp.), Scheidegger (*Lichenologist* **25**: 315, 1993; key 36 spp. on rock, Eur.), Nordin (*Symb. bot. upsal.* **31**: 327, 1996; Nordic spp.), Kalb & Elix (*Mycotaxon* **68**: 465, 1998; chemistry), Moberg *et al.* (*Taxon* **48**: 143, 1999; nomencl.), Nordin (*Bryologist* **102**: 249, 1999; N. Am.), Marbach (*Biblthca Mycol.* **74**: 1, 2000; trop.), Grube & Arup (*Lichenologist* **33**: 63, 2001; polyphyly), Trinkaus *et al.* (*Lichenologist* **33**: 37, 2001; Australia), Molina *et al.* (*Lichenologist* **34**: 509, 2002; phylogeny), Wedin *et al.* (*Taxon* **51**: 655, 2002; phylogeny), Helms *et al.* (*Mycol.* **95**: 1078, 2003; phylogeny), Bungartz & Nash (*Biblthca Lichenol.* **88**: 49, 2004; N America), Bungartz *et al.* (*Bryologist* **107**: 459, 2004; Mexico), Grube *et al.* (*Biblthca Lichenol.* **88**: 163, 2004; Australia), Simon *et al.* (*J. Mol. Evol.* **60**: 434, 2005; introns), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny).

Buelliaceae Zahlbr. (1907) = Caliciaceae.

Buelliastrum Zahlbr. (1930), Lecanorales (L). 2, China.

Buelliella Fink (1935), Dothideomycetes. 8 (on li-

chens), widespread. See Hafellner (*Beih. Nova Hedwigia* **62**, 1979; key), Suija & Alstrup (*Lichenologist* **36**: 203, 2004).

Buelliomyces E.A. Thomas ex Cif. & Tomas. (1953) ≡ Diploicia.

Buelliopsis A. Schneid. (1897) = Buellia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Buergenerula Syd. (1936), Magnaporthaceae. Anamorphs *Passalora*-like, *Nakataea*-like. 3, Europe; N. America. See Barr (*Mycol.* **68**: 611, 1976), McKenzie (*Mycotaxon* **42**: 351, 1991), Kohlmeyer *et al.* (*Bot. Mar.* **40**: 291, 1997).

Buglossoporus Kotl. & Pouzar (1966), Fomitopsidaceae. 10, widespread. See Corner (*Beih. Nova Hedwigia* **78**: 1, 1984).

Buglossus Wahlenb. (1826) = Fistulina fide Stalpers (*in litt.*).

bulbil, a discrete, compact, multicellular, thalloidic propagule initiated in one of several ways but always homogeneous throughout development, with all cells acropetally produced and expanding more or less synchronously to many times (e.g. 4–10×) the diameter of the colourless, thin-walled hyphae from which they arise; pseudoparenchymatous at least at maturity, and lacking internal differentiation (found in certain basidiomycetes such as *Burgoa* and *Minimedusa*, distinguished from sclerotia; see Weresub & LeClair, *CJB* **49**: 2203, 1971); lichenized in *Multiclavula vernalis* (Poelt & Obermayer, *Herzogia* **8**: 289, 1990).

bulbillate (of a stipe), having a small or not clearly marked bulb at the base.

Bulbillomyces Jülich (1974), Meruliaceae. Anamorph *Aegerita*. 1, widespread (northern hemisphere). See Jülich (*Persoonia* **8**: 69, 1974), Legon (*Mycologist* **20**: 81, 2006).

bulbillosis, the condition, in *Agaricales*, in which basidiome sporulation is suppressed and the basidial function taken on by bulbils, as in *Rhacophyllus* (Singer, 1962: 27).

Bulbilopycnis Matsush. (1996), anamorphic *Pezizomycotina*, Hsp.?.?. 1, Transvaal. See Matsushima (*Matsush. Mycol. Mem.* **9**: 3, 1996).

Bulbithecium Udagawa & T. Muroi (1990), ? Bionectriaceae. Anamorph *Acremonium*-like. 1 (coprophilous), Peru. See Udagawa & Muroi (*Bull. natn. Sci. Mus.* Tokyo, B **16**: 13, 1990), Suh & Blackwell (*Mycol.* **91**: 836, 1999; phylogeny), Rossman *et al.* (*Mycol.* **93**: 100, 2001; phylogeny).

Bulbocatenospora R.F. Castañeda & Iturr. (2000), anamorphic *Pezizomycotina*. 1, Venezuela. See Castañeda Ruíz *et al.* (*MR* **104**: 107, 2000).

Bulbomicrosphaera A.Q. Wang (1987) = Erysiphe fide Braun & Takamatsu (*Schlechtendalia* **4**: 3, 2000).

Bulbomollisia Graddon (1984) = Mollisia fide Graddon (*MR* **94**: 231, 1990), Nauta & Spooner (*Mycologist* **13**: 3, 1999).

Bulbopodium Earle (1909) = Cortinarius fide Singer (*Agaric. mod. Tax.* edn 3, 1975).

Bulborrhizina Kurok. (1994), Parmeliaceae (L). 1, Mozambique. See Kurokawa (*Acta Bot. Fenn.* **150**: 105, 1994), Eriksson & Hawksworth (*SA* **13**: 188, 1995).

Bulbothamnidium J. Klein (1870) = Helicostylum fide Upadhyay (*Mycol.* **65**: 735, 1973).

Bulbothricella, see *Bulbotricella*.

Bulbothrix Hale (1974), Parmeliaceae (L). 45, widespread (esp. tropical). See Hale (*Smithson. Contr. bot.* **32**, 1976; monogr.), Lumbsch (*Mycotaxon* **64**: 225, 1997), Blanco *et al.* (*Mol. Phylogen. Evol.* **39**: 52, 2006; phylogeny).

Bulbotricella V. Marcano, Mohali & A. Morales (1996) ? = Bulbothrix

Lit.: Lumbsch (*Mycotaxon* **64**: 225, 1997).

Bulbouncinula R.Y. Zheng & G.Q. Chen (1979) = Erysiphe fide Braun & Takamatsu (*Schlechtendalia* **4**: 3, 2000).

bulbous (1) bulb-like; (2) (of a stipe), having a swelling at the base (Fig. 4G).

Bulgaria Fr. (1822), Bulgariaceae. Anamorph *Endomelanconium*. 1, widespread (north & south temperate). *B. inquinans*, common saprobe on bark of hardwoods after felling, but sometimes parasitic. See Fenwick (*Mycologist* **6**: 177, 1992; culture), Verkley (*The Ascus Apical Apparatus in Leotiales* An Evaluation of Ultrastructural Characters as Phylogenetic Markers in the Families *Sclerotiniaceae*, *Leotiaceae* and *Geoglossaceae*: 209 pp., 1995; ultrastr.), Döring & Triebel (*Cryptog. Bryol.-Lichénol.* **19**: 123, 1998; phylogeny), Gernandt *et al.* (*Mycol.* **93**: 915, 2001; phylogeny), Wang *et al.* (*Mol. Phylogen. Evol.* **41**: 295, 2006; phylogeny), Wang *et al.* (*Mycol.* **98**: 1065, 2006; phylogeny).

Bulgariaceae Fr. (1849), Leotiales. 4 gen. (+ 10 syn.), 7 spp.

Lit.: Gamundí & Arambarri (*Revta Fac. Agron. Univ. nat. La Plata* **59**: 17, 1983), Fenwick (*Mycologist* **6**: 177, 1992), Triebel & Rambold (*Arnoldia* **4**: 15, 1992), Döring & Triebel (*Cryptog. Bryol.-Lichénol.* **19**: 123, 1998), Wang *et al.* (*Mycol.* **98**: 1065, 2006; phylogeny), Wang *et al.* (*Mol. Phylogen. Evol.* **41**: 295, 2006).

Bulgariastrum Syd. & P. Syd. (1913) ? = Dermea fide Korf *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 249, 1973).

Bulgariella P. Karst. (1885), Helotiaceae. 4, Europe; S. America. See Gamundí (*Sydowia* **34**: 89, 1981), Gamundí & Romero (*Fl. criptog. Tierra del Fuego* **10**: 130 pp., 1998; Argentina).

Bulgariopsis Henn. (1902), Helotiaceae. 1 or 2, Brazil.

Bulla Battarra ex Earle (1909) = Agrocybe fide Singer (*Agaric. mod. Tax.* edn 3, 1975).

Bullardia Jungh. (1830) [non *Bulliarda* DC. 1801, *Crassulaceae*] nom. rej. = Melanogaster fide Stalpers (*in litt.*).

Bullaria DC. (1805) = Puccinia fide Arthur (*Manual Rusts US & Canada*, 1934).

Bullaserpens Bat., J.L. Bezerra & Cavalc. (1965), anamorphic *Pezizomycotina*, Cpt.0fH.?. 1, Brazil. See Batista *et al.* (*Atas Inst. Micol. Univ. Pernambuco* **2**: 292, 1965).

bullate (1) having bubble-like or blister-like swellings; (2) (of a pileus), having a rounded projection at the centre (Fig. 19K).

Bullatina Vězda & Poelt (1987), Gomphillaceae (L). 1, widespread (tropical). See Vězda & Poelt (*Folia geobot. phytotax.* **22**: 186, 1987), Brusse (*Bothalia* **22**: 44, 1992; Transkei), Lücking *et al.* (*Lichenologist* **37**: 123, 2005; phylogeny).

Buller (Arthur Henry Reginald; 1874-1944; England, later Canada). Professor of Botany, Manitoba University (1904-1936). A most versatile mycologist, noted for his research on spore discharge and sexuality in basidiomycetes, particularly rusts; also famous for his limerick poems, and an expert billiards player. His library is at the Research Station, Agriculture

Canada, Winnipeg (Dowding, *Mycol.* **50**: 794, 1958; Oliver, *Catalogue of the Buller Memorial Library*, 1965). *Publs.* see Literature. *Biogs, obits etc.* Ainsworth (*Mycologist* **2**: 83, 1988) [portrait]; Bisby (*Nature* **154**: 173, 1944); Brodie & Lowe (*Science* **100**: 305, 1944); Brooks (*Obituary Notices of Fellows of the Royal Society* **5**: 51, 1945) [portrait]; Stafleu & Cowan (*TL-2* **1**: 401, 1976); Stafleu & Mennega (*TL-2, Suppl.* **3**: 217, 1995).

Buller phenomenon. The dikaryotization, in basidiomycetes and ascomycetes, of a homokaryon by a dikaryon (Quintanilha's (1933) term for Buller's discovery; see Buller, 1941); 'di-mon' matings (Papazian, *Bot. Gaz.* **112**: 143, 1950).

Bullera Derx (1930), anamorphic *Tremellaceae*. *c.* 35, widespread. See Ingold & Young (*TBMS* **76**: 165, 1981; spore discharge), Weijman & Rodrigues de Miranda (*Antonie van Leeuwenhoek* **49**: 559, 1983; cell wall composition), Suh *et al.* (*Microbiol.* Reading **141**: 901, 1995), Suh *et al.* (*J. gen. appl. Microbiol.* Tokyo **42**: 501, 1996; mol. phylogeny), Golubev & Nakasa (*FEMS Microbiol. Lett.* **146**: 59, 1997; mycocins), Barnett *et al.* (*Yeasts: Characteristics and Identification* 3rd edn, 2000), Fell *et al.* (*Int. J. Syst. Evol. Microbiol.* **50**: 1351, 2000; mol. phylogeny), Nakase *et al.* (*Journal of General and Applied Microbiology, Tokyo* **48**: 345, 2002; Taiwan n.sp.), Luong *et al.* (*Journal of General and Applied Microbiology, Tokyo* **51**: 335, 2005; Vietnam n.sp.), Fungsin *et al.* (*Journal of General and Applied Microbiology, Tokyo* **52**: 73, 2006; Thailand n.sp.).

Bulleribasidium J.P. Samp., M. Weiss & R. Bauer (2002), Tremellaceae. Anamorph *Bullera*. 1, Germany. See Sampaio *et al.* (*Mycol.* **94**: 874, 2002), Sampaio (*Frontiers in Basidiomycote Mycology*: 49, 2004).

Bulleromyces Boekhout & A. Fonseca (1991), Tremellaceae. Anamorph *Bullera*. 1, widespread (north temperate). See Boekhout & Fonseca (*Antonie van Leeuwenhoek* **59**: 91, 1991), Sampaio (*Frontiers in Basidiomycote Mycology*: 49, 2004).

Buller's drop. A drop of liquid on the hilar appendix of a ballistospore (q.v.) developed immediately before discharge, studied by Buller (*Researches* **2-6**, 1922-34); the drop contains mannitol and hexoses in concentrations enabling water to be taken in from a saturated atmosphere; prior to discharge the Buller's drop expands until it is large enough to come into contact with spore surface; at this point the drop redistributes itself over the spore surface, causing a sudden change in the centre of gravity of the spore sufficient to break the weak apiculus-sterigma connexion linking the spore to the basidium and resulting in discharge (Webster *et al.*, *MR* **99**: 833, 1995). Acceleration has been estimated at 25,000 g (Money, *Mycol.* **90**: 547, 1998). An educational video-film on this topic is commercially available (Webster, *Ballistospore discharge in basidiomycetes*, IWF Wissen und Medien, Göttingen, 1998).

Bulliard (Jean Baptiste François 'Pierre'; 1752-1793; France). Studied at Clairvaux (up to *c.* 1774); lived in Paris (*c.* 1775 onwards). An eminent naturalist; his main mycological work contains excellent early coloured illustrations of fungi; at a time when 'spontaneous generation' was the accepted explanation, he suggested that a fungus caused cereal smut through spore dispersal [a view also expressed, curiously almost simultaneously, in 1794, by the English artist, poet and mystic, William Blake, through his remarkable illustration 'Mildew Blighting the Ears of Corn']. *Publs. Histoire des champignons de la France* (1791-1792) [index: Petersen, *Mycotaxon* **6**: 127, 1977]. *Biogs, obits etc.* Gilbert (*BSMF* **68**: 1, 1952, bibliography, list of biographies, portrait); Gilbert (*Mycopathologia et Mycologia Applicata* **6**: 237, 1952). Grummann (1974: 269); Stafleu & Cowan (*TL-2* **1**: 402, 1976).

Bulliardella (Sacc.) Paoli (1905) = Actidium fide Lohman (*Pap. Mich. Acad. Sci.* **23**: 155, 1938).

Bulliardia, see *Bullardia*.

Bulliardia Lázaro Ibiza (1916) [non *Bulliarda* DC. 1801, *Crassulaceae*] ≡ Cerrena fide Donk (*Verh. K. ned. Akad. Wet.* tweede sect. **62**: 1, 1974).

Bunodea A. Massal. (1855) = Pyrenula Ach. (1809) fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Bunodophoron A. Massal. (1861), Sphaerophoraceae (L). 20, widespread (esp. south temperate). See Wedin (*Pl. Syst. Evol.* **187**: 213, 1993), Wedin (*Symb. Bot. Upsal.* **31** no. 1, 1995; key, monograph), Wedin (*Mycotaxon* **53**: 33, 1995), Wedin *et al.* (*Pl. Syst. Evol.* **209**: 75, 1998; phylogeny), Döring & Wedin (*Pl. Biol.* **2**: 361, 2000; anatomy), Wedin *et al.* (*Lichenologist* **32**: 171, 2000; phylogeny), Peršoh *et al.* (*Mycol. Progr.* **3**: 103, 2004; asci).

bunt, a wheat disease (*Tilletia caries* and *T. laevis*, syn. *T. foetida*); stinking smut; **dwarf -**, *T. controversa*. See also *Ustilaginales*.

Burcardia Schmidel (1797) [non *Burchardia* Schreb. 1789, *Liliaceae*] ≡ Sarcosoma.

Burenella Jouvenaz & E.I. Hazard (1978), Microsporidia. 1.

Buerenia M.S. Reddy & C.L. Kramer (1975), Protomycetaceae. 3 (on *Umbelliferae*), widespread. See Döbbeler (*Nova Hedwigia* **60**: 171, 1995).

Burgella Diederich & Lawrey (2007), Cantharellales. 1. See Diederich & Lawrey (*Mycol. Progr.* **6**: 61, 2007; phylogeny).

Burgoa Goid. (1938), anamorphic *Sistotrema*. 4 (propagules bulbils), widespread. See Weresub & LeClair (*CJB* **49**: 2203, 1971).

Burgundy mixture, made as Bordeaux mixture (q.v.) but with sodium carbonate (Na_2CO_3) in place of lime (copper sulphate 1.8 kg, sodium carbonate 2.3 kg, water 227 l).

Burkea Sprague (1977), Microsporidia. 1.

Burnett (John Harrison; 1922-2007; Scotland, later England). Student (1940-1942, 1945-1947) then lecturer (1947-1954), Oxford University; Professor of Botany, St Andrews University (1955-1960); Professor of Botany, University of Newcastle-upon-Tyne (1960-1968); Regius Professor, Glasgow University (1968-1970); Sibthorpian Professor of Rural Economy, Oxford University (1970-1979); Principal and Vice-Chancellor, Edinburgh University (1979-1987). Noted for his work on fungal biology and, in particular, genetics; also a champion of biodiversity conservation, believing strongly that without fungi the rest of the biosphere could not survive; as a commando under Fitzroy Maclean during World War II, his contact with guerilla leader and later president of Yugoslavia, Josep Brod (Tito) was catalytic in establishing postwar national parks in the country; after retirement, he strongly embraced the new digital technology, and well understood its importance for biodiversity conservation; founder and chairman of the Inter-

national Organization for Plant Information, and secretary of the World Council for the Biosphere (1987-1993); chairman of the UK National Biodiversity Network. Work. *Publs. Fundamentals of Mycology* (1968); *Mycogenetics* (1975); *Fungal Populations and Species* (2003). *Biogs, obits etc.* Anon. (John Harrison Burnett, obituary. *Times* London, 17 August 2007).

Burrillia Setch. (1891), Doassansiaceae. 4 (on aquatic plants), N. C. & S. America; Asia. See Thirumalachar (*Mycol.* **34**: 602, 1947), Vánky (*Sydowia* **34**: 167, 1981).

bursiculate, bag-like.

bursiform, bag-like.

Burt (Edward Angus; 1859-1939; USA). Born into a poor farming family; student, Harvard University (1891-1895); Professor of Natural History, Middlebury College, Vermont (1895-1913); Librarian and Mycologist, Missouri Botanic Garden, and Professor of Botany, Washington University, St Louis (1913-1933). Noted for his work on the *Thelephoraceae*; also, incidentally, a shrewd stock-market investor. *Publs.* The Thelephoraceae of North America. I-XV. *Annals of the Missouri Botanical Garden* (1914-1926). *Biogs, obits etc.* Dodge (*Occasional Papers of the Farlow Herbarium of Cryptogamic Botany* **14** 1, 1979); Lloyd (*Mycological Notes by G.C. Lloyd* **47**: 653, 1917) [portrait].

Buscalionia Sambo (1940), ? Trypetheliaceae (L). 1, Brazil.

Busseëlla Henn. (1902) = Cephaleuros fide Höhnel (*Sber. Akad. Wiss. Wien* Math.-naturw. Kl., Abt. 1 **120**: 411, 1911).

Butler (Edwin John; 1874-1943, Ireland). Imperial Mycologist, India (1900-1919); founding Director of the Imperial Mycological Institute, Kew (1920-1935). *Publs.*the genus *Pythium*. *Memoirs of the Department of Agriciculture in India* Botanical Series 5, **1** (1907); *Fungi and Disease in Plants* (1918); (with H. Sydow & P. Sydow) Fungi Indiae orientalis *Annales Mycologici* **16** (1906); (with Jones) *Plant Pathology* (1950). *Biogs, obits etc.* Güssow (*Phytopathology* **34**: 149, 1944) [portrait]; Johnston (*Review of Tropical Plant Pathology* **7**: 1, 1993); Kulkarni (*Plant Pathology Newsletter* **1**: 5, 1983); Mason (*Obituary Notices of Fellows of the Royal Society* **4**: 455, 1943) [bibliography, portrait]; Stafleu & Mennega (*TL-2, Suppl.* **3**: 285, 1995).

Butlerelfia Weresub & Illman (1980), Atheliaceae. 1, Canada; Europe. See Weresub & Illman (*CJB* **58**: 144, 1980).

Butleria Sacc. (1914), Elsinoaceae. 1, India. See Petrak & Sydow (*Annls mycol.* **27**: 87, 1929).

button, a young mushroom (esp. *Agaricus bisporus*) before the pileus has expanded.

Buxetroldia K.R.L. Petersen & Jørg. Koch (1997), Halosphaeriaceae. 1 (marine), Denmark. See Petersen & Koch (*MR* **101**: 1524, 1997), Pang *et al.* (*Nova Hedwigia* **77**: 1, 2003; phylogeny).

Buxtehudea J.I.R. Larsson (1980), Microsporidia. 1.

Byliana Dippen. (1930) = Palawaniella fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Byrrha Bat., F. Monnier & J.S. Silveira (1959) = Pichia fide Batra *in* Subramanian (Ed.) (*Taxonomy of fungi* **1**: 187, 1978).

Byrsalis Neck. ex Kremp. (1869) = Peltigera fide Santesson (*Taxon* **3**: 236, 1954).

Byrsomyces Cavalc. (1972) = Microtheliopsis fide Lücking *et al.* (*Lichenologist* **30**: 121, 1998).

Byssiplaca A. Massal. (1860) = Lecanora fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

byssisede, see byssoid.

Byssitheca Bonord. (1864) ≡ Rosellinia.

Byssoascus Arx (1971), Myxotrichaceae. Anamorph *Oidiodendron*. 1, Canada. See von Arx (*Persoonia* **6**: 377, 1971), Sugiyama *et al.* (*Mycoscience* **40**: 251, 1999; phylogeny), Usuki *et al.* (*Mycoscience* **44**: 97, 2003; mycorrhizas), Wang *et al.* (*Mycol.* **98**: 1065, 2006; phylogeny).

Byssocaulon Mont. (1835), Chrysothricaceae (L). 6, widespread (tropical). See Rogers (*Flora of Australia* **54**: 65, 1992; Australia).

Byssochlamys Westling (1909), Trichocomaceae. Anamorph *Paecilomyces*-like. 4, widespread. *B. fulva* may damage tinned fruits. See Stolk & Samson (*Persoonia* **6**: 341, 1971), Subramanian & Rajendran (*Kavaka* **5**: 83, 1978; ontogeny), Domenech *et al.* (*Microbiology* Reading **145**: 2789, 1999; chemistry, immunology), Samson *et al.* (*Introduction to Food- and Airborne Fungi*: 1, 2002; identification), Luangsa-ard *et al.* (*Mycol.* **96**: 773, 2004; phylogeny), Luangsa-ard *et al.* (*Kasetsart Journal* Natural Sciences **38**: 94, 2004; Thailand), Houbraken *et al.* (*Advances in Experimental Medicine and Biology* **571**: 211, 2006; toxins).

Byssocladiella Gaillon (1833) ≡ Byssocladium.

Byssocladium Link (1815) nom. dub., anamorphic *Pezizomycotina*. See Donk (*Taxon* **11**: 81, 1962).

Byssocorticaceae Jülich (1982) = Atheliaceae.

Byssocorticium Bondartsev & Singer (1944), Atheliaceae. 9 (mycorrhizal), widespread. See Jülich (*Willdenowia* Beih. 7, 1972), Mervielde (*AMK Mededelingen*: 45, 2003).

Byssocristella M.P. Christ. & J.E.B. Larsen (1970) = Tomentellopsis fide Hjortstam (*Svensk bot. Tidskr.* **68**: 51, 1974).

Byssocystis Riess (1853) = Ampelomyces fide Rogers (*Mycol.* **51**: 96, 1959).

Byssogene Syd. (1922), ? Dothideales. 1, Indonesia.

byssoid, cotton-like; made up of delicate threads; floccose. - **lichens**, see Egea *et al.* (*Lichenologist* **27**: 351, 1995; in *Arthoniales*), Hafellner & Vězda (*Nova Hedw.* **55**: 183, 1992; key 17 gen. thalli).

Byssolecania Vain. (1921), Pilocarpaceae (L). 9, widespread. See Santesson (*Symb. bot. upsal.* **12** no. 1: 1, 1952), Santesson (*SA* **10**: 137, 1991).

Byssoloma Trevis. (1853), Pilocarpaceae (L). Anamorph *Pyriomyces*. 55, widespread. See Vězda (*Folia geobot. phytotax.* **22**: 71, 1987; key 10 Afr. spp.), Kalb & Vězda (*Nova Hedwigia* **51**: 435, 1990; key 11 spp. neotropics), Elix *et al.* (*Biblthca Lichenol.* **58**: 81, 1995; chemistry), Sérusiaux (*Cryptog. Bryol.-Lichénol.* **19**: 197, 1998; Europe), Holien (*Graphis Scripta* **11**: 61, 2000; Scandinavia).

Byssolomataceae Zahlbr. (1926) = Pilocarpaceae.

Byssolophis Clem. (1931), Lophiostomataceae. 1, widespread. See Holm (*Windahlia* **16**: 49, 1986), Barr (*Mycotaxon* **45**: 191, 1992; posn).

Byssomerulius Parmasto (1967), Phanerochaetaceae. 8, widespread. See Parmasto (*Consp. System. Corticiac.*, 1968), Zmitrovich (*Mikol. Fitopatol.* **35**: 9,

2001).

Byssonectria P. Karst. (1881), Pyronemataceae. 10, widespread. See Dennis & Itzerott (*Kew Bull.* **28**: 5, 1973), Benkert (*Gleditschia* **15**: 173, 1987; status), Caillet & Moyne (*Bull. Soc. Hist. nat. Doubs* **84**: 9, 1991; key), Sivertsen (*SA* **9**: 23, 1991; nomencl.), Pfister (*Mycol.* **85**: 952, 1994; development, key 4 spp. N. Am.), Pfister (*Mycotaxon* **53**: 431, 1995), Yao & Spooner (*MR* **100**: 881, 1996; Brit. spp.), Landvik *et al.* (*Nordic Jl Bot.* **17**: 403, 1997; DNA), Kullman (*Mycotaxon* **69**: 199, 1998; sibling spp.), Harrington *et al.* (*Mycol.* **91**: 41, 1999; phylogeny), Hansen *et al.* (*Mol. Phylogen. Evol.* **36**: 1, 2005), Hansen & Pfister (*Mycol.* **98**: 1029, 2006; phylogeny), Perry *et al.* (*MR* **111**: 549, 2007; phylogeny).

Byssoonygena Guarro, Punsola & Cano (1987), Onygenaceae. Anamorph *Malbranchea*. 1, Spain. See Guarro *et al.* (*Mycopathologia* **100**: 159, 1987).

Byssopeltis Bat., J.L. Bezerra & T.T. Barros (1970), Microthyriaceae. 1, Brazil. See Batista *et al.* (*Publções Inst. Micol. Recife* **636**: 5, 1969).

Byssophoropsis (Vain.) Tehler (1993) = Sagenidiopsis fide Egea *et al.* (*Flechten Follmann* Contributions to Lichenology in Honour of Gerhard Follmann: 183, 1995).

Byssophragmia M. Choisy (1931) = Megalospora Meyen fide Sipman (*Biblthca Lichenol.* **18**, 1983).

Byssophytum Mont. (1848), Pezizomycotina (L (sterile)). 2, Java; Tahiti. See Groenhart (*Nederl. Kruid. Arch.* **46**: 774, 1936).

Byssoporia M.J. Larsen & Zak (1978), Atheliaceae. 1 (mycorrhizal), widespread. See Larsen & Zak (*CJB* **56**: 1123, 1978).

Byssopsora A. Massal. (1861) = Bacidia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Byssosphaeria Cooke (1879), Melanommataceae. Anamorph *Pyrenochaeta*. *c.* 12, widespread. See Barr (*Mycotaxon* **20**: 1, 1984; key), Hyde *et al.* (*MR* **103**: 1423, 1999), Chen & Hsieh (*Sydowia* **56**: 24, 2004; Taiwan).

Byssostilbe Petch (1912) = Berkelella fide Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Byssotheciella Petr. (1923), Pezizomycotina. 1 or 2, Europe; S. America.

Byssothecium Fuckel (1861), Dacampiaceae. Anamorph *Chaetophoma*-like. 5, widespread (temperate). See Boise (*Mycol.* **75**: 666, 1983), Semeniuk (*Mycol.* **75**: 744, 1983; on alfalfa), Crane *et al.* (*Mycol.* **84**: 235, 1992), Lumbsch & Lindemuth (*MR* **105**: 901, 2001; phylogeny), Kruys *et al.* (*MR* **110**: 527, 2006; phylogeny), Schoch *et al.* (*Mycol.* **98**: 1041, 2006; phylogeny).

Byssus L. (1753) nom. rej. prop. ≡ Trentepohlia Formerly used for some filamentous lichenized and other fungus mycelia.

C (1) see Metabolic products. (2) Botanical Museum and Herbarium (Copenhagen, Denmark); founded 1759; part of the University of Copenhagen.

Cabalodontia Piątek (2004), Meruliaceae. 5. See Piątek (*Polish Botanical Journal* **49**: 2, 2004).

CABI, the trading name of CAB INTERNATIONAL (formerly Commonwealth Agricultural Bureaux; founded 1929), an intergovernmental organization established by treaty lodged with the UN, and of which IMI (q.v.) was an Institute; see Scrivenor (*CAB – the first 50 years*, 1980).

Cacahualia Mercado & R.F. Castañeda (1984) = Arachnophora fide Sutton (*in litt.*), Castañeda Ruíz *et al.* (*Nova Hedwigia* **64**: 473, 1997).

Caccobius Kimbr. (1967), Thelebolaceae. 1 (coprophilous), widespread (north temperate). See Landvik *et al.* (*Mycoscience* **39**: 49, 1998; DNA), van Brummelen (*Persoonia* **16**: 425, 1998; ultrastr.).

Cacosphaeria Speg. (1888) = Kacosphaeria fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Cacumisporium Preuss (1851), anamorphic *Pezizomycotina*, Hso.≡ eP.19. 9, Europe; N. America. See Goos (*Mycol.* **61**: 52, 1969), Sutton (*Mycol. Pap.* **132**, 1973), Kirk (*Mycotaxon* **43**: 231, 1992), Hyde & Goh (*MR* **102**: 739, 1998), Réblová & Gams (*Czech Mycol.* **51**: 1, 1999; teleomorph), Réblová (*Stud. Mycol.* **45**: 149, 2000; review), Tsui *et al.* (*Mycol.* **93**: 389, 2001; Hong Kong).

cadavericole, an organism living on corpses.

Cadophora Lagerb. & Melin (1927), anamorphic *Helotiales*. 10, widespread. See Conant (*Mycol.* **29**: 597, 1937), Harrington & McNew (*Mycotaxon* **87**: 141, 2003; phylogeny), Bills (*Mem. N. Y. bot. Gdn* **89**: 113, 2004).

caducous (of spores, etc.), falling off readily, deciduous.

Cadyexinis Stach (1957), Fossil Fungi. 3 (Miocene, Carboniferous), Taiwan; Germany.

Caecomyces J.J. Gold (1988), Neocallimastigaceae. 2, British Isles; Canada. See Wubah *et al.* (*Mycol.* **83**: 303, 1991; morphology), Gleason *et al.* (*Australasian Mycologist* **21**: 94, 2002; rhizoid morphology).

Caenomyces E.W. Berry (1916), Fossil Fungi (mycel.) ? Fungi. 7 (Tertiary), Brazil; USA.

Caenothyrium Theiss. & Syd. (1918) ? = Actinopeltis fide Spooner & Kirk (*MR* **94**: 223, 1990).

Caeoma Link (1809), anamorphic *Pucciniales*. *c.* 200, widespread. Anamorph name for aecial anamorphs (I) without bounding structures. See Sato & Sato (*TBMS* **85**: 223, 1985; wider circumscription incl. bounded sori), Crane *et al* (*Mycoscience* **46**: 143, 2005; Japan n.sp., rhododendron rust).

caeoma (pl. **caeomata**), an aecium as in *Caeoma*, i.e. without peridial cells and with or without paraphyses.

caeomatoid (of aecia), resembling caeomata; sometimes, incorrectly, 'caeomoid'.

Caeomurus, see *Coeomurus*.

Caeruleomyces Stalpers (2000), anamorphic *Hymenochaetales*. 1. See Stalpers (*Karstenia* **40**: 177, 2000).

Caerulicium Jülich (1982) = Byssocorticium fide Stalpers (*in litt.*).

Caesar's mushroom, basidioma of the edible *Amanita caesarea*.

caespitose (cespitose), in groups or tufts like grass; cf. gregarious.

Caespitotheca S. Takam. & U. Braun (2005), Erysiphaceae. 1. See Takamatsu *et al.* (*MR* **109**: 907, 2005).

caespitulus (pl. **caespituli**), a tuft of spores.

Caesposus Nüesch (1937) = Lyophyllum fide Kuyper (*in litt.*), Cooke (*Spec. Publ. Div. Myc. Dis. Surv. US Department of Agriculture* **3**, 1953; typification).

Cainea S. Hughes (1951) nom. nud. = Apiosordaria fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Cainia Arx & E. Müll. (1955), Cainiaceae. 3 (from grasses), widespread (temperate). See Parguey-Leduc (*Revue Mycol.* Paris **28**: 200, 1963; asci, affinities), Krug (*Sydowia* **30**: 122, 1978), Kang *et al.* (*MR* **103**: 1621, 1999), Jeewon *et al.* (*MR* **107**: 1392, 2003;

phylogeny).

Cainiaceae J.C. Krug (1978), Xylariales. 2 gen., 4 spp.
Lit.: Müller & Corbaz (*Sydowia* **10**: 181, 1956), Krug (*Sydowia* **30**: 122, 1978), Kohlmeyer & Volkmann-Kohlmeyer (*SA* **12**: 7, 1993), Kang *et al.* (*MR* **103**: 1621, 1999), Lumbsch *et al.* (*Mycol. Progr.* **1**: 57, 2002).

Ciniella E. Müll. (1957), Hyponectriaceae. 2 (saprobic in dead leaves), Canada; Europe. See Müller (*Sydowia* **10**: 118, 1957).

Cainomyces Thaxt. (1901), ? Laboulbeniales. 1.

Calathaspis I.M. Lamb & W.A. Weber (1972), Cladoniaceae (L). 1, Papua New Guinea. See Stenroos (*Ann. bot. fenn.* **25**: 207, 1988; Melanesia), Stenroos & DePriest (*Am. J. Bot.* **85**: 1548, 1998; DNA), Stenroos *et al.* (*Mycol. Progr.* **1**: 267, 2002; phylogeny).

Calathella D.A. Reid (1964), Marasmiaceae. 9, Europe; N. America. A new name to replace the illegitimate honomyn has not been introduced. See Reid (*Persoonia* **3**: 93, 1964), Singer (*Agar. mod. Tax.* 4th ed.: 387, 1986; syn. on *Flagelloscypha*), Bodensteiner *et al.* (*Mycol.* **93**: 1010, 2001; Bali).

Calathinus Quél. (1886) [non *Calathinus* Rafin. 1836, *Amaryllidaceae*] = Crepidotus fide Kuyper (*in litt.*) Typification is ambiguous, synonymy with *Pleurocybella* has been proposed.

Calathiscus Mont. (1841) ? = Lysurus fide Dring (*Kew Bull.* **35**: 1, 1980).

Calbovista Morse (1935) ≡ Calbovista Morse ex M.T. Seidl.

Calbovista Morse ex M.T. Seidl (1995), Agaricaceae. 1, USA. See Seidl (*Mycotaxon* **54**: 389, 1995).

calcarate, having a projection or spur.

calcareous, containing lime.

Calcarispora Marvanová & Marvan (1963), anamorphic *Pezizomycotina*, Hso.0fH.1. 1 (aquatic), Europe; Canada. See Marvanová & Marvan (*Čas. Slez. Mus.* Ser. A, Hist. Nat. **12**: 109, 1963), Marvanová & Bärlocher (*Czech Mycol.* **53**: 1, 2001; culture).

Calcarisporiella de Hoog (1974), anamorphic *Pezizomycotina*, Hso.0eH.10. 1, British Isles. See de Hoog (*Stud. Mycol.* **7**: 68, 1974).

Calcarisporium Preuss (1851), anamorphic *Hypocreales*, Hso.0eH.10. 2 (on agarics, etc.), Europe. See Barnett (*Mycol.* **50**: 497, 1958), Barnett & Lilly (*Bull. W. Va Exp. Stn* **420T**, 1958), Nicot (*BSMF* **84**: 85, 1968), Rombach & Roberts (*Mycol.* **79**: 153, 1987; symbiosis with *Hirsutella*), Kendrick (*CJB* **81**: 75, 2003; morphogenesis), Hausner & Reid (*CJB* **82**: 752, 2004; phylogeny), Somrithipol & Jones (*Sydowia* **58**: 133, 2006; Thailand).

calceiform, shoe-like in form.

Calceispora Matsush. (1975), anamorphic *Pezizomycotina*, Hso.0eH.15. 2, Japan; Malawi. See Sutton (*Mycol. Pap.* **167**: 11, 1993).

calceolate, see calceiform.

Calceomyces Udagawa & S. Ueda (1988), Xylariaceae. Anamorph *Nodulisporium*. 1, Japan. See Udagawa & Ueda (*Mycotaxon* **32**: 448, 1988).

calcicolous, an organism (**calcicole**) growing on substrates rich in calcium; esp. of spp. on limestone or chalky rocks or soils.

Caldariomyces Woron. (1926), anamorphic *Pezizomycotina*. See Hughes (*Mycol.* **68**: 693, 1976), Reynolds & Faull (*Taxon* **50**: 1183, 2001; conservation proposal), Gams (*Taxon* **54**: 520, 2005; conservation rejected).

Caldesia Rehm (1889) ≡ Holmiella.

Caldesia Trevis. (1869) [non *Caldesia* Parl. 1860, *Alismataceae*] = Arthonia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Caldesiella Sacc. (1877) nom. rej. = Tomentella Pat. fide Larsen (*Taxon* **16**: 510, 1967) See also, Nikolajeva (*Mikol. Fitopatol.* **2**: 198, 1968).

Calenia Müll. Arg. (1890), Gomphillaceae (L). 41, widespread (tropical). See Santesson (*Symb. bot. upsal.* **12** no. 1: 1, 1952), Vězda & Poelt (*Folia geobot. phytotax.* **22**: 179, 1987), Hartmann (*Mycotaxon* **59**: 483, 1996), Lücking (*Biblthca Lichenol.* **65**: 1, 1997), Lücking *et al.* (*Trop. Bryol.* **19**: 55, 2000), Ferraro (*Fungal Diversity* **15**: 153, 2004; hypophores), Lücking *et al.* (*Mycol.* **96**: 283, 2004; phylogeny), Lücking *et al.* (*Lichenologist* **37**: 123, 2005; morphology, cladistics), Papong *et al.* (*Nova Hedwigia* **86**: 201, 2008).

Caleniomyces Cif. & Tomas. (1953) = Caleniopsis.

Caleniopsis Vězda & Poelt (1987), Gomphillaceae (L). 2, widespread (tropical). See Vězda & Poelt (*Folia geobot. phytotax.* **22**: 187, 1987), Lücking *et al.* (*Lichenologist* **37**: 123, 2005; phylogeny), Papong *et al.* (*Nova Hedwigia* **86**: 201, 2008).

Caleutypa Petr. (1934), Pezizomycotina. 1, Europe.

Caliciaceae Chevall. (1826), Teloschistales (±L). 31 gen. (+ 46 syn.), 731 spp.
Lit.: Tibell (*Nova Hedwigia* Beih. **79**: 597, 1984), Tibell (*Symb. bot. upsal.* **27** no. 1: 279 pp., 1987), McCune & Rosentreter (*Bryologist* **95**: 329, 1992), Tibell & Kalb (*Nova Hedwigia* **55**: 11, 1992), Tibell (*Symb. bot. upsal.* **32** no. 1: 291, 1997), Wedin & Tibell (*CJB* **75**: 1236, 1997; phylogeny), Tibell (*Biblthca Lichenol.* **71**, 1998; S Am. spp. s.l.), Tibell (*Biblthca Lichenol.* **71**: 107 pp., 1998), Hladun (*Clementeana* **4**: 48, 1999; key to *Caliciales*), Sarrión *et al.* (*Mycotaxon* **71**: 169, 1999), Tibell (*Nordic Lichen Flora* **1**. Introductory Parts; Calicioid Lichens and Fungi: 20, 1999), Tibell (*Nordic Lichen Flora* **1**. Introductory Parts; Calicioid Lichens and Fungi **1**, 1999; Nordic spp. s.l.), Wedin *et al.* (*CJB* **78**: 246, 2000; rels with *Physciaceae*), Helms *et al.* (*Mycol.* **95**: 1078, 2003; phylogeny), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny).

Caliciales Bessey (1907) = Teloschistales.

Calicidium, see *Calycidium*.

Caliciella Vain. (1927) = Calicium fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Caliciomyces E.A. Thomas ex Cif. & Tomas. (1953) ≡ Calicium.

Caliciopsis Peck (1880), Coryneliaceae. 28 (on conifers), widespread. See Benny *et al.* (*Bot. Gaz.* **146**: 437, 1985; key), Marmolejo (*Mycotaxon* **72**: 195, 1999), Rikkinen (*Karstenia* **40**: 147, 2000; China), Winka & Eriksson (*Phylogenetic Relationships Within the Ascomycota Based on 18S rDNA Sequences* Akademisk Avhandling [Thesis (PhD), Department of Ecology and Environmental Science, Umeå University]: [17] pp., 2000; phylogeny), Geiser *et al.* (*Mycol.* **98**: 1053, 2006; phylogeny).

Calicium Pers. (1794), Caliciaceae (±L). 30, widespread. See Tibell (*Symb. bot. upsal.* **21** no. 2, 1975), Tibell (*Svensk bot. Tidskr.* **71**: 239, 1977), Tibell (*Beih. Nova Hedwigia* **79**: 597, 1984; gen. concept), Tibell & Kalb (*Nova Hedwigia* **55**: 11, 1992; 9 trop. Am. spp.), Tibell (*Nordic Lichen Flora* **1**. Introductory Parts; Calicioid Lichens and Fungi **1**, 1999; Nordic spp. s.l.), Wedin *et al.* (*Taxon* **51**: 655, 2002; phylogeny), Miądlikowska *et al.* (*Mycol.* **98**: 1088,

2006; phylogeny), Tibell (*J. Hattori bot. Lab.* **100**: 809, 2006; Himalayas).
Calidia Stirt. (1876) = Byssoloma fide James (*Lichenologist* **5**: 175, 1971).
Calidion Syd. & P. Syd. (1919), anamorphic *Uncola*. 2 (on *Lindsaea*, *Polypodium*, *Thelypteris* (*Pteridophyta*)), S. America. Anamorph name for (II).
Lit.: Cummins & Hiratsuka (*Illustr. Gen. Rust Fungi* edn 3: 225 pp., 2003; syn. *Macabuna*, *Physopella* sensu Ono *et al.*, 1992).
Californiomyces U. Braun (1981) = Brasiliomyces fide Zheng (*Mycotaxon* **19**: 281, 1984).
Calkinsia Nieuwl. (1916) ≡ Pterygium.
Callebaea Bat. (1962), ? Capnodiaceae. 1, Uganda. See Batista (*Broteria* ser. bot. **31**: 100, 1962).
Calliderma (Romagn.) Largent (1994) = Entoloma fide Kuyper (*in litt.*).
Callimastix Weissenb. (1912), Coelomomycetaceae. 1 (On *Cyclops*), Germany. See Barr *in* Margulis *et al.* (Eds) (*Handbook of Protoctista*: 454, 1990).
Callimothallus Dilcher ex Janson. & Hills (1977), Fossil Fungi, Microthyriaceae. 7 (Cretaceous, Tertiary), widespread. See Hansen (*Grana* **19**: 67, 1980).
Calliospora Arthur (1905) = Uropyxis fide Arthur (*Manual Rusts US & Canada*, 1934).
Callistodermatium Singer (1981), ? Tricholomataceae. 1, Brazil. See Singer (*Mycol.* **73**: 506, 1981).
Callistospora Petr. (1955), anamorphic *Pezizomycotina*, Hso.≡ eP.19. 1, Australia. See Nag Raj (*CJB* **67**: 3169, 1989; redescr.).
Callistosporium Singer (1944), Tricholomataceae. 13, widespread. See Singer (*Sydowia* **30**: 261, 1978; key), Redhead (*Sydowia* **35**: 223, 1982; *Callistosporium luteo-olivaceum*), Gándara & Guzmán (*Mycotaxon* **96**: 73, 2006).
Callolechia Kremp. (1869) ≡ Collolechia.
Callopis (Müll. Arg.) Gyeln. (1933) = Phyllopsora fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).
Callopisma De Not. (1847) nom. rej. prop. ≡ Caloplaca.
Calloria Fr. (1836), Helotiales. Anamorph *Cylindrocolla*. 4, Europe; N. America. See Hein (*Willdenowia* Beih. **9**, 1976), Spooner (*Biblthca Mycol.* **116**: 711 pp., 1987; Australia), Nauta & Spooner (*Mycologist* **13**: 65, 1999; UK).
Calloriella Höhn. (1918), Helotiales. 1, Europe. See Nannfeldt (*Nova Acta R. Soc. Scient. upsal.* **8**: 193, 1932; aff. with *Orbiliaceae*).
Callorina Korf (1971) ≡ Calloria fide Hein (*Willdenowia* Beih. **9**, 1976).
Calloriopsis Syd. & P. Syd. (1917), ? Helotiaceae. 1 (on *Meliolaceae*), widespread (tropical). See Pfister (*Mycotaxon* **4**: 340, 1976), Lizoň *et al.* (*Mycotaxon* **67**: 73, 1998; posn), Baral & Marson (*Micologia 2000*: 23, 2000).
Callorites Fiore (1932), Fossil Fungi. 1 (Eocene), Italy.
callose, hard or thick and sometimes rough.
Callosisperma Preuss (1855) nom. dub., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).
callosities (of fungi), wall thickenings associated with the penetration of fungicolous parasites (Swart, *TBMS* **64**: 511, 1975). See papillae.
Calocera (Fr.) Fr. (1828), Dacrymycetaceae. *c.* 15, widespread. See McNabb (*N.Z. Jl Bot.* **3**: 31, 1965; key), Kennedy (*CJB* **50**: 413, 1972; basidioma devel.), Reid (*TBMS* **62**: 437, 1974; key Brit. spp.), Mathiesen (*Svampe* **25**: 35, 1992; key Danish spp.).
Calocerаceae Rea (1922) = Dacrymycetaceae.
Caloceras Fr. ex Wallr. (1833) = Calocera fide Kennedy (*Mycol.* **50**: 884, 1958).
Calochaetis Syd. (1935) = Wentiomyces fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).
Calocladia Lév. (1851) [non *Calocladia* Grev. 1836, *Rhodophyta*] ≡ Microsphaera fide Braun (*in litt.*).
Calocline Syd. (1939), anamorphic *Pezizomycotina*, St.0eH.15. 1, Ecuador.
Calocybe Kühner ex Donk (1962), Lyophyllaceae. *c.* 40, widespread. *C. gambosum*, St. George's mushroom. See Singer (*Sydowia* **30**: 264, 1978; key).
Caloderma Petri (1900) = Scleroderma fide Guzmán (*Darwiniana* **16**: 233, 1970).
Calodon P. Karst. (1881) = Hydnellum P. Karst. (1879) fide Donk (*Taxon* **5**: 69, 1956).
Calogloeum Syd. (1924) = Fusamen fide von Arx (*Verh. K. ned. Akad. Wet. Amst.* C **51**: 1, 1957).
Calolepis Syd. (1925) = Pycnoderma fide von Arx (*Persoonia* **2**: 421, 1963).
Calonectria De Not. (1867), Nectriaceae. Anamorph *Cylindrocladium*. *c.* 34, widespread. See Rossman (*Mycotaxon* **8**: 321, 1979), Rossman (*Mycotaxon* **8**: 485, 1979; excl. names), Rossman (*Mycol. Pap.* **150**, 1983), Subramanian & Bhat (*Cryptog. Mycol.* **4**: 269, 1983), Crous & Wingfield (*Mycotaxon* **51**: 341, 1994), Rehner & Samuels (*CJB* **73** Suppl. 1: S816, 1995; phylogeny), Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999), Schoch *et al.* (*Stud. Caloplacaceae Zahlbr. (1907) = Teloschistaceae.

Caloplacomyces E.A. Thomas (1939) nom. inval. ≡ Caloplaca.

Caloplacopsis (Zahlbr.) B. de Lesd. (1932) = Candelariella fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Caloporaceae Bondartseva (1983) = Meruliaceae.

Caloporia P. Karst. (1893) ≡ Caloporus P. Karst.

Caloporus P. Karst. (1881) = Merulius Fr. fide Donk (*Persoonia* **1**: 193, 1960).

Caloporus Quél. (1886) = Albatrellus fide Stalpers (*in litt.*).

Calopposis Lloyd (1925) = Calocera fide McNabb (*N.Z. Jl Bot.* **3**: 31, 1965).

Caloscypha Boud. (1885), Caloscyphaceae. Anamorph *Geniculodendron*. 1, Europe. See Kimbrough & Curry (*Mycol.* **78**: 735, 1986; ultrastr.), Landvik *et al.* (*Nordic Jl Bot.* **17**: 403, 1997; phylogeny), Harmaja (*Karstenia* **42**: 27, 2002; family), Schröder *et al.* (*Forest Pathology* **32**: 225, 2002; anam.), Hansen & Pfister (*Mycol.* **98**: 1029, 2006; phylogeny), Perry *et al.* (*MR* **111**: 549, 2007; phylogeny).

Caloscyphaceae Harmaja (2002), Pezizales. 2 gen. (+ 1 syn.), 2 spp. See Harmaja (*Karstenia* **42**: 27, 2002; family), Hansen & Pfister (*Mycol.* **98**: 1029, 2006; phylogeny).

Calosphaeria Tul. & C. Tul. (1863), Calosphaeriaceae. Anamorph *Calosphaeriophora*. 29, widespread. See Barr (*Mycol.* **77**: 549, 1985), Samuels & Candoussau (*Nova Hedwigia* **62**: 47, 1996), Réblová *et al.* (*Stud. Mycol.* **50**: 533, 2004; phylogeny), Damm *et al.* (*Persoonia* **20**: 39, 2008; asci, relns).

Calosphaeriaceae Munk (1957), Calosphaeriales. 8 gen. (+ 2 syn.), 44 spp.

Lit.: Barr (*Mycol.* **77**: 549, 1985), Romero & Minter (*TBMS* **90**: 457, 1988), Samuels & Candoussau (*Nova Hedwigia* **62**: 47, 1996), Barr (*Cryptog. Bryol.-Lichénol.* **19**: 169, 1998), Mostert *et al.* (*Mycol.* **95**: 646, 2003), Réblová *et al.* (*Stud. Mycol.* **50**: 533, 2004), Damm *et al.* (*Persoonia* **20**: 39, 2008; asci, relns).

Calosphaeriales M.E. Barr (1983). Sordariomycetidae 2 fam., 13 gen., 54 spp. Stromatic tissues almost absent to well-developed, usually pseudostromatic. Ascomata perithecial, immersed, often clustered, with separate or convergent ostioles. Interascal tissue composed of a few elongate paraphyses. Asci formed in fascicles or spicate clusters, croziers sometimes absent, sessile or long-stalked, sometimes polysporous; usually with an inconspicuous J- apical ring. Ascospores hyaline or pale brown, ellipsoidal or allantoid, thin-walled. Saprobes on bark or wood, mainly temp. Fams:

(1) **Calosphaeriaceae**
(2) **Pleurostomataceae**

Lit.: Barr (*Mycol.* **77**: 549, 1985; *Mycotaxon* **39**: 43, 1990), Barr *et al.* (*Mycotaxon* **48**: 529, 1993), Rogers (*in* Hawksworth (Ed.), *Ascomycete systematics*: 321, 1994).

Calosphaeriophora Réblová, L. Mostert, W. Gams & Crous (2004), anamorphic *Calosphaeria*. 1. See Réblová *et al.* (*Stud. Mycol.* **50**: 542, 2004).

Calosphaeriopsis Petr. (1941), Pezizomycotina. 1, Europe.

Calospora Nitschke ex Niessl (1875) = Macrodiaporthe fide Barr (*Mycol. Mem.* **7**: 232 pp., 1978), Holm (*Taxon* **24**: 475, 1978).

Calospora Sacc. (1883) = Prosthecium fide Barr (*Mycol. Mem.* **7**: 232 pp., 1978).

Calosporella J. Schröt. (1897) = Prosthecium fide Barr (*Mycol. Mem.* **7**: 232 pp., 1978).

Calostilbe Sacc. & P. Syd. (1902), Nectriaceae. Anamorph *Calostilbella*. 1 (on rotten wood etc.), pantropical. See Samuels (*CJB* **51**: 1275, 1973), Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Calostilbella Höhn. (1919), anamorphic *Calostilbe*, Hsy.≡ eP.1. 1, W. Africa; West Indies. See Mason (*Mycol. Pap.* **2**: 29, 1925), Hewings & Crane (*Mycotaxon* **20**: 245, 1984).

Calostoma Desv. (1809), Calostomataceae. 15, widespread. See Boedijn (*Bull. Jard. bot. Buitenz.* ser. 3 **16**: 64, 1938; Indonesia, key), Liu (*J. Shansi Univ., nat. sci. ed.* **1**: 109, 1979; world key [Chinese]), Hibbett *et al.* (*Nature* **407**: 506, 2000; phylogeny), Hughey *et al.* (*Mycol.* **92**: 94, 2000; phylogeny).

Calostomataceae E. Fisch. (1900), Boletales. 1 gen. (+ 3 syn.), 15 spp.

Lit.: Cunningham (*Gast. Austr. N.Z.*: 236 pp., 1942), Hughey *et al.* (*Mycol.* **92**: 94, 2000), Binder & Bresinsky (*Mycol.* **94**: 85, 2002).

Calothricopsis, see *Calotrichopsis*.

Calothyriella Höhn. (1917) = Microthyrium fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Calothyriolum Speg. (1919) = Asterina fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Calothyriopeltis F. Stevens & R.W. Ryan (1925) nom. dub., Fungi. See Petrak (*Sydowia* **5**: 169, 1951).

Calothyriopsis Höhn. (1919), Microthyriaceae. 2, America (tropical).

Calothyris Clem. & Shear (1931) ≡ Calothyriopeltis.

Calothyrium Theiss. (1912) = Asterinella fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Calotrichopsis Vain. (1890), Lichinaceae (L). 3, S. America. See Henssen (*Symb. bot. upsal.* **18** no. 1, 1963), Moreno & Egea (*Acta Bot. Barcinon.* **41**: 1, 1992), Schultz & Büdel (*Lichenologist* **34**: 39, 2002; key).

calvacin, a non-diffusible mucoprotein antibiotic from *Langermannia gigantea*; active against mouse, rat,

and hamster tumours (Beneke, *Mycol.* **55**: 257, 1963).

Calvarula Zeller (1939), Phallaceae. 1, USA.

Calvatia Fr. (1849) nom. cons., Agaricaceae. *c.* 40, widespread. See Zeller & Smith (*Lloydia* **27**: 148, 1964; N. Am. spp., keys), Kreisel (*Nova Hedwigia* **48**: 241, 1989; key to segr. *Handkea*, not accepted here), Calonge & Martin (*Boln Soc. Micol. Madrid* **14**: 181, 1990; gen. limits), Demoulin (*Mycotaxon* **46**: 77, 1993), Lange (*Blyttia* **51**: 141, 1993; infr. generic taxa), Coetzee & Van Wyk (*Bothalia* **33**: 156, 2003; *Calvatia* sect. *Macrocalvatia*), Coetzee & Van Wyk (*Taxon* **54**: 541, 2005; nomencl.).

Calvatiella C.H. Chow (1936) = Lycoperdon Pers. fide Kreisel & Calonge (*Mycotaxon* **48**: 13, 1993).

Calvatiopsis Hollós (1929), Agaricaceae. 1, Europe. Perhaps a 'monstrosity'.

calvescent, becoming bare or bald.

Calvitimela Hafellner (2001), ? Tephromelataceae. 5, widespread. See Hafellner & Türk (*Stapfia* **76**: 150, 2001), Arup *et al.* (*Mycol.* **99**: 42, 2007; sister group relations with *Parmeliaceae*).

Calvocephalis Bainier (1882) = Syncephalis fide Benjamin (*Aliso* **4**: 321, 1959).

calvous, naked, bare.

Calycella (Fr.) Boud. (1885) ≡ Calycina.

Calycella (Sacc.) Sacc. (1899), Helotiaceae. 1, Europe. See Korf & Carpenter (*Mycotaxon* **1**: 52, 1974).

Calycella Quél. (1886) = Bisporella fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Calycellina Höhn. (1918), Hyaloscyphaceae. Anamorph *Chalara*-like. *c.* 43, widespread. See Thind & Sharma (*J. Indian bot. Soc.* **59**: 350, 1980), Arendholz & Sharma (*Mycotaxon* **20**: 633, 1984), Lowen & Dumont (*Mycol.* **76**: 1003, 1984; key), Baral (*Beitr. Kenntn. Pilze Mitteleur.* **5**: 209, 1989; 4-spored spp.), Huhtinen (*Karstenia* **29**: 45, 1990), Svrček (*Česká Mykol.* **46**: 149, 1993; 5 spp.), Cantrell & Hanlin (*Mycol.* **89**: 745, 1997; DNA), Yu & Zhuang (*Mycosystema* **22**: 42, 2003; phylogeny), Raitviir (*Scripta Mycol.* **20**, 2004).

Calycellinopsis W.Y. Zhuang (1990), Dermateaceae. 1 (on petioles), China. See Zhuang (*Mycotaxon* **38**: 121, 1990).

Calycidiaceae Elenkin (1929), Lecanorales (L). 1 gen. (+ 2 syn.), 1 spp.

Lit.: Tibell (*Symb. bot. upsal.* **27** no. 1: 279 pp., 1987), Wedin (*Taxonomic Studies in Sphaerophoraceae* (Caliciales, Ascomycotina), Acta Universitatis Upsaliensis (Comprehensive Summaries of Uppsala Dissertations from the Faculty of Science and Technology no. 77): 168 pp., 1994), Tibell (*Symb. bot. upsal.* **32** no. 1: 291, 1997), Wedin (*Lichenologist* **34**: 63, 2002).

Calycidiomyces Cif. & Tomas. (1953) ≡ Calycidium.

Calycidium Stirt. (1877), Calycidiaceae (L). 1 (on *Nothofagus*), New Zealand. See Sato (*Miscnea bryol. lichen., Nichinan* **4**: 150, 1968), Tibell (*Symb. bot. upsal.* **27** no. 1, 1987), Tibell (*Symb. bot. upsal.* **32**: 291, 1997; anamorphs), Wedin (*Lichenologist* **34**: 63, 2002; monogr.).

calyciform, cup-like.

Calycina Nees ex Gray (1821), Hyaloscyphaceae. Anamorph *Acleistia*. *c.* 45, widespread. See Baral (*SA* **13**: 113, 1993), Raitviir (*Scripta Mycol.* **20**, 2004), Zhang & Zhuang (*Nova Hedwigia* **78**: 475, 2004; phylogeny).

Calycium DC. (1805) ≡ Calicium.

calycular, cup-like.

Calyculosphaeria Fitzp. (1923) = Nitschkia fide Gaikwad (*Sydowia* **26**: 290, 1974), Nannfeldt (*Svensk bot. Tidskr.* **66**: 49, 1975), Huhndorf *et al.* (*MR* **108**: 1384, 2004).

calyculus, a cup-like or calyx-like structure at the base of the sporangium in *Mycetozoa*.

Calyptella Quél. (1886), Marasmiaceae. 20, widespread. See Singer (*Sydowia* **30**: 270, 1978; key), Young (*Mycologist* **10**: 152, 1996; *Calyptella longipes* in Australia).

Calyptellopsis Svrček (1986), Hyaloscyphaceae. 1, former Czechoslovakia. See Svrček (*Česká Mykol.* **40**: 203, 1986).

Calyptospora J.G. Kühn (1869), Pucciniastraceae. 1, north temperate. Separated from *Pucciniastrum* by the demicyclic life cycle (0, I-III). See Faull (*J. Arnold Arbor.* **20**: 104, 1939), Cummins & Hiratsuka (*Illustr. Gen. Rust Fungi rev. edit.*, 1983; as *Pucciniastrum*), Hiratsuka (*The Rust Flora of Japan*, 1992).

Calyptra Theiss. & Syd. (1918), Dothideomycetes. 2, America.

calyptra, a cap or hood.

Calyptromyces H. Karst. (1849) = Mucor Fresen. fide Sumstine (*Mycol.* **2**: 125, 1910), Hesseltine (*Mycol.* **47**: 344, 1955) See.

Calyptronectria Speg. (1909), Melanommataceae. 1 or 2 (dead branches), S. America. See Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Calyptrozyma Boekhout & Spaay (1995), Eurotiomycetes. 1, USA. See Boekhout *et al.* (*MR* **99**: 1244, 1995), Schweigkofler *et al.* (*Organ. Divers. Evol* **2**: 1, 2002; phylogeny).

Camanchaca Follm. & Peine (1999) = Pentagenella fide Follmann & Peine (*J. Hattori bot. Lab.* **87**: 259, 1999), Tehler & Irestedt (*Cladistics* **23**: 432, 2007).

Camaroglobulus Speer (1986), anamorphic *Mytilinidion*, St.0eP.1. 1, Brazil. See Speer (*BSMF* **102**: 100, 1986).

Camarographium Bubák (1916), anamorphic *Pezizomycotina*, St.#eP.15. 4, Europe. See Verkley *et al.* (*Sydowia* **57**: 259, 2005).

Camaropella Lar.N. Vassiljeva (1997) = Camarops fide Vasilyeva (*Mikol. Fitopatol.* **31**: 6, 1997).

Camarophyllopsis Herink (1958), ? Hygrophoraceae. 26, widespread (north temperate). See Printz & Læssøe (*Svampe* **14**: 83, 1986; key), Boertmann (*Biblthca Mycol.* **192**: 168 pp., 2002; monogr.).

Camarophyllus (Fr.) P. Kumm. (1871) = Hygrophorus fide Kuyper (*in litt.*).

Camarops P. Karst. (1873), Boliniaceae. 19, widespread. See Nannfeldt (*Svensk bot. Tidskr.* **66**: 335, 1972), Pouzar (*Česká Mykol.* **40**: 218, 1987; 4 spp. Czech.), Eriksson & Hawksworth (*SA* **7**: 64, 1988; posn), Vassilyeva (*Mikol. Fitopatol.* **22**: 388, 1988), Callan & Rogers (*Sydowia* **41**: 74, 1989; teleomorph in culture), Vasilyeva (*Mikol. Fitopatol.* **31**: 5, 1997; Russian Far East), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004; phylogeny), Catania & Romero (*Sydowia* **57**: 3, 2005; Argentina), Rogers *et al.* (*Sydowia* **58**: 105, 2006; Caribbean), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny).

Camaropycnis E.K. Cash (1945), anamorphic *Pezizomycotina*, St.0eH.15. 1, USA.

Camarosporellum Tassi (1902), anamorphic *Pezizomycotina*, Cpd.#eP.1. 3, Europe; USA. See Sutton & Pollack (*Mycopath. Mycol. appl.* **52**: 331, 1974), van Warmelo & Sutton (*Mycol. Pap.* **145**, 1981).

Camarosporiopsis Abbas, B. Sutton & Ghaffar (2000), anamorphic *Pezizomycotina*. 1, Pakistan. See Abbas *et al.* (*Pakist. J. Bot.* **32**: 239, 2000).

Camarosporium Schulzer (1870), anamorphic *Botryosphaeriales*, St.#eP.1/19. *c.* 106, widespread (esp. temperate). A polyphyletic group that is also used for anamorphs of *Cucurbitaria* and related genera. See Butin (*Sydowia* **45**: 161, 1993; pleomorphy), Taylor *et al.* (*Mycotaxon* **78**: 75, 2001; on *Proteaceae*), Crous *et al.* (*Stud. Mycol.* **55**: 235, 2006; phylogeny).

Camarosporula Petr. (1954), anamorphic *Anthracostroma*, St.#eP.1. 1, Australia. See Petrak (*Sydowia* **8**: 99, 1954), Swart (*TBMS* **84**: 733, 1985; conidiogenesis).

Camarosporulum Tassi (1902), anamorphic *Pezizomycotina*, Cpd.#eP.?. 1, widespread.

Camarotella Theiss. & Syd. (1915) = Coccodiella fide Hyde & Cannon (*Mycol. Pap.* **175**, 1999).

Camillea Fr. (1849), Xylariaceae. Anamorph *Xylocladium*. 41, widespread (tropical). See Silveira & Rogers (*Acta Amazon.* Supl. **15**: 7, 1987; Brazil), Læssøe *et al.* (*MR* **93**: 121, 1989; monogr., SEM, key 27 spp.), Rogers *et al.* (*Mycol.* **83**: 274, 1991), González & Rogers (*Mycotaxon* **47**: 229, 1993; key 14 spp., Mexico), Whalley (*Mycologist* **10**: 149, 1996; SEM), Whalley *et al.* (*Kew Bull.* **54**: 715, 1999; SE Asia), Sánchez-Ballesteros *et al.* (*Mycol.* **92**: 964, 2000; phylogeny), Rogers *et al.* (*Sydowia* **54**: 84, 2002; Costa Rica), Triebel *et al.* (*Nova Hedwigia* **80**: 25, 2005; phylogeny).

Campanella Henn. (1895), Marasmiaceae. *c.* 40, widespread (esp. tropical). See Singer (*Nova Hedwigia* **26**: 847, 1976; key), Bougher (*Mycotaxon* **99**: 327, 2007; Australia).

Campanophyllum Cifuentes & R.H. Petersen (2003), Cyphellaceae. 1, Costa Rica. See Cifuentes *et al.* (*Mycol. Progr.* **2**: 287, 2003).

Campanularius Roussel (1806) = Panaeolus fide Kuyper (*in litt.*) This name has not yet been proposed for rejection against *Panaeolus*, nom. cons.

campanulate, bell-like in form (Fig. 23.25).

Campanulospora I.V. Issi, Radischcheva & Dolzhenko (1983), Microsporidia. 1.

Campanulospora Salazar-Yepes, Pardo-Card. & Buriticá (2007), Phragmidiaceae. Anamorph *Gerwasia*. 1, S. America. See Salazar Yepes, M.; Pardo Cardona, V.M.; Buriticá Céspedes, P. (*Caldasia* **29**: 105, 2007).

Campbellia Cooke & Massee (1890) [non *Campbellia* Wight 1849, *Orobanchaceae*] ≡ Rodwaya.

campestroid, agarics having a pileus with a diam. : stipe ratio of 1 or >1. See Freeman (*Mycotaxon* **8**: 1, 1979). Cf. placomycetoid.

Campoa Speg. (1921), Parmulariaceae. 2, S. America; Philippines.

Camposporidium Nawawi & Kuthub. (1988), anamorphic *Pezizomycotina*, Hso.≡ eP.19. 3 (aquatic), tropical. See Nawawi & Kuthubutheen (*Mycotaxon* **32**: 161, 1988), Castañeda-Ruíz & Guarro (*CJB* **76**: 1584, 1998).

Camposporium Harkn. (1884), anamorphic *Pezizomycotina*, Hso.≡ eP.10. 17, widespread. See Hughes (*Mycol. Pap.* **36**, 1951), Peek & Solheim (*Mycol.* **50**: 844, 1959), Watanabe (*TMSJ* **34**: 71, 1993; key 14 spp.), Hyde *et al.* (*S. Afr. J. Bot.* **64**: 151, 1998), Mercado Sierra *et al.* (*Mycotaxon* **67**: 417, 1998), Whitton *et al.* (*Fungal Diversity* **11**: 177, 2002; key).

Campsotrichum Ehrenb. (1819) = Myxotrichum fide Hughes (*CJB* **46**: 939, 1968).

Camptobasidium Marvanová & Suberkr. (1990), Microbotryomycetes. Anamorph *Crucella*. 1, USA. See Marvanová & Suberkropp (*Mycol.* **82**: 209, 1990).

Camptomeris Syd. (1927), anamorphic *Pezizomycotina*, Hsp.≡ eP.10. 9, widespread (tropical). See Hughes (*Mycol. Pap.* **49**, 1952), Bessey (*Mycol.* **45**: 364, 1953; key).

Camptomyces Thaxt. (1894), Laboulbeniaceae. 8, widespread. See Santamaría (*Fl. Mycol. Iberica* **5**, 2003; Iberian peninsula).

Camptosphaeria Fuckel (1870), Lasiosphaeriaceae. 4, widespread. See Krug & Jeng (*Sydowia* **29**: 71, 1977; key), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004).

Camptosporium Link (1818) nom. dub., anamorphic *Pezizomycotina*. See Kirk (*in litt.*), Hughes (*CJB* **36**: 744, 1958; possible synonymy with *Menispora*).

Camptoum Link (1824) ≡ Arthrinium fide Hughes (*CJB* **36**: 727, 1958).

Campylacia A. Massal. ex Beltr. (1858) = Leptorhaphis fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

campylidium, helmet-shaped conidiomata occurring in various, mainly foliicolous, tropical lichenized genera (e.g. *Badimia*, *Loflammia*, *Sporopodium*); the name *Pyrenotrichum* (Ascomycetes, inc. sed.) has been applied to many of these conidiomata. See Sérusiaux (*Lichenologist* **18**: 1, 1986).

Campylobasidium Lagerh. ex F. Ludw. (1892) nom. rej. = Septobasidium fide Berndt (*in litt.*).

Campylocarpon Halleen, Schroers & Crous (2004), anamorphic *Nectriaceae*. 2 (on *Vitis* roots), S. Africa. See Halleen *et al.* (*Stud. Mycol.* **50**: 448, 2004).

Campylomyces Nakasone (2004), Gloeophyllaceae. 2, Australia; Morocco. See Nakasone (*Sydowia* **56**: 258, 2004).

Campylospora Ranzoni (1953), anamorphic *Pezizomycotina*, Hso.1bH.1. 3 (aquatic), widespread (north temperate). See Ranzoni (*Farlowia* **4**: 373, 1953).

Campylostylus Genev. (1873) nom. dub., ? Fungi.

Campylothecium Ces. (1846) = Cordyceps fide Tulasne & Tulasne (*Select. fung. carpol.* **3**: 18, 1865).

Campylothelium Müll. Arg. (1883), Trypetheliaceae (L). 6, widespread (tropical). See Tucker & Harris (*Bryologist* **83**: 1, 1980), Harris (*Acta Amazon.* Supl. **14**: 55, 1984; Brazil), Prado *et al.* (*MR* **110**: 511, 2006; phylogeny), Aptroot *et al.* (*Biblthca Lichenol.* **97**, 2008; Costa Rica).

Canadian tuckohoe, see stone-fungus.

canal, sometimes applied to the pore connecting the two cells of a polarilocular spore.

canaliculate, having longitudinal grooves (Fig. 20.16).

Canalisporium Nawawi & Kuthub. (1989), anamorphic *Pezizomycotina*, Hsp.#eP.1. 9, widespread. See Nawawi & Kuthubutheen (*Mycotaxon* **34**: 477, 1989), Goh *et al.* (*CJB* **76**: 142, 1998; revision), Goh & Hyde (*Mycol.* **92**: 589, 2000; Australia), Cai *et al.* (*Cryptog. Mycol.* **24**: 3, 2003; China), Ferrer & Shearer (*Mycotaxon* **93**: 179, 2005; Panamá).

Canariomyces Arx (1984), Microascaceae. 1, Canary Islands. See von Arx *et al.* (*Beih. Nova Hedwigia* **94**, 1988; posn).

Canavirgella W. Merr., N.G. Wenner & Dreisbach (1996), Rhytismataceae. 1, USA. See Merrill *et al.* (*CJB* **74**: 1476, 1996).

Cancellaria Brongn. (1825) = Roestelia fide Berndt (*in litt.*) Anamorph name for (I), aecial states of *Gymno-*

sporangium.

cancellate, reticulate; like a network, as the basidioma of *Clathrus*.

Cancellidium Tubaki (1975), anamorphic *Hypocreales*, Hso.#eP.1. 2 (aero-aquatic, conidia hollow), E. Asia. See Tubaki (*TMSJ* **16**: 357, 1975), Shaw (*Mycologist* **8**: 162, 1994; Australia), Yeung *et al.* (*Cryptog. Mycol.* **27**: 295, 2006; phylogeny).

Canceromyces Niessen [not traced] nom. dub., Fungi. Based on a mould from a cancer.

Candelabrella Rifai & R.C. Cooke (1966) = Arthrobotrys fide Cooke (*TBMS* **53**: 475, 1969), Schenck *et al.* (*CJB* **55**: 977, 1977), Rubner (*Stud. Mycol.* **39**, 1996).

Candelabrochaete Boidin (1970), Phanerochaetaceae. 11, widespread. See Hjortstam (*Mycotaxon* **56**: 451, 1995).

Candelabrum Beverw. (1951), anamorphic *Pezizomycotina*, Hso.1bH.1. 7 (aero-aquatic), widespread. See Beverwijk (*Antonie van Leeuwenhoek Ned. Tijdschr. Hyg.* **17**: 283, 1951), Voglmayr (*MR* **102**: 410, 1998; key).

Candelaria A. Massal. (1852), Candelariaceae (L). 11, widespread. See Hillmann (*Rabenh. Krypt.-Fl.* **9** 5.3: 19, 1936), Poelt (*Phyton* Horn **16**: 189, 1974), Jørgensen & Galloway (*Lichenologist* **24**: 407, 1992), Kärnefelt & Westberg (*Mycotaxon* **80**: 456, 2001; southern Africa), LaGreca & Lumbsch (*Biblthca Lichenol.* **78**: 211, 2001; phylogeny), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny), Westberg *et al.* (*MR* **111**: 1277, 2007; phylogeny).

Candelariaceae Hakul. (1954), Candelariales (L). 5 gen. (+ 6 syn.), 66 spp.

Lit.: Jørgensen & Galloway (*Lichenologist* **24**: 407, 1992), Castello & Nimis (*Acta Bot. Fenn.* **150**: 5, 1994), LaGreca & Lumbsch (*Biblthca Lichenol.* **78**: 211, 2001), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny), Hofstetter *et al.* (*Mol. Phylogen. Evol.* **44**: 412, 2007; phylogeny), Westberg *et al.* (*MR* **111**: 1277, 2007; phylogeny).

Candelariales Miądl., Lutzoni & Lumbsch (2007). Lecanoromycetes. 1 fam., 5 gen., 66 spp. Fam.:
Candelariaceae

For *Lit.* see under fam.

Candelariella Müll. Arg. (1894), Candelariaceae (L). *c.* 48, widespread. See Hakulinen (*Ann. bot. Soc. Zool.-Bot. Fenn. Vanamo* **27** no. 3, 1954; monogr.), Poelt & Reddi (*Ergebn. ForschUnternehmens Nepal Himalaya* **6**: 1, 1969), Laundon (*Lichenologist* **4**: 297, 1970; UK), Harris & Buck (*Mich. Bot.* **17**: 155, 1978; N. Am.), Gilbert *et al.* (*Lichenologist* **13**: 249, 1981; citrine spp.), Castello & Nimis (*Acta Bot. Fenn.* **150**: 5, 1994; Antarctic spp.), LaGreca & Lumbsch (*Biblthca Lichenol.* **78**: 211, 2001; phylogeny), Aragón & Martínez (*Lichenologist* **34**: 81, 2002; Europe), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny), Hofstetter *et al.* (*Mol. Phylogen. Evol.* **44**: 412, 2007; phylogeny), Westberg (*Bryologist* **110**: 365, 2007; N America), Westberg (*Bryologist* **110**: 375, 2007; N America), Westberg (*Bryologist* **110**: 391, 2007; N America), Westberg *et al.* (*MR* **111**: 1277, 2007; phylogeny).

Candelariellomyces E.A. Thomas ex Cif. & Tomas. (1953) ≡ Candelariella.

Candelariellopsis Werner (1936) = Candelariella fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Candelariopsis (Sambo) Szatala (1959) nom. inval. ? = Caloplaca fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Candelina Poelt (1974), Candelariaceae (L). 3, widespread. See Poelt (*Phyton* Horn **16**: 194, 1974), LaGreca & Lumbsch (*Biblthca Lichenol.* **78**: 211, 2001; phylogeny, anatomy), Westberg *et al.* (*MR* **111**: 1277, 2007; phylogeny).

Candelospora Rea & Hawley (1912) = Cylindrocladium fide Boedijn (*in litt.*).

Candelosynnema K.D. Hyde & Seifert (1992), anamorphic *Pezizomycotina*, Hsy.≡ eH.10. 1, Australia. See Hyde & Seifert (*Aust. Syst. Bot.* **5**: 401, 1992).

candicidin, an antibiotic from the actinomycete *Streptomyces griseus*; antibacterial and antifungal (esp. against *Candida albicans*); Lechevalier *et al.* (*Mycol.* **45**: 155, 1953), Kligman & Lewis (*Proc. Soc. exper. Biol. Med.* **82**: 399, 1953).

Candida Berkhout (1923) nom. cons., anamorphic *Saccharomycetales*, Hso.0eH.?. 355, widespread. Pseudomycelium or mycelium present. *C. albicans* (candidiasis, q.v.) and other spp. are pathogenic for humans and animals; *C. utilis*, food yeast. See Shepherd *et al.* (*Ann. Rev. Microbiol.* **39**: 579, 1985; biology, genetics, pathogenicity), Srivastava *et al.* (*Microbial Ecology* **11**: 71, 1985; differentiation of biotypes), Belov & Kamenev (*Mikrobiologiya* **55**: 473, 1986; wall components and morphology), Lehmann *et al.* (*TBMS* **88**: 199, 1987; killer fungi characterize species and biotypes), Magee *et al.* (*J. Bact.* **169**: 1639, 1987; rDNA RFLP), Montrocher & Claisse (*Cellular and Molecular Biology* **33**: 313, 1987; spectrophotometric analysis), Mendling (*Vulvovaginal Candidosis. Theory and Practice*, 1988; review), Viljoen *et al.* (*J. gen. Microbiol.* **134**: 1893, 1988; long chain fatty acids), Weijman & Rodrigues de Miranda (*Antonie van Leeuwenhoek* **54**: 535, 1988; carbohydrate patterns), Weijman *et al.* (*Antonie van Leeuwenhoek* **54**: 545, 1988; redefinition of genus), Hendriks *et al.* (*Syst. Appl. Microbiol.* **12**: 223, 1989; nucleotide sequence of *C.albicans*), Kamiyama *et al.* (*Mycopathologia* **107**: 3, 1989; DNA homology between strains), Kamiyama *et al.* (*J. Med. Vet. Mycol.* **27**: 229, 1989; Adansonian taxonomy of spp.), Merson-Davies & Odds (*J. gen. Microbiol.* **135**: 3143, 1989; morphology index), Montrocher *et al.* (*Yeast* Special Issue **5**: S385, 1989; biochemical analysis), Su & Meyer (*Yeast* Special Issue **5**: S355, 1989; restriction endonuclease analysis of DNA), Boiron (*Bulletin de la Société Française de Mycologie Médicale* **19**: 13, 1990; electrophoretic karyotypes), Iwaguchi *et al.* (*J. gen. Microbiol.* **136**: 2433, 1990; karyotypes), Jensen *et al.* (*Mycoses* **33**: 519, 1990; crossed immunoelectrophoresis to differentiate *C. albicans*), Odds (*Bulletin de la Société Française de Mycologie Médicale* **19**: 5, 1990; molecular biology), Pope (*Phytopathology* **80**: 966, 1990; cellular fatty acids), Rustchenko-Bulgac *et al.* (*J. Microbiol.* **44**: 2590, 2006; hyphal wall protein sequences), Suh *et al.* (*Mycol.* **98**: 1006, 2006; phylogeny).

candidiasis, a cosmop. disease of humans (including thrush, mouget, etc.) and animals caused by species of *Candida* (syn. *Monilia* auct.), esp. *C. albicans*; moniliasis; candidosis. Like many other fungal diseases, candidiasis has become more important with the rise in numbers of immunocompromised patients. See Winner & Hurley (*Candida albicans*, 1964; (Eds), *Symposium on Candida infections*, 1966), Odds (*Candida and candidosis*, edn. 2, 1988), Turnbay *et al.* (Eds) (*Candida and candidamycosis*, 1991). Candida Society Website: www.candida-society.org.

candidosis, see candidiasis.

candle-snuff fungus, stromata of *Xylaria hypoxylon*.

canescent, becoming hoary or grey.

caninoid venation, see veins.

canker, a plant disease in which there is sharply-limited necrosis of the cortical tissue, e.g. **apple canker** (*Nectria galligena*).

CANL, Lichen Herbarium, Canadian Museum of Nature (Ottawa, Canada); founded 1882; a government corporation.

Cannanorosporonites Ramanujam & Rao (1979), Fossil Fungi. 1 (Miocene), India.

Canningia J. Weiser, Wegensteiner & Z. Žižka (1995), Microsporidia. 1.

Cannonia Joanne E. Taylor & K.D. Hyde (1999), Xylariaceae. 1, Argentina; Australia. See Taylor & Hyde (*MR* **103**: 1398, 1999).

Canomaculina Elix & Hale (1987) = Parmotrema fide Elix (*Mycotaxon* **65**: 475, 1997), Blanco *et al.* (*Mycol.* **97**: 150, 2005), Blanco *et al.* (*Mol. Phylogen. Evol.* **39**: 52, 2006; phylogeny).

Canoparmelia Elix & Hale (1986), Parmeliaceae (L). *c.* 40, widespread. See Elix *et al.* (*Mycotaxon* **27**: 271, 1986), Adler (*Mycotaxon* **28**: 251, 1987; Argentina), Elix (*Flora of Australia* **55**: 21, 1994), Heiman & Elix (*Mycotaxon* **70**: 163, 1999; N. America), Blanco *et al.* (*Mycol.* **97**: 150, 2005; phylogeny), Blanco *et al.* (*Mol. Phylogen. Evol.* **39**: 52, 2006; phylogeny), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny).

Canteria Karling (1971), ? Endochytriaceae. 1, British Isles. See Karling (*Arch. Mikrobiol.* **76**: 129, 1971).

Cantharellaceae J. Schröt. (1888), Cantharellales. 5 gen. (+ 10 syn.), 92 spp.

Lit.: Corner (*Beih. Sydowia* **1**: 266, 1957), Petersen & Mueller (*Boln Soc. argent. Bot.* **28**: 195, 1992), Danell (*Mycorrhiza* **5**: 89, 1994), Feibelman *et al.* (*MR* **101**: 1423, 1997), Redhead *et al.* (*Mycotaxon* **65**: 285, 1997), Watling (*Nature* Lond. **365**: 299, 1997), Li *et al.* (*Acta Sci. nat. Cantharellopsis Kuyper (1986), Tricholomataceae. 1, Europe. See Kuyper (*La Famiglia delle Tricholomataceae* Atti del Convegno Internazionale del 10-15 Settembre 1984, Borgo Val di Taro, Italy: 99, 1986), Redhead *et al.* (*Mycotaxon* **83**: 19, 2002; phylogeny).

Cantharellula Singer (1936), Tricholomataceae. 2, widespread (temperate). See Singer (*Revue Mycol. Paris* **1**: 281, 1936), Redhead *et al.* (*Mycotaxon* **83**: 19, 2002; phylogeny).

Cantharellus Adans. ex Fr. (1821), Cantharellaceae. 65, widespread. *C. cibarius*, the edible chanterelle. See Smith & Morse (*Mycol.* **39**: 497, 1947), Corner (*Beih. Sydowia* **1**, 1957), Heinemann (*Fl. Icon. Champ. Congo* **8**: 154, 1959; keys 17 spp. Congo), Eyssartier & Buyck (*Aust. Syst. Bot.* **14**: 587, 2001; Australia), Redhead *et al.* (*Taxon* **51**: 559, 2002; nomenclature), Gulden (*Sopp og Nyttevekster* **1**: 10, 2005; key nordic spp.).

Cantharocybe H.E. Bigelow & A.H. Sm. (1973), Pleurotaceae. 1, N. America. See Bigelow & Smith (*Mycol.* **65**: 486, 1973).

Cantharomyces Thaxt. (1890), Laboulbeniaceae. 27, widespread. See Weir & Hammond (*Biodiv. Cons.* **6**: 701, 1997; ecology, biodiversity), Rossi & Santamaria (*Mycol.* **92**: 786, 2000; on *Staphylinidae*), Santamaría (*Fl. Mycol. Iberica* **5**, 2003; Iberian peninsula), Shen *et al.* (*Mycosystema* **23**: 303, 2004; China).

Cantharosphaeria Thaxt. (1920) = Eriosphaeria fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

cap, see pileus.

capillaceous, see capilliform.

Capillaria Pers. (1822), anamorphic *Pezizomycotina*, Hso.?.?. 4, widespread (temperate).

Capillaria Velen. (1947) [non *Capillaria* Roussel 1806, *Algae*] = Lycoperdon Pers. fide Stalpers (*in litt.*).

Capillataspora K.D. Hyde (1989), Dothideomycetes. 1, Brunei. See Hyde (*CJB* **67**: 2522, 1989), Kohlmeyer & Volkmann-Kohlmeyer (*Bot. Mar.* **34**: 1, 1991).

capilliconidium, a secondary conidium produced on a long capillary tube in *Entomophthorales*.

capilliform, hair-like; thread-like; capillaceous.

Capillipes R. Sant. (1956), Helotiaceae. 1, Lapland. See Santesson (*Friesia* **5**: 390, 1956).

Capillistichus Santam. (2004), Laboulbeniaceae. 1, Spain. See Santamaría (*Mycol.* **96**: 763, 2004).

capillitium (of *Mycetozoa* and gasteroid *Agaricomycotina*), a mass of sterile, thread-like elements, tubes or fibres among the spores.

capitate, having a well-formed head (Figs 29.9, 37.18).

capitate-fastigiate (of macrolichens), having a thallus cortex of erect, parallel hyphae terminated by swollen and pigmented apical cells.

capitellum, a little head.

Capitoclavaria Lloyd (1922) ? = Clavaria fide Stalpers (*in litt.*).

Capitorostrum Bat. (1957), anamorphic *Pezizomycotina*, Cpd.0eH.15. 2, Australia; Papua New Guinea. See Hyde & Philemon (*Mycotaxon* **42**: 95, 1991).

Capitotricha (Raitv.) Baral (1985), Hyaloscyphaceae. 3, widespread. See Raitviir (*Eesti NSV Tead. Akad. Toim.* Biol. seer **36**: 313, 1987), Leenurm *et al.* (*Sydowia* **52**: 30, 2000; ultrastr.), Suková (*Czech Mycol.* **57**: 139, 2005; Czech Republic).

Capitularia Flörke (1807) = Cladonia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Capitularia Rabenh. (1851) = Uromyces fide Dietel (*Nat. Pflanzenfam.* **6**, 1928).

capitulum, a stalked globose apical apothecium, as in the *Caliciales*. Cf. mazaedium.

Capnia Vent. (1799) = Dermatocarpon Eschw. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Capniomyces S.W. Peterson & Lichtw. (1983), Legeriomycetaceae. 2 (in *Plectoptera*), Spain; USA. See Lichtwardt (*The Trichomycetes. Fungal associates of arthropods*, 1986), White (*MR* **110**: 1011, 2006; phylogeny), Valle (*Mycol.* **99**: 442, 2007; Spain).

Capnites Theiss. (1916) [non *Capnites* (DC.) Dumort. 1827, *Papaveraceae*] = Phaeosaccardinula fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Capnobatista Cif. & F.B. Leal ex Bat. & Cif. (1963) = Trichomerium fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Capnobotryella Sugiy. (1987), anamorphic *Capnodiales*, Hso.1eP.1/12. 2, Japan. See Titze & de Hoog (*Antonie van Leeuwenhoek* **58**: 265, 1990; *C. renispora* on roof tile), Sterflinger *et al.* (*Stud. Mycol.* **43**: 5, 1999; ecology), Hambleton *et al.* (*Mycol.* **95**: 959, 2003; morphology), Tsuneda *et al.* (*Rep. Tottori Mycol. Inst.* **41**: 1, 2003; conidiogenesis, phylogeny), Crous *et al.* (*Stud. Mycol.* **58**: 1, 2007), Sert *et al.* (*MR* **111**: 1235, 2007; Turkey).

Capnobotrys S. Hughes (1970), anamorphic *Metacapnodium*, Hso.≡ eP.10. 1, Austria. See Hughes (*N.Z. Jl Bot.* **8**: 205, 1970), Reynolds (*CJB* **76**: 2125, 1998; phylogeny), Tsuneda *et al.* (*Rep. Tottori Mycol. Inst.* **41**: 1, 2003; phylogeny).

Capnocheirides J.L. Crane & S. Hughes (1982), anamorphic *Capnodiales*, Hso.0-≡ eP.38. 1, Europe. See Crane & Hughes (*Mycol.* **74**: 752, 1982).

Capnociferria Bat. (1963) = Antennulariella fide Hughes (*Mycol.* **68**: 693, 1976).

Capnocrinum Bat. & Cif. (1963) = Antennulariella fide Hughes (*Mycol.* **68**: 693, 1976).

Capnocybe S. Hughes (1966), anamorphic *Metacapnodiaceae*, Hso.≡ eP.10. 3, New Zealand; USA. See Hughes (*N.Z. Jl Bot.* **4**: 335, 1966).

Capnodaria (Sacc.) Theiss. & Syd. (1918), Capnodiaceae. 1, Europe.

Capnodendron S. Hughes (1976), anamorphic *Antennulariella*, Hso.≡ eP.3. 3, widespread. See Hughes (*Mycol.* **68**: 750, 1976), Hughes (*CJB* **78**: 1215, 2000), Hughes (*N.Z. Jl Bot.* **41**: 139, 2003).

Capnodenia (Sacc.) Theiss. & Syd. (1917) = Capnodium fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Capnodiaceae Höhn. ex Theiss. (1916), Capnodiales. 26 gen. (+ 28 syn.), 117 spp.

Lit.: Batista & Ciferri (*Saccardoa* **2**, 1963), Reynolds (*Taxon* **20**: 759, 1971; hyphal morph.), Reynolds (*Nova Hedwigia* **26**: 179, 1975; growth forms), Hughes (*Mycol.* **68**: 693, 1976; gen. names, anamorphs), Reynolds (*Mycotaxon* **8**: 417, 1979; stalked taxa), Rodríguez Hernández (*Revta Jardín bot. Nac* Univ. Habana **6**: 53, 1985), Parbery & Brown (*Microbiology of the Phyllosphere*: 101, 1986), Reynolds (*Mycotaxon* **27**: 377, 1986; cladistics), Reynolds *in* Sugiyama (Ed.) (*Pleomorphic Fungi: The Diversity and its Taxonomic Implications*: 157, 1987), Mibey

(*Soft Scale Insects. Their Biology, Natural Enemies and Control World Crop Pests* 7A: 275, 1997), Inácio & Dianese (*MR* **102**: 695, 1998), Reynolds (*CJB* **76**: 2125, 1998; phylogeny), Olejnik & Ingrouille (*MR* **103**: 333, 1999), Reynolds (*CJB* **76**: 2125, 1998), Sterflinger *et al.* (*Stud. Mycol.* **43**: 5, 1999; phylogeny), Reynolds (*Mycopathologia* **148**: 141, 1999), Lindemuth *et al.* (*MR* **105**: 1176, 2001), Lumbsch & Lindemuth (*MR* **105**: 901, 2001), Schoch *et al.* (*Mycol.* **98**: 1041, 2006; phylogeny).

Capnodiales Woron. (1925). Dothideomycetidae. 9 (?+1) fam., 198 gen., 7244 spp. Mycelium superficial, often well-developed, dark, very varied in form, composed of sometimes irregular ± cylindrical or torulose hyphae, sometimes with erect branches, sometimes with mucous coating. Ascomata small, globose or vertically elongated, thin-walled, sometimes covered in a mucous layer, sometimes setose or with hyphal appendages, opening either with a clearly-defined ostiole or a poorly-defined lysigenous pore. Interascal tissue absent or composed of inconspicuous periphysoids. Asci small, ovoid or saccate, fissitunicate, not blueing in iodine or rarely with a J+ exterior layer. Ascospores hyaline to brown, septate, sometimes muriform, rarely ornamented, sheath lacking. Anamorphs very varied. Plant parasites (including many important pathogen genera), saprobes or sooty moulds. Fams.:
(1) **Antennulariellaceae**
(2) **Capnodiaceae**
(3) **Davidiellaceae**
(4) **Euantennariaceae**
(5) **Metacapnodiaceae**
(6) **Mycosphaerellaceae**
(7) **Piedraiaceae**
(8) **Schizothyriaceae**
(9) **Teratosphaeriaceae**

The *Asterinaceae* may also belong here, but molecular data are inadequate.

Lit.: Crous *et al.* (*Stud. Mycol* **58**: 1, 2007; phylogeny), Reynolds (*CJB* **76**: 2125, 1998; phylogeny), Schoch *et al* (*Mycol* **98**: 1041, 2006; phylogeny), Sterflinger *et al.* (*Stud. Mycol.* **43**: 5, 1999; phylogeny).

Capnodiastrum Speg. (1886), anamorphic *Rhytidenglerula*, Cpd.1eP.1. 5, widespread (esp. S. America). See Hughes *in* Sugiyama (Ed.) (*Pleomorphic Fungi: The Diversity and its Taxonomic Implications*: 103, 1987).

Capnodiella (Sacc.) Sacc. (1905) ≡ Sorica.

Capnodina (Sacc.) Sacc. (1926) = Antennulariella fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Capnodinula Bat. & Cif. (1963), Capnodiales. 1, Australia. See Batista & Ciferri (*Saccardoa* **2**: 81, 1963).

Capnodinula Speg. (1918) = Wentiomyces fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Capnodiopsis Henn. (1902) = Molleriella fide von Arx (*Persoonia* **2**: 421, 1963).

Capnodium Mont. (1848), Capnodiaceae. Anamorphs *Fumagospora*, *Phaeoxyphiella*, *Polychaetella*, *Scolecoxyphium*. c. 15, widespread. See Reynolds (*Bull. Torrey bot. Club* **97**: 253, 1970), Reynolds (*Mycotaxon* **34**: 197, 1989; California), Reynolds (*CJB* **76**: 2125, 1998; phylogeny), Sterflinger *et al.* (*Stud. Mycol.* **43**: 5, 1999; phylogeny), Lumbsch & Lindemuth (*MR* **105**: 901, 2001; phylogeny), Schoch *et al.* (*Mycol.* **98**: 1041, 2006; phylogeny).

Capnofrasera S. Hughes (2003), anamorphic *Antennulariellaceae*. 1, New Zealand. See Hughes (*N.Z. Jl Bot.* **41**: 139, 2003).

Capnogoniella Bat. & Cif. (1963) nom. conf., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Capnogonium Bat. & Peres (1961) = Brooksia fide Deighton & Pirozynski (*Mycol. Pap.* **105**, 1966).

Capnokyma S. Hughes (1975), anamorphic *Euantennariaceae*, Hso.≡ eP.1. 2, New Zealand; Venezuela. See Hughes (*N.Z. Jl Bot.* **13**: 638, 1975), Hughes (*Mycol.* **93**: 603, 2001).

Capnophaeum Speg. (1918), ? Capnodiaceae. 2, Asia.

Capnophialophora S. Hughes (1966), anamorphic *Metacapnodium*, Hso.0eH.15. 3, New Zealand. See Hughes (*N.Z. Jl Bot.* **4**: 352, 1966).

Capnosporium S. Hughes (1976), anamorphic *Metacapnodium*, Hso.1-≡ eP.28. 1, New Zealand. See Hughes (*Mycol.* **68**: 752, 1976).

Capnostysanus Speg. (1918) = Stysanus fide Clements & Shear (*Gen. Fung.*, 1931).

Cappellettia Tomas. & Cif. (1952) = Gyalidea fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Caprettia Bat. & H. Maia (1965), Monoblastiaceae (L). 6 (foliicolous), pantropical. See Batista & Maia (*Atas Inst. Micol. Univ. Pernambuco* **2**: 377, 1965), Lücking *et al.* (*Lichenologist* **30**: 121, 1998), Sérusiaux & Lücking (*Biblthca Lichenol.* **86**: 161, 2003; revision).

Capricola Velen. (1947), ? Helotiales. 1, Europe.

Capronia Sacc. (1883), Herpotrichiellaceae. Anamorphs *Exophiala*, *Rhinocladiella*, *Cladophialophora*, *Phialophora*. 27, Europe; N. America. See Müller *et al.* (*TBMS* **88**: 63, 1987; key), Barr (*Mycotaxon* **41**: 419, 1991; key N. Am. spp.), Untereiner *et al.* (*MR* **99**: 897, 1995; molec. taxonomy), Au *et al.* (*Mycol.* **91**: 326, 1999; ultrastr.), Haase *et al.* (*Stud. Capsicumyces Gamundí, Aramb. & Giaiotti (1979), anamorphic *Pezizomycotina*, Hso.0eH.11. 1, Argentina. See Gamundí *et al.* (*Darwiniana* **22**: 190, 1979).

capsidiol, a phytoalexin (q.v.) from spur pepper (*Capsicum frutescens*).

Capsulasclerotes Malan (1959), Fossil Fungi. 1 (Permian), former Czechoslovakia.

capsule, a hyaline gelatinous sheath surrounding the cell of certain yeasts and bacteria.

Capsulospora K.D. Hyde (1996), Xylariales. 8 (saprobic on palms), S.E. Asia. See Kang *et al.* (*Fungal Di-*

versity **1**: 147, 1998; DNA), Kang *et al.* (*Mycoscience* **40**: 151, 1999), Kang *et al.* (*Mycotaxon* **81**: 321, 2002; phylogeny).

Capsulotheca Kamyschko (1960), ? Trichocomaceae. 1, former USSR. See Benny & Kimbrough (*Mycotaxon* **12**, 1980).

Carassea S. Stenroos (2002), Cladoniaceae (L). 1, Brazil. See Stenroos *et al.* (*Mycol. Progr.* **1**: 277, 2002), Zhou *et al.* (*J. Hattori bot. Lab.* **100**: 871, 2006; phylogeny).

Carbacanthographis Staiger & Kalb (2002), Graphidaceae (L). 11, widespread. See Staiger (*Biblthca Lichenol.* **85**: 98, 2002), Nakanishi *et al.* (*Bull. natn. Sci. Mus.* Tokyo, B **29**: 83, 2003; Japan), Archer (*Biblthca Lichenol.* **94**, 2006; Australia), Archer (*Systematics & Biodiversity* **5**: 9, 2007; Solomon Is).

Carbomyces Gilkey (1954), Carbomycetaceae. 3, USA. See Trappe (*TBMS* **57**: 85, 1971), Zak & Whitford (*Mycol.* **78**: 840, 1986; ecology), Trappe & Weber (*Harvard Pap. Bot.* **6**: 209, 2001), Læssøe & Hansen (*MR* **111**: 1075, 2007; phylogeny).

Carbomycetaceae Trappe (1971), Pezizales. 1 gen., 3 spp.

Lit.: Trappe (*Mycotaxon* **9**: 297, 1979), Zak & Whitford (*Mycol.* **78**: 840, 1986), Trappe & Weber (*Harvard Pap. Bot.* **6**: 209, 2001), Læssøe & Hansen (*MR* **111**: 1075, 2007; phylogeny).

carbonaceous, dark-coloured and readily broken; charcoal-like or cinder-like.

Carbonea (Hertel) Hertel (1983), Lecanoraceae (±L). 20 (mainly on lichens), widespread. See Knoph (*Mycotaxon* **72**: 97, 1999), Grube *et al.* (*MR* **108**: 506, 2004; phylogeny).

carbonicolous, living on burnt ground; pyrophilous (q.v.).

Carbosphaerella I. Schmidt (1969), Halosphaeriaceae. 2 (marine), widespread. See Johnson *et al.* (*Bot. Mar.* **27**: 557, 1984), Sundari *et al.* (*Bot. Mar.* **39**: 327, 1996).

Carcinomyces Oberw. & Bandoni (1982), Carcinomycetaceae. 2, north temperate. See Oberwinkler & Bandoni (*Nordic Jl Bot.* **2**: 507, 1982).

Carcinomycetaceae Oberw. & Bandoni (1982), Tremellales. 3 gen. (+ 2 syn.), 25 spp.

Lit.: Hauerslev (*Friesia* **9**: 43, 1969), Gottschalk & Blanz (*Z. Mykol.* **51**: 205, 1985), Ginns (*Mycol.* **78**: 619, 1986), Oberwinkler (*Stud. Mycol.* **30**: 61, 1987), Kotiranta & Larsson (*Windahlia* **18**: 1, 1988), Rath (*Atti Soc. ital. Sci. nat. Mus. Civico Storia nat. Milano* **132**: 13, 1991).

Carestiella Bres. (1897), Stictidaceae (±L). 1, Europe. See Sherwood (*Mycotaxon* **5**: 1, 1977), Wedin *et al.* (*Lichenologist* **37**: 67, 2005; phylogeny), Wedin *et al.* (*MR* **110**: 773, 2006; nests within paraphyletic *Stictis*).

Caribaeomyces Cif. (1962), Microthyriaceae. 1, Dominican Republic. See Ciferri (*Atti Ist. bot. Univ. Lab. crittog. Pavia* sér. 5 **19**: 98, 1962).

carinate, keeled; boat-like.

Carinispora K.D. Hyde (1992), Phaeosphaeriaceae. 1 (on *Nypa*), Brunei. See Hyde (*J. Linn. Soc.* Bot. **110**: 95, 1992).

cariose, decayed.

carioso-cancellate, becoming latticed by decay.

Caripia Kuntze (1898), Marasmiaceae. 1, America (tropical). See Corner (*Ann. Bot. Mem.* [A monograph of Clavaria and allied genera] **1**, 1950), Singer (*Agaric. mod. Tax.* edn 2: 792, 1962).

Carlia Rabenh. (1857) nom. dub., Fungi. See Wakefield (*TBMS* **23**: 215, 1939).

Carlosia G. Arnaud (1954) = Isthmospora fide Kendrick & Carmichae *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 390, 1973).

Carlosia Samp. (1923) = Thelomma fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995), Paz-Bermúdez *et al.* (*Taxon* **51**: 771, 2002; typification).

Carmichaelia N.D. Sharma (1980), anamorphic *Pezizomycotina*, Hso.0eP.10. 1, India. See Sharma (*J. Indian bot. Soc.* **59**: 278, 1980), Hambleton *et al.* (*Stud. Mycol.* **53**: 29, 2005).

carminophilic (of basidia), becoming densely granular (= siderophilous (or carminophilous) granulation) after treatment with aceto-carmine stain.

Carneopezizella Svrček (1987), Helotiaceae. 1, former Czechoslovakia. See Svrček (*Česká Mykol.* **41**: 88, 1987).

Carnia Bat. (1960), Pezizomycotina. 1, Brazil. Affinities unknown: the original link suggested with *Pezizaceae* is unlikely.

carnose (carnous), fleshy.

Carnostroma Lloyd (1919) = Xylaria Hill ex Schrank fide von Arx & Müller (*Beitr. Kryptfl. Schweiz* **11** no. 1, 1954), Læssøe (*SA* **13**: 43, 1994; ? synonym of *Xylaria*).

Carnoya Dewèvre (1893) = Mortierella fide Hesseltine (*Mycol.* **47**: 344, 1955).

carnulose, somewhat fleshy.

Caromyxa Mont. (1856) nom. inval. = Mutinus fide Stalpers (*in litt.*).

carotene, a mixture of pigments, chiefly the carotenoid β-carotene, found in various fungi, e.g. *Phycomyces blakesleeanus* (Lilly *et al.*, *Bull. W. Va. agric. Exp. Stn* **441T**, 1960), *Choanephora cucurbitarum* (Chu & Lilly, *Mycol.* **52**: 80, 1961); **carotenoids**, a large group of related polyene compounds, mostly with C_{40}, yellow, red or more rarely colourless. Many have been given trivial names, e.g. torularhodin, neurosporene. See Hesseltine (*Tech. Bull. USDA* **1245**, 1961; *Mucorales*), Arpin (*Bull. mens. Soc. linn. Lyon* **38**, 1968; *BSMF* **84**: 427, 1969; discomycetes), Shibata *et al.* (*List of fungal products*, 1964; 24 refs.), Valadon (*TBMS* **67**: 1, 1976; taxonomic value of carotenoids). See Metabolic products.

Carothecis Clem. (1931) ? = Cephalotheca fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Carouxella Manier, Rioux & Whisler (1965), Harpellaceae. 2 (in *Diptera*), France; Argentina. See Lichtwardt (*The Trichomycetes. Fungal associates of arthropods*, 1986), Lichtwardt *et al.* (*Mycol.* **91**: 1060, 1999; Argentina).

Carpenteles Langeron (1922) = Eupenicillium fide Stolk & Scott (*Persoonia* **4**: 391, 1967), Pitt *et al.* (*Integration of Modern Taxonomic Methods for Penicillium and Aspergillus Classification*: 9, 2000).

Carpenterella Tehon & H.A. Harris (1941), Synchytriaceae. 2, USA; India.

Carpobolus P. Micheli ex Paulet (1808) [non *Carpobolus* Schwein. 1822, *Hepaticae*] ≡ Sphaerobolus.

carpogenous, living on fruit.

carpogonium (generally of algae, sometimes of fungi, e.g. *Erysiphaceae*), the female sex organ.

carpoid, see *Biatoropsis*.

Carpoligna F.A. Fernández & Huhndorf (1999), Sordariales. Anamorph *Pleurothecium*. 1, widespread. See Fernández *et al.* (*Mycol.* **91**: 251, 1999), Réblová & Winka (*Mycol.* **93**: 478, 2001).

Carpolithes Brongn. (1822), Fossil Fungi, anamorphic *Fungi*, Hso.?.?. 1.
Carpomycetes, fungi having sporocarps; esp. ascomycetes and basidiomycetes.
carpophore (1) stalk of the sporocarp; (2) sometimes (esp. in France) = basidioma.
carpophoroid, a sterile carpophore-like body, in agarics, of unknown function (Singer, 1962: 22).
Carpophoromyces Thaxt. (1931), Laboulbeniaceae. 1, Sri Lanka. See Nannfeldt (*Svensk bot. Tidskr.* **43**: 468, 1949).
Carpozyma L. Engel (1872) = Hanseniaspora fide Lodder (*Yeasts, a taxonomic study* 2nd edn, 1970).
carrier, an organism harbouring a parasite without itself showing disease (Anon., *TBMS* **33**: 154, 1950).
Carrionia Bric.-Irag. (1938) = Rhinocladiella Nannf. fide Schol-Schwarz (*Antonie van Leeuwenhoek* **34**: 119, 1968).
Carrismyces R.F. Castañ & Heredia (2000), anamorphic *Pezizomycotina*. 1, Mexico. See Castañeda Ruiz & Heredia (*Mycotaxon* **76**: 125, 2000).
cartilaginous, firm and tough but readily bent.
cartilaginous layer, sometimes applied to the sterome in *Cladonia* and the chondroid axis (q.v.) in *Usnea*.
Cartilosoma Kotl. & Pouzar (1958) = Antrodia fide Pegler (*The polypores [Bull. BMS Suppl.]*, 1973), Donk (*Verh. K. ned. Akad. Wet.* tweede sect. **62**: 1, 1974) Accepted by.
caryallagic (of reproduction), having nuclear change; **acaryallagic**, not having nuclear change, as in clone development (Link, *Bot. Gaz.* **88**: 1, 1929).
caryo-, see karyo.
Caryospora De Not. (1855), Zopfiaceae. 6, widespread. See Barr (*Mycotaxon* **9**: 17, 1979), Hawksworth (*TBMS* **79**: 69, 1982), Hyde (*TMSJ* **30**: 333, 1989), Abdel-Wahab & Jones (*Mycoscience* **41**: 379, 2000).
Caryosporella Kohlm. (1985), ? Melanommataceae. 1 (on *Rhizophora*), widespread (pantropical). See Kohlmeyer (*Proc. Indian Acad. Sci.* Pl. Sci. **94**: 355, 1985), Hyde (*TMSJ* **30**: 333, 1989).
Casaresia Gonz. Frag. (1920), anamorphic *Mollisia*, Hso.0bP.1. 1 (aquatic), widespread (north temperate). See Webster *et al.* (*Nova Hedwigia* **57**: 483, 1993; teleomorph connection).
Cashiella Petr. (1951), Dermateaceae. 3, N. America; New Zealand. See Petrak (*Sydowia* **5**: 371, 1951), Gadgil & Dick (*N.Z. Jl For. Sci.* **29**: 440, 1999; New Zealand).
cassideous, helmet-shaped.
Castagnella G. Arnaud (1914) = Rhagadostoma fide Müller & von Arx *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 87, 1973).

caulocystidium, see cystidium.

Caulogaster Corda (1831) nom. dub., Fungi. Based on insect eggs fide Tulasne & Tulasne (*Selecta fungorum carpologa* **1**: 125, 1861).

Cauloglossum Grev. (1823) = Podaxis fide Stalpers (*in litt.*).

cauloplane, the stem surface.

Caulorhiza Lennox (1979), Tricholomataceae. 3, USA. See Lennox (*Mycotaxon* **9**: 154, 1979).

Caumadothis Petr. (1971) = Botryosphaeria fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Causalis Theiss. (1918) = Coccodiella fide Müller & von Arx *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 87, 1973).

Cautinia Maas Geest. (1967) = Grifola fide Stalpers (*in litt.*).

Cavaraella Speg. (1923), Rhytismatales. 1, Cuba.

Cave fungi. There are many records of fungi from caves and mines in temperate and tropical regions. Although so far no fungi have been reported as peculiar to caves, at least one new species, *Microascus caviariformis*, the 'chicken-sandwich cave fungus', has been described from a cave (Malloch & Hubart, *Can. J. Bot.* **65**: 2384, 1987). Lagarde (*Arch. Zool. exp. gen.* **53**: 277, 1913; **56**: 279, and *Notes et Revue*: 129, 1917; **60**: 593, 1922) recorded *c.* 50 taxa (including most groups of fungi) from caves in France, Spain and N. Africa. Went (*Science* **166**: 385, 1969) and Hasselbring *et al.* (*Mycol.* **67**: 171, 1975) describe fungi associated with stalactites. Cunningham *et al.* (*Environmental geology* **25**: 2, 1995) reported over 90 species of fungi from a cave network in New Mexico. Various yeasts have been reported from caves in Japan (Sugita *et al.*, *Appl. Environ. Microbiol.* **71**: 7626, 2005). Fungi in caves and mines in general reflect the substrata available. Where caves are not too deep, basidiomata of fungi such as *Boletus* spp. or *Hygrocybe* may occasionally be encountered (e.g. Kibby, *Field Mycology* **9**: 66, 2008). Polypores and other wood-destroying fungi are common in mines where the basidiomata are frequently abnormal (Fassatiová, *Česká Myk.* **24**: 162, 1970; mines of Příbram, former Czechoslovakia). Caves may also be a source of dermatophyte fungi (Lurie & May, *Mycol.* **49**: 178, 1957), with many records of miners in South African gold mines with infections of *Sporothrix schenkii* obtained from mine timbers (Doidge, *Bothalia* **5**: 1, 1950); infection by *Histoplasma* can be a serious hazard for speleologists in some parts of the new world (Ashford *et al*, *Am. J. Trop. Med. Hyg.* **60**: 899, 1999). *Fusarium* infections are associated 'white nose syndrome' causing very high mortalities of cave bats (Anon., *New Scientist* **2645**: 6, 2008). Where caves become tourist attractions, resulting environmental changes may increase levels of fungi. This can result in damage to e.g. prehistoric cave paintings (Connor, *Independent* [UK newspaper], 10 May 2006).

cavernose, having hollows or cavities.

cavernula (pl. **-ae**), cavity; esp. the cavities in the lower cortex of *Cavernularia*.

Cavernularia Degel. (1937), Parmeliaceae (L). 2, Europe; N. America. See Ahti & Henssen (*Bryologist* **68**: 85, 1965), Printzen & Ekman (*Lichenologist* **34**: 101, 2002; population biology), Printzen *et al.* (*Mol. Ecol.* **12**: 1473, 2003; phylogeography), Thell *et al.* (*Symb. bot. upsal.* **34** no. 1: 429, 2004; biogeography).

Cavimalum Yoshim. Doi, Dargan & K.S. Thind (1977), Clavicipitaceae. 2, Asia. See Doi *et al.* (*Bull. natn. Sci. Mus.* Tokyo, B **3**: 23, 1977), Bischoff & White (*Mycology Series* **19**: 125, 2003).

Cazia Trappe (1989), Pezizaceae. 1 (hypogeous), USA. See Trappe (*Mem. N. Y. bot. Gdn* **49**: 336, 1989; placement in *Helvellaceae*), Norman & Eggers (*Mycol.* **91**: 820, 1999; phylogeny), Percudani *et al.* (*Mol. Phylogen. Evol.* **13**: 169, 1999; phylogeny), Hansen *et al.* (*Mycol.* **93**: 958, 2001; phylogeny), Hansen & Pfister (*Mycol.* **98**: 1029, 2006; phylogeny), Læssøe & Hansen (*MR* **111**: 1075, 2007; phylogeny).

CBS, Centraalbureau voor Schimmelcultures (Baarn and Delft, Netherlands); founded 1904; an Institute of the Royal Netherlands Academy of Arts and Science; see van Beverwijk (*Ant. v. Leeuwenh.* **25**: 1, 1959), de Hoog (Ed.) (*Centraalbureau voor Schimmelcultures: 75 years culture collection*, 1979).

cecidium, a gall (q.v.); caused by an animal (**zoo-**), esp. an insect; caused by a fungus (**myco-**).
Cecidonia Triebel & Rambold (1988), Lecideaceae. 2 (on lichens), Europe. See Triebel & Rambold (*Nova Hedwigia* **47**: 280, 1988), Buschbom & Mueller (*Mol. Phylogen. Evol.* **32**: 66, 2004; phylogeny).
Ceeveesubramaniomyces Pratibha, K.D. Hyde & Bhat (2005), anamorphic *Basidiomycota*. 1, India. See Pratibha *et al.* (*Kavaka* **32**: 21, 2004).
Cejpia Velen. (1934), Dermateaceae. 2, Europe. See Baral (*SA* **13**: 113, 1994), Nauta & Spooner (*Mycologist* **14**: 21, 2000; UK).
Cejpomyces Svrček & Pouzar (1970) = Thanatephorus fide Langer (*Biblthca Mycol.* **158**, 1994).
Cejpomycetaceae Jülich (1982) = Ceratobasidiaceae.
Celatogloea P. Roberts (2005), Basidiomycota. 1, USA. See Roberts (*Mycologist* **19**: 69, 2005).
Celidiaceae J. Schröt. (1893) = Arthoniaceae.
Celidiopsis A. Massal. (1856) = Arthonia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).
Celidium Tul. (1852) = Arthonia fide Santesson (*Symb. bot. upsal.* **12** no. 1: 69, 1952), Wedin & Hafellner (*Lichenologist* **30**: 59, 1998), Ertz *et al.* (*Biblthca Lichenol.* **91**: 155 pp., 2005).
cell, a unit of cytoplasm containing one or more nuclei, limited by a membrane (the **cell membrane**), and, in fungi, usually enclosed by a wall (see cell wall chemistry). Adjacent fungal cells do not necessarily contain individual protoplasts (q.v.) because cytoplasm and nuclei may pass from one cell to another.
Cell wall chemistry. See Klis *et al.* (*in* Howard & Gow (Eds), *Biology of the fungal cell*, edn 2, 2007). See also Wessels (*Int. Rev. Cytol.* **104**: 37, 1986; *New Phytologist* **123**: 397, 1993), Bartnicki Garcia (*in* Rayner *et al.* (Eds), *Evolutionary biology of the fungi*: 389, 1987), Gooday (*in* Gow & Gadd, *The growing fungus*: 41, 1995). Polymers found in fungal walls are given in Table 2. The wall (e.g. zygospore wall of *Mucorales*) may also contain melanin (a dark coloured pigment which protects spores from UV light and microbial lysis) and sporopollenin (the most resistant biopolymer known).
cellar fungus, *Coniophora puteana* or *Rhinocladiella ellisii* (sterile mycelium *Zasmidium cellare*; syn. *Racodium cellare*; Hawksworth & Riedl, *Taxon* **26**: 208, 1977).
cellular slime moulds, *Dictyosteliomycota* (q.v.).
Cellularia Bull. (1788) = Trametes fide Donk (*Verh. K. ned. Akad. Wet.* tweede sect. **62**: 1, 1974).
Cellulasclerotes Stach & Pickh. (1957), Fossil Fungi. 3 (Permo-Carboniferous), Europe.
cellulin, a chitan-glucan complex which occurs as granules in the cells and plugs (- **plugs**) at hyphal constrictions in *Leptomitales* (see Lee *et al*, *Mycol.* **68**: 87, 1976).
cellulolysis adequacy index, an estimate, derived by dividing the rate of cellulolysis by the mycelial growth rate on an agar plate, as to whether the rate of cellulose decomposition by a fungus is adequate to supply its needs for saprobic survival (Garrett, *TBMS* **49**: 59, 1966; Deacon, *TBMS* **72**: 469, 1979).
cellulolytic fungi, fungi able to utilize cellulose-containing materials (incl. plant cellulose, paper, cloth, etc.), e.g. *Chaetomiaceae* (Chahal & Wang, *Mycol.* **70**: 160, 1978). Cellophane or filter paper is often used in the culture of these fungi. See Biodeterioration.
Cellulosporium Peck (1879) nom. dub., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).
Cellypha Donk (1959), ? Tricholomataceae. 10, widespread. See Reid (*Persoonia* **3**: 131, 1964).
Celoporthe Nakab., Gryzenh., Jol. Roux & M.J. Wingf. (2006), Cryphonectriaceae. 1, S. Africa; Indonesia. See Nakabonge *et al.* (*Stud. Mycol.* **55**: 261, 2006).
Celotheliaceae Lücking, Aptroot & Sipman (2008), Pyrenulales. 1 gen., 8 spp.
Celothelium A. Massal. (1860), Celotheliaceae (L). 8, widespread (subtropical and tropical). See Aguirre-Hudson (*Bull. Br. Mus. nat. hist.* Bot. **21**: 85, 1991), Berger & Aptroot (*Herzogia* **13**: 151, 1998; Austria), Prado *et al.* (*MR* **110**: 511, 2006; phylogeny), Aptroot *et al.* (*Biblthca Lichenol.* **97**, 2008; Costa Rica).
Celtidia J.D. Janse (1897), Zopfiaceae. 1, Java. See Hawksworth (*CJB* **57**: 91, 1979).
Celyphus Batten (1973), Fossil Fungi ? Fungi. 1 (late Jurassic – early Cretaceous), British Isles; USA.
CEM, see Societies and organizations.
Cenangella Sacc. (1884) = Dermea fide Nannfeldt (*Nova Acta R. Soc. Scient. upsal.*, 1932).
Cenangiaceae Rehm (1888) = Helotiaceae.
Cenangiella Lambotte (1887) = Scleroderris fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).
Cenangina Höhn. (1909) = Cenangium fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).
Cenangiomyces Dyko & B. Sutton (1979), anamorphic *Agaricomycetes*, Ccu.0eH.41. 1 (with clamp connexions), British Isles. See Dyko & Sutton (*TBMS* **72**: 411, 1979).
Cenangiopsis Rehm (1912), Helotiaceae. 1, Europe.
Cenangiopsis Velen. (1947), ? Helotiales. 1, former Czechoslovakia. See Baral (*SA* **13**: 113, 1994).
Cenangites Mesch. (1892), Fossil Fungi. 1 (Tertiary), Europe.
Cenangium Fr. (1818), Helotiaceae. 25, widespread. *C. ferruginosum* (syn. *C. abietis*) (die-back of pines). See Verkley (*MR* **99**: 187, 1995; asci), Jung *et al.* (*Pl. Path. J.* **17**: 216, 2001; sp. definition).
Cenangiumella J. Fröhl. & K.D. Hyde (2000), Helotiaceae. 1, Brunei. See Fröhlich & Hyde (*Fungal Diversity Res. Ser.* **3**: 240, 2000).
ceno-, see coeno-.
Cenococcum Moug. & Fr. (1829), anamorphic *Dothideomycetes*, Sc.-.-. 1, Europe; N. America. *C. geophilum* is mycorrhizal. See LoBuglio *et al.* (*CJB* **69**: 2331, 1992; variation in rDNA), Massicotte *et al.* (*CJB* **70**: 125, 1992; morphology), Stülten *et al.* (*Mycorrhiza* **5**: 259, 1995; protoplast regeneration), Timonen *et al.* (*New Phytol.* **135**: 313, 1997; ecology), Farmer & Sylvia (*MR* **102**: 859, 1998; ITS variation), LoBuglio (*Ectomycorrhizal Fungi*: 287, 1999; review), Shinohara *et al.* (*Curr. Genet.* **35**: 527, 1999; phylogeography), Portugal *et al.* (*S. Afr. J. Sci.* **97**: 617, 2001; population structure), Brundrett (*New Phytol.* **154**: 275, 2002; coevolution), Jany *et al.* (*New Phytol.* **154**: 651, 2002; genetic diversity), Sakakibara *et al.* (*MR* **106**: 868, 2002; identification techniques), Douhan & Rizzo (*New Phytol.* **166**: 263, 2005; population structure), Douhan *et al.* (*Mycol.* **99**: 812, 2007; population structure).
Cenomyce Ach. (1809) ≡ Cenomyces.
Cenomyces Ach. (1809) = Cladonia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).
Cenomycetaceae Chevall. (1826) = Cladoniaceae.
Cenozosia A. Massal. (1854) = Ramalina fide Hawk-

sworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Centonites Peppers (1964), Fossil Fungi. 1 (Carboniferous), USA.

central body (of ascomycetes), the cell structure (central apparatus) from which astral rays emanate and initiate a cleavage of the cytoplasm (Harper, 1905). See Lindegren *et al.* (*Can. J. Genet. Cytol.* **7**: 37, 1965).

centric (**central**) (of a stipe), at the centre of the pileus; (of oogonium of *Saprolegniaceae*), having one or two layers of fat droplets surrounding the central cytoplasm in contrast to **sub-**, having the cytoplasm surrounded by one layer of droplets on one side, and by two or three layers on the other and **ex-**, having one large drop or a lunate row of droplets on one side (Coker, 1923).

Centridium Chevall. (1826) = Roestelia fide Dietel (*Nat. Pflanzenfam.* **6**, 1928).

centrifugal, from the centre outwards.

centriole, short-cylindrical or barrel-shaped cell organelle 300-500 nm long × 150 nm diam. (kinetosome lacking an axoneme).

centripetal, towards the centre.

Centrolepidosporium R.G. Shivas & Vánky (2007), ? Ustilaginaceae. 1 (on *Centrolepidaceae*), Australia. See Shivas & Vánky (*Mycol. Balcan.* **4**: 1, 2007).

Centrospora Neerg. (1942) [non *Centrospora* Trevis. 1845, *Algae*] ≡ Mycocentrospora.

centrum, the structures within an ascoma, i.e. the asci and interascal tissue (the hamathecium); for types of centrum organization see Reynolds (Ed.) (*Ascomycete systematics*, 1981), and under *Ascomycota*.

cep, basidioma of the edible *Boletus edulis*; **fungi suilli** of Pliny and other classical writers.

cepaceous, see alliaceous.

Cephalacladium, see *Cephalocladium*.

Cephaleuros Kunze (1832), Trentepohliaceae. parasitic on vascular plants. *C. virescens* (syn. *Mycoidea parasitica*) is common on tea (**red-rust**) and other trop. plants; photobiont of *Strigula* (q.v.) and other foliicolous lichens. See Printz (*Nytt Mag. Naturvid.* **80**: 137, 1940; keys), Santesson (*Symb. bot. upsal.* **12**(1), 1952).

Cephaliophora Thaxt. (1903), anamorphic *Pezizales*, Hso.≡ eH.6. 6, widespread (tropical). See Barron *et al.* (*CJB* **68**: 685, 1990; 2 n.spp.), Tanabe *et al.* (*Mycol.* **91**: 830, 1999), Barron (*Biodiversity of Fungi* Inventory and Monitoring Methods: 435, 2004; review).

Cephaloascaceae L.R. Batra (1973), Saccharomycetales. 1 gen. (+ 2 syn.), 1 spp.

Lit.: Batra (*Stud. Mycol.* **30**: 415, 1987), von Arx & van der Walt (*Stud. Mycol.* **30**: 167, 1987), Hausner *et al.* (*Mycol.* **84**: 870, 1992; mol. phylogeny), Spatafora & Blackwell (*Mycol.* **85**: 912, 1993), Kurtzman & Robnett (*CJB* **73** Suppl. 1: S824, 1995; molecular rels), Read & Beckett (*MR* **100**: 1281, 1996), Hoog & Kurtzman *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 143, 1998), Malloch & de Hoog *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 197, 1998), Suh *et al.* (*Mycol.* **98**: 1006, 2006; phylogeny).

Cephaloascales = Saccharomycetales.

Cephaloascus Hanawa (1920), Cephaloascaceae. 1, Japan; Canada. See Schippers-Lammertse & Heyting (*Antonie van Leeuwenhoek* **28**: 5, 1962), Udagawa *et al.* (*TMSJ* **18**: 399, 1977), Cannon & Minter (*TMSJ* **33**: 51, 1992), de Hoog & Kurtzman *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 143, 1998), Spatafora (*Cellular Origin and Life in Extreme Habitats* **4**: 591, 2002; evolution), Suh *et al.* (*Mycol.* **98**: 1006, 2006; phylogeny).

Cephalocladiaceae Corda (1838) = Sclerotiniaceae.

Cephalocladium Rchb. (1828) = Botrytis fide Mussat (*Syll. fung.* **15**: 82, 1901).

Cephalodiplosporium Kamyschko (1961) = Fusarium fide Gams (*in litt.*).

cephalodium (pl. **-ia**), a delimited region within (**internal -**), or a warty, squamulose, or fruticose structure on the surface of, a lichen thallus containing a photobiont different from that characteristic of the rest of the thallus. Generally cephalodia contain cyanobacteria (e.g. *Nostoc*) whilst the rest of the thallus contains a green alga (e.g. *Trebouxia*). *Nostoc* cephalodia fix atmospheric nitrogen (see Millbank & Kershaw, *New Phytol.* **68**: 721, 1969). Known in about 400 lichenized spp. in diverse orders; see cyanotrophy, gall, Lichens, paracephalodium, photomorph, phycotype.

Cephalodochium Bonord. (1851), anamorphic *Pezizomycotina*, Hsp.0eH.?. 1, Europe.

Cephaloedium Kunze (1828) nom. nud. = Exosporium fide Hughes (*CJB* **36**: 744, 1958; nomencl.).

Cephalomyces Bainier (1907) = Cephaliophora fide Ellis (*Dematiaceous Hyphomycetes*, 1971).

Cephalophorum Nees [not traced] nom. dub., anamorphic *Pezizomycotina*. See Benjamin (*Taxon* **17**: 524, 1968).

Cephalophysis (Hertel) H. Kilias (1985), Teloschistaceae (L). 1, Europe. See Kilias (*Herzogia* **7**: 182, 1985), Kärnefelt (*Cryptog. bot.* **1**: 147, 1989; phylogeny).

Cephaloscypha Agerer (1975), Marasmiaceae. 2, widespread. See Agerer (*Sydowia* **27**: 193, 1973-1974).

cephalosporin, one of a series of antibacterial antibiotics from *Acremonium* spp., esp. *A. chrysogenum* (cephalosporin C) and *A. salmosynnematum*); see Roberts (*Mycol.* **44**: 292, 1952), Grosklags & Swift (*Mycol.* **49**: 305, 1957), Kavanagh *et al.* (*Mycol.* **50**: 370, 1958), Sassiver & Lewis (*Adv. appl. Microbiol.* **13**: 163, 1970; structure), Abraham & Newton (*Adv. Chemotherapy* **2**: 23, 1969); cephalosporin N = penicillin N.

Cephalosporiopsis Peyronel (1915), anamorphic *Hypocreales*, Hso.1eH.15. 4, Europe; Africa. fide Carmichael *et al.* (*Genera of Hyphomycetes*, 1980; synonymy with *Acremonium* or *Fusarium*).

Cephalosporium Corda (1839) = Acremonium fide Gams (*Cephalosporium-artige Schimmelpilze*, 1971).

Cephalotelium Syd. (1921) = Ravenelia fide Dietel (*Nat. Pflanzenfam.* **6**, 1928).

Cephalotheca Fuckel (1871), Cephalothecaceae. 6, widespread. See Booth (*Mycol. Pap.* **83**, 1961; key), Suh & Blackwell (*Mycol.* **91**: 836, 1999; phylogeny), Yaguchi *et al.* (*Mycotaxon* **96**: 309, 2006; from human).

Cephalothecaceae Höhn. (1917), Sordariales. 5 gen. (+ 4 syn.), 13 spp.

Lit.: Chesters (*TBMS* **19**: 261, 1935; life history), Lundqvist (*Svensk bot. Tidskr.* **86**: 261, 1992), Fortey *et al.* (*Mycologist* **11**: 132, 1997), Suh & Blackwell (*Mycol.* **91**: 836, 1999; phylogeny), Lumley *et al.* (*Mycotaxon* **74**: 395, 2000), Paulin & Harrington (*Stud. Mycol.* **45**: 209, 2000), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004), Yaguchi *et al.* (*Mycotaxon* **96**: 309,

2006), Stchigel & Guarro (*MR* **111**: 1100, 2007).
Cephalothecium Corda (1838) = Trichothecium fide Hughes (*CJB* **36**: 727, 1958).
cephalothecoid, fragmenting along a series of predefined suture lines, as in ascomata of *Cephalotheca* (q.v.).
Cephalothricum, see *Cephalotrichum Link*.
Cephalotrichum Berk. ex Sacc. (1886) ≡ Trichocephalum.
Cephalotrichum Link (1809), anamorphic *Microascaceae*, Hsy.0eP.19. 8, widespread. See Hughes (*CJB* **36**: 727, 1958), Morton & Smith (*Mycol. Pap.* **86**, 1963).
Cepsiclava J. Walker (2004), Clavicipitaceae. 1 (on living florets of *Phalaris*), Australia. Perhaps synonymous with *Aciculosporium*. See Walker (*Australas. Pl. Path.* **33**: 228, 2004).
Ceracea Cragin (1885), anamorphic *Pezizomycotina*, Hsp.0eH.?. 1, USA. See Martin (*Mycol.* **41**: 77, 1949), Donk (*Persoonia* **4**: 334, 1966).
Ceraceohydnum Jülich (1978) = Mycoaciella fide Hjortstam *et al.* (*Kew Bull.* **45**: 303, 1990; key).
Ceraceomerulius (Parmasto) J. Erikss. & Ryvarden (1973) = Byssomerulius fide Hjortstam & Larsson (*Windahlia* **21**, 1994).
Ceraceomyces Jülich (1972), Amylocorticiaceae. 16, widespread. See Jülich (*Willdenowia* Beih. **7**: 146, 1972), Legon (*Mycologist* **19**: 167, 2005).
Ceraceopsora Kakish., T. Sato & S. Sato (1984), Chaconiaceae. 1 (on *Anemone* (0, I) (*Ranunculaceae*); *Elaeagnus* (II, III) (*Elaeagnaceae*)), Japan. See Kakishima *et al.* (*Mycol.* **76**: 969, 1984).
Ceraceosorales Begerow, Stoll & R. Bauer (2007). Exobasidiomycetes. 1 gen., 1 spp. No families recognized.
Lit. Begerow *et al.* (*Mycol.* **98**: 906, 2006; phylogeny).
Ceraceosorus B.K. Bakshi (1976), Ceraceosorales. 1, India. See Bakshi (*Mycol.* **68**: 649, 1976), Begerow *et al.* (*Mycol.* **98**: 906, 2006; phylogeny).
ceraceous (cereous), wax-like.
Ceraiomyces Thaxt. (1901) = Laboulbenia fide Thaxter (*Proc. Amer. Acad. Arts & Sci.* **51**: 1, 1915).
Ceramoclasteropsis Bat. & Cavalc. (1962), ? Capnodiaceae. 1, Brazil. See Batista & Cavalcanti (*Brotéria* Sér. Ci. Nat. **31**: 101, 1962).
Ceramothyrium Bat. & H. Maia (1956), Chaetothyriaceae. Anamorph *Stanhughesia*. 20, widespread (tropical). See Constantinescu *et al.* (*Stud. Mycol.* **31**: 69, 1989; anamorph), Winka *et al.* (*Mycol.* **90**: 822, 1998; rDNA phylogeny), Haase *et al.* (*Stud. Mycol.* **43**: 80, 1999; phylogeny).
Cerania Gray (1821) nom. rej. = Thamnolia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).
ceranoid, having horn-like branches.
Cerapora, see *Ceriporia.*
Ceraporia, see *Ceriporia.*
Ceraporus Bondartsev & Singer (1941) nom. nud. ≡ Ceriporia.
Cerasterias Reinsch (1867) nom. dub., ? Algae.
Cerastoma Quél. (1875), (orthographic variant), see *Ceratostoma* Fr.
Cerastomis Clem. (1931) = Ceratostomella fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).
Ceratelium Arthur (1906) ≡ Cerotelium.
Ceratella (Quél.) Bigeard & H. Guill. (1913) [non *Ceratella* Hook. f. 1844, *Compositae*] = Multiclavula.
Ceratella Pat. (1887) [non *Ceratella* Hook. f. 1844, *Compositae*] ≡ Ceratellopsis.
Ceratellopsis Konrad & Maubl. (1937), Gomphaceae. 9, Europe. See Berthier (*Bull. mens. Soc. linn. Lyon* Num. Spéc. **46**: 187, 1976), Shiryaev (*Mikol. Fitopatol.* **38**: 59, 2004; Urals).
Ceratitium Rabenh. (1851) = Gymnosporangium fide Laundon (*Mycol. Pap.* **102**, 1965).
Ceratobasidiaceae G.W. Martin (1948), Cantharellales. 8 gen. (+ 14 syn.), 43 spp. Molecular data suggest most species group together within the *Cantharellales*, except the type, which probably belongs in the *Auriculariales.*
Lit.: Jin & Korpradiskul (*Mycosystema* **17**: 331, 1998), Roberts (*MR* **102**: 1074, 1998), Roberts (*Mycotaxon* **69**: 35, 1998), Roberts (*Sydowia* **50**: 252, 1998), Saunders & Owens (*Mycorrhiza Manual Springer Lab Manual*: 413, 1998), Roberts (*Rhizoctonia-forming fungi*, 1999), Salazar *et al.* (*Mycol.* **91**: 459, 1999), Gonzalez *et al.* (*Mycol.* **93**: 1138, 2001), Pope & Carter (*Mycol.* **93**: 712, 2001), Larsson *et al.* (*MR* **108**: 983, 2004), Otero *et al.* (*Mol. Ecol.* **13**: 2393, 2004), Binder *et al.* (*Systematics and Biodiversity* **3**: 113, 2005), González *et al.* (*Mol. Phylogen. Evol.* **40**: 459, 2006), Sharon *et al.* (*Mycoscience* **47**: 299, 2006).
Ceratobasidiales Jülich (1981) = Cantharellales.
Ceratobasidium D.P. Rogers (1935), Ceratobasidiaceae. Anamorph *Ceratorhiza*. *c.* 18, widespread. See Currah & Zelmer (*Rep. Tottori mycol. Inst.* **30**: 43, 1992), Roberts (*Rhizoctonia-forming fungi*, 1999), Gonzalez *et al.* (*Mycol.* **93**: 1138, 2001; Ribosomal DNA), Shan *et al.* (*Mycol.* **94**: 230, 2002; orchid endophytes), Ma *et al.* (*MR* **107**: 1041, 2003; anamorph phylogeny), Kotiranta & Saarenoksa (*Ann. bot. fenn.* **42**: 237, 2005; Finland).
Ceratocarpia Rolland (1896), Dothideomycetes. 2, Europe; Africa. See Benny & Kimbrough (*Mycotaxon* **12**: 1, 1980).
Ceratochaete Syd. & P. Syd. (1917) = Dysrhynchis fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).
Ceratochaetopsis F. Stevens & Weedon (1927) = Chaetothyrina fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).
Ceratocladia Schwend. (1860) = Alectoria Ach. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).
Ceratocladium Corda (1839), anamorphic *Pezizomycotina*, Hso.0eH.?6. 1, Europe. See Hughes (*Mycol. Pap.* **47**, 1951), Kendrick (*CJB* **81**: 75, 2003; morphogenesis).
Ceratocladium Pat. (1898) ≡ Xylocladium.
Ceratocoma Buriticá & J.F. Hennen (1991), Pucciniosiraceae. 2 (on *Gompholobium* (*Leguminosae*) or *Xylopia* (*Annonaceae*)), Australia; Africa. See Buriticá & Hennen (*Revista de la Academia Columbiana de Ciencias Exactas, Físicas y Naturales* **18**: 146, 1991).
Ceratocystidaceae Locq. (1972), Microascales. 6 gen. (+ 6 syn.), 79 spp.
Lit.: Malloch & Blackwell (*CJB* **68**: 1712, 1990), Brasier (*Recent Advances in Studies on Oak Decline* Proceedings of an International Congress, Selva di Fasano (Brindisi), Italy, September 13-18, 1992: 241, 1993), Grylls & Seifert *in* Wingfield *et al.* (Eds) (*Ceratocystis* and *Ophiostoma* Taxonomy, Ecology

and Pathogenicity: 261, 1993), Hausner *et al.* (*CJB* **71**: 52, 1993), Samuels (*Ceratocystis* and *Ophiostoma* Taxonomy, Ecology and Pathogenicity: 15, 1993), Seifert *et al.* (*Ceratocystis* and *Ophiostoma* Taxonomy, Ecology and Pathogenicity: 269, 1993), Wingfield *et al.* (*Ceratocystis* and *Ophiostoma* Taxonomy, Ecology and Pathogenicity, 1993), Wyk *et al.* (*Ceratocystis* and *Ophiostoma* Taxonomy, Ecology and Pathogenicity: 133, 1993), Beer *et al.* (*Antonie van Leeuwenhoek* **67**: 325, 1995), Harrington & Wingfield (*CJB* **76**: 1446, 1998), Witthuhn *et al.* (*MR* **103**: 743, 1999), Hausner *et al.* (*CJB* **78**: 903, 2000), Okada *et al.* (*Stud. Mycol.* **45**: 169, 2000), Paulin & Harrington (*Stud. Mycol.* **45**: 209, 2000), Baker Engelbrecht & Harrington (*Mycol.* **97**: 57, 2005), Marín *et al.* (*MR* **109**: 1137, 2005), Johnson *et al.* (*Mycol.* **97**: 1067, 2005).

Ceratocystiopsis H.P. Upadhyay & W.B. Kendr. (1975), Ophiostomataceae. Anamorph *Hyalorhinocladiella*. *c.* 11. See Wolfaardt *et al.* (*S. Afr. J. Bot.* **58**: 277, 1992; synoptic key, database), Hausner *et al.* (*MR* **97**: 625, 1993), van Wijk & Wingfield (*CJB* **71**: 1212, 1993; ultrastr.), Benade *et al.* (*CJB* **74**: 891, 1996; anamorph devel.), Hsiau & Harrington (*Mycol.* **89**: 661, 1997; associated with *Coleoptera*), Benade *et al.* (*Mycotaxon* **68**: 251, 1998; conidial devel.), Viljoen *et al.* (*MR* **104**: 365, 2000; taxonomy), Zhou *et al.* (*Fungal Diversity* **15**: 261, 2004; Chile), Zipfel *et al.* (*Stud. Mycol.* **55**: 75, 2006; phylogeny).

Ceratocystis Ellis & Halst. (1890), Ceratocystidaceae. Anamorph *Chalara*. 44, widespread (esp. temperate). See also *Ophiostoma*. See Hunt (*Lloydia* **19**: 1, 1956; monogr., keys), Upadhyay (*monograph of Ceratocystis and Ceratocystiopsis*, 1981; monogr., keys), Kowalski & Butin (*J. Phytopath.* **124**: 236, 1989; 6 spp. on *Quercus*), Wolfaardt *et al.* (*S. Afr. J. Evol.* **11**: 376, 1994), Witthuhn *et al.* (*Mycol.* **90**: 96, 1998), Harrington & Wingfield (*CJB* **76**: 1446, 1999; spp. on conifers), Witthuhn *et al.* (*MR* **103**: 743, 1999; phylogeny), Hausner *et al.* (*CJB* **78**: 903, 2000; phylogeny), Paulin & Harrington (*Stud. Mycol.* **45**: 209, 2000), Witthuhn *et al.* (*Mycol.* **92**: 447, 2000; molecular analysis), Barnes *et al.* (*Molecular Plant Pathology* **2**: 319, 2001; microsatellites), Harrington *et al.* (*Pl. Dis.* **86**: 418, 2002; conifer-associated spp.), Paulin-Mahady *et al.* (*Mycol.* **94**: 62, 2002; phylogeny), Baker *et al.* (*Phytopathology* **93**: 1274, 2003; population structure, host specificity), Morin *et al.* (*Phytopathology* **94**: 1323, 2004; Canada), Wyk *et al.* (*Stud. Mycol.* **50**: 365, 2004; Bhutan), Baker Engelbrecht & Harrington (*Mycol.* **97**: 57, 2005; infraspecific taxonomy), Marín *et al.* (*MR* **109**: 1137, 2005; *C. polonica* agg.), Thorpe *et al.* (*Phytopathology* **95**: 316, 2005; on *Araceae*), Wyk *et al.* (*Australas. Pl. Path.* **34**: 587, 2005; Oman), Johnson *et al.* (*Mycol.* **97**: 1067, 2005; N America), Wyk *et al.* (*Fungal Diversity* **21**: 181, 2006; *C. moniliformis* agg.), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny), Engelbrecht *et al.* (*Phytopathology* **97**: 1648, 2007; on *Theobroma*).

Ceratogaster Corda (1841) = Elaphomyces fide Mussat (*Syll. fung.* **15**: 83, 1901).

Ceratomyces Thaxt. (1892), Ceratomycetaceae. 20, widespread. See Weir & Rossi (*Mycol.* **93**: 171, 2001; Bolivia), Santamaría (*Fl. Mycol. Iberica* **5**, 2003; Iberian peninsula).

Ceratomycetaceae S. Colla (1934), Laboulbeniales. 12 gen., 85 spp.

Lit.: Tavares (*Mycol. Mem.* **9**: 627 pp., 1985), Bameul (*Nouv. Rev. Entomol.* Nouv. sér. **10**: 19, 1993), Majewski (*Acta Mycologica* Warszawa **34**: 7, 1999), Santamaría (*Nova Hedwigia* **68**: 351, 1999; European spp.), Weir & Hughes (*Mycol.* **94**: 483, 2002).

Ceratonema Pers. (1822) nom. dub., Fungi. Based on mycelium, etc. fide Mussat (*Syll. Fung.* **15**: 83, 1901).

Ceratophacidium J. Reid & Piroz. (1966), Rhytismataceae. 1, USA. See Reid & Pirozynski (*CJB* **44**: 645, 1966).

Ceratophoma Höhn. (1917), anamorphic *Massarina*, St.0eH.?. 1, Europe.

Ceratophora Humb. (1793) nom. rej. = Gloeophyllum fide Donk (*Verh. K. ned. Akad. Wet.* tweede sect. **62**: 1, 1974).

Ceratophorum Sacc. (1880), anamorphic *Pezizomycotina*, Hso.≡ eP.1. 5, widespread. *C. setosum* (lupin leaf spot). See Hughes (*Mycol. Pap.* **36**, 1951), Ellis (*Mycol. Pap.* **70**, 1958), Huseyinov *et al.* (*Mikol. Fitopatol.* **36**: 11, 2002; Turkey).

Ceratophyllum M. Choisy (1951) [non *Ceratophyllum* L. 1753, *Ceratophyllaceae*] = Hypogymnia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Ceratopodium Corda (1837) = Graphium fide Saccardo (*Syll. fung.* **4**: 609, 1886).

Ceratoporia Ryvarden & de Meijer (2002), Ceratobasidiaceae. 1 (saprobic), Brazil. See Ryvarden & Meijer (*Syn. Fung.* **15**: 44, 2002).

Ceratoporthe Petr. (1925), Diaporthales. 1 (on *Sarothamnus*), Europe.

Ceratopycnidium Maubl. (1907) = Byssoloma. Apparently used in two separate senses. fide Bertoni & Cabral (*MR* **95**: 1014, 1991), Bertoni (*Mycotaxon* **52**: 193, 1994; Brazil), Lücking *et al.* (*Lichenologist* **34**: 270, 2002; synonymy).

Ceratopycnis Höhn. (1915), anamorphic *Pezizomycotina*, Cpd.≡ eP.15. 1, Europe. See Morgan-Jones (*Mycotaxon* **2**: 167, 1975), Farr *et al.* (*Mycol.* **90**: 290, 1998).

Ceratopycnium Clem. & Shear (1931) ≡ Ceratopycnidium.

Ceratorhiza R.T. Moore (1987), anamorphic *Ceratobasidium*. *c.* 7, widespread. See Moore (*Antonie van Leeuwenhoek* **55**: 393, 1989), Currah & Zelmer (*Rep. Tottori mycol. Inst.* **30**: 43, 1992), Roberts (*Rhizoctonia-forming fungi*, 1999).

Ceratosebacina P. Roberts (1993), ? Auriculariales. 3, Europe. See Roberts (*MR* **97**: 470, 1993), Weiss & Oberwinkler (*MR* **105**: 403, 2001; phylogeny).

Ceratosperma Speg. (1918) = Nematostoma fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Ceratospermopsis Bat. (1951), Meliolaceae. 2 (from leaves), Brazil. See Batista (*Mycopath. Mycol. appl.* **5**: 165, 1951).

Ceratospermum P. Micheli (1729) nom. dub., ? Pezizomycotina.

Ceratosphaeria Niessl (1876), Sordariomycetes. Anamorph *Harpophora*-like. 11, widespread. See Tsuda

& Ueyama (*TMSJ* **18**: 413, 1977), Hyde *et al.* (*Nova Hedwigia* **64**: 185, 1997), Réblová (*Sydowia* **50**: 229, 1998; Czech Republic), Réblová (*Mycol.* **98**: 68, 2006; phylogeny).

Ceratosporella Höhn. (1923), anamorphic *Pezizomycotina*, Hso.2bP.1. 13, widespread. See Hughes (*TBMS* **35**: 243, 1952), Kuthubutheen & Nawawi (*MR* **95**: 159, 1991; key), Castañeda Ruíz *et al.* (*Mycotaxon* **60**: 275, 1996).

Ceratosporiaceae Nann. (1934) = Helminthosphaeriaceae.

Ceratosporium Schwein. (1832), anamorphic *Iodosphaeria*, Hso.0bP.1. 6, widespread. See Hughes (*Mycol. Pap.* **39**, 1951), Hughes (*N.Z. Jl Bot.* **2**: 305, 1965), Kirschner & Chen (*Mycol.* **96**: 917, 2004; Taiwan).

Ceratostoma Fr. (1818) nom. rej. = Melanospora Corda fide Cannon & Hawksworth (*Taxon* **32**: 476, 1983).

Ceratostoma Sacc. (1876) ? = Arxiomyces fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Ceratostomataceae G. Winter (1885), Melanosporales. 12 gen. (+ 23 syn.), 63 spp.

Lit.: Doguet (*Botaniste* **39**: 1, 1955; monogr.), Cannon & Hawksworth (*J. Linn. Soc.* Bot. **84**: 115, 1982; key gen.), Horie *et al.* (*Mycotaxon* **25**: 229, 1986), Vakili (*MR* **93**: 67, 1989), Rehner & Samuels (*CJB* **73**: S816, 1995), Goh & Hanlin (*Mycol.* **90**: 655, 1998), Goh *et al.* (*Fungal Science* Taipei **13**: 1, 1998), Jones & Blackwell (*MR* **102**: 661, 1998; DNA), Stchigel *et al.* (*MR* **103**: 1305, 1999), Zhang & Blackwell (*MR* **106**: 148, 2002), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004).

Ceratostomella Sacc. (1878), ? Annulatascaceae. *c.* 18 (on rotten wood etc.), widespread (esp. temperate). See Barr (*Mycotaxon* **46**: 45, 1993), Untereiner (*Mycol.* **85**: 294, 1993), Kang *et al.* (*Mycoscience* **40**: 151, 1999), Inderbitzin (*Mycoscience* **41**: 167, 2000; China), Réblová (*Mycol.* **98**: 68, 2006; phylogeny).

Ceratostomina Hansf. (1946) = Rhynchomeliola fide Müller & von Arx *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 87, 1973).

Ceraunium Wallr. (1833) ≡ Elaphomyces.

Cercidospora Körb. (1865), ? Dothideomycetes. 22 (on lichens), north temperate; Arctic. See Hafellner (*Herzogia* **7**: 353, 1987; key), Eriksson & Yue (*SA* **11**: 166, 1993), Hafellner & Obermayer (*Cryptog. Bryol.-Lichénol.* **16**: 177, 1995; on *Arthrorhaphis*), Zhurbenko (*Mikol. Fitopatol.* **36**: 3, 2002; Russia), Zhurbenko & Triebel (*Biblthca Lichenol.* **86**: 205, 2003; on *Lecidoma*), Ihlen & Wedin (*Lichenologist* **39**: 1, 2007; Fennoscandia, key).

Cercocladospora G.P. Agarwal & S.M. Singh (1974) = Pseudocercospora fide Deighton (*Mycol. Pap.* **140**, 1976), Crous & Braun (*CBS Diversity Ser.* **1**: 571 pp., 2003).

Cercodeuterospora Curzi (1932) = Passalora fide Deighton (*Mycol. Pap.* **137**, 1974), Crous & Braun (*CBS Diversity Ser.* **1**: 571 pp., 2003).

Cercophora Fuckel (1870), Lasiosphaeriaceae. Anamorph *Cladorrhinum*. 42, widespread. See Lundqvist (*Symb. bot. upsal.* **20** no. 1, 1972; coprophilous spp.), Hilber & Hilber (*Z. Mykol.* **45**: 209, 1979; on wood), Ueda (*Mycoscience* **35**: 287, 1994; anamorph), Réblová & Svrcek (*Czech Mycol.* **49**: 207, 1997), Hanlin (*Am. J. Bot.* **86**: 780, 1999; morphology), Miller & Huhndorf (*Sydowia* **53**: 211, 2001; neotropical spp.), Miller (*Sydowia* **55**: 267, 2003; perithecial anatomy), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004; phylogeny), Miller & Huhndorf (*MR* **108**: 26, 2004; phylogeny), Miller & Huhndorf (*Mol. Phylogen. Evol.* **35**: 60, 2005; phylogeny, anatomy), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny).

Cercoseptoria Petr. (1925) = Pseudocercospora fide Deighton (*TBMS* **88**: 365, 1987), Crous & Braun (*CBS Diversity Ser.* **1**: 571 pp., 2003).

Cercosperma G. Arnaud ex B. Sutton & Hodges (1983), anamorphic *Pezizomycotina*, Hso.≡ eP.10. 2, pantropical. See Sutton & Hodges (*Nova Hedwigia* **35**: 798, 1981), Dorai & Vittal (*TBMS* **91**: 521, 1988; India).

Cercosphaerella Kleb. (1918) = Mycosphaerella fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Cercospora Fresen. (1863) [Aug.] nom. cons. prop., anamorphic *Mycosphaerella*, Hso.0fH.31. *c.* 1416, widespread. Leaf spot of banana (*C. musae*, see *Mycosphaerella*), beet (*C. beticola*), celery (*C. apii*), groundnut (*Arachis*) (*C. arachidicola*, teleomorph *Mycosphaerella arachidis*), tobacco (*C. nicotianae*). See Chupp (*Monograph of the fungus genus Cercospora*, 1954; arranged by host fam.), Sigler *et al.* (*Mycotaxon* **10**: 133, 1979), Ooorschot (*Stud. Mycol.* **20**, 1980; key 22 spp.), Pons *et al.* (*TBMS* **85**: 405, 1985; ultrastructure of *C. beticola*), Assante *et al.* (*Riv. Patol. veg., Pavia* Sér. 4 **22**: 41, 1986; secondary metabolites), Pollack (*Mycol. Mem.* **12**, 1987; annotated compilation of species names), Chabasse (*Bull. Soc. Fr. mycol. Med.* **17**: 373, 1988; key French spp.), Pons & Sutton (*Mycol. Pap.* **160**, 1988; spp. on *Dioscorea*), Stewart & Pflegler (*Journal of the Minnesota Academy of Science* **53**: 34, 1989; synoptic key gen.), Hsieh & Goh (*Cercospora and Similar Fungi from Taiwan*, 1990; Taiwan), Sutton (*Taxon* **40**: 643, 1991; conservation), Skou (*Mycotaxon* **43**: 237, 1992; xerophilic spp., ? related to *Ascosphaeraceae*), Braun (*Cryptog. bot.* **3**: 235, 1993; subgen. *Hyalocercospora*), Braun (*Monogr. Cercosporella, Ramularia Allied Genera (Phytopath. Hyphom.)* **1**: 117 pp., 1995; subg. *Hyalocercospora*), Takizawa *et al.* (*Mycoscience* **35**: 327, 1995; ubiquinone system), Braun (*Sydowia* **48**: 205, 1996), Braun & Mel'nik (*Mikol. Fitopatol.* **30**: 1, 1996; Russian types), Pons & Sutton (*MR* **100**: 815, 1996; on *Heliotropium*), Crous *et al.* (*Mycotaxon* **64**: 405, 1997; Brazil), Crous & Câmara (*Mycotaxon* **68**: 299, 1998; Brazil), Guo (*Mycosystema* **17**: 97, 1998; China), Kobayashi *et al.* (*Mycoscience* **39**: 185, 1998; Japan), Braun (*Schlechtendalia* **2**: 1, 1999), Braun & Sivapalan (*Fungal Diversity* **3**: 1, 1999; Brunei), Crous & Corlett (*CJB* **76**: 1523, 1998; on *Platanus*), Crous *et al.* (*Mycotaxon* **72**: 171, 1999; Brazil), Kim & Shin (*Korean J. Mycol.* **27**: 220, 1999; Korea), Nakashima *et al.* (*Mycoscience* **40**: 269, 1999; Japan), Stewart *et al.* (*MR* **103**: 1491, 1999; phylogeny), Crous *et al.* (*Stud. Mycol.* **45**: 107, 2000; review), Guo & Jiang (*Mycotaxon* **74**: 257, 2000; China), Siboe *et al.* (*J. gen. appl. Microbiol.* Tokyo **46**: 69, 2000; *C. apii* complex), Crous & Braun (*Mycotaxon* **78**: 327, 2001; spp. described by Chupp), Crous *et al.* (*Mycol.* **93**: 1081, 2001; phylogeny), Goodwin *et al.* (*Phytopathology* **91**: 648, 2001; phylogeny), Braun *et al.* (*Feddes Repert.* **113**: 112, 2002; spp. described by Chupp), Crous & Braun (*CBS Diversity Ser.* **1**: 571 pp., 2003; annotated checklist), Guo *et al.* (*Flora Fungorum Sinicorum* **20**, 2003; China), Braun & Crous (*Mycotaxon* **92**: 395, 2005;

nomencl.), Groenewald *et al.* (*Phytopathology* **95**: 951, 2005; phylogeny, sp. concepts), Crous *et al.* (*Stud. Mycol.* **55**: 189, 2006; on maize), Groenewald *et al.* (*Fungal Genetics Biol.* **43**: 813, 2006; mating type genes), Groenewald *et al.* (*Mycol.* **98**: 275, 2006; host range), Schoch *et al.* (*Mycol.* **98**: 1041, 2006; phylogeny).

Cercospora Fuckel (1863) [Apr.] nom. rej. prop. = Pseudocercospora fide Sutton & Pons (*Taxon* **112**: 643, 1991).

Cercosporaceae Nann. (1934) = Mycosphaerellaceae.

Cercosporella Sacc. (1880), anamorphic *Mycosphaerella*, Hsy.0fH.10. 99, widespread. *C. pastinacae* (parsnip (*Pastinaca*) leaf spot). See Deighton (*Mycol. Pap.* **133**, 1973), Braun (*Monogr. Cercosporella, Ramularia Allied Genera (Phytopath. Hyphom.)* **1**: 61, 1995; monogr., keys), Braun (*Monogr. Cercosporella, Ramularia Allied Genera (Phytopath. Hyphom.)* **2**: 401, 1998), Pons & Sutton (*MR* **104**: 1501, 2000; conidiogenesis), Berner *et al.* (*Mycol.* **97**: 1122, 2006; spp. with biocontrol potential).

Cercosporellaceae Nann. (1934) = Mycosphaerellaceae.

Cercosporidium Earle (1901) = Passalora fide Deighton (*Mycol. Pap.* **112**, 1967; key), von Arx (*Proc. K. ned. Akad. Wet.* Ser. C, Biol. Med. Sci. **86**: 15, 1983), Castañeda Ruíz & Braun (*Cryptog. Bot.* **1**: 42, 1989), Liu *et al.* (*Acta phytopath. sin.* **28**: 43, 1998; RAPD), Crous *et al.* (*Mycol.* **93**: 1081, 2001; phylogeny), Crous & Braun (*CBS Diversity Ser.* **1**: 571 pp., 2003; annotated checklist).

Cercosporina Speg. (1911) = Cercospora Fresen. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Cercosporiopsis Miura (1928) nom. illegit. ≡ Pseudocercospora fide Carmichael *et al.* (*Genera of Hyphomycetes*, 1980).

Cercosporites E.S. Salmon (1903), Fossil Fungi. 1 (Miocene), Italy.

Cercosporites Stopes (1913), Fossil Fungi. 1 (Cretaceous), former Czechoslovakia.

Cercosporula Arnaud (1954) nom. inval., anamorphic *Chaetosphaeriales*, Hso.0fH.15. 3, France; neotropics. See Castañeda Ruíz & Arnold (*Revta Jardín bot. Nac.* Univ. Habana **6**: 47, 1985).

Cercostigmina U. Braun (1993) = Pseudocercospora fide Braun (*Cryptog. bot.* **4**: 107, 1993), Crous & Braun (*CBS Diversity Ser.* **1**: 571 pp., 2003; annotated checklist), Taylor *et al.* (*MR* **107**: 653, 2003; phylogeny of spp. on *Proteaceae*).

Cerebella Ces. (1851) = Epicoccum fide Schol-Schwarz (*TBMS* **42**: 149, 1959), Ellis (*Dematiaceous Hyphomycetes*, 1971), Pažoutová & Kolínská (*Czech Mycol.* **54**: 155, 2003).

cerebriform, brain-like; convoluted.

Cereicium Locq. (1979) = Cortinarius fide Kuyper (*in litt.*).

Cereolus (Körb.) Boistel (1903) = Stereocaulon Hoffm. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Cericium Hjortstam (1995), Cystostereaceae. 1, S. America. See Hjortstam (*Mycotaxon* **54**: 184, 1995).

Cerillum Clem. (1931) ≡ Colletomanginia.

Cerinomyces G.W. Martin (1949), Dacrymycetaceae. 12, widespread (temperate). See McNabb (*N.Z. Jl Bot.* **2**: 403, 1964; key), Donk (*Persoonia* **4**: 267, 1966), Huckfeldt & Hechler (*Zeitschrift für Mykologie* **70**: 97, 2004; Germany).

Cerinomycetaceae Jülich (1982) = Dacrymycetaceae. *Lit.*: Maekawa (*CJB* **65**: 583, 1987), Maekawa & Zang (*Mycotaxon* **61**: 343, 1997), Duhem (*Bull. trimest. Soc. mycol. Fr.* **114**: 1, 1998), Larsson *et al.* (*MR* **108**: 983, 2004).

Cerinosterus R.T. Moore (1987), anamorphic *Femsjonia*. 1, widespread. See Moore (*Stud. Mycol.* **30**: 216, 1987).

Ceriomyces Corda (1837) nom. dub. = Ptychogaster fide Patouillard (*Essai taxonomique sur les familles et les genres des Hyménomycètes*, 1900).

Ceriomyces Murrill (1909) = Boletus Fr. fide Singer (*Farlowia* **2**: 223, 1945).

Cerion Massee (1901), Rhytismataceae. 2, Australia; America (tropical). See Sherwood (*Occ. Pap. Farlow Herb. Crypt. Bot.* **15**, 1980), Johnston (*Aust. Syst. Bot.* **14**: 377, 2001; Australia).

Ceriophora Höhn. (1919), Xylariales. 1 (from *Carex* leaves), Europe. Links with the *Cainiaceae* are tentative. See Kang *et al.* (*MR* **103**: 1621, 1999).

Cerioporus Quél. (1886) = Polyporus P. Micheli ex Adans. fide Saccardo (*Syll. fung.* **5**: 1, 1887).

Ceriospora Niessl (1876), Annulatascaceae. Anamorph *Chaetoconis*. 3, widespread (temperate). See Hyde (*Sydowia* **45**: 204, 1993), Campbell *et al.* (*Mycol.* **95**: 41, 2003).

Ceriosporella A.R. Caval. (1966) ≡ Marinospora.

Ceriosporella Berl. (1894) = Lophiostoma fide von Arx & Müller (*Stud. Mycol.* **9**, 1975), Hyde (*Sydowia* **45**: 204, 1993).

Ceriosporopsis Linder (1944), Halosphaeriaceae. 7 (marine), widespread. See Jones & Zainal (*Mycotaxon* **32**: 237, 1988; key), Yusoff *et al.* (*CJB* **72**: 1550, 1994; ultrastr.), Spatafora *et al.* (*Am. J. Bot.* **85**: 1569, 1998; DNA), Chen *et al.* (*Mycol.* **91**: 84, 1999; DNA), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny).

Ceriporia Donk (1933), Phanerochaetaceae. 22, widespread. See Pieri & Rivoire (*BSMF* **113**: 193, 1984), Ryvarden & Iturriaga (*Mycol.* **95**: 1066, 2003; Venezuela), Gilbertson & Hemmes (*Mem. N. Y. bot. Gdn* **89**: 81, 2004; Hawai'i).

Ceriporiopsis Domański (1963), Phanerochaetaceae. *c.* 25, widespread. See Domański (*Acta Soc. Bot. Pol.* **32**: 731, 1963), Ryvarden & Iturriaga (*Mycol.* **95**: 1066, 2003; Venezuela).

cernuous, hanging down; drooping; nodding.

Cerocorticium Henn. (1900), Meruliaceae. 2, widespread. See Wassink (*Coolia* **50**: 21, 2007) See also *Radulomyces*.

Cerodothis Muthappa (1969), Dothideomycetes. 1, India. See Muthappa (*Mycol.* **61**: 737, 1969).

Cerophora Raf. (1808) = Lycoperdon Pers. fide Donk (*Taxon* **5**: 73, 1956).

Ceropsora B.K. Bakshi & Suj. Singh (1960), ? Coleosporiaceae. 1 (on *Picea* (*Pinaceae*)), India. See Bakshi & Singh (*CJB* **38**: 260, 1960) May belong to *Chrysomyxa*; similar to *Stilbechrysomyxa*.

Cerotelium Arthur (1906), Phakopsoraceae. *c.* 25, widespread (tropical; subtropical). *C. fici* (fig rust), *C. desmium* (cotton rust). See Ono *et al.* (*MR* **96**: 844, 1992; key), Hüseyın & Selçuk (*Pakist. J. Bot.* **36**: 203, 2004; Turkey), Hernández *et al.* (*Sydowia* **57**: 189, 2005; Guyana), Thaung (*Australasian Mycologist* **24**: 29, 2005; Burma).

Cerradoa J.F. Hennen & Y. Ono (1978) = Edythea fide Cummins & Hiratsuka (*Illustr. Gen. Rust Fungi* edn 3: 225 pp., 2003).

Cerrena Gray (1821), Polyporaceae. 4, widespread. See Westhuizen (*CJB* **41**: 1487, 1963; structure), Pegler (*The polypores [Bull. BMS Suppl.]*, 1973).

Cerrenella Murrill (1905) = Inonotus fide Pegler (*TBMS* **47**: 175, 1964).

Cesatia Rabenh. (1850) [non *Cesatia* Endl. 1838, *Umbelliferae*] = Trullula fide Saccardo (*Syll. fung.* **3**: 1, 1884).

Cesatiella Sacc. (1878), Sordariomycetidae. 1 (from dead wood), Europe. See Kohlmeyer *et al.* (*Bot. Mar.* **40**: 291, 1997), Rossman (*Stud. Mycol.* **42**, 1999).

cespitose, see caespitose.

Ceteraria Ach. (1809) ≡ Cetraria.

Cetradonia J.C. Wei & Ahti (2002), Cladoniaceae (L). 1, USA. See Wei & Ahti (*Lichenologist* **34**: 23, 2002), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny), Zhou *et al.* (*J. Hattori bot. Lab.* **100**: 871, 2006; phylogeny).

Cetradoniaceae J.C. Wei & Ahti (2002) = Cladoniaceae.

Lit.: Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny), Zhou *et al.* (*J. Hattori bot. Lab.* **100**: 871, 2006; phylogeny).

Cetraria Ach. (1803) nom. cons., Parmeliaceae (L). 21, widespread (temperate to Arctic). See Kärnefelt (*Op. Bot.* **46**, 1979; monogr. brown fruticose spp.), Jahns & Schuster (*Beitr. Biol. Pfl.* **55**: 427, 1981; morphogenesis), Awasthi (*Bull. bot. Surv. India* **24**: 1, 1983; key, India), Kärnefelt (*Op. Bot.* **86**: 1, 1986; key, as *Coelocaulon*), Kärnefelt *et al.* (*Pl. Syst. Evol.* **183**: 113, 1992; evol. & phylog.), Kärnefelt *et al.* (*Bryologist* **96**: 394, 1993), Thell (*Cryptog. Bryol.-Lichénol.* **16**: 247, 1995; anamorphs), Thell (*Folia Cryptog. Estonica* **32**: 113, 1998), Thell & Miao (*Ann. bot. fenn.* **35**: 275, 1998; phylogeny), Randlane *et al.* (*Bryologist* **100**: 109, 1999; world list cetrarioid lichens), Thell (*Lichenologist* **31**: 441, 1999; introns), Wedin *et al.* (*MR* **103**: 1152, 1999; phylogeny), Thell *et al.* (*Folia cryptog. Estonica* **36**: 95, 2000; phylogeny), Thell *et al.* (*Mycol. Progr.* **1**: 335, 2002; phylogeny), Thell *et al.* (*Mitteilungen aus dem Institut für Allgemeine Botanik Hamburg* **30-32**: 283, 2002; phylogeny, ecology), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny), Randlane & Saag (*Central European Lichens*: 75, 2006; key).

Cetrariaceae Schaer. (1850) = Parmeliaceae.

Cetrariastrum Sipman (1980), Parmeliaceae (L). 5, tropical. See Sipman (*Mycotaxon* **26**: 235, 1986), Kurokawa (*J. Jap. Bot.* **74**: 251, 1999; sorediate spp.), Divakar *et al.* (*Mol. Phylogen. Evol.* **40**: 448, 2006; phylogeny, morphology).

Cetrariella Kärnefelt & A. Thell (1993), Parmeliaceae (L). 2, widespread (northern hemisphere). See Kärnefelt *et al.* (*Bryologist* **96**: 394, 1993), Kärnefelt & Thell (*Biblthca Lichenol.* **75**: 27, 2000; posn), Thell *et al.* (*Mycol. Progr.* **1**: 335, 2002; phylogeny), Thell *et al.* (*Symb. bot. upsal.* **34** no. 1: 429, 2004; biogeography), Randlane & Saag (*Central European Lichens*: 75, 2006; key).

Cetrariomyces E.A. Thomas (1939) nom. inval. ≡ Cetraria.

Cetrariopsis Kurok. (1980), Parmeliaceae (L). 2, widespread. See Kärnefelt *et al.* (*Pl. Syst. Evol.* **183**: 113, 1992), Randlane *et al.* (*Cryptog. Bryol.-Lichénol.* **16**: 35, 1995; status).

Cetrelia W.L. Culb. & C.F. Culb. (1968), Parmeliaceae (L). 17, widespread (esp. Asia). See Culberson & Culberson (*Contr. US natn Herb.* **34**: 449, 1968), Chen (*Acta Mycol. Sin.* Suppl. **1**: 386, 1986; China), Randlane & Saag (*Khemotaksonomicheskoe Izuchenie Sporovykh Rasteniĭ i Gribov, Dostizheniya i Perspektivy Razvitiya*: 193, 1990; chemotaxonomy), Randlane *et al.* (*Ukr. bot. Zh.* **48**: 41, 1991; Ukraine), Randlane & Saag (*Nov. sist. Niz. Rast.* **28**: 118, 1992; Russia), Elix (*Flora of Australia* **55**: 33, 1994; Australia), Barbero *et al.* (*Cryptog. bot.* **5**: 28, 1995; Iberian peninsula), Thell & Miao (*Ann. bot. fenn.* **35**: 275, 1998; phylogeny), Thell *et al.* (*Mycol. Progr.* **1**: 335, 2002; phylogeny), Randlane & Saag (*Central European Lichens*: 75, 2006; key).

Cetreliopsis M.J. Lai (1980), Parmeliaceae (L). 5, Australasia. See Lumbsch (*SA* **7**: 105, 1988), Randlane *et al.* (*Cryptog. Bryol.-Lichénol.* **16**: 35, 1995), Lai & Elix (*Mycotaxon* **84**: 355, 2002; Thailand), Thell *et al.* (*Mycol. Progr.* **1**: 335, 2002; phylogeny).

Ceuthocarpon P. Karst. (1873) = Linospora fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Ceuthodiplospora Died. (1912), anamorphic *Splanchnonema*, Cpd.1eH.15. 1, former Czechoslovakia. See Sutton (*Mycol.* **72**: 208, 1980).

Ceuthosira Petr. (1924), anamorphic *Pezizomycotina*, Cpd.0eH.?. 1, Europe.

Ceuthospora Fr. (1825) nom. rej. = Pyrenophora fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Ceuthospora Grev. (1826) nom. cons., anamorphic *Phacidium*, St.0eH.15. 106, widespread. See Sutton (*The Coelomycetes*, 1980), DiCosmo *et al.* (*Mycotaxon* **21**: 1, 1984), Ando *et al.* (*Ann. phytopath. Soc. Japan* **55**: 391, 1989; brown zonate leaf blight of tea by *C. lauri*).

Ceuthosporella Höhn. (1929) ≡ Helhonia.

Ceuthosporella Petr. & Syd. (1923), anamorphic *Pezizomycotina*, St.0eH.?. 1, Japan.

CF (CFL), see Nomenclature, Societies and organizations.

Chaconia Juel (1897), Chaconiaceae. 7 (on dicots, esp. *Leguminosae*), widespread (tropical). See Ono & Hennen (*TMSJ* **24**: 369, 1983), Hennen *et al.* (*Catalogue of the Species of Plant Rust Fungi (Uredinales) of Brazil*: 2005, 2005; Brazil spp.).

Chaconiaceae Cummins & Y. Hirats. (1983), Pucciniales. 8 gen. (+ 8 syn.), 75 spp.

Lit.: Dai & Shen (*Mycotaxon* **48**: 193, 1993), Evans (*Mycopathologia* **124**: 163, 1993), Ono & Harada (*Mycoscience* **35**: 179, 1994), Ono *et al.* (*Cryptogams of the Himalayas* **3**. Nepal and Pakistan: 69, 1995), Payak (*Indian Phytopath.* **49**: 307, 1996), Berndt (*Mycol.* **91**: 1045, 1999), Cummins & Hiratsuka (*Illustr. Gen. Rust Fungi* edn 3: 225 pp., 2003), Maier *et al.* (*CJB* **81**: 12, 2003), Wingfield *et al.* (*Australas. Pl. Path.* **33**: 327, 2004), Ritschel (*Biblthca Mycol.* **200**: 132 pp., 2005), Aime (*Mycoscience* **47**: 112, 2006).

Chadefaudia Feldm.-Maz. (1957), Halosphaeriaceae (?L). 6 (marine algae), widespread. See Kohlmeyer & Kohlmeyer (*Marine Mycology*, 1979), Stegena & Kemperman (*Bot. Mar.* **27**: 443, 1984; S. Afr.), Nakagiri & Ito (*Mycol.* **89**: 484, 1997; contrast with *Retrostium*).

Chadefaudiella Faurel & Schotter (1959), Chadefaudiellaceae. 2 (coprophilous), N. Africa. See Faurel & Schotter (*Revue Mycol.* Paris **30**: 330, 1966).

Chadefaudiellaceae Faurel & Schotter ex Benny & Kimbr. (1980), Microascales. 2 gen., 3 spp.

Lit.: Valldosera *et al.* (*Mycotaxon* **30**: 5, 1987), von Arx *et al.* (*Beih. Nova Hedwigia* **94**: 104 pp., 1988), von Arx *et al.* (*Beih. Nova Hedwigia* **94**: 104, 1988).

Chadefaudiomyces Kamat, V.G. Rao, A.S. Patil & Ullasa (1974), Diaporthales. Anamorph *Lasmenia*. 1, India. See Kamat *et al.* (*Revue Mycol.* Paris **38**: 19, 1973).

Chaenocarpus Lév. (1843) nom. dub. = Chaenocarpus Rebent. fide Læssøe (*SA* **13**: 43, 1994).

Chaenocarpus Rebent. (1804) nom. dub., Xylariaceae. 1, Europe. See Dennis (*Revta Biol.* Lisb. **1**: 175, 1958), Læssøe (*SA* **13**: 43, 1994).

Chaenocarpus Spreng. (1831) = Chaenocarpus Rebent. fide Læssøe (*SA* **13**: 43, 1994).

Chaenotheca (Th. Fr.) Th. Fr. (1860), Coniocybaceae (L). 25, widespread (esp. temperate). See Tibell (*Symb. bot. upsal.* **23** no. 1, 1980; key 14 N. Hemisph. spp.), Tibell (*Nova Hedwigia* **79**: 597, 1984; gen. concept), Honegger (*Sydowia* **38**: 146, 1986; asci), Middelborg & Mattsson (*Sommerfeltia* **5**, 1987; Norway), Tibell (*Nordic Jl Bot.* **13**: 441, 1993; anamorphs), Tibell (*Fl. Neotrop.* Monogr. **69**: 78 pp., 1996; neotropical spp.), Tibell (*Symb. bot. upsal.* **32** no. 1: 291, 1997; anamorphs), Tibell (*Biblthca Lichenol.* **71**: 107 pp., 1998; S America), Tibell (*Lichenologist* **33**: 519, 2001; phylogeny, synonymy), Tibell (*Bryologist* **104**: 191, 2001; phylogeny, photobionts), Tibell (*Ann. bot. fenn.* **39**: 73, 2002; morphology, phylogeny), Tibell & Koffman (*Bryologist* **105**: 353, 2002; N America), Aptroot & Tibell (*Australasian Lichenology* **52**: 12, 2003; Papua New Guinea), Rikkinen (*Acta Bot. Fenn.* **175**: 1, 2003; Oregon), Titov *et al.* (*Symb. bot. upsal.* **34** no. 1: 455, 2004; Russia).

Chaenotheciella Räsänen (1943) ? = Chaenothecopsis fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Chaenothecomyces Cif. & Tomas. (1953) = Chaenotheca.

Chaenothecopsis Vain. (1927), Mycocaliciaceae. Anamorphs *Asterophoma*, *Catenomycopsis*, *Phialophora*-like. 62 (on lichens, other fungi or wood), Europe. See Schmidt (*Mitt. Inst. Allg. Botanik Hamburg* **13**: 111, 1970), Hawksworth (*TBMS* **74**: 650, 1980), Tibell (*Beih. Nova Hedwigia* **79**: 597, 1984), Tibell (*Symb. bot. upsal.* **27** no. 1, 1987; status, Austral. spp.), Tibell (*CJB* **69**: 2427, 1991; anamorphs), Tibell & Constantinescu (*MR* **95**: 556, 1991; anamorph), Tibell & Ryman (*Nova Hedwigia* **60**: 199, 1995; key 8 spp.), Rikkinen (*Bryologist* **102**: 366, 1999; resinicolous spp.), Rikkinen & Poinar (*MR* **104**: 7, 2000; fossil sp.), Rikkinen (*Mycol.* **95**: 1032, 2003; in amber), Rikkinen (*Mycol.* **95**: 98, 2003; on resin), Tibell & Vinuesa (*Taxon* **54**: 427, 2005; phylogeny), Geiser *et al.* (*Mycol.* **98**: 1053, 2006; phylogeny), Groner (*Lichenologist* **38**: 395, 2006; Switzerland).

Chaetalysis Peyronel (1922) = Acarosporium fide Sutton (*Mycol. Pap.* **141**, 1977).

Chaetantromycopsis H.P. Upadhyay, Cavalc. & A.A. Silva (1986), anamorphic *Pezizomycotina*, Hsy.0eP.15. 1, Brazil. See Upadhyay *et al.* (*Mycol.* **78**: 493, 1986).

Chaetapiospora Petr. (1947) = Pseudomassaria fide Barr (*Mycol.* **68**, 1976).

Chaetarthriomyces Thaxt. (1931), Laboulbeniaceae. 3, widespread. See Scheloske (*Parasitol. Schr. Reihe* **19**: 97, 1969), Majewski (*Acta Mycologica* Warszawa **34**: 7, 1999; Poland), Shen *et al.* (*Mycosystema* **22**: 157, 2003; China).

Chaetasbolisia Speg. (1918), anamorphic *Pezizomycotina*, Cpd.0eH.15. 7, widespread. See Patel *et al.* (*MR* **101**: 335, 1997; India).

Chaetaspis Syd. & P. Syd. (1917) = Rhagadolobium fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Chaetasterina Bubák (1909) = Chaetothyrium fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Chaetendophragmia Matsush. (1971), anamorphic *Pezizomycotina*, Hso.≡ eP.19. 5, widespread. See Matsushima (*Microfungi of the Solomon Islands and Papua-New Guinea*: 12, 1971), Carris (*MR* **99**: 667, 1995; synanamorph), Wu & Zhuang (*Fungal Diversity Res. Ser.* **15**, 2005).

Chaetendophragmiopsis B. Sutton & Hodges (1978), anamorphic *Pezizomycotina*, Hso.≡ eP.19. 2, pantropical. See Sutton & Hodges (*Nova Hedwigia* **29**: 596, 1978).

Chaethomites, see *Chaetomites*.

Chaetoamphisphaeria Hara (1918), Pezizomycotina. 1, Japan.

Chaetobasidiella Höhn. (1918) nom. dub., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Chaetobasis Clem. & Shear (1931) ≡ Chaetobasidiella.

Chaetoblastophorum Morgan-Jones (1977), anamorphic *Pezizomycotina*, Hso.0eH.1. 1, USA. See Morgan-Jones (*Mycotaxon* **5**: 484, 1977).

Chaetobotrys Clem. (1931) ≡ Kusanobotrys.

Chaetocalathus Singer (1943), Marasmiaceae. *c.* 20, widespread (predominantly subtropical). See Singer (*Lilloa* **8**: 441, 1942; monogr.), Singer (*Fl. Neotrop.* **17**: 53, 1976; key 6 neotrop. spp.).

Chaetocarpus P. Karst. (1889) [non *Chaetocarpus* Thwaites 1849) nom. cons., *Euphorbiaceae*] = Veluticeps fide Donk (*Persoonia* **3**: 199, 1964).

Chaetoceratostoma Turconi & Maffei (1912) = Scopinella fide Hawksworth (*TBMS* **64**: 447, 1975).

Chaetoceris Clem. & Shear (1931) ≡ Chaetoceratostoma.

Chaetochalara B. Sutton & Piroz. (1965) = Chalara fide Kirk *in* Kirk & Spooner (*Kew Bull.* **38**: 579, 1984).

Chaetocladiaceae A. Fisch. (1892) = Mucoraceae.
Lit.: Kirk (*in litt.*).

Chaetocladium Fresen. (1863), Mucoraceae. 2 (facultative parasites of *Mucorales*), widespread. See Benny & Benjamin (*Aliso* **8**: 391, 1976), Voigt & Wöstemeyer (*Gene* **270**: 113, 2001; phylogeny), Wöstemeyer & Schimek *in* Heitman *et al.* (Eds.) (*Sex in Fungi*: 431, 2007; trisporic acid & mating).

Chaetoconidium Zukal (1887), anamorphic *Pezizomycotina*, Hso.?.?. 1, Europe.

Chaetoconis Clem. (1909), anamorphic *Ceriospora*, Cpd.≡ eH.15. 2, widespread (north temperate). See Sutton (*CJB* **46**: 183, 1968), Punithalingham (*Nova Hedwigia* **40**: 99, 1984; appendages), Nag Raj (*Coelomycetous Anamorphs with Appendage-bearing Conidia*: 188, 1993).

Chaetocrea Syd. (1927), Tubeufiaceae. 1 (fungicolous), widespread (neotropics). See Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Chaetocypha Corda (1829) nom. dub., Fungi. See Donk (*Reinwardtia* **1**: 208, 1951).

Chaetocytostroma Petr. (1920), anamorphic *Pezizomycotina*, St.0eH.?. 1, Europe.

Chaetoderma Parmasto (1968), Stereaceae. 2, Europe. See Parmasto (*Consp. System. Corticiac.*: 86, 1968).

Chaetodermataceae Jülich (1982) = Stereaceae.

Chaetodermella Rauschert (1988), Gloeophyllaceae. 1, Europe. See Rauschert (*Haussknechtia* **4**: 52, 1988).

Chaetodimerina Hansf. (1946) = Rizalia fide Pirozynski (*Kew Bull.* **31**: 595, 1977).

Chaetodiplis Clem. (1931), anamorphic *Pezizomycotina*, Cpd.0eP.?. 1, Europe.

Chaetodiplodia P. Karst. (1884), anamorphic *Pezizomycotina*, Cpd.1eP.15. 9, widespread (esp. tropical). See Zambettakis (*BSMF* **70**: 219, 1954).

Chaetodiplodina Speg. (1910), anamorphic *Pezizomycotina*, Cpd.0eP.1. 2, S. America. See Petrak & Sydow (*Annls mycol.* **33**: 181, 1935).

Chaetodiscula Bubák & Kabát (1910) = Hymenopsis fide Sutton (*Mycol. Pap.* **141**, 1977).

Chaetodochis Clem. (1909) ? = Chaetostroma fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Chaetodochium Höhn. (1932) = Volutella fide Tulloch (*Mycol. Pap.* **130**, 1972).

Chaetolentomita Maubl. (1915) = Chaetosphaeria fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Chaetomastia (Sacc.) Berl. (1891), ? Dacampiaceae. 10, widespread. See Barr (*Mycotaxon* **34**: 507, 1989; key N. Am. spp.), Eriksson & Hawksworth (*SA* **8**: 64, 1989; posn), Barr (*Mycotaxon* **82**: 373, 2002; definition).

Chaetomelanops Petr. (1948) = Pyrenostigme fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Chaetomelasmia Danilova (1951) = Diachorella fide Sutton (*Mycol. Pap.* **141**, 1977).

Chaetomeliola (Cif.) Bat., H. Maia & M.L. Farr (1962) = Meliola fide Hughes (*in litt.*).

Chaetomella Fuckel (1870), anamorphic *Leotiomycetes*, Cpd.0eH.15. 5 (esp. in soil), widespread. See Sutton & Sarbhoy (*TBMS* **66**: 297, 1976), Vobis *et al.* (*Boln Soc. argent. Bot.* **28**: 205, 1992; Argentina), Rossman *et al.* (*Mycol. Progr.* **3**: 275, 2004; phylogeny).

Chaetomeris Clem. (1931) ≡ Treubiomyces.

Chaetomiaceae G. Winter (1885), Sordariales. 16 gen. (+ 8 syn.), 205 spp. The family appears to be paraphyletic.

Lit.: Udagawa *in* Kurato & Ueno (Eds) (*Toxigenic Fungi: their toxins and health hazard*: 139, 1984), Cannon (*TBMS* **87**: 45, 1986), von Arx *et al.* (*Beih. Nova Hedwigia* **84**: 162 pp., 1986), von Arx *et al.* (*Beih. Nova Hedwigia* **94**: 104 pp., 1988), von Arx *et al.* (*Beih. Nova Hedwigia* **94**, 1988), Domsch *et al.* (*Compendium of Soil Fungi and Supplement*: 406 pp., 1993), Mouchacca (*Cryptog. Mycol.* **18**: 19, 1997), Silva & Hanlin (*Mycoscience* **37**: 261, 1996), Lee & Hanlin (*Mycol.* **91**: 434, 1999; DNA), Stchigel *et al.* (*MR* **104**: 879, 2000), Untereiner *et al.* (*CJB* **79**: 321, 2001), Stchigel *et al.* (*MR* **106**: 975, 2002), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004), Lumbsch & Huhndorf (*MR* **111**: 1064, 2007).

Chaetomiales = Sordariales.

Chaetomidium (Zopf) Sacc. (1882), Chaetomiaceae. Anamorph *Phialophora*-like. 16 (mainly from soil or coprophilous), widespread. See von Arx (*Stud. Mycol.* **8**, 1975), von Arx (*Beih. Nova Hedwigia* **94**, 1988; keys), Silva & Hanlin (*Mycoscience* **37**: 261, 1997; key), Stchigel *et al.* (*Stud. Mycol.* **50**: 215, 2004).

Chaetomiopsis Mustafa & Abdul-Wahid (1990), Chaetomiaceae. 1 (from soil), Egypt. See Moustafa & Abdul-Wahid (*Mycol.* **82**: 129, 1990).

Chaetomiotricha Peyronel (1914) = Chaetomium fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Chaetomites Pampal. (1902), Fossil Fungi. 1 (Tertiary), Italy.

Chaetomium Kunze (1817), Chaetomiaceae. Anamorph *Botryotrichum*. 95 (coprophilous, on straw, wet paper, cloth, cotton fibres (esp. *C. globosum*) many cellulolytic, some thermophilic, some mycotoxic), widespread. See Hawksworth & Wells (*Mycol. Pap.* **134**, 1973; ornamentation terminal hairs), Millner *et al.* (*Mycol.* **69**: 720, 1977; ascospores SEM), Wicklow (*TBMS* **72**: 107, 1979; ecology and hair types), Udagawa *in* Kurato & Ueno (Eds) (*Toxigenic Fungi: their toxins and health hazard*: 139, 1984; toxins), Cannon (*TBMS* **87**: 50, 1986; key spp. with inconspicuous hairs), von Arx *et al.* (*Beih. Nova Hedwigia* **84**, 1986; keys), Guarro & Figueras (*Cryptog. Bot.* **1**: 97, 1989; ontogeny), Koyama (*Proc. Jap. Assoc. Mycotoxic.* **35**: 7, 1992; mycotoxins), Lee & Hanlin (*Mycol.* **91**: 434, 1999; DNA), Untereiner *et al.* (*CJB* **79**: 321, 2001; phylogeny), Hsieh & Hu (*Taiwania* **47**: 264, 2002; Taiwan), Barron *et al.* (*J. Clin. Microbiol.* **41**: 5302, 2003; mycosis), Sun *et al.* (*Mycosystema* **23**: 333, 2004; China), Sun *et al.* (*Mycosystema* **24**: 318, 2005; China), Wang & Zheng (*Nova Hedwigia* **81**: 247, 2005; China), Kubátová (*Czech Mycol.* **58**: 155, 2006; Czech Republic), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny), Chang & Wang (*Taiwania* **53**: 85, 2008; key Taiwan spp.).

Chaetomonodorus Bat. & H. Maia (1961) = Microtheliopsis fide Lücking *et al.* (*Lichenologist* **30**: 121, 1998).

Chaetomyces Thaxt. (1893), Laboulbeniaceae. 1, N. & S. America. See Nannfeldt (*Svensk bot. Tidskr.* **43**: 468, 1949).

Chaetonaemosphaera Schwarzman (1968) = Ceratocystis fide Sutton (*Mycol. Pap.* **141**, 1977).

Chaetonaevia Arx (1951), Dermateaceae. 3, Europe. See Dennis (*Kew Bull.* **52**: 451, 1997), Nauta & Spooner (*Mycologist* **13**: 65, 1999; UK).

Chaetonectrioides Matsush. (1996), Dothideomycetes. Anamorph *Mirandina*. 1, Malaysia. See Matsushima (*Matsush. Mycol. Mem.* **9**: 5, 1996).

Chaetopatella I. Hino & Katum. (1958) = Pseudolachnea Ranoj. fide Sutton (*Mycol. Pap.* **141**, 1977).

Chaetopeltaster Katum. (1975), anamorphic *Pezizomycotina*, Cpt.0eH.?. 1, Japan. See Katumoto (*Bulletin of the Faculty of Agriculture, Yamaguchi University* **26**: 98, 1975).

Chaetopeltiopsis Hara (1913) nom. dub., anamorphic *Pezizomycotina*. 1, Japan.

Chaetopeltis Sacc. (1898) [non *Chaetopeltis* Berthold 1878, *Algae*] ≡ Tassia.

Chaetopeltopsis Theiss. (1913) = Chaetothyrina fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Chaetophiophoma Speg. (1910), anamorphic *Pezizomycotina*, Cpd.0fH.1. 1, S. America.

Chaetophoma Cooke (1878), anamorphic *Pezizomycotina*, Cpd.0eH.15. 30, widespread. See Hughes (*Mycol.* **68**: 693, 1976).

Chaetophomella Speg. (1918) nom. conf., anamorphic

Pezizomycotina. See Sutton (*Mycol. Pap.* **141**, 1977).
Chaetophorites Pratje (1922), Fossil Fungi (mycel.) ? Fungi. 1 (Silurian, Jurassic, Tertiary), widespread.
Chaetoplaca Syd. & P. Syd. (1917), ? Schizothyriaceae. 1, Philippines.
Chaetoplea (Sacc.) Clem. (1931), Leptosphaeriaceae. Anamorph *Parahendersonia*. 17, widespread (esp. north temperate). See Barr (*Mem. N. Y. bot. Gdn* **62**: 1, 1992; key), Yuan & Barr (*Mycotaxon* **52**: 495, 1994), Eriksson & Hawksworth (*SA* **14**: 48, 1995; posn).
Chaetoporellaceae Jülich (1982) = Schizoporaceae.
Chaetoporellus Bondartsev & Singer (1944) nom. rej. = Hyphodontia fide Langer (*Biblthca Mycol.* **158**, 1994).
Chaetoporus P. Karst. (1890) = Junghuhnia fide Ryvarden (*Persoonia* **7**: 17, 1972).
Chaetopotius Bat. (1951) = Aithaloderma fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).
Chaetopreussia Locq.-Lin. (1977), Sporormiaceae. 1 (coprophilous), Sahara. See Locquin-Linard (*Revue Mycol.* Paris **41**: 185, 1977), Barr (*Mycotaxon* **76**: 105, 2000).
Chaetopsella Höhn. (1930) ≡ Chaetopsis fide Hughes (*TBMS* **34**: 551, 1951).
Chaetopsina Rambelli (1956), anamorphic *Cosmospora*, Hso.0eH.15. 14, widespread. See Kirk & Sutton (*TBMS* **85**: 709, 1985; key), Samuels (*Mycotaxon* **22**: 13, 1985; teleomorphs), Rambelli (*Micol. Ital.* **16**: 7, 1987; bibliogr.), Onofri & Zucconi (*Mycotaxon* **41**: 451, 1991; SEM *C. fulva*), Goh & Hyde (*MR* **101**: 1517, 1997), Okada *et al.* (*Mycoscience* **38**: 409, 1997; phylogeny).
Chaetopsis Grev. (1825), anamorphic *Pezizomycotina*, Hso.1eP.15. 7, widespread. See DiCosmo *et al.* (*Mycol.* **75**: 949, 1983; related genera).
Chaetopyrena Pass. (1881), anamorphic *Pezizomycotina*. 1 or 2, Europe.
Chaetopyrena Sacc. (1883) ≡ Chaetopyrenis.
Chaetopyrenis Clem. & Shear (1931) = Keissleriella fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).
Chaetosaccardinula Bat. (1962) = Strigopodia fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).
Chaetosartorya Subram. (1972), Trichocomaceae. Anamorph *Aspergillus*. 3, Costa Rica. See Subramanian & Rajendran (*Revue Mycol.* Paris **43**: 193, 1979; ontogeny), Kuraishi *et al.* (*NATO ASI Series A: Life Sciences* **185**: 407, 1990; ubiquinones), Chang *et al.* (*J. gen. appl. Microbiol.* Tokyo **37**: 289, 1991; DNA), Peterson (*Integration of Modern Taxonomic Methods for Penicillium and Aspergillus Classification*: 323, 2000; phylogeny), Tamura *et al.* (*Integration of Modern Taxonomic Methods for Penicillium and Aspergillus Classification*: 357, 2000; phylogeny).
Chaetosclerophoma Petr. (1924), anamorphic *Pezizomycotina*, St.0eH.?. 1, Europe.
Chaetoscorias W. Yamam. (1955) = Phragmocapnias fide Hughes (*Mycol.* **68**: 693, 1976).
Chaetoscutula E. Müll. (1959), Dothideomycetes. 1, France; Scotland. See Müller (*Sydowia* **12**: 190, 1958).
Chaetoscypha Syd. (1924) ? = Lachnum fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).
Chaetoseptoria Tehon (1937), anamorphic *Pezizomycotina*, Cpd.0fH.?. 1, N. America. See Sutton (*Mycol. Pap.* **97**, 1964).
Chaetosira Clem. (1931) ≡ Wiesneriomyces.
Chaetospermella Chardón & Toro (1934) ≡ Spermochaetella.
Chaetospermella Naumov (1929) = Chaetospermum fide Sutton (*Mycol. Pap.* **141**, 1977).
Chaetospermopsis Katum. & Y. Harada (1979) = Amphichaetella fide Katumoto & Harada (*TMSJ* **20**: 424, 1979), Alcorn (*Australas. Mycol.* **21**: 111, 2002).
Chaetospermum Sacc. (1892), anamorphic *Pezizomycotina*, St.0eH.1. 5, widespread. See Sutton (*The Coelomycetes*, 1980), Muntañola-Cvetkovic & Gómez-Bolea (*Mycotaxon* **47**: 59, 1993; Iberian peninsula).
Chaetosphaerella E. Müll. & C. Booth (1972), Chaetosphaerellaceae. Anamorphs *Oedemium*, *Veramycina*. 2 (from wood etc.), Europe. See Réblová (*Mycotaxon* **70**: 387, 1999), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004; phylogeny), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny).
Chaetosphaerellaceae Huhndorf, A.N. Mill. & F.A. Fernández (2004), Coronophorales. 5 gen. (+ 7 syn.), 8 spp.
Lit.: Réblová (*Mycotaxon* **70**: 387, 1999), Réblová (*Mycotaxon* **71**: 45, 1999), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004), Huhndorf *et al.* (*MR* **108**: 1384, 2004).
Chaetosphaeria Tul. & C. Tul. (1863), Chaetosphaeriaceae. Anamorphs very diverse, including *Cacumisporium*, *Catenularia*, *Chalara*-like, *Chloridium*, *Codinaea*, *Craspedodidymum*, *Cryptophiale*, *Cylindrotrichum*, *Dictyochaeta*, *Exserticlava*, *Fusichalara*, *Gonytrichum*, *Menispora*, *Phaeostalagmus*, *Phialophora*-like and *Zanclospora*. 68, widespread. See Booth (*Mycol. Pap.* **68**, 1957), Gams & Holubová-Jechová (*Stud. Mycol.* **13**, 1976), Barr & Crane (*CJB* **57**: 835, 1979; anamorph), Barr (*Mycotaxon* **39**: 43, 1990; posn), Réblová (*Stud. Mycol.* **45**: 149, 2000), Réblová & Gams (*Mycoscience* **41**: 129, 2000), Réblová & Winka (*Mycol.* **92**: 939, 2000; phylogeny), Huhndorf *et al.* (*Mycol.* **93**: 1072, 2001), Réblová & Seifert (*Sydowia* **55**: 313, 2003; Thailand), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004; phylogeny), Réblová (*Stud. Mycol.* **50**: 171, 2004; New Zealand), Fernández & Huhndorf (*Fungal Diversity* **18**: 15, 2005), Huhndorf & Fernández (*Fungal Diversity* **19**: 23, 2005; anamorph connexions), Fernández *et al.* (*Mycol.* **98**: 121, 2006; morphology, phylogeny), Réblová *et al.* (*MR* **110**: 104, 2006; *Menispora* anam.), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny), Atkinson *et al.* (*N.Z. Jl Bot.* **45**: 685, 2007; New Zealand).
Chaetosphaeriaceae Réblová, M.E. Barr & Samuels (1999), Chaetosphaeriales. 28 gen. (+ 33 syn.), 306 spp.
Lit.: Gams & Holubová-Jechová (*Stud. Mycol.* **13**, 1976), Barr (*Mycotaxon* **39**: 43, 1990), Kuthubutheen & Nawawi (*MR* **95**: 1224, 1991), Réblová (*Czech Mycol.* **50**: 73, 1997), Samuels *et al.* (*Mycol.* **89**: 156, 1997), Hyde *et al.* (*MR* **103**: 1432, 1999), Réblová (*Sydowia* **51**: 210, 1999), Réblová (*Mycotaxon* **71**: 45, 1999), Réblová *et al.* (*Sydowia* **51**: 49, 1999), Gams (*Stud. Chaetosphaeriales Huhndorf, A.N. Mill. & F.A.

Fernández (2004). Sordariomycetidae. 1 fam., 31 gen., 311 spp. Fam.:
Chaetosphaeriaceae
For *Lit.* see under fam.
Chaetosphaerides Matsush. (2003), ? Trichosphaeriales. 1, Japan. See Matsushima (*Matsush. Mycol. Mem.* **10**: 146, 2001), Réblová (*in litt.*, 2008).
Chaetosphaerites Félix (1894), Fossil Fungi. 3 (Carboniferous, Tertiary), widespread.
Chaetosphaeronema Moesz (1915), anamorphic *Pezizomycotina*, Cpd.1eH.15. 3, widespread. See Punithalingam & Spooner (*Kew Bull.* **57**: 534, 2002; UK).
Chaetosphaeropsis Curzi & Barbaini (1927) = Coniothyriopsis Speg. fide Clements & Shear (*Gen. Fung.*, 1931), Sutton (*Mycol. Pap.* **141**, 1977).
Chaetosphaerulina I. Hino (1938), Tubeufiaceae. Anamorph *Xenosporium*. 5, S. & S.E. Asia. See Sivanesan (*TBMS* **81**: 325, 1983; key, as *Thaxteriellopsis*), Rossman (*Mycol. Pap.* **157**, 1987; synonym of *Herpotrichia*), Crane *et al.* (*CJB* **76**: 602, 1998).
Chaetospora Faurel & Schotter (1965) [non *Chaetospora* R. Br. 1918, *Cyperaceae*] = Neochaetospora fide Sutton & Sankaran (*MR* **95**: 1021, 1991).
Chaetosporium Corda (1833) nom. dub., Fungi. See Saccardo (*Syll. fung.* **4**: 761, 1886).
Chaetosticta Petr. & Syd. (1925), anamorphic *Lasiostemma*, Cpd.≡ eH.15. 3, N. America; Japan. See Crane (*CJB* **49**: 31, 1971), Matsushima (*Matsush. Mycol. Mem.* **10**, 2001).
Chaetostigme Syd. & P. Syd. (1917) = Wentiomyces fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).
Chaetostigmella Syd. & P. Syd. (1917) = Phaeodimeriella Speg. fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).
Chaetostroma Corda (1829) nom. conf., nom. dub., anamorphic *Pezizomycotina*, Hsp.?.?. 10, widespread. See Tulloch (*Mycol. Pap.* **130**, 1972), Holubová-Jechová (*Sydowia* **46**: 238, 1994).
Chaetostromella P. Karst. (1895) nom. conf., anamorphic *Pezizomycotina*. See Petrak (*Sydowia* **7**: 299, 1953).
Chaetostylum Tiegh. & G. Le Monn. (1873) = Helicostylum fide Lythgoe (*TBMS* **41**: 135, 1958), Upadhyay (*Mycol.* **65**: 735, 1973).
Chaetotheca Zukal (1890), ? Trichocomaceae. 1, Europe.
Chaetothiersia B.A. Perry & Pfister (2008), Pyronemataceae. 1, USA. See Perry & Pfister (*Fungal Diversity* **28**: 65, 2008).
Chaetothyriaceae Hansf. ex M.E. Barr (1979), Chaetothyriales. 13 gen. (+ 27 syn.), 98 spp.
Lit.: Batista & Ciferri (*Sydowia* Beih. **3**, 1962), Eriksson & Yue (*Mycotaxon* **22**: 269, 1985), Pohlad (*Mycol.* **80**: 757, 1988), Constantinescu *et al.* (*Stud. Mycol.* **31**: 69, 1989), Panwar & Jagtap (*Geobios* New Rep. **9**: 121, 1990), Winka *et al.* (*Mycol.* **90**: 822, 1998), Haase *et al.* (*Stud. Mycol.* **43**: 80, 1999), Cannon (*IMI Descr. Fungi Bact.* **141**: [22] pp., 1999).
Chaetothyriales M.E. Barr (1987). Chaetothyriomycetidae. 3 fam., 37 gen., 213 spp. Mycelium varied, if external with narrow cylindrical brown hyphae, sometimes with setose appendages. Ascomata erumpent or superficial, sometimes formed beneath a subiculum, spherical or flattened, sometimes setose, often collapsing when dry, the apex ± papillate, with a well-developed periphysate ostiole; peridium thin-walled, composed of compressed pseudoparenchymatous cells, varied in pigmentation; hymenium usually J+; interascal tissue of short apical periphysoids. Asci saccate to clavate, fissitunicate, the inner wall layer often conspicuously thickened in the apical region, sometimes polysporous; ascospores hyaline or pale greyish, transversely septate or muriform. Anamorphs hyphomycetous, sometimes yeast-like (black yeasts, see yeasts). Epiphytic or biotrophic on leaves or saprobic on plants or other fungi, cosmop. Fams.:
(1) **Chaetothyriaceae**
(2) **Coccodiniaceae**
(3) **Herpotrichiellaceae**
For *Lit.* see under fam.
Chaetothyrina Theiss. (1913), Micropeltidaceae. 7, widespread (tropical). *C. musarum* (sooty blotch of banana). See Bitancourt (*Arq. Inst. biol., S. Paulo* **7**: 5, 1936), Panwar *et al.* (*Geobios* New Rep. **10**: 41, 1991), Reynolds & Gilbert (*Aust. Syst. Bot.* **18**: 265, 2005; key).
Chaetothyriolum Speg. (1919) nom. dub., anamorphic *Pezizomycotina*. See Santesson (*Symb. bot. upsal.* **12** no. 1: 1, 1952).
Chaetothyriomycetes O.E. Erikss. & Winka (1997) = Eurotiomycetes. See *Chaetothyriomycetidae*
For *Lit.* see ord. and fam.
Chaetothyriomycetidae Doweld (2001), Eurotiomycetes. Ascomata perithecial, superficial or immersed within a thallus. Asci usually thick-walled and fissitunicate, rarely evanescent, sometimes accompanied by pseudoparaphyses. Ascospores variable in pigmentation and septation. Lichenized, parasitic (esp. on other fungi) or saprobic.
The number of families contained within this subclass continues to increase based on new molecular data. Ord.:
(1) **Chaetothyriales**
(2) **Pyrenulales**
(3) **Verrucariales**
Lit.: Geiser *et al.* (*Mycol.* **98**: 1051, 2006; phylogeny), Liu *et al.* (*Mol. Biol. Evol.* **16**: 1799, 1999; RNA polymerase phylogeny), Sterflinger *et al.* (*Stud. Chardoniella F. Kern (1939), Pucciniosiraceae. 4 (on *Compositae* (0, III)), S. America. See Buriticá & Hennen (*Fl. Neotrop.* **24**: 39, 1980), Pardo-Cardona (*Caldasia* **25**: 283, 2003).

Charomyces Seifert (1987), anamorphic *Pezizomycotina*, Hso.0eP.40. 2, Hawaii; Cuba. See Seifert (*CJB* **65**: 230, 1987).

Charonectria Sacc. (1880), Hyponectriaceae. 5 (from dead leaves or lichenicolous), widespread (temperate). See Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999), Wang & Hyde (*Fungal Diversity* **3**: 159,

1999).

Charrinia Viala & Ravaz (1894) nom. dub., Fungi. See Müller (*SA* **6**: 121, 1987).

chartaceous, paper-like.

chasmothecium, a closed fruitbody having no predefined opening but with the asci arranged in a single basal fascicle, e.g. an ascoma of *Erysiphe* (Braun *et al. in* Belanger *et al.* (Eds). *The Powdery Mildews: A comprehensive Tretise*, 2000). cf. cleistothecium.

Chaudhuria Zahlbr. (1932) = Heterodermia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Chaunopycnis W. Gams (1979), anamorphic *Ophiocordycipitaceae*, Hsp/St.0eH.15. 3 (from soil), widespread. See Gams (*Persoonia* **11**: 75, 1980), Möller *et al.* (*MR* **99**: 681, 1995; population biology), Möller *et al.* (*J. Industr. Microbiol. Biotechnol.* **17**: 359, 1996; chemistry), Bills *et al.* (*Mycol. Progr.* **1**: 3, 2002; phylogeny, chemistry), Matsushima (*Matsush. Mycol. Mem.* **10**, 2001).

Cheese. Fungi are used in the manufacture of many cheeses, some of which have characteristic spp., e.g. camembert (*Penicillium camemberti*), roquefort and other blue cheeses (*P. roqueforti*). See Babel (*Econ. Bot.* **7**: 27, 1953), Marth (*in* Reed, *Prescott & Dunn's Industrial microbiology*, edn 4: 65, 1982), Thom (*Bull. Bur. Anim. Ind. USDA* **82**, 1906); blue cheeses. Fungi known to produce mycotoxins have been detected in some cheeses (Moubasher *et al.*, *Mycopathologia* **66**: 187, 1979).

Cheilaria Lib. (1830), anamorphic *Pezizomycotina*, St.≡ eH.15. 1, widespread. See Sutton (*The Coelomycetes*, 1980).

Cheilariopsis Petr. (1959) ≡ Apomelasmia.

cheilocystidium, see cystidium.

Cheilodonta Boud. (1885) = Orbilia fide Baral (*SA* **13**, 1994).

Cheilophlebium Opiz & Gintl (1856) nom. dub., ? Agaricales. See Donk (*Beih. Nova Hedwigia* **5**: 50, 1962).

Cheilymenia Boud. (1885), Pyronemataceae. 66, widespread (esp. temperate). See Denison (*Mycol.* **56**: 718, 1964; key), Moravec (*Česká Mykol.* **22**: 32, 1968), Moravec (*Česká Mykol.* **38**: 146, 1984), Moravec (*Mycotaxon* **36**: 169, 1989), Wu & Kimbrough (*Bot. Gaz.* **152**: 421, 1992; ascospores), Moravec (*Czech Mycol.* **47**: 7, 1993), Landvik *et al.* (*Nordic Jl Bot.* **17**: 403, 1997; DNA), Moravec (*Czech Mycol.* **50**: 189, 1998), Prokhorov (*Mikol. Fitopatol.* **32**: 14, 1998; key), Moravec (*Czech Mycol.* **55**: 215, 2003; revn), Moravec (*Czech Mycol.* **54**: 135, 2003; revn), Moravec (*Czech Mycol.* **54**: 113, 2003; revn), Hansen & Pfister (*Mycol.* **98**: 1029, 2006; phylogeny), Moravec (*Czech Mycol.* **58**: 149, 2006; anatomy), Perry *et al.* (*MR* **111**: 549, 2007; phylogeny).

Cheimonophyllum Singer (1955), Cyphellaceae. 3, widespread. See Singer (*Sydowia* **9**: 417, 1955).

Cheiroconium Höhn. (1910) = Sirothecium fide Hughes (*CJB* **36**: 727, 1958), Sutton (*Proc. Indian Acad. Sci.* Pl. Sci. **94**: 229, 1985).

cheiroid, see chiroid.

Cheiromoniliophora Tzean & J.L. Chen (1990), anamorphic *Pleosporales*, Hso.#eP.10. 1, widespread. See Tzean & Chen (*MR* **94**: 424, 1990), Castañeda Ruíz *et al.* (*Mycotaxon* **61**: 319, 1997), Ho *et al.* (*Mycol.* **92**: 582, 2000; Hong Kong), Belomesyatseva (*Nov. sist. Niz. Rast.* **35**: 55, 2001; Belorus), Tsui *et al.* (*Fungal Diversity* **21**: 157, 2006; phylogeny), Cai *et al.* (*Persoonia* **20**: 53, 2008; phylogeny).

Cheiromycella Höhn. (1910), anamorphic *Hyaloscypha*, Hsp.1bH.?. 2, Europe; Japan. See Sutton (*Proc. Indian Acad. Sci.* Pl. Sci. **94**: 229, 1985; disposition of names), Kendrick (*CJB* **81**: 75, 2003; morphogenesis).

Cheiromyceopsis Mercado & J. Mena (1988), anamorphic *Pezizomycotina*, Hsp.0bP.1. 1, Cuba. See Mercado & Mena (*Acta Bot. Cubana* **53**: 2, 1988), Delgado-Rodríguez *et al.* (*Cryptog. Mycol.* **23**: 277, 2002), Mercado Sierra *et al.* (*Mycol.* **95**: 860, 2003).

Cheiromyces Berk. & M.A. Curtis (1857), anamorphic *Pezizomycotina*, Hsp.0bP.1. 5, widespread. See Sutton (*Proc. Indian Acad. Sci.* Pl. Sci. **94**: 229, 1985; disposition of names), Ho *et al.* (*Mycol.* **92**: 582, 2000; Hong Kong), Kendrick (*CJB* **81**: 75, 2003; morphogenesis), Promputtha *et al.* (*Nova Hedwigia* **80**: 527, 2005; Thailand).

Cheiromycina B. Sutton (1986), anamorphic *Pezizomycotina*, Hsp.0bP.1 (L). 1, Sweden. See Sutton (*Nordic Jl Bot.* **6**: 831, 1986), Aptroot & Schiefelbein (*MR* **107**: 104, 2003; key), Egorova & Mel'nik (*Mikol. Fitopatol.* **38**: 23, 2004; Russia), Earland-Bennett & Hawksworth (*Lichenologist* **37**: 191, 2005; status), Wang & Zheng (*Nova Hedwigia* **81**: 247, 2005; Austria), Printzen (*Nova Hedwigia* **84**: 261, 2007; key).

Cheiropodium Syd. & P. Syd. (1915) = Clasterosporium fide Ellis (*Dematiaceous Hyphomycetes*, 1971).

Cheiropolyschema Matsush. (1980), anamorphic *Pezizomycotina*, Hso.0bP.28. 1, Taiwan. See Matsushima (*Matsush. Mycol. Mem.* **1**: 15, 1980).

Cheirospora Moug. & Fr. (1825), anamorphic *Pezizomycotina*, Cac.0bP.1. 1, widespread. See Ono & Kobayashi (*Mycoscience* **46**: 352, 2005; Japan).

Cheirosporium L. Cai & K.D. Hyde (2008), anamorphic *Pleosporales*, Hsp.0bP.1. 1, China. See Cai *et al.* (*Persoonia* **20**: 53, 2008; descr.).

Chelisporium Speg. (1910) = Sirothecium fide Sutton (*Proc. Indian Acad. Sci.* Pl. Sci. **94**: 229, 1985).

chemical race, a group of chemically differentiated individuals or populations and not of any particular taxonomic rank (i.e. a chemical race may be a species, var., or chemotype); **- strain**, used as an infraspecific taxonomic rank in lichenized taxa distinguished only by chemical characters (Lamb, *Nature* **168**: 38, 1951).

chemosyndrome, a biogenetically meaningful set of major and minor natural metabolic products produced by a species (Culberson & Culberson, *Syst. Bot.* **1**: 325, 1977).

chemotaxis, a taxis (q.v.) in response to a chemical stimulus. Gooday (*in* Carlile (Ed.), *Primitive sensory and communication systems*, 155, 1975; chemotaxis in fungi), Bonner (*Mycol.* **69**: 443, 1977; in cellular slime moulds).

Chemotaxonomy (biochemical systematics; chemical fungal taxonomy), taxonomy using chemical characteristics, in a broad sense including both primary and secondary metabolites and physiological/chemical tests. Frisvad *et al.* (*MR* **112**: 231, 2008) noted the mycologists and bacteriologists define the term differently. Mycologists limit the term to carbohydrate or lipid-based taxonomy whereas for bacteriologists the term also encompasses the amino acid and nucleic acid complement of the organism. As a result, in mycology, chemotaxonomy declined in importance with the advent of molecular taxonomy (based

on PCR technology & DNA sequence analysis), although there have been recent developments (e.g. Frisvad *et al.*, *MR* **112**: 231, 2008; Bitzer *et al.*, *MR* **112**: 251, 2008) which may be enhanced further with developments in metabolomics (see Genomics). Ubiquinone and fatty acid profiles are still used widely in yeast taxonomy (see Barnett *et al.*, *Yeasts: Characteristics and identification* Edn 3, 2000: 18; Deák, *Handbook of food spoilage yeasts*, 2008: 211).

Lit.: **Non-lichen-forming fungi**: Botha & Kock (*Int. J. Food Microbiol.* **19**: 39, 1993; fatty acid profiles, yeasts), Frisvad (*Chemom. Intell. Lab. Syst.* **14**: 253, 1992; secondary metabolites, chemometrics), Frisvad, *in* Hawksworth (Ed.) (*Identification and characterization of pest organisms*: 303, 1994), Frisvad *et al.* (Eds) (*Chemical fungal taxonomy*. 1998; secondary metabolites review, survey), Gómez-Miranda *et al.* (*Exp. Mycol.* **12**: 258, 1988; cell wall composition), Klich & Mullaney (*in* Arora *et al.*, *Handbook of Applied Mycology* **4**: 35, 1992; DNA methods), Meixner (*Chemische Farbreaktionen von Pilzen*, 1975; asco- and basidiomycetes), Micales *et al.* (*in* Arora *et al.*, *Handbook of Applied Mycology* **4**: 57, isozyme analysis), Murray (*J. gen. Microbiol.* **52**: 213, 1968; biochemical tests, pathogenic fungi), Paterson (*in* Frisvad *et al.*, 1998; unsaponifiable lipids review); Rast & Pfyffer (*Bot. J. Linn. Soc.* **99**: 1989; polyols), Rosendahl & Banke (*in*Frisvad *et al.*, 1998; isozyme analysis), Tyrrell (*Bot. Rev.* **35**: 305, 1969; review), Vogel (*Am. Naturalist* **48**: 435, 1964; evolutionary implications of lysine pathways).

Lichens: Culberson & Elix (*Meth. Plant Biochem.* **1**: 509, 1993; review), Feige & Lumbsch (Eds) (*Bibl. Lich.* **53**, 1993; review), Hawksworth (*in* Brown *et al.* (Eds), 1976: 139; review, bibliogr., use), Lumbsch (*in*Frisvad *et al.*, 1998; review), Rogers (*Bot. J. Linn. Soc.* **101**: 229, 1989; chemistry and species concept). See also Metabolic products, Phylogeny.

chemotropism, see tropism.

chemotype, a group of chemically differentiated individuals of a species of unknown or of no taxonomic significance.

Chermomyces Brain (1923) nom. dub., ? Dothideomycetes. See Batra *in* Subramanian (Ed.) (*Taxonomy of fungi* **1**: 187, 1978; applied to yeast-like cells in insect mycetomas).

Cheshunt compound, Copper sulphate ($CuSO_4$) 2 parts, ammonium carbonate ($(NH_4)_2CO_3$) 11 parts; used (at least 24 hr after mixing) at the rate of 56.7 g per 4.5 l of water as a soil disinfectant against damping-off.

chestnut blight, *Cryphonectria parasitica* (syn. *Endothia parasitica*). See Anagnostakis (*Mycol.* **79**: 23, 1987).

Chevalieria G. Arnaud (1920) [non *Chevalieria* Gaudich. ex Beer 1857, *Bromeliaceae*] ≡ Chevalieropsis.

Chevalieropsis G. Arnaud (1923), Parodiopsidaceae. Anamorph *Septoidium*. 1, Africa. See Petrak (*Sydowia* **5**: 346, 1951).

Chiajaea (Sacc.) Höhn. (1920) = Hypomyces fide Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

chiastobasidium, see basidium.

Chiastospora Riess (1852), anamorphic *Pezizomycotina*, Cac.1bH.?. 1, Europe. See Sutton (*Mycol. Pap.* **141**, 1977).

Chiastosporum Dughi (1956) nom. inval. = Collema F.H. Wigg. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Chikaneea B. Sutton (1973), anamorphic *Pezizomycotina*, Hso.≡ eH.10. 1, Canada. See Sutton (*Mycol. Pap.* **132**: 29, 1973), Sinclair *et al.* (*Mycotaxon* **64**: 365, 1997), Marvanová *et al.* (*Nova Hedwigia* **75**: 255, 2002).

Chilemyces Speg. (1910) = Dimerina fide Petrak & Sydow (*Annls mycol.* **32**: 1, 1934).

Chiliospora A. Massal. (1860) = Biatoridium fide Hafellner (*Acta Bot. Fenn.* **150**: 39, 1994), Jørgensen (*Taxon* **53**: 521, 2004; nomencl.).

Chiloella Syd. (1928) = Glomerella fide von Arx & Müller (*Beitr. Kryptfl. Schweiz* **11** no. 1, 1954).

Chilonectria Sacc. (1878) = Nectria fide Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Chimaeroscypha Raitv. (2004), Hyaloscyphaceae. 1, Tadzhikistan. See Raitviir (*Scripta Mycologica* Tartu **20**: 19, 2004).

chimeroid (of lichen thalli), see Lichens, Phycotype.

Chinese cheese, see sufu.

Chinese mushroom, see straw mushroom.

Chinese rice, see starters.

Chiodecton Ach. (1814), Roccellaceae (L). 24, widespread (esp. tropical). See Tehler (*CJB* **68**: 2458, 1990; cladistics), Thor (*Op. Bot.* **103**, 1990; monogr., key), Henssen & Thor (*Nordic Jl Bot.* **18**: 95, 1998; ontogeny), Cáceres *et al.* (*Lichenologist* **33**: 503, 2001), Thor (*J. Jap. Bot.* **77**: 47, 2002; Japan, Taiwan), Thor (*Biblthca Lichenol.* **95**: 543, 2007; Malaysia).

Chiodectonaceae Zahlbr. (1905) = Roccellaceae.

Chiodectonomyces Cif. & Tomas. (1953) ≡ Enterographa.

Chiographa Leight. (1854) = Phaeographis fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Chionaster Wille (1903) nom. dub., Algae. Based on an alga having no chlorophyll.

Chionomyces Deighton & Piroz. (1972), anamorphic *Pezizomycotina*, Hso.≡ eH.10. 4 (on *Meliolaceae*), widespread (tropical). See Deighton & Pirozynski (*Mycol. Pap.* **128**: 74, 1972).

chionophilous, having a preference for growing nearby snow.

Chionosphaera D.E. Cox (1976), Chionosphaeraceae. 4, N. America; Europe. See Kirschner (*MR* **105**: 1403, 2001; new sp. associated with conifer inhabiting bark beetles).

Chionosphaeraceae Oberw. & Bandoni (1982), Agaricostilbales. 4 gen., 18 spp.

Lit.: Oberwinkler & Bandoni (*CJB* **60**: 1726, 1982), Oberwinkler & Bauer (*Sydowia* **41**: 224, 1989), Seifert *et al.* (*Boln Soc. argent. Bot.* **28**: 215, 1992), Diederich (*Biblthca Lichenol.* **61**: 198 pp., 1996), Boekhout *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 627, 1998), Kwon-Chung *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 643, 1998), Fell *et al.* (*Int. J. Syst. Evol. Microbiol.* **50**: 1351, 2000; mol. phylogeny), Scorzetti *et al.* (*FEMS Yeast Res.* **2**: 495, 2002), Bauer *et al.* (*Mycol. Progr.* **5**: 41, 2006).

Chionyphe Thienem. (1839) = Mucor Fresen. fide Hesseltine (*Mycol.* **47**: 344, 1955).

chiroid (cheiroid), shaped like a hand with the fingers together and not divergent, e.g. the conidia of *Cheiromyces*; cf. digitate, palmate.

Chithramia Nag Raj (1988), anamorphic *Pezizomycotina*, St.1eP.1. 1, India. See Nag Raj (*CJB* **66**: 903, 1988).

chitinoclastic, chitin decomposing.

Chitinonectria M. Morelet (1968) = Neonectria fide Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Chitinozoa, fossil chitinous organisms of uncertain affinity found in the Upper Precambian to the Devonian.

Chitonia (Fr.) P. Karst. (1879) [non *Chitonia* D. Don 1823, *Melastomataceae*] ≡ Clarkeinda.

Chitoniella Henn. (1898) ≡ Clarkeinda fide Singer (*Agaric. mod. Tax.*, 1951).

Chitonis Clem. (1909) ≡ Chitonia.

Chitonomyces Peyr. (1873), Laboulbeniaceae. 98, widespread. See Sugiyama (*TMSJ* **18**: 155, 1977; Japanese spp.), Sugiyama & Nagasawa (*TMSJ* **26**: 3, 1985; Borneo), Santamaria (*Nova Hedwigia* **73**: 339, 2001; Spain).

Chitonospora E. Bommer, M. Rousseau & Sacc. (1891), Xylariales. 1 (from dead grasses), Europe. See Eriksson (*Svensk bot. Tidskr.* **60**: 320, 1966), Kang *et al.* (*Fungal Diversity* **2**: 135, 1999; posn).

chitosan, a partially deacetylated form of chitin characteristic of zygomycetes; **chitases**, enzymes (EC 3.2.1.99) from fungi and bacteria able to hydrolyse chitosan (Monaghan *et al.*, *Nature* (*New Biol.*) **245**: 78, 1973).

chitosome, a small spheroidal structure (40-70 nm diam.), containing chitin synthetase zymogen, found in many fungi (Bracker *et al.*, *Proc. Nat. Acad. Sci. USA* **73**: 4570, 1976).

Chlamydoabsidia Hesselt. & J.J. Ellis (1966), Cunninghamellaceae. 1, India; USA. See Hesseltine & Ellis (*Mycol.* **58**: 761, 1966), Behera & Mukerji (*Norw. Jl Bot.* **21**: 1, 1974), Braun (*Int. J. Mycol. Lichenol.* **3**: 271, 1988).

Chlamydoaleurosporia Grigoraki (1924) = Trichophyton fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

chlamydocyst, a two-walled resting zoosporangium of *Blastocladiaceae* within a hypha.

Chlamydomucor Bref. (1889) = Mucor Fresen. fide Hesseltine (*Mycol.* **47**: 344, 1955) See, Ellis *et al.* (*Mycol.* **68**: 131, 1976).

Chlamydomyces Bainier (1907), anamorphic *Pezizomycotina*, Hso.1eP.1. 2, widespread. See Mason (*Mycol. Pap.* **2**: 37, 1928), Claudia (*Mycotaxon* **27**: 255, 1986), Hambleton *et al.* (*Stud. Mycol.* **53**: 29, 2005; key).

Chlamydopsis Hol.-Jech. & R.F. Castañeda (1986), anamorphic *Pezizomycotina*, Hso.#bP.1/3. 1, Cuba. See Holubová-Jechová & Castañeda (*Česká Mykol.* **40**: 74, 1986).

Chlamydopus Speg. (1898), Agaricaceae. 1, widespread (desert areas). See Long & Stouffer (*Mycol.* **38**: 619, 1947), Lunghini (*Bollettino dell'Associazione Micologica ed Ecologica Romana* **17**: 22, 2001).

Chlamydorubra K.B. Deshp. & K.S. Deshp. (1966), anamorphic *Pezizomycotina*, Hso.0eP.?. 1, India. See Deshpande & Deshpande (*Mycopath. Mycol. appl.* **29**: 272, 1966).

Chlamydosauromyces Sigler, Hambl. & Paré (2002), Onygenaceae. 1 (from lizard skin), USA. See Sigler *et al.* (*Stud. Mycol.* **47**: 127, 2002).

chlamydospore, an asexual 1-celled spore (primarily for perennation, not dissemination) originating endogenously and singly within part of a pre-existing cell, by the contraction of the protoplast and possessing an inner secondary and often thickened hyaline or brown wall, usually impregnated with hydrophobic material. Originally proposed by de Bary in 1859 for *Asterophora* anamorphs. See Griffiths (*Nova Hedw.* **25**: 503, 1974; origin, structure, function), Hughes (*in* Arai (Ed.), *Filamentous microorganisms*: 1, 1985; definition, occurrence).

Chlamydosporites Paradkar (1975), Fossil Fungi ? Ustilaginales. 1 (Cretaceous), India.

Chlamydosporium Peyronel (1913) = Phoma Sacc. fide Mouchacca & Sutton (*Cryptog. Mycol.* **12**: 251, 1991).

Chlamydotomus Trevis. (1879) nom. dub., ? Algae.

Chlamydozyma Wick. (1964) = Metschnikowia fide Pitt & Miller (*Mycol.* **60**: 663, 1968).

Chlamydozymaceae Wick. (1964) = Metschnikowiaceae.

Chlorangium Link (1849) nom. rej. = Aspicilia fide Laundon & Hawksworth (*Taxon* **37**: 478, 1988; nomencl.), Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Chlorangium Rabenh. (1857) nom. dub., Lecanorales.

Chlorea Nyl. (1855) nom. rej. = Letharia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995), Obermayer (*Progr. Probl. Lichenol. Nineties. Proc. Third Symp. Intern. Assoc. Lichenol.* [*Biblthca Lichenol.* **68**]: 45, 1997).

Chlorencoelia J.R. Dixon (1975), Hemiphacidiaceae. 3, widespread (north temperate). See Zhuang (*Mycotaxon* **31**: 261, 1988), Zhuang *et al.* (*Mycosystema* **19**: 478, 2000; phylogeny), Wang *et al.* (*Mycol.* **98**: 1065, 2006; phylogeny), Wang *et al.* (*Mol. Phylogen. Evol.* **41**: 295, 2006; phylogeny).

Chloridiaceae Nann. (1934) = Chaetosphaeriaceae.

Chloridiella Arnaud (1953) nom. nud. = Idriella fide Nicot & Charpentié (*BSMF* **87**: 621, 1972).

Chloridium Link (1809), anamorphic *Chaetosphaeria*, Hso.0eH.15/18. *c.* 27, widespread. See Gams & Holubová-Jechová (*Stud. Mycol.* **13**, 1976), Wang & Wilcox (*Mycol.* **77**: 951, 1985), Morgan-Jones & Goos (*Mycol.* **84**: 921, 1992; nomencl.), Réblová (*Stud. Mycol.* **45**: 149, 2000; review), Réblová & Gams (*Mycoscience* **41**: 129, 2000), Réblová & Winka (*Mycol.* **92**: 939, 2000; phylogeny), Fernández *et al.* (*Mycol.* **98**: 121, 2006; phylogeny).

Chlorocaulum Clem. (1909) = Stereocaulon Hoffm. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Chlorociboria Seaver ex C.S. Ramamurthi, Korf & L.R. Batra (1958) nom. cons., ? Helotiales. Anamorph *Dothiorina*. 17, widespread. See Tunbridge Ware. See Korf (*Mycol.* **51**: 298, 1951; status), Dixon (*Mycotaxon* **1**: 193, 1975; key), Holst-Jensen *et al.* (*Mycol.* **89**: 885, 1997; DNA), Johnston & Park (*N.Z. Jl Bot.* **43**: 679, 2005; New Zealand), Wang *et al.* (*Mol. Phylogen. Evol.* **41**: 295, 2006; phylogeny), Wang *et al.* (*Mycol.* **98**: 1065, 2006; phylogeny).

Chlorocyphella Speg. (1909) = Pyrenotrichum fide Santesson (*Symb. bot. upsal.* **12** no. 1: 1, 1952), Gams (*Taxon* **54**: 520, 2005; nomencl.).

Chlorodictyon J. Agardh (1870) = Ramalina fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Chlorodothis Clem. (1909) = Tomasellia fide Harris (*in litt.*).

Chlorogaster Laessøe & Jalink (2004), Sclerodermataceae. 1, Sabah. See Læssøe & Jalink (*Persoonia* **18**: 421, 2004).

Chlorolepiota Sathe & S.D. Deshp. (1979), Agaricaceae. 1, India. See Sathe & Deshpande (*Curr. Sci.* **48**:

693, 1979).

Chloroneuron Murrill (1911) = Gomphus Pers. fide Petersen (*The genera Gomphus and Gloeocantharellus in North America*, 1972).

Chloropeltigera (Gyeln.) Gyeln. (1934) nom. inval. = Peltigera fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Chloropeltis Clem. (1909) = Peltigera fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

chlorophycophilous (of fungi), lichenized with a green photobiont (Pike & Carroll, *in* Alexopoulos & Mims, *Introductory mycology*, edn 3, 1980).

Chlorophyllum Massee (1898), Agaricaceae. 16, widespread (esp. tropical). Recognition would make *Macrolepiota* non-monophylletic; conservation over *Chlorophyllum* has not yet been proposed. See Heinemann (*Rev. Mycol. nat. Belg.* **31**: 317, 1966; *C. molybdites*, poisonous), Heinemann (*Bull. Jard. bot. nat. Belg.* **38**: 195, 1968), Sundberg (*Madroño* **21**: 15, 1971), Johnson & Vilgalys (*Mycol.* **90**: 971, 1998), Sarasini & Contu (*Rivista di Micologia* **44**: 247, 2001; as *Endoptychum*, Italy), Vellinga (*Mycotaxon* **83**: 415, 2002), Vellinga (*Mycotaxon* **85**: 259, 2003; *Chlorophyllum rachodes* and allies), Hausknecht & Pidlich-Aigner (*Öst. Z. Pilzk.* **13**: 1, 2004; Austria), Vellinga (*MR* **108**: 354, 2004; phylogeny), Ge & Yang (*Mycotaxon* **96**: 181, 2006; China).

Chlorophyllum Murrill (1910) = Gomphus Pers. fide Petersen (*The genera Gomphus and Gloeocantharellus in North America*, 1972).

chloroplast endoplasmic reticulum (CER), a layer of ribosome studded membrane surrounding the plastid.

Chloroscypha Seaver (1931), Helotiales. *c.* 14 (on conifers), widespread (north temperate). See Gremmen (*Nova Hedwigia* **2**: 547, 1963; Netherlands spp.), Kobayashi (*Bull. Govt For. Exp. Stn* **176**, 1965), Butin (*Sydowia* **37**: 15, 1984; S America), Baral (*Z. Mykol.* **53**: 119, 1987; asci), Shoji (*Bulletin of the Forestry and Forest Products Research Institute* Ibaraki, Japan **368**: 23, 1994; ecology), Gernandt *et al.* (*Mycol.* **93**: 915, 2001; phylogeny), Garcia *et al.* (*BSMF* **118**: 125, 2002), Wang *et al.* (*Mycol.* **98**: 1065, 2006; phylogeny), Wang *et al.* (*Mol. Phylogen. Evol.* **41**: 295, 2006; phylogeny).

Chlorosperma Murrill (1922) = Melanophyllum fide Singer (*Agaric. mod. Tax.*, 1951).

Chlorospleniella P. Karst. (1885), ? Helotiales. 1, Brazil. See Groves & Wilson (*Taxon* **16**: 39, 1967).

Chlorosplenium Fr. (1849), Dermateaceae. 5, widespread. See also *Chlorociboria*. See Dixon (*Mycotaxon* **1**: 65, 1974; key), Verkley (*Sydowia* **56**: 343, 2004).

Chlorospora Massee (1898) non *Chlorospora* Speg. 1891 ≡ Melanophyllum.

Chlorostroma A.N. Mill., Lar.N. Vassiljeva & J.D. Rogers (2007), ? Xylariaceae. 1, USA. See Miller *et al.* (*Sydowia* **59**: 138, 2007).

Chlorovibrissea L.M. Kohn (1989), Vibrisseaceae. Anamorph *Phialophora*-like. 4, Australasia. See Kohn (*Mem. N. Y. bot. Gdn* **49**: 112, 1989), Korf (*Mycosystema* **3**: 19, 1991; posn), Buchanan & May (*N.Z. Jl Bot.* **41**: 407, 2003; conservation), Wang *et al.* (*Mycol.* **98**: 1065, 2006; phylogeny), Wang *et al.* (*Mol. Phylogen. Evol.* **41**: 295, 2006; phylogeny).

Chmelia Svob.-Pol. (1966) = Alternaria fide de Hoog & Hermanides-Nijhof (*Stud. Mycol.* **18**, 1976), Hoog & Horré (*Mycoses* **45**: 259, 2002).

Chnoopsora Dietel (1906) = Melampsora fide Cummins & Hiratsuka (*Illustr. Gen. Rust Fungi rev. edit.*, 1983).

Choanatiara DiCosmo (1984), anamorphic *Pezizomycotina*, St.0eH.15. 2, India; Canada. See Vujanovic (*Can. J. Pl. Path.* **20**: 319, 1998).

Choanephora Curr. (1873), Choanephoraceae. 2, widespread (esp. tropical). *C. cucurbitarum* (blossom blight and fruit rot of cucurbits and other plants). See Thaxter (*Rhodora* **5**: 97, 1903), Barnett & Lilly (*Phytopathology* **40**: 80, 1950), Barnett & Lilly (*Mycol.* **47**: 26, 1955; culture), Hesseltine & Benjamin (*Mycol.* **49**: 723, 1957), Higham & Cole (*CJB* **60**: 2313, 1982; sporangiolum ultrastr.), Kirk (*Mycol. Pap.* **152**: 61 pp., 1984; key), Yu & Ko (*MR* **103**: 684, 1999; azygospore formation), Sakai *et al.* (*Am. J. Bot.* **87**: 440, 2000; pollination mutualism), Donnell *et al.* (*Mycol.* **93**: 286, 2001; phylogeny), Voigt & Wöstemeyer (*Gene* **270**: 113, 2001; phylogeny), Papp *et al.* (*Acta Biol. Hung.* **54**: 393, 2003; phylogeny), Feofilova (*App. Biochem. Microbiol.* **42**: 439, 2006; heterothallism), Gareth Jones (*Mycoscience* **47**: 167, 2006; spore appendages).

Choanephoraceae J. Schröt. (1894), Mucorales. 4 gen. (+ 3 syn.), 6 spp.

Lit.: Higham & Cole (*CJB* **60**: 2313, 1982), Kirk (*Mycol. Pap.* **152**: 61 pp., 1984; revision, keys), Benny (*Mycol.* **83**: 150, 1991), Yu & Ko (*MR* **103**: 684, 1999), Sakai *et al.* (*Am. J. Bot.* **87**: 440, 2000), Tanabe *et al.* (*Mol. Phylogen. Evol.* **30**: 438, 2004).

Choanephorella Vuill. (1904) = Choanephora fide Zycha *et al.* (*Mucorales*, 1969).

Choanephoroidea I. Miyake & S. Ito (1935) ? = Choanephora fide Kirk (*in litt.*).

chocolate spot, a disease of *Vicia* and other legumes (*Botrytis cinerea* and *B. fabae*); see Wilson (*Ann. appl. Biol.* **24**: 258, 1937), Harrison (*Pl. Path.* **37**: 168, 1988).

Choeromyces Tul. & C. Tul. (1862) = Choiromyces fide Fischer (*Nat. Pflanzenfam.* **5b**: viii, 1938).

Choiromyces Vittad. (1831), Tuberaceae. 5 (hypogeous), widespread. See Zhang & Minter (*MR* **92**: 91, 1989; cytology), Pegler *et al.* (*British truffles*, 1993), O'Donnell *et al.* (*Mycol.* **89**: 48, 1997; phylogeny), Percudani *et al.* (*Mol. Phylogen. Evol.* **13**: 169, 1999; phylogeny), Ferdman *et al.* (*MR* **109**: 237, 2005; phylogeny), Hansen & Pfister (*Mycol.* **98**: 1029, 2006; phylogeny).

choke, a disease of grasses (*Epichloë typhina*).

Chondroderris Maire (1937), Helotiales. 1, Spain.

Chondrogaster Maire (1925), Mesophelliaceae. 2, Mauritania; Brazil; Europe. See Petrak (*Sydowia* **4**: 373, 1950), Petrak (*Sydowia* **4**: 171, 1950).

chondroid axis, the cartilaginous axis occupying the central portion of the medulla in *Usnea*.

Chondroplea Kleb. (1933) = Discosporium Höhn. fide Sutton (*Mycol. Pap.* **141**, 1977).

Chondropodiella Höhn. (1917), anamorphic *Godronia*, St.0eH.?. 1, USA.

Chondropodiola Petr. & Cif. (1932) nom. dub., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Chondropodium Höhn. (1916) = Cornicularielia fide DiCosmo (*CJB* **56**: 1665, 1978).

Chondropsis Nyl. (1879) nom. rej. = Xanthoparmelia fide Rogers (*New Phytol.* **70**: 1069, 1971), Elix & Child (*Brunonia* **9**: 113, 1986), Lumbsch & Kothe (*Lichenologist* **20**: 25, 1988; anatomy), Elix (*Flora of*

Australia **55**: 34, 1994), Blanco *et al.* (*Taxon* **53**: 959, 2004; phylogeny), Gams (*Taxon* **53**: 1067, 2004; nomencl.).

Chondrospora A. Massal. (1860) nom. rej. = Anzia Stizenb. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Chondrostereum Pouzar (1959), Cyphellaceae. 4, widespread. *C. purpureum* (silver leaf of plum, etc.). See Ekramoddoullah *et al.* (*CJB* **15**: 7, 1993; Canadian isolates).

Chondrostroma Syd. (1940) [non *Chondrostroma* Gürich 1906, fossil ? *Algae*] = Phacidiopycnis fide Rupprecht (*Sydowia* **13**: 10, 1959).

Chondrus Stackh. (1797), Algae. Algae.

Chordecystia C.B. Foster (1979), Fossil Fungi. 1.

Chordostylum Tode (1790) nom. dub., Mucoraceae.

Choreospora Constant. & R. Sant. (1987), anamorphic *Pezizomycotina*, Hsp.1bH.15. 1 (on lichens), Australia. See Constantinescu & Santesson (*Lichenologist* **19**: 177, 1987).

Chorioactidaceae Pfister (2008), Pezizales. 3 gen., 7 spp.

Lit.: Pfister *et al.* (*MR* **112**: 513, 2008).

Chorioactis Kupfer (1902), Chorioactidaceae. 1, USA. fide Bellemère *et al.* (*Nova Hedwigia* **58**: 49, 1994; ultrastr.), Rudy & Keller (*Mycologist* **10**: 33, 1996), Harrington *et al.* (*Mycol.* **91**: 41, 1999; phylogeny), Pfister & Kurogi (*Mycotaxon* **89**: 277, 2004; morphology), Hansen & Pfister (*Mycol.* **98**: 1029, 2006; phylogeny), Perry *et al.* (*MR* **111**: 549, 2007; phylogeny), Pfister *et al.* (*MR* **112**: 513, 2008).

Choriphyllum Velen. (1922) ≡ Phaeolus fide Donk (*Persoonia* **8**: 281, 1975).

Chorostate (Nitschke ex Sacc.) Traverso (1906) = Diaporthe fide Barr (*Mycol. Mem.* **7**, 1978).

Chorostella (Sacc.) Clem. & Shear (1931) = Cryptodiaporthe fide Barr (*Mycol. Mem.* **7**, 1978).

Chrismofulvea Marbach (2000), Caliciaceae (L). 4, widespread. See Marbach (*Biblthca Lichenol.* **74**: 151, 2000).

Christiansenia Hauerslev (1969), Carcinomycetaceae. 7, widespread (north temperate). See Hauerslev (*Friesia* **9**: 43, 1969), Rath (*Rivista di Micologia* **30**: 112, 1987).

Christianseniaceae F. Rath (1991) = Carcinomycetaceae.

Christianseniales F. Rath (1991) = Tremellales.

Christiaster Kuntze (1891) ≡ Gonatobotryum.

Chromatium Link (1824) = Dematium fide Mussat (*Syll. fung.* **15**: 86, 1901).

Chromatochlamys Trevis. (1860) = Thelenella fide Mayrhofer (*Biblthca Lichenol.* **26**, 1987; monogr., key), Fryday & Coppins (*Lichenologist* **36**: 89, 2004).

chromatography. Physico-chemical diffusion technique for the identification of chemical products in which a moving *mobile* phase (which may be liquid or gas) is passed over an immobile *stationary* phase (which may be solid or liquid). Phases may be polar or non-polar. Different forms of chromatography may be defined according to the type of matrix used, the physico-chemical principles of separation or even the equipment used; **gas -**, in a gaseous phase with solid support, used in e.g. fatty acid analyses (see Kendrick & Ratledge, *Lipids* **27**: 15, 1992; Stahl 7 Klug, *App. Env. Microbiol.* **62**: 4136, 1996), but is a destructive method: the sample is not eluted/retained for future use; **high-pressure liquid -** (h.p.l.c.), in solvent under pressure, method of choice for screening non-volatile metabolites and has been used widely in mycotoxin screening; often in conjunction with *diode array detector* which allows detection of metabolite maxima/minima across the entire UV range via a polychromator and the diode array (a chip containing a large number of light sensitive diodes) [see Meyer, *Practical high performance liquid chromatography* edn 4, 2004, general text; Frisvad & Thrane, *in* Betina (Ed.) *Chromatography of Mycotoxins*, 253, 1993, use in mycotoxin detection; Smedsgard, *J. Chromatogr.* A **760**: 264, method for screening fungal cultures]; **paper -**, on filter paper, now rarely used (but see Lund, *Lett. Appl. Microbiol.* **21**: 11, 1995 for rapid method with *Penicillium*); **thin-layer -** (t.l.c.), in thin silicate layers on glass, aluminium or plastic plates. Much used in lichenology, e.g. Feige *et al.*, (*J. Chromatogr.* **646**: 417, 1993; h.p.l.c. lichen products), Mietzsch *et al.*, (*Mycotaxon* **47**: 475, 1993; computer progr. lichen products), and for mycotoxin producing fungi, e.g. Abrunhosa *et al.*, (*Lett. Appl. Microbiol* **32**: 240, 2001), (see Chemotaxonomy, Metabolic products); **preparative -** thicker layered plates used for re-extraction of particular metabolites prior to purification and further analysis.

Lit.: **General**: Harborne, (*Phytochemical methods*, 1973), Smith, (*Chromatographic and electrophoretic techniques* **1**, 1960), Frisvad *et al.* (Eds), (*Chemical Fungal Taxonomy*, 1998).

Chromelosporium Corda (1833) = Ostracoderma. *C. fulvum* (peat mould). fide Hughes (*CJB* **36**: 727, 1958; segregation from *Botrytis*), Hughes & Bisalputra (*CJB* **48**: 361, 1970; ultrastructure of conidiogenesis), Hennebert (*Persoonia* **7**: 183, 1973), Hennebert & Korf (*Mycol.* **67**: 214, 1975), Norman & Egger (*Mycol.* **91**: 820, 1999; phylogeny).

Chromendothia Lar.N. Vassiljeva (1993) = Camarops fide Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999), Castlebury *et al.* (*Mycol.* **94**: 1017, 2002; phylogeny, links to *Endothia*), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny).

chromo- (combining form), colour.

Chromocleista Yaguchi & Udagawa (1993), Trichocomaceae. Anamorph *Geosmithia*-like. 2, Japan. See Yaguchi *et al.* (*TMSJ* **34**: 101, 1993), Ogawa *et al.* (*Mycol.* **89**: 756, 1997; DNA), Ogawa & Sugiyama (*Integration of Modern Taxonomic Methods for Penicillium and Aspergillus Classification*: 149, 2000; phylogeny), Kolařík *et al.* (*MR* **108**: 1053, 2004; phylogeny).

Chromocrea Seaver (1910) ≡ Creopus fide Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Chromocreopsis Seaver (1910) = Thuemenella fide Corlett (*Mycol.* **77**: 272, 1985), Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Chromocyphella De Toni & Levi (1888), ? Inocybaceae. 5, widespread.

Chromocytospora Speg. (1910) = Phomopsis (Sacc.) Bubák. fide Petrak (*Sydowia* **5**: 335, 1951), Sutton (*Mycol. Pap.* **141**, 1977).

chromogen, a stain-producing organism (Erlich, 1941).

chromogenesis, colour production.

chromogenic (chromogenous), colour-producing.

chromomycosis (**chromoblastomycosis**), a chronic skin disease in humans caused by traumatic inoculation by certain species of various black-yeast genera, including *Exophiala*, *Fonsecaea*, *Phialophora*;

mostly on adult males in the tropics; dermatitis verrucosa; see Al-Doory (*Chromomycosis*, 1972).

chromophilous, deeply staining.

Chromosera Redhead, Ammirati & Norvell (1995), Hygrophoraceae. 1, widespread (north temperate). See Redhead *et al.* (*Beih. Sydowia* **10**: 161, 1995).

chromosome, see Chromosome maps, Chromosome numbers.

Chromosome maps. A chromosome map is a chart of the linear array of genes on a chromosome. The first chromosome map for a fungus was of the sex chromosome of *Neurospora crassa* (Lindegren, *J. Genet.* **32**: 243, 1936), the first for a set of fungal chromosomes was for the 8 chromosomes of *Aspergillus nidulans* (Kafer, *Adv. Genet.* **9**: 105, 1958; for revised maps see Dorn, *Genetics* **56**: 619, 1967). See also Lindegren *et al.* (*Nature* **183**: 800, 1959; *Saccharomyces cerevisiae*). See also Molecular biology.

Chromosome numbers. In fungi, chromosomes numbers are generally low; n=4 is possibly the basic number, although the very small size of fungal chromosomes has probably frequently led to an underestimation of their number in research studies (Wieloch, *J. microbiol. methods* **67**: 1, 2006; visualizing fungal chromosomes). n=6 has been reported for *Cenococcum geophilum* (Portugal *et al.*, *Nucleus* **45**: 14, 2002) and n=5 or n=6 for *Tuber aestivum* (Poma *et al.*, *FEMS microbiol. letters* **167**: 101, 1998). 2- and 3-ploid series are frequent among *Chromista*, and higher polyploids can occur. *Allomyces* has 8-50+ chromosomes (Emerson & Wilson, *Mycol.* **46**: 393, 1954); *Puccinia graminis* n=3 (fide McGinnis, *CJB* **31**: 522, 1953); *Dermatocarpon weberi* n=6 or 8; *Porpidia crustulata* n=2; *Agaricales*, n=2-12 (Ueda, *Trans. mycol. Soc. Japan* **10**: 23, 1969). See also: karyotype.

Rather few fungi have so far been studied in this respect, although pulsed field gel electrophoresis (q.v.) as a technique will accelerate this process and has already been used to show that fungal nuclei contain 3 (*Schizosaccharomyces pombe*) to *c.* 21 (*Ustilago hordei*) chromosomes (see Mills & McCluskey, *Molecular plant-microbe interactions* **3**: 351-357, 1990). (see Cytology). See Altman & Dittmer (*Biological data book*, 1964), Burges (*in* Lousley, *Species studies in the British flora*: 76, 1955), Ornduff (*Index to plant chromosome numbers* [*Regnum veg.* **50**], 1968), Rogers (*Evolution* **27**: 153, 1973; polyploidy in fungi).

Chromosporium Corda (1829), anamorphic *Pezizomycotina*, Hso.0eH.15. 20, widespread.

Chromostylium Giard (1889) ? = Metarhizium fide Tulloch (*TBMS* **66**: 409, 1976).

Chromotorula F.C. Harrison (1927) = Rhodotorula fide Lodder (*Die anaskosporogenen Hefen* **1**, 1934), Fell & Statzell-Tallman *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 800, 1998).

Chroocybe Räsänen (1943) nom. inval. ? = Coniocybe fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Chroodiscus (Müll. Arg.) Müll. Arg. (1890), Thelotremataceae (L). 30, widespread (tropical). See Lumbsch & Vězda (*Nova Hedwigia* **50**: 245, 1990), Lücking (*Cryptog. Mycol.* **20**: 193, 1999), Kantvilas & Vězda (*Lichenologist* **32**: 325, 2000; Tasmania), Galloway (*Australasian Lichenology* **49**: 16, 2001), Messuti *et al.* (*Lichenologist* **35**: 241, 2003; Argentina), Frisch (*Biblthca Lichenol.* **92**: 3, 2006; Africa), Frisch *et al.* (*Biblthca Lichenol.* **92**: 517, 2006; phylogeny).

Chroogomphus (Singer) O.K. Mill. (1964) nom. cons. prop., Gomphidiaceae. 18, widespread (north temperate). See Singer & Kuthan (*Česká Mykol.* **30**: 81, 1976), Agerer (*Nova Hedwigia* **50**: 1, 1990; ecology), Miller & Aime (*Trichomycetes and Other Fungal Groups, Robert W. Lichwardt Commemoration Volume*: 315, 2001), Miller (*Mycol.* **95**: 176, 2003).

Chrooicia Trevis. (1861) = Pyrenula Ach. (1809) fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Chroolepus C. Agardh (1824) = Cystocoleus fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Chroostroma Corda (1837) = Pactilia fide Saccardo (*Syll. fung.* **4**: 673, 1886).

Chrysachne Cif. (1938), anamorphic *Pezizomycotina*, Hsp.0eH.?. 1, West Indies.

Chrysalidopsis Steyaert (1961), anamorphic *Pezizomycotina*, Cac.≡ eP.?. 1, Chile. See Steyaert (*Darwiniana* **12**: 171, 1961).

Chryseidea Onofri (1981) ? = Phaeoisaria.

Chrysella Syd. (1926), Pucciniaceae. 1 (on *Mikania* (0, III) (*Compositae*)), C. America.

chryseous, golden yellow.

Chrysobostrychodes G. Kost (1985) ≡ Chrysomphalina.

Chrysocelis Lagerh. & Dietel (1913), ? Mikronegeriaceae. 6 (on dicots, 1 on monocots), widespread (esp. tropical). See Ono & Hennen (*TMSJ* **24**: 369, 1983).

Chrysoconia McCabe & G.A. Escobar (1979), Coniophoraceae. 1, Réunion. See McCabe & Escobar (*Mycotaxon* **9**: 240, 1979).

Chrysoconiaceae Jülich (1982) = Coniophoraceae.

Chrysocyclus Syd. (1925), Pucciniaceae. 3 (on *Compositae*, *Solanaceae*), America (tropical). See Davidson (*Mycol.* **24**: 221, 1932).

chrysocystidium, see cystidium.

Chrysoderma Boidin & Gilles (1991), Meruliaceae. 1, Réunion. See Boidin & Gilles (*Cryptog. Mycol.* **12**: 126, 1991).

Chrysogloeum Petr. (1959), anamorphic *Blasdalea*, Cac.0eH.?. 1, Peru. See Petrak (*Sydowia* **12**: 254, 1958).

Chrysogluten Briosi & Farneti (1904) nom. rej. = Cosmospora fide Rossman & Samuels (*Taxon* **47**: 723, 1998; nomencl.), Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Chrysoglutenaceae Jatta (1911) = Nectriaceae.

chrysogonidia, photobiont cells of *Trentepohlia* (obsol.).

Chrysomma Acloque (1893) = Caloplaca fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Chrysomphalina Clémençon (1982), Hygrophoraceae. 4, Europe. See Lutzoni (*Syst. Biol.* **46**: 373, 1997; phylogeny), Hibbett *et al.* (*Nature* **407**: 506, 2000; suggested placement in *Marasmiaceae*), Moncalvo *et al.* (*Syst. Biol.* **49**: 278, 2000), Redhead *et al.* (*Mycotaxon* **83**: 19, 2002; phylogeny), Barassa *et al.* (*Mycotaxon* **88**: 113, 2003; Spain).

Chrysomyces Theiss. & Syd. (1917) = Perisporiopsis Henn. fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Chrysomyxa Unger (1840), Coleosporiaceae. *c.* 23 (on *Picea* (0, I); II (*Caeoma*-like and often (?) with evanescent peridium); III on dicots, or microcyclic III (= *Melampsoropsis*) on *Picea* or *Tsuga* (*Pinaceae*)),

widespread (northern hemisphere). See Savile (*Can. J. Res.* C **28**: 318, 1950), Crane (*CJB* **79**: 957, 2001), Crane (*Mycol.* **97**: 534, 2005).

Chrysomyxaceae Gäum. ex Leppik (1972) = Coleosporiaceae.

Chrysonilia Arx (1981), anamorphic *Neurospora*, Hso.0eH.38. 3, widespread. *C. sitophila* (syn. *Monilia sitophila*), red bread mould. See Zeng *et al.* (*FEMS Microbiol. Lett.* **237**: 79, 2004; detection).

Chrysophlyctis Schilb. (1896) = Synchytrium fide Fitzpatrick (*The lower fungi. Phycomycetes*, 1930).

Chrysoporthe Gryzenh. & M.J. Wingf. (2004), Cryphonectriaceae. Anamorph *Chrysoporthella*. 5, widespread. See Hodges (*Mycol.* **72**: 542, 1980; on *Eucalyptus*), van Heerden & Wingfield (*MR* **105**: 94, 2001; genetic diversity of *C. cubensis*), Myburg *et al.* (*Mycoscience* **44**: 187, 2003; on *Myrtaceae*), Roux *et al.* (*Pl. Dis.* **87**: 1329, 2003; on *Eucalyptus*), Roux *et al.* (*Plant Dis.* **87**: 1329, 2003), Gryzenhout *et al.* (*Stud. Mycol.* **50**: 129, 2004), Gryzenhout *et al.* (*Fungal Diversity* **20**: 39, 2005; Ecuador), Rodas *et al.* (*Pl. Path.* **54**: 460, 2005; Colombia), Gryzenhout *et al.* (*MR* **110**: 833, 2006; Colombia), Gryzenhout *et al.* (*Mycol.* **98**: 239, 2006; phylogeny), Gryzenhout *et al.* (*FEMS Microbiol. Letters* **258**: 161, 2006), Heath *et al.* (*Pl. Dis.* **90**: 433, 2006; South Africa), Nakabonge *et al.* (*Plant Dis.* **90**: 734, 2006).

Chrysoporthella Gryzenh. & M.J. Wingf. (2004), anamorphic *Chrysoporthe*. 1. No independent species have been recognized. See Gryzenhout *et al.* (*Stud. Mycol.* **50**: 130, 2004).

Chrysopsora (Vain.) M. Choisy (1951) = Psora Hoffm. (1796) fide Timdal (*Nordic Jl Bot.* **4**: 525, 1984).

Chrysopsora Lagerh. (1892), Pucciniaceae. 1 (on *Gynoxis*, *Mikania* (0, III) (*Compositae*)), America (tropical).

Chrysorhiza T.F. Andersen & Stalpers (1996), anamorphic *Waitea*. 1, widespread. See Stalpers & Andersen *in* Sneh *et al.* (Eds) (*Rhizoctonia Species* Taxonomy, Molecular Biology, Ecology, Pathology and Disease Control: 58, 1996).

Chrysosplenium Allesch. (1898) [non *Chrysosplenium* L. 1753, *Saxifragaceae*] ≡ Chlorosplenium fide Dixon (*Mycotaxon* **1**: 65, 1974).

Chrysospora (orthographic variant), see *Chrysopsora* (Vain.) M. Choisy.

Chrysosporium Corda (1833), anamorphic *Onygenaceae*, Hso.0eH.1. *c.* 62, widespread. Teleomorphs various (also in *Arthrodermataceae*). See Carmichael (*CJB* **40**: 1137, 1962), Boekhout (*Stud. Mycol.* **31**: 29, 1989; septal ultrastr.), Hoog *et al.* (*Medical Mycology* **36** Suppl. 1: 52, 1998; review), Gräser *et al.* (*Medical Mycology* **37**: 105, 1999; phylogeny), Roilides *et al.* (*J. Clin. Microbiol.* **37**: 18, 1999; human disease), Sugiyama *et al.* (*Mycoscience* **40**: 251, 1999; phylogeny), Kushwaha (*Revta Iberoamer. Micol.* **17** [Special]: 66, 2000; physiology, biotechnology), Vidal *et al.* (*Revta Iberoamer. Micol.* **17** [Special]: 22, 2000; phylogeny), Vidal & Guarro (*Stud. Mycol.* **47**: 189, 2002; diagnosis).

Chrysothallus Velen. (1934), Hyaloscyphaceae. 8, former Czechoslovakia. See Korf (*Lloydia* **14**: 129, 1951), Huhtinen (*Karstenia* **29**: 45, 1990), Galán & Raitviir (*Nova Hedwigia* **58**: 453, 1994).

Chrysothricaceae Zahlbr. (1905), Arthoniales (L). 2 gen. (+ 4 syn.), 17 spp.

Lit.: Thor (*Bryologist* **91**: 360, 1988), Tønsberg (*Graphis Scripta* **6**: 31, 1994), Grube (*Bryologist* **101**: 377, 1998).

Chrysothrix Mont. (1852) nom. cons., Chrysothricaceae (L). 11, widespread. See Laundon (*Lichenologist* **13**: 101, 1981; key), Thor (*Bryologist* **91**: 360, 1988; S America), Tønsberg (*Graphis Scripta* **6**: 31, 1994), Grube (*Bryologist* **101**: 377, 1998; phylogeny), Jagadeesh Ram *et al.* (*Lichenologist* **38**: 127, 2006; India), Elix & Kantvilas (*Lichenologist* **39**: 361, 2007; Australia), Harris & Ladd (*Opuscula Philolichenum* **5**: 29, 2008; N America).

Chuppia Deighton (1965), anamorphic *Pezizomycotina*, Hso.#eP.1. 1, Venezuela. See Deighton (*Mycol. Pap.* **101**: 32, 1965).

Chytrella Kirschst. (1941) = Unguicularia fide Raschle (*Sydowia* **29**: 170, 1977).

chytrid, one of the *Chytridiales*. See Canter-Lund & Lund, *Freshwater Algae* (1995) for general account.

Chytridhaema Moniez (1887), ? Olpidiaceae. 1, France.

Chytridiaceae Nowak. (1878), Chytridiales. 33 gen. (+ 5 syn.), 238 spp.

Lit.: Sparrow (*Aquatic Phycomycetes* Edn 2: 1187 pp., 1960), Barr *in* Margulis *et al.* (Eds) (*Handbook of Protoctista*: 454, 1990), James *et al.* (*CJB* **78**: 336, 2000).

Chytridiales Cohn (1879). Chytridiomycetes. 4 fam., 75 gen., 494 spp. Thallus monocentric or polycentric, endogenous or exogenous; zoospores mostly with one conspicuous lipid globule; rhizoids tapering to fine (‹0.5µm) tips; generally aquatic but also in soil; saprobic or parasitic; on algae, microfauna, other fungi, pollen, plant debris, chitin and keratin, rarely terrestrial on higher plants (*Synchytrium*); *Batrachochytrium* pathogen in amphibian skin; cosmop.

The *Spizellomycetales* were removed from *Chytridiales sensu* Sparrow and *Chytridiales* emended using ultrastructural characters of zoospore (Barr, 1980): microtubules extending from one side of kinetosome in a parallel array; non-flagellate centriole parallel and connected to the kinetosome; rumposome often present on surface of lipid globule; ribosomes usually in mass, which is more or less enclosed by endoplasmic reticulum. Families in order are based on type of development, no on phylogeny. Sparrow (1960) divided the order into an operculate and inoperculate series; Karling (1977) used Whiffen's (1944) system based on thallus development types, a system followed by Barr, which is used herein. Fams:

(1) **Chytridiaceae**
(2) **Cladochytriaceae**
(3) **Endochytriaceae**
(4) **Synchytriaceae**

The placement of many genera within the revised *Chytridiales* is still uncertain.

Lit.: Sparrow (1960), Karling (*Chytridiomycetarum iconographia*, 1977; 175 pl.), Barr (*CJB* **58**: 2380, 1980; 1990), Barr & Désaulniers (*CJB* **66**: 869, 1988; precise configuration of organelles in zoospore), Powell & Roychoudhury (*CJB* **70**: 750, 1992; redefinition of chytridialean types of MLC), Longcore (*CJB* **71**: 414, 1993; new type of MLC, *Mycol.* **87**: 25, 1995; discussion of taxonomic characters), James *et al.* (*Mycol.* **98**: 860, 2006; molecular phylogeny), Hibbett *et al.* (*MR* **111**: 109, 2007), and see under Familes.

Chytridioides Tregnoboff (1913) = Chytridiopsis fide

Karling (*Chytriomyc. Iconogr.*: 37, 1977), Canning *in* Margulis *et al.* (Eds) (*Handbook of Protoctista*: 53, 1990; systematic position).

Chytridiomycetes Caval.-Sm. (1998), Chytridiomycota. 3 ord., 10 fam., 98 gen., 678 spp. Ords:
(1) **Chytridiales**
(2) **Rhizophydiales**
(3) **Spizellomycetales**
Lit.: James *et al.* (*Mycol.* **98**: 860, 2006; molecular phylogeny), Hibbett *et al.* (*MR* **111**: 109, 2007), and see under Orders.

Chytridiomycota M.J. Powell (2007), Fungi. 2 class., 4 ord., 14 fam., 105 gen., 706 spp. (Chytridiomycetes, Rumpomycetes). Thallus coenocytic, holocarpic or eucarpic, monocentric, polycentric, or mycelial; cell walls chitinous (at least in hyphal stages); mitochondial cristae flat; zoospores posteriorly (whiplash) monoflagellate or (rarely) polyflagellate, lacking mastigonemes or scales, with unique flagellar 'root' systems. Aquatic saprobes or parasites growing on decaying and living organic material (incl. nematodes, insects, amphibian skin, plant partss, other chytrids and fungi), in freshwater and soils; a few are marine, some are obligate anaerobes on cellulosic substrata in guts of herbivores.

The presence of flagellate zoospores has led to these fungi sometimes being classified as *Mastigomycotina* or being placed with the fungal phyla of the *Chromista* rather than in the *Fungi* (Kendrick, 1992; Kreissel, 1988). Retained in the *Fungi* (Barr, 1992; Bruns *et al.*, 1991; Corliss, 1994; Alexopoulos *et al.* 1996) on ultrastructural (flattened mitochondrial cristae), cell wall chemistry (chitinous) and molecular evidence (see Phylogeny).

Two classes are now recognized (zygospore ultrastructure in *Deckenbachia* and *Thalassochytrium* is sufficiently distinct that it cannot be satisfactority placed):
(1) **Chytridiomycetes**
(2) **Monoblepharidomycetes**
Lit.: Barr (*in* Margulis *et al.* (Eds), *Handbook of Protoctista*: 454, 1990; *Mycol.* **84**: 1, 1992), Bruns *et al.* (*Ann. Rev. Ecol. Syst.* **22**: 525, 1991), Karling (*Sydowia Beih.* **6**, 1966; Indian spp., keys; *Chytridiomycetarum iconographia*, 1977), Powell (*Mycol.* **85**: 1, 1993; roles in environment), Sparrow (*in* Ainsworth *et al.*, *The Fungi* **4B**: 85, 1973; ecology), Longcore (*Mycotaxon* **60**: 149, 1996; taxonomic change since 1960), James *et al.* (*CJB* **78**: 336, 2000; molecular phylogeny), James *et al.* (*Mycol.* **98**: 860, 2006; molecular phylogeny), Hibbett *et al.* (*MR* **111**: 109, 2007), and see under Classes and Orders.

Chytridiopsis W.G. Schneid. (1884), Microsporidia. 3, Europe; S. America. See Canning *in* Margulis *et al.* (Eds) (*Handbook of Protoctista*: 53, 1990; systematic position).

Chytridium A. Braun (1851), Chytridiaceae. *c.* 45, widespread (temperate). See Karling (*Chytriomyc. Iconogr.*, 1977; in algae).

Chytriomyces Karling (1945), Chytridiaceae. 34, widespread. See Johnson (*J. Elisha Mitchell scient. Soc.* **87**: 200, 1971; Icelandic spp.), Karling (*Chytriomyc. Iconogr.*, 1977), Letcher & Powell (*Mycotaxon* **84**: 447, 2002; monogr., key).

Cibalocoryne Hazsl. (1881) = Geoglossum fide Saccardo (*Syll. fung.* **8**: 1, 1889).

Cibdelia Juel (1925), ? Olpidiaceae. 1, Europe. See Juel (*Ark. Bot.* **19**: 9, 1925).

Cibiessia Crous (2007), anamorphic *Teratosphaeriaceae*. 3, Australia; S. Africa. See Crous *et al.* (*Fungal Diversity* **26**: 1, 2007), Crous *et al.* (*Stud. Mycol.* **58**: 1, 2007; phylogeny).

Ciboria Fuckel (1870), Sclerotiniaceae. Anamorph *Myrioconium*. *c.* 21, widespread (temperate). See also *Moellerodiscus*. See Schumacher (*Norw. Jl Bot.* **25**: 145, 1978; Norwegian amenticolous spp.), Spooner (*Biblthca Mycol.* **116**, 1987; 3 spp. Australasia), Holst-Jensen *et al.* (*Mycol.* **89**: 885, 1997; phylogeny), Holst-Jensen *et al.* (*Nordic Jl Bot.* **18**: 705, 1999; phylogeny), Galán & Palmer (*Czech Mycol.* **52**: 277, 2001; Europe), Wang *et al.* (*Mycol.* **98**: 1065, 2006; phylogeny), Wang *et al.* (*Mol. Phylogen. Evol.* **41**: 295, 2006; phylogeny).

Ciboriella Seaver (1951) = Hymenoscyphus fide Schumacher (*Mycotaxon* **38**: 233, 1990).

Ciborinia Whetzel (1945), Sclerotiniaceae. Anamorphs *Myrioconium*, *Sclerotium*. 16, widespread. See Batra (*Am. J. Bot.* **47**: 819, 1960; key), Holst-Jensen *et al.* (*Mycol.* **89**: 885, 1997; phylogeny), Zhuang & Wang (*Mycosystema* **16**: 161, 1997), Holst-Jensen *et al.* (*Nordic Jl Bot.* **18**: 705, 1999; phylogeny), Cook (*Bulletin OEPP* EPPO Bulletin **33**: 257, 2003; diagnostics), Toor *et al.* (*Australas. Pl. Path.* **34**: 319, 2005; genetic diversity), Saito & Kaji (*Mycoscience* **47**: 41, 2006; on *Gentiana*).

Ciboriopsis Dennis (1962) = Moellerodiscus fide Dumont (*Mycol.* **68**: 233, 1976), Johnston (*N.Z. Jl Bot.* **40**: 105, 2002).

Cicadocola Brain (1923), anamorphic *Pezizomycotina*, Hso.0eH.4. 1 (in *Insecta*), S. Africa.

Cicadomyces Šulc (1911), ? Saccharomycetales. 10 (in *Insecta*), widespread.

cicatricose, with longitudinal ridges (Fig. 20.15).

cicatrized (of conidiogenous cells and conidia), having thickened scars.

Cicinnobella Henn. (1904) = Perisporina. Also used for *Dimerium* anamorphs. fide Höhnel (*Sber. Akad. Wiss. Wien* Math.-naturw. Kl., Abt. 1 **120**: 379, 1911).

Cicinobolus Ehrenb. (1853) = Ampelomyces fide Rogers (*Mycol.* **51**: 96, 1959), Donk (*Taxon* **15**: 149, 1966).

Cidaris Fr. (1849), ? Helvellaceae. 1, N. America. Affinities are unclear. See van Brummelen *in* Hawksworth (Ed.) (*Ascomycete Systematics. Problems and Perspectives in the Nineties* NATO ASI Series vol. **269 269**: 399, 1994; posn).

cider, an alcoholic drink obtained by the fermentation of apple juice by various yeasts. Cf. beer.

Ciferri (Raffaele; 1897-1964, Italy, later Dominican Republic). Founder and Director of the Experimental Agricultural Station, Santiago de los Caballeros, Dominican Republic (1925-1932; Vice Director, Italian Cryptogamic Laboratory, Botanical Institute, Pavia (1932-1936); Professor of Botany, Florence University (1936-1942); Professor of Botany, University of Pavia (1942-1964). A most versatile mycologist who, through more than 1,000 publications, made notable contributions to tropical mycology, particularly in Brazil with Batista (q.v.) and the Dominican Republic, with González Fragoso (q.v.); also known for his work with the *Ustilaginales* (q.v.), plant pathogenic fungi (q.v.), medical mycology (q.v.), and the compilation of a mycological bibliography. Founder of the journal *Mycopathologia et Mycologia Applicata. Publs. G. Lindau & P Sydow*

Thesaurus Literaturae Mycologicae et Lichenologicae Supplementum 1911-1930 4 vols (1957-1960) [these volumes are freely available on-line; see Internet: catalogues & thesauri]. *Biogs, obits etc.* Baldacci (*Mycol.* **57**: 198, 1965) [portrait]; Grummann (1974: 516); Stafleu & Cowan (*TL-2* **1**: 503, 1976); Tomaselli (*Atti dell'Istituto Botanico della Università e Laboratorio Crittogamico di Pavia* Serie 5, **21** (Suppl.), 1964; bibliography).

Ciferria Gonz. Frag. (1925), anamorphic *Pezizomycotina*, ?.0fH.?. 1, West Indies.

Ciferriella Petr. (1930), anamorphic *Pezizomycotina*, Cac.≡ eP.19. 1, West Indies.

Ciferrina Petr. (1932), anamorphic *Pezizomycotina*, St.0fH.?. 1, West Indies.

Ciferriolichen Tomas. (1952) = Arthopyrenia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Ciferriomyces Petr. (1932) ? = Pyrenostigme fide Hansford (*Mycol. Pap.* **15**, 1946).

Ciferriopeltis Bat. & H. Maia (1965), anamorphic *Pezizomycotina*, Cpt.0eP.?. 1, Dominican Republic. See Batista & Maia (*Publções Inst. Micol. Recife* **463**: 4, 1965).

Ciferriotheca Bat. & I.H. Lima (1959) = Metathyriella fide Luttrell *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 213, 1973).

Ciferrioxyphium Bat. & H. Maia (1963), anamorphic *Aithaloderma*, Hsy.≡ eH.15. 2, widespread (tropical). See Batista & Maia (*Quad. Lab. crittogam., Pavia* **31**: 65, 1963).

Ciferriusia Bat. (1962) = Yatesula fide von Arx & Müller (*Stud. Mycol.* **9**, 1975), Reynolds & Gilbert (*Cryptog. Mycol.* **27**: 249, 2006; Panamá).

Ciglides Chevall. (1826) = Gymnosporangium fide Sydow & Sydow (*Monographia Uredinearum seu Specierum Omnium ad hunc usque Diem Descriptio et Adumbratio Systematica* **3**, 1915).

Ciglidiaceae Chevall. (1826) = Pucciniaceae.

Ciliaria Quél. (1885) [non *Ciliaria* Stackh. 1809, *Algae*] ≡ Scutellinia fide Clements & Shear (*Gen. Fung.*, 1931).

ciliate, edged with hairs.

Ciliatosporidium I. Foissner & W. Foissner (1995), Microsporidia. 1.

Ciliatula Velen. (1922) = Pezoloma fide Korf (*Phytologia* **21**: 201, 1971).

ciliatulate, thinly ciliate.

Cilicia Fr. (1825), Agaricomycetes (L). 2, Europe. See Donk (*Reinwardtia* **2**: 435, 1954) See, Laundon (*Lichenologist* **13**: 101, 1981).

Ciliciocarpus Corda (1831) = Gautieria fide Pilát (*Fl. ČSR* **B1**: 211, 1958).

Ciliciopodium Corda (1831), anamorphic *Nectria*, Cpt.0eH.?. 5, widespread. See Booth (*Mycol. Pap.* **73**, 1959).

Ciliciopus Clem. & Shear (1931) ≡ Ciliciopodium.

Ciliella Sacc. & P. Syd. (1902), Helotiales. 1, Brazil.

Ciliochora Höhn. (1919), anamorphic *Pezizomycotina*, St.0eH.19. 2, paleotropical. See Nag Raj (*Coelomycetous Anamorphs with Appendage-bearing Conidia*, 1993), Sutton *et al.* (*MR* **100**: 405, 1996; Italy), Moriondo & Menguzzato (*Inftore fitopatol.* **50**: 55, 2000; status as endophyte).

Ciliochorella Syd. (1935), anamorphic *Pezizomycotina*, St.1eP.15. 2, widespread (tropical). See Subramanian & Ramakrishnan (*TBMS* **39**: 314, 1956), Punithalingam (*Stud. Mycol.* **31**: 113, 1989; cytology), Masilamani & Muthumary (*MR* **98**: 857, 1994; ontogeny).

Ciliofusa Clem. & Shear (1931) ≡ Ciliofusarium.

Ciliofusarium Rostr. (1892) = Menispora fide Hughes (*CJB* **36**: 727, 1958).

Ciliofusospora Bat. & J.L. Bezerra (1963), Pezizomycotina. 1, Brazil. See Batista & Bezerra (*Publções Inst. Micol. Recife* **385**: 15, 1963).

Ciliolarina Svrček (1977), Hyaloscyphaceae. Anamorph *Septonema*-like. 6, N. America; Europe (northern). See Huhtinen (*Biblthca Mycol.* **150**: 93, 1993; key), Raitviir (*Scripta Mycologica* Tartu **20**, 2004).

Ciliomyces Höhn. (1906) = Paranectria fide Hawksworth & Pirozynski (*CJB* **55**: 2555, 1977), Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Ciliophora Petr. (1929), anamorphic *Pezizomycotina*, St.0eH.19. 1, C. America.

Ciliophorella Petr. (1940), anamorphic *Pezizomycotina*, Cpd.0eH.?. 1, Austria.

Cilioplea Munk (1953), Lophiostomataceae. 9, widespread. See Crivelli (*Über die heterogene Ascomycetengattung Pleospora Rbh.*, 1983; key), Barr (*SA* **5**: 125, 1986; posn), Barr (*Mem. N. Y. bot. Gdn* **62**: 92 pp., 1990; North America).

Ciliosculum Kirschst. (1941), ? Hyaloscyphaceae. 1, Germany.

Ciliosira Syd. (1942) = Acarosporium fide Petrak (*Sydowia* **14**: 347, 1960).

Ciliospora Zimm. (1902) = Chaetospermum fide Sutton (*Mycol. Pap.* **141**, 1977), Matsushima (*Matsush. Mycol. Mem.* **5**, 1987).

Ciliosporella Petr. (1927), anamorphic *Pezizomycotina*, Cpd.0eH.15. 2, Austria; Australia. See Yuan & Mohammed (*MR* **101**: 1531, 1997; n.sp. Australia).

cilium (pl. **cilia**), (1) an appendage of animal cells, e.g. protozoa; sometimes used for the flagellum (q.v.) of a zoospore; (2) a hair-like out-growth, e.g. from the edge of an apothecium or lichen thallus.

-cillin (suffix), for penicillins; derivatives of carboxy-6-amino-penicillanic acid (*WHO Chron.* **17**: 400, 1963).

cincinnate (cincinnal), rolled round; curled.

Cinereomyces Jülich (1982), Polyporaceae. 1, widespread. See Jülich (*Biblthca Mycol.* **85**: 396, 1981), Spirin (*Karstenia* **45**: 103, 2005; Russia).

cingulate, edged all round.

Cintractia Cornu (1883), Anthracoideaceae. *c.* 15, widespread (tropical to subtropical). The sorus of agglutinated ustilospores is characterized by a sterile stroma; the name has been widely used also for *Anthracoidea* (q.v.). See Ingold (*MR* **99**: 140, 1995; spore germination), Piepenbring *et al.* (*Mycol.* **91**: 485, 1999), Piepenbring (*Nova Hedwigia* **70**: 289, 2000; classification).

Cintractiaceae Vánky (2000) = Anthracoideaceae.

Cintractiella Boedijn (1937), Cintractiellaceae. 2 (induces hypertrophy in *Diplasia* & *Hypolytrum* (*Cyperaceae*)), East Indies; S. America. See Vánky (*Fungal Diversity* **13**: 167, 2003).

Cintractiellaceae Vánky (2003), Ustilaginales. 2 gen., 3 spp.

Lit.: Vánky (*Fungal Diversity* **13**: 167, 2003).

Cintractiomyxa Golovin (1952) = Anthracoidea fide Nannfeldt & Lindeberg (*Svensk bot. Tidskr.* **51**: 503, 1957).

Cionothrix Arthur (1907), Pucciniosiraceae. 6 (on

Compositae, 1 on *Sapindaceae* (0, III)), S. America. See Buriticá & Hennen (*Fl. Neotrop.* **24**: 18, 1980), Buriticá (*Rev. Acad. Colomb. Cienc.* **18** no. 69: 131, 1991), Berndt (*Mycol.* **94**: 523, 2002; Argentina).

Ciposia Marbach (2000), Caliciaceae (L). 1, USA. See Marbach (*Biblthca Lichenol.* **74**: 158, 2000).

circadian, pertaining to a day, e.g. a 24-hr rhythm. Cf. diel, diurnal.

Circinaria Bonord. (1851) = Valsa Fr. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Circinaria Fée (1825) = Coccocarpia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Circinaria Link (1809) nom. rej. = Aspicilia fide Laundon & Hawksworth (*Taxon* **37**: 478, 1988).

Circinaria M. Choisy (1929) = Lecanora fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Circinastrum Clem. (1909) ≡ Weinmannodora fide Sutton (*Mycol. Pap.* **141**, 1977).

circinate, twisted round; coiled (Fig. 23.37).

Circinella Tiegh. & G. Le Monn. (1873), Mucoraceae. 9, widespread. See Hesseltine & Fennell (*Mycol.* **47**: 193, 1955; key), Naganishi (*TMSJ* **15**: 175, 1974), Ho (*Fungal Science* Taipei **10**: 23, 1995; ultrastr.), Arambarri & Cabello (*Mycotaxon* **57**: 145, 1996; key to spp.), Roux *et al.* (*Proc. Microsc. Soc. S. Afr.* **28**: 45, 1998; ultrastr.), Voigt & Wöstemeyer (*Gene* **270**: 113, 2001; phylogeny).

Circinoconis Boedijn (1942), anamorphic *Pezizomycotina*, Hso.0-≡ hP.1. 1, East Indies; Australasia. See Aptroot & Iperen (*Nova Hedwigia* **67**: 485, 1998; Papua New Guinea).

Circinomucor Arx (1982) = Mucor Fresen. fide Kirk (*in litt.*).

Circinoniesslia Samuels & M.E. Barr (1998), Niessliaceae. 1 (on dead bark or fungicolous), Puerto Rico. See Samuels & Barr (*CJB* **75**: 2165, 1998).

Circinostoma Gray (1821) ? = Valsa Fr. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Circinotrichum Nees (1816), anamorphic *Pezizomycotina*, Hso.0eH.6. 17, widespread. See Pirozynski (*Mycol. Pap.* **84**, 1962; key), Castañeda Ruíz *et al.* (*Mycotaxon* **63**: 169, 1997).

Circinumbella Tiegh. & G. Le Monn. (1872) = Circinella fide Hesseltine (*Mycol.* **47**: 344, 1955).

Circulocolumella S. Ito & S. Imai (1957), Hysterangiaceae. 1, Bonin Island. See Ito & Imai (*Science Rep. Yokohama Nat. Univ.* Section 2 **6**: 4, 1957).

circum- (prefix), all round; round about.

circumcinct, having a band around the middle.

circumscissile, opening or cracking along a circle.

cirrate (**cirrose**), rolled round (curled) or becoming so.

Cirrenalia Meyers & R.T. Moore (1960), anamorphic *Halosphaeriaceae*, Hso.0-≡ hP.1. 17 (marine and terrestrial), widespread (temperate). See Kohlmeyer (*Ber. dt. bot. Ges.* **79**: 27, 1966), Goos (*Proc. Indian Acad. Sci.* Pl. Sci. **94**: 245, 1985), Ravikumar & Purushothaman (*Curr. Sci.* **57**: 674, 1988; India), Matsushima (*Matsush. Mycol. Mem.* **9**: 1, 1996), Somrithipol *et al.* (*Nova Hedwigia* **75**: 477, 2002; Thailand), Zhao & Liu (*Fungal Diversity* **18**: 201, 2005; review), Tsui & Berbee (*Mol. Phylogen. Evol.* **39**: 587, 2006; phylogeny).

Cirrholus Mart. (1821) nom. dub., Fungi.

Cirrhomyces Höhn. (1903) = Chloridium fide Hughes (*CJB* **36**: 727, 1958).

Cirrosporium S. Hughes (1980), anamorphic *Pezizomycotina*, St.≡ eP.23. 1, New Zealand. See Hughes (*N.Z. Jl Bot.* **18**: 329, 1980).

cirrus (**cirrhus**), a curl-like tuft; a tendril-like mass or 'spore horn' of forced-out spores.

Cirsosia G. Arnaud (1918), Asterinaceae. 7, widespread (tropical). See Batista & Maia (*Rev. brasil. Biol.* **2**: 115, 1960), Hosagoudar & Pillai (*MR* **98**: 127, 1994; India), Reynolds & Gilbert (*Aust. Syst. Bot.* **18**: 265, 2005; Australia), Thaung (*Australas. Mycol.* **25**: 5, 2006; Burma).

Cirsosiella G. Arnaud (1918) = Cirsosia fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Cirsosina Bat. & J.L. Bezerra (1960), ? Microthyriaceae. 2 (on *Rhododendron*), Europe; Borneo. See Batista & Bezerra (*Revta Biol.* Lisb. **2**: 132, 1960).

Cirsosiopsis Butin & Speer (1979), Microthyriaceae. 1 (on *Araucaria*), Brazil. See Butin & Speer (*Sydowia* **31**: 10, 1978).

Cissococcomyces Brain (1923), anamorphic *Pezizomycotina*, Hso.?.?. 1 (in *Insecta*), S. Africa.

Cistella Quél. (1886) nom. cons., Hyaloscyphaceae. Anamorph *Phialophora*-like. 38, widespread (temperate). See Dennis (*Mycol. Pap.* **32**, 1949), Raitviir (*Scripta Mycol.* **1**, 1970; keys), Matheis (*Friesia* **11**: 85, 1976), Raitviir (*Scripta Mycol.* **8**: 147, 1978), Helfer (*Libri Botanici* **1**, 1991; anamorph), Cantrell & Hanlin (*Mycol.* **89**: 745, 1997; DNA), Raitviir & Järv (*Proc. Est. Acad. Sci. Biol. Ecol.* **46**: 94, 1997), Gams (*Stud. Mycol.* **45**: 187, 2000; anamorph), Yu & Zhuang (*Mycosystema* **22**: 42, 2003; phylogeny), Raitviir (*Scripta Mycol.* **20**, 2004).

Cistellina Raitv. (1978) = Hyphodiscus fide Svrček (*Česká Mykol.* **41**: 193, 1987), Haines (*Mycotaxon* **35**: 324, 1989), Raitviir (*Scripta Mycol.* **20**, 2004), Zhuang *et al.* (*Flora Fungorum Sinicorum* **21**, 2004; China).

cisternal ring, a ring-like arrangement of the endoplasmic reticulum which appears to bud and give rise to vesicles.

Citeromyces Santa María (1957), Saccharomycetales. 1, widespread. See Kurtzman *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 146, 1998), Suzuki & Nakase (*J. gen. appl. Microbiol.* Tokyo **45**: 239, 1999), Nagatsuka *et al.* (*Int. J. Syst. Evol. Microbiol.* **52**: 2315, 2002; Thailand), Suh *et al.* (*Mycol.* **98**: 1006, 2006; phylogeny).

citreoviridin, a polyene toxin of *Penicillium citreoviride*; the cause of cardiac beri-beri in humans.

citrinin, a toxic yellow pigment of *Penicillium citrinum*, *P. viridicatum*, etc.; the cause of nephrotoxicosis in pigs.

Citromyces Wehmer (1893) = Penicillium Link fide Thom (*The Penicillia*, 1930), Peterson & Sigler (*MR* **106**: 1109, 2002; nomencl.).

Civisubramaniania Vittal & Dorai (1986), anamorphic *Pezizomycotina*, Hso.0eP.1. 1, India. See Vittal & Dorai (*TBMS* **87**: 482, 1986).

CK, see Metabolic products.

Cladaria Ritgen (1828) nom. rej. = Ramaria Fr. ex Bonord. fide Corner (*Ann. Bot. Mem.* [A monograph of Clavaria and allied genera, addenda] **17**: 347, 1953).

Cladaspergillus Ritgen (1831) = Aspergillus fide Mussat (*Syll. fung.* **15**: 89, 1901).

clade, a monophyletic group of any magnitude (first used by Huxley, *Nature* **180**: 454, 1957); the recognition and hierarchical arrangement of such taxa constitutes the practice of cladistics (q.v.).

Cladia Nyl. (1870), Cladoniaceae (L). 14, widespread. See Filson (*J. Hattori bot. Lab.* **49**: 1, 1981; monogr.,

key), Ahti (*Regnum veg.* **128**: 58, 1993; names in use), Stenroos *et al.* (*Pl. Syst. Evol.* **207**: 43, 1997), Wedin *et al.* (*Lichenologist* **32**: 171, 2000; phylogeny), Stenroos *et al.* (*Mycol. Progr.* **1**: 267, 2002; phylogeny), Guo & Kashiwadani (*National Science Museum Monographs* **24**: 207, 2004; phylogeny), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny).

Cladiaceae Filson (1981) = Cladoniaceae.

Cladidium Hafellner (1984), Lecanoraceae (L). 2, western USA. See Ryan (*Mycotaxon* **34**: 697, 1989), Ryan & Nash (*Nova Hedwigia* **64**: 393, 1997).

Cladina (Nyl.) Nyl. (1866) = Cladonia fide Ahti (*Ann. bot. Soc. zool.-bot. fenn. Vanamo* **32** no. 1, 1961), Ahti (*Beih. Nova Hedwigia* **79**: 25, 1984), Huovinen & Ahti (*Ann. bot. fenn.* **23**: 93, 1986; chemistry 30 spp.), Wei *et al.* (*Acta Mycol. Sin.* **5**: 240, 1986; 9 spp. China), Rouss & Ahti (*Lichenologist* **21**: 29, 1989), Ahti (*Regnum veg.* **128**: 58, 1993; names in use; accepted gen.), Burgaz & Ahti (*Nova Hedwigia* **59**: 399, 1994), Hammer (*Mycol.* **89**: 461, 1997; morphology), Stenroos *et al.* (*Pl. Syst. Evol.* **207**: 43, 1997; phylogeny), Burgaz & Ahti (*Nova Hedwigia* **66**: 549, 1998; Spain), Ito *et al.* (*Mycopathologia* **144**: 169, 1998; nomencl.), Carbonero *et al.* (*Phytochem.* **61**: 681, 2002; polysaccharides), Guo & Kashiwadani (*National Science Museum Monographs* **24**: 207, 2004; phylogeny).

Cladinomyces Cif. & Tomas. (1953) = Cladonia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Cladistics. See Phylogenetic analysis.

Cladobotryum Nees (1816), anamorphic *Hypomyces*, Hso.≡ eH.15. 35, widespread. See Gams & Hoozemans (*Persoonia* **6**: 96, 1970; key), de Hoog (*Persoonia* **10**: 33, 1978; key 11 spp.), Põldmaa *et al.* (*Sydowia* **49**: 80, 1997; 3 new holomorphic spp.), Põldmaa *et al.* (*CJB* **77**: 1756, 1999; phylogeny).

Cladobyssus Ritgen (1831) = Hypha fide Mussat (*Syll. fung.* **15**, 1901).

Cladochaete Sacc. (1912) [non *Cladochaete* DC. 1838, *Compositae*] = Chaetomium fide Petrak & Sydow (*Reprium nov. Spec. Regni veg., Beih.* **42**: 487, 1927).

Cladochasiella Marvanová (1997), anamorphic *Pezizomycotina*, Hso.?.?. 1, Czech Republic. See Marvanová (*Cryptog. Mycol.* **18**: 285, 1997), Descals (*MR* **109**: 545, 2005; diagnostics).

Cladochytriaceae J. Schröt. (1892), Chytridiales. 10 gen. (+ 1 syn.), 38 spp.

Lit.: Sparrow (*Aquatic Phycomycetes* Edn 2: 1187 pp., 1960), Longcore (*CJB* **71**: 415, 1993), Blackwell *et al.* (*Mycotaxon* **89**: 259, 2004).

Cladochytrium Nowak. (1877), Cladochytriaceae. *c.* 10, widespread. See Sparrow (*Aquatic Phycomycetes* Edn 2: 462, 1960; key).

Cladoconidium Bandoni & Tubaki (1985), anamorphic *Pezizomycotina*, Hso.≡ eH.10. 1, Japan; Canada. See Bandoni & Tubaki (*TMSJ* **26**: 426, 1985), Marvanová & Bärlocher (*Czech Mycol.* **53**: 1, 2001; Canada).

Cladodendron Lázaro Ibiza (1916) ≡ Grifola fide Donk (*Verh. K. ned. Akad. Wet.* tweede sect. **62**: 1, 1974).

Cladoderris Pers. ex Berk. (1842) = Cymatoderma fide Donk (*Taxon* **6**: 17, 1957).

Cladodium (Tuck.) Gyeln. (1934) [non *Cladodium* Brid. 1826, *Musci*] ≡ Cladidium.

cladogram, see Cladistics.

Cladographium Peyronel (1918), anamorphic *Pezizomycotina*, Hsy.0eP.?. 1, Europe.

Cladomeris Quél. (1886) = Grifola fide Pegler (*The polypores [Bull. BMS Suppl.]*, 1973).

Cladona Adans. (1763) nom. rej. prop. = Cladonia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Cladonia P. Browne (1756) nom. cons., Cladoniaceae (L). 518, widespread. See also *Cladina*. See Sandstede (*Rabenh. Krypt.-Fl.* **9** 4.2: 1, 1931; Eur.), Asahina (*Lichens of Japan* **1**, 1950), Thomson (*The lichen genus Cladonia in North America*, 1968), Culberson & Kristinsson (*Bryologist* **72**: 431, 1970), Jahns (*Untersuchungen zur Entwicklungsgeschichte der Cladoniaceen*, 1970), Bird & Marsh (*CJB* **50**: 915, 1972; Alberta), Ahti (*Ann. bot. fenn.* **10**: 163, 1973; *Unciales*), Jahns & Beltman (*Lichenologist* **5**: 349, 1973; ontogeny), Ahti (*Ann. bot. fenn.* **15**: 7, 1978; Eur.), Ahti (*Ann. bot. fenn.* **17**: 195, 1980; *gracilis*-group), Ahti (*Lichenologist* **12**: 125, 1980), Ahti (*J. Hattori bot. Lab.* **52**: 331, 1982; evol. trends), Ahti (*Lichenologist* **14**: 105, 1982; morphology), Honegger (*Lichenologist* **15**: 57, 1983; asci), Archer & Bartlett (*N.Z. Jl Bot.* **24**: 581, 1986; key 44 NZ spp.), Upreti (*Feddes Repert.* **98**: 469, 1987; key 62 spp. India & Nepal), Ahti (*Regnum veg.* **128**: 58, 1993; names in use), Hammer (*Bryologist* **96**: 299, 1993; sect. *Perviae* N. Am.), Ahti & Marcelli (*Biblthca Lichenol.* **52**: 5, 1995; *Cladonia verticillaris*-group), Hammer (*Bryologist* **98**: 1, 1995; 57 NW USA spp.), Hammer (*Mycol.* **87**: 46, 1995; ontogeny), Stenroos *et al.* (*Pl. Mycol.* **58**: 185, 2007; phylogeny), Davey & Currah (*MR* **111**: 106, 2007; key, from bryophytes), de Hoog *et al.* (*Stud. Mycol.* **58**: 219, 2007; phylogeny, pathogenicity).

Cladophytum Leidy (1849) nom. dub., ? Fungi. 1, USA.

Cladoporus (Pers.) Chevall. (1826) nom. rej. = Laetiporus fide Donk (*Persoonia* **1**: 173, 1960; based on an abnormal polypore).

Cladopsis Nyl. (1885) = Pyrenopsis fide Henssen (*Lichenologist* **21**: 101, 1989).

Cladopycnidium H. Magn. (1940) = Lecidea fide Hertel (*Ergebn. Forsch Unternehmens Nepal Himalaya* **6**: 145, 1977).

Cladoriella Crous (2006), anamorphic *Dothideomycetes*. 1, S. Africa. See Crous (*Stud. Mycol.* **55**: 56, 2006).

Cladorrhinum Sacc. & Marchal (1885), anamorphic *Apiosordaria, Cercophora*, Hso.0eH.15. 6, widespread. See Domsch *et al.* (*Compendium of soil fungi*, 1980), Mouchacca & Gams (*Mycotaxon* **48**: 415, 1993; key), Chopin *et al.* (*J. Med. Vet. Mycol.* **35**: 53, 1997; keratomycosis).

Cladosarum E. Yuill & J.L. Yuill (1938) ? = Aspergillus fide Raper & Fennell (*The genus Aspergillus*, 1965).

Cladosphaera Dumort. (1822), ? Pezizomycotina. 1, Europe.

Cladosphaeria Nitschke ex Jacz. (1894) = Cryptosphaeria Ces. & De Not. fide Petrak (*Sydowia* **15**: 186, 1962).

Cladosporiaceae Nann. (1934) = Davidiellaceae.

Cladosporiella Deighton (1965), anamorphic *Pezizomycotina*, Hso.≡ eP.3. 1, Malaysia. See Deighton (*Mycol. Pap.* **101**: 34, 1965), Crous & Braun (*CBS Diversity Ser.* **1**: 571 pp., 2003).

Cladosporites Félix (1894), Fossil Fungi. 3 (Tertiary), Europe; USA.

Cladosporium Link (1816), anamorphic *Davidiella*, Hso.≡ eP.3. *c.* 150, widespread. *C. herbarum* is ubiquitous and generally saprobic. Medical species are now included in *Cladophialophora.* See de Vries (*Contribution to the knowledge of the genus Cladosporium Link ex Fr.*, 1952; [reprint 1967]), Yamamoto (*Sci. Rep. Hyogo Univ. Agr.* **4**: 1, 1959; spp. from Japan), Ellis (*DH*, 1971), Ellis (*MDH*, 1976), Latgé *et al.* (*J. Microbiol.* **34**: 1325, 1988; wall ultrastr. *C. cladosporioides*), Morgan-Jones & McKemy (*Mycotaxon* **39**: 185, 1990; taxonomy of *C. uredinicola*), McKemy & Morgan-Jones (*Mycotaxon* **41**: 135, 1991; taxonomy of *C. chlorocephalum*), McKemy & Morgan-Jones (*Mycotaxon* **41**: 397, 1991; taxonomy of *C. oxysporum*), McKemy & Morgan-Jones (*Mycotaxon* **43**: 163, 1992; taxonomy of *C. cucumerinum*), Morgan-Jones & McKemy (*Mycotaxon* **43**: 9, 1992; taxonomy of *C. vignae*), David (*Mycol. Pap.* **172**, 1997; subgen. *Heterosporium*), Ho *et al.* (*Mycotaxon* **72**: 115, 1999; key), Crous *et al.* (*Stud. Mycol.* **45**: 107, 2000; review), Crous *et al.* (*Mycol.* **93**: 1081, 2001; phylogeny), Wirsel *et al.* (*Fungal Genetics Biol.* **35**: 99, 2002; molecular ecology), Braun *et al.* (*Mycol. Progr.* **2**: 3, 2003; phylogeny, teleomorph), Dugan *et al.* (*Schlechtendalia* **11**, 2004; checklist), Park *et al.* (*Mycotaxon* **89**: 441, 2004; indoor environment), Schubert & Braun (*Sydowia* **56**: 296, 2004; morphology), Heuchert *et al.* (*Schlechtendalia* **13**, 2005; fungicolous taxa), Schoch *et al.* (*Mycol.* **98**: 1041, 2006; phylogeny), Crous *et al.* (*Stud. Mycol.* **58**: 33, 2007; phylogeny, definition), Crous *et al.* (*Stud. Mycol.* **58**: 1, 2007; phylogeny), Schubert *et al.* (*Stud. Mycol.* **58**: 105, 2007; morphology, biodiversity), Zalar *et al.* (*Stud. Mycol.* **58**: 157, 2007; *C. sphaerospermum* complex).

Cladosporothyrium Katum. (1984) = Zelopelta fide Sutton (*in litt.*).

Cladosterigma Pat. (1892), ? Exobasidiales. 1, Ecuador. See Petch (*TBMS* **8**: 212, 1923), Seifert (*TBMS* **85**: 123, 1985), Seifert & Bandoni (*Sydowia* **53**: 156, 2001).

Cladotrichum Corda (1831) = Oedemium fide Hughes (*CJB* **36**: 727, 1958).

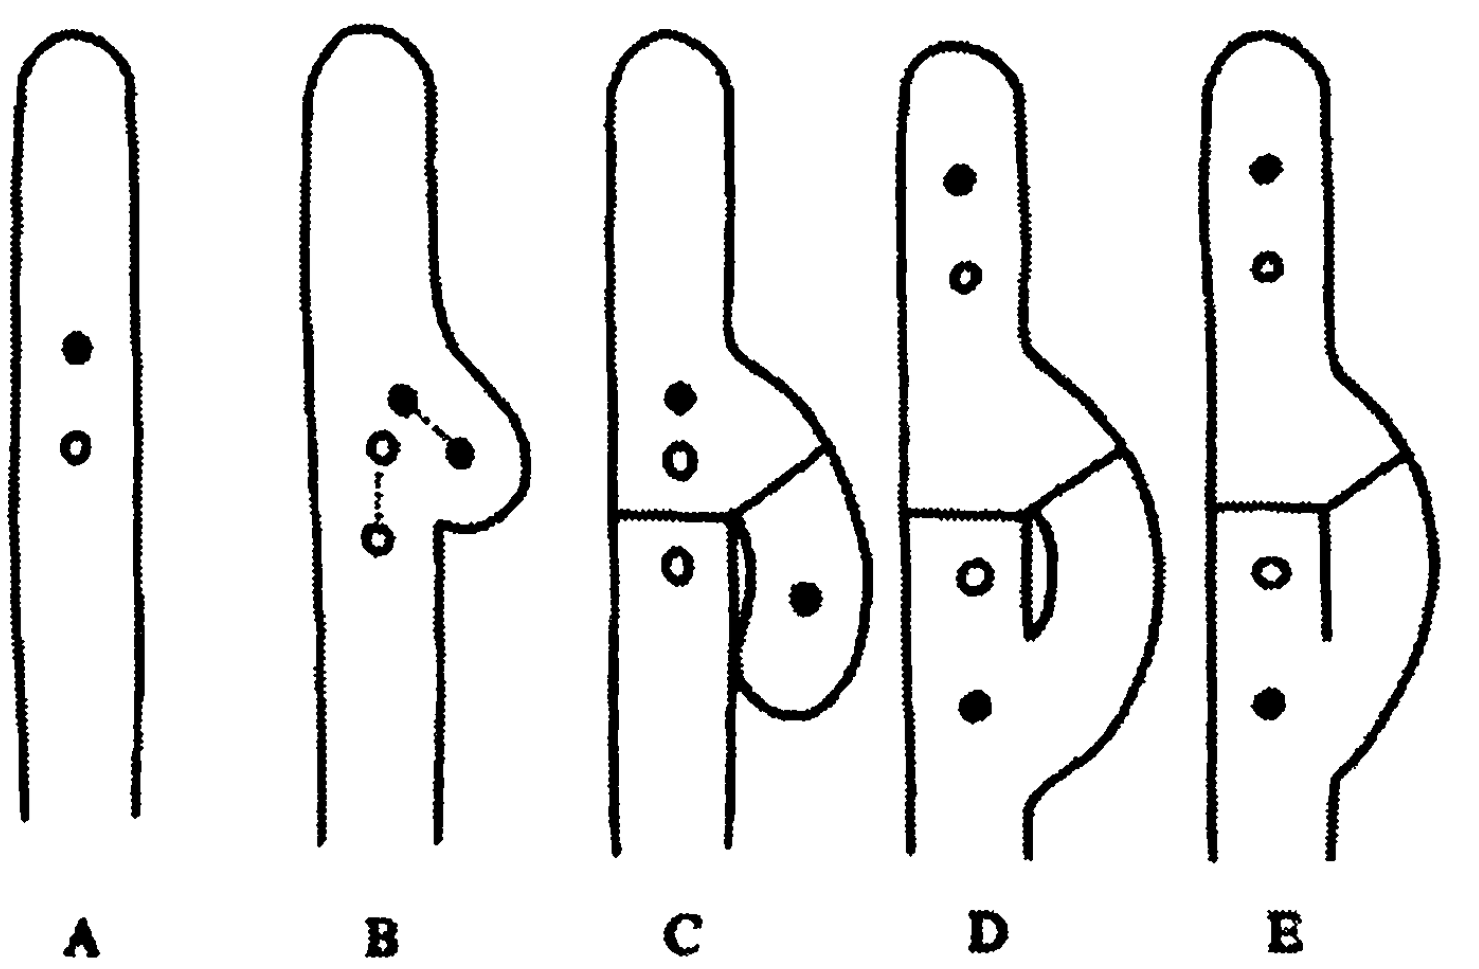

Fig. 11. Clamp connexion formation (diagrammatic). A, dikaryotic hyphal apex; simultaneous nuclear division and formation of a backwardly directed lateral branch into which one of the daughter nuclei passes; C, formation of two cross-walls cutting off an apical cell which contains two compatible nuclei, and a lateral branch with a single nucleus; D, fusion of lateral branch with subapical cell which then becomes dikaryotic; E, final stage.

clamp-connexion (-connection, clamp, clamp-cell) (of basidiomycetes), a hyphal outgrowth which, at cell division, makes a connection between the resulting two cells by fusion with the lower; buckle; nodose septum; by-pass hypha (Fig. 11).

Clarkeinda Kuntze (1891), Agaricaceae. 5, widespread. See Pegler (*J. Linn. Soc.* Bot. **91**: 245, 1985; key).

Classicula R. Bauer, Begerow, Oberw. & Marvanová (2003), Classiculaceae. Anamorph *Naiadella*. 1, Germany. See Bauer *et al.* (*Mycol.* **95**: 757, 2003).

Classiculaceae R. Bauer, Begerow, Oberw. & Marvanová (2003), Classiculales. 2 gen., 2 spp.
Lit.: Bauer *et al.* (*Mycol.* **95**: 757, 2003).

Classiculales R. Bauer, Begerow, Oberw. & Marvanová (2003). Classiculomycetes. 1 fam., 2 gen., 2 spp. Fam.:
Classiculaceae.
For *Lit.* see under fam.

Classiculomycetes R. Bauer, Begerow, J.P. Samp., M. Weiss & Oberw. (2006), Pucciniomycotina. 1 ord., 1 fam., 2 gen., 2 spp. Ord.:
Classiculales
For *Lit.* see ord. and fam.

Classification. The asigning of objects to defined categories; taxonomy. The application of scientific names to the categories into which fungi may be placed and the relative order of those categories is governed by an internationally agreed code (see Nomenclature). The rank of **species** is basic (code Art. 2), but as yet there is no universally applicable definition of species (q.v.). There is fairly general agreement on the ranks to be used for the main infraspecific ranks (although taxa based on pathogenic, physiological, or biochemical characters present difficulties), and on ranks above species from genus to order. Above order, and particularly above class there is more diversity in usage, not least because the code's rules of priority do not apply above family. In the example in Table 3, group-name endings in heavy type are those authorized for fungi in the *Code* (Arts 16-19). The relative order of the various ranks must not be altered (Art. 5) or the names become invalid (Art. 33.5; an exception is made in Art. 33.6 for wrong use of 'tribe' within a genus by Fries in the *Systema mycologicum*, 1821-32). Additional ranks may be intercalated or added, 'provided confusion or error is not thereby introduced' (Art. 4.3).

There is particular instability in the use of ranks above order, and different authors prefer to use or avoid particular categories. 'Division' is peculiar to the code governing fungi, but from 1993 'phylum', familiar to zoologists, was authorized as an alternative which could be used in its place, and this has been used by mycologists (see Kingdoms of fungi). Above the rank of kingdom, additional categories justified by evidence from molecular phylogeny (q.v.) are becoming necessary, 'domain' now being the most widely used.

Different suffixes are available for the terminations of higher taxonomic categories according to whether the code of nomenclature in used, and further under the code governing fungi according to whether the names are considered to be of fungi or algae (i.e. '-*phyta*' not '-*mycota*' as the phylum termination; '-*phyceae*' not '-*mycetes*' for class names; for consistency in this *Dictionary*, and to clearly indicate where phyla are ones traditionally studied by mycologists, the fungal termination has been retained throughout. This also has the practical advantage of keeping phylum names the same regardless of the kingdom in which they are placed.

It is important to note that not all available ranks are used for particular fungi, and there is an increasing tendency for mycologists not to use ranks between the principal ones, or below subspecies.

The rank of special form (q.v.; Art. 4) is available to mycologists wishing to separate morphologically identical fungi by host reactions. Special forms are not regulated by the Code, nor are notations for physiologic races (q.v.) designated by numbers by agreement between interested mycologists.

Any characters judged to represent significant discontinuities, whether biological, morphological, ultrastructural, or molecular, can be used in classifications. Particular emphasis is placed on reproductive structures, ultrastructure, and molecular evidence at levels above family.

Practice as regards the typography of scientific names has varied in different nations. The codes all rule that species names should be differentiated, and *italic* is usually employed, but practice at the family level and above has been inconsistent. The current code governing fungi (Greuter *et al.*, *Regnum Veg.* **138**, 2000) uses *italic* for all scientific names regardless of rank (e.g. *Fungi*, *Ascomycota*, *Lecanorales*, *Russulaceae*).

See Chemotaxonomy, Cladistics, Kingdoms of fungi, Nomenclature, Phylogeny, Species.

Clasterisporium orthographic variant; see *Clasterosporium*.

Clasteropycnis Bat. & Cavalc. (1963), anamorphic *Pezizomycotina*, Cpd.0eP.?. 1, Brazil. See Batista & Cavalcanti (*Quad. Lab. crittogam., Pavia* **31**: 69, 1963)

Clasterosphaeria Sivan. (1984), Magnaporthaceae. Anamorph *Clasterosporium*. 1, Malaysia. See Sivanesan (*TBMS* **83**: 710, 1984).

Clasterosporiaceae Nann. (1934) = Magnaporthaceae.

Clasterosporites Pia (1927), Fossil Fungi. 1 (Eocene), Europe.

Clasterosporium Schwein. (1832), anamorphic *Clasterosphaeria*, Hso.≡ eP.1/19. 10 (mostly on *Cyperaceae*), widespread. Also used for anamorphs of *Asterinaceae*. See Ellis (*Mycol. Pap.* **70**, 1958; key), Sutton *et al.* (*Pl. Path.* **43**: 1066, 1994; *C. flexum* on *Chamaecyparis*), Taylor & Crous (*MR* **104**: 618, 2000), Hosagoudar (*Zoos' Print Journal* **19**: 1437, 2004).

Clathraceae Chevall. (1826) = Phallaceae.
Lit.: Dring (*Kew Bull.* **35**: 1, 1980; monogr.).

clathrate (**clathroid**), like a network; latticed.

Clathrella E. Fisch. (1898) = Clathrus fide Dring (*Kew Bull.* **35**: 1, 1980).

Clathridium, see *Clethridium*.

Clathrina Müll. Arg. (1883) = Cladia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Clathrococcum Höhn. (1911) ? = Epicoccum fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Clathroconium Samson & H.C. Evans (1982), anamorphic *Pezizomycotina*, Hso.0-≡ hP.10. 1 (on *Arachnida*), Ghana. See Samson & Evans (*CJB* **60**: 1577, 1982), Samson *et al.* (*Atlas of Entomopathogenic Fungi*: 187 pp., 1988).

Clathrogaster Petri (1900), Hysterangiaceae. 2, Borneo.

Clathroporina Müll. Arg. (1882) = Porina Müll. Arg. fide McCarthy (*Lichenologist* **27**: 321, 1995), McCarthy & Malcolm (*Nova Hedwigia* **62**: 543, 1996), McCarthy & Malcolm (*Lichenologist* **29**: 1, 1997), Lücking & Vezda (*Willdenowia* **28**: 181, 1998; foliicolous spp.).

Clathroporinopsis M. Choisy (1929) ? = Topelia fide Hafellner & Kalb (*Biblthca Lichenol.* **57**: 161, 1995), McCarthy (*Taxon* **45**: 533, 1996; synonymy with *Porina*).

Clathrosphaera Zalewski (1888) nom. conf., anamorphic *Pezizomycotina*. See *Clathrosphaerina*. See van Beverwijk (*TBMS* **34**: 280, 1951).

Clathrosphaerina Beverw. (1951), anamorphic *Hyaloscypha*, Hso.0bP.1. 1 (conidia hollow, net-like), Europe. See Beverwijk (*TBMS* **34**: 289, 1951), Goos (*Mycol.* **79**: 1, 1987; review).

Clathrospora Rabenh. (1857) nom. rej., Pleosporaceae. Anamorph *Alternaria*-like. 5, widespread. See Shoemaker & Babcock (*CJB* **70**: 1617, 1992), Kruys *et al.* (*MR* **110**: 527, 2006; posn).

Clathrosporium Nawawi & Kuthub. (1987), anamorphic *Helotiales*, Hso.#eP.1. 1 (aero-aquatic, conidia hollow, net-like), Malaysia. See Nawawi & Kuthubutheen (*TBMS* **89**: 408, 1987), Hennebert (*CJB* **76**: 1596, 1998), Wang *et al.* (*Mycol.* **98**: 1065, 2006; phylogeny).

Clathrotrichum Pat. (1921) = Beniowskia fide Mason (*Mycol. Pap.* **2**: 27, 1928).

Clathrus P. Micheli ex L. (1753), Phallaceae. *c.* 16, widespread (subtropical; tropical). See Burk (*Mycotaxon* **8**: 463, 1979), Dring (*Kew Bull.* **35**: 1, 1980).

Claudopus Gillet (1876) = Entoloma fide Kuyper (*in litt.*).

Claurouxia D. Hawksw. (1988), ? Candelariaceae (L). 1, Europe. See Hawksworth (*SA* **7**: 65, 1988).

Clausaria Nyl. (1861) = Pertusaria fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Claussenomyces Kirschst. (1923), Helotiaceae. Anamorph *Dendrostilbella*. 19, widespread. See Iturriaga (*Mycotaxon* **42**: 327, 1991), Gamundí & Giaiotti (*N.Z. Jl Bot.* **33**: 515, 1995), Verkley (*MR* **99**: 187, 1995; asci), Gamundí & Romero (*Fl. criptog. Tierra del Fuego* **10**, 1998), Medardi (*Czech Mycol.* **59**: 101, 2007; review).

Claustula K.M. Curtis (1926), Claustulaceae. 1, New Zealand. See Buchanan & May (*N.Z. Jl Bot.* **41**: 407, 2003; conservation).

Claustulaceae G. Cunn. (1931), Phallales. 4 gen., 10 spp.

Clautriavia (Pat.) Lloyd (1909) = Phallus fide Stalpers (*in litt*).

Clauzadea Hafellner & Bellem. (1984), ? Porpidiaceae (L). 4, Europe. See Hafellner & Bellemère (*Nova Hedwigia* Beih. **79**: 319, 1984), Pietschmann (*Nova Hedwigia* **51**: 521, 1990; asci), Meyer (*Sendtnera* **8**: 85, 2002; monogr.), Buschbom & Mueller (*Mol. Phylogen. Evol.* **32**: 66, 2004; phylogeny).

Clauzadeana Cl. Roux (1984), Lecanoraceae (L). 1, widespread. See Roux (*Bull. Soc. linn. Provence* **35**: 101, 1983).

Clauzadella Nav.-Ros. & Cl. Roux (1996), Verrucariaceae (L). 1, France. See Navarro-Rosinés & Roux (*CJB* **74**: 1533, 1996).

Clauzadeomyces Diederich (1994), anamorphic *Pezizomycotina*, Hso.?.?. 1 (lichenicolous), Belgium. See Diederich (*Bull. Soc. linn. Provence* **45**: 418, 1994).

clava, a club-like fruiting structure, e.g. of *Cordyceps*.

clavacin, see patulin.

Clavaria Vaill. ex L. (1753) nom. cons., Clavariaceae. 28, widespread. See Corner (*Ann. Bot. Mem.* [A monograph of Clavaria and allied genera] **1**, 1950), Donk (*Reinwardtia* **2**: 441, 1954), Pine *et al.* (*Mycol.* **91**: 944, 1999; phylogeny), Dentinger & McLaughlin (*Mycol.* **98**: 746, 2006; phylogeny) sensu Linnaeus = *Clavariadelphus* fide.

Clavariaceae Chevall. (1826), Agaricales. 7 gen. (+ 8 syn.), 120 spp.

Lit.: Coker (*The Clavarias of the United States and Canada* [reprint, 1973], 1923; review), Corner (*Ann. Bot. Mem.* [A monograph of Clavaria and allied genera] **1**, 1950), Corner (*Ann. Bot. Mem.* [A monograph of Clavaria and allied genera] **1**: 1, 1950), Donk (*Reinwardtia* **1**, 1951; gen. names), Corner (*Ann. Bot. Mem.* [A monograph of Clavaria and allied genera, addenda] **16**, 1952), Corner (*TBMS* [A monograph of Clavaria and allied genera, addenda] **35**: 285, 1952), Corner (*Ann. Bot. Mem.* [A monograph of Clavaria and allied genera, addenda] **17**, 1953), Pilát (*Acta Mus. Nat. Prag.* **14B**: 129, 1958; European spp.), Thind (*The Clavariaceae of India*, 1961; 15 gen., 92 spp.; keys), Donk (*Persoonia* **3**: 199, 1964), Henry (*Ann. Carnegie Mus.* **39**: 125, 1967; keys 30 spp. W. Penn.), Petersen (*TBMS* **50**: 641, 1967; fam. interrelationships), Petersen (*Sydowia* **21**: 105, 1968), Corner (*Beih. Nova Hedwigia* **33**: 1, 1970), Petersen (*Friesia* **9**: 369, 1971; type studies of *Clavaria* and *Clavulinopsis*), Pilát (*Sborn. národ. muz. Praze* **27B**: 113, 1971; former Czechoslovakia), Berthier (*Biblthca Mycol.* **98**, 1976; world monogr.), Maas Geesteranus (*De fungi van Nederland Die Clavaroide fungi. Auriscalpiaceae, Clavariaceae, Clavulinaceae, Gomphaceae* [*Wetensch. Med. KNVV* **113**], 1976), Pegler & Young (*TBMS* **84**: 207, 1985), Thind & Sharda (*Kavaka* **14**: 9, 1986), Petersen (*Bull. N.Z. Dept. Sci. Industr. Res., Pl. Dis. Div.* [The clavarioid fungi of New Zealand] **263**: 143, 1988), Petersen (*Mycosystema* **2**: 159, 1989), Villarreal & Pérez-Moreno (*Micol. Neotrop. Aplic.* **4**: 119, 1991), Rodríguez-Armas *et al.* (*Docums Mycol.* **22**: 21, 1992), Pine *et al.* (*Mycol.* **91**: 944, 1999), Dentinger & McLaughlin (*Mycol.* **98**: 746, 2006), García-Sandoval *et al.* (*Mycotaxon* **94**: 265, 2005).

Clavariachaeta Lloyd (1922) nom. nud. ≡ Clavariachaete.

Clavariachaete Corner (1950), Hymenochaetaceae. 2, America (tropical). See Corner (*Ann. Bot. Mem.* [A monograph of Clavaria and allied genera] **1**: 268, 1950).

Clavariadelphaceae Corner (1970), Gomphales. 2 gen. (+ 1 syn.), 26 spp.

Clavariadelphus Donk (1933), Clavariadelphaceae. 19, widespread (temperate). See Wells & Kempton (*Mich. Bot.* **7**: 35, 1968; key N. Am. spp.), Methven (*Mycotaxon* **34**: 153, 1989; N. Am. spp.).

Clavariana Nawawi (1976), anamorphic *Pezizomycotina*, Hso.1bH.10. 1 (aquatic), widespread. See Nawawi (*TBMS* **67**: 217, 1976), Marvanová (*Tropical Mycology*: 169, 1997), Descals (*MR* **109**: 545, 2005).

Clavarichaetaceae Jülich (1982) = Hymenochaetaceae.

Clavariella P. Karst. (1881) = Ramaria Fr. ex Bonord. fide Corner (*Ann. Bot. Mem.* [A monograph of Clavaria and allied genera] **1**, 1950).

Clavariopsis De Wild. (1895), anamorphic *Pleosporales*, Hso.1bH.1. 2, widespread. See Petersen (*Mycol.* **55**: 21, 1963; key), Nawawi (*TBMS* **88**: 428, 1987; Malaysia), Belliveau & Bärlocher (*MR* **109**: 1407, 2005; phylogeny).

Clavariopsis Holterm. (1898) ≡ Holtermannia.

Clavascidium Breuss (1996), Verrucariaceae (L). 4, widespread. See Breuss (*Annln naturh. Mus. Wien* Ser. B, Bot. Zool. **98**: 41, 1996), Gueidan *et al.* (*MR* **111**: 1145, 2007; phylogeny).

Clavascina Beneš (1961), Fossil Fungi. 1 (Carboniferous), former Czechoslovakia.

clavate (1) club-like; narrowing in the direction of the base; (2) (of stipes of agarics), narrowing to the apex (Fig. 23.16). Cf. obclavate. See also clava.

clavatin, see patulin.

Clavatisporella K.D. Hyde (1995), ? Hyponectriaceae. 1, Irian Jaya.

Clavatospora Sv. Nilsson ex Marvanová & Sv. Nilsson (1971), anamorphic *Corollospora*, Hso.1bH.1. 3 (aquatic), widespread. See Marvanová & Nilsson (*TBMS* **57**: 531, 1971), Chen (*Fungal Science* Taipei **15**: 47, 2000), Campbell *et al.* (*Fungal Diversity Res. Ser.* **7**: 15, 2002; phylogeny), Descals (*MR* **109**: 545, 2005).

Claviceps Tul. (1853), Clavicipitaceae. Anamorph *Sphacelia*. 41 (mainly on *Poaceae*, rarely *Cyperaceae*), widespread. See Ergot, Poisonous fungi. See Brady (*Lloydia* **25**: 1, 1962; hosts), Loveless (*TBMS* **47**: 205, 1964; identification from honey dew), Tanda (*J. Agric. Sci., Tokyo* **5**: 85, 1981; vars.), Taber *in* Demain & Solomon (Eds) (*Biology of industrial microorganisms*: 449, 1985; review biology), Düvell (*Biblthca Mycol.* **126**, 1989; linear plasmid), Smit (*Biblthca Mycol.* **143**, 1992; transformation), Kuldau *et al.* (*Mycol.* **89**: 431, 1997; DNA), Anon. *in* Kren &

Cletria P. Browne (1756) = Clathrus fide Stalpers (*in litt.*).

Clibanites (P. Karst.) P. Karst. (1871), ? Bionectriaceae. 1 (on rotten wood), Finland. See Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Climacocystis Kotl. & Pouzar (1958), Fomitopsidaceae. 1, widespread (north temperate). See Ryvarden & Gilbertson (*Europ. Polyp.* **1**: 208, 1993).

Climacodon P. Karst. (1881), Phanerochaetaceae. 6, widespread. See Candoussau (*Bulletin de la Société Mycologique du Béarn* **104**: 3, 1998).

Climacodontaceae Jülich (1982) = Meruliaceae.

Climate change. There is widespread agreement among scientists that Earth's climate is changing as a result of human activity. The impacts of this change, which is towards global warming, cannot yet be predicted accurately, but concern has been expressed about anticipated mass extinctions of animal and plant species. To date, the impact on fungi, their response, and the impact of that response on humanity, have only just begun to be considered: public and political awareness remains very low. If mass extinctions also occur in the fungi as a result of climate change, many will be unrecorded, as so few of the world's fungal species are known (see Numbers of fungi). There is already some evidence that fruiting periods have changed for north-temperate macrofungi. As with animals and plants, the geographical distributions of fungi may move in response to climate change, but at present accessible distributional information is inadequate and there are no agreed criteria for determining whether fungi appearing in new areas are invasives or refugees. The implications for agriculture and forestry, through potential spread of crop diseases, have been largely overlooked. Not enough is known about how fungi will respond to temperature changes, nor about what impact that will have on, for example, the carbon cycle, although Dighton (2003) provides a scholarly introduction to this impending debate. Some habitats are more clearly threatened by global warming than others, and fungi known to occur only in those habitats (nivicolous myxomycetes, other alpine or arctic fungi, specialist mangrove swamp fungi etc.) can confidently be evaluated as under threat. For the rest, the current state of knowledge is rudimentary.

Clistosoma Clem. & Shear (1931) ≡ Cleistosoma.

Clithramia Nag Raj (1988), anamorphic *Pezizomycotina*, St.1eP.1. 1 (on *Oryza*), India. See Nag Raj (*CJB* **66**: 903, 1988).

Clithris (Fr.) Bonord. (1851) = Cenangium fide Minter (*in litt.*).

Clitocybe (Fr.) Staude (1857), Tricholomataceae. *c.* 300, widespread (esp. north temperate). *C. augeana* (frequently but incorrectly as *C. dealbata*), a mushroom-bed contaminant. The genus is polyphyletic and several segregate genera have recently been recognised. See Harmaja (*Karstenia* **10**: 5, 1969; key 43 spp. Finland), Singer (*Sydowia* **31**: 199, 1979; key 202 spp.), Bigelow (*Beih. Nova Hedwigia* **72**, 1982), Bigelow (*Beih. Nova Hedwigia* **81**, 1985; N. Am. spp.), Moncalvo *et al.* (*Syst. Biol.* **49**: 278, 2000; probably non-monophyletic), Harmaja (*Ann. bot. fenn.* **40**: 213, 2003), Lachapelle (*Revue du Cercle de Mycologie de Bruxelles* **3**: 17, 2003; key Europ. spp.), Mata & Petersen (*Mycotaxon* **86**: 303, 2003; type studies of neotropical spp.).

Clitocybula (Singer) Singer ex Métrod (1952), Marasmiaceae. *c.* 15, widespread (temperate). See Singer (*Sydowia* **31**: 233, 1979; key).

Clitopilina Arnaud (1952) nom. nud., Xenasmataceae.

Clitopiloidea (Romagn.) Largent (1994) = Entoloma fide Kuyper (*in litt.*).

Clitopilopsis Maire (1937) = Rhodocybe fide Singer (*Am. midl. Nat.* **37**: 527, 1946).

Clitopilus (Fr. ex Rabenh.) P. Kumm. (1871), Entolomataceae. *c.* 30, widespread (north temperate). *C. passeckerianus*, a mushroom-bed contaminant. See Ware (*Gdnrs' Chron.* **97**: 325, 1935), Singer (*Sydowia* **31**: 235, 1979; key), Baroni *et al.* (*Fungal Diversity* **6**: 13, 2001; Thailand), Legon & Roberts (*Mycologist* **16**: 114, 2002; Brit. sp.) See cat's ear.

Clohesyomyces K.D. Hyde (1993), anamorphic *Pezizomycotina*, Cpd.0eH.1. 1 (aquatic), Australia. See Hyde (*Aust. Syst. Bot.* **6**: 170, 1993).

Clohiesia K.D. Hyde (1995), Sordariales. 2, Australia. See Hyde (*Nova Hedwigia* **61**: 119, 1995; similarities with *Clypeosphaeriaceae*), Réblová & Winka (*Mycol.* **93**: 478, 2001), Untereiner *et al.* (*CJB* **79**: 321, 2001; phylogeny).

Clonophoromyces Thaxt. (1931), Laboulbeniaceae. 1, West Indies; Japan. See Terada & Tavares (*TMSJ* **34**: 357, 1993; Japan).

Clonostachyopsis Höhn. (1907) = Clonostachys fide Clements & Shear (*Gen. Fung.*, 1931), Schroers (*Stud. Mycol.* **46**: 1, 2001).

Clonostachys Corda (1839), anamorphic *Bionectriaceae*, Hso.0eH.15. 48, widespread (esp. Europe). See Hawksworth & Punithalingam (*TBMS* **64**: 89, 1975), Schroers *et al.* (*Mycol.* **91**: 365, 1999), Schroers (*Stud. Mycol.* **45**: 63, 2000; phylogeny), Schroers (*Stud. Mycol.* **46**: 1, 2001; monogr.).

Closteroaleurosporia Grigoraki (1924) ≡ Microsporum.

closterospore (in dermatology), a multinucleate phragmospore, as in *Trichophyton* (obsol.).

Closterosporia Grigoraki (1924) = Microsporum fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Closterosporium Sacc. (1883), anamorphic *Melanomma*, Cac.≡ eP.?. 1, Europe.

club fungi, the *Clavariaceae*.

club root, a disease of crucifers (*Plasmodiophora brassicae*), see *Plasmodiophora*.

cluster-cup, see aecium.

clypeate, having a clypeus.

Clypeispora A.W. Ramaley (1991), anamorphic *Mycosphaerella*, Cpd.0eH.1. 1, USA. See Ramaley (*Mycotaxon* **40**: 13, 1991).

Clypeocarpus Kirschst. (1941) = Mazzantia fide von Arx & Müller (*Beitr. Kryptfl. Schweiz* **11** no. 1, 1954).

Clypeoceriospora Sousa da Câmara (1946), Pezizomycotina. 1, Europe.

Clypeochorella Petr. (1923), anamorphic *Pezizomycotina*, St.0eH.?. 1, Europe.

Clypeococcum D. Hawksw. (1977), Dacampiaceae. 7 (on lichens), Europe; N. America. See Hawksworth (*J. Linn. Soc.* Bot. **75**: 196, 1977).

Clypeodiplodina F. Stevens (1927) = Ascochytulina fide Clements & Shear (*Gen. Fung.*, 1931).

Clypeolaria Tratt. (1825) nom. dub., Fungi. See Rudolphi (*Linnaea* **4**: 395, 1829; det. as *Insecta*).

Clypeolella Höhn. (1910) = Schiffnerula fide Hughes (*CJB* **62**: 2213, 1984), Hughes *in* Sugiyama (Ed.) (*Pleomorphic Fungi: The Diversity and its Taxonomic Implications*: 103, 1987), Hosagoudar (*Zoos' Print Journal* **18**: 1071, 2003).

Clypeolina Speg. (1923) ≡ Clypeolopsis.

Clypeolina Theiss. (1918), Micropeltidaceae. 1, Brazil.

Clypeolinopsis Bat. (1959) ? = Stomiopeltis fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Clypeolopsis F. Stevens & Manter (1925) ? = Stomiopeltis fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Clypeolum Speg. (1881), Pezizomycotina. 8, widespread (tropical). See Batista (*Publções Inst. Micol. Recife* **56**, 1959), Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962; synonymy with *Porina*).

Clypeomyces Kirschst. (1935) nom. dub., Fungi. See Petrak (*Sydowia* **1**: 61, 1947).

Clypeopatella Petr. (1942), anamorphic *Pezizomycotina*, St.0eH.?. 1, Rhodes.

Clypeophialophora Bat. & Peres (1962), anamorphic *Pezizomycotina*, St.0eH.?. 1, Brazil. See Batista & Peres (*Publções Inst. Micol. Recife* **358**: 8, 1962).

Clypeophysalospora H.J. Swart (1981), Clypeosphaeriaceae. 1 (from dead leaves), Australia. See Kang *et al.* (*Mycoscience* **40**: 151, 1999).

Clypeoporthe Höhn. (1919), Valsaceae. Anamorph *Phaeocytostroma*. 4 (grass culms), widespread (tropical). See Sivanesan & Waller (*Phytopath. Pap.* **29**, 1986), Barr (*Mycotaxon* **41**: 287, 1991).

Clypeoporthella Petr. (1924), ? Diaporthaceae. Anamorph *Phomopsis*. 2, Europe; N. America. See Barr (*Mycol. Mem.* **7**, 1978).

Clypeopycnis Petr. (1925), anamorphic *Pezizomycotina*, Cpd.0eH.15. 3, widespread. See Sutton & Pascoe (*Stud. Mycol.* **31**: 177, 1989), Priest (*Fungi of Australia: Septoria* **0**, 2006).

Clypeopyrenis Aptroot (1991), Pyrenulaceae (L). 1, C. & S. America. See Aptroot (*Biblthca Lichenol.* **44**: 40, 1991), Aptroot *et al.* (*Biblthca Lichenol.* **97**, 2008; Costa Rica).

Clypeorhynchus Kirschst. (1936) = Diaporthe fide von Arx & Müller (*Beitr. Kryptfl. Schweiz* **11** no. 1,

1954).

Clypeoseptoria F. Stevens & P.A. Young (1925), anamorphic *Pezizomycotina*, St.0fH.?. 3, Hawaii; Brazil. See Ciferri & Batista (*Atti Ist. bot. Univ. Lab. Crittog. Pavia* sér. 5 **14**: 53, 1957).

Clypeosphaeria Fuckel (1870), Clypeosphaeriaceae. 31 (dead wood and bark), widespread. See Barr (*SA* **8**: 1, 1989), Hyde *et al.* (*Sydowia* **50**: 21, 1998), Kang *et al.* (*Mycoscience* **40**: 151, 1999), Tsui *et al.* (*Mycol.* **93**: 1002, 2001; Hong Kong), Jeewon *et al.* (*MR* **107**: 1392, 2003; phylogeny).

Clypeosphaeriaceae G. Winter (1886), Xylariales. 8 gen. (+ 3 syn.), 49 spp.

Coelomorum Paulet (1793) = Helvella fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Coelomyces, see *Coelomomyces*.

Coelomycetes (obsol.). Widespr., saprobic or parasitic on higher plants, fungi, lichens, vertebrates, also recovered from the widest range of ecological niches. 1000 gen. (+ 500 syn.), 7000 spp. The term 'coelomycetes' merely indicates that conidia are formed within a cavity lined by fungal or fungal/host tissue. The range of conidiogenous events is more limited than in hyphomycetes (q.v.), but solitary, 'phialidic', and 'annellidic' types predominate, and 'tretic' and 'basauxic' are absent. See Anamorphic fungi. For modern reassessments of coelomycete systematics see Sutton (*in* Ainsworth *et al.* (Eds), *The Fungi* **4A**: 513, 1973), Nag Raj (*in* Cole & Kendrick (Eds), *Biology of conidial fungi* **1**: 43, 1981), Nag Raj (*Coelomycetous anamorphs with appendage-bearing conidia*, 1993).

Pap.* 1961-1981; VI, 1977, generic names proposed for *Coelomycetes*), Nag Raj *et al.* (*Icones generum coelomycetum* I-XIII, 1972-1982), Nag Raj *et al.* (*CJB* **49-67**; Genera coelomycetum I-XXVIII), Mathur (*The Coelomycetes of India*, 1979), Kendrick (*The whole fungus*, 1979), Michaelides *et al.* (*Icones generum coelomycetum* suppl.), Sutton (*The Coelomycetes*, 1980), Nag Raj (*in* Cole & Kendrick, *Biology of conidial fungi*: 43-84, 1981). See also under Mitosporic fungi.

This artificial class has been traditionally separated into three orders, Sphaeropsidales, characterized by pycnidial conidiomata, *Melanconiales* with acervular conidiomata, and *Pycnothyriales* with pycnothyrial conidiomata. An alternative system for anamorphic fungi as a whole (now obsol.) was suggested by Sutton (1980) where differences in conidiogenesis were used for separation of taxa at the class, subclass and ordinal levels with conidiomatal structure used at the subordinal level. The traditional separation is:

(1) **Melanconiales** (fams. Melanconiaceae, Stilbosporaceae, Coryneaceae - see Sutton, 1973 for discussion for family names). Mycelium is within the host or substratum. Conidiogenous events are various. Conidiomata are subcuticular, epidermal, subepidermal, peridermal or subperidermal and the conidiogenous layer is formed within the substratum. Dehiscence is by rupture of the overlying tissues and conidial masses may be dry or slimy. Conidiomata become erumpent at maturity and grade into sporodochial conidiomata (tuberculariaceous hyphomycetes). In culture such fungi cannot be distinguished from many hyphomycetes.

Lit.: von Arx (*A revision of the fungi classified as Gloeosporium*, 1970), Guba (*Monograph of Monochaetia and Pestalotia*, 1961), Vassiljevsky & Karakulin (*Fungi imperfecti parasitici*, Pt. II. Melanconiales, 1950).

(2) **Sphaeropsidales** (Phomales, Phyllostictales; fams. Sphaerioidaceae, Nectrioidaceae, Leptostromataceae, Excipulaceae, Discellaceae, Asbolisiaceae etc. – see Sutton, 1973 for discussion of family names). Mycelium may be immersed in the substratum or superficial. Conidia may be dry or slimy and conidiogenous events are various. Conidiomata are superficial, semi-immersed or immersed with the conidiogenous layer lining the walls of the locule(s). Diversity in conidiomatal structure is considerable in terms of tissue composition (see tissue types), number and arrangement of locules, relationship to the substrata and type of dehiscence (see Sutton, 1980; Nag Raj, 1981, for the range of variation).

Kazak.* **5**, 1970), Punithalingam (*Studies on Sphaeropsidales in culture* I-III, *Mycol. Pap.* 1970-81).

(3) **Pycnothyriales** (fams. Pycnothyriaceae, Microthyriopsidaceae, Peltopycnidiaceae, Actinothyriaceae, Actinopeltaceae, Rhizothyriaceae, Peltasteraceae, see Katumoto, 1975, for discussion of family names). Mycelium may be immersed in the substratum or superficial; when superficial it may bear hyphopodia and/or setae. Conidia are produced in several ways. Conidiomata are superficial or subcuticular, flattened, uni- or multi-locular, sometimes attached to the substratum by a central column of tissue or hypostroma, otherwise attached at the periphery; conidiogenous layer may be restricted to the upper or lower surface or occur on both; tissue structure of the pycnothyrium and nature of marginal cells are important generic criteria. Anamorphs of Dothideales.

Coemurus, see *Coeomurus*.

Coenicia Trevis. (1861) ? = Pyrenula Ach. (1809) fide Aguirre-Hudson (*Bull. Br. Mus. nat. hist.* Bot. **21**: 85, 1991).

coeno- (prefix), living together, e.g. multinucleate.

Coenocarpus Fr. (1825) ≡ Chaenocarpus Spreng.

coenocentrum (of oomycetes), a small deeply staining body at the centre of the multinucleate oosphere to which the egg-nucleus goes.

coenocyte (adj. **coenocytic**), a multinucleate mass of protoplasm; (adj., of fungi), non-cellular, in the sense of non-septate; Vuillemin (1912) used **coenocyte** for a cell usually multinucleate and **apocyte** for one temporarily or secondarily multinucleate; **coenocytium** originally used for a structure resulting from nuclear division not followed by cytoplasmic cleavage, in contrast to a **syncytium**, a multinucleate structure resulting from the fusion of several protoplasts.

coenogametes, multinucleate gametangia (q.v.) which, upon fusion, give a **coenozygote**.

Coenogoniaceae Stizenb. (1862), Ostropales. 1 gen. (+ 13 syn.), 87 spp.

coenozygote, see coenogametes.

Coeomurus Gray (1821) nom. rej. ≡ Uromyces fide Berndt (*in litt.*).

Coevolution. Reciprocal evolutionary adaptations between disparate organisms leading to their interdependence. A process widespread in fungi as about two-thirds of the spp. form intimate relationships with other organisms as commensals, mutualists, or pathogens. Most studied in pathogen-host gene-for-gene (q.v.) 'arms-races'.

Collecephalus J.A. Spencer (1972), anamorphic *Pezizomycotina*, Hso.0eH.6. 1, USA. See Spencer (*Hemerocallis J.* **26**: 15, 1972).

Collection and preservation. Carefully dried specimens of many fungi retain at least their microscopic structure for many years. Their preservation in dried reference collections as research and voucher material is therefore recommended. For most taxa, it is only practicable to retain fruit-bodies in dried collections, though mycelia can be preserved as living cultures. Most fungi with fleshy fruit bodies shrink considerably on drying, and such features as colour are frequently lost. Good field notes on size, shape, colour, texture etc. are thus important, and colour photographs are valuable. Freeze-drying (lyophilization) of fleshy fungi often gives satisfactory results (Kendrick, *Mycol.* **61**: 392, 1969), although the resulting specimens are fragile.

The experienced worker when making a collection gives attention to (1) conservation: ensuring that the gathering is unlikely to affect the continuing presence of the fungus in that location; (2) quality: representative material must be gathered in a range of developmental stages (including those with full-sized spores in or on the cells producing them and appearing ready for release, but also including when possible earlier and later stages); (3) amount: where possible, enough material should be collected for investigation not only by the collector but also later by others; and (4) field notes, ensuring that features which will deteriorate on drying are adequately described, and that as much information as possible is given about the location and timing of the collection (including, where possible, latitude, longitude, altitude in m above sea level and, where appropriate, aspect), abundance (not what is being counted - ascoma, basidioma etc. - the number seen - a logarithmic scale may be appropriate - the time taken to see that quantity, and whether the find was serendipitous or the result of a search - in the case of an unsuccessful search, an abundance of zero may be recorded), associated organisms (e.g. the species of plant on which the fungus occurs), the part of the organism (e.g. leaf) or other substratum, and details of the nature of any association (necrotrophic parasite etc.). Many lichens are very slow-growing, so particular care should be taken to ensure that populations are not unduly denuded by collectors. Field observations may suffice, and necessary chemical tests can sometimes be carried out in situ. It is possible to assess the condition of immersed and stromatic microfungi in the field by cutting transversely across the fruit bodies and examining their contents preferably with a hand-lens; where spores are present the inner surface of the fruit-body is usually shiny, and the contents will swell if a drop of water is added. Collections should be placed in packets or baskets as appropriate, ensuring that fragile specimens are protected from crushing, and that there is an unambiguous link between field notes and specimen. Plastic bags are not recommended due to the uncontrollable build-up of humidity levels. Where feasible, specimens should be collected along with their substratum, to minimize disturbance of their structures. Knives, folding saws or secateurs may be appropriate, and for rock-inhabiting lichens a geological hammer and masonry chisel may be needed. After as short a time as possible, and if necessary after microscopical examination, the material must be dried. Many leaf-fungi are best pressed between drying papers, although delicate hyphomycetes etc. may be damaged by such a process and should be air-dried. Specimens of microfungi on wood and bark, and most macrofungi, such as polypores and some gasteromycetes, should be dried in a current of warm dry air, ideally in a specially constructed dryer. Spore prints (on black paper if the spores are pale) of hymenomycetes are valuable, and can sometimes later be used for culturing.

Once dry, specimens are usually kept loose, to facilitate later observations. Microfungi should be protected by glassine inner bags in folded paper outer packets, which may be fixed onto herbarium sheets or kept in filing cabinets. Fragile specimens, especially myxomycetes and macrofungi, are normally pinned or glued onto small pieces of card and kept in small cardboard boxes. Nowadays, most collection data are stored in computerized databases, but packets must still be labelled with at least basic information in order to facilitate curation. Illustrations, photographs etc. must also be cross-referenced with the specimen. Semi-permanent slide preparations (see Mounting media) should always be kept if possible, either in protective cardboard boxes within the specimen packet or in a separate collection. This minimizes the need for future workers to deplete the specimen further, and is particularly important for type or authentic collections.

colliculose (colliculous), with rounded swellings; blistered.

Colligerites K.P. Jain & R.K. Kar (1979), Fossil Fungi. 2 (Palaeocene), India.

Collodendrum Clem. (1909) ≡ Tremellodendron.

Collodiscula I. Hino & Katum. (1955), Xylariaceae. Anamorph *Acanthodochium*. 1 (on dead bamboo culms), Japan; Taiwan. See Samuels (*SA* **6**: 121, 1987; status), Samuels *et al.* (*Mycotaxon* **28**: 453, 1987), Ju & Rogers (*Mycol.* **82**: 342, 1990; posn), Læssøe (*SA* **13**: 43, 1994), Læssøe & Spooner (*Kew Bull.* **49**: 1, 1994), Ju & Rogers (*Mycotaxon* **73**: 343, 1999), Kang *et al.* (*Fungal Diversity* **2**: 135, 1999; uncertain posn).

Collodochium Höhn. (1902), anamorphic *Pezizomycotina*, Hsp.0eH.?. 1, Europe.

Collolechia A. Massal. (1854) = Placynthium fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Collonaemella Höhn. (1915) = Cornularia fide Clements & Shear (*Gen. Fung.*, 1931), Sutton (*Mycol. Pap.* **141**, 1977).

Collonema Grove (1886) nom. dub., Pezizomycotina. Based on an effete ascoma. See Sutton (*Mycol. Pap.* **141**: 45, 1977).

Collopezis Clem. (1909) ≡ Tjibodasia.

Collopus Earle (1909) = Mycena fide Singer (*Agaric. mod. Tax.*, 1951).

Collostroma Petr. (1947), anamorphic *Pezizomycotina*, St.0eH.?. 1, Austria.

collulum, the neck of a conidiogenous cell (Zaleski, 1927).

Collybia (Fr.) Staude (1857) nom. cons., Tricholomataceae. 3, widespread (north temperate). The majority of taxa formerly classified in *Collybia* have now been transferred to *Gymnopus* and *Rhodocollybia*. See Antonín & Noordeloos (*Libri Botanici* **17**, 1997; European spp.), Antonín *et al.* (*Mycotaxon* **63**: 359, 1997; taxonomy), Moncalvo *et al.* (*Syst. Biol.* **49**: 278, 2000; phylogeny), Hughes *et al.* (*MR* **105**: 164, 2001; phylogeny), Mata & Petersen (*Mycotaxon* **86**: 303, 2003; type studies neotropical species (s.lat.)).

Collybidium Earle (1909) ≡ Flammulina.

Collybiopsis (J. Schröt.) Earle (1909) = Marasmius fide Kuyper (*in litt.*).

Collyria Fr. (1849) nom. dub., Agaricales. See Singer (*Agaric. mod. Tax.* edn 3, 1975).

colon (:) (in author citations), see Nomenclature.

Colonnaria Raf. (1808) = Clathrus fide Dring (*Kew Bull.* **35**: 1, 1980).

Colonomyces R.K. Benj. (1955), Euceratomycetaceae. 1, USA; Europe. See Benjamin (*Aliso* **3**: 186, 1955).

colony (of bacteria and yeasts), a mass of individuals, generally of one species, living together; (of mycelial fungi), a group of hyphae (frequently with spores) which, if from one spore or cell, may be one individual.

Colour. Many fungi can be characterized partly by the colour of their fruitbodies or other organs, or by the colour of pigments exuded into pure culture media. Describing those colours has often been attempted without reference to standards, with unsatisfactory results. Names of colours should therefore be given precision by reference to a colour standard, preferably the Munsell Color System as exemplified in the *Munsell book of color* (various editions available through the internet). This work is expensive and the 'Mycologists' Color Kit' designed for individual ownership and produced by the Munsell Color Co. seems to be no longer available. The *Methuen handbook of colour* by Kornerup, edn 3, 1984 (an English translation of the Danish *Farver i Farver* by Kornerup & Wanscher, edn 2, 1967) is an inexpensive colour chart for which the equivalent Munsell notation is given for each colour; Rayner's *A mycological colour chart*, 1970 (now unavailable), illustrated Dade's nomenclature (see below).

Since its publication in 1912 Ridgway's *Color*

standards and color nomenclature, which covers 1,115 colours, has been much used by biologists but copies of this work must now be referred to with caution due to variations having occurred in some colours depending on the amount of use a copy has received and the care which has been given to its preservation. Tables for Ridgway/Munsell conversions accompany Rayner's chart. The Pantone company produces specialist colour charts which may also be applicable.

Other general colour standards include Oberthur & Dauthenay, *Repertoire de couleurs*, 2 vols., 1905 (for Ridgway equivalents see Snell & Dick, *Glossary of mycology*, rev. edn. 1971); Klinksieck & Vallette, *Code de couleurs*, 1908; Maerz & Paul, *A Dictionary of color*, edn 2, 1950; and Wilson, *Horticultural colour chart*, 2 vols., 1939-42. Kelly & Judd (*The ISCC-NBS method of designating colors and a dictionary of color names*, 1955 [reprint 1963], National Bureau of Standards, Washington Circular 553) list the Inter-Society Color Council-NBS equivalents of 7,500 colour names including those of Ridgway and Maerz & Paul; a supplement provides standard colour patches (ISCC-NRSS, *Centroid color charts*, *Standard sample* No. 2106). Locquin, *Guide des coleurs naturelles* (*Obs. Disp. mycol.* **1** (2), 1975) has about 1,536 colour patches, Pfaff (*Z. Mykol.* **49**: 237, 1983; comparison colour atlases), *RHS Colour Chart*, 2000 (Royal Horticultural Society, UK) inc. 800 samples).

Saccardo (*Chromotaxia*, 1891; edn 3, 1912) gave the Latin, Italian, French, English and German names and synonyms of 50 colours of mycological interest, and Dade (*Mycol. Pap.* **6** (edn 2), 1949) related Saccardo's colours to the Ridgway standard, suggested additional Latin colour terms for mycological use, and gave an extended list of colour names. The colour terminology used by Fries for agarics was discussed by Wharton (*Grevillea* **13**: 25, 1884) whose paper has been reprinted in part by Stearn (*Botanical Latin*, edn 4, 1992) who also reprints Dade's chart and gives additional interesting historical information on colour terminology. Locquin, *Chromotaxis: Code mycologique et pedologique des couleurs*, 1958 (see *Mycol.* **50**: 447, 1958) related a number of colours to a series of colour transparencies. See Tocker *et al.* (*Taxon* **40**: 201, 1991; survey colour charts).

Colour names are omitted from this *Dictionary* although a few general colour terms such as dematiaceous, hyaline, inquinant, etc., and those given below have been compiled.

Corner (*Clavaria*, 1950) proposed the following series of terms for the more precise description of pigmentation of basidiomata and hyphae: **achroic**, without true pigmentation; **euchroic**, having true pigmentation as opposed to **epichroic**, discoloration due to injury; **hysterochroic**, slowly discoloured from base to apex in old age; euchroism may be **acrochroic**, coloured specially in the hyphal tips at the growing point, **metachroic**, changing colour through the appearance of a new pigment in maturer tissue, **ectochroic**, pigment on the outside of the hypha, **mesochroic**, pigment in the hyphal wall, or **endochroic**, pigment inside the cell. The last may be subdivided according to whether the pigment is diffused in the cytoplasm (**cytochroic**), in the cell vacuoles (**cystochroic**) or in oil drops (**lipochroic**). Cf. Pigments.

colour of the reverse, the colour of the underside of a fungus culture in a tube or Petri dish.

Colpoma Wallr. (1833), Rhytismataceae. Anamorph *Conostroma*. 14, widespread. See Twyman (*TBMS* **29**: 234, 1946), Johnston (*N.Z. Jl Bot.* **29**: 405, 1991; NZ), Medardi (*Riv. Micol.* **45**: 239, 2002; Italy), Buchanan & May (*N.Z. Jl Bot.* **41**: 407, 2003; conservation), Hou & Piepenbring (*Forest Pathology* **35**: 359, 2005; China).

Colpomella Höhn. (1926) nom. dub., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Coltricia Gray (1821), Hymenochaetaceae. 20, widespread. See Pegler (*The polypores [Bull. BMS Suppl.]*, 1973), Legon (*Mycologist* **17**: 42, 2003; UK).

Coltriciaceae Jülich (1982) = Hymenochaetaceae.

Coltriciella Murrill (1904), Hymenochaetaceae. 7, widespread. See Murrill (*Bull. Torrey bot. Club* **31**: 348, 1904), Wagner & Fischer (*Mycol.* **94**: 998, 2002).

Coltriciopsis Teixeira (1991) = Coltricia fide Ryvarden (*Svensk Bot. Tidskr.* **68**: 276, 1974).

columella, a sterile central axis within a mature fruitbody which may be uni- or multicellular, unbranched or branched, of fungal or host origin; (of gasteromycetes, after Cunningham) **axile -**, when an axis in the gleba; **dendroid -**, having lateral branches, as in *Gymnoglossum*; **percurrent -**, joining the peridium at the apex of gleba; **pseudo-**, embryonic tissue in the mature peridium of *Geastrum*; **simple -**, not branched, as in *Secotium*.

Columnocystis Pouzar (1959) = Veluticeps fide Hjortstam & Tellería (*Mycotaxon* **37**: 53, 1990).

Columnodomus Petr. (1941), anamorphic *Pezizomycotina*, St.0eH.?. 1, Europe.

Columnodontia Jülich (1979), Meruliaceae. 1, S.E. Asia; Australasia. See Jülich (*Persoonia* **10**: 326, 1979).

Columnomyces R.K. Benj. (1955), Laboulbeniaceae. 1, USA. See Benjamin (*Aliso* **3**: 185, 1955), Tavares (*Mycol. Mem.* **9**: 627 pp., 1985), Santamaría (*Mycol.* **96**: 761, 2004).

Columnophora Bubák & Vleugel (1916), anamorphic *Pezizomycotina*, Hso.0eP.1. 1, Europe.

Columnosphaeria Munk (1953), Dothioraceae. Anamorph *Aureobasidium*. 1, widespread. See von Arx & Müller (*Stud. Mycol.* **9**, 1975), Barr (*Harvard Pap. Bot.* **6**: 25, 2001), Schoch *et al.* (*Mycol.* **98**: 1041, 2006; phylogeny).

Columnothyrium Bubák (1916), anamorphic *Pezizomycotina*, Cpt.0eH.?. 1, Europe.

Colus Cavalier & Séchier (1835), Phallaceae. 4, widespread.

Coma Nag Raj & W.B. Kendr. (1972), anamorphic *Ascocoma*, Cac.0bP.19. 1, Australasia. See Sutton (*Nova Hedwigia* **25**: 161, 1974), Swart (*TBMS* **87**: 603, 1987; teleomorph), Beilharz & Pascoe (*Mycotaxon* **91**: 273, 2005).

comate, having hairs; shaggy.

Comatospora Piroz. & Shoemaker (1971), anamorphic *Pezizomycotina*, St.1eH.19. 1, Canada. See Pirozynski & Shoemaker (*CJB* **49**: 539, 1971).

Combea De Not. (1846), Roccellaceae (L). 1, S. Africa; USA. See Tehler (*CJB* **68**: 2458, 1990; cladistics), Myllys *et al.* (*Bryologist* **101**: 70, 1998), Myllys *et al.* (*Lichenologist* **31**: 461, 1999; DNA), Lücking *et al.* (*Mycol.* **96**: 283, 2004; phylogeny), Tehler & Irestedt (*Cladistics* **23**: 432, 2007).

Combodia Fr. (1849) ? = Lasiodiplodia fide Sutton

(*Mycol. Pap.* **141**, 1977).

Comesella Speg. (1923), ? Dothideales. 1 (on *Pteridophyta*), Cuba.

Comesia Sacc. (1884), ? Helotiales. 2 or 3, Europe; N. Africa.

Cometella Schwein. (1835) ≡ Clasterosporium fide Ellis (*Mycol. Pap.* **70**, 1958).

commensalism, a form of symbiosis (q.v.).

Comminutispora A.W. Ramaley (1996), Capnodiales. Anamorph *Hyphospora*. 1, USA. See Ramaley (*Mycol.* **88**: 132, 1996), Hambleton *et al.* (*Mycol.* **95**: 959, 2003; phylogeny).

commissure, a closing join; a seam.

commixt, mixed with; intermingled.

Common names (also vernacular names). For fungi, these should be printed in Roman (not italic) type and decapitalized. They can be divided into two general categories: those derived from the scientific Latin name of a genus or higher taxonomic rank (common in scientific writing), and those of the language of the user, rather than the scientific Latin binomial or trinomial (generally used by field mycologists). Common names used in scientific writing may be either singular or plural, e.g. aspergillus (aspergilli), ascomycete(s), fusarium (fusaria), etc. Such use seems unobjectionable as it enables taxa to be distinguished from the individuals of which they are composed, e.g. phytophthoras = species of *Phytophthora*; see Seifert *et al.*, *Stud. Mycol.* **45**, 2000).

In English, in marked contrast to flowering plants, few fungi (incl. lichen-forming species) have common names which are genuinely ancient; only twenty-five or so fungi (e.g. fly agaric, blewits, morel, puff ball) have achieved recognition by the *Shorter Oxford Dictionary* and *Webster's Dictionary*. Basidiomycetes and other conspicuous fungi have, however, been recognized by common names from earliest times, and many ancient names may be supposed lost along with so much of Britain's folk heritage. There have been numerous attempts with varying success to generate modern common names for larger fungi (and occasionally for microfungi; see Cooke, *Handbook of British fungi*, 1871), frequently by more or less literal English versions of the scientific names, most recently by the British Mycological Society (see Internet). Lichens used by man for dyeing, or other purposes, or eaten by reindeer were also often given common names, e.g. crottle, heather rags, lungwort, manna, old man's beard, orchil, rock tripe. Common names for diseases of plants, man, and animals caused by fungi are also widely used in both technical and popular writing, and a many plant disease names are also applied to the pathogens themselves, e.g. rust, smut, powdery mildew (see British Society for Plant Pathology. Names of British Plant Diseases and their Causes *Phytopathological Papers* **28**, 1984).

Common names for fungi in other languages are often more abundant and diverse than for English, but may not be so well documented. Many examples can be found with Internet search engines (see Internet). See also Lundqvist & Persson (*Svenska Svampnamn*, 1987; 2584) [Swedish names]; Ulvinen *et al.* (*Karstenia* **29** (Suppl.), 1989) [Finnish larger fungi]. See also Classification, Dyeing, Nomenclature.

community, any phytosociological taxon.

Comocephalum Syd. (1939), anamorphic *Pezizomycotina*, Cpd.#eP.?. 1, Ecuador.

Comocheila A. Massal. (1860) = Phlyctis fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Comoclathris Clem. (1909), Diademaceae. Anamorph *Alternaria*-like. 21, America; Europe. See Shoemaker & Babcock (*CJB* **70**: 1617, 1992; key), Barr (*SA* **12**: 27, 1993; synonym of *Graphyllium*).

comose, having hairs in groups or tufts.

compaginate, joined tightly together.

companion cell, contiguous donor gametangium of *Olpidiopsidales*.

compatible (of mating types, strains, etc.), able to be cross-mated; cross-fertile; **hemi-**, a homokaryon compatible with 1 of the 2 components of the dikaryon. See Sex.

complanate, flat; smooth.

complement-fixation test, a sensitive test by which antigen-antibody reaction may be detected and quantified. The test depends on the ability of antigens after reacting with their specific antibodies to 'fix' **complement** (a group of proteins normally present in freshly isolated serum) the presence of which is necessary for the lysis of red blood cells by haemolysin (red-cell-immune serum).

Completoria Lohde (1874), Completoriaceae. 1 (on prothalli of *Pteridophyta*), widespread (north temperate). See Atkinson (*Cornell Univ. Agric. Exp. Stn Bull.* **94**: 252, 1895), Tucker (*Mycotaxon* **13**: 481, 1981), Humber (*Mycotaxon* **34**: 441, 1989).

Completoriaceae Humber (1989), Entomophthorales. 1 gen., 1 spp.

Lit.: Atkinson (*Bot. Gaz.* **19**: 467, 1894), Humber (*Mycotaxon* **34**: 441, 1989).

complex, sometimes used to designate a group of closely related species.

Complexipes C. Walker (1979), anamorphic *Tricharina*, Hso.0eP.1. 2, widespread. See Yang & Korf (*Mycotaxon* **23**: 457, 1985), Lee & Ka (*Korean J. Mycol.* **18**: 127, 1990; Korea), Pacioni *et al.* (*Micologia e Vegetazione Mediterranea* **13**: 3, 1998).

complicate, bent upon itself.

compound, made up of a number of parts.

compressed (of a stipe), flattened transversely.

Compsocladium I.M. Lamb (1956), Ramalinaceae (L). 1, New Guinea. See Lamb (*Lloydia* **19**: 157, 1956), Ekman (*Op. bot.* **127**: 148 pp., 1996), Frisch (*Biblthca Lichenol.* **96**: 73, 2007; Ecuador).

Compsomyces Thaxt. (1894), Laboulbeniaceae. 7, widespread. See Santamaría (*Fl. Mycol. Iberica* **5**, 2003; Iberian peninsula).

Compsosporiella Sankaran & B. Sutton (1991) = Anisomeridium fide Sankaran & Sutton (*MR* **95**: 1289, 1991), Harris (*More Florida Lichens*, 1995).

Computing, has numerous applications in mycology, and pertinent papers are cited under appropriate topics. For coding of characters for use in microbial databases see Gams *et al.* (*J. gen. microbiol.* **134**: 1667, 1988) and Rogosa *et al.* (*Coding microbiological data for computers*, 1986). See also Authors, Genetic Resource Collections, Internet, Inventorying, Literature, Neural networks, Numerical taxonomy.

Concamerella W.L. Culb. & C.F. Culb. (1981) = Parmotrema fide Culberson & Culberson (*Bryologist* **84**: 307, 1981), Adler (*Mycotaxon* **38**: 331, 1990; key), Thell *et al.* (*Mycol. Progr.* **3**: 297, 2004; phylogeny), Blanco *et al.* (*Mycol.* **97**: 150, 2005; phylogeny), Blanco *et al.* (*Mol. Phylogen. Evol.* **39**: 52, 2006; phylogeny).

concatenate, in chains; catenulate.

concave (esp. of a pileus), hollowed out; basin-like.

concentric bodies, ultrastructures found in many lichenized fungi and also in some other fungi such as *Rhopographus*, *Sphaerotheca*, *Cercospora*, *Pseudopeziza*, *Sphaceloma*; 'elliptical bodies'. See Griffiths & Greenwood (*Arch. Microbiol.* **87**: 285, 1972), Pons *et al.* (*TBMS* **83**: 181, 1984), Beilharz (*TBMS* **84**: 79, 1985), Meyer (*Mycol.* **79**: 44, 1987; in granules in *Allomyces*).

conceptacle, any hollow structure producing spores or spermatia.

conchate (conchiform), like a bivalve shell.

Conchatium Velen. (1934) = Cyathicula fide Baral (*SA* **13**: 113, 1994).

Conchites Paulet (1791) = Auricularia fide Donk (*Taxon* **7**: 174, 1958).

Conchomyces Overeem (1927), Tricholomataceae. 2, Indonesia. See Thorn *et al.* (*Mycol.* **92**: 241, 2000; phylogeny).

Conchyliastrum Zebrowski (1936), Fossil Fungi ? Chytridiomycetes. 2 (Cambrian to ? Recent), Australia.

concolorous, of one colour.

concrescent, becoming joined.

concrete, joined by growth.

conditioning, the process by which fungi enzymically soften up substrata such as dead leaves before detritivorous animals can eat them.

conducting hypha, see hypha.

Condylospora Nawawi (1976), anamorphic *Pezizomycotina*, Hso.0fH.10. 3 (aquatic), pantropical. See Nawawi & Kuthubutheen (*Mycotaxon* **33**: 329, 1988), Santos-Flores *et al.* (*Caribb. J. Sci.* **32**: 116, 1996; Puerto Rico), Chan *et al.* (*Fungal Diversity* **5**: 89, 2000; Hong Kong).

conferted, near together; crowded.

Conferticium Hallenb. (1980), Stereaceae. 4, widespread (north temperate). See Ginns & Freeman (*Biblthca Mycol.* **157**, 1994), Larsson & Larsson (*Mycol.* **95**: 1037, 2003; phylogeny).

Confertobasidium Jülich (1972) = Scytinostromella fide Ginns & Freeman (*Biblthca Mycol.* **157**, 1994).

Confertopeltis Tehon (1933) nom. dub., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Conferva L. (1753), Algae. Algae.

confervoid, composed of loose filaments or cells.

Confistulina Stalpers (1983) = Fistulina.

confluent (1) (of sori, etc.), coming together; running into one another; (2) (of the flesh of a stipe), continuous with the trama of the pileus.

congeneric, one of two or more taxa considered to belong to one genus; cf. synonym.

congested, very near together.

conglobate (1) massed into a ball; (2) (of the bases of stipes), together making a fleshy mass.

conglutinate, glued together; esp. of paraphyses in *Lecanorales*.

Conia Vent. (1799) nom. rej. = Lepraria fide Sutton (*in litt.*).

Coniambigua Etayo & Diederich (1995), anamorphic *Pezizomycotina*. 1, Spain. See Etayo & Diederich (*Flechten Follmann* Contributions to Lichenology in Honour of Gerhard Follmann: 207, 1995), Diederich (*Herzogia* **16**: 41, 2003).

Coniangium Fr. (1821) = Arthonia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995), Grube *et al.* (*Mycol.* **96**: 1159, 2004).

Coniarthonia Grube (2001), Arthoniaceae (L). 6, widespread. See Grube (*Lichenologist* **33**: 492, 2001).

Conicomyces R.C. Sinclair, Eicker & Morgan-Jones (1983), anamorphic *Pezizomycotina*, Hsy.0fH.15. 2, widespread. See Illman & White (*CJB* **63**: 419, 1985; addit. spp.), Seifert (*Mycotaxon* **71**: 301, 1999; Canada).

Conicosolen F. Schill. (1927) = Psorotheciopsis fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Conida A. Massal. (1856) = Arthonia fide Santesson (*Symb. bot. upsal.* **12** no. 1: 1, 1952), Calatayud *et al.* (*Biblthca Lichenol.* **88**: 67, 2004).

conidange, a small pycnidium (in a lichen thallus) having no stout wall (des Abbayes, 1951) (obsol.).

Conidella Elenkin (1901) ? = Arthonia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995), Calatayud *et al.* (*Biblthca Lichenol.* **88**: 67, 2004).

Conidial nomenclature. The traditional approach to nomenclature of spores of anamorphic fungi is that of Saccardo who differentiated 7 morphological types based on shape and septation (amero- [with no septum], dictyo- [with longitudinal and transverse septa], didymo- [with 1 transverse septum], helico- [with a helix shape, with or without septa], phragmo- [with more than 1 transverse septum], scoleco- [long and thin, with or without septa], and staurospores [with radiating 'arms' or star-shaped, with or without septa]). These terms were further qualified according to whether the spores were pigmented (phaeo-amerospores, etc.) or not (hyalo-amerospores, etc.); see Anamorphic fungi. Kendrick & Nag Raj (*in* Kendrick (Ed.), *The whole fungus* **1**: 43, 1979) discussed Saccardo's categories and offered precise definitions.

Since Hughes (*CJB* **31**: 577, 1953) drew attention to the systematic importance of conidiogenous events (q.v.), a nomenclature for conidia has evolved based on the methods by which the conidia develop, giving rise to terms such as annelloconidia, phialoconidia, tretoconidia etc. (cf.). These attempt to summarize in a single word a complex series of developmental events any of which can vary independently of the others; as a result, they are imprecise, and not universally accepted: a better procedure is to use the word 'conidium' with qualifying adjectives or descriptors. Main contributions to conidial terminology have been by the first Kananaskis Workshop-Conference in 1969 (see Kendrick (Ed.), *Taxonomy of fungi imperfecti*, 1971). Ellis (*Dematiaceous hyphomycetes*, 1971) offered a series of definitions as did Kendrick & Carmichael (*in* Ainsworth *et al.* (Eds), *The Fungi* **4A**: 323, 1973), Cole (*CJB* **53**: 2983, 1975), and Cole & Samson (*Patterns of development in conidial fungi*, 1979). The descriptive terminology in both conidial morphology and conidiogenous events was initiated by Minter *et al.* (*TBMS* **79**: 75, 1982; **80**: 39, 1983; **81**: 109, 1983), developed by Sutton (*in* Reynolds & Taylor (Eds), *The fungal holomorph*: 28, 1993) and Hennebert & Sutton, and Sutton & Hennebert (*in* Hawksworth (Ed.), *Ascomycete systematics*: 65, 77, 1994), and is used in this edn of the *Dictionary*. See Anamorphic fungi.

conidiangium, pycnidium (obsol.).

Conidiascus Holterm. (1898), ? Saccharomycetes. 1, Java.

Conidiobolus Bref. (1884), Ancylistaceae. 38, widespread. See King (*CJB* **54**: 45, 1976), King (*CJB* **54**: 1285, 1976; key), King (*CJB* **55**: 718, 1977), Re-

maudière & Keller (*Mycotaxon* **11**: 323, 1980), Ben-Ze'ev & Kenneth (*Mycotaxon* **14**: 393, 1982; subgen. *Delacrouxia*), Latgé *et al.* (*CJB* **60**: 413, 1982; ultrastr.), Latgé *et al.* (*Exp. Mycol.* **10**: 99, 1986; ultrastr.), Keller (*Sydowia* **40**: 122, 1987), Humber (*Mycotaxon* **34**: 441, 1989), Callaghan *et al.* (*MR* **104**: 1270, 2000; repetitive conidia), Tosi *et al.* (*Mycotaxon* **90**: 343, 2004; n.sp. Antarctica), Tanabe *et al.* (*J. gen. appl. Microbiol.* Tokyo **51**: 267, 2005), Keller (*Sydowia* **58**: 38, 2006), Huang *et al.* (*Mycotaxon* **100**: 227, 2007; USA), Waingankar *et al.* (*Mycopathol.* **165**: 173, 2008; n.sp.).

Conidiocarpus Woron. (1926), anamorphic *Pezizomycotina*, Cpd.0eH.15. 2, widespread. See Hughes (*Mycol.* **68**: 693, 1976), Matsushima (*Matsush. Mycol. Mem.* **10**, 2001; Japan), Reynolds & Gilbert (*Aust. Syst. Bot.* **18**: 265, 2005; Australia), Reynolds & Gilbert (*Cryptog. Mycol.* **27**: 249, 2006; Panamá).

Conidiogenesis. The process of conidium formation. Concepts of conidiogenesis have increasingly been used in anamorphic fungal systematics since Hughes (*CJB* **31**: 577, 1953) classified some hyphomycetes according to the different methods by which conidia develop from conidiophores and the ways in which conidiophores (and conidiogenous cells) grow before, during and after conidia are produced. The historical development of this approach has been covered by Kendrick (Ed.) (*Taxonomy of fungi imperfecti*, 1971), for hyphomycetes, by Sutton (*in* Ainsworth *et al.* (Eds), *The Fungi* **4A**: 513, 1973) for coelomycetes, and by Vobis (*Bibl. Lich.* **14**, 1980) for lichenized pycnidia. Cole & Samson (*Patterns of development in conidial fungi*, 1979) emphasized the contribution of ultrastructural data to developmental concepts. Minter *et al.* (*TBMS* **79**: 75, 1982; **80**: 39, 1983; **81**: 109, 1983) reassessed optical and electron microscopy observations and demonstrated a continuum of developmental processes. See Anamorphic fungi, wall-building.

conidiogenous, producing conidia; **- cell**, any cell from or within which a conidium is directly produced; **- locus**, the place on a conidiogenous cell at which a conidium arises; Kendrick (1971: 258).

conidiole, a small conidium, esp. one on another; a secondary conidium, as in *Empusa*.

conidioma (pl. **-ata**), a specialized multi-hyphal, conidia-bearing structure (Kendrick & Nag Raj *in* Kendrick (Ed.), *The whole fungus* **1**: 51, 1979). See acervulus, pycnidium, sporodochium, synnema (all obsol. nouns, but used adjectivally, e.g. acervular conidioma). See Fig. 10. Cf. conidiophore.

conidiophore, a simple or branched hypha (a **fertile hypha**) bearing or consisting of conidiogenous cells from which conidia are produced; sometimes used when describing reduced structures for the conidiogenous cell.

Conidiosporomyces Vánky (1992), Tilletiaceae. 3 (on *Poaceae*), pantropical. See Vánky & Vánky (*Lidia* **5**: 157, 2002; southern Africa).

Conidiotheca Réblová & L. Mostert (2007), ? Calosphaeriales. 1, USA. See Réblová & Mostert (*MR* **111**: 299, 2007; phylogeny).

Conidioxyphium Bat. & Cif. (1963) = Conidiocarpus fide Hughes (*Mycol.* **68**: 693, 1976).

conidium, a specialized, non-motile (cf. zoospore), asexual spore, usually caducous, not developed by cytoplasmic cleavage (cf. sporangiospore) or free-cell formation (cf. ascospore); in certain *Oomycota* produced through the incomplete development of zoosporangia which fall off and germinate to produce a germination tube. See Sutton (*TBMS* **86**: 1, 1986; derivation etc.); **- initial**, a cell, or part of a cell from which a conidium develops; **- ontogeny**, conidiogenesis (q.v.).

Coniella Höhn. (1918), anamorphic *Schizoparmaceae*, Cpd.0eP.15. 13, widespread. See Sutton (*The Coelomycetes*, 1980; key), Castlebury *et al.* (*Mycol.* **94**: 1017, 2002; phylogeny), Van Niekerk *et al.* (*MR* **108**: 283, 2004; phylogeny), Rossman *et al.* (*Mycoscience* **48**: 135, 2007; review).

Coniobotrys Pouzar (1958) ? = Jaapia Bres. fide Donk (*Persoonia* **3**: 199, 1964).

Coniobrevicolla Réblová (1999), Trichosphaeriaceae. 1 (from wood), Denmark. See Réblová (*Mycotaxon* **70**: 421, 1999).

Coniocarpaceae Rchb. (1841) = Arthoniaceae.

Coniocarpon DC. (1805) nom. rej. = Arthonia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Coniocessia D. García, Stchigel, D. Hawksw. & Guarro (2006), Xylariales. Anamorph *Nodulisporium*-like. 1 (from soil), Jordan. See García *et al.* (*MR* **110**: 1284, 2006).

Coniochaeta (Sacc.) Cooke (1887), Coniochaetaceae. Anamorph *Lecythophora*. 65 (coprophilous or on rotting wood), widespread. Species with *Nodulisporium*-like anamorphs belong to *Coniolaria* (*Xylariales*). See Hawksworth & Yip (*Aust. J. Bot.* **29**: 377, 1981; key 11 spp. in cult.), Mahoney & LaFavre (*Mycol.* **73**: 931, 1981; synopsis), Checa *et al.* (*Cryptog. Mycol.* **9**: 1, 1988; key 15 spp. Spain), Hawksworth *in* Hawksworth (Ed.) (*Ascomycete Systematics. Problems and Perspectives in the Nineties* NATO ASI Series vol. **269 269**: 377, 1994; polyphyly), Kamiya *et al.* (*Mycoscience* **36**: 377, 1995), Lee & Hanlin (*Mycol.* **91**: 434, 1999; DNA), Romero *et al.* (*MR* **103**: 689, 1999; Argentina), Weber (*Nova Hedwigia* **74**: 159, 2002; anam.), Weber *et al.* (*Nova Hedwigia* **74**: 187, 2002; phylogeny), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004; phylogeny), Asgari & Zare (*Nova Hedwigia* **82**: 227, 2006; Iran), García *et al.* (*MR* **110**: 1271, 2006; phylogeny).

Coniochaetaceae Malloch & Cain (1971), Coniochaetales. 5 gen. (+ 8 syn.), 72 spp.

Lit.: Checa *et al.* (*Cryptog. Mycol.* **9**: 1, 1988), Crane & Shearer (*Mycotaxon* **54**: 107, 1995), Kamiya *et al.* (*Mycoscience* **36**: 377, 1995), Guarro *et al.* (*Mycoscience* **38**: 123, 1997), Ramaley (*Mycol.* **89**: 962, 1997), Huhndorf *et al.* (*Sydowia* **51**: 176, 1999), Lee & Hanlin (*Mycol.* **91**: 434, 1999; DNA), Romero *et al.* (*MR* **103**: 689, 1999), Weber *et al.* (*Nova Hedwigia* **74**: 187, 2002), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004), García *et al.* (*MR* **110**: 1271, 2006).

Coniochaetales Huhndorf, A.N. Mill. & F.A. Fernández (2004). Sordariomycetidae. 1 fam., 9 gen., 76 spp. Fam.:

Coniochaetaceae

For *Lit.* see under fam.

Coniochaetidium Malloch & Cain (1971) = Coniochaeta fide von Arx (*Stud. Mycol.* **8**: 25, 1975; key), Udagawa & Tsubouchi (*Mycotaxon* **27**: 63, 1986), Guarroet al. (*Mycoscience* **38**: 123, 1997), García *et al.* (*MR* **110**: 1271, 2006; phylogeny), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny).

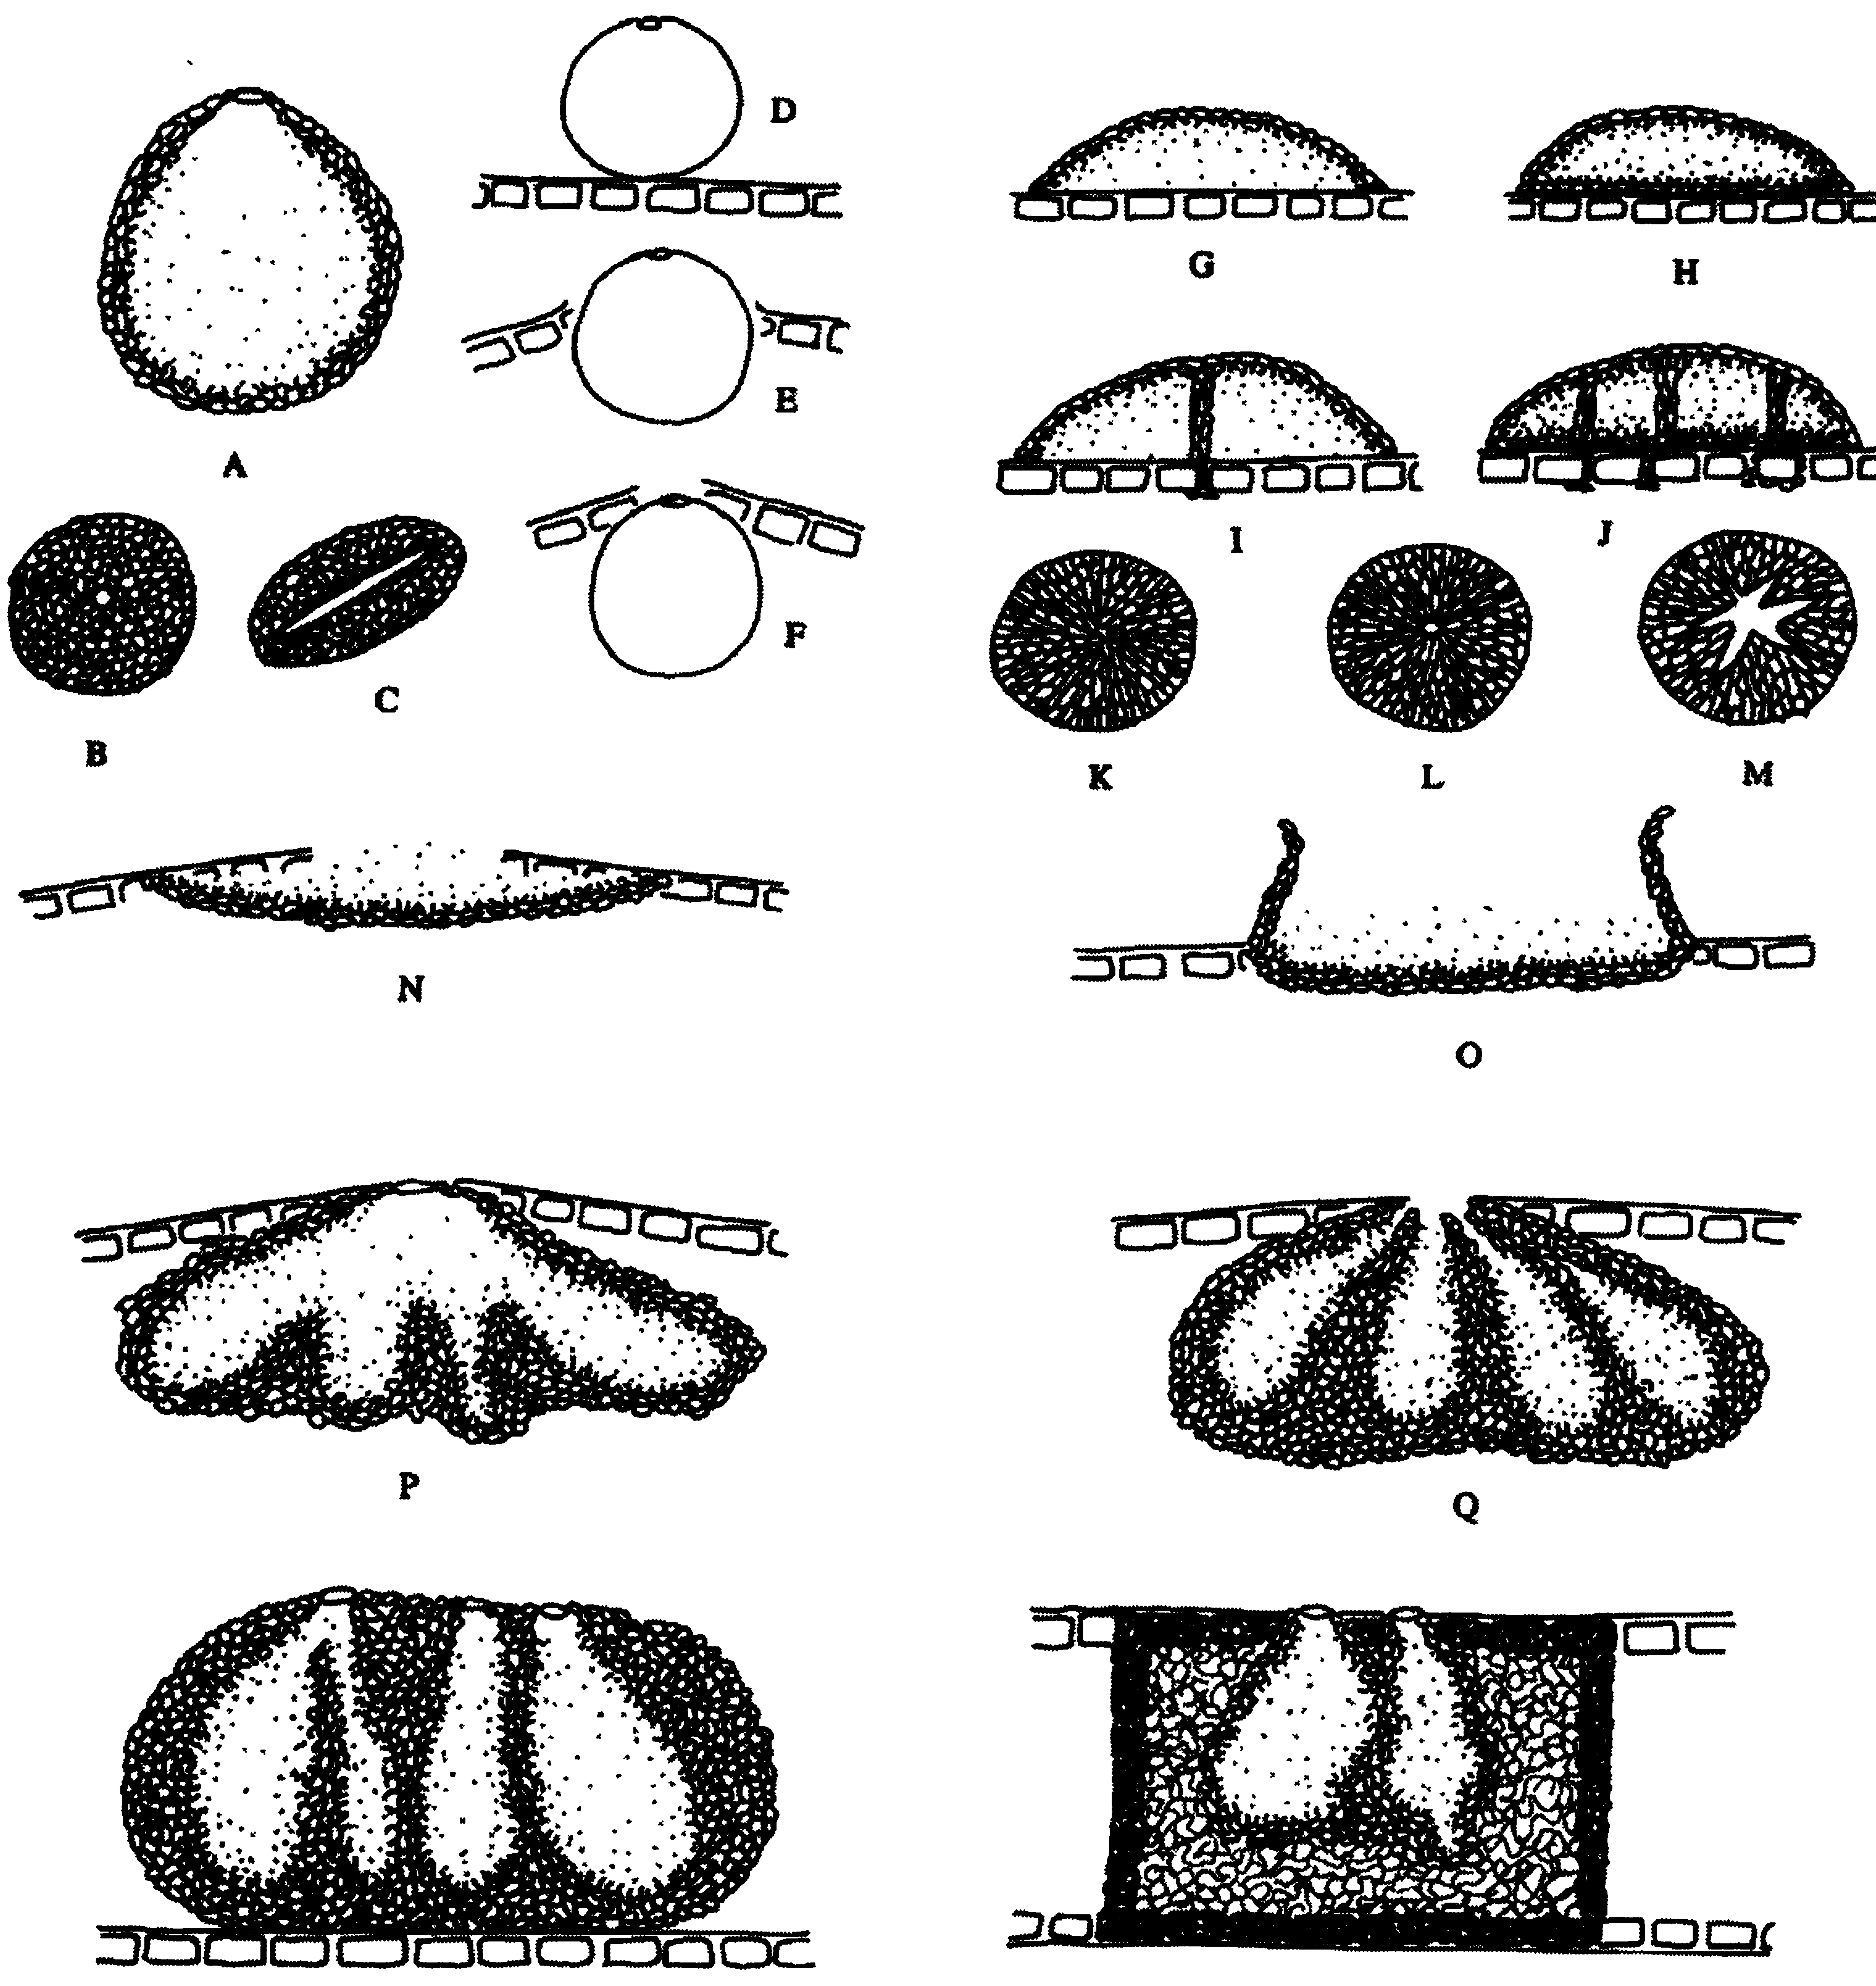

Fig. 12. Conidiomatal types. A-F, pycnidial; B, dehiscence by a central circular ostiole; C, dehiscence by a longitudinal ostiole (raphe); D, superficial; E, semi-immersed; F, immersed; G-M, pycnothyrial; G, with upper wall only; H, with upper and lower walls; I, with a central supporting column; J, multilocular with several supporting columns; K, dehiscence from the margin; L, dehiscence by a central ostiole; M, dehiscence by irregular fissures; N, acervular; O, cupulate; P-R, eustromatic; P, convoluted, immersed; Q, multilocular, immersed; R, multilocular, superficial; S, pseudostromatic.

Coniochila A. Massal. (1860) ? = Ocellularia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Coniocybaceae Rchb. (1837), Lecanoromycetes (inc. sed.) (L). 4 gen. (+ 12 syn.), 56 spp.

Lit.: Honegger (*Lichenologist* **17**: 273, 1985), Honegger (*Sydowia* **38**: 146, 1985), Tibell (*Symb. bot. upsal.* **27** no. 1: 279 pp., 1987), Tibell (*Fl. Neotrop.* Monogr. **69**: 78 pp., 1996), Tibell (*Symb. bot. upsal.* **32** no. 1: 291, 1997), Wedin & Tibell (*CJB* **75**: 1236, 1997), Rikkinen (*Bryologist* **101**: 558, 1998), Tibell (*Biblthca Lichenol.* **71**: 107 pp., 1998), Selva & Tibell (*Bryologist* **102**: 377, 1999), Tibell (*Nordic Lichen Flora* **1**. Conotrematomyces Cif. & Tomas. (1953) ≡ Conotrema.

Conotremopsis Vězda (1977), Stictidaceae (L). 1, Tasmania. See Vězda (*Folia geobot. phytotax.* **12**: [313], 1977).

Conservation (of fungi). In view of the destruction of many habitats on a global scale and the threats of climate change, there is an increasingly urgent need to attend to conservation of rare and endangered fungi. Many groups of fungi are sensitive to environmental pollution, the most abundant evidence being for lichen-forming species. *In situ* conservation of fungi therefore prioritizes conservation of habitats and regulation of pollution (for *ex situ* fungal conservation, see Genetic resource collections). Fungal conservation is however still in its infancy. Public awareness is very low. Consequently, in many countries there is no explicit legal protection for fungi. Many national biodiversity action plans produced as a result of the Rio Convention (see Biodiversity) fail to consider fungi. The IUCN (The World Conservation Union) currently includes only two committees for fungal conservation in its Species Survival Commission (both listed under plants), one for fungi in general, the other for lichens (there are, in comparison, twenty committees for birds). There are serious practical problems in applying IUCN red-listing criteria to the fungi, and very few fungi have yet been formally evaluated using this system. The broader conservation movement is largely unaware of the need to conserve fungi (frequently only one or two token larger fungi are listed as endangered, and then usually as 'lower' plants), and fungi (for example host-specific species known only on rare endemic plants) may be treated as part of the problem (a threat to the plant) rather than recognized as being themselves in need of protection. Furthermore, the broader conservation movement usually identifies priority habitats on the basis of bird, mammal and flowering plant diversity, with fungi rarely taken into account. This can mean that habitats rich in fungal diversity are being missed by such categorization; host-specific fungi are frequently not found in all places where associated organisms occur; furthermore, like other groups of organisms, fungi are being affected by climate change with, for example, refugee species appearing in areas beyond their traditional geographical limits.

The challenges for fungal conservation are therefore daunting. Efforts to date have emphasized gathering scientific evidence for threats and decline (there have also been successful efforts in the UK to identify 'important fungal areas'), but the political activity necessary to turn that evidence into results remains very small; there is little awareness of the need to maintain a distinction between those responsible for scientific evidence and those involved in the political promotion of conservation, and there is little dialogue between those interested in *in situ* and *ex situ* conservation. Evidence gathering has been di-

rected mainly towards the visually more striking larger fungi, including species forming conspicuous lichens. Basic activities include compilation of distribution and ecological data into regional and national databases from which **Red Lists** are prepared, comprising condensed information on threatened species. National lists have been prepared for most European countries for basidiomycetes and some larger ascomycetes (see Internet) but coverage is patchy. For lichens, there is a preliminary *Red List of Macrolichens in the European Community* (Sérusiaux, 1989) but, although efforts continue, there is still no European level red-list for any other group of fungi. For other parts of the world, red list coverage is usually poor to non-existent, although some impressive fungal conservation work has occurred in the northwest USA as an adjunct to projects conserving the northern spotted owl (e.g. Molina, *MR* **112**: 613, 2008).

On the basis of the Red Lists, it appears that some ecological groups of basidiomycetes are more vulnerable than others: of special concern are (1) wood-inhabiting fungi (esp. bracket spp.) on large logs in virgin and old-growth forests, endangered by intensive forestry (Høiland & Bendiksen, *in* Arnolds & Kreisel, *Conservation of fungi in Europe*: 51, 1993; Kotiranta & Niemelä, *Threatened polypores in Finland*, 1993); (2) fungi of peat bogs, marshland and boggy forests, due to reclamation and drainage (Winterhoff & Krieglsteiner, *Beig. Veroff. Natur. Landschaftspflege Bad. Württ.* **40**, 1984); (3) fungi of sand dunes, due to recreation, digging of sand and afforestation (Winterhoff & Krieglsteiner, 1984); (4) fungi of old, permanent pastures on soils poor in nutrients, due to increased fertilizer application, afforestation or lack of appropriate management (Arnolds, *Opera Bot.* **100**: 7, 1989; Nitare, *Svensk bot. Tidskr.* **82**: 341, 1988); (5) ectomycorrhizal fungi in forests on soils poor in nutrients, due to acidification and/or nitrogen accumulation from air pollution (Arnolds, *Agric. Ecosyst. Environm.* **35**: 209, 1991; Dighton & Jansen, *Environm. Pollut.* **73**: 179, 1991).

There is a wealth of evidence to show that lichens are also greatly affected by many of the above factors, but more particularly deforestation, agricultural practices and a wide variety of atmospheric pollutants (see Air pollution); a review of the principles and priorities of lichen conservation is provided by Seaward (*J. Hattori Bot. lab.* **52**: 401, 1982). Experiments and circumstantial evidence have not demonstrated a strong correlation between collection of mushrooms and their decline (Egli *et al.*, *Mycol. Helv.* **3**: 417, 1990), but rare lichens have disappeared as a result of over-zealous collecting for economic reasons (e.g. as a component of curries, wreaths, decorations) or for reference collections and exsiccata. Maintenance of threatened species and species diversity of fungi in general is often dependent on management practices (Keizer, *in* Pegler *et al.* (Eds), 1993: 251), but in deciding these, fungi are rarely taken into account.

There are very few non-governmental organizations specifically dedicated to fungal conservation. Mycologists in Europe co-operate through the European Council for Conservation of Fungi (ECCF), established by the 9th Congress of European Mycologists in Oslo (1985) and now the conservation wing of the European Mycological Association (see Societies and organizations). The ECCF is composed of national representatives of each country [other persons active in fungal conservation can be placed on the mailing list by request]. The ECCF organizes specialist meetings on fungal conservation between European Congresses, and short business meetings during those Congresses. The Bern Convention's Standing Order Committee failed in 2006 to adopt an ECCF submission presenting the scientific case for including 33 endangered larger fungi in its lists of strictly protected organisms, but in 2007, the Council for Europe adopted guidelines for conservation of macrofungi in Europe prepared by the ECCF. Some other mycological societies also have conservation groups: lichen conservation is catered for by a subcommittee of the International Association for Lichenology (and via its *Newsletter*). There is a Conservation Special Interest Group in the Australasian Mycological Society, and in November 2007, a specialist group for fungal conservation was established in Brazil. Three prototype Specialist Committees have been established for ascomycete conservation, rust & smut conservation, and for conservation of chromistans, chytrids, myxomycetes and zygomycetes (see Internet).

General introductions to fungal conservation are provided by Arnolds and Richardson (*in* Hawksworth (Ed.), *Frontiers in mycology*: 187, 243, 1991); Palm & Chapela (*Mycology in Sustainable Development*, 1997); Moore *et al.* (*Fungal Conservation. Issues and Solutions*, 2001). See also Biodiversity, Climate change.

Consetiella Hol.-Jech. & Mercado (1982), anamorphic *Pezizomycotina*, Hsy.-.-. 1, Cuba. See Holubová-Jechová & Mercado (*Mycotaxon* **14**: 310, 1982), Mercado-Sierra *et al.* (*Mycotaxon* **67**: 417, 1998).

consortium, a form of symbiosis (q.v.) in which two or more organisms live together in an interdependent way (obsol.).

conspecific, of two or more taxa considered to be one species; cf. synonym.

constipate, crowded together.

Constricta R. Heim & Mel.-Howell (1965) nom. inval., Agaricaceae. 1, Ivory Coast. See Heim & Meléndez-Howell (*Revue Mycol.* Paris **30**: 324, 1965).

containment levels, see Safety, Laboratory.

contaminated (1) bearing, or intermixed with, a pathogen, as spores on seeds, fungi in soil (c.f. infection and infested); (2) (of cultures), not pure.

context (of hymenomycetes), the hyphal mass between the superior surface and the subhymenium or the trama of basidiocarps.

contiguous, touching; joining.

contingent, touching.

continuous (1) (of spores, hyphae, etc.), having no septa; (2) (of a stipe), one with the tissue of the pileus or peridium; (3) (of cultures), see culture.

control, to prevent or retard the development of a disease (Anon., *TBMS* **33**: 154, 1950).

Contumyces Redhead, Moncalvo, Vilgalys & Lutzoni (2002), Agaricomycetes. 3, Europe. *Hymenochaetales* or *Agaricales* (*Rickenella* clade). See Redhead *et al.* (*Mycotaxon* **82**: 161, 2002).

convergence, describes two organisms with many characters in common but which are descended from widely separate origins. Difficult to distinguish from parallelism due to intermediate conditions.

convex (of a pileus), equally rounded; broadly obtuse;

convexo-expanded, having the edge bent over; **convexo-plane**, convex when young, flat after expansion.

Cooke (Mordecai Cubitt; 1825-1914, England). Schoolmaster, Lambeth (1851-1860); cataloguer, India Museum, London (1862-1880); cryptogamic botanist, Royal Botanic Gardens, Kew (1880-1892). Like his countryman Berkeley (q.v.), he had wide interests in natural history from which his mycological work was the chief development. He was responsible for a very great number of books, papers, and other writings, producing *Science Gossip* for some years and starting (in 1872) the cryptogamic journal *Grevillea*, most of which was written by him during the twenty years the journal was under his control. He described a great number of new species, and new groupings, esp. of polypores and pyrenomycetes (*Grevillea* 1884-1890). His collection of some 46,000 specimens and 25,000 sheets of drawings, are now in the fungal reference collection of the Royal Botanic Gardens, Kew (**K**). *Publs. Handbook of British Fungi* (1871) [supplemented by 1,300 numbers of *Fungi Britannici Exsiccati*]; *Mycographia* (1875-1878) [pictures and accounts of discomycetes]; *Illustrations of British fungi (Hymenomycetes)* (1881-1891) [with 1,200 coloured plates, see *TBMS* **20**: 33, 1935, for index]; *Handbook of Australian Fungi* (1892); *Fungoid Pests of Cultivated Plants* (1906). *Biogs, obits etc.* Ramsbottom (*TBMS* **5**: 169, 1915); English (*Mordecai Cubitt Cooke*, 1987); Stafleu & Cowan (*TL-2* **1**: 536, 1976).

Cookeina Kuntze (1891), Sarcoscyphaceae. 12, widespread (esp. tropical). See Pfister & Kaushal (*Mycotaxon* **20**: 117, 1984; key), Landvik *et al.* (*Nordic Jl Bot.* **17**: 403, 1997; DNA), Wang (*Mycotaxon* **62**: 289, 1997; China), Harrington *et al.* (*Mycol.* **91**: 41, 1999; phylogeny), Maldonado González (*Revta Jardín bot. Nac.* Univ. Habana **21**: 305, 2000; Cuba), Weinstein *et al.* (*Mycol.* **94**: 673, 2002; phylogeny), Meléndez-Howell *et al.* (*Mycotaxon* **87**: 53, 2003; ultrastr.), Hansen & Pfister (*Mycol.* **98**: 1029, 2006; phylogeny), Iturriaga & Pfister (*Mycotaxon* **95**: 137, 2006; monogr.).

Cookella Sacc. (1878), Cookellaceae. 1 (on *Articularia* and *Microstroma*), widespread. See Tehler (*CJB* **68**: 2458, 1990; relationships, use as outgroup).

Cookellaceae Höhn. ex Sacc. & Trotter (1913), ? Myriangiales. 3 gen. (+ 11 syn.), 13 spp.
Lit.: Eriksson (*Op. Bot.* **60**, 1981), Eriksson & Yue (*Mycotaxon* **38**: 201, 1990), Tehler (*CJB* **68**: 2458, 1990; rels, use as outgroup).

Cooksonomyces H.J. Swart & D.A. Griffiths (1974), anamorphic *Pezizomycotina*, Cac/St.≡ eP.19. 1, Australia. See Swart & Griffiths (*TBMS* **63**: 152, 1974).

Coolia Huijsman (1943) nom. nud. = Squamanita fide Bas (*Persoonia* **3**, 1965).

coolplate, a temperature-controlled plate on which cultures under a light source may be maintained without an undesirable rise in temperature. See Cooke (*FBPP News* **6**: 37, 1981).

Coonemeria Mouch. (1997), Trichocomaceae. Anamorph *Paecilomyces*-like. 3, widespread. See Mouchacca (*Cryptog. Mycol.* **18**: 1, 1997).

Copelandia Bres. (1912) = Panaeolus fide Kuyper (*in litt.*).

Coppinsia Lumbsch & Heibel (1998), ? Trapeliaceae (L). 1, Europe. See Lumbsch & Heibel (*Lichenologist* **30**: 96, 1998), Heibel & Lumbsch (*Lichenologist* **31**: 203, 1999; Germany), Lumbsch *et al.* (*MR* **111**: 1133, 2007).

Copranophilus Speg. (1909) = Pyxidiophora fide Lundqvist (*Bot. Notiser* **133**: 121, 1980), Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Coprinaceae Overeem & Weese (1924) = Agaricaceae.

Coprinarius (Fr.) P. Kumm. (1871) nom. rej. = Panaeolus fide Kuyper (*in litt.*).

coprine, a disulfuran-like metabolite of the edible *Coprinus atramentarius* which gives a reaction in humans similar to that of antabuse (q.v.).

Coprinellus P. Karst. (1879), Psathyrellaceae. Anamorph *Hormographiella*. *c.* 100, widespread. See Jørgensen & Stalpers (*Taxon* **50**: 909, 2001; nomencl.), Ko *et al.* (*MR* **105**: 1519, 2001; phylogeography), Redhead *et al.* (*Taxon* **50**: 203, 2001; nomencl.), Gams (*Taxon* **54**: 520, 2005; nomencl.), Cáceres *et al.* (*Antonie van Leeuwenhoek* **89**: 79, 2006; anamorphs).

Coprinites Poinar & Singer (1990), Fossil Fungi. 1, Dominican Republic.

Coprinopsis Beeli (1929) ? = Oudemansiella fide Singer (*Agaric. mod. Tax.* edn 3, 1975).

Coprinopsis P. Karst. (1881), Psathyrellaceae. *c.* 200, widespread. See Jørgensen & Stalpers (*Taxon* **50**: 909, 2001; nomencl.), Redhead *et al.* (*Taxon* **50**: 203, 2001; nomencl.), Keirle *et al.* (*Fungal Diversity* **15**: 33, 2004; Hawaii), Gams (*Taxon* **54**: 520, 2005; nomencl.).

Coprinus Pers. (1797), Agaricaceae. Anamorph *Rhacophyllus*. *c.* 10 (coprophilous, on wood, etc.), widespread. The Ink-Caps. Some are edible; *C. comatus*, the shaggy ink-cap or shaggy-mane, is a common mushroom in waste places. The lamellae and their cystidia 'deliquesce' by autodigestion after spore discharge giving 'ink' that may be used for writing. A phylogenetic reconsideration of *Coprinus* s. lat. has led to a changed generic circumscription. The type species of the genus (and the generitype of the family) belongs to *Agaricaceae*; the other coprinoid taxa belong to *Psathyrellaceae*. See Buller (*Researches* **1-7**, 1909; to 1950), Seaver (*Mycol.* **27**: 83, 1935; lifting power), Lange (*Dansk bot. Ark.* **14** no. 6, 1952; biological species concept), Lange & Smith (*Mycol.* **45**: 747, 1953), Orton (*TBMS* **40**: 263, 1957), Kits van Waveren (*Persoonia* **5**: 131, 1968; 'stercorarius' group), Anderson (*The life history and genetics of Coprinus lagopus*, 1971), Romagnesi (*BSMF* **92**: 189, 1976; *C. micaceus*-group), van der Bogart (*Mycotaxon* **4**: 233, 1976; Western N. Am. Sect. *Coprinus*), Patrick (*Mycotaxon* **6**: 341, 1977; sectional ranks), Orton & Watling (*British Fungus Fl.* **3**, 1979; keys 92 spp.), Reijnders (*Persoonia* **10**: 384, 1979; development), van der Bogart (*Mycotaxon* **8**: 243, 1979; Western N. Am. sect. *Seratuli*), Johnson & Vilgalys (*Mycol.* **90**: 971, 1998), Hopple & Vilgalys (*Mol. Phylogen. Evol.* **13**: 1, 1999), Redhead *et al.* (*Taxon* **50**: 203, 2001; new systematic arrangement).

Coprinusella (Peck) Zerov (1979) = Coprinus fide Kuyper (*in litt.*).

Coprobia Boud. (1885) = Cheilymenia fide Moravec (*Mycotaxon* **38**: 459, 1990), Moravec (*Libri Botanici* **21**, 2005).

Coprobolus Cain & Kimbr. (1970), Thelebolaceae. 1 (coprophilous), Canada. Position is uncertain. See van Brummelen (*Persoonia* **16**: 425, 1998).

coprogen, a growth factor in dung required by *Pilobo-*

lus spp. (Hesseltine *et al.*, *Mycol.* **45**: 7, 1953; Pidacks *et al.*, *J. Am. Chem. Soc.* **75**: 6064, 1953).

Coprolepa Fuckel (1870) = Hypocopra fide Cain (*Univ. Toronto Stud., Biol.* **38**, 1934), Læssøe (*SA* **13**: 43, 1994; ? synonym of *Xylaria*).

coprome, a physically and chemically uniform unit (pellet) of faeces used in experimental studies of coprophilous fungi (Wood & Cooke, *TBMS* **83**: 337, 1984).

Copromyces N. Lundq. (1967), Sordariaceae. 1 (coprophilous), Sweden; Canada. See Lundqvist (*Symb. bot. upsal.* **20** no. 1, 1972), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004; phylogeny), Miller & Huhndorf (*Mol. Phylogen. Evol.* **35**: 60, 2005; phylogeny).

Coprophilous fungi. Fungi living on dung; fimicolous fungi. Fungi on dung include aerial contaminants, non-specialized species which have been eaten and survived passage through the gastro-intestinal tract, symbionts living in the gastro-intestinal tract excreted with the dung, and species specially adapted for living on dung. The last category are the coprophilous fungi, and they comprise many species from a wide range of taxonomic groups, e.g. most *Acrasiales*, some other *Mycetozoa*, *Mucorales*, *Pezizales*, *Sordariales*, *Coprinaceae*, and certain other *Basidiomycota*. Many produce violently discharged spores with sticky sheaths which, particularly for species on herbivorous dung, aid colonization of adjacent vegetation. Some coprophilous fungi are specific to particular types of animal, others seem to be generalists. There is often a distinct succession observable on decaying dung: some later colonizers may produce antibiotics to aid colonization, and among these are species (such as *Poronia punctata*) now endangered possibly partly as a result of antibiotic supplements to domesticated animal feeds.

copulants, Kniep's name for copulating structures of like form.

copulation, the fusion of sexual elements; conjugation; **gametangial -**, the fusion of two sexual organs; **heterogamic -**, the fusion of gametes morphologically unlike; **isogamic -**, the fusion of gametes morphologically like; conjugation in the narrower sense; **planogamic -**, the fusion of motile gametes to give a motile zygote (a planozygote). Cf. merogamy.

Cora Fr. (1825) = Dictyonema C. Agardh ex Kunth fide Parmasto (*Nova Hedwigia* **29**: 99, 1978).

Coraceae Tomas. ex Tomas. (1950) = Atheliaceae.

Coraemyces Cif. & Tomas. (1954) ≡ Cora.

coral fungi, basidiomata of *Clavariaceae*.

coral spot, a branch disease of shrubs and trees (*Nectria cinnabarina*).

Corallicola Volkm.-Kohlm. & Kohlm. (1992), Halosphaeriaceae. 1 (on coral), Belize. See Kohlmeyer & Volkmann-Kohlmeyer (*Mycotaxon* **44**: 417, 1992).

Corallinopsis Lagarde (1917), anamorphic *Pezizomycotina*, Hsy.0eP.?. 1 (on *Insecta*), France.

Coralliochytrium Domján (1937), Chytridiales. 1, Hungary. See Domján (*Folia Cryptog.* **2**: 22, 1937).

Corallium G. Hahn (1883) = Ramaria Fr. ex Bonord. fide Donk (*Reinwardtia* **2**: 435, 1954).

Corallochytrium Raghuk. (1987), ? Choanozoa. 1, Arabian Sea. See Cavalier-Smith & Allsopp (*Eur. J. Protist.* **32**: 1, 1996), Cavalier-Smith *in* Coombs *et al.* (Eds) (*Evolutionary Relationships Among Protozoa*: 375, 1998).

Corallocytostroma Y.N. Yu & Z.Y. Zhang (1980), anamorphic *Clavicipitaceae*, St.≡ eH.?. 2, China; Australia. See Yu & Zhang (*Acta Microbiol. Sin.* **20**: 232, 1980), Shivas *et al.* (*MR* **101**: 849, 1997), Pažoutová *et al.* (*MR* **108**: 126, 2004; ontogeny, phylogeny).

Corallodendron Jungh. (1838) [non *Corallodendron* Mill. 1754, *Papilionaceae*] ≡ Corallomyces Fr. fide Samson & Seifert *in* Samson & Pitt (Eds) (*Advances in Penicillium and Aspergillus systematics* **102**: 397, 1985; represents a diatom).

Coralloderma D.A. Reid (1965), Meruliaceae. 2, Asia; Australia. See Reid (*Nova Hedwigia* Beih. **18**: 332, 1965).

Corallofungus Kobayasi (1983), Hydnaceae. 1, Japan. See Kobayasi (*J. Jap. Bot.* **56**: 174, 1983).

coralloid, much branched; like coral in form; esp. basidiomata of *Clavaria*. Cf. forate.

Coralloidea Roussel (1806) ≡ Ramaria Fr. ex Bonord.

Coralloides Hoffm. (1789) nom. rej. prop. ? = Stereocaulon Hoffm. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Coralloides Tourn. ex Maratti (1822) nom. rej. prop. = Ramaria Fr. ex Bonord. fide Donk (*Persoonia* **8**: 281, 1975).

Coralloides Wulfen (1776) nom. dub., Fungi (L).

Corallomorpha Opiz (1856) nom. dub., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Corallomyces Berk. & M.A. Curtis (1853) = Corallomycetella fide Rogerson (*Mycol.* **62**: 865, 1970), Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Corallomyces Fr. (1849), anamorphic *Pezizomycotina*, Hsy.0eH.?. 2, Africa; Java.

Corallomycetella Henn. (1904), Nectriaceae. Anamorphs *Fusarium*-like, *Rhizostilbella*. 2 (woody tis-

sues), widespread (pantropical). See Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

corbiculae, protective structures forming a stroma around the telia of certain rusts (Kuhnholtz-Lordat, *Bull. mens. Acad. Sci. Lett. Montpellier* **71**: 91, 1942; see *RAM* **26**: 468, 1947); paraphyses; pseudoparaphyses.

Corbulopsora Cummins (1940), Pucciniaceae. 3 (on *Compositae*), Papua New Guinea; India. See Cummins (*Mycol.* **32**: 364, 1940) Cf. *Miyagia.*

Corda (August Karl Josef; 1809-1849, Czech). A medic; employed in the National Museum, Prague; lost at sea in the West Indies. His collections, previously thought lost with him, were rediscovered and are in the National Museum, Prague (**PRM**), see Pilát, *Acta Musei Naturalis Pragae* **1B**: 139, 1938). *Publs.* Pilze. *Sturm's Deutchlands Flora* (1829-1841); *Icones Fungorum hucusque Cognitorum* 6 parts (1837-1854) [the last part by Zobel]; *Anleitung zum Studium der Mycologie* (1842). *Biogs, obits etc.* Šebek (*Česká Mykologie* **38**: 129, 1984); Šebek (*Mykologický Sborník* **61**: 113, 1984); Stafleu & Cowan (*TL-2* **1**: 546, 1976).

Cordalia Gobi (1885) = Tuberculina fide Saccardo (*Syll. fung.* **4**: 653, 1886).

Cordana Preuss (1851), anamorphic *Pezizomycotina*, Hso.1eP.6. 13, Europe; tropical. *C. musae* (banana leaf spot). See Hughes (*CJB* **33**: 259, 1955), de Hoog *et al.* (*Proc. K. Ned. Akad. Wet.* Ser. C, Biol. Med. Sci. **86**: 197, 1983), Priest (*MR* **94**: 861, 1990; spp. on *Musa*, Australia), Castañeda Ruíz *et al.* (*Mycotaxon* **73**: 1, 1999; Venezuela), Markovskaja (*Mycotaxon* **87**: 179, 2003; Lithuania), Cai *et al.* (*Sydowia* **56**: 222, 2004; China), Soares *et al.* (*Fungal Diversity* **18**: 147, 2005; Brazil).

Cordella Speg. (1886), anamorphic *Apiospora*, Hso.0eP.37. 4, pantropical. See Subramanian (*Proc. Indian natn Sci. Acad.* Part B. Biol. Sci. **55**: 38, 1962), Reynolds & Gilbert (*Aust. Syst. Bot.* **18**: 265, 2005; Australia), Reynolds & Gilbert (*Cryptog. Mycol.* **27**: 249, 2006; Panamá).

Cordierites Mont. (1840), ? Helotiales. 3, widespread. See Samuels & Kohn (*Sydowia* **39**: 202, 1986; NZ), Zhuang (*Mycotaxon* **31**: 261, 1988; key), Wang *et al.* (*Mol. Phylogen. Evol.* **41**: 295, 2006; phylogeny).

Corditubera Henn. (1897), Boletales. 5, Africa (tropical). See Demoulin & Dring (*Bull. Jard. bot. nat. Belg.* **45**: 345, 1975), Malençon (*Cryptog. Mycol.* **4**: 1, 1983), Verbeken & Walleyn (*Boll. Gruppo Micol. 'G. Bresadola'* **46**: 87, 2003).

Cordycepioideus Stifler (1941) = Ophiocordyceps fide Blackwell & Gilbertson (*Mycol.* **76**: 763, 1984), Blackwell & Rossi (*Mycotaxon* **25**: 581, 1986; ecology), Samson *et al.* (*Atlas of Entomopathogenic Fungi*, 1988), Ochiel *et al.* (*Mycologist* **11**: 7, 1997), Suh *et al.* (*Mycol.* **90**: 611, 1998; phylogeny), Sung *et al.* (*Stud. Mycol.* **57**: 1, 2007).

Cordyceps Fr. (1824) nom. cons., Cordycipitaceae. Anamorphs *Beauveria*, *Isaria*, *Lecanicillium*, *Akanthomyces*, *Mariannaea*. 90 (mostly on insects; caterpillar fungi, vegetable caterpillars), widespread. Recently split into a number of segregates, including *Ophiocordyceps*, *Metacordyceps* and *Elaphocordyceps*; see also these genera. See Kobayasi (*Bull. Biogeogr. Soc. Japan* **9**: 271, 1939; Japan), Mains (*Mycol.* **50**: 169, 1957; N. Am., key), Willis (*Muelleria* **1**: 2, 1959; Australia, key), Kobayasi & Shimizu (*Bull. natn. Sci. Mus.* Tokyo, B **5**: 69, 1960), Kobayasi & Shimizu (*Bull. natn. Sci. Mus.* Tokyo, B **2**: 133, 1976; New Guinea), Evans & Samson (*TBMS* **79**: 431, 1982), Evans & Samson (*TBMS* **82**: 127, 1984; on ants), Hameed *et al.* (*Revue roum. Biol.* Sér. Biol. Végét. **29**: 147, 1984; *Ophiocordyceps*), Samson *et al.* (*Atlas of Entomopathogenic Fungi*, 1988), Ito & Hirano (*Lett. Appl. Microbiol.* **25**: 239, 1997; DNA), Tzean *et al.* (*Atlas of Entomopathogenic Fungi from Taiwan*, 1997), Chen *et al.* (*Biochemical Genetics* **37**: 201, 1999; DNA), Artjariyasripong *et al.* (*Mycoscience* **42**: 503, 2001; phylogeny), Guzmán *et al.* (*Mycotaxon* **78**: 115, 2001; Mexico), Kinjo & Zang (*Mycoscience* **42**: 567, 2001; *Ophiocordyceps*, China), Liu *et al.* (*J. Invert. Path.* **78**: 178, 2001), Liu *et al.* (*MR* **105**: 827, 2001; *Ophiocordyceps*, anamorph), Nikoh & Fukatsu (*Mol. Biol. Evol.* **18**: 1631, 2001; phylogeny, introns), Park *et al.* (*Mycobiology* **29**: 121, 2001; phylogeny), Huang *et al.* (*Mycotaxon* **81**: 229, 2002; *Beauveria* anamorph), Hywel-Jones (*MR* **106**: 2, 2002; ascospores), Liu *et al.* (*MR* **106**: 1100, 2002; phylogeny, anamorphs), Evans (*Mycology Series* **19**: 517, 2003; biocontrol), Fukatsu & Nikoh (*Mycology Series* **19**: 311, 2003; host relations), Stensrud *et al.* (*MR* **109**: 41, 2005; phylogeny), Yokoyama *et al.* (*FEMS Microbiol. Lett.* **250**: 145, 2005; heterothallism), Torres *et al.* (*Mycotaxon* **94**: 253, 2005), Stensrud *et al.* (*MR* **111**: 409, 2007; evolution in *C. sinensis*), Sung *et al.* (*Stud. Mycol.* **57**: 1, 2007; phylogeny, monogr.).

Cordycipitaceae Kreisel ex G.H. Sung, J.M. Sung, Hywel-Jones & Spatafora (2007), Hypocreales. 15 gen. (+ 18 syn.), 250 spp. See Sung *et al.* (*Stud. Mycol.* **57**: 1, 2007; phylogeny, monogr.), Sung *et al.* (*Mol. Phylogenet. Evol.* **44**: 1204, 2007; phylogeny).

Cordylia Fr. (1818) [non *Cordylia* Pers. 1807, *Leguminosae*] ≡ Cordyceps.

Cordyliceps Fr. (1832) ≡ Cordyceps.

Corella Vain. (1890) = Dictyonema C. Agardh ex Kunth fide Parmasto (*Nova Hedwigia* **29**: 99, 1978).

Coremiaceae Nann. (1934) = Trichocomaceae.

Coremiales, see *Hyphomycetes.*

Coremiella Bubák & K. Krieg. (1912), anamorphic *Pezizomycotina*, Hsy.0eP.40. 1, widespread. See Ellis (*Dematiaceous Hyphomycetes*, 1971), Comerio *et al.* (*Revta Iberoamer. Micol.* **22**: 50, 2005).

Coremiopsis Sizova & Suprun (1957) ? = Isaria fide Samson (*Stud. Mycol.* **6**, 1974).

Coremium Link (1809) = Penicillium Link fide Thom (*Bull. Bur. Anim. Ind. USDA* **118**, 1910), Seifert & Samson (*Advances in Penicillium and Aspergillus Systematics* **102**: 143, 1985).

coremium, see synnema.

Corenohydnum Lloyd (1936) nom. dub., Fungi.

Coreomyces Thaxt. (1903), Laboulbeniaceae. 20, widespread. See Majewski (*Acta Mycologica* Warszawa **9**: 217, 1973; Polish spp.), Tavares (*Mycol. Mem.* **9**: 627 pp., 1985), Majewski (*TMSJ* **29**: 151, 1988; Japan), Santamaría (*Fl. Mycol. Iberica* **5**, 2003; Iberian peninsula).

Coreomycetopsis Thaxt. (1920), ? Laboulbeniaceae. 1 (on termites), West Indies; USA. See Blackwell & Kimbrough (*Mycol.* **68**: 541, 1976; structure and development), Henk *et al.* (*Mycol.* **95**: 561, 2003).

Corethromyces Thaxt. (1892), Laboulbeniaceae. 82 (on beetles), widespread. See Tavares (*Mycol. Mem.* **9**, 1985), Santamaría (*Mycol.* **89**: 325, 1997; on rove beetles), Weir & Rossi (*Mycol.* **93**: 171, 2001; Bolivia), Weir & Hughes (*Mycol.* **94**: 483, 2002; New

Zealand), Rossi & Máca (*Sydowia* **58**: 110, 2006; Czech Republic), Santamaria (*Nova Hedwigia* **82**: 349, 2006; Spain), Rossi & Weir (*Mycol.* **99**: 131, 2007; S America).

Corethropsis Corda (1839), anamorphic *Pezizomycotina*, Hsy.0eH.?. 3, Europe; America.

Corethrostroma Kleb. (1933), anamorphic *Pezizomycotina*, St.0eH.?. 1, Europe.

coriacellate, somewhat coriaceous.

coriaceous, like leather in texture.

Corinophoros A. Massal. (1856) nom. rej. = Peccania fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Coriolaceae Singer (1961) = Polyporaceae.

Coriolellus Murrill (1905) = Antrodia fide Donk (*Verh. K. ned. Akad. Wet.* tweede sect. **62**: 1, 1974).

Coriolopsis Murrill (1905), Polyporaceae. 17, widespread. See Pegler (*The polypores [Bull. BMS Suppl.]*, 1973), Ryvarden & Johansen (*Prelim. Polyp. Fl. E. Afr.*: 315, 1980; key 10 Afr. spp.).

Coriolus Quél. (1886) = Trametes fide Singer (*Publções Inst. Micol. Recife* **304**, 1961), Domanski *et al.* (*Polyporaceae* edn 2, 1973) See also.

Coriscium Vain. (1890) nom. utique rej. = Lichenomphalia fide Stalpers (*in litt.*). The name has been used for the anamorph (lichenized squamules) of certain lichenized species of Omphalina and is now listed as nom. utique rej. See Redhead & Kuyper (*Arctic Alpine Mycology* **2**: 319, 1987).

corium, see Spore wall and Fig. 5.

corkir, see cudbear.

Cormothecium A. Massal. (1854) = Rhizocarpon fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Corneohydnum Lloyd (1924) nom. nud., ? Agaricomycetes. ? Basidiomycetes.

corneous (1) horn-like in texture; (2) (of a substance), like horn.

Corner (Edred John Henry; 1906-1996; England, later Singapore). Assistant Director, Singapore Botanic Garden (1929-1939, remaining in Singapore until 1945); Principal Field Scientific Officer, UNESCO (1946); Lecturer in Botany (1949), then Reader in Plant Taxonomy (1959), then Professor of Tropical Botany (1966), Cambridge University; Fellow of the Royal Society of London (1955); developed the concept of hyphal systems, using analysis of hyphal development to elucidate phylogeny in basidiomycetes; his taxonomic monographs demonstrated the huge diversity of basidiomycetes in southeast Asia. *Publs.* Ad Polyporaceas I-VII *Beihefte zur Nova Hedwigia* (1983-1989). *Biogs, obits etc.* Watling & Ginns (*Mycol.* **90**: 732, 1998) [portrait]; Watling (*MR* **105**: 1533, 2001) [portrait].

Corneromyces Ginns (1976), Boletales. 1, Sabah. See Ginns (*Mycol.* **68**: 970, 1976).

Corneromycetaceae Jülich (1979) = Coniophoraceae.

Corneroporus Hattori (2001), Bankeraceae. 1, Malaysia. See Hattori (*Mycoscience* **42**: 426, 2001).

Cornicularia (Schreb.) Hoffm. (1792), Parmeliaceae (L). 1, widespread (north temperate). See Kärnefelt (*Op. Bot.* **86**: 1, 1986), Kärnefelt *et al.* (*Pl. Syst. Evol.* **183**: 113, 1992), Thell *et al.* (*Mycol. Progr.* **1**: 335, 2002; phylogeny), Peršoh *et al.* (*Mycol. Progr.* **3**: 103, 2004; asci, photobionts), Thell *et al.* (*Symb. bot. upsal.* **34** no. 1: 429, 2004; biogeography), Randlane & Saag (*Central European Lichens*: 75, 2006; key).

Cornicularia Bonord. (1851) = Clavulinopsis fide Corner (*Ann. Bot. Mem.* [A monograph of Clavaria and allied genera] **1**, 1950).

Cornicularia Schaer. (1850) ≡ Alectoria Ach.

Corniculariaceae Schaer. (1850) = Parmeliaceae.

Corniculariella P. Karst. (1884), anamorphic *Durandiella*, St.0fH.15. 7, widespread. See DiCosmo (*CJB* **56**: 1665, 1978), Illman (*Taxon* **34**: 512, 1985; typification), Verkley (*Nova Hedwigia* **75**: 433, 2002).

corniform, shaped like a horn (Fig. 23.36).

Corniola Gray (1821) [non *Corniola* Adans. 1763, *Leguminosae*] = Arrhenia fide Redhead (*CJB* **62**: 865, 1984).

Cornipulvina Huhndorf, A.N. Mill., F.A. Fernández & Lodge (2005), Boliniaceae. 1, neotropics. See Huhndorf *et al.* (*Fungal Diversity* **20**: 61, 2005).

Cornucopiella Höhn. (1915), anamorphic *Pezizomycotina*, Cpd.0eH.15. 2, Europe. See Seifert (*TBMS* **85**: 123, 1985), Okada & Tubaki (*Sydowia* **39**: 148, 1986).

Cornuella Setch. (1891) [non *Cornuella* Pierre 1891, *Sapotaceae*] ≡ Tracya.

Cornularia Sacc. (1884) = Corniculariella fide DiCosmo (*CJB* **56**: 1665, 1978).

Cornuntum Velen. (1947), ? Helotiales. 1, Europe.

cornute (1) horned; horn-like in form; (2) (of aecia), see roestelia.

Cornutispora Piroz. (1973), anamorphic *Pezizomycotina*, Cpd.1bH.10. 4 (on lichens and *Rhytismatales*), widespread. See Hawksworth (*TBMS* **67**: 151, 1976), Martínez & Hafellner (*Mycotaxon* **69**: 271, 1998), Punithalingam (*MR* **107**: 917, 2003; cytology), Knoph (*Biblthca Lichenol.* **88**: 345, 2004; Japan).

Cornutostilbe Seifert (1990), anamorphic *Pezizomycotina*, Hsy.0eH.1. 1, Indonesia. See Seifert (*Mem. N. Y. bot. Gdn* **59**: 120, 1990).

Cornuvesica C.D. Viljoen, M.J. Wingf. & K. Jacobs (2000), Microascales. Anamorph *Chalara*-like. 1, Europe; N. America. See Viljoen *et al.* (*MR* **104**: 365, 2000), Hausner *et al.* (*CJB* **81**: 40, 2003), Hausner & Reid (*CJB* **82**: 752, 2004; phylogeny).

Corollium Sopp (1912) ≡ Paecilomyces fide Raper & Thom (*Manual of the Penicillia*, 1949).

Corollospora Werderm. (1922), Halosphaeriaceae. Anamorphs *Clavariopsis*-like, *Sigmoidea*, *Varicosporina*. 19 (on wood or sand, marine), widespread. See Nakagiri (*TMSJ* **27**: 197, 1986; anamorphs), Kohlmeyer & Volkmann-Kohlmeyer (*TBMS* **88**: 181, 1987; key 6 spp.), Nakagiri & Tokura (*TMSJ* **28**: 413, 1987; key 13 spp.), Kohlmeyer & Volkmann-Kohlmeyer (*Bot. Mar.* **34**: 1, 1991; key), Read *et al.* (*Bot. Mar.* **35**: 553, 1992; asci), Spatafora *et al.* (*Am. J. Bot.* **85**: 1569, 1998; phylogenetic analysis), Chen *et al.* (*Mycol.* **91**: 84, 1999; DNA), Kong *et al.* (*MR* **104**: 35, 2000; DNA), Campbell *et al.* (*Fungal Diversity Res. Ser.* **7**: 15, 2002; phylogeny, revision), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny), Hsieh *et al.* (*Bot. Mar.* **50**: 302, 2007; ontogeny).

Coronasclerotes Stach & Pickh. (1957), Fossil Fungi. 5 (Carboniferous), Germany.

coronate, crowned.

Coronatomyces Dania García, Stchigel & Guarro (2004), ? Sordariaceae. 1, Cuba. Perhaps synonymous with *Boothiella*. See García *et al.* (*Stud. Mycol.* **50**: 144, 2004).

Coronella P. Crouan & H. Crouan (1867) = Kickxella fide Linder (*Farlowia* **1**: 49, 1943).

Coronellaria P. Karst. (1870), Dermateaceae. 4,

Europe. See Scheuer (*Biblthca Mycol.* **123**, 1988), Magnes & Hafellner (*Biblthca Mycol.* **139**, 1991), Raitviir & Leenurm (*Folia cryptog. Estonica* **38**: 63, 2001; Estonia).

Coronicium J. Erikss. & Ryvarden (1975), Pterulaceae. 5, widespread (north temperate); Hawaii. See Eriksson & Ryvarden (*Cortic. N. Europ.* **4**, 1976), Gilbertson & Hemmes (*Mem. N. Y. bot. Gdn* **89**: 81, 2004; Hawaii).

Coronium Bonord. (1864) nom. dub., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Coronopapilla Kohlm. & Volkm.-Kohlm. (1990), ? Zopfiaceae. 1 (marine), Belize. See Kohlmeyer & Volkmann-Kohlmeyer (*MR* **94**: 685, 1990), Eriksson & Hawksworth (*SA* **8**: 7, 1991).

Coronophora Fuckel (1864), Nitschkiaceae. 5 (from wood), Europe. See Subramanian & Sekar (*Kavaka* **18**: 19, 1993), Huhndorf *et al.* (*MR* **108**: 1384, 2004).

Coronophoraceae Höhn. (1907) = Nitschkiaceae.

Lit.: Nannfeldt (*Svensk bot. Tidskr.* **69**: 49, 1975), Subramanian & Sekar (*Kavaka* **18**: 19, 1993) but the rank originally intended by Höhnel is uncertain. See.

Coronophorales Nannf. (1932). Hypocreomycetidae. 4 fam., 26 gen., 87 spp. Fams:

(1) **Bertiaceae**
(2) **Chaetosphaerellaceae**
(3) **Nitschkiaceae**
(4) **Scortechiniaceae**

For *Lit.* see under fam.

Coronophorella Höhn. (1909) = Nitschkia fide Müller & von Arx *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 87, 1973).

Coronoplectrum Brusse (1987), Parmeliaceae (L). 1, Namibia. See Brusse (*Mycotaxon* **28**: 131, 1987).

Coronospora M.B. Ellis (1971), anamorphic *Ascoronospora*, Hso.≡ eP.10. 4, S.E. & E. Asia. See Ellis (*Mycol. Pap.* **125**: 16, 1971), Matsushima (*Matsush. Mycol. Mem.* **10**, 2001; connection), Zhang & Zhang (*Mycosystema* **23**: 331, 2004).

Coronotelium Syd. (1921) = Puccinia fide Dietel (*Nat. Pflanzenfam.* **6**, 1928).

correct (of names), see Nomenclature.

correlated species (of *Pucciniales*), a species derived by reduction (of life cycle or morphology) from a parent heteroecious macrocyclic species/or the parent species itself.

Corrugaria Métrod (1949) = Mycena fide Singer (*Agaric. mod. Tax.*, 1951).

corrugate, wrinkled.

cortex, a more or less thick outer covering; **epi-** (q.v.); **corticate**, having a cortex.

corticate, see cortex.

Corticiaceae Herter (1910) nom. cons., Corticiales. 29 gen. (+ 8 syn.), 136 spp. Traditionally this family contained the resupinate homobasidiomycetes, which are now divided over more than 10 orders.

Lit.: Larsson (*MR* **111**: 1040, 2007).

Corticiales K.H. Larss. (2007). Agaricomycetes. 1 fam., 29 gen., 136 spp. Fam.:

Corticiaceae

For *Lit.* see under fam.

Corticifraga D. Hawksw. & R. Sant. (1990), ? Lecanorales. 2 (on lichens, *Peltigerales*), widespread (esp. temperate). See Hawksworth & Santesson (*Biblthca Lichenol.* **38**: 123, 1990), Martínez & Hafellner (*Mycotaxon* **69**: 271, 1998; Sapin, Portugal), Zhurbenko (*Mikol. Fitopatol.* **35**: 34, 2001; Russia), Hafellner *et al.* (*Mycotaxon* **84**: 293, 2002; N America), Hawksworth (*Lichenologist* **35**: 191, 2003; UK, Ireland), Zhurbenko (*Lichenologist* **39**: 221, 2007; review).

corticioid, of a form resembling *Corticium*; specifically, with a smooth hymenium.

Corticioides Lloyd (1908) = Tremella Pers. fide Lloyd (*Mycol. Writ. (Myc. Notes No. 57)* **5**: 816, 1919).

Corticirama Pilát (1957), Corticiaceae. 2, Europe. See Pilát (*Beih. Sydowia* **1**: 128, 1957).

Corticiruptor Wedin & Hafellner (1998), Lecanorales (L). 1, Norway. See Wedin & Hafellner (*Lichenologist* **30**: 86, 1998).

Corticium Fr. (1835) = Phanerochaete fide Donk (*Persoonia* **3**: 199, 1964).

Corticium Pers. (1794), Corticiaceae. 25, widespread. *C. solani* (anamorph *Rhizoctonia solani*), see *Thanatephorus*, and *C. salmonicolor* (pink disease of rubber, tea, and other tropical plants, see *Phanerochaete*. Formerly used for many resupinate basidiomycetes; now restricted to the species previously known as *Laeticorticium*. See Eriksson & Ryvarden (*Cortic. N. Europ.* **4**: 759, 1976; key 5 Eur. spp.), Larsen & Gilbertson (*Norw. Jl Bot.* **24**: 99, 1977), Greslebin & Rajchenberg (*N.Z. Jl Bot.* **41**: 437, 2003; Patagonia), Duhem & Michel (*BSMF* **122**: 145, 2006; key s.str.).

corticolous, living on bark; **corticole**, an organism which does this.

Corticomyces A.I. Romero & S.E. López (1989), anamorphic *Agaricomycetes*. 1 (with clamp-connexions), Argentina. See Romero & López (*Mycotaxon* **34**: 431, 1989).

cortina (of agarics), a partial veil (or part of one), frequently web-like, covering the mature gills.

Cortinaria, see *Cortinarius*.

Cortinariaceae R. Heim ex Pouzar (1983) nom. cons., Agaricales. 12 gen. (+ 28 syn.), 2104 spp.

Lit.: Ammirati *et al.* (*Poisonous Mushrooms of the Northern United States and Canada*: 396 pp., 1986), Bidaud *et al.* (*Atlas des Cortinaires* **8**: 239, 1996), Liu *et al.* (*CJB* **75**: 519, 1997), Brandrud (*Edinb. J. Bot.* **55**: 65, 1998), Hibbett *et al.* (*Nature* **407**: 506, 2000) suggest that *Cortinariaceae* could be the sistergroup to *Hydnangiaceae*, while the inclusion of *Inocybe* is not supported. Several gastroid taxa are also included in the *Cortinariaceae*, Høiland & Holst-Jensen (*Mycol.* **92**: 694, 2000), Moncalvo *et al.* (*Syst. Biol.* **49**: 278, 2000), Bougher & Lebel (*Aust. Syst. Bot.* **14**: 439, 2001), Peintner *et al.* (*Am. J. Bot.* **88**: 2168, 2001), Peintner *et al.* (*Mycol.* **94**: 620, 2002), Garnica *et al.* (*MR* **107**: 1143, 2003), Garnica *et al.* (*Mycol.* **95**: 1155, 2003), Peintner *et al.* (*MR* **107**: 485, 2003), Peintner *et al.* (*Mycol.* **96**: 1042, 2004), Frøslev *et al.* (*Mol. Phylogen. Evol.* **37**: 602, 2005), Matheny (*Mol. Phylogen. Evol.* **35**: 1, 2005), Vesterholt (*Fungi of Northern Europe* **3**: 146 pp., 2005), Garnica *et al.* (*CJB* **83**: 1457, 2005), Moreau *et al.* (*Mol. Phylogen. Evol.* **38**: 794, 2006).

Cortinariales = Agaricales.

cortinarins, toxic fluorescent cyclic decapeptides produced by *Cortinarius* spp. (Laatsch & Matthies, *Mycol.* **83**: 492, 1991). See also mycetismus (Mycetism).

Cortinarius (Pers.) Gray (1821) nom. cons., Cortinariaceae. *c.* 2000, widespread (esp. north temperate). The genus has been subdivided in a number of subgenera, but these usually lack phylogenetic quality or make other groups non-monophyletic. Recognition of *Dermocybe* as a separate genus would make the rest

of *Cortinarius* paraphyletic. See Moser (*Die Gattung Phlegmacium*, 1960; key European subgen. *Phlegmacium*), Horak & Moser (*Nova Hedwigia* **10**: 211, 1965; key), Moser (*Z. Pilzk.* **35**: 213, 1969; key European subgen. *Leprocybe*), Moser (*Schweiz. Z. Pilzk.* **50**: 153, 1972; key), Moser & Horak (*Beih. Nova Hedwigia* **52**: 513, 1975; key South American spp.), Brandrud (*Nordic Jl Bot.* **3**: 577, 1983; key European subgen. *Cortinarius*), Høiland (*Op. bot.* **71**: 1, 1984; key European spp. subgen. *Dermocybe*), Beaton *et al.* (*Kew Bull.* **40**: 171, 1985; key Austral.), Gill & Steglich (*Progr. Chem. Nat. Prod.* **51**, 1987; pigment chemistry), Brandrud *et al.* (*Cortinarius Flora Photographica*, 1990; European spp.), Horak & Wood (*Sydowia* **42**: 88, 1990; key Australiasian subgen. *Myxacium* and *Paramyxacium*), Reumaux *et al.* (*Atlas des Cortinaires*, 1990; European spp.), Bendiksen *et al.* (*Sommerfeltia* **19**: 1, 1993; key European spp. subgen. *Myxacium*), Gill (*Aust. Jl Chem.* **48**: 1, 1995; pigments in Australian spp.), Horak (*Beih. Sydowia* **10**: 101, 1995; key Australasian subgen. *Phlegmacium*), Liu *et al.* (*CJB* **75**: 519, 1997; phylogeny), Høiland & Holst-Jensen (*Mycol.* **92**: 694, 2000; phylogeny), Seidl (*Mycol.* **92**: 1091, 2000; phylogeny subgen. *Myxacium*), Soop (*BSMF* **117**: 91, 2001; New Zealand sp.), Peintner *et al.* (*Mycotaxon* **81**: 177, 2002; syn. of *Cortinarius*), Consiglio *et al.* (*Il Genere Cortinarius in Italia* **1**, 2003; Italy), Garnica *et al.* (*MR* **107**: 1143, 2003; South American spp), Consiglio *et al.* (*Il Genere Cortinarius in Italia* **2**, 2004; Italy), Francis & Bougher (*Australasian Mycologist* **23**: 1, 2004; Western Australian spp.), Soop (*Cortinarius in Sweden*, 2004; Sweden), Antonini *et al.* (*Il Genere Cortinarius in Italia*, 2005; keys to subgen.), Bidaud *et al.* (*Atlas des Cortinaires* **15**: 983, 2005), Consiglio *et al.* (*Il Genere Cortinarius in Italia* **3**, 2005; Italy), Consiglio *et al.* (*Rivista di Micologia* **49**: 29, 2006; sect. *Cystidiosi*) Cortinarius poisoning, see Mycetism.

Cortinellus Roze (1876) = Tricholoma fide Singer (*Agaric. mod. Tax.*, 1951).

Cortiniopsis J. Schröt. (1889) ≡ Lacrymaria.

Cortinomyces Bougher & Castellano (1993) ≡ Protoglossum.

Corylomyces Stchigel, M. Calduch & Guarro (2006), Lasiosphaeriaceae. 1, France. See Stchigel *et al.* (*MR* **110**: 1362, 2006).

Corylophomyces R.K. Benj. (1994), Laboulbeniaceae. 5, widespread. See Benjamin (*Aliso* **14**: 42, 1994), Benjamin (*Aliso* **18**: 71, 1999), Santamaría (*Fl. Mycol. Iberica* **5**, 2003).

Corymbomyces Appel & Strunk (1904) = Gliocladium fide Kendrick & Carmichae *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 390, 1973).

corymbose, arranged in clusters.

Corynascella Arx & Hodges (1975), ? Chaetomiaceae. 3, widespread. See von Arx (*Beih. Nova Hedwigia* **94**, 1988; key), Guarro *et al.* (*Mycol.* **89**: 955, 1997), Stchigel *et al.* (*Mycol.* **95**: 1218, 2003).

Corynascus Arx (1973), Chaetomiaceae. Anamorph *Myceliophthora*. 7, widespread. See von Arx (*Stud. Mycol.* **8**: 21, 1975), von Arx (*Beih. Nova Hedwigia* **94**, 1988; key), Mouchacca (*Cryptog. Mycol.* **18**: 19, 1997; thermophilic spp.), Sigler *et al.* (*Mycotaxon* **68**: 185, 1998), Stchigel *et al.* (*MR* **104**: 879, 2000; key).

Coryne Nees (1816), anamorphic *Ascocoryne*, Hsy.0eH.15. 1, widespread (esp. temperate). See Seifert (*Stud. Mycol.* **31**: 157, 1989).

Coryneaceae Corda (1839) = Pseudovalsaceae.

Corynecystis Brusse (1985), Lichinaceae (L). 1, S. Africa. See Brusse (*Bothalia* **15**: 552, 1985).

Corynelia Ach. (1823), Coryneliaceae. 7 (on *Podocarpaceae*), widespread (esp. tropical and south temperate). See Benny *et al.* (*Bot. Gaz.* **146**: 238, 1985), Johnston & Minter (*MR* **92**: 422, 1989), Hawksworth (*SA* **14**: 48, 1995; nomencl.), Winka & Eriksson (*Phylogenetic Relationships Within the Ascomycota Based on 18S rDNA Sequences* Akademisk Avhandling [Thesis (PhD), Department of Ecology and Environmental Science, Umeå University]: [17] pp., 2000; phylogeny), Geiser *et al.* (*Mycol.* **98**: 1053, 2006; phylogeny).

Coryneliaceae Sacc. ex Berl. & Voglino (1886), Coryneliales. 8 gen. (+ 7 syn.), 46 spp.

Lit.: Benny *et al.* (*Bot. Gaz.* **146**: 232, 1985), Benny *et al.* (*Bot. Gaz.* **146**: 437, 1985), Benny *et al.* (*Bot. Gaz.* **146**: 238, 1985), Benny *et al.* (*Bot. Gaz.* **146**: 431, 1985), Johnston & Minter (*MR* **92**: 422, 1989), Marmolejo (*Mycotaxon* **72**: 195, 1999), Rikkinen (*Karstenia* **40**: 147, 2000), Winka & Eriksson (*Phylogenetic Relationships Within the Ascomycota Based on 18S rDNA Sequences* Akademisk Avhandling [Thesis (PhD), Department of Ecology and Environmental Science, Umeå University]: [17] pp., 2000), Inderbitzin *et al.* (*MR* **108**: 737, 2004).

Coryneliales Seaver & Chardón (1926). Eurotiomycetidae. 1 fam., 8 gen., 46 spp. Fam.:

Coryneliaceae

Lit.: Benny *et al.* (*Bot. Gaz.* **146**: 232, 238, 431, 437, 1985), Fitzpatrick (*Mycol.* **12**: 206, 1920; **34**: 464, 1942; keys, monogr.), Geiser *et al.* (*Mycol.* **98**: 1051, 2006), Johnston & Minter (*MR* **92**: 422, 1989; asci).

Coryneliella Har. & P. Karst. (1890), Pezizomycotina. 1, Mauritius. See Fitzpatrick (*Mycol.* **12**: 206, 1920).

Coryneliopsis Butin (1972), ? Coryneliaceae. 2 (with *Cyttaria*), Chile. See Benny *et al.* (*Bot. Gaz.* **146**: 437, 1985; key), Johnston & Minter (*MR* **92**: 422, 1989; asci).

Coryneliospora Fitzp. (1942), Coryneliaceae. 2, widespread. See Benny *et al.* (*Bot. Gaz.* **146**: 437, 1985; key).

Corynelites Babajan & Tasl. (1970), Fossil Fungi. 1 (Tertiary), former USSR.

Corynella Boud. (1885) [non *Corynella* DC. 1825, *Leguminosae*] = Claussenomyces fide Korf & Abawi (*CJB* **49**: 1879, 1971).

Coryneopsis Grove (1933) = Seimatosporium fide Sutton (*Mycol. Pap.* **141**, 1977).

Corynesphaera Dumort. (1822) nom. rej. prop. ≡ Cordyceps.

Corynespora Güssow (1906) nom. cons., anamorphic *Corynesporasca*, Hso.≡ eP.25. 89, widespread. See Wei (*Mycol. Pap.* **34**, 1950), Ellis (*Mycol. Pap.* **65**, 1957; key), Ellis (*Mycol. Pap.* **76**, 1960), Goh *et al.* (*Fungal Diversity* **1**: 85, 1998; rDNA analysis), Gams & Seifert (*Taxon* **48**: 379, 1999; nomencl.), Pereira *et al.* (*Biological Control* **26**: 21, 2003; biocontrol), Silva *et al.* (*MR* **107**: 567, 2003; genetic variation).

Corynesporasca Sivan. (1996), Corynesporascaceae. Anamorph *Corynespora*. 1, Sri Lanka. See Sivanesan (*MR* **100**: 783, 1996).

Corynesporascaceae Sivan. (1996), Pleosporales. 2 gen., 90 spp.

Lit.: Carris (*Mycol. Soc. Amer. Newsl.* **38**: 19,

1987), Morgan-Jones (*Mycotaxon* **31**: 511, 1988), Sivanesan (*MR* **100**: 783, 1996), Goh *et al.* (*Fungal Diversity* **1**: 85, 1998).

Corynesporella Munjal & H.S. Gill (1961), anamorphic *Pezizomycotina*, Hso.≡ eP.?. 4, India. See Munjal & Gill (*Indian Phytopath.* **14**: 7, 1961).

Corynesporina Subram. (1994) nom. inval., anamorphic *Pezizomycotina*, Hso.?.?. 1, Singapore. See Subramanian (*Nova Hedwigia* **59**: 266, 1994), Shoemaker & Hambleton (*CJB* **79**: 592, 2001).

Corynesporopsis P.M. Kirk (1981), anamorphic *Pezizomycotina*, Hso.1-≡ eP.29. 9, widespread. See Sutton (*Sydowia* **41**: 330, 1989), Mercado Sierra *et al.* (*Mycotaxon* **64**: 7, 1997).

Corynetes Hazsl. (1881) = Geoglossum fide Nitare (*Windahlia* **14**: 37, 1984), Spooner (*Biblthca Mycol.* **116**, 1987).

Coryneum Nees (1816), anamorphic *Pseudovalsa*, Cac.≡ eP.19. 21, widespread (esp. temperate). See Sutton (*Mycol. Pap.* **138**, 1975; key), Sutton & Rizwi (*Nova Hedwigia* **32**: 341, 1980), Orsenigo *et al.* (*Mycotaxon* **67**: 257, 1998).

Corynitaceae Kalchbr. (1880) = Phallaceae.

Corynites Berk. & M.A. Curtis (1853) = Mutinus fide Stalpers (*in litt.*).

Corynocladus Leidy (1850) nom. dub., ? Microthyriaceae.

Corynodesmium Wallr. (1828) nom. nud., anamorphic *Pezizomycotina*. See Hughes (*CJB* **36**: 727, 1958).

Corynoides Gray (1821) = Calocera fide McNabb (*N.Z. Jl Bot.* **3**: 31, 1965).

Corynophoron Nyl. ex Müll. Arg. (1894) = Stereocaulon Hoffm. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Corynophorus, see *Corinophoros*.

Coscinaria Ellis & Everh. (1886) = Oomyces fide Rogerson (*Mycol.* **62**: 865, 1970).

Coscinedia A. Massal. (1860) = Myriotrema fide Hale (*Bull. Br. Mus. nat. hist.* Bot. **8**: 227, 1981).

Coscinocladium Kunze (1846), Physciaceae (L). 1, Europe. See Crespo *et al.* (*Taxon* **53**: 405, 2004; phylogeny).

coscinocystidium, a cystidium projecting as a pseudocystidium.

coscinoid, a pitted conducting element in *Linderomyces*.

Coscinopeltella Chardón (1930) = Vestergrenia Rehm fide von Arx & Müller (*Beitr. Kryptfl. Schweiz* **11** no. 1, 1954).

Coscinopeltis Speg. (1909) = Munkiella fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Coscinospora Mirza (1963) nom. inval. ≡ Jugulospora.

Cosmariospora Sacc. (1880), anamorphic *Pezizomycotina*, Hsp.1eP.?. 1, Italy.

Cosmospora Rabenh. (1862), Nectriaceae. Anamorphs *Acremonium*-like, *Fusarium*-like, *Chaetopsina*, *Cylindrocladiella*, *Stilbella*, *Volutella*. 47, widespread. Anamorphs varied, the genus may not be monophyletic. See Samuels *et al.* (*Mycol. Pap.* **164**, 1991; keys 40 spp. as *Nectria* subgen. *Dialonectria*), Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999), Nirenberg & Samuels (*CJB* **78**: 1482, 2000), Samuels *et al.* (*Fusarium* Paul E. Nelson Memorial Symposium: 1, 2001; *Fusarium*-like anamorphs), Samuels *et al.* (*Tropical Mycology* **2**: 13, 2002; key), Summerbell & Schroers (*J. Clin. Microbiol.* **40**: 2866, 2002; phylogeny), Hosoya & Tubaki (*Mycoscience* **45**: 261, 2004), Samuels *et al.* (*CBS Diversity Ser.* **4**, 2006; USA), Zhang & Zhuang (*Mycosystema* **25**: 15, 2006; phylogeny).

Costanetoa Bat. & J.L. Bezerra (1963), anamorphic *Pezizomycotina*, Cpd.1bH.?. 1, Brazil. See Batista & Bezerra (*Quad. Lab. crittogam., Pavia* **31**: 75, 1963).

Costantin (Julien Noël; 1857-1936, France). Maitre de Conférences de Botanique, École Normale Supérieure, Paris (1887-1901); Professor of Culture (1901-1919) then Professor of Organographics (1919 onwards) at the Natural History Museum, Paris. Carried out early work in pure culture with hyphomycetes, particularly species parasitic on other fungi; was an early exponent of the view, later adopted by Vuillemin (q.v.) and Mason (q.v.) that hyphomycetes should be classified by the development of their conidia. *Publs. Les Mucédinées Simples. Histoire, Classification, Culture et Rôle des Champignons Inférieurs dans les Maladies des Végétaux et des Animaux* (1888); *Atlas des Champignons Comestibles et Vénéneux* (1895); (with Durour) *Nouvelle Flore des Champignons. de France* (1891) [many later edns and reprints]. *Biogs, obits etc.* Magrou (*BSMF* **53**: 245, 1937); Stafleu & Cowan (*TL-2* **1**: 555, 1976).

Costantinella Matr. (1892), anamorphic *Morchellaceae*, Hso.0eP.10. 4, Europe; N. America. See Paden (*Persoonia* **6**: 405, 1972), Wong *et al.* (*Fungal Diversity* **8**: 173, 2001; Hong Kong).

Costapeda Falck (1923) ≡ Helvella.

costate, veined or ribbed.

costiferous, see hypha.

cot death (Sudden Infant Death Sydrome; SIDS), hypothesis for involvement of *Scopulariopisis brevicaulis* through biodeteriogenic action on mattresses with subsequent release of toxic gases was proposed by Richardson (*Lancet* **335**: 670, 1990) but not supported by later experiments (Kelley *et al.*, *Human Exp. Toxicol.* **11**: 347, 1992).

Cotylidia P. Karst. (1881), Agaricomycetes. 9, widespread (esp. tropical). *Hymenochaetales* or *Agaricales* (*Rickenella* clade). See Reid (*Beih. Nova Hedwigia* **18**: 56, 1965; key), Boidin *et al.* (*BSMF* **66**: 445, 1998; sub *Phanerochaetaceae*).

cotyliform, plate-like or wheel-like with an upturned edge.

Cougourdella E. Hesse (1935), Microsporidia. 2.

Coulterella Zebrowski (1936), Fossil Fungi ? Chytridiomycetes. 1 (Cambrian to ? Recent), Australia.

Courtoisia L. Marchand (1830) nom. rej. prop. = Rinodina fide Hafellner (*Beih. Nova Hedwigia* **79**: 241, 1984).

Coutinia J.V. Almeida & Sousa da Câmara (1903) = Botryosphaeria fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Coutourea Castagne (1845) nom. dub., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Cowlesia Nieuwl. (1916) ≡ Macropodia.

cramp balls, the ascomata of *Daldinia concentrica*.

Crandallia Ellis & Sacc. (1897), anamorphic *Duplicaria*, Cpt.0eH.15. 1, USA. See Powell (*Mycol.* **65**: 1362, 1973), Kohlmeyer & Volkmann-Kohlmeyer (*MR* **105**: 500, 2001).

Craneomyces Morgan-Jones, R.C. Sinclair & Eicker (1987), anamorphic *Pezizomycotina*, Hso.0eP.3. 1, S. Africa. See Morgan-Jones *et al.* (*Mycotaxon* **30**: 345, 1987).

Craspedodidymum Hol.-Jech. (1972), anamorphic *Chaetosphaeriaceae*, Hso.0eP.15. 10, widespread. See Holubová-Jechová (*Česká Mykol.* **26**: 70, 1972),

Pinruan *et al.* (*Mycoscience* **45**: 177, 2004; Thailand, on palms), Huhndorf & Fernández (*Fungal Diversity* **19**: 23, 2005; teleomorph).

Craspedon Fée (1825) = Strigula fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Crassoascus Checa, Barrasa & A.T. Martínez (1993), Annulatascaceae. 1 (from wood etc.), Spain. See Kang *et al.* (*Mycoscience* **40**: 151, 1999).

Crassochaeta Réblová (1999), Chaetosphaerellaceae. 2 (from wood), widespread. See Réblová (*Mycotaxon* **71**: 45, 1999), Réblová & Winka (*Mycol.* **93**: 478, 2001; phylogeny), Huhndorf *et al.* (*MR* **108**: 1384, 2004; phylogeny).

Cratarellus, see *Craterellus*.

Craterella Pers. (1794) nom. rej. = Cotylidia fide Donk (*Taxon* **6**: 26, 1959).

Craterellaceae Herter (1910) = Cantharellaceae.

Craterellus Pers. (1825), Cantharellaceae. 20, widespread. *C. cornucopioides* ('Horn of Plenty') is edible. See Corner (*Beih. Sydowia* **1**, 1957), Feibelman *et al.* (*MR* **101**: 1423, 1997), Dahlman *et al.* (*MR* **104**: 388, 2000; molecular systematics).

Crateridium Trevis. (1862) = Cyphelium Ach. fide Tibell (*Beih. Nova Hedwigia* **79**: 597, 1984).

crateriform, cup-like or crater-like in form.

Craterocolla Bref. (1888), Sebacinaceae. Anamorph *Ditangium*. 1, Europe. See Donk (*Persoonia* **4**: 164, 1966), Weiss & Oberwinkler (*MR* **105**: 403, 2001; phylogeny).

Craterolechia A. Massal. (1860) ? = Arthonia fide Zahlbruckner (*Catalogus Lichenum Universalis* **2**, 1922).

Crateromyces Corda (1831) nom. dub., Fungi. ? Based on insect eggs.

Cratiria Marbach (2000), Caliciaceae (L). 14, widespread (esp. tropical). See Marbach (*Biblthca Lichenol.* **74**: 160, 2000).

Crauatamyces Viégas (1944), Dothideomycetes. 1, Brazil.

Creangium Petr. (1950) = Saccardia fide von Arx (*Persoonia* **2**: 421, 1963).

Crebrothecium Routien (1949) = Eremothecium fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Cremasteria Meyers & R.T. Moore (1960), anamorphic *Pezizomycotina*, Hso.0eP.4. 1 (marine), USA; Mediterranean. See Meyers & Moore (*Am. J. Bot.* **47**: 348, 1960), Kohlmeyer & Volkmann-Kohlmeyer (*Bot. Mar.* **34**: 1, 1991).

Cremeogaster Mattir. (1924) = Leucophleps fide Fogel (*CJB* **57**: 1718, 1979).

Crenasclerotes Stach & Pickh. (1957), Fossil Fungi. 3 (Carboniferous), Germany.

crenate, having the edge toothed with rounded teeth (Fig. 23.43).

crenulate, delicately crenate (Fig. 23.44).

Creodiplodina Petr. (1957), anamorphic *Pezizomycotina*, Hso.1eH.?. 1, Australia. See Petrak (*Sydowia* **10**: 316, 1956).

Creographa A. Massal. (1860) nom. rej. prop. = Phaeographis fide Lücking *et al.* (*Taxon* **56**: 1296, 2007; nomencl.).

Creolophus P. Karst. (1879) = Hericium Pers. fide Larsson & Larsson (*in litt.*).

Creomelanops Höhn. (1920) = Botryosphaeria fide Samuels & Singh (*TBMS* **86**: 295, 1986), Eriksson & Yue (*SA* **6**: 241, 1987).

Creonecte Petr. (1949), anamorphic *Pezizomycotina*, Cpd.0fH.?. 1 (on *Uredo*), S. America.

Creonectria Seaver (1909) = Nectria fide Rogerson (*Mycol.* **62**: 865, 1970), Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Creopus Link (1833) = Hypocrea fide Rogerson (*Mycol.* **62**: 865, 1970), Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999), Chaverri & Samuels (*Stud. Mycol.* **48**, 2003).

Creoseptoria Petr. (1937), anamorphic *Pezizomycotina*, St.0fH.?. 1, Caucasus.

creosote fungus, see kerosene fungus.

Creosphaeria Theiss. (1910), ? Xylariaceae. Anamorph *Selenosporopsis*. 3, N. & S. America. See Ju *et al.* (*Mycotaxon* **48**: 219, 1993), Læssøe (*SA* **13**: 43, 1994), Bills & Peláez (*Mycotaxon* **57**: 471, 1996; endophytes), Ju & Rogers (*Mycotaxon* **73**: 343, 1999; Taiwan), Sánchez-Ballesteros *et al.* (*Mycol.* **92**: 964, 2000; phylogeny), Acero *et al.* (*Mycol.* **96**: 249, 2004; phylogeny), Triebel *et al.* (*Nova Hedwigia* **80**: 25, 2005; phylogeny).

Creothyriella Bat. & C.A.A. Costa (1957), anamorphic *Pezizomycotina*, Cpt.0eH.?. 1, India. See Batista & Costa (*Revta Biol.* Lisb. **1**: 97, 1957).

Creothyrium Petr. (1925) = Cylindrocolla fide Sutton (*Mycol. Pap.* **141**, 1977).

Crepidopus (Nees) Gray (1821) nom. rej. = Pleurotus fide Kuyper (*in litt.*).

Crepidotaceae Singer (1951) = Inocybaceae.

Crepidotus (Fr.) Staude (1857), Inocybaceae. *c.* 200, widespread. See Hesler & Smith (*North American species of Crepidotus*, 1965; key N. Am. spp.), Singer (*Beih. Nova Hedwigia* **44**: 341, 1973; key), Senn-Irlet (*Mycotaxon* **52**: 59, 1994; culture), Senn-Irlet (*Persoonia* **16**: 1, 1995; key Eur. spp.), Senn-Irlet & de Meijer (*Mycotaxon* **66**: 165, 1998; key Brazilian spp.), Aime *et al.* (*Am. J. Bot.* **92**: 74, 2005; phylogeny and taxonomy).

Crepidula Simakova, Pankova & I.V. Issi (2003), Microsporidia. 1. See Simakova *et al.* (*Parazitologiya* **37**: 145, 2003).

Crepidulospora Simakova, Pankova & I.V. Issi (2004), Microsporidia. 1. See Simakova *et al.* (*Parazitologiya* **38**: 477, 2004).

Crepinula Kuntze (1891) ≡ Cephalotheca.

crescentic, see lunate.

Cresponea Egea & Torrente (1993), Roccellaceae (L). 12, widespread (esp. tropical). See Egea & Torrente (*Mycotaxon* **48**: 302, 1993), Letrouit-Galinou *et al.* (*Bull. Soc. linn. Provence* **45**: 389, 1994; ultrastr.), Grube (*Bryologist* **101**: 377, 1998; phylogeny), Kantvilas (*Symb. bot. upsal.* **34** no. 1: 183, 2004), Kantvilas (*Australasian Lichenology* **58**: 32, 2006; Australia).

Cresporhaphis M.B. Aguirre (1991), ? Trichosphaeriaceae (±L). 7, widespread (temperate; mediterranean). See Barr (*Mycotaxon* **46**: 64, 1993), Calatayud & Aguirre-Hudson (*MR* **105**: 122, 2001).

Cribbea A.H. Sm. & D.A. Reid (1962), Cortinariaceae. 4, widespread (southern temperate). Basidioma gasteroid. See Smith & Reid (*Mycol.* **54**: 98, 1962), Francis & Bougher (*Australasian Mycologist* **21**: 81, 2002; Australia).

Cribbeaceae Singer, J.E. Wright & E. Horak (1963) = Cortinariaceae. The name *Cribbeaceae* has not yet been proposed for rejection against *Cortinariaceae*.

cribose (cribriform), having a network like a sieve.

Cribritaceae Locq., D. Pons & Sal.-Cheb. (1981) = Microthyriaceae.

Cribrites R.T. Lange (1978), Fossil Fungi, Microthyriaceae. 1 (? Eocene), Australia.

Cribropeltis Tehon (1933), anamorphic *Pezizomycotina*, Cpt.0eH.?. 1, USA.

Cribrospora Pacioni & P. Fantini (2000), Agaricales. 1, Europe. See Pacioni & Fantini (*Micologia e Vegetazione Mediterranea* **14**: 171, 1999).

Cricunopus P. Karst. (1881) = Suillus Gray fide Smith & Thiers (*The Boletes of Michigan*, 1971).

Criella (Sacc.) Henn. (1900), Rhytismataceae. 1, widespread (tropical).

Crinigera I. Schmidt (1969), Pezizomycotina. 1 (on *Fucus*, marine), Baltic Sea. See Koch & Jones (*CJB* **67**: 1183, 1989).

Crinipellis Pat. (1889), Marasmiaceae. *c.* 65, widespread. The pathogens of cacao are now placed in *Moniliophthora* (q.v.). See Singer (*Lilloa* **8**: 441, 1942; monogr.), Singer (*Fl. Neotrop.* Monogr. **17**: 9, 1976; key 14 neotrop. spp.), Arruda *et al.* (*Mycol.* **97**: 1348, 2005; new sp.).

Crinitospora B. Sutton & Alcorn (1985), anamorphic *Pezizomycotina*, Cac.1eH.15/19. 1, Australia. See Sutton & Alcorn (*TBMS* **84**: 437, 1985).

Crinium Fr. (1819) ≡ Crinula Fr.

Crinofera Nieuwl. (1916) ≡ Pilophora.

Crinula Fr. (1821), anamorphic *Holwaya*, Hsy.0eP.?. 2, Europe; N. America. See Seifert (*Stud. Mycol.* **27**: 1, 1985), Aronsson (*Svensk bot. Tidskr.* **85**: 9, 1991; Sweden), Roth (*Schweiz. Z. Pilzk.* **69**: 197, 1991; Switzerland).

Crinula Sacc. (1889) ≡ Holwaya.

Criserosphaeria Speg. (1912), ? Helotiales. 1, Argentina. See Petrak & Sydow (*Annls mycol.* **33**: 157, 1935).

crispate, curled and twisted.

crista, tubular, pouch-like or shelf-like inwardly directed fold of the inner membrane of a mitochondrion; site of ATP production during aerobic metabolism.

Cristaspora Fort & Guarro (1984), Trichocomaceae. 1, Spain. See Fort & Guarro (*Mycol.* **76**: 1115, 1984).

cristate, crested.

Cristella Pat. (1887) = Sebacina fide Rogers (*Mycol.* **36**: 70, 1944), Weresub (*Taxon* **16**: 402, 1967), Donk (*Taxon* **17**: 278, 1968) = Trechispora (Hydnodont.) fide, Liberta (*CJB* **51**: 1871, 1973).

Cristelloporia I. Johans. & Ryvarden (1979) = Trechispora fide Larsson (*in litt.*).

Cristidium R. Sant. (1952) nom. nud., anamorphic *Pezizomycotina*. 1 (on *Gyalectidium* in the tropics).

Cristinia Parmasto (1968), Stephanosporaceae. 7, widespread. See Hjortstam & Grosse-Brauckmann (*Mycotaxon* **47**: 405, 1993; key).

Cristiniaceae Jülich (1982) = Atheliaceae.

Cristula Chenant. (1920), anamorphic *Pezizomycotina*, Hso.1bH.1. 1, Europe.

Cristularia (Sacc.) Costantin (1888) = Botrytis fide Saccardo (*Syll. fung.* **4**: 134, 1886).

Cristulariella Höhn. (1916), anamorphic *Nervostroma*, Hso.1bH.1. 4 (on *Acer* etc.), widespread (north temperate). See Redhead (*CJB* **53**: 700, 1975), Niedbalski *et al.* (*Mycol.* **71**: 722, 1979; development in *C. pyramidalis*), Suto & Suyama (*Mycoscience* **46**: 227, 2005), Narumi-Saito *et al.* (*Mycoscience* **47**: 351, 2007).

Cristulospora L.F. Khodzhaeva & I.V. Issi (1989), Microsporidia. 3.

Crivellia Shoemaker & Inderb. (2006), Pleosporaceae. Anamorph *Brachycladium*. 1, widespread. See Inderbitzin *et al.* (*CJB* **84**: 1304, 2006).

Crocicreas Fr. (1849), Helotiaceae. 62, widespread (esp. north temperate). See also *Cyathicula*. See Carpenter (*Mem. N. Y. bot. Gdn* **33**, 1981), Baral & Krieglsteiner (*Beih. Sydowia* **6**, 1985), Galán (*MR* **98**: 1137, 1994), Triebel & Baral (*Sendtnera* **3**: 199, 1996), Iturriaga *et al.* (*MR* **103**: 28, 1999; application).

Crocicreomyces Bat. & Peres (1964) = Calopadia fide Lücking *et al.* (*Lichenologist* **30**: 121, 1998).

Crocodia Link (1833) nom. rej. = Pseudocyphellaria fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Crocynia (Ach.) A. Massal. (1860) nom. cons., Crocyniaceae (L). *c.* 2, widespread (tropical). See Hue (*Bull. Soc. bot. Fr.* **71**: 311, 1924; *s.l.* monogr.), Ekman & Tønsberg (*MR* **106**: 1262, 2002; phylogeny), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny).

Crocyniaceae M. Choisy ex Hafellner (1984), Lecanorales (L). 1 gen. (+ 1 syn.), *c.* 2 spp.

Lit.: Hafellner (*Nova Hedwigia* Beih. **79**: 241, 1984), Aptroot & Sipman (*Willdenowia* **20**: 221, 1991), Hofstetter *et al.* (*Mol. Phylogen. Evol.* **44**: 412, 2007; phylogeny).

Crocysporium Corda (1837) = Aegerita fide Saccardo (*Syll. fung.* **4**: 662, 1886).

Cronartiaceae Dietel (1900), Pucciniales. 2 gen., 24 spp.

Lit.: Crane *et al.* (*Proceedings of the Fourth IUFRO Rusts of Pines Working Party Conference* Tsukuba: 101, 1995), Hiratsuka (*Proceedings of the Fourth IUFRO Rusts of Pines Working Party Conference* Tsukuba: 1, 1995), Mims *et al.* (*Mycol.* **88**: 47, 1996), Vogler & Bruns (*Mycol.* **90**: 244, 1998), Et-touil *et al.* (*Phytopathology* **89**: 915, 1999), Vogler (*HortTechnol.* **10**: 518, 2000), Hantula *et al.* (*MR* **106**: 203, 2002), Cummins & Hiratsuka (*Illustr. Gen. Rust Fungi* edn 3: 225 pp., 2003), Maier *et al.* (*CJB* **81**: 12, 2003), Kubisiak *et al.* (*Heredity* **92**: 41, 2004), Wingfield *et al.* (*Australas. Pl. Path.* **33**: 327, 2004), Aime (*Mycoscience* **47**: 112, 2006).

Cronartium Fr. (1815), Cronartiaceae. *c.* 20 (on *Pinus* (0, I) (*Pinaceae*); on dicots (II, III)), widespread. *C. ribicola* (blister rust of *Pinus strobus* and other 5-needle pines; II and III on *Ribes*), *C. quercuum* (fusiform rust of pine). See Mielke (*Bull. Sch. Forest. Yale* **52**, 1943; *C. ribicola*), Peterson (*Rep. Tottori mycol. Inst.* **10**: 203, 1973), Hiratsuka & Powell (*Canad. Forest Serv. Tech. Rep.* **4**, 1976), Burdsall & Snow (*Mycol.* **69**: 503, 1977; *C. quercuum* taxonomy), Vogler & Bruns (*Mycol.* **90**: 244, 1998; DNA seq. analysis), Hantula *et al.* (*MR* **106**: 203, 2002; genetics), Hamelin *et al.* (*Phytopathology* **95**: 793, 2005; Mol. epidemiol. white pine blister rust).

Crossopsora Syd. & P. Syd. (1919), Phakopsoraceae. *c.* 17, widespread (tropical). See Peterson (*Rep. Tottori mycol. Inst.* **10**: 203, 1973), Gjærum *et al.* (*Lidia* **5**: 87, 2000; Uganda), Berndt *et al.* (*Mycotaxon* **83**: 265, 2002; Brazil), Engkhaninun *et al.* (*Mycoscience* **46**: 137, 2005; Thailand).

Crotalia Liro (1938), anamorphic *Anthracoidea*. 1, Europe.

Crotone Theiss. & Syd. (1915), Venturiaceae. 1, S. America.

Crotonocarpia Fuckel (1870) = Cucurbitaria fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

crottle, Scottish term for many lichens (obsol.); often used collectively; **black -**, *Parmelia omphalodes*.

Crouania Fuckel (1870) [non *Crouania* J. Agardh 1842, *Algae*] = Lamprospora fide Eckblad (*Nytt Mag. Bot.* **15**: 1, 1968).

Crouaniella (Sacc.) Lambotte (1888) = Ascobolus fide van Brummelen (*Persoonia* Suppl. **1**: 1, 1967).

crowded (of gills), very close together; conferted.

crown rust (of oats), *Puccinia coronata*.

Crozalsiella Maire (1917) = Ustilago fide Vánky (*Europ. Smut Fungi*: 348, 1994) fide.

crozier, the hook of an ascogenous hypha before ascus-development; ascus crook (Fig. 13).

Crucella Marvanová & Suberkr. (1990), anamorphic *Camptobasidium*. 1, USA. See Marvanová & Suberkropp (*Mycol.* **82**: 212, 1990).

Crucellisporiopsis Nag Raj (1983), anamorphic *Pezizomycotina*, Ccu.1bH.15. 2, Venezuela; New Zealand. See Nag Raj (*CJB* **60**: 2601, 1982).

Crucellisporium M.L. Farr (1968), anamorphic *Pezizomycotina*, Cac/Ccu.1bH.10. 2, USA; Tanzania. See Nag Raj & Kendrick (*CJB* **56**: 713, 1978), Punithalingam (*Nova Hedwigia* **48**: 297, 1989; cytology), Punithalingam (*MR* **107**: 917, 2003).

cruciate (1) in the form of a cross; (2) (of basidial septa), vertical and at right angles.

Crucibulum Tul. & C. Tul. (1844), Agaricaceae. 3, widespread (temperate). See Sarasini & Pina (*Rivista di Micologia* **39**: 115, 1996), Zhou *et al.* (*Fungal Diversity* **17**: 243, 2004; China), Sarasini (*Gasteromiceti Epigei*: 406 pp., 2005).

cruciform (of nuclear division in *Plasmodiophora*), having the chromosomes in a ring around a dumb-bell-shaped nucleolus.

cruciform division, see promitosis.

Cruciger R. Kirschner & Oberw. (1999), anamorphic *Agaricomycetes*. 1, Germany. See Kirschner & Oberwinkler (*Mycoscience* **40**: 345, 1999).

Crucispora E. Horak (1971), Agaricaceae. 2, New Zealand; Asia. See Horak (*N.Z. Jl Bot.* **9**: 489, 1971).

Crumenella P. Karst. (1890), Helotiaceae. 1 (on *Myrica*), Europe.

Crumenula De Not. (1864) = Godronia fide Groves (*CJB* **43**: 1195, 1965), Petrini *et al.* (*CJB* **67**: 2805, 1989).

Crumenula Rehm (1889) ≡ Crumenulopsis.

Crumenulopsis J.W. Groves (1969), Helotiaceae. Anamorph *Digitosporium*. 4, Europe; N. America. See Ennos & Swales (*MR* **95**: 521, 1991; populations), Hanlin *et al.* (*Mycol.* **84**: 650, 1992).

crust, a general term for a hard surface layer, esp. of a sporocarp; crustose.

Crustoderma Parmasto (1968), Meruliaceae. 14, widespread. See Nakasone (*Mycol.* **76**: 40, 1984), Gilbertson & Nakasone (*Mycol.* **95**: 467, 2003; key).

Crustodiplodina Punith. (1988), anamorphic *Pezizomycotina*, St.1eH.19. 1, British Isles. See Punithalingam (*Mycol. Pap.* **159**: 199, 1988).

Crustodontia Hjortstam & Ryvarden (2005), Polyporales. 1, widespread. See Hjortstam & Ryvarden (*Syn. Fung.* **20**: 36, 2005).

Crustomollisia Svrček (1987), Dermateaceae. 1, Europe. See Svrček (*Sydowia* **39**: 219, 1987), Nauta & Spooner (*Mycologist* **13**: 65, 1999).

Crustomyces Jülich (1978), Cystostereaceae. 3, widespread. See Jülich (*Persoonia* **10**: 140, 1978), Legon (*Mycologist* **20**: 118, 2006).

crustose (crustaceous), crust-like; used for lichens having a thallus stretching over and firmly fixed to the substratum by the whole of their lower surface; such thalli generally lack rhizinae and a lower cortex. (Fig. 21B).

Crustospathula Aptroot (1998), Ramalinaceae (L). 1, Papua New Guinea. See Aptroot (*Trop. Bryol.* **14**: 27, 1998).

Crustula Velen. (1934) = Mollisia fide Baral (*SA* **13**: 113, 1994).

Cryocaligula Minter (1986), anamorphic *Ploioderma*, St.1eH.10. 1, C. America. See Minter (*Recent Research on Conifer Needle Diseases* (USDA Forest Service General Technical Report GTR-WO 50): 78, 1986).

Cryomyces Selbmann, de Hoog, Mazzaglia, Friedmann & Onofri (2005), anamorphic *Dothideomycetes*. 2, Antarctica. See Selbmann *et al.* (*Stud. Mycol.* **51**: 1, 2005).

cryopreservation, see Genetic Resource Collections.

Cryphonectria (Sacc.) Sacc. & D. Sacc. (1905), Cryphonectriaceae. Anamorph *Endothiella*. 5, widespread. *C. parasitica* (chestnut (*Castanea*) blight or canker). See also *Endothia*. See Roane in Roane *et al.* (Eds) (*Chestnut blight, other Endothia diseases, and the genus Endothia*: 28, 1986; key 11 spp.), Micales & Stipes (*Phytopathology* **77**: 650, 1987), Milgroom & Lipari (*Mol. Ecol.* **4**: 633, 1995; DNA), Cortesi *et al.* (*Eur. J. For. Path.* **28**: 167, 1998; VCGs), Milgroom & Cortesi (*Proc. natn Acad. Sci. U.S.A.* **96**: 10518, 1999; pop. str.), Myburg *et al.* (*Mycol.* **91**: 243, 1999; DNA), Castlebury *et al.* (*Mycol.* **94**: 1017, 2002; posn), Hoegger *et al.* (*Mycol.* **94**: 105, 2002; *C. radicalis*), Myburg *et al.* (*CJB* **80**: 590, 2002), Marra *et al.* (*Heredity* **93**: 189, 2004; population biology), Myburg *et al.* (*CJB* **82**: 1730, 2004; phylogeny), Myburg *et al.* (*Mycol.* **96**: 990, 2004; phylogeny), Gryzenhout *et al.* (*Taxon* **54**: 539, 2005; nomencl.), Breuillin *et al.* (*MR* **110**: 288, 2006; genetic variation), Gryzenhout *et al.* (*FEMS Microbiol. Lett.* **258**: 161, 2006; *C. parasitica*, taxonomy review), Gryzenhout *et al.* (*Mycol.* **98**: 239, 2006; phylogeny), Liu & Milgroom (*Mycol.* **99**: 279, 2007; E Asia, VCGs).

Cryphonectriaceae Gryzenh. & M.J. Wingf. (2006), Diaporthales. 12 gen. (+ 2 syn.), 26 spp.

Lit.: Barr (*Mycol. Mem.* **7**: 1, 1978), Anagnostakis (*Mycol.* **79**: 23, 1987), Redlin & Rossman (*Mycol.* **83**: 200, 1991), Castlebury *et al.* (*Mycol.* **94**: 1017, 2002), Myburg *et al.* (*Mycoscience* **44**: 187, 2003), Gryzenhout *et al.* (*Stud. Mycol.* **50**: 130, 2004), Myburg *et al.* (*Mycol.* **96**: 990, 2004), Gryzenhout *et al.* (*Mycol.* **98**: 239, 2006), Rossman *et al.* (*Mycoscience* **48**: 135, 2007; phylogeny), Gryzenhout *et al.* (*Taxonomy, phylogeny, and ecology of bark-infecting and tree killing fungi in the Cryphonectriaceae*: in press, 2008; monograph).

crypta, a sleeve-like formation around a tree root (esp. evergreens) in tropics and subtropics developed by certain agarics (Singer, 1962: 20).

Cryptadelphia Réblová & Seifert (2004), Trichosphaeriaceae. Anamorph *Brachysporium*. 6, widespread (temperate). See Réblová & Seifert (*Mycol.* **96**: 348, 2004), Markovskaja & Treigien (*Nova Hedwigia* **84**: 495, 2007; Lithuanian, anamorph).

Cryptandromyces Thaxt. (1912), Laboulbeniaceae. 13 or 19, widespread. See Tavares (*Mycol. Mem.* **9**, 1985), Santamaría (*Fl. Mycol. Iberica* **5**, 2003; Iberian peninsula).

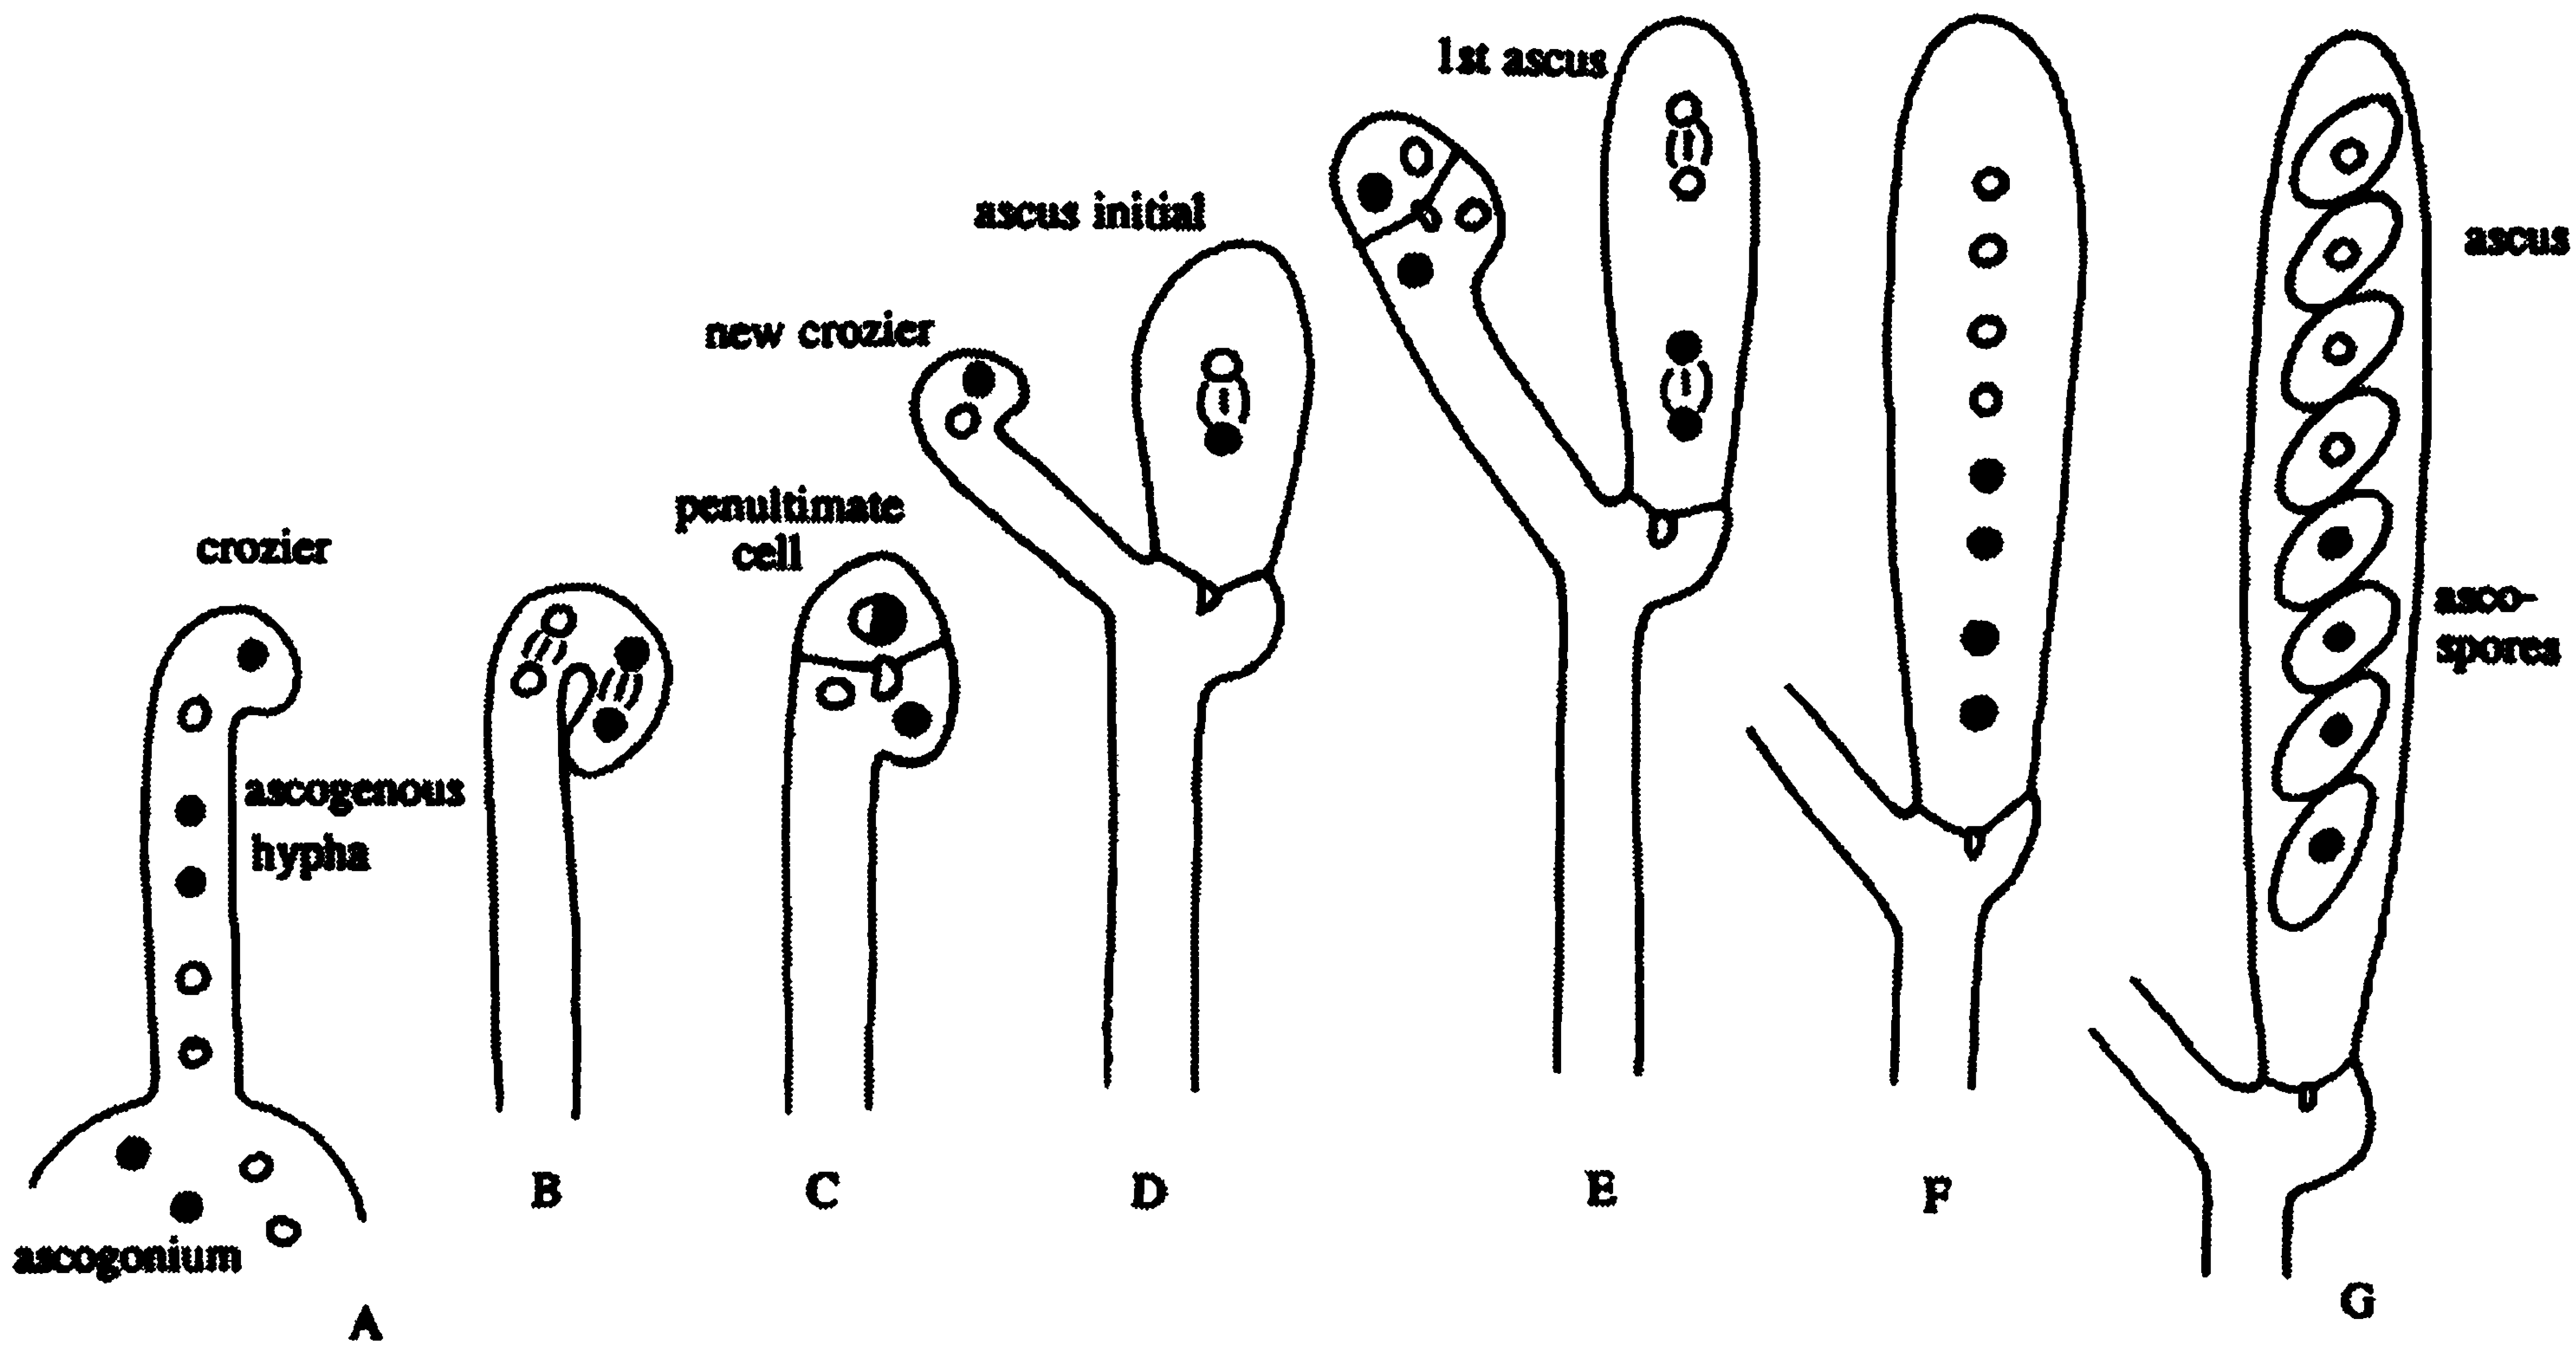

Fig. 13. Ascus and ascospore development (diagrammatic). A, ascogenous hypha with a crozier at the apex developing from an ascogonium; B, conjugate division of the two nuclei in the crozier; C, two septa cut off a binucleate penultimate cell, the nuclei in which fuse to form a diploid fusion nucleus, meanwhile the backwardly directed terminal cell fuses with the ascogenous hypha; D, penultimate cell enlarges to become the ascus within which the fusion nucleus begins to divide meiotically, and a new crozier develops from beneath the ascus and repeats the behaviour of the first; E, second division of meiosis occurs in the young ascus; F, mitotic division of the four haploid nuclei in the ascus; G, ascospores formed.

Cryptascoma Ananthap. (1988), Valsaceae. 1, India. See Ananthapadmanaban (*TBMS* **90**: 479, 1988).

Cryptella Quél. (1875) = Robergea fide Saccardo (*Syll. fung.* **2**: 806, 1883).

Cryptendoxyla Malloch & Cain (1970), ? Cephalothecaceae. Anamorph *Chalara*-like. 1 (from soil etc.), Canada. See von Arx & van der Walt (*Stud. Mycol.* **9**: 167, 1987; posn), Suh & Blackwell (*Mycol.* **91**: 836, 1999; phylogeny).

cryptic, inconspicuous or hidden.

Cryptica R. Hesse (1884) = Pachyphloeus fide Fischer (*Nat. Pflanzenfam.* **5b**: viii, 1938).

Cryptoascus Petri (1909), Pezizomycotina. 2, Europe. *C. oligosporus* on *Olea*, *C. graminis* on wheat.

Cryptobasidiaceae Malençon ex Donk (1956), Exobasidiales. 4 gen. (+ 2 syn.), 9 spp.

Lit.: Ciccarone (*Micol. Ital.* **18**: 29, 1989), Bauer *et al.* (*CJB* **75**: 1273, 1997), Gómez & Kisimova-Horovitz (*Revta Biol. trop.* **45**: 1293, 1998), Begerow *et al.* (*Mycol. Progr.* **1**: 187, 2002), Hendrichs *et al.* (*Sydowia* **55**: 33, 2003).

Cryptobasidiales Jülich (1981) = Exobasidiales.

Cryptobasidium Lendn. (1921) = Botryoconis fide Malençon (*BSMF* **69**: 92, 1953).

Cryptoceuthospora Petr. (1921), anamorphic *Pezizomycotina*, St.0eH.?. 2, Europe.

Cryptochaete P. Karst. (1889) = Peniophora fide Donk (*Persoonia* **3**: 199, 1964).

Cryptocline Petr. (1924), anamorphic *Helotiales*, Cac.0eH.19. 15, widespread (north temperate). See Morgan-Jones (*CJB* **51**: 309, 1973), Sutton (*The Coelomycetes*, 1980), Petrini (*Sydowia* **37**: 238, 1984), Matsushima (*Matsush. Mycol. Mem.* **10**, 2001; Japan).

Cryptococcaceae Kütz. ex Castell. & Chalm. (1919) = Tremellaceae.

Cryptococcales. Order used for *Blastomycetes* (q.v.) with ascomycetous teleomorphs, but *Cryptococcus* itself is now known to be polyphyletic and partly of basidiomycetous affinity (and assiged here to *Tremellaceae*).

cryptococcosis, a disease in humans and animals caused by *Cryptococcus neoformans* (teleomorph *Filobasidiella neoformans*); 'European blastomycosis'; torulosis. See Casadevall & Perfect (*Cryptococcus neoformans*, 1998), Kovacs *et al.* (*Annls Intern. Med.* **1103**: 533, 1985; clinical), Buchanan & Murphy (*Emerg. Infect. Dis.* **4**: 71, 1998; pathogenesis).

Cryptococcus Kütz. (1833) nom. rej. ≡ Cryptococcus Vuill.

Cryptococcus Vuill. (1901) nom. cons., anamorphic *Filobasidiella*. c. 75, widespread. In a wide sense, applied to a range of yeast forming species within the *Tremellomycetes*. See Ellis & Pfeiffer (*J. Clin. Microbiol.* **28**: 1642, 1990; ecology), James & Cherniak (*Infect. Immun.* **60**: 1084, 1992; cell wall biochemistry), Guého *et al.* (*Antonie van Leeuwenhoek* **63**: 175, 1993; mol. phylogeny), Perfect *et al.* (*J. Clin. Microbiol.* **31**: 3305, 1993; PFGE), Currie *et al.* (*J. Clin. Microbiol.* **32**: 1188, 1994; RFLP), Fan *et al.* (*J. med. Vet. Mycol.* **32**: 1163, 1994; mol. phylogeny), Fell *et al.* (*Stud. Mycol.* **38**: 129, 1995; mol. phylogeny), Filonow *et al.* (*Biol. Control* **7**: 212, 1996; biocontrol), Tanaka *et al.* (*J. med. Vet. Mycol.* **34**: 299, 1996; ploidy), Boekhout & Scorzetti (*J. Med. Vet. Mycol.* **35**: 147, 1997; mycocins), Boekhout *et al.*

(*Int. J. Syst. Bacteriol.* **47**: 432, 1997; PFGE, RAPD), Sorrell & Ellis (*Rev. Iberoam. Micol.* **14**: 42, 1997; ecology), Casadevall & Perfect (*Cryptococcus neoformans*, 1998), Krockenberger *et al.* (*Medical Mycology* **39**: 523, 2001; immunohistochemical differentiation of *Cryptococcus neoformans* vars), Hazen & Howell (*Manual of Clinical Microbiology* **2**: 1693, 2003), Lemmer *et al.* (*Medical Mycology* **42**: 135, 2004; PCR fingerprinting compared to serotyping in *Cryptococcus neoformans*), McClelland *et al.* (*Trends in Microbiology* **12**: 208, 2004; mating system in *Cryptococcus neoformans*), Lin *et al.* (*Nature* London **434** no. 7036: 1017, 2005; sexual reproduction in partners of the same mating type in *Cryptococcus neoformans*), Loftus *et al.* (*Science* Washington **307** no. 5713: 1321, 2005; genome map), Lin & Heitman (*Annual Review of Microbiology* **60**: 69, 2006; biology of *Cryptococcus neoformans* species complex), Playford *et al.* (*J. Clin. Microbiol.* **44**: 876, 2006; detection and identification by reverse line blot hybridization).

Cryptocolax R.A. Scott (1956), Fossil Fungi, Eurotiales. 1 (Eocene), USA. See Pirozynski (*Ann. Rev. Phytopath.* **14**: 237, 1976).

Cryptocoryneopsis B. Sutton (1980), anamorphic *Pezizomycotina*, Hso.0bP.1. 1, Australia. See Sutton (*TBMS* **74**: 393, 1980), Ho *et al.* (*Mycol.* **92**: 582, 2000; key), Alcorn (*Australas. Mycol.* **21**: 111, 2002).

Cryptocoryneum Fuckel (1870), anamorphic *Pezizomycotina*, St.0bP.1. 4, widespread (temperate). See Ho *et al.* (*Mycol.* **92**: 582, 2000; key).

Cryptocrea Petr. (1937) = Eudarluca fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Cryptoderis Auersw. (1869) ≡ Pleuroceras.

Cryptoderma Imazeki (1943) = Phylloporia fide Wagner & Fischer (*MR* **105**: 781, 2001).

Cryptodesma Leidy (1850) nom. dub., ? Fungi.

Cryptodiaporthe Petr. (1921), Gnomoniaceae. Anamorphs *Diplodina, Uniseta*. 24, widespread (north & south temperate). See Barr (*Mycotaxon* **41**: 287, 1991), Redlin & Rossman (*Mycol.* **83**: 200, 1991), Bathgate *et al.* (*MR* **100**: 159, 1996), Castlebury *et al.* (*Mycol.* **94**: 1017, 2002), Castlebury *et al.* (*Mycoscience* **44**: 203, 2003; phylogeny), Sogonov *et al.* (*Sydowia* **57**: 102, 2005; phylogeny), Gryzenhout *et al.* (*Mycol.* **98**: 239, 2006; placement of *C. corni*), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny).

Cryptodictyon A. Massal. (1860), Lecideaceae (L). 2, Asia.

Cryptodidymosphaeria (Rehm) Höhn. (1917) = Didymosphaeria fide Aptroot (*Nova Hedwigia* **60**, 1995).

Cryptodidymosphaerites Currah, Stockey & B.A. LePage (1998), Fossil Fungi, Pleosporales. 1. See Currah *et al.* (*Mycol.* **90**: 668, 1998).

Cryptodiscus Corda (1838), ? Stictidaceae. 6, widespread. See Sherwood (*Mycotaxon* **5**: 1, 1977), Sherwood-Pike (*Mycotaxon* **28**: 137, 1987), Wedin *et al.* (*Lichenologist* **37**: 67, 2005; phylogeny).

cryptoendolithic (of organisms, esp. lichens), surviving at low temperatures through modification of the thallus so that it can exist inside rock between rock crystals (Friedmann, *Science, N.Y.* **215**: 1045, 1982). Cf. endolithic.

Cryptogamia (obsol.). Division of the kingdom *Plantae* for the spore-producing plants, i.e. the *Thallophyta* (which traditionally included fungi), *Bryophyta* (mosses and liverworts), and *Pteridophyta* (ferns, etc.); the *Phanerogamia* (*Spermatophyta*) being the division for the flowering (or seed-producing) plants.

Cryptogene Syd. (1939) = Ascochytopsis fide Sutton (*Mycol. Pap.* **141**, 1977).

Cryptogenella Syd. (1939) = Ascochytopsis fide Sutton (*Mycol. Pap.* **141**, 1977).

Cryptohymenium Samuels & L.M. Kohn (1987), Dermateaceae. 1, New Zealand. See Samuels & Kohn (*Sydowia* **39**: 202, 1987).

Cryptolechia A. Massal. (1853), Gyalectaceae (L). 8, widespread (esp. tropical). See Vězda (*Folia geobot. phytotax.* **4**: 443, 1969), Hawksworth & Dibben (*Lichenologist* **14**: 98, 1982; nomencl.), Kauff & Büdel (*Bryologist* **108**: 272, 2005; ontogeny, anatomy), Kalb (*Biblthca Lichenol.* **95**: 297, 2007; key).

Cryptoleptosphaeria Petr. (1923), ? Diaporthales. 1 (on *Leptosphaeria*), Europe. Affinities of this genus remain obscure. See Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999), Réblová & Seifert (*Stud. Mycol.* **50**: 95, 2004).

Cryptomela Sacc. (1884) = Cryptosporium fide Höhnel (*Sber. Akad. Wiss. Wien* Math.-naturw. Kl., Abt. 1 **125**: 76, 1916).

Cryptomeliola S. Hughes & Piroz. (1997), Meliolaceae. 3, Cuba; Kenya. See Mibey & Hawksworth (*Mycol. Pap.* **174**, 1997), Mibey & Cannon (*Cryptog. Mycol.* **20**: 249, 1999).

Cryptomphalina R. Heim (1966), Polyporaceae. 1, Thailand. See Singer (*Agaric. mod. Tax.* 4th ed: 185, 1986; possibly a teratological form of *Lentinus*).

Cryptomycella Höhn. (1925), anamorphic *Cryptomycina*, St.0eH.15. 1, Europe. See Gabel (*Mycol.* **85**: 861, 1993).

Cryptomyces Grev. (1825), Rhytismataceae. 1, widespread (north temperate). *C. maximus* (on *Salix*). See Alcock (*TBMS* **11**: 161, 1926), Minter & Cannon (*IMI Descr. Fungi Bact.* **148** nos 1471-1480, 2001), Vasil'eva (*Mikol. Fitopatol.* **36**: 17, 2002).

Cryptomycetaceae Höhn. (1917) = Rhytismataceae.

Cryptomycina Höhn. (1917), Pezizomycotina. Anamorph *Cryptomycella*. 3 or 1, widespread (north temperate). *C. pteridis* (common on bracken, *Pteridium aquilinum*). See Bache-Wiig (*Mycol.* **32**: 214, 1940).

Cryptomycocolacaceae Oberw. & R. Bauer (1990), Cryptomycocolacales. 2 gen., 2 spp.

Lit.: Mattsson & Wedin (*Lichenologist* **30**: 463, 1998).

Cryptomycocolacales Oberw. & R. Bauer (1990). Cryptomycocolacomycetes. 1 fam., 2 gen., 2 spp. Fam.:

Cryptomycocolacaceae

For *Lit.* see under fam.

Cryptomycocolacomycetes R. Bauer, Begerow, J.P. Samp., M. Weiss & Oberw. (2006). Pucciniomycotina. 1 ord., 1 fam., 2 gen., 2 spp. Ord.:

Cryptomycocolacales

For *Lit.* see ord. and fam.

Cryptomycocolax Oberw. & R. Bauer (1990), Cryptomycocolacaceae. 1 (parasitic on an ascomycete), Costa Rica. See Oberwinkler & Bauer (*Mycol* **82**: 672, 1990), Bauer *et al.* (*Mycol. Progr.* **5**: 41, 2006).

Cryptonectriella (Höhn.) Weese (1919) = Nectriella Nitschke ex Fuckel fide Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Cryptonectriopsis (Höhn.) Weese (1919) = Phomatospora fide Barr (*Mycol. Mem.* **7**: 232 pp., 1978).

Cryptoniesslia Scheuer (1993), Niessliaceae. 1 (from dead leaves), British Isles. See Scheuer (*MR* **97**: 543, 1993), Samuels & Barr (*CJB* **75**: 2165, 1997).

Cryptoparodia Petr. (1950) = Antennularia fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Cryptopeltis Rehm (1906) = Porina Müll. Arg. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Cryptopeltosphaeria, see *Cryptoleptosphaeria*.

Cryptopezia Höhn. (1919), Helotiales. 1, Samoa.

Cryptophaeella Höhn. (1917) ? = Microsphaeropsis Höhn. fide Sutton (*Mycol. Pap.* **141**, 1977).

Cryptophallus Peck (1897) = Phallus fide Lloyd (*Mycol. Notes* **26**: 329, 1907).

Cryptophiale Piroz. (1968), anamorphic *Pezizomycotina*, Hso.1eH.15. 21, widespread (tropical). See Sutton *et al.* (*MR* **92**: 354, 1989; key), McKenzie (*Mycotaxon* **49**: 307, 1993; NZ, New Caledonia spp.), Goh & Hyde (*MR* **100**: 999, 1996; key), Umali *et al.* (*Mycoscience* **40**: 189, 1999).

Cryptophialoidea Kuthub. & Nawawi (1987), anamorphic *Pezizomycotina*, Hso.0fH.15. 2, Malaysia. See Kuthubutheen & Nawawi (*TBMS* **89**: 581, 1987), Kuthubutheen & Nawawi (*MR* **98**: 686, 1994), Delgado *et al.* (*Fungal Diversity* **20**: 31, 2005; Cuba).

Cryptoporaceae Jülich (1982) = Polyporaceae.

Cryptoporus (Peck) Shear (1902), Polyporaceae. 2, N. America; S.E. Asia. See Gilbertson & Ryvarden (*N. Amer. Polyp.* **1**: 220, 1986), Wu & Zang (*Mycotaxon* **74**: 415, 2000; China), Giaon *et al.* (*Bollettino dell'Associazione Micologica ed Ecologica Romana* **18-19**: 56, 2002).

Cryptopus Theiss. (1914) [non *Cryptopus* Lindl. 1824, *Orchidaceae*] ≡ Adelopus.

Cryptorhynchella Höhn. (1915) ? = Sphaerographium fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995), Verkley (*Nova Hedwigia* **75**: 433, 2002).

Cryptosordaria De Not. ex Sacc. (1891) nom. inval. = Anthostomella See Læssøe (*SA* **13**: 43, 1994; ? synonym of *Xylaria*), Lu & Hyde (*Fungal Diversity Res. Ser.* **4**, 2000).

Cryptosphaerella Sacc. (1882) ? = Coronophora fide Subramanian & Sekar (*Kavaka* **18**: 19, 1993).

Cryptosphaeria Ces. & De Not. (1863) nom. cons., Diatrypaceae. Anamorph *Cytosporina*. 8, widespread (esp. temperate). See Glawe & Rogers (*CJB* **64**: 1493, 1986; anamorph), Glawe & Jacobs (*Mycol.* **79**: 135, 1987), Rappaz (*Mycol. Helv.* **2**: 285, 1987; key), Glawe (*Sydowia* **41**: 122, 1989; anamorph), Rappaz (*Taxon* **38**: 664, 1989; nomencl.), Romero & Carmarán (*Fungal Diversity* **12**: 161, 2003; Argentina), Acero *et al.* (*Mycol.* **96**: 249, 2004; phylogeny, polyphyly).

Cryptosphaeria Grev. (1822) nom. rej. = Diplodia fide Bisby & Mason (*TBMS* **24**: 138, 1940).

Cryptosphaerina Lambotte & Fautrey ex Sacc. & P. Syd. (1902) = Cryptosphaeria Ces. & De Not. fide Pirozynski (*in litt.*).

Cryptospora Tul. & C. Tul. (1863) [non *Cryptospora* Kar. & Kir. 1842, *Cruciferae*] = Cryptosporella fide Holm (*SA* **11**: 29, 1992), Mejía *et al.* (*MR* **112**: 23, 2008; phylogeny).

Cryptosporella Sacc. (1877), Gnomoniaceae. 8, widespread. See Reid & Booth (*CJB* **65**: 1320, 1987), Ananthapadmanaban (*TBMS* **90**: 479, 1988; synonym of *Wuestneia*), Reid & Booth (*CJB* **67**: 879, 1989), Lee *et al.* (*Stud. Mycol.* **50**: 235, 2004), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny), Mejía *et al.* (*MR* **112**: 23, 2008; phylogeny, monogr.).

Cryptosporellaceae Arx & E. Müll. (1954) = Gnomoniaceae.

Cryptosporina E.I. Hazard & Oldacre (1975), Microsporidia. 1.

Cryptosporina Höhn. (1905) = Botryosphaeria fide von Arx & Müller (*Beitr. Kryptfl. Schweiz* **11** no. 1, 1954).

Cryptosporiopsis Bubák & Kabát (1912), anamorphic *Pezicula, Ocellaria*, Cac/St.0eH.15. *c.* 29, widespread (esp. temperate). *C. malicorticis* (syn. *Gloeosporium perennans*) (perennial canker of apple). See Dennis (*Kew Bull.* **29**: 157, 1974; key), Johnston & Fullerton (*N.Z. J. Exp. Agr.* **16**: 159, 1988; *C. citri* causing leaf spot of *Citrus*), Gené *et al.* (*MR* **94**: 309, 1990; bud rot of *Corylus*), Dugan *et al.* (*Mycol.* **85**: 551 and 565, 1993; morphology, pathogenicity, cytology etc. of *C. perennans* and *C. curvispora*), Kowalski *et al.* (*MR* **102**: 347, 1998), Verkley (*Stud. Mycol.* **44**: 180 pp., 1999; monogr.), Abeln *et al.* (*Mycol.* **92**: 685, 2000; phylogeny), Sigler *et al.* (*Stud. Mycol.* **53**: 53, 2005; N America).

Cryptosporium Kunze (1817), anamorphic *Pezizomycotina*. 25, widespread (temperate). See Sutton (*Mycol. Pap.* **141**, 1977).

Cryptostictella Grove (1912) = Discosia fide Petrak & Sydow (*Annls mycol.* **23**: 209, 1925), Grove (*British Stem- and Leaf-Fungi (Coelomycetes)* **2**, 1937).

Cryptostictis Fuckel (1866) = Seimatosporium fide Shoemaker (*CJB* **42**: 411, 1964).

Cryptostroma P.H. Greg. & S. Waller (1952), anamorphic *Pezizomycotina*, St.0eP.19. 1, N. America; Europe. *C. corticale* (sooty bark of *Acer*).

Cryptosympodula Verkley (1999), anamorphic *Scleropezicula*, Hso.?.?. 1, Canada. See Verkley (*Stud. Mycol.* **44**: 132, 1999).

Cryptothamnium Wallr. (1842) = Chaenocarpus Spreng. fide Læssøe (*SA* **13**: 55, 1994).

Cryptothecia Stirt. (1876) nom. cons., Arthoniaceae (L). 75, widespread (tropical). See Santesson (*Symb. bot. upsal.* **12** no. 1: 1, 1952), Awasthi & Agarwal (*J. Indian bot. Soc.* **48**: 62, 1969), Makhija & Patwardhan (*Biovigyanam* **11**: 1, 1985; key 24 spp.), Thor (*Bryologist* **94**: 278, 1991), Lücking (*Lichenologist* **27**: 127, 1995; Costa Rica), Thor (*Symb. bot. upsal.* **32**: 267, 1997; Australasia), Grube (*Bryologist* **101**: 377, 1998), Grube & Lücking (*MR* **105**: 1007, 2001; ontogeny), Sipman (*Biblthca Lichenol.* **86**: 177, 2003; Singapore), Sparrius & Saipunkaew (*Lichenologist* **37**: 507, 2005; Thailand), Lücking *et al.* (*Lichenologist* **38**: 235, 2006; *C. candida* complex).

Cryptotheciaceae Bonord. (1864) = Arthoniaceae.

Cryptothecium Penz. & Sacc. (1897) [non *Cryptothecium* Hübener 1851, fossil *Musci*] = Protocreopsis fide Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Cryptothele Th. Fr. (1866), Lichinaceae (L). 8, widespread. See Henssen & Büdel (*Beih. Nova Hedwigia* **79**: 381, 1984), Schultz & Büdel (*Lichenologist* **34**: 39, 2002; key).

Cryptotheliaceae Walt. Watson (1929) = Trypetheliaceae.

Cryptotheliomyces Cif. & Tomas. (1953) ≡ Cryptothele.

Cryptothelium A. Massal. (1860), Trypetheliaceae (L). 1, tropical. See Eriksson (*Op. Bot.* **60**, 1981), Harris (*Acta Amazon.* Supl. **14**: 55, 1984; key 2 spp. Brazil), Eriksson & Hawksworth (*SA* **11**: 56, 1992;

status), Aptroot *et al.* (*Biblthca Lichenol.* **97**, 2008; Costa Rica).

Cryptotrichosporon I. Okoli & Boekhout (2007), anamorphic *Trichosporonaceae*. 1, Nigeria. See Okoli *et al.* (*FEMS Yeast Res.* **7**: 339, 2007).

Cryptovalsa Ces. & De Not. ex Fuckel (1870), Sordariomycetes. 24, widespread. See Hyde (*MR* **97**: 799, 1993), Inderbitzin *et al.* (*MR* **103**: 1628, 1999; Hong Kong), Mostert *et al.* (*Australas. Pl. Path.* **33**: 295, 2004; on *Vitis*), Vasilyeva & Stephenson (*Fungal Diversity* **19**: 189, 2005; USA).

Cryptovalsaria Lar.N. Vassiljeva & S.L. Stephenson (2007), Sordariomycetes. 1. See Vasiljeva & Stephenson (*Sydowia* **59**: 154, 2007).

Cryptumbellata Udagawa & Uchiy. (1999), anamorphic *Pezizomycotina*, Hso.?.?. 1, China. See Udagawa & Uchiyama (*Mycotaxon* **70**: 186, 1999).

Crystallocystidium (Rick) Rick (1940) nom. dub., Polyporales.

Ctenoderma Syd. & P. Syd. (1920) = Skierka fide Mains (*Mycol.* **31**: 175, 1939).

ctenoid, comb-like.

Ctenomyces Eidam (1880), Arthrodermataceae. Anamorph *Chrysosporium*-like. 1, widespread. See Orr & Kuehn (*Mycopathologia* **21**: 321, 1963), Currah (*Mycotaxon* **24**: 1, 1985), Harmsen *et al.* (*Mycoses* **42**: 67, 1999; DNA), Sugiyama & Mikawa (*Mycoscience* **42**: 413, 2001; phylogeny), Geiser *et al.* (*Mycol.* **98**: 1053, 2006; phylogeny).

Ctenosporites Elsik & Janson. (1974), Fossil Fungi, anamorphic *Pezizomycotina*. 2 (Eocene), widespread. See Lange & Smith (*N. Jb. Geol. Paläont. Mh.* **11**: 649, 1975).

Ctenosporium R. Kirschner (2006), anamorphic *Pezizomycotina*. 1, Panama. Possibly synonymous with the fossil genus *Ctenosporites*. See Kirschner (*Mycol. Progr.* **5**: 136, 2006).

Ctesium Pers. (1827) = Graphis fide Staiger (*Biblthca Lichenol.* **85**, 2002).

Cubamyces Murrill (1905) = Trametes fide Overholts (*Polyporaceae of the United States, Alaska, & Canada*, 1953).

Cubasina R.F. Castañeda (1986), anamorphic *Pezizomycotina*, Hso.#eP.1. 1, Cuba. See Castañeda (*Deuteromycotina de Cuba* Hyphomycetes IV: 6, 1986), Markovskaya & Treigiene (*Mikol. Fitopatol.* **38**: 52, 2004).

Cubonia Sacc. (1889), ? Ascobolaceae. 3, Europe. Most species included in this genus belong in to *Pseudombrophila*, but a revision is needed. See Kimbrough & Korf (*Am. J. Bot.* **54**: 9, 1967), Eckblad (*Nytt Mag. Bot.* **15**: 1, 1968), Durand (*BSMF* **88**: 155, 1973; ontogeny), Pfister (*Mycol.* **76**: 843, 1984).

Cucujomyces Speg. (1917), Laboulbeniaceae. 14, widespread. See Rossi & Weir (*CJB* **74**: 77, 1996; Indonesia), Weir & Rossi (*CJB* **75**: 791, 1997; NZ), Weir & Rossi (*Mycol.* **93**: 171, 2001; Bolivia), Santamaría (*Fl. Mycol. Iberica* **5**, 2003; Iberian peninsula), Hughes *et al.* (*Mycol.* **96**: 1355, 2004; New Zealand).

Cucullaria Corda (1842) = Leotia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

cucullate, hood-like or cowl-like in form.

Cucullospora K.D. Hyde & E.B.G. Jones (1986) [non *Cucullispora* Scheuring 1970, fossil-sporae dispersae] ≡ Cucullosporella.

Cucullosporella K.D. Hyde & E.B.G. Jones (1990), Halosphaeriaceae. 1 (marine), Seychelles. See Jones & Hyde (*Mycotaxon* **37**: 197, 1990), Alias *et al.* (*Mycoscience* **42**: 405, 2001; ultrastr.), Pang *et al.* (*Nova Hedwigia* **77**: 1, 2003; phylogeny).

Cucurbidothis Petr. (1921) = Curreya fide von Arx & Müller (*Stud. Mycol.* **9**, 1975), Silva-Hanlin & Hanlin (*MR* **103**: 153, 1999).

Cucurbitaria Gray (1821), Cucurbitariaceae. Anamorphs *Camarosporium*, *Dichomera*, *Pleurostromella*, *Megaloseptoria*, *Pyrenochaeta*, *Diplodia*-like. *c.* 36 (on twigs), widespread. See Mirza (*Nova Hedwigia* **16**: 161, 1968), Silva-Hanlin & Hanlin (*MR* **103**: 153, 1999; DNA), Liew *et al.* (*Mol. Phylogen. Evol.* **16**: 392, 2000; phylogeny), Schoch *et al.* (*Mycol.* **98**: 1041, 2006; phylogeny).

Cucurbitariaceae G. Winter (1885), Pleosporales. 5 gen. (+ 9 syn.), 49 spp.

Lit.: Mirza (*Nova Hedwigia* **16**: 161, 1968), Barr & Boise (*Mem. N. Y. bot. Gdn* **49**: 298, 1989), Barr (*Mem. N. Y. bot. Gdn* **62**: 92 pp., 1990), Berbee (*Mol. Biol. Evol.* **13**: 462, 1996), Ramaley & Barr (*Mycotaxon* **65**: 501, 1997), Silva-Hanlin & Hanlin (*MR* **103**: 153, 1999; DNA).

Cucurbitariaceites R.K. Kar, R.Y. Singh & Sah (1972), Fossil Fungi, Dothideomycetes. 2 (Tertiary), India.

Cucurbitariella Petr. (1917) = Coniochaeta fide von Arx & Müller (*Beitr. Kryptfl. Schweiz* **11** no. 1, 1954).

Cucurbitariopsis C. Massal. (1889) ? = Rhabdospora fide Mussat (*Syll. fung.* **10**: 1, 1892), Sutton (*Mycol. Pap.* **141**, 1977).

Cucurbitariopsis Vassilkov (1960) ≡ Gemmamyces.

Cucurbitopsis Bat. & Cif. (1957), Pezizomycotina. 1, Portugal. See Batista & Ciferri (*Publções Inst. Micol. Recife* **95**: 3, 1957).

Cucurbitula Fuckel (1870) = Coniochaeta fide Petrini (*Sydowia* **44**: 169, 1993).

cudbear (corkir), Scottish names for lichens used in making dye, esp. *Ochrolechia tartarea*. See Dyeing.

Cudonia Fr. (1849), Cudoniaceae. 9, widespread (temperate). See Mains (*Am. J. Bot.* **27**: 322, 1940), Nannfeldt (*Ark. Bot.* **30A** no. 4: 1, 1942), Mains (*Mycol.* **48**: 694, 1956; N. Am. spp.), Sharma & Rawla (*Biblthca Mycol.* **91**: 203, 1983; India), Landvik *et al.* (*Mycoscience* **37**: 237, 1997; phylogeny), Döring & Triebel (*Cryptog. Bryol.-Lichénol.* **19**: 123, 1998; phylogeny), Gernandt *et al.* (*Mycol.* **93**: 915, 2001; phylogeny), Wang *et al.* (*Mycol.* **94**: 641, 2002; phylogeny, n. sp.), Wang *et al.* (*Mycol.* **98**: 1065, 2006; phylogeny), Wang *et al.* (*Mol. Phylogen. Evol.* **41**: 295, 2006; phylogeny).

Cudoniaceae P.F. Cannon (2001), Rhytismatales. 2 gen. (+ 3 syn.), 21 spp.

Lit.: Landvik *et al.* (*Mycoscience* **37**: 237, 1996; phylogeny), Döring & Triebel (*Cryptog. Bryol.-Lichénol.* **19**: 123, 1998; phylogeny), Gernandt *et al.* (*Mycol.* **93**: 915, 2001), Wang *et al.* (*Mycol.* **94**: 641, 2002), Wang *et al.* (*Mycol.* **98**: 1065, 2006; phylogeny).

Cudoniella Sacc. (1889), Helotiaceae. Anamorph *Tricladium*. *c.* 30, widespread. See Dennis (*Persoonia* **3**: 72, 1964), Baral & Krieglsteiner (*Beih. Sydowia* **6**, 1985; synonym of *Hymenoscyphus*), Webster *et al.* (*Nova Hedwigia* **60**: 493, 1995; anamorph), Gamundí & Romero (*Fl. criptog. Tierra del Fuego* **10**: 130 pp., 1998; Argentina), Wang *et al.* (*Am. J. Bot.* **92**: 1565, 2005; phylogeny), Wang *et al.* (*Mycol.* **98**: 1065, 2006; phylogeny), Wang *et al.* (*Mol. Phy-

logen. Evol. **41**: 295, 2006; phylogeny).

Cudoniopsis Speg. (1925), Sclerotiniaceae. 1, S. America.

Culbersonia Essl. (2000), Physciaceae. 2, Kenya; USA. See Esslinger (*Bryologist* **103**: 771, 2000).

Culcitalna Meyers & R.T. Moore (1960), anamorphic *Halosphaeriaceae*, Hsp.≡ eP.1. 1 (marine), Newfoundland. See Meyers & Moore (*Am. J. Bot.* **47**: 348, 1960), Hambleton *et al.* (*Stud. Mycol.* **53**: 29, 2005; phylogeny).

Culicicola Nieuwl. (1916) ≡ Lamia.

Culicidospora R.H. Petersen (1960), anamorphic *Pezizomycotina*, Hso.1bH.1. 2 (aquatic), widespread. See Petersen (*Mycol.* **55**: 23, 1963), Descals (*MR* **109**: 545, 2005; diagnostics).

Culicinomyces Couch, Romney & B. Rao (1974), anamorphic *Pezizomycotina*, Hso.0eH.15. 3 (in *Anopheles* and rotifers), USA; Australia. See Inmann & Bland (*CJB* **61**: 2618, 1983; ultrastr. conidiogenesis), Sweeney *et al.* (*J. Invert. Path.* **42**: 224, 1983; ultrastr.), Sigler *et al.* (*Mycol.* **79**: 493, 1987; on *Aedes kochi*).

Culicospora J. Weiser (1977), Microsporidia. 1.

Culicosporella J. Weiser (1977), Microsporidia. 1.

culmicolous, living on stems, esp. those of grasses; caulicolous; **culmicole**, an organism which does this.

culmomarasmin, a wilt toxin of *Fusarium culmorum* (Gäumann *et al.*, *Phytopath. Z.* **36**: 115, 1959).

cultivar, a variety in the horticultural (or agricultural) sense (see Art. 10, *International code of nomenclature for cultivated plants* [*Regnum veg.* **104**], 1980). Snyder *et al.* (*J. Madras Univ.* **27**: 185, 1957) used cultivar for infraspecific taxa of *Fusarium* but this term is only correctly used in mycology for trade varieties of cultivated mushrooms, etc.

cultivated mushroom, basidioma of *A. bisporus* (syn. *A. brunnescens*; name in need of conservation; see Malloch, *Mycol.* **68**: 910, 1976, nomencl.);.

culture, a growth of one organism or of a group of organisms for the purpose of experiment (esp. of fungi and other organisms on laboratory media) or sometimes for trade (e.g. a **mushroom -**); **continuous -**, one in which the culture medium is simultaneously added and withdrawn (harvested) so that the volume remains constant; see Calcott (*Continuous culture of cells*, 2 vols, 1981); **enrichment -**, a culture which favours the growth of the desired organism in a mixed culture or population; **pure -**, a - of one sort of organism; **- medium**, see medium; **type -**, see type.

Culture collections, see Genetic resource collections.

culture methods, see Media.

Cumminsiella Arthur (1933), Pucciniaceae. 8 (on *Berberis*, *Mahonia* (autoecious) (*Berberidaceae*)), Europe; America. See Baxter (*Mycol.* **49**: 864, 1957; key), McCain & Hennen (*Syst. Bot.* **7**: 48, 1982; keys etc.) *C. mirabilissima* is a neomycete in many regions on cultivated *Mahonia*.

Cumminsina Petr. (1955), ? Raveneliaceae. 1 (on *Grewia* (*Tiliaceae*)), Angola. See Petrak (*Sydowia* **9**: 474, 1955).

cumulate, massed together; heaped up.

Cumulospora I. Schmidt (1985), anamorphic *Pezizomycotina*, Hso.#eP.?. 1 (marine), widespread. See Schmidt (*Mycotaxon* **24**: 420, 1985), Peña & Arambarri (*Darwiniana* **35**: 69, 1998; Argentina), Chatmala *et al.* (*Fungal Diversity* **17**: 1, 2004; Thailand).

cuneate, see cuneiform.

cuneiform (**cuneate**), thinner at one end than the other; wedge or axe-blade shaped (Fig. 23.23).

Cuniculitrema J.P. Samp. & R. Kirschner (2001), Cuniculitremaceae. Anamorph *Sterigmatosporidium*. 1, Germany. See Kirschner *et al.* (*Antonie van Leeuwenhoek* **80**: 155, 2001).

Cuniculitremaceae J.P. Samp., R. Kirschner & M. Weiss (2001), Tremellales. 4 gen., 25 spp.

Lit.: Kirschner *et al.* (*Antonie van Leeuwenhoek* **80**: 155, 2001).

Cunningham (Gordon Herriot; 1892-1962; New Zealand). Wounded at Gallipoli (1914); instructor, Horticulture Division, Department of Agriculture, Palmerston North (1917-1920) then Wellington (1920-1928); Head of Mycological Laboratory, Plant Research Station, Palmerston North (1928-1935); Director, Plant Diseases Division, Department of Scientific and Industrial Research, Auckland (1939-1957); Fellow of the Royal Society of London (1950). Pioneer New Zealand plant pathologist and mycologist. *Publs.* The Ustilaginaceae or smuts of New Zealand. *Transactions of the New Zealand Institute* (1924), *Fungus Diseases of Fruit-trees in New Zealand* (1925); *The Rust Fungi of New Zealand* (1931) *Plant Protection by the Aid of Therapeutants* (1935); *Gasteromycetes of Australia an New Zealand* (1944); The Thelephoraceae of Australia and New Zealand. *Bulletin of the New Zealand Department of Scientific and Industrial Research* (1963); Polyporaceae of New Zealand. *Bulletin of the New Zealand Department of Scientific and Industrial Research* (1965). *Biogs, obits etc.* Ramsbottom (*Biographical Memoirs of Fellows of the Royal Society* **10**: 15, 1964) [bibliography, portrait]; Stafleu & Cowan (*TL-2* **1**: 573, 1976).

Cunninghamella Matr. (1903), Cunninghamellaceae. 10, widespread. See Samson (*Proc. K. ned. Akad. Wet.* Ser. C, Biol. Med. Sci. **72**: 322, 1969; key), Hawker *et al.* (*J. gen. Microbiol.* **60**: 181, 1970; sporangiolum ultrastructure), Baijal & Mehrotra (*Sydowia* **33**: 1, 1980; key), Shipton & Lunn (*TBMS* **74**: 483, 1980; taxonomic criteria, key), Lunn & Shipton (*TBMS* **81**: 303, 1983; key), Weitzman (*TBMS* **83**: 527, 1984), Zheng & Chen (*Mycosystema* **5**: 1, 1992), Dermoumi (*Mycoses* **36**: 293, 1993; zygomycoses), Zheng & Chen (*Mycosystema* **7**: 1, 1994), Zheng & Chen (*Mycosystema* **8-9**: 1, 1995-1996), Zheng & Chen (*Mycotaxon* **69**: 187, 1998), Su *et al.* (*MR* **103**: 805, 1999; phylogeny), Voigt & Wöstemeyer (*Gene* **270**: 113, 2001; phylogeny), White *et al.* (*Mycol.* **98**: 872, 2006; phylogeny), Koyama *et al.* (*Respirology* **13**: 309, 2008; mucormycosis).

Cunninghamellaceae Naumov ex R.K. Benj. (1959), Mucorales. 5 gen. (+ 3 syn.), 15 spp.

Lit.: Benny *et al.* (*Mycol.* **84**: 639, 1992; emend.), Dermoumi (*Mycoses* **36**: 293, 1993), Zheng & Chen (*Mycosystema* **7**: 1, 1994), Zheng & Chen (*Mycosystema* **8-9**: 1, 1995-1996), Zheng & Chen (*Mycotaxon* **69**: 187, 1998), Su *et al.* (*MR* **103**: 805, 1999).

Cunninghamia Curr. (1873) [non *Cunninghamia* R. Br. 1826, *Cycadaceae*] ≡ Choanephora.

Cunninghammyces Stalpers (1985), Cyphellaceae. 2, New Zealand; Réunion. See Hjortstam & Larsson (*Windahlia* **21**, 1994; = *Xenasma*), Hjortstam *et al.* (*Syn. Fung.* **20**: 42, 2005).

cup fungus, a discomycete (esp. *Leotiales* or *Pezizales*) ascoma. **- lichen**, a sp. of *Cladonia* having podetia expanded into goblet-like scyphi.

Cuphocybe R. Heim (1951) = Cortinarius fide Peintner *et al.* (*Mycotaxon* **83**: 447, 2002).
Cuphophyllus (Donk) Bon (1985), Hygrophoraceae. *c.* 25, widespread. See Lodge (*Kew Bulletin* **54**: 807, 1999; Lesser Antilles), Bañares & Arnolds (*Persoonia* **18**: 135, 2002; Canary Islands).
cupulate, cup-like in form, as e.g. in conidiomata (Fig. 10 O).
Cupulisporonites Z.C. Song & Liu Cao (1994), Fossil Fungi. 1, Antarctica. See Song & Cao (*Monograph, State Antarctic Committee* China **3**: 38, 1994).
Cupulomyces R.K. Benj. (1992), Laboulbeniaceae. 1, Grenada. See Benjamin (*Aliso* **13**: 355, 1992), Santamaria (*MR* **99**: 1071, 1995).
Curculiospora Arnaud (1954), anamorphic *Pezizomycotina*, Hso.0-≡ hP.1. 1, France.
curling factor, see griseofulvin.
Curreya Sacc. (1883), Cucurbitariaceae. Anamorph *Coniothyrium*-like. 2 (on conifers), widespread (north temperate). See von Arx & van der Aa (*Sydowia* **36**: 1, 1983), Eriksson (*SA* **5**: 127, 1986), Barr (*Mycotaxon* **29**: 501, 1987), Barr (*Mem. N. Y. bot. Gdn* **62**, 1990), Kruys *et al.* (*MR* **110**: 527, 2006; phylogeny).
Curreyella (Sacc.) Lindau (1897) ≡ Discostroma fide Kang *et al.* (*MR* **103**: 53, 1999).
Curreyella Massee (1895) = Plicaria fide Eckblad (*Nytt Mag. Bot.* **15**: 1, 1968).
Curtis (Moses Ashley; 1808-1872; USA). Became priest, Wilmington, North Carolina (1835); teacher, Raleigh, North Carolina (1837-1839); missionary, Hillsboro (1841-1847) then Society Hill (1847-156) then again Hillsboro (1856-1872), North Carolina. Student and collector of American fungi who collaborated with Tuckerman (q.v.) and Berkeley (q.v.), sending them specimens collected personally and received from other field biologists mainly in the USA but also from Cuba. Collections in **FH** and **K**. *Biogs, obits etc.* Berkeley & Berkeley (*A Yankee botanist.*, 1986); Petersen (*Mycotaxon* **9**: 459, 1979); Petersen ('B. & C': the mycological association of M.J. Berkeley and M.A. Curtis. *Bibliotheca Mycologica* **72**: 1, 1980); Shear & Stevens (*Mycol.* **11**: 181, 1919); Snell & Dick (*Mycol.* **45**: 968, 1953); Stafleu & Cowan (*TL-2* **1**: 573, 1976).
Curucispora Matsush. (1981), anamorphic *Pezizomycotina*, Hso.1bH.1. 2, Ponape. See Matsushima (*Matsush. Mycol. Mem.* **2**: 4, 1981).
Curvatispora V.V. Sarma & K.D. Hyde (2001), Clypeosphaeriaceae. 1, Singapore. See Sarma & Hyde (*Nova Hedwigia* **72**: 480, 2001).
Curvibasidium Samp. & Golubev (2004), Microbotryomycetes. 2, Japan; Europe. See Sampaio *et al.* (*Int. J. Syst. Evol. Microbiol.* **54**: 1402, 2004).
Curvicladiella Decock & Crous (2006), anamorphic *Nectriaceae*, Hso.?.?. 1, French Guiana. See Decock & Crous (*Stud. Mycol.* **55**: 225, 2006).
Curvicladium Decock & Crous (1998) ≡ Curvicladiella fide Decock & Crous (*Mycol.* **90**: 276, 1998), Crous *et al.* (*Stud. Mycol.* **55**: 213, 2006).
Curvidigitus Sawada (1943), anamorphic *Pezizomycotina*, Hsy.0-≡ bH.?. 1, Taiwan. See Pirozynski (*Mycol. Pap.* **129**, 1972).
Curvisporium, see *Curvusporium*.
Curvularia Boedijn (1933), anamorphic *Cochliobolus*, Hsy.≡ eP.26. 54, widespread. *C. lunata* common on crop plants, esp. trop. (Lam-Quang-Bach, *Fiches Phytopath. trop.* **15**, 1964). See Kendrick & Cole (*CJB* **46**: 1279, 1968; spore devel.), Sivanesan (*Mycol. Pap.* **158**, 1987; key), Alcorn (*Mycotaxon* **39**: 361, 1990; additions to genus), Alcorn (*Mycotaxon* **41**: 329, 1991), Berbee *et al.* (*Mycol.* **91**: 964, 1999; ITS), Olivier *et al.* (*Mycol.* **92**: 736, 2000; phylogeny), Hosokawa *et al.* (*Mycoscience* **44**: 227, 2003; morphology), Sivanesan *et al.* (*Aust. Syst. Bot.* **16**: 275, 2003; Australia), Sun *et al.* (*Mycoscience* **44**: 239, 2003; species concepts), Carter & Boudreaux (*J. Clin. Microbiol.* **42**: 5419, 2004; clinical), Bhattacharya *et al.* (*BMC Evolutionary Biology* **5**: 58, 2005; introns), Pimentel *et al.* (*J. Clin. Microbiol.* **43**: 4288, 2005; clinical).
Curvulariopsis M.B. Ellis (1961), anamorphic *Pezizomycotina*, Hsy.≡ eP.10. 1, Ecuador. See Ellis (*Mycol. Pap.* **82**: 39, 1961).
Curvusporium Corbetta (1963) = Curvularia fide Sutton (*in litt.*), Hosokawa *et al.* (*Mycoscience* **44**: 227, 2003).
cuspidate (e.g. of a pileus or cystidium), having a well-marked sharp outgrowth or point at the top.
Cuspidatispora Shearer & Bartolata (2006), Lasiosphaeriaceae. 1, USA. See Miller *et al.* (*Mycoscience* **47**: 220, 2006).
Cuspidosporium Cif. (1955) = Exosporium fide Ellis (*Mycol. Pap.* **82**, 1961).
Custingophora Stolk, Hennebert & Klopotek (1968), anamorphic *Sordariomycetes*, Hso.0eP.15. 2, widespread. See Barr & Crane (*CJB* **57**: 835, 1979), Viljoen *et al.* (*MR* **103**: 497, 1999), Réblová & Winka (*Mycol.* **92**: 939, 2000; phylogeny), Pinnoi *et al.* (*Nova Hedwigia* **77**: 213, 2003; Thailand).
Cuticularia Ducomet (1907), anamorphic *Pezizomycotina*, Hso.-.-. 1, Europe.
cutis (cuticle) (of basidiomata), the outer layer consisting of compressed hyphae parallel to the surface; the upper and lower layers of the **cutis** are sometimes distinguished as **epi-** and **sub-**. See Shaffer (*Brittonia* **22**: 230, 1970; cuticular terminology in *Russula*), Singer (*Agaricales in Modern Taxonomy* edn 4: 69, 1986); also pellis.
Cutomyces Thüm. (1878) = Puccinia fide Dietel (*Nat. Pflanzenfam.* **6**, 1928).
CYA, see Media.
cyanescent, becoming blue.
Cyanicium Locq. (1979) = Cortinarius fide Kuyper (*in litt.*).
Cyanisticta Gyeln. (1931) = Pseudocyphellaria fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).
Cyanoannulus Raja, J. Campb. & Shearer (2003), Annulatascaceae. 1, USA. See Raja *et al.* (*Mycotaxon* **88**: 8, 2003), Campbell & Shearer (*Mycol.* **96**: 822, 2004).
Cyanobaeis Clem. (1909) = Baeomyces fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).
Cyanobasidium Jülich (1979) = Lindtneria fide Hjortstam (*Mycotaxon* **28**: 19, 1987).
cyanobiont, see photobiont.
Cyanocephalium Zukal (1893) ? = Thelocarpon fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962), Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).
Cyanochyta Höhn. (1915), anamorphic *Gibberella*, Cpd.1eH.?. 1, Europe. See Sutton (*Mycol. Pap.* **141**, 1977).
Cyanoderma Höhn. (1919) [non *Cyanoderma* Weber Bosse 1887, *Rhodophyceae*] ≡ Cyanodermella.
Cyanodermella O.E. Erikss. (1981), Stictidaceae. 2,

Europe; N. America. See Eriksson (*Ark. Bot.* ser. 2 **6**: 381, 1967; as *Cyanoderma*), Winka *et al.* (*Lichenologist* **30**: 455, 1998; DNA), Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999), Ekman & Tønsberg (*MR* **106**: 1262, 2002; phylogeny).

Cyanodiscus E. Müll. & M.L. Farr (1971), Saccardiaceae. 1 or 2, USA (subtropical); Cuba. See Müller & Farr (*Mycol.* **63**: 1080, 1971), Reynolds & Gilbert (*Cryptog. Mycol.* **27**: 249, 2006; Panamá).

Cyanodontia Hjortstam (1987), Meruliaceae. 1, E. Africa. See Hjortstam (*Mycotaxon* **28**: 23, 1987).

Cyanohypha Jülich (1982) = Botryobasidium Donk fide Langer (*Biblthca Mycol.* **158**, 1994).

Cyanopatella Petr. (1949), anamorphic *Pezizomycotina*, Cpd.0eH/1eP.?. 1, Iran.

cyanophilous (of spores, etc.), readily absorbing a blue stain such as cotton blue or gentian violet.

Cyanophomella Höhn. (1918), anamorphic *Gibberella*, Cpd.0-1eH.?. 1, Europe.

cyanophycophilous (of fungi), ones lichenized with a cyanobacterium (Pike & Carroll, *in* Alexopoulos & Mims, *Introductory mycology*, edn 3, 1980); see photobiont.

Cyanoporina Groenh. (1951), ? Pyrenothricaceae (L). 1, Java. See Groenhart (*Reinwardtia* **1**: 198, 1951).

Cyanopulvis J. Fröhl. & K.D. Hyde (2000), Xylariaceae. 1, Australia. See Fröhlich & Hyde (*Fungal Diversity Res. Ser.* **3**: 308, 2000).

Cyanopyrenia H. Harada (1995), ? Eurotiomycetes (L). 1 (aquatic), Japan. See Harada (*Lichenologist* **27**: 249, 1995).

Cyanospora Heald & F.A. Wolf (1910) = Robergea fide Nannfeldt (*Nova Acta R. Soc. Scient. upsal.*, 1932).

Cyanosporus McGinty (1909) = Polyporus P. Micheli ex Adans. fide Stevenson & Cash (*Bull. Lloyd Libr. Mus.* **35**: 130, 1936).

Cyanotheca Pascher (1914) nom. dub., ? Fungi.

cyanotrophic (of fungi, esp. lichen-forming spp.), obtaining nutrients (esp. nitrates fixed from the atmosphere) by forming regular connexions to free-living or ± lichenized cyanobacteria; see Poelt & Mayrhofer (*Pl. Syst. Evol.* **158**: 265, 1988); see also cephalodium.

Cyathela Raf. (1819) nom. dub., Fungi. No spp. included.

Cyathella Raf. (1815) nom. dub., Fungi. No spp. included.

Cyathia P. Browne (1756) = Cyathus fide Stalpers (*in litt.*).

Cyathicula De Not. (1863) = Crocicreas fide Carpenter (*Mem. N. Y. bot. Gdn* **33**, 1981), Triebel & Baral (*Sendtnera* **3**: 199, 1996), Gamundí & Romero (*Fl. criptog. Tierra del Fuego* **10**: 130 pp., 1998; Argentina), Iturriaga *et al.* (*MR* **103**: 28, 1999; nomencl.), Gamundí (*Darwiniana* **41**: 29, 2003; Chile).

cyathiform, like a cup, a little wider at the top than at the bottom, and sometimes stalked.

Cyathipodia Boud. (1907) = Helvella fide Dissing (*Dansk bot. Ark.* **25** no. 1, 1966).

Cyathisphaera Dumort. (1822) ≡ Cucurbitaria fide Nannfeldt (*Svensk bot. Tidskr.* **69**: 49, 1975).

Cyathodes P. Micheli ex Kuntze (1891) ≡ Cyathus.

Cyathus Haller (1768), Agaricaceae. *c.* 45 (on soil, wood, etc.), widespread. The Bird's Nest Fungi. See Brodie (*Bot. Notiser* **130**: 453, 1977; world key), Gomez & Pérez-Silva (*Rev. Mex Micol.* **4**: 161, 1988; key Mexican spp.), Zhou *et al.* (*Fungal Diversity* **17**: 243, 2004; China), Sarasini (*Gasteromiceti Epigei*: 406 pp., 2005).

Cybebe Tibell (1984) = Chaenotheca fide Middelborg & Mattson (*Sommerfeltia* **5**, 1987), Sparrius *et al.* (*Mycotaxon* **83**: 357, 2002; Taiwan).

Cyberliber (www.cybertruffle.org.uk/cyberliber). An open source of mycological literature on the internet, providing access to scanned images of all the main mycological catalogues and thesauruses, and of many volumes of mycological books and journals. There are, in addition, lists of published mycological works in alphabetical order by author, and a search facility to find works by any specified mycological author.

Cyclaneusma DiCosmo, Peredo & Minter (1983), Leotiomycetes. 2 (on *Pinus*), widespread. See Cannon & Minter (*Mycol. Pap.* **155**, 1986; India), Choi & Simpson (*Mycotaxon* **54**: 455, 1995; development), Gernandt *et al.* (*Mycol.* **93**: 915, 2001; phylogeny), Minter (*Mycotaxon* **87**: 43, 2003).

Cycledium Wallr. (1833) ≡ Schizoxylon.

Cycledum, see *Cycledium*.

Cyclobium C. Agardh (1821) ≡ Clisosporium.

Cycloconium Castagne (1845) nom. rej. = Spilocaea fide Hughes (*CJB* **36**: 727, 1958), Braun (*Taxon* **54**: 538, 2005; nomencl.).

Cyclocybe Velen. (1939) = Agrocybe fide Kuyper (*in litt.*).

Cyclocytospora Höhn. (1928) = Cytospora fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Cycloderma Klotzsch (1832) nom. dub., Agaricales. See Lloyd (*Mycol. Notes* **17**: 181, 1904) probably an unopened *Geastrum*.

Cyclodomella P.N. Mathur, V.V. Bhatt & Thirum. (1959) = Coniella fide Petrak (*Sydowia* **14**: 352, 1960).

Cyclodomus Höhn. (1909), anamorphic *Maculatifrondes*, Cpd.0eH.15. 3, USA; S. America.

Cyclodothis P. Syd. (1913) = Mycosphaerella fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Cyclographa Vain. (1921) = Catarraphia fide Egea & Torrente (*Cryptog. Bryol.-Lichénol.* **14**: 329, 1993).

Cyclographina D.D. Awasthi (1979) = Diorygma fide Awasthi (*Norw. Jl Bot.* **26**: 169, 1979), Archer (*Telopea* **10**: 589, 2004; Australia), Kalb *et al.* (*Symb. Bot. Upsal.* **34** no. 1: 140, 2004).

cycloheximide (actidione), an antibiotic from *Streptomyces griseus* (*J. Am. Chem. Soc.* **69**: 174, 1947); antibacterial and antifungal. For use in isolating fungi pathogenic for humans, see Georg *et al.* (*J. Lab. Clin. Med.* **44**: 222, 1954). - **tolerance**, used to distinguish plant pathogenic fungi, e.g. *Ceratocystis* from *Ophiostoma* (Harrington, *Mycol.* **72**: 1123, 1981).

Cyclomarsonina Petr. (1965), anamorphic *Pezizomycotina*, St.1eH/1eP.?. 1, India. See Petrak (*Sydowia* **18**: 391, 1964).

Cyclomyces Kunze ex Fr. (1830) nom. rej. = Hymenochaete fide Wagner & Fischer (*Mycol. Progr.* **1**: 93, 2002).

Cyclomycetella Murrill (1904) = Hymenochaete fide Donk (*Reinwardtia* **1**: 483, 1952; as *Cyclomyces*).

Cyclopeltella Petr. (1953), anamorphic *Cyclopeltis*, Cpt.0eH.?. 1, Philippines. See Petrak (*Sydowia* **7**: 373, 1953).

Cyclopeltis Petr. (1953), Micropeltidaceae. Anamorph *Cyclopeltella*. 1, Philippines. See Petrak (*Sydowia* **7**: 370, 1953).

Cyclophomopsis Höhn. (1920) = Phomopsis (Sacc.) Bubák. fide Sutton (*Mycol. Pap.* **141**, 1977).

Cyclopleurotus Hasselt (1824) = Pleurotus fide Singer (*Agaric. mod. Tax.* 4th ed, 1986).
Cycloporellus Murrill (1907) ≡ Cyclomycetella.
Cycloporus Murrill (1904) ≡ Coltricia fide Pegler (*The polypores [Bull. BMS Suppl.]*, 1973), Ryvarden (*Khumbu Himal.* **6**: 380, 1977).
Cyclopus (Quél.) Barbier (1907) ≡ Agrocybe.
Cycloschizaceae Locq., D. Pons & Sal.-Cheb. (1981) = Parmulariaceae.
Cycloschizella Höhn. (1919) = Cycloschizon fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).
Cycloschizon Henn. (1902), Parmulariaceae. 11, widespread (tropical). See Inácio & Minter (*IMI Descr. Fungi Bact.* **145** nos 1441-1450, 2000).
cyclosis, cytoplasmic streaming; characteristic of eukaryotes.
cyclosporin (**-e**, **cyclosporin A**, Sandimmun), a ring-shaped polypeptide from *Tolypocladium inflatum* first reported by Dreyfuss *et al.* (*Eur. J. appl. Microbiol.* **3**: 125, 1976) which selectively inhibits the immune system in humans, especially affecting T cells; since 1983 approved for general use during kidney, heart, liver, pancreas, and bone marrow transplants, reducing organ rejection rates and increasing patient survival; see Winter (*in* Calhoun, *1986 Yearbook of science and the future*: 160, 1985; review). Also used for selective isolation of basidiomycetes.
Cyclostoma P. Crouan & H. Crouan (1867) ≡ Stictis.
Cyclostomella Pat. (1896), Parmulariaceae. 2, C. America. See Inácio & Minter (*IMI Descr. Fungi Bact.* **145** nos 1441-1450, 2000).
Cyclotheca Theiss. (1914), Microthyriaceae. 9, widespread (tropical). See Hosagoudar & Abraham (*New Botanist* **20**: 109, 1993).
Cyclothyrium Petr. (1923), anamorphic *Thyridaria*, St.0eP.15. 2 (on *Juglans*), British Isles; India. See Sutton (*The Coelomycetes*, 1980).
Cylicogone Emden & Veenb.-Rijks (1974) = Conioscypha fide Sutton (*in litt.*), Réblová & Seifert (*Stud. Mycol.* **50**: 95, 2004).
Cylindrina Pat. (1886) ? = Stictis fide Sherwood (*Mycotaxon* **6**: 215, 1977).
Cylindrium Bonord. (1851) = Fusidium fide Hughes (*CJB* **36**: 727, 1958).
Cylindrobasidiaceae Jülich (1982) = Meruliaceae.
Cylindrobasidium Jülich (1974), Physalacriaceae. 6, widespread. See Jülich (*Persoonia* **8**: 72, 1974).
Cylindrocarpon Wollenw. (1913), anamorphic *Neonectria*, Hsp.≡ eH.15. 58 (esp. in soil; sometimes pathogenic), widespread. See Booth (*Mycol. Pap.* **104**, 1966; key), Samuels (*N.Z. Jl Bot.* **16**: 73, 1978; *Nectria* teleomorphs), Brayford (*TBMS* **89**: 347, 1987; description of *C. bugnicourtii*), Brayford (*Mycopathologia* **100**: 115, 1987; 10 descriptions and illustrations), Brayford & Samuels (*Mycol.* **85**: 612, 1993), Samuels & Brayford (*Sydowia* **45**: 55, 1993), Hennequin *et al.* (*J. Clin. Microbiol.* **37**: 3586, 1999; clinical diagnostics), Iwen *et al.* (*J. Clin. Microbiol.* **38**: 3375, 2000; clinical strain), Mantiri *et al.* (*CJB* **79**: 334, 2001; *Neonectria* teleomorphs), Rossman *et al.* (*Mycol.* **93**: 100, 2001; phylogeny), Watanabe *et al.* (*Mycoscience* **42**: 591, 2001; Japan), Summerbell & Schroers (*J. Clin. Microbiol.* **40**: 2866, 2002; phylogeny), Seifert *et al.* (*Phytopathology* **93**: 1533, 2003; on ginseng), Brayford *et al.* (*Mycol.* **96**: 572, 2004), Halleen *et al.* (*Stud. Mycol.* **50**: 431, 2004), Petit & Gubler (*Pl. Dis.* **89**: 1051, 2005; on *Vitis*), Castlebury *et al.* (*CJB* **84**: 1417, 2006; phylogeny on *Fagus*), Halleen *et al.* (*Stud. Mycol.* **55**: 227, 2006; on *Vitis*), Schroers *et al.* (*MR* **112**: 82, 2008; 3-septate spp.).
Cylindrocarpostylus R. Kirschner & Oberw. (1999), anamorphic *Pezizomycotina*, Hso.?.?. 1 (in bark beetle galleries), Europe. See Kirschner & Oberwinkler (*MR* **103**: 1155, 1999), Kubátová *et al.* (*Czech Mycol.* **53**: 237, 2001; Czech Republic).
Cylindrocephalum Bonord. (1851) = Chalara fide Hughes (*CJB* **36**: 727, 1958).
Cylindrochytridium Karling (1941), Chytridiaceae. 2, USA; British Isles.
Cylindrochytrium, see *Cylindrochytridium*.
Cylindrocladiella Boesew. (1982), anamorphic *Nectricladiella*, Hso.≡ eH.15. 11, widespread. See Crous & Wingfield (*MR* **97**: 433, 1993; key), Victor *et al.* (*MR* **102**: 273, 1998), Schoch *et al.* (*Stud. Mycol.* **45**: 45, 2000; phylogeny), Crous (*Taxonomy and Pathology of Cylindrocladium (Calonectria) and Allied Genera*: 278 pp., 2002; review), Coller *et al.* (*Australas. Pl. Path.* **34**: 489, 2005; on *Vitis*).
Cylindrocladiopsis J.M. Yen (1979) = Cylindrocladium fide Braun (*Monogr. Cercosporella, Ramularia Allied Genera (Phytopath. Hyphom.)* **1**: 216, 1995), Crous & Seifert (*Fungal Diversity* **1**: 53, 1998).
Cylindrocladium Morgan (1892), anamorphic *Calonectria*, Hso.≡ eH.15. 66, widespread. See Wormald (*TBMS* **27**: 71, 1944), Alfenas (*Fitopatol. Brasil* **11**: 275, 1986; key), Stevens *et al.* (*Mycol.* **82**: 436, 1990; aminopepsidase specificity and identification), Crous *et al.* (*S. Afr. For. Jl* **1576**: 69, 1991; spp. in S. Africa forest nurseries), Peerally (*Mycotaxon* **40**: 323, 1991; key and review), Crous & Wingfield (*S. Afr. J. Bot.* **58**: 397, 1992; states of *Calonectria*), Crous *et al.* (*Syst. Appl. Microbiol.* **16**: 266, 1993; techniques for characterization of 3-septate spp.), El-Gholl *et al.* (*CJB* **71**: 466, 1993; *C. ovatum* n.sp. from *Eucalyptus*), Watanabe (*Mycol.* **86**: 151, 1994; 3 spp. on *Phellodendron*), Crous *et al.* (*Sydowia* **50**: 1, 1998), Crous *et al.* (*CJB* **77**: 1813, 1999; phylogeny based on DNA), Schoch *et al.* (*Mycol.* **91**: 286, 1999; population structure), Schoch *et al.* (*Mycol.* **92**: 665, 2000), Kang *et al.* (*Syst. Appl. Microbiol.* **24**: 206, 2001; species concepts), Schoch *et al.* (*Pl. Dis.* **85**: 941, 2001; population genetics), Schoch *et al.* (*MR* **105**: 1045, 2001; phylogeny), Henricot & Culham (*Mycol.* **94**: 980, 2002; on *Buxus*), Crous *et al.* (*Stud. Mycol.* **50**: 415, 2004), Risède & Simoneau (*Eur. J. Pl. Path.* **110**: 139, 2004; on *Musa*), Watanabe & Nakamura (*Mycoscience* **45**: 351, 2004; Japan), Crous *et al.* (*Stud. Mycol.* **55**: 213, 2006).
Cylindrocolla Bonord. (1851), anamorphic *Calloria*, Hsp.0eH.?. 5, widespread (north temperate).
Cylindrodendrum Bonord. (1851), anamorphic *Nectriaceae*, Hso.0eH.15. 3, Europe. *C. album* synanamorph of *Cylindrocarpon*). See Petch (*TBMS* **27**: 81, 1944), Buffina & Hennebert (*Mycotaxon* **19**: 323, 1984), Summerbell *et al.* (*CJB* **67**: 573, 1989).
Cylindrodochium Bonord. (1851) ≡ Cylindrosporium.
Cylindrogloeum Petr. (1941), anamorphic *Pezizomycotina*, Cac.0-1eH.15. 2, Lapland.
Cylindromyces C. Manoharachary, D.K. Agarwal & N.K. Rao (2004), anamorphic *Pezizomycotina*, H?.?.?. 1, India. See Manoharachary *et al.* (*Indian Phytopath.* **57**: 161, 2004).
Cylindronema Schulzer (1866) nom. dub., anamorphic *Pezizomycotina*. See Carmichael *et al.* (*Genera of*

Hyphomycetes, 1980).

Cylindrophoma (Berl. & Voglino) Höhn. (1918), anamorphic *Pezizomycotina*, Cpd.0eH.?. 1, Italy.

Cylindrophora Bonord. (1851) nom. dub., anamorphic *Pezizomycotina*. See de Hoog (*Persoonia* **10**: 67, 1978).

Cylindrospora I.V. Issi & Voronin (1986), Microsporidia. 38.

Cylindrosporella Höhn. (1916), anamorphic *Stegophora*. 3. See Sutton (*Mycol. Pap.* **141**, 1977), Kaneko & Kobayashi (*Mycoscience* **43**: 181, 2002; on *Betulaceae*).

Cylindrosporium Grev. (1822), anamorphic *Pyrenopeziza*, Cac.0eH.15. 3, widespread (north temperate). *C. concentricum*, light leaf spot of *Brassica*. See Nag Raj & Kendrick (*CJB* **49**: 2119, 1971), Rawlinson *et al.* (*TBMS* **71**: 425, 1978), Foster *et al.* (*Physiological and Molecular Plant Pathology* **55**: 111, 1999; mating types), Paavolainen *et al.* (*MR* **104**: 611, 2000; on *Betula*), Andrianova & Minter (*IMI Descr. Fungi Bact.* **163** nos 1621-1630, 2005), Priest (*Fungi of Australia: Septoria*, 2006; Australia).

Cylindrosympodium W.B. Kendr. & R.F. Castañeda (1990), anamorphic *Venturiaceae*, Hso.≡ eH.10. 6, widespread. See Castañeda Ruiz & Kendrick (*Univ. Waterloo Biol. Ser.* **32**, 1990), Lücking (*Lichenologist* **35**: 33, 2003), Crous *et al.* (*Stud. Mycol.* **58**: 185, 2007; phylogeny).

Cylindrotaenium Thomé (1867) nom. dub., ? Fungi.

Cylindrotheca Bonord. (1864), Pezizomycotina. 1, Europe.

Cylindrothyrium Maire (1907), anamorphic *Pezizomycotina*, Cpt.0eH.?. 1, France.

Cylindrotrichum Bonord. (1851), anamorphic *Chaetosphaeria*, Hsy.0eH.16. 13, Europe. See Gams & Holubová-Jechová (*Stud. Mycol.* **13**, 1976; key), DiCosmo *et al.* (*Mycol.* **75**: 949, 1983; synonym of *Chaetopsis*), Rambelli & Onofri (*TBMS* **88**: 393, 1987), Réblová & Gams (*Czech Mycol.* **51**: 1, 1999; teleomorph), Réblová (*Stud. Mycol.* **45**: 149, 2000; review), Réblová & Winka (*Mycol.* **92**: 939, 2000; phylogeny), Fernández & Huhndorf (*Fungal Diversity* **18**: 15, 2005).

Cylindroxyphium Bat. & Cif. (1963), anamorphic *Pezizomycotina*, Cpd.0eH.15. 1, USA. See Batista & Ciferri (*Quad. Lab. crittogam., Pavia* **31**: 77, 1963).

Cyllamyces Ozkose, B.J. Thomas, D.R. Davies, G.W. Griff. & Theodorou (2001), Neocallimastigaceae. 1, British Isles. See Ozkose *et al.* (*CJB* **79**: 668, 2001).

Cylomyces Clem. (1931) ≡ Listeromyces.

Cymadothea F.A. Wolf (1935) = Mycosphaerella fide Cannon (*Mycol. Pap.* **163**, 1991; nomencl.).

Cymatella Pat. (1899), Marasmiaceae. 4, Antilles.

Cymatellopsis Parmasto (1985), Marasmiaceae. 1, E. Africa. See Parmasto (*Nova Hedwigia* **40**: 463, 1984).

Cymatoderma Jungh. (1840), Meruliaceae. 9, widespread (tropical). See Welden (*Mycol.* **52**: 856, 1962; Am. spp.), Reid (*Beih. Nova Hedwigia* **18**: 95, 1965; key), Douanla-Meli & Langer (*Mycotaxon* **90**: 323, 2004).

Cymbella Pat. (1886) [non *Cymbella* C. Agardh 1830, *Bacillariophyta*] ≡ Chromocyphella.

cymbiform, boat-shaped; navicular (Fig. 23.32).

Cymbothyrium Petr. (1947), anamorphic *Pezizomycotina*, St.0eP.1. 1, Europe.

Cynema Maas Geest. & E. Horak (1995), Tricholomataceae. 1, Papua New Guinea. See Maas Geesteranus & Horak (*Biblthca Mycol.* **159**: 208, 1995).

Cyniclomyces Van der Walt & D.B. Scott (1971), Saccharomycetales. 1, Europe. See Phaff & Miller *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 154, 1998), Suh *et al.* (*Mycol.* **98**: 1006, 2006; phylogeny).

Cynicus Raf. (1815) nom. dub., Fungi. No spp. included.

Cynophallus (Fr.) Corda (1842) nom. rej. ≡ Mutinus.

Cypellomyces, see *Cypheliomyces*.

Cypheliaceae Zahlbr. (1903) = Caliciaceae.

Cypheliomyces E.A. Thomas ex Cif. & Tomas. (1953) = Cyphelium Ach. fide Tibell (*Beih. Nova Hedwigia* **79**: 597, 1984).

Cypheliopsis (Zahlbr.) Vain. (1927) = Thelomma fide Tibell (*Beih. Nova Hedwigia* **79**: 597, 1984).

Cyphelium Ach. (1815), Caliciaceae (L). *c.* 12, widespread (esp. north and south temperate). See Weber (*Bryologist* **70**: 197, 1967), Tibell (*Svensk bot. Tidskr.* **65**: 138, 1971; Eur.), Tibell (*Beih. Nova Hedwigia* **79**: 597, 1984), Middelborg & Mattson (*Sommerfeltia* **5**: 1, 1987; Norway), Tibell (*Symb. bot. upsal.* **27** no. 1: 279 pp., 1987; Australasia), Pant & Awasthi (*Biovigyanam* **15**: 3, 1989; India, Nepal), Tibell (*Fl. Neotrop.* Monogr. **69**: 78 pp., 1996; neotropics), Tibell (*Symb. bot. upsal.* **32** no. 1: 291, 1997; anamorphs), Wedin & Tibell (*CJB* **75**: 1236, 1997; phylogeny), Tibell (*Biblthca Lichenol.* **71**: 107 pp., 1998; S America), Tibell (*Nordic Lichen Flora* **1**. Introductory Parts; Calicioid Lichens and Fungi: 20, 1999; Scandinavia), Wedin *et al.* (*CJB* **78**: 246, 2000; phylogeny), Wedin *et al.* (*Taxon* **51**: 655, 2002; phylogeny), Tibell & Thor (*J. Hattori bot. Lab.* **94**: 205, 2003; Japan), Peršoh *et al.* (*Mycol. Progr.* **3**: 103, 2004; asci), Tibell (*J. Hattori bot. Lab.* **100**: 809, 2006; India).

Cyphelium Chevall. (1826) = Chaenotheca fide Tibell (*Beih. Nova Hedwigia* **79**: 597, 1984).

Cyphelium De Not. (1846), Coniocybaceae. 1, Europe.

Cyphella Fr. (1822), Cyphellaceae. 2, widespread. See Matheny *et al.* (*Mycol.* **98**: 982, 2006; phylogeny).

cyphella (pl. -ae), a break in the lower (rarely upper) cortex of a lichen thallus which is roundish or ovate and in section appears as a cup-like structure lined with a layer of loosely connected, frequently globular, cells formed from the medulla, characteristic of *Sticta*; also used for pores open to the halliomedulla in *Oropogon*.

Cyphellaceae Lotsy (1907), Agaricales. 16 gen. (+ 1 syn.), 31 spp. The family name has previously been used for a diversity of fungi. Many of the genera character-ised by a cyphelloid habit have been distributed among several families of the *Agaricales*.

Lit.: Pilát (*Annls mycol.* **22**: 204, 1924), Pilát (*Annls mycol.* **23**: 144, 1925), Cooke (*Mycol.* **49**: 680, 1957; *Porotheleaceae*), Donk (*Persoonia* **1**: 25, 1959), Cooke (*Sydowia* Beih. **4**, 1961; *Porotheleaceae*), Donk (*Persoonia* **2**: 331, 1962), Reid (*Persoonia* **3**: 97, 1964; Michigan), Donk (*Acta Bot. Neerl.* **15**: 95, 1966; reassessment), Donk (*Checklist of European polypores* [*Verh. K. ned. Akad. Wet.* **62**], 1974).

Cyphellathelia Jülich (1972) = Pellidiscus fide Hjortstam (*Windahlia* **15**: 59, 1986).

Cyphellina Rick (1959) nom. dub. = Tomentella Pat. fide Donk (*Persoonia* **3**: 199, 1964).

Cyphellocalathus Agerer (1981), Tricholomataceae. 1, Bolivia. See Agerer (*Mycol.* **73**: 491, 1981) = La-

chnella (Tricholomat.) fide, Singer (*Agaric. mod. Tax.* 4th ed: 386, 1986).

Cyphellomyces Speg. (1906) = Phellorinia fide Stalpers (*in litt.*).

Cyphellophora G.A. de Vries (1962), anamorphic *Chaetothyriaceae*, Hso.≡ eP.15. 11 (on human skin etc.), widespread. See Vries *et al.* (*Antonie van Leeuwenhoek* **52**: 141, 1986), Walz & de Hoog (*Antonie van Leeuwenhoek* **53**: 143, 1987; n.sp. and cf. *Annellodentimyces*), Decock *et al.* (*Antonie van Leeuwenhoek* **84**: 209, 2003; phylogeny), Geiser *et al.* (*Mycol.* **98**: 1053, 2006; phylogeny).

Cyphellopsidaceae Jülich (1982) = Marasmiaceae.

Cyphellopsis Donk (1931) = Merismodes fide Kuyper (*in litt.*).

Cyphellopus Fayod (1889) nom. dub., ? Bolbitiaceae. 1, British Isles. See Pearson (*TBMS* **20**: 521, 1935).

Cyphellopycnis Tehon & G.L. Stout (1929) = Phomopsis (Sacc.) Bubák. fide Sutton (*TBMS* **47**: 497, 1964).

Cyphellostereum D.A. Reid (1965), Agaricomycetes. 2, widespread. *Hymenochaetales* or *Agaricales* (*Rickenella* clade). See Reid (*Beih. Nova Hedwigia* **18**: 484 pp., 1965; key), Salcedo *et al.* (*Nova Hedwigia* **82**: 81, 2006).

Cyphidium Magnus (1875) = Olpidium fide Sparrow (*Aquatic Phycomycetes* Edn 2: 1187 pp., 1960).

Cyphina Sacc. (1884) = Sarcopodium fide Sutton (*Mycol. Pap.* **141**, 1977).

Cyphospilea Syd. (1926) = Coleroa fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Cyptotrama Singer (1960), Physalacriaceae. 15, S. America. See Singer (*Lilloa* **30**: 375, 1960).

Cyrenella Goch. (1981), anamorphic *Cystobasidiomycetes*. 1 (with clamp connexions), USA. See Gochenaur (*Mycotaxon* **13**: 268, 1981), Bauer *et al.* (*Mycol. Progr.* **5**: 41, 2006).

Cyrta Bat. & H. Maia (1961) [non *Cyrta* Lour. 1790, *Styracaceae*] = Calopadia fide Lücking *et al.* (*Lichenologist* **30**: 121, 1998).

Cyrtidium Vain. (1921), ? Dothideomycetes. 2, Europe.

Cyrtidula Minks (1876), Dothideomycetes. 2, Italy. See Harris (*More Florida Lichens*, 1995).

Cyrtocnon Link ex Rchb. (1828) nom. dub., anamorphic *Pezizomycotina*.

Cyrtographa Müll. Arg. (1894) = Minksia fide Zahlbruckner (*Catalogus Lichenum Universalis* **4**, 1926).

Cyrtopsis Vain. (1921), Dothideomycetes. 1, Europe.

cyst (1) an encysted cell (? the product of meiosis after karyogamy), usually aggregated into a cystosorus which germinates to produce a zoospore (*Plasmodiophorales*); (2) an encysted zoospore (planospore) which becomes a gametangium (*Blastocladiales*); **macro-** (of *Myxomycota*), an encysted aggregate of myxoamoebae; the resting form of a young plasmodium; the alternative to the sorocarp in some cellular slime moulds (dictyostelids) (Nickerson & Raper, *Am. J. Bot.* **60**: 190, 1973); propagule, especially the walled structure of the encysted zoospore (*Peronosporales*); resting spores of chrysomonads etc.; **micro-** (of *Mycetozoa*), an encysted myxamoeba or swarm spore; **spore-**, a cell, hollow organ or sac-like structure enclosing a mass of protoplasm containing spores as in the *Ascosphaeraceae* (Skou, 1982).

Cystangium Singer & A.H. Sm. (1960), Russulaceae. 32, Australia; S. America. Basidioma gasteroid. See Miller *et al.* (*Mycol.* **93**: 344, 2001; basiodioma gasteroid; probably polyphylletic and should be merged with *Russula*), Trappe *et al.* (*Mycotaxon* **81**: 195, 2002; nomenclature), Lebel (*Aust. Syst. Bot.* **16**: 371, 2003; australasian spp.).

cystesium, a cell which differentiates to adhere to a cystidium arising from the opposite hymenium (Horner & Moore, *TBMS* **88**: 488, 1987).

Cystidiella Malan (1943), anamorphic *Pezizomycotina*, Hso.0eH.1. 1, Italy. With secondary conidia.

Cystidiodendron Rick (1943) nom. dub., Hydnaceae. See Donk (*Persoonia* **3**: 199, 1964).

Cystidiodontia Hjortstam (1983), Cystostereaceae. 2, widespread. See Hjortstam (*Mycotaxon* **17**: 571, 1983).

cystidiole (of hymenomycetes), a simple hymenial cell of about the same diameter as the basidia but remaining sterile and protruding beyond the hymenial surface.

Cystidiophorus Bondartsev & Ljub. (1963) nom. inval., Polyporaceae. 1.

cystidium (pl. **-ia**), a sterile body, frequently of distinctive shape, occurring at any surface of a basidioma, particularly the hymenium from which it frequently projects (Fig. 12). Cystidia have been classified and named according to their: (1) *origin*: **hymenial - (tramal -)**, originating from hymenial (tramal) hyphae; **pseudo-**, derived from a conducting element, filamentous to fusoid, oily contents, embedded not projecting; **coscino-**, see coscinoid; **skeleto-**, the apical part of a skeletal hypha (frequently ± inflated) projecting into or through the hymenium; false seta; **macro-**, arising deep in the trama in Lactario-Russulae; **hypho-**, hypha-like, derived from generative hyphae. (2) *position* (first by Buller, **2**): on the pileus surface (**pileo-**, **dermato-**, Fayod); at the edge (**cheilo-**), side (**pleuro-**), or within (**endo-**) a lamella; on the stipe (**caulo-**). (3) *form*: **lepto-**, smooth, thin-walled; **lampro-**, thick-walled, with or without encrustation (**setiform lampro-**, awl-shaped, wall pigmented; **asteroseta**, a radially branched lampro-; **microsclerid**, a versiform, endolampro-; **lyo-**, cylindrical to conical, very thick-walled, abruptly thin-walled at apex, not encrusted, colourless, as in *Tubulicrinis* (Donk, 1956); **monilioid gloeo-**, (torulose gloeo- (Bourdot & Galzin, 1928); moniliform paraphysis (Burt, 1918); pseudophysis; **schizo-** (Nikolayeve, 1956, 1961)), monilioid, frequently with a beaded apex (as in *Hericiaceae* and *Corticiaceae*). (4) *contents*: **gloeo-**, thin-walled, usually irregular, contents hyaline or yellowish and highly refractile; **chryso-**, like lepto- but with highly staining contents; **hypo-**, (Larsen & Burdsall, *Mem. N.Y. bot. Gdn* **28**: 123, 1976); **oleo-**, having an oily resinous exudate; **pseudo-**, see (1) above. See also hyphidium, seta. Reviews of cystidia include Romagnesi (*Rev. Mycol., Paris* **9** (suppl.): 4, 1944), Talbot (*Bothalia* **6**: 249, 1954), Lentz (*Bot. Rev.* **20**: 135, 1954), Smith (*in* Ainsworth & Sussman (Eds), *The fungi* **2**: 151, 1966), Price (*Nova Hedw.* **24**: 515, 1975; types in polypores).

Cystingophora Arthur (1907) = Ravenelia fide Arthur (*Manual Rusts US & Canada*, 1934).

Cystoagaricus Singer (1947), Psathyrellaceae. 4, America (subtropical). See Singer (*Mycol.* **39**: 85, 1947), Vellinga (*MR* **108**: 354, 2004; posn.).

Cystobasidiaceae Gäum. (1926), Cystobasidiales. 2 gen., 9 spp.

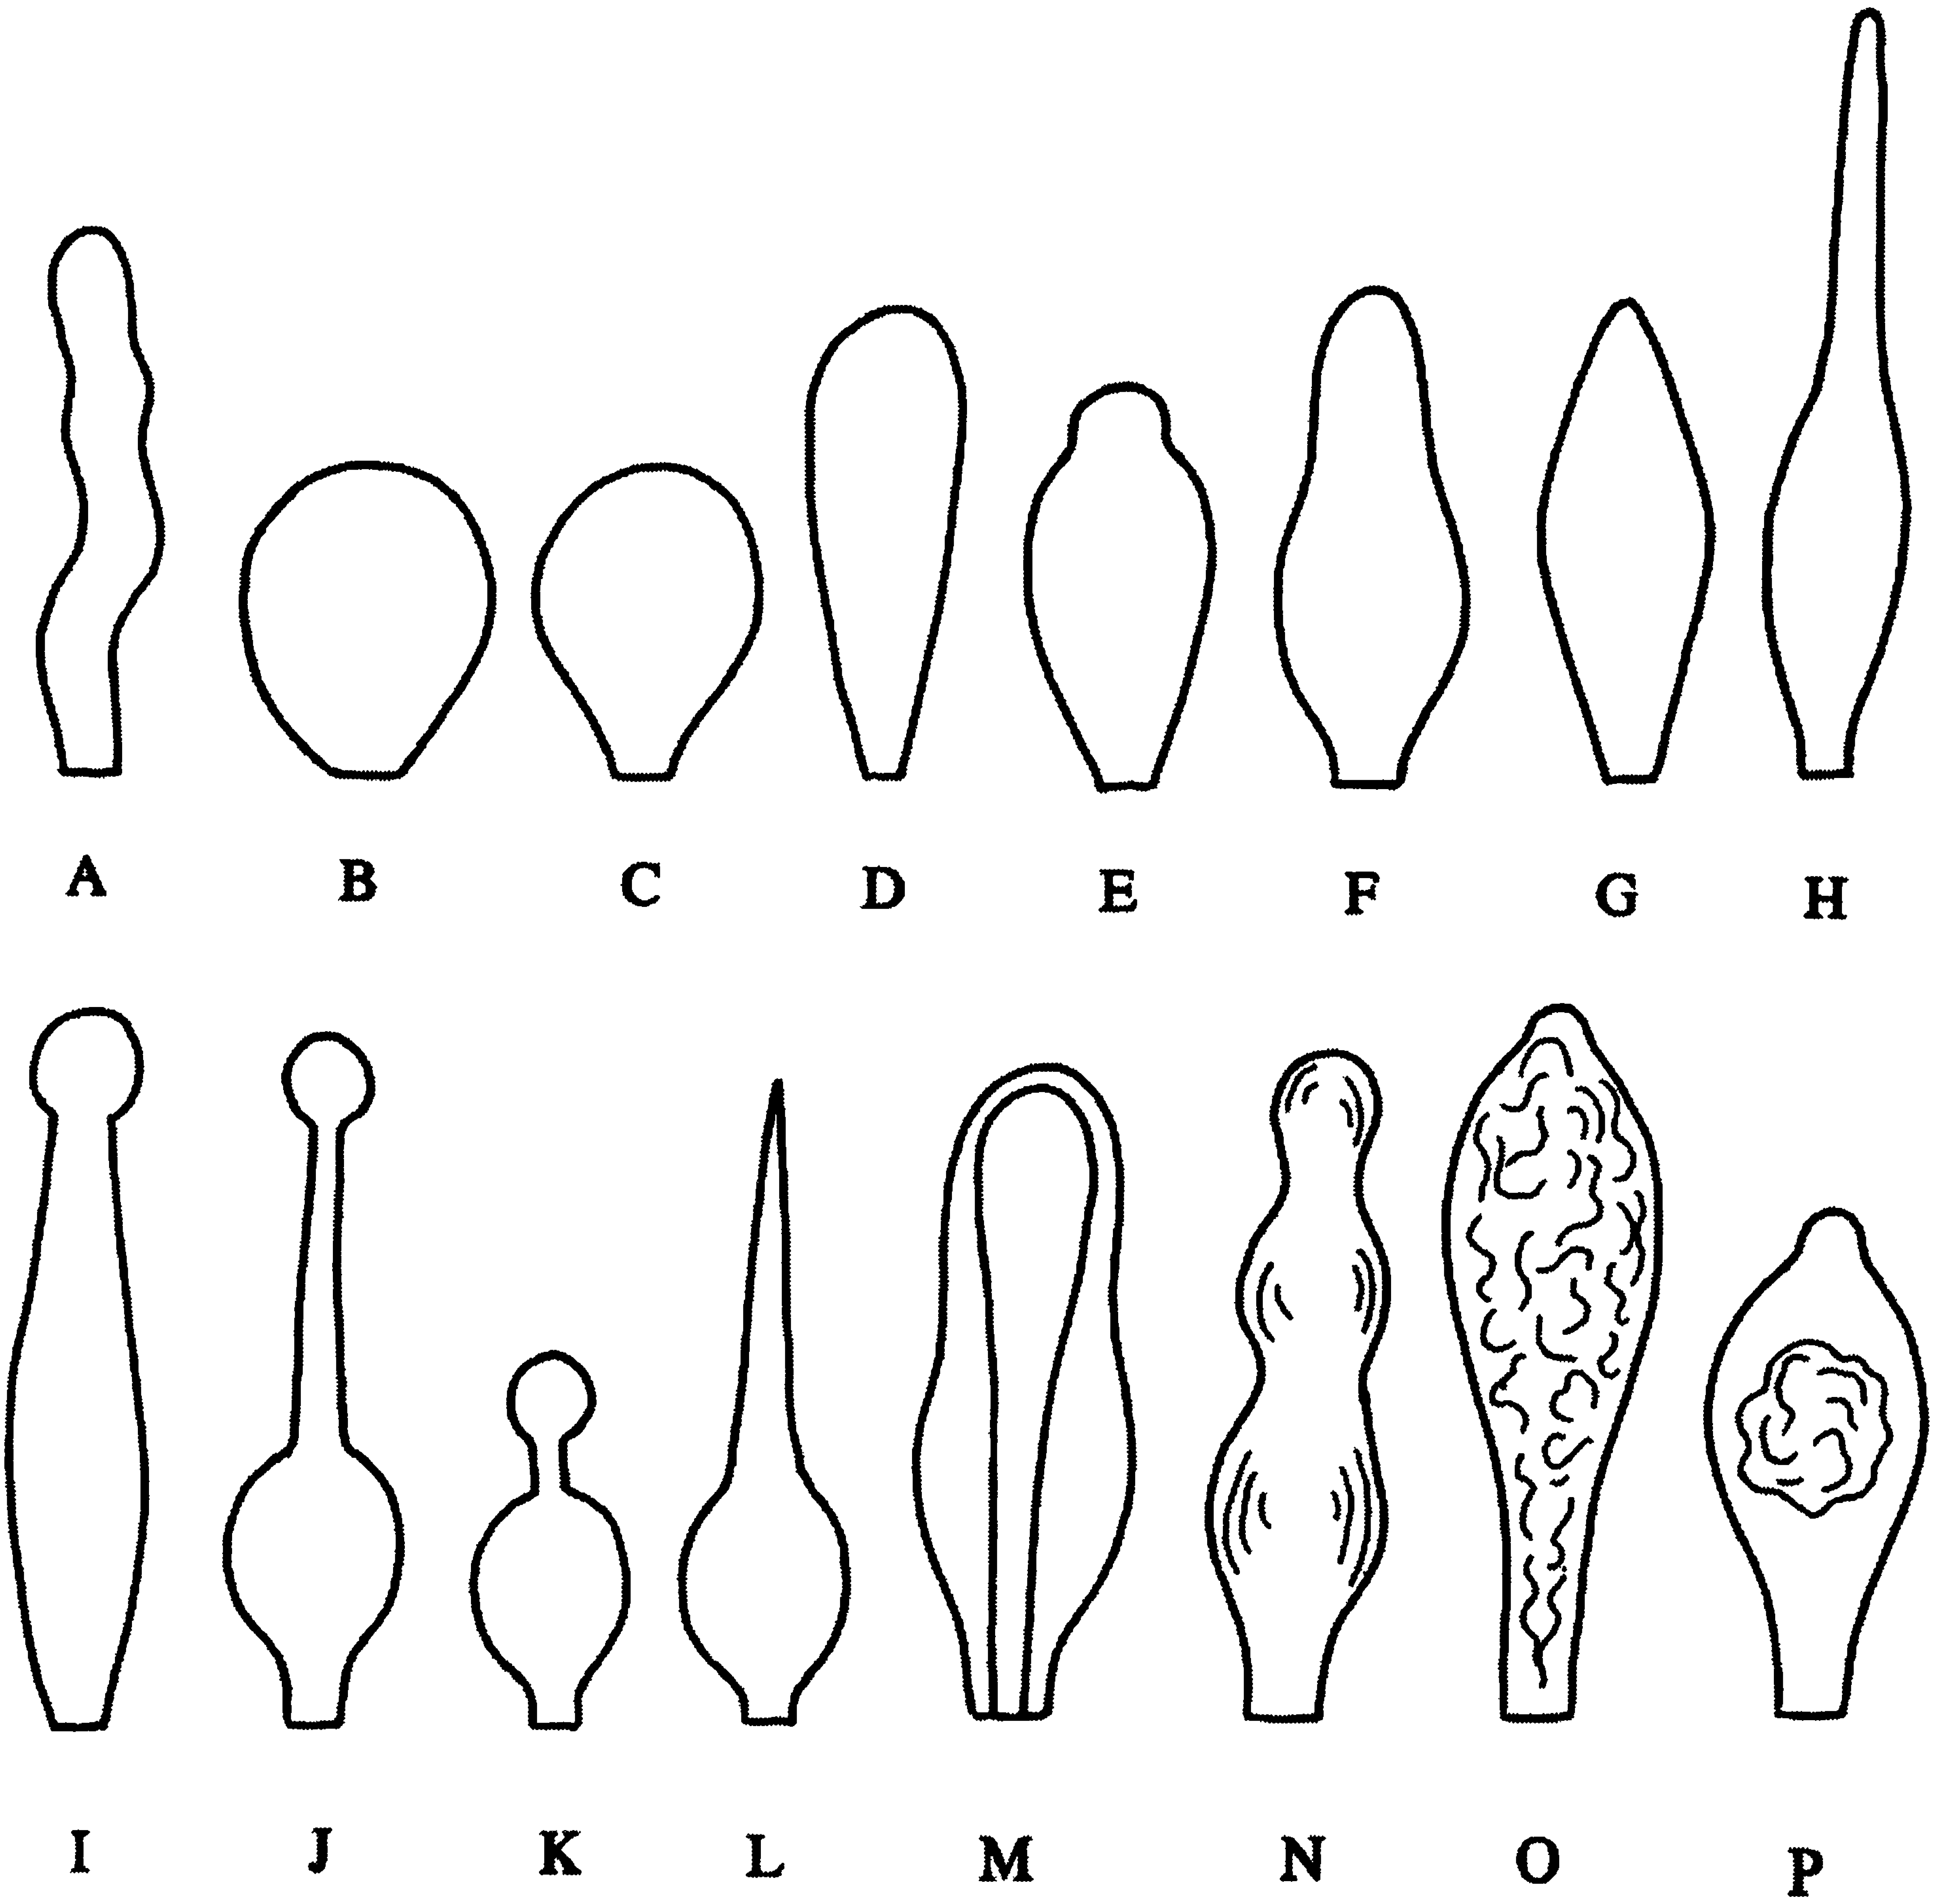

Fig. 14. Cystidia. A, hyphoid (*Collybia*); globose (*Agaricus*); C, pyriform (*Agaricus*); D, clavate (*Inocybe*); E, utriform (*Psathyrella*); F, lageniform (*Pholiota*); G, fusoid (*Psathyrella*); H, lanceolate (*Hypholoma*); I, capitate (*Hyphoderma*); J, tibiiform (*Galerina*); K, lecythiform (*Conocybe*); L, urticoid (*Naucoria*); M, metuloid (*Lentinus*); N, gloeocystidium (*Gloeocystidiellum*); O, macrocystidium (*Russula*); P, chrysocystidium (*Stropharia*). Not to scale.

Cystobasidiales R. Bauer, Begerow, J.P. Samp., M. Weiss & Oberw. (2006). Cystobasidiomycetes. 1 fam., 2 gen., 9 spp. Fam.:
Cystobasidiaceae
For *Lit.* see under fam.

Cystobasidiomycetes R. Bauer, Begerow, J.P. Samp., M. Weiss & Oberw. (2006). Pucciniomycotina. 3 ord., 1 fam., 7 gen., 14 spp. Ord.:
(1) **Cystobasidiales**
(2) **Erythrobasidiales**
(3) **Naohideales**
For *Lit.* see ord. and fam.

Cystobasidium (Lagerh.) Neuhoff (1924), Cystobasidiaceae. *c.* 5, widespread. See Martin (*Mycol.* **31**: 507, 1939), Olive (*Mycol.* **44**: 564, 1952).

cystochroic, see colour.

Cystocoleus Thwaites (1849), anamorphic *Capnodiales*, Hso.-.- (L). 1, widespread. See Muggia *et al.* (*MR* **112**: 50, 2008; phylogeny).

Cystocybe Velen. (1921) nom. dub. ? = Cortinarius fide Singer (*Agaric. mod. Tax.* edn 3, 1975).

Cystodendron Bubák (1914), anamorphic *Mollisia*, Hsp.0eH/1eP.15. 1, Europe. See Gams (*Stud. Mycol.* **45**: 192, 2000), Crous *et al.* (*Eur. J. Pl. Path.* **109**: 845, 2003; phylogeny).

Cystoderma Fayod (1889), Agaricaceae. *c.* 35, widespread (esp. temperate). Probably a separate family is justified. See Justo & Castro (*A Pantorra* **2**: 45, 2002), Saar (*Mycotaxon* **86**: 455, 2003; key temperate Eurasia spp), Jamoni (*Funghi e Ambiente* **94-95**: 51, 2004), Saar & Læssøe (*Mycotaxon* **96**: 123, 2006; species from high Andean Ecuador).

Cystodermella Harmaja (2002), Agaricaceae. 12, widespread. Probably a separate family (with *Cystoderma* is justified. See Harmaja (*Karstenia* **42**: 43, 2002), Saar (*Mycotaxon* **86**: 455, 2003; key).

Cystodium Fée (1837), ? Dothideomycetes. 1, widespread (tropical).

Cystofilobasidiaceae K. Wells & Bandoni (2001), Cystofilobasidiales. 9 gen. (+ 1 syn.), 20 spp.
Lit.: Kwon-Chung (*Stud. Mycol.* **30**: 75, 1987), Wery *et al.* (*Yeast* Chichester **12**: 641, 1996), Fell & Statzell-Tallman *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 676, 1998), Kwon-Chung *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 646, 1998), Miller & Phaff *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 789, 1998), Fell & Blatt (*J. Industr. Microbiol. Biotechnol.* **23**: 677, 1999), Fell *et al.* (*Int. J. Syst. Bacteriol.* **49**: 907, 1999), Diaz & Fell (*Antonie van Leeuwenhoek* **77**: 7, 2000), Sampaio *et al.* (*Int. J. Syst. Evol. Microbiol.* **51**: 221, 2001).

Cystofilobasidiales Fell, Roeijmans & Boekhout (1999). Tremellomycetes. 1 fam., 9 gen., 20 spp. Fam.:
Cystofilobasidiaceae
Lit.: Fell *et al.* (*IJSB* **49**: 911, 1999 (taxonomy), Fell *et al.* (*IJSEM* **50**: 1351, 2000; mol. phylogeny).

Cystofilobasidium Oberw. & Bandoni (1983), Cystofilobasidiaceae. 5 (some marine), widespread. See Oberwinkler *et al.* (*Syst. Appl. Microbiol.* **4**: 114, 1983), Fell *et al.* (*Int. J. Syst. Evol. Microbiol.* **50**: 1351, 2000; mol. phylogeny), Weiss *et al.* (*Frontiers in Basidiomycote Mycology*: 7, 2004).

Cystogloea P. Roberts (2006), Basidiomycota. 1 (on perithecia of *Pseudotrichia*), Sweden. See Roberts (*Acta Mycologica* Warszawa **41**: 25, 2006).

Cystogomphus Singer (1942), Gomphidiaceae. 1, France (introduced).

Cystolepiota Singer (1952), Agaricaceae. *c.* 10, widespread. See Knudsen (*Bot. Tidsskr.* **73**: 124, 1978; key), Johnson & Vilgalys (*Mycol.* **90**: 971, 1998; phylogeny), Johnson (*Mycol.* **91**: 443, 1999), Hausknecht & Pidlich-Aigner (*Öst. Z. Pilzk.* **13**: 1, 2004; Austria), Vellinga (*MR* **108**: 354, 2004; phylogeny).

Cystolobis Clem. (1909) = Knightiella fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Cystomyces Syd. (1926), Raveneliaceae. 1 (on *Lonchocarpus* (?) (*Leguminosae*)), C. America. See Walker *et al.* (*Australas. Pl. Pathol.* **35**: 1, 2006).

Cystopage Drechsler (1941), Zoopagaceae. 7, N. America; British Isles. See Drechsler (*Mycol.* **33**: 251, 1941), Drechsler (*Mycol.* **37**: 1, 1945), Drechsler (*Mycol.* **47**: 364, 1955), Drechsler (*Mycol.* **49**: 387, 1957), Drechsler (*Mycol.* **51**: 787, 1959), Dyal (*Sydowia* **27**: 293, 1976; keys parasites of nematodes and amoebae, bibliogr.), Kasim (*Acta Mycologica* Warszawa **33**: 161, 1998), Shimada & Saikawa (*Nippon Kingakukai Kaiho* **47**: 1, 2006; chlamydospore germination).

Cystopezizella Svrček (1983) = Calycina fide Baral (*SA* **13**: 113, 1994).

Cystophora Rabenh. (1844) [non *Cystophora* J. Agardh 1841, *Algae*] ≡ Voglinoana.

Cystopsora E.J. Butler (1910), Pucciniaceae. 2 (on *Antidesma* (0, I, III) (*Euphorbiaceae*); *Olea* (*Oleaceae*)), India; Indonesia. 0, I, III. See Thirumalachar (*Bot. Gaz.* **107**: 74, 1945), Cummins & Hiratsuka (*Illustr. Gen. Rust Fungi rev. edit.*, 1983; syn. of *Zaghouania*).

cystosorus (of *Chytridiales*), a group of united cysts or resting spores.

cystospore (1) an encysted zoospore formed at the exit to the zoosporangium and germinating to produce a new zoospore (planospore) as in *Achlya* (*Oomycetes*), *Achlyogeton* and *Achlyella* (*Chytridiomycetes*); (2) (of *Amoebidiales*) spores released from an encysted amoeboid cell.

Cystosporogenes E.U. Canning, R.J. Barker, J.P. Nicholas & A.M. Page (1984), Microsporidia. 3.

Cystostereaceae Jülich (1982), Agaricales. 6 gen., 16 spp.
Lit.: Chamuris (*Mycol.* **78**: 380, 1986), Chamuris (*Mycol. Mem.* **14**: 247 pp., 1988), Hjortstam (*Mycotaxon* **42**: 149, 1991), Ginns (*Mycol.* **90**: 19, 1998), Larsson *et al.* (*MR* **108**: 983, 2004).

Cystostereum Pouzar (1959), Cystostereaceae. 6, widespread. See Hallenberg & Ryvarden (*Mycotaxon* **2**: 135, 1975).

Cystostiptoporus Dhanda & Ryvarden (1975) = Microporellus fide Ryvarden (*Gen. Polyp.*: 135, 1991).

Cystotelium Syd. (1921) = Ravenelia fide Sydow & Sydow (*Monographia Uredinearum seu Specierum Omnium ad hunc usque Diem Descriptio et Adumbratio Systematica* **3**, 1915), Dietel (*Nat. Pflanzenfam.* **6**, 1928; syn. of *Haploravenelia*).

Cystotheca Berk. & M.A. Curtis (1860), Erysiphaceae. Anamorph *Oidium* subgen. *Setoidium*. 4, Asia; N. America. See Katumoto (*Rep. Tottori mycol. Inst.* **10**: 437, 1973; key), Braun (*Beih. Nova Hedwigia* **89**, 1987; key), Saenz & Taylor (*CJB* **77**: 150, 1999; mol. syst.), Braun & Takamatsu (*Schlechtendalia* **4**: 1, 2000; phylogeny), Takamatsu *et al.* (*MR* **104**: 1304, 2000; phylogeny, host relations), Takamatsu (*Mycoscience* **45**: 147, 2004; evolution).

Cystothyrium Speg. (1888) nom. conf., anamorphic *Pezizomycotina*. See Petrak & Sydow (*Annls mycol.* **33**: 157, 1935).

Cystotricha Berk. & Broome (1850), anamorphic *Helotiales*, St.1eH.1. 1, British Isles. See Wu *et al.* (*MR* **102**: 179, 1998).

Cystotrichiopsis B.A. Abbas, B. Sutton & Ghaffar (2001), anamorphic *Pezizomycotina*, C?.?.?. 1, Pakistan. See Abbas *et al.* (*Pakist. J. Bot.* **33**: 365, 2001).

Cytidia Quél. (1888), Corticiaceae. 5, widespread (esp. N. America). *C. salicina*, a common red fungus on *Salix*. See Cooke (*Mycol.* **43**: 196, 1951; key), Donk (*Persoonia* **1**: 70, 1959), Legg & Roberts (*Field Mycology* **1**: 45, 200; UK).

Cytidiaceae Jülich (1982) = Corticiaceae.

Cytidiella Pouzar (1954) = Auriculariopsis fide Stalpers (*Persoonia* **13**: 495, 1988).

Cytispora Fr. (1823), Pezizomycotina. 1, Europe.

cytochalasin, one of a series of related fungal metabolites (e.g. from *Helminthosporium*, *Metarhizium*, *Phoma*, *Xylariaceae*, *Zygosporium*) which inhibit cytokinesis so that multinucleate cells result (Carter, *Nature* **213**: 261, 1967), Turner (1971: 352); **- B** = phomin.

cytochroic, see colour.

Cytodiplospora Oudem. (1894) = Diplodina fide Sutton (*Mycol. Pap.* **141**, 1977).

Cytodiscula Petr. (1931), anamorphic *Pezizomycotina*, St.0eH.?. 1, Madeira.

Cytogloeum Petr. (1925), anamorphic *Pezizomycotina*, Cac.0eH.15. 1, Europe.

Cytology. The study of cell fungal contents, esp. the nucleus, is usually well covered in mycology textbooks. The nuclear membrane may (*Basidiobolus ranarum*) or may not (*Saccharomyces cerevisiae*) break down during mitosis. Pulse field gel electro-

phoresis (q.v.) has shown that fungal nuclei contain 3 (*Schizosaccharomyces pombe*) to *c.* 21 (*Ustilago hordei*) chromosomes (see Mills & McCluskey, *Molecular plant-microbe interactions* **3**: 351-357, 1990). Mitotic chromosomes are smaller in fungi than meiotic ones. Usually, a well-defined 'metaphase plate' is absent and disjunction of sister chromatids is asynchronous during mitosis (see review Aist & Morris, *Fungal. Genet. Biol.* **27**: 1-25, 1999). Cyclic changes of condensation/decondensation states of fungal rDNA were observed by fluorescence *in situ* hybridisation (FISH) during mitosis. In the ascomycetes *Cochliobolus heterostrophus* and *Haematonectria haematococca* rDNA is decondensed throughout its entire length at interphase and condensation reaches a maximum at metaphase, remaining in that state through anaphase (Taga *et al.*, *MR* **107**: 1012-1020, 2003). Pulse field gel electrophoresis (PFGE) can aid visualisation of minute chromosomes and reveals that different isolates of the same fungal species frequently have chromosomes differing in size and the presence of supernumerary, conditionally dispensable, chromosomes. Some supernumerary chromosomes carry functional genes, like antibiotic resistance (Miao *et al.*, *Science* **254**: 1773-1776, 1991) or, in *Nectria haematococca*, the ability to cause disease symptoms on host plants (Wasmann & VanEtten, *Mol. Plant-Microb. Interact.* **9**: 793-803, 1996). DNA fingerprinting (Owen, *J. Med. Microbiol.* **30**: 898, 1989), restriction fragment length polymorphisms (RFLP) (Kusters-van-Someren *et al.*, *Curr. Genet.* **19**: 21, 1991) and amplified fragment length polymorphism (AFLP) (*Clin. Microbiol. Rev.* **13**: 332-370, 2000) are used to study fungal genomes, to characterize species and strains of fungi. Single or double stranded DNA or RNA mycoviruses and double stranded DNA or RNA plasmids may be present in fungal cytoplasm. Hyphal tips of extending hyphae contain a very high concentration of macrovesicles (100-250 nm diam.), microvesicles (40-70 nm diam.), and coated vesicles (vesicles surrounded by a basket-like lattice of fibrous protein called clathrin); the microvesicles may correspond to chitosomes (Bracker *et al.*, *Proc. Natl. Acad. Sci. USA* **73**: 4570, 1976); the concentration of vesicles at the hyphal tip can sometimes be observed as a phase-dark body known as the Spitzenkörper (Steinberg, *Eukaryotic Cell* **6**:351-360, 2007). Specialized hyphae, called conidial anastomosis tubes (CATs), are produced by conidia and by conidial germ tubes of some fungi. In contrast to germ tubes, CATs are cellular elements that are morphologically and physiologically distinct: microtubules and nuclei pass through fused CATs, they are thinner, shorter, lack branches, exhibit determinate growth, and home toward each other (Rocka *et al.*,*Eukaryotic Cell* **4**: 911-919, 2005). The fungal cytoskeleton contains microfilaments (4-9 nm diam.) formed by the polymerization of G-actin, microtubules (30-40 nm diam.) formed by the polymerization of α- and β-tubulin, and filasomes (aggregates of microfilaments coated with vesicles). The cytoplasm contains mitochondria, microbodies, hydrogenosomes (in anaerobic fungi), Golgi bodies (in *Chromista*), smooth and rough endoplasmic reticula, 80S ribosomes, glycogen and lipid globules. Spherical Worinin bodies (e.g. in *Fusarium* spp.) or hexagonal crystals (*Neurospora crassa*) are associated with the septal pores of *Ascomycota*. Nuclei of filamentous fungi can migrate within the cytoplasm along microtubules, driven by the microtubule dependent motor protein dynein. Cellular differentiation, mating, and filamentous growth are regulated in many fungi by environmental and nutritional signals. Signal transduction cascades: protein kinase cascade and cyclic AMP signaling pathway, regulate development, mating and virulence of fungi that has been well studied in *Candida albicans*, *Cryptococcus neoformans*, *Saccharomyces cerevisiae* and *Ustilago maydis* (Lengeler *et al.*,*Microbiol. Mol. Biol. Rev.* **64**: 746-785, 2000). See also Chromosome numbers.

Dacampia A. Massal. (1853), Dacampiaceae. 3 (on lichens), Europe. See Eriksson (*Op. Bot.* **60**, 1981), Crivelli (*Über die heterogene Ascomycetengattung Pleospora Rbh.*, 1983), Henssen (*Cryptog. Bot.* **5**: 149, 1995), Halici & Hawksworth (*Fungal Diversity* **28**: 49, 2008; key).

Dacampiaceae Körb. (1855), Pleosporales. 16 gen. (+ 7 syn.), 121 spp.
Lit.: Barr (*Prodr. Cl. Loculoasc.*, 1987), Hawksworth & Diederich (*TBMS* **90**: 293, 1988), Alstrup & Hawksworth (*Meddr Grønland* Biosc. **31**: 90 pp., 1990), Wang *et al.* (*MR* **111**: 1268, 2007; phylogeny).

Dacampiosphaeria D. Hawksw. (1980) = Pyrenidium fide Hawksworth (*TBMS* **80**: 547, 1983).

Dacrina Fr. (1825) nom. dub., ? Hydnaceae.

Dacrina Fr. (1832) = Strumella fide Saccardo (*Syll. fung.* **4**: 742, 1886).

Dacrydium Link (1809) nom. conf., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **144**, 1977).

Dacrymycella Bizz. (1885), anamorphic *Pezizomycotina*, Hsp.0eH.13. 2, Europe; Java.

Dacrymyces Nees (1816), Dacrymycetaceae. *c.* 39, widespread. See McNabb (*N.Z. Jl Bot.* **11**: 461, 1973; key), Reid (*TBMS* **62**: 449, 1974; key Brit. spp.), Mathiesen (*Svampe* **23**: 46, 1991; Danish spp.), Hahn & Karasch (*Zeitschrift für Mykologie* **68**: 31, 2002), Burdsall & Laursen (*Memoirs of the New York Botanical Garden* **89**: 107, 2004; New Zealand subantarctic islands n.spp.), Shirouzou *et al.* (*Mycoscience* **48**: 388, 2007; phylogeny).

Dacrymycetaceae J. Schröt. (1888), Dacrymycetales. 9 gen. (+ 8 syn.), 101 spp.
Lit.: McNabb (*N.Z. Jl Bot.* **3**: 59, 1965), Reid (*TBMS* **62**: 433, 1974), Maekawa (*CJB* **65**: 583, 1987), Oberwinkler (*Stud. Mycol.* **30**: 61, 1987), Ing (*Mycologist* **4**: 34, 1990), Maekawa & Zang (*Mycotaxon* **61**: 343, 1997), Duhem (*Bull. trimest. Soc. mycol. Fr.* **114**: 1, 1998), Mossebo *et al.* (*Cryptog. Mycol.* **22**: 119, 2001), Weiss & Oberwinkler (*MR* **105**: 403, 2001), Binder & Hibbett (*Mol. Phylogen. Evol.* **22**: 76, 2002), Larsson *et al.* (*MR* **108**: 983, 2004), Shirouzou *et al.* (*Mycoscience* **48**: 388, 2007; phylogeny).

Dacrymycetales Henn. (1898). Dacrymycetes. 1 fam., 9 gen., 101 spp. Fam.:
Dacrymycetaceae
Lit.: Donk (1951-63, VIII; *Proc. Kon. nederl. Akad. Wet.* C **67** (2), 1964; 1966: 264), Kennedy (*Mycol.* **50**: 874, 1959; gen. key), Reid (*TBMS* **62**: 433, 1974; Br. spp.; keys).

Dacrymycetes Doweld (2001), Agaricomycotina. 1 ord., 1 fam., 9 gen., 101 spp. Ord.:
Dacrymycetales
Lit.: Doweld (*Prosyllabus*: LXXVII, 2001), Hibbett *et al.* (*MR* **111**: 509, 2007; phylogeny).

Dacryobasidium Jülich (1982) = Cristinia fide Hjortstam & Grosse-Brauckmann (*Mycotaxon* **47**: 405, 1993).

Dacryobolaceae Jülich (1982) = Meruliaceae.

Dacryobolus Fr. (1849), Fomitopsidaceae. 5, widespread. See Eriksson (*Symb. bot. upsal.* **16** no. 1: 115, 1958), Christiansen (*Dansk bot. Ark.* **19**: 244, 1960), Parmasto (*Consp. System. Corticiac.*: 98, 1968; taxonomy), Manjon *et al.* (*An. Jard. bot. Madr.* **40**: 297, 1984; key Eur. spp.).

Dacryodochium P. Karst. (1896) = Graphiola fide Sutton (*in litt.*).

dacryoid, having one end rounded and the other more or less pointed; pear-like or tear-like in form.

Dacryoma Samuels (1988), anamorphic *Nectria*, St.0-1eH.15. 3, Indonesia; Peru. See Samuels (*Brittonia* **40**: 328, 1988), Matsushima (*Matsush. Mycol. Mem.* **10**, 2001; Peru).

Dacryomitra Tul. & C. Tul. (1872) = Calocera fide McNabb (*N.Z. Jl Bot.* **3**: 31, 1965).

Dacryomyces, see *Dacrymyces*.

Dacryomycetopsis Rick (1958) nom. dub., Basidiomycota. See Rick (*Iheringia* Série Botânica **2**: 53, 1958).

Dacryonaema Nannf. (1947), Dacrymycetaceae. 1,

Europe. See Lisická (*Czech Mycology* **48**: 217, 1995; Slovakia).

Dacryopinax G.W. Martin (1948), Dacrymycetaceae. *c.* 15, widespread (esp. tropical). See McNabb (*N.Z. Jl Bot.* **3**: 59, 1965; key), Lowy (*Mycotaxon* **13**: 428, 1981; key trop. Am. spp.), Sierra & Cifuentes (*Mycotaxon* **92**: 243, 2005; key), Roberts (*Mycotaxon* **96**: 83, 2006; Caribbean).

Dacryopsella Höhn. (1915) = Pistillina fide Donk (*Reinwardtia* **2**: 435, 1954).

Dacryopsida Nees (1816) nom. dub., Agaricomycetes.

Dacryopsis Massee (1891) = Ditiola Fr. fide Kennedy (*Mycol.* **56**: 298, 1964).

Dacryoscyphus R. Kirschner & Zhu L. Yang (2005), anamorphic *Dacrymycetaceae*. 1, China. See Kirschner & Yang (*Antonie van Leeuwenhoek* **87**: 331, 2005).

Dactuliochaeta G.L. Hartm. & J.B. Sinclair (1988), anamorphic *Pleosporales*, Cpd.0eH.15. 1 (on (*Glycine*), Africa. For *Pyrenochaeta* with *Dactuliophora* synanamorph. See Hartman & Sinclair (*Mycol.* **80**: 696, 1988).

Dactuliophora C.L. Leakey (1964), anamorphic *Pleosporales*, Hsp.#eP.42. 4, widespread (esp. Africa). See Datnoff *et al.* (*TBMS* **87**: 297, 1986; as *Pyrenochaeta*), Ramaley (*Mycol.* **91**: 132, 1999).

Dactylaria Sacc. (1880), anamorphic *Helotiales*, Hso.1-≡ eH.10. *c.* 109, widespread. Probably polyphyletic. See Bhatt & Kendrick (*CJB* **46**: 1253, 1968; type sp.), de Hoog & von Arx (*Kavaka* **1**: 55, 1973), de Hoog & van Oorschot (*Proc. K. ned. Akad. Wet.* Ser. C, Biol. Med. Sci. **86**: 55, 1983), de Hoog (*Stud. Mycol.* **26**: 1, 1985; key 41 spp.), Dixon & Salkin (*J. Clin. Microbiol.* **24**: 12, 1986; medical spp.), Sawadogo & Cayrol (*Riv. Scient.*: 27, 1990), Castañeda Ruiz & Kendrick (*Univ. Waterloo Biol. Ser.* **35**: 1, 1991; Cuba), Saikawa & Kaneko (*Mycoscience* **35**: 89, 1994; infection process), Castañeda Ruíz *et al.* (*Mycotaxon* **58**: 253, 1996; Cuba), Rubner (*Stud. Mycol.* **39**, 1996), Goh & Hyde (*MR* **101**: 1265, 1997; revision), Liou & Tzean (*Mycol.* **89**: 876, 1997; phylogeny), Ahrén *et al.* (*FEMS Microbiol. Lett.* **158**: 179, 1998; phylogeny), Paulus *et al.* (*Fungal Diversity* **14**: 143, 2003; Australia).

Dactylariopsis Mekht. (1967) = Arthrobotrys fide Schenck *et al.* (*CJB* **55**: 977, 1977), Scholler *et al.* (*Sydowia* **51**: 89, 1999; synonymy with *Drechslerella*).

Dactylella Grove (1884), anamorphic *Orbilia*, Hso.≡ eH.10. *c.* 62 (mainly on nematodes), widespread (esp. north temperate). See Subramanian (*J. Indian bot. Soc.* **42**: 291, 1963), Zhang *et al.* (*Mycosystema* **7**: 111, 1995; review), Rubner (*Stud. Mycol.* **39**, 1996), Liou & Tzean (*Mycol.* **89**: 876, 1997; phylogeny), Ahrén *et al.* (*FEMS Microbiol. Lett.* **158**: 179, 1998; phylogeny), Webster *et al.* (*MR* **102**: 99, 1998; teleomorph), Hagedorn & Scholler (*Sydowia* **51**: 27, 1999; phylogeny), Zhang *et al.* (*Mycosystema* **20**: 51, 2001; ontogeny), Barron (*Biodiversity of Fungi* Inventory and Monitoring Methods: 435, 2004; review).

Dactylellina M. Morelet (1968) = Monacrosporium fide Scholler *et al.* (*Sydowia* **51**: 89, 1999; gen. concept), Li *et al.* (*Mycol.* **97**: 1034, 2006; phylogeny).

Dactyliaceae Nann. (1934) = Orbiliaceae.

Dactylifera Alcorn (1987), anamorphic *Pezizomycotina*, Hso.0bP.26. 1, Australia. See Alcorn (*Mycotaxon* **28**: 71, 1987).

Dactylina G. Arnaud ex Subram. (1964) ≡ Lactydina.

Dactylina Nyl. (1860), Parmeliaceae (L). *c.* 10, widespread. See Lynge (*Skr. Svalbard Ishavet* **59**, 1933), Follmann *et al.* (*Willdenowia* **5**: 7, 1968), Thomson & Bird (*CJB* **56**: 1602, 1978; N. Am. spp., key), Kärnefelt & Thell (*Nova Hedwigia* **62**: 487, 1996; revision), Thell *et al.* (*Mycol. Progr.* **1**: 335, 2002; phylogeny), Mattsson & Articus (*Symb. bot. upsal.* **34** no. 1: 237, 2004; phylogeny), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny), Randlane & Saag (*Central European Lichens*: 75, 2006; key European spp.).

Dactylium Nees (1816) nom. rej. = Monacrosporium fide Gams & Rubner (*Taxon* **46**: 335, 1997).

Dactyloblastus Trevis. (1853) = Phlyctis fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

dactyloid, finger-like.

Dactylomyces Sopp (1912), Trichocomaceae. Anamorph *Polypaecilum*. 2 (thermophilic), Europe; N. America. See also *Coonemeria*. See Apinis (*TBMS* **50**: 576, 1967), Mouchacca (*Cryptog. Mycol.* **18**: 19, 1997; review).

Dactyloporus Herzer (1893), Fossil Fungi, Agaricomycetes. 1 (Carboniferous), N. America. See Seward (*Fossil plants* **1**: 211, 1898).

Dactylospora Körb. (1855), Dactylosporaceae. *c.* 49 (on lichens, hepatics or wood), widespread. See Hafellner (*Beih. Nova Hedwigia* **62**, 1979), Bellemère & Hafellner (*Cryptog. Mycol.* **3**: 71, 1982; asci), Döbbeler & Triebel (*Bot. Jahrb. Syst.* **107**: 503, 1985; on *Hepaticae*), Au *et al.* (*Mycoscience* **37**: 129, 1996; ultrastr.), Kohlmeyer & Volkmann-Kohlmeyer (*Mycotaxon* **67**: 247, 1998; marine spp.), Sarrión *et al.* (*Lichenologist* **34**: 361, 2002; Spain), Ihlen *et al.* (*Bryologist* **107**: 357, 2004; key).

Dactylosporaceae Bellem. & Hafellner (1982), ? Lecanorales (L). 1 gen. (+ 6 syn.), 49 spp.

Lit.: Döbbeler & Triebel (*Bot. Jahrb. Syst.* **107**: 503, 1985), Au *et al.* (*Mycoscience* **37**: 129, 1996), Kohlmeyer & Volkmann-Kohlmeyer (*Mycotaxon* **67**: 247, 1998), Jones *et al.* (*Mycoscience* **40**: 317, 1999).

Dactylosporangium Thiemann, Pagani & Beretta (1967), Actinobacteria. q.v.

Dactylosporina (Clémençon) Dörfelt (1985), Marasmiaceae. 2, S. America. Or perhaps *Physalacriaceae*. See Dörfelt (*Feddes Repert.* **96**: 236, 1985).

Dactylosporites Paradkar (1976), Fossil Fungi. 1 (Cretaceous), India. See Paradkar (*Journal of Palynology* **10**: 120, 1974).

Dactylosporium Harz (1872), anamorphic *Pezizomycotina*, Hso.#eP.10. 2, Europe; Cuba. See Hughes (*Naturalist* Hull: 63, 1952), Seifert & Hughes (*N.Z. Jl Bot.* **38**: 489, 2000).

Dactylosporium Mekht. (1967) ≡ Dactylellina.

dadih (**dadiah**), a fermented product of buffalo milk popular in Western Sumatra. See Gandjar *et al.* (*IMC3 Abstr.*: 452, 1983; microbiology).

Daedala Hazsl. (1887) = Hypodermina fide Darker (*CJB* **45**: 1399, 1967).

Daedalea Pers. (1801), Fomitopsidaceae. 7, widespread. *D. quercina* (wood rot). See Corner (*Beih. Nova Hedwigia* **86**: 265 pp., 1987), Legon (*Mycologist* **19**: 44, 2005).

Daedaleaceae Jülich (1982) = Fomitopsidaceae.

Daedaleites Mesch. (1892), Fossil Fungi. 2 (Tertiary), Europe.

Daedaleopsis J. Schröt. (1888), Polyporaceae. 6, widespread. See Pegler (*The polypores [Bull. BMS*

Suppl.], 1973), Ko & Jung (*Antonie van Leeuwenhoek* **75**: 191, 1999; molecular phylogeny), Bernicchia *et al.* (*MR* **110**: 14, 2006; neolithic DNA).

Daedaloides Lázaro Ibiza (1916) = Cryptoderma fide Pegler (*The polypores [Bull. BMS Suppl.]*, 1973).

Daldinia Ces. & De Not. (1863) nom. cons., Xylariaceae. Anamorph *Nodulisporium*. *c.* 30, widespread. *D. concentrica* ('calico wood', 'cramp balls' on *Fraxinus*). See Pérez-Silva (*Boln. Soc. mex. Micol.* **7**: 51, 1973; Mexican spp.), Thind & Dargan (*Kavaka* **6**: 15, 1979; Indian spp.), Petrini & Müller (*Mycol. Helv.* **1**: 501, 1986; key 5 spp. Eur.), Læssøe (*SA* **13**: 43, 1994; syn. of *Hypoxylon*), Ju *et al.* (*Mycotaxon* **61**: 243, 1997; monogr.), Rogers *et al.* (*Mycotaxon* **72**: 507, 1999; typification), Johannesson *et al.* (*MR* **104**: 275, 2000; Europ.), Johannesson *et al.* (*Mycol.* **93**: 440, 2001; population structure), Johannesson *et al.* (*Mol. Ecol.* **10**: 1665, 2001; genetic variation), Stadler *et al.* (*Mycotaxon* **80**: 167, 2001; European spp.), Stadler *et al.* (*Mycotaxon* **77**: 379, 2001; biochemistry), Stadler *et al.* (*Mycol. Progr.* **1**: 31, 2002; ascospore ornamentation), Stadler *et al.* (*MR* **108**: 257, 2004; cryptic spp.), Stadler *et al.* (*MR* **108**: 1025, 2004; large-spored spp.), Hsieh *et al.* (*Mycol.* **97**: 844, 2005; phylogeny), Triebel *et al.* (*Nova Hedwigia* **80**: 25, 2005; phylogeny), Bitzer *et al.* (*MR* **112**: 251, 2008; phylogeny, chemistry).

Daleomyces Setch. (1924) = Peziza Fr. fide Korf (*Mycol.* **48**: 711, 1956), Antonín (*Czech Mycol.* **57**: 249, 2005; Czech Republic).

Damnosporium Corda (1842) = Bactridium fide Saccardo (*Syll. fung.* **4**: 691, 1886).

damping-off, a rotting of seedlings at soil level. In **pre-emergent** - the young plant is attacked at germination so that the seedling does not come up. Species of *Fusarium, Phytophthora, Pythium* and *Rhizoctonia* are common - **fungi.** Soil sterilization is frequently the best control measure (see Cheshunt compound).

Danaëa Caneva & Rambelli (1981) [non *Danaëa* Sm. 1793, *Pteridophyta*] ≡ Kiliophora.

Dangeard (Pierre Clement Augustin; 1862-1947; France). On the academic staff, Faculty of Sciences, Caen (1886-1891) then Poitiers (1891-1908) then Paris (1908-1924); Professor of Botany, Sorbonne, Paris (1924 onwards). A distinguished mycologist, protozoologist, algologist, cytologist, and morphologist. He provided data for classification of many fungi, especially those with algal or protozoan affinities. *Publs.* Recherches sur le développement du périthèce chez les Ascomycètes. *Le Botaniste* (1907). *Biogs, obits etc.* Grummann (1974: 313); Heim (*Revue de Mycologie* **12**: 97, 1947) [portrait]; Moreau (*Revue Générale de Botanique* **57**: 193, 1950) [portrait]; Stafleu & Cowan (*TL-2* **1**: 596, 1976).

Dangeardia Schröd. (1898), Chytridiaceae. 7, Europe; N. America. See Batko (*Acta Mycologica* Warszawa **12**: 407, 1970).

Dangeardiana Valkanov ex A. Batko (1970), Chytridiaceae. 4 (on *Eudorina*), Bulgaria. See Batko (*Acta Mycologica* Warszawa **6**: 430, 1970).

Dangeardiella Sacc. & P. Syd. (1899), Melanommataceae. 2 (on *Pteridophyta*), Europe. See Obrist (*Phytopath. Z.* **35**: 379, 1959), Liew *et al.* (*Mol. Phylogen. Evol.* **16**: 392, 2000; phylogeny), Câmara *et al.* (*MR* **107**: 516, 2003; phylogeny).

dangeardien (dangeardium), collective term for both asci and basidia; structures where diploid nuclei are formed, undergo meiosis and form haploid spores (Moreau, *Botaniste* **34**: 315, 1949). See van der Walt & Johanssen (*Ant. v. Leeuwenhoek* **40**: 185, 1974; concept in yeast taxonomy).

Dangeardiomycetes, *Basidiomycetes, Protobasidiomycetes* and *Ascomycetes* excluding *Periascomycetes* (Moreau, 1953).

DAOM, Canadian National Mycological Herbarium (Ottawa, Canada); founded 1929; part of the Centre for Land and Biological Resources Research, Agriculture Canada; genetic resource collection **CCFC**; see Cody *et al.* (*Systematics in Agriculture Canada at Ottawa 1886-1986*, 1986).

DAP pathway, alpha, beta-diaminopimelic acid pathway for lysine synthesis (cf. AAA pathway).

Dapsilosporium Corda (1837) = Melanconium fide Saccardo (*Syll. fung.* **3**: 1, 1884), Sutton (*Mycol. Pap.* **141**, 1977).

DAR, Plant Pathology Branch Herbarium New South Wales (Rydalmere, NSW, Australia); founded 1890; collections vested in a Trust established by the NSW Parliament from 1983 and supported by the goverment.

Darbishirella Zahlbr. (1898) = Ingaderia See Tehler (*CJB* **68**: 2458, 1990; cladistics), Feige & Lumbsch (*Mycotaxon* **48**: 381, 1993).

Darkera H.S. Whitney, J. Reid & Piroz. (1975), Helotiales. Anamorph *Tiarosporella*. 2, Europe; N. America. See Whitney *et al.* (*CJB* **53**: 3052, 1975), Gernandt *et al.* (*Mycol.* **93**: 915, 2001; phylogeny).

Darluca Castagne (1851) = Sphaerellopsis Cooke fide Sutton (*Mycol. Pap.* **141**, 1977).

Darlucella Höhn. (1919) = Sphaerellopsis Cooke fide Sutton (*Mycol. Pap.* **141**, 1977).

Darlucis Clem. (1931) = Heteropatella fide Sutton (*Mycol. Pap.* **141**, 1977).

Daruvedia Dennis (1988), Dothideomycetes. 1, British Isles. See Barr (*Mycotaxon* **51**: 191, 1994; posn).

Darwiniella Speg. (1887) nom. dub., Pezizomycotina. See Petrak & Sydow (*Annls mycol.* **34**: 22, 1936).

Dasturella Mundk. & Khesw. (1943), Phakopsoraceae. 3 (on *Rubiaceae* (0, I where known); on *Poaceae* (esp., II, III)), India. See Thirumalachar *et al.* (*Bot. Gaz.* **108**: 371, 1947), Cummins & Hiratsuka (*Illustr. Gen. Rust Fungi* edn 3: 225 pp., 2003; syn. of *Kweilingia*), Thaung (*Australasian Mycologist* **24**: 29, 2005; Burma).

Dasybolus Clem. & Shear (1931) ≡ Dasyobolus.

Dasyobolus (Sacc.) Sacc. (1895) = Ascobolus fide van Brummelen (*Persoonia* Suppl. **1**: 1, 1967).

Dasypezis Clem. (1909) = Lachnum fide Nannfeldt (*Nova Acta R. Soc. Scient. upsal.*, 1932).

Dasyphthora Clem. (1909) nom. rej. = Nectriopsis fide Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Dasypyrena Speg. (1912) = Actinopeltis fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Dasyscypha Fuckel (1870) = Neodasyscypha Suková & Spooner.

Dasyscyphella Tranzschel (1898), Hyaloscyphaceae. 23, Asia; N. America. See Dennis (*Kew Bull.* **27**: 273, 1972), Raitviir (*Eesti NSV Tead. Akad. Toim.* Biol. seer **26**: 33, 1977), Baral (*Z. Mykol.* **59**: 3, 1993), Galán & Raitviir (*Nova Hedwigia* **58**: 453, 1994), Raitviir & Järv (*Proc. Est. Acad. Sci. Biol. Ecol.* **46**: 94, 1997), Leenurm *et al.* (*Sydowia* **52**: 30, 2000; ultrastr.), Raitviir (*Polish Botanical Journal* **47**: 227, 2002; revision), Suková (*Czech Mycol.* **57**: 139, 2005; Czech Republic).

Dasyscyphus Nees ex Gray (1821) = Lachnum. For-

merly used for many members of the *Hyaloscyphaceae* with distinctive apothecial hairs. fide Holm (*TBMS* **67**: 333, 1976), Korf (*Mycotaxon* **5**: 515, 1977), Holm (*Mycotaxon* **7**: 139, 1978), Dimitrova (*Phytologica Balcanica* **6**: 133, 2000; Bulgaria).

Dasysphaeria Speg. (1912), Pezizomycotina. 1, S. America.

Dasyspora Berk. & M.A. Curtis (1853), Uropyxidaceae. 1 (on *Annonaceae*), America (tropical). See Hennen & Figueredo (*Mycol.* **73**: 350, 1981).

Dasysticta Speg. (1912), anamorphic *Pezizomycotina*, Cpd.0eH.15. 1, S. America.

Dasystictella Höhn. (1919) nom. dub., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Datronia Donk (1967), Polyporaceae. 5, north temperate. See Ryvarden & Gilbertson (*Europ. Polyp.* **1**: 230, 1993).

datum (pl. **data**), facts, figures, information and observations. Often used adjectivally, e.g. data bank, data matrix, database.

Davidgallowaya Aptroot (2007), Parmeliaceae (L). 1, Papua New Guinea. See Aptroot (*Biblthca Lichenol.* **95**: 137, 2007).

Davidiella Crous & U. Braun (2003), Davidiellaceae. Anamorph *Cladosporium*. 33, widespread. See Braun *et al.* (*Mycol. Progr.* **2**: 8, 2003), Park *et al.* (*Mycotaxon* **89**: 441, 2004; indoor spp.), Seifert *et al.* (*CJB* **82**: 914, 2004; phylogeny), Crous *et al.* (*MR* **110**: 264, 2006), Schoch *et al.* (*Mycol.* **98**: 1041, 2006; phylogeny), Crous *et al.* (*Stud. Mycol.* **58**: 1, 2007; phylogeny), Schubert *et al.* (*Stud. Mycol.* **58**: 105, 2007; phylogeny).

Davidiellaceae C.L. Schoch, Spatafora, Crous & Shoemaker (2007), Capnodiales. 4 gen. (+ 11 syn.), 185 spp. See Schoch *et al.* (*Mycol.* **98**: 1041, 2006; phylogeny), Crous *et al.* (*Stud. Mycol.* **58**: 1, 2007; phylogeny).

Davincia Penz. & Sacc. (1901) = Crocicreas fide Carpenter (*Mem. N. Y. bot. Gdn* **33**: 1, 1981).

Davinciella (Sacc. & D. Sacc.) Trotter (1928) ≡ Merodontis.

Davisiella Petr. (1924), anamorphic *Pezizomycotina*, Cpd.0eH/#eH.15. 1, USA.

Davisomycella Darker (1967), Rhytismataceae. 10, widespread. See Minter & Ivory (*TBMS* **91**: 171, 1988), Ganley *et al.* (*Proc. natn Acad. Sci. U.S.A.* **101**: 10107, 2004; endophytes), Hou *et al.* (*Nova Hedwigia* **83**: 511, 2006; China).

Davisoniella H.J. Swart (1988), anamorphic *Mycosphaerella*, St.0eP.19. 1, Australia. See Swart (*TBMS* **90**: 289, 1988), Crous *et al.* (*Stud. Mycol.* **55**: 99, 2006; phylogeny).

Dawsicola Döbbeler (1981), Helotiales. 1 (on *Musci*), New Zealand. See Döbbeler (*Sydowia* **38**: 41, 1986), Döbbeler (*Biodiv. Cons.* **6**: 721, 1997).

Dawsomyces Döbbeler (1981), ? Arthoniomycetes. 2 (on *Musci*), New Guinea; Australia. See Döbbeler (*Mitt. bot. StSamml.* Münch. **17**: 426, 1981), Döbbeler (*Biodiv. Cons.* **6**: 721, 1997).

Dawsophila Döbbeler (1981), Dothideomycetes. 2, New Guinea; New Zealand. See Grube (*Bryologist* **101**: 377, 1998).

de Bary (Heinrich Anton; 1831-1888; Germany). Doctor of Medicine, Berlin (1853); practising surgeon, Frankfurt-am-Main, the town of his birth (1853); privat docent in botany, Tübingen (1853-1855); Professor, Freiburg (1855-1867); Professor, Halle (1867-1872); Professor, Strasburg University (1872-1888); editor, *Botanische Zeitung* (1867-1887). His writings on mycology (and on algology, bacteriology and botany) were outstanding, his interests being more biological and physiological than systematic: from his investigations on life histories, parasites and saprobes, *Mycetozoa* (see Martin, *Proceedings of the Iowa Academy of Science* **65**: 20, 1958), the nature of lichens, etc., he made new and important discoveries. Heteroecism in the *Pucciniales* was made clear by his experiments and he gave accounts of development and of sex in a number of 'phycomycetes' and 'ascomycetes'. His teaching (many of his students became noted) and writings had a very great effect on later development of mycology, and it is generally accepted that he was 'the founder of modern mycology'. *Publs. Untersuchungen über die Brandpilze* (1853); *Die Mycetozoen* (1859); *Morphologie und Physiologie der Pilze* (1866) [edn 2, 1884; English edn, 1887]. *Biogs, obits etc.* Reess (*Bericht der Deutschen Botanischen Gesellschaft* **6**: viii, 1888); Smith (*Phytopathology* **1**: 1, 1911) [portrait]; Sparrow (*Mycol.* **70**: 222, 1978); Stafleu & Cowan (*TL-2* **1**: 135, 1976).

de Bary bubbles, air bubbles in ascospores; first described by de Bary (1884: 106). See Dodge (*Bull. Torrey bot. Cl.* **84**: 431, 1957).

de Notaris (Giuseppe; 1805-1877; Italy). Graduate in medicine, Padua (1830); Professor of Botany, University of Genoa (1839-1872); Professor of Botany, Rome (1872-1877). Made early investigations of Italian ascomycetes, including lichen-forming species, and introduced reforms in ascomycete taxonomy; also published extensively on Italian liverworts and mosses. Main collections in Rome (**RO**). *Publs. Micromycetes Italici Novi vel Minus Cogniti* (1839-1855); *Sferiacei Italici* (1863); also other papers, especially on ascomycetes. *Biogs, obits etc.* Cooke (*Grevillea* **5**: 143, 1877); Graniti (*Rendiconti della Accademia Nazionale delle Scienze detta dei XL* Serie V **15**: 9, 1991) [portrait]; Stafleu & Cowan (*TL-2* **1**: 622, 1976).

Dearness (John; 1852-1954; Canada). School inspector, East Middlesex (1874-1899); Vice-Principal (1899-1918) then Principal (1918-1922) London Normal School. Self-taught amateur mycologist; the first Canadian mycologist to receive international recognition. Collections in **DAOM** (Parmelee, *Mycol.* **70**: 509, 1978). *Publs.* New and noteworthy fungi I-VI. *Mycol.* (1916-1929); (with House) New or noteworthy species of fungi I-IV. *Bulletin of the New York State Museum* (1918-1925). *Biogs, obits etc.* Tamblyn (*Mycol.* **47**: 909, 1955) [bibliography, portrait]; Ginns (*Mycotaxon* **26**: 47, 1986); Stafleu & Cowan, *TL-2* **1**: 605, 1976).

Dearnessia Bubák (1916), anamorphic *Pezizomycotina*, Cpd.≡ eH.1. 1, Canada.

death cap, basidiomata of the highly poisonous *Amanita phalloides*.

Debarya Schulzer (1866) = Hypocrea. The type no longer exists, so application is dubious. fide Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Debaryella Höhn. (1904), ? Sordariomycetes. 2, Europe. The type is lost and affinities are obscure. fide Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999), Réblová & Seifert (*Stud. Mycol.* **50**: 95, 2004).

Debaryolipomyces Ramírez (1957) nom. nud., ? Saccharomycetes. See Batra *in* Subramanian (Ed.) (*Taxonomy of fungi* **1**: 187, 1978).

Debaryomyces Klöcker (1909) nom. rej. = Torulaspora fide van der Walt & Johanssen (*CSIR Res. Rept.* **325**, 1975).

Debaryomyces Lodder & Kreger-van Rij (1984) nom. cons., Saccharomycetales. 19, widespread. See Hendriks *et al.* (*Syst. Appl. Microbiol.* **15**: 98, 1992; posn), Yamada *et al.* (*J. gen. appl. Microbiol.* Tokyo **38**: 623, 1992; gen. concept), Cai *et al.* (*Int. J. Syst. Bacteriol.* **46**: 542, 1996; rDNA), Nakase *et al. in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 157, 1998), Ramos *et al.* (*J. gen. appl. Microbiol.* Tokyo **44**: 399, 1998; ITS), Nishikawa *et al.* (*Medical Mycology* **37**: 101, 1999; PCR identification), Corredor *et al.* (*FEMS Microbiol. Lett.* **193**: 171, 2000; DNA probes), Petersen *et al.* (*Int. J. Food Microbiol.* **69**: 11, 2001; DNA typing), Thanh *et al.* (*FEMS Yeast Res.* **2**: 415, 2002; from woodlice), Corredor *et al.* (*Antonie van Leeuwenhoek* **83**: 215, 2003; chromosomes), Petersen & Jespersen (*Journal of Applied Microbiology* **97**: 205, 2004; genetic diversity), Martorell *et al.* (*FEMS Yeast Res.* **5**: 1157, 2005; molecular identification), Romero *et al.* (*FEMS Yeast Res.* **5**: 455, 2005; molecular detection), Quirós *et al.* (*Antonie van Leeuwenhoek* **90**: 211, 2006; IGS analysis), Suh *et al.* (*Mycol.* **98**: 1006, 2006; phylogeny).

Debaryoscyphus Arendh. & R. Sharma (1986) = Hamatocanthoscypha fide Huhtinen (*Karstenia* **29**: 545, 1990).

Debaryozyma Van der Walt & Johannsen (1978) nom. rej. ≡ Debaryomyces Lodder & Kreger ex Kreger.

Decaisnella Fabre (1879), Massariaceae. 11, widespread. See Barr (*Sydowia* **38**: 11, 1986), Barr (*SA* **5**: 127, 1986; status), Barr (*N. Amer. Fl.* ser. 2 **13**: 129 pp., 1990; key, posn), Abdel-Wahab & Jones (*CJB* **81**: 598, 2003; Australia), Checa & Blanco (*Mycotaxon* **91**: 353, 2005; Spain).

Decampia Mudd (1861) ≡ Dacampia.

Decapitatus Redhead & Seifert (2000), anamorphic *Mycena*. 1. See Redhead *et al.* (*Taxon* **49**: 789, 2000).

decay, the destruction of plant or animal material by fungi and other microorganisms.

Deccanodia Singhai (1974), Fossil Fungi, anamorphic *Pezizomycotina*. 1 (Eocene), India.

deciduous (of spores, etc.), falling away at maturity; shed, either with (e.g. teliospores) or without (e.g. urediniospores) a fragment of the pedicel or sporophore; cf. persistent.

Deckenbachia Jacz. (1931) ≡ Coenomyces.

declinate, bent or curved down or forwards.

declivate (declivous), sloping.

decolourate, colourless.

Decomposition. In the strict sense, is the breakdown of organic materials through biological activity, although the physical processes of leaching and fragmentation are sometimes considered a part of decomposition. Fungal decomposition, particularly of plant remains, is a key element worldwide in the recycling of nutrients. The products resulting from biological decomposition by fungi are energy for the decomposer, inorganic elements and compounds, and simple organic compounds such as CO_2 or alcohol which result from aerobic and anaeraobic respiration (fermentation), respectively. Products containing complex organic compounds with phenolic rings (humic acids) can result from partial decomposition of lignin, and are an important component of soil organic matter. The release of mineral nutrients through decomposition is known as nutrient mineralization. When fungi decompose organic matter such as wood or straw in which the ratio of carbon to inorganic nutrients (especially nitrogen and phosphorus) is high, the nutrient mineralization phase is often preceded by a nutrient immobilization phase. During nutrient immobilization, the decomposers incorporate mineral nutrients from their organic substrate and sometimes from the surrounding environment into their biomass. See Carroll & Wicklow (Eds) (*The fungal community*, edn 2, 1992), Dix & Webster (*Fungal ecology*, 1995). See also: Biodegradation.

Deconica (W.G. Sm.) P. Karst. (1879) = Psilocybe (Fr.) P. Kumm. fide Singer (*Agaric. mod. Tax.*, 1951).

Decorospora Inderb., Kohlm. & Volkm.-Kohlm. (2002), Pleosporaceae. 1 (marine), widespread. See Inderbitzin *et al.* (*Mycol. Progr.* **94**: 657, 2002).

decorticate, having no cortex.

decumbent, resting on the substratum with the ends turned up.

decurrent (of lamellae), running down the stipe (Fig. 19E).

decurved (of the pileus edge), bent down.

decussate (of lichen thalli), having the surface divided and crossed by dark lines.

Dedalea, see *Daedalea*.

dediploidization (in ascomycetes and basidiomycetes), the making of haploid cells (or hyphae) by a dikaryotic diploid mycelium or cell.

deer balls (Lycoperdon nuts or **harts' truffles)**, *Elaphomyces* ascomata.

Deflexula Corner (1950) = Pterula fide Kuyper (*in litt.*).

Degelia Arv. & D.J. Galloway (1981), Pannariaceae (L). 11, widespread (temperate). See Jørgensen & James (*Biblthca Lichenol.* **38**: 253, 1990; key), Lumbsch & Kothe (*Mycotaxon* **43**: 277, 1992; thallus SEM), Jørgensen & James (*Lichenologist* **30**: 533, 1998), Jørgensen (*Bryologist* **103**: 670, 2000; N America), Jørgensen *et al.* (*Lichenologist* **32**: 257, 2000; n. spp.), Jørgensen (*Biblthca Lichenol.* **78**: 109, 2001; Australia), Ekman & Jørgensen (*CJB* **80**: 625, 2002; phylogeny), Jørgensen (*N.Z. Jl Bot.* **40**: 327, 2002; New Zealand), Wiklund & Wedin (*Cladistics* **19**: 419, 2003; phylogeny), Jørgensen (*Biblthca Lichenol.* **88**: 229, 2004; S hemisphere), Miądlikowska & Lutzoni (*Am. J. Bot.* **91**: 449, 2004; phylogeny), Wedin & Wiklund (*Symb. bot. upsal.* **34** no. 1: 469, 2004; phylogeny), Jørgensen & Sipman (*J. Hattori bot. Lab.* **100**: 695, 2006; New Guinea), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny).

Degeliella P.M. Jørg. (2004), Pannariaceae (L). 2, austral. See Jørgensen (*Biblthca Lichenol.* **88**: 235, 2004).

dehiscence papilla, morphologically and ultrastructurally distinct protuberance on an undischarged sporangium that becomes converted into an exit tube.

dehiscent (dehiscing) (of asci or fruit-bodies), opening when mature, by pores or by becoming broken into parts.

Deichmannia Alstrup & D. Hawksw. (1990), anamorphic *Pezizomycotina*, Hsp.#eP.1. 1 (on lichens), Greenland. See Alstrup & Hawksworth (*Meddr Grønland* Biosc. **31**: 26, 1990).

Deighton (Frederick Claude; 1903-1992; England, later Sierra Leone). Plant Pathologist, British Colonial Of-

fice (up to 1955); Mycologist, IMI (1955-1973). With Hughes, a pioneer of the mycota of West Africa, in particular Sierra Leone; also noted as an expert on *Cercospora* and related genera. Collections in IMI. *Publs*. Seventeen numbers of the series *Mycological Papers*. *Biogs, obits etc*. Ainsworth (*Brief Biographies of British Mycologists* p. 57, 1996).

Deightonia Petr. (1947) = Vanderystiella fide Petrak (*Sydowia* **5**: 328, 1951).

Deightoniella S. Hughes (1952), anamorphic *Mycosphaerellaceae*, Hso.1-≡ eP.19. 10, widespread (esp. tropical). *D. torulosa* (fruit spot ('speckle') of banana. See Ellis (*DH*, 1971), Constantinescu (*Proc. K. Ned. Akad. Wet.* Ser. C, Biol. Med. Sci. **86**: 137, 1983), Ondřej (*Česká Mykol.* **38**: 39, 1984; Czech. spp.), Barr (*Mycol.* **77**: 549, 1985), Crous *et al.* (*Mycosphaerella Leaf Spot Diseases of Bananas: Present Status and Outlook* Proceedings of the 2nd International Workshop on *Mycosphaerella* Leaf Spot Diseases Held in San José, Costa Rica, 20-23 May 2002: 43, 2003).

Deigloria Agerer (1980), Marasmiaceae. 10, widespread (neotropics). See Agerer (*Mycotaxon* **12**: 188, 1980).

Dekkera Van der Walt (1964), ? Pichiaceae. Anamorph *Brettanomyces*. 5, widespread. See Smith *et al.* (*Yeast* Chichester **6**: 299, 1990), Molina *et al.* (*Int. J. Syst. Bacteriol.* **43**: 32, 1993; molec., key), Yamada *et al.* (*Biosc., Biotechn., Biochem.* **58**: 1893, 1994; molec. syst.), Smith *et al. in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 174, 1998), Cocolin *et al.* (*Appl. Environm. Microbiol.* **70**: 1347, 2004; molecular detection), Martorell *et al.* (*Int. J. Food Microbiol.* **106**: 79, 2006; molecular typing), Suh *et al.* (*Mycol.* **98**: 1006, 2006; phylogeny).

Dekkeromyces Santa María & C. Sánchez-Pinto (1970) = Kluyveromyces fide Batra *in* Subramanian (Ed.) (*Taxonomy of fungi* **1**: 187, 1978).

Dekkeromyces Wick. & K.A. Burton (1956) nom. inval. = Kluyveromyces fide Batra *in* Subramanian (Ed.) (*Taxonomy of fungi* **1**: 187, 1978).

Delacourea Fabre (1879) = Lophiostoma fide Barr (*Sydowia* **38**: 11, 1985), Eriksson & Hawksworth (*SA* **6**: 123, 1987).

Delacroixia Sacc. & P. Syd. (1899) = Conidiobolus fide Tyrrell & McLeod (*J. invert. Path.* **20**: 11, 1972).

Delastreopsis Mattir. (1905) ≡ Lespiaultinia fide Trappe (*TBMS* **65**: 496, 1975).

Delastria Tul. & C. Tul. (1843), Pezizales. 1 (hypogeous), Europe (southern); N. Africa.

Delentaria Corner (1970), Gomphaceae. 1, Brazil. See Corner (*Beih. Nova Hedwigia* **33**: 225, 1970).

Delicatula Fayod (1889), ? Tricholomataceae. 2, widespread (temperate). See Antonín (*Czech Mycol.* **54**: 205, 2003).

deliquescent, becoming liquid, e.g. after maturing.

Delisea Fée (1825) [non *Delisea* J.V. Lamour. 1819, *Algae*] ≡ Plectocarpon.

Delitescor Earle (1909) = Psilocybe (Fr.) P. Kumm. fide Singer (*Agaric. mod. Tax.*, 1951).

Delitschia Auersw. (1866), Delitschiaceae. 51 (coprophilous), widespread. See Luck-Allen & Cain (*CJB* **53**: 1827, 1975; key), Parguey-Leduc (*BSMF* **94**: 409, 1978; ontogeny), Barr (*N. Amer. Fl.* ser. 2 **13**: 129 pp., 1990; posn), Barrasa & Checa (*Rev. Iberoam. Micol.* **7**: 5, 1990; key 8 spp.), Eriksson & Hawksworth (*SA* **10**: 138, 1991), Pelaez *et al.* (*Mycotaxon* **50**: 115, 1994; West Africa), Hyde & Steinke (*Mycoscience* **37**: 99, 1996; aquatic spp.), Richardson (*MR* **102**: 1038, 1998), Winka & Eriksson (*Phylogenetic Relationships Within the Ascomycota Based on 18S rDNA Sequences* Akademisk Avhandling [Thesis (PhD), Department of Ecology and Environmental Science, Umeå University]: [17] pp., 2000; phylogeny), Bell (*CBS Diversity Ser.* **3**, 2005), Kruys *et al.* (*MR* **110**: 527, 2006; phylogeny), Schoch *et al.* (*Mycol.* **98**: 1041, 2006; phylogeny).

Delitschiaceae M.E. Barr (2000), Pleosporales. 3 gen. (+ 2 syn.), 54 spp.

Lit.: Barr (*Mycotaxon* **76**: 105, 2000), Liew *et al.* (*Mol. Phylogen. Evol.* **16**: 392, 2000), Winka & Eriksson (*Phylogenetic Relationships Within the Ascomycota Based on 18S rDNA Sequences* Akademisk Avhandling [Thesis (PhD), Department of Ecology and Environmental Science, Umeå University]: [17] pp., 2000), Bell & Mahoney (*Muelleria* **15**: 3, 2001), Kruys *et al.* (*MR* **110**: 527, 2006).

Delitschiella Sacc. (1905) = Delitschia fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Delortia Pat. & Gaillard (1888), anamorphic *Pezizomycotina*, Hsp.0-≡ hH.1. 4 (aquatic), America (tropical); Africa. See Pirozynski (*Mycol. Pap.* **129**, 1972), Goh & Hyde (*MR* **101**: 42, 1997; Australia).

Delphinella (Sacc.) Kuntze (1898), Dothideales. Anamorphs *Dothiorella*, *Sclerophoma*. 6, widespread (esp. north temperate). See Barr (*Contr. Univ. Mich. Herb.* **9**: 523, 1972), Froidevaux (*Nova Hedwigia* **23**: 679, 1973), Barr (*Harvard Pap. Bot.* **6**: 25, 2001; revision), Lumbsch & Lindemuth (*MR* **105**: 901, 2001; phylogeny), Morozova & Vasil'eva (*Mikol. Fitopatol.* **37**: 59, 2003; Siberia), Tsuneda *et al.* (*Mycol.* **96**: 1128, 2004; phylogeny), Schoch *et al.* (*Mycol.* **98**: 1041, 2006; phylogeny).

Delpinoella Sacc. (1899), Pezizomycotina. 1, Africa.

Delpinoina Kuntze (1891), Ascodichaenaceae. Anamorph *Macroallantina*. 2, Europe. See Speer (*BSMF* **103**: 9, 1987).

Delpontia Penz. & Sacc. (1901), ? Stictidaceae. 1 (on *Pteridophyta*), Java. See Sherwood (*Mycotaxon* **5**: 1, 1977).

deltoid, triangular in shape.

Deltosperma W.Y. Zhuang (1988), anamorphic *Unguiculariopsis*, St.0eP.15. 4, N. America; Europe. See Zhuang (*Mycotaxon* **32**: 31, 1988), Zhuang (*MR* **104**: 507, 2000).

DematiaceaeFr. (1832). (obsol.). Having dark-coloured hyphae and/or conidia.

dematiaceous (of mycelium, spores, etc.), pigmented, more or less darkly. Cf. moniliaceous.

Dematiocladium Allegr., Aramb., Cazau & Crous (2005), anamorphic *Nectriaceae*, H?.?.?. 1, Brazil. See Crous *et al.* (*MR* **109**: 836, 2005), Decock *et al.* (*Mycol.* **98**: 488, 2006; phylogeny).

Dematioscypha Svrček (1977), Hyaloscyphaceae. Anamorph *Haplographium*. 3, Europe; New Zealand. See Huhtinen (*Mycotaxon* **30**: 9, 1987; 3 spp.), Spooner (*Biblthca Mycol.* **116**, 1987), Raitviir (*Czech Mycol.* **52**: 289, 2001; key), Raitviir (*Scripta Mycologica* Tartu **20**, 2004).

Dematium Pers. (1801) nom. conf., anamorphic *Pezizomycotina*. See Hughes (*CJB* **36**: 727, 1958), Morgan-Jones & Goos (*Mycol.* **84**: 921, 1992).

Dematoidium Stautz (1931) ? = Aureobasidium fide Hermanides-Nijhof (*Stud. Mycol.* **15**: 143, 1977).

Dematophora R. Hartig (1883), anamorphic

Rosellinia, Hsy.0eP.11. 1, widespread. *D. necatrix* (white root rot of apple and pear). See Watanabe (*Ann. phytopath. Soc. Japan* **58**: 65, 1992; sporulation in vitro), Schnittler & Novozhilov (*Mycotaxon* **71**: 387, 1999; Taiwan), Nakamura *et al.* (*Mycoscience* **41**: 503, 2000; teleomorph), Petrini (*N.Z. Jl Bot.* **41**: 71, 2003; New Zealand), Petrini & Petrini (*MR* **109**: 569, 2005; revision).

-deme (suffix), a neutral term, always used with a prefix, and denoting any group of individuals within a taxon (q.v.; usually a species); first proposed by Gilmour & Gregor (*Nature* **144**: 333, 1939); occasionally used in mycology, e.g. agamodeme (predominantly apomictic), photosymbiodeme (of lichen thalli with different photobionts).

demicyclic, see *Pucciniales* and Table 5.

Dencoeliopsis Korf (1971), Helotiaceae. 2, Europe; USA. See Holm & Holm (*Symb. bot. upsal.* **21** no. 3: 6, 1977; possible synonymy with *Rutstroemia*), Zhuang (*Mycotaxon* **32**: 97, 1988).

Dendrina Fr. (1829) nom. dub., anamorphic *Pezizomycotina*. See Lindau (*Rabenh. Krypt.-Fl.* **1**: 203, 1907).

Dendriscocaulon Nyl. (1888), Lobariaceae (L). 10, widespread. See James & Henssen *in* Brown *et al.* (Eds) (*Lichenology: progress and problems*: 27, 1976), Thomas *et al.* (*Biblthca Lichenol.* **82**: 123, 2001; phylogeny), Tønsberg & Goward (*Bryologist* **104**: 12, 2001; Pacific), Lohtander *et al.* (*MR* **106**: 777, 2002; phylogeny), Takahashi *et al.* (*J. Hattori bot. Lab.* **100**: 783, 2006; photosymbiodemes).

dendritic, irregularly branched; tree-like; dendroid.

Dendrochaete G. Cunn. (1965) = Echinochaete fide Reid (*Kew Bull.* **17**: 278, 1963).

dendrochin, an antifungal antibiotic from *Dendrodochium toxicum* toxic to farm animals (Bilai, *Antibiotic-producing microscopic fungi*: 139, 1963).

Dendrocladium (Pat.) Lloyd (1919) = Ramaria Fr. ex Bonord. fide Corner (*Reinwardtia* **2**: 457, 1954).

Dendroclathra Voglmayr & Delg.-Rodr. (2001), anamorphic *Pezizomycotina*, Hso.?.?. 1 (aero-aquatic), Cuba. See Voglmayr & Delgado-Rodríguez (*CJB* **79**: 995, 2001).

Dendrocollybia R.H. Petersen & Redhead (2001), Tricholomataceae. Anamorph *Tilachlidiopsis*. 1, widespread (temperate). See Hughes *et al.* (*MR* **105**: 164, 2001).

Dendrocorticium M.J. Larsen & Gilb. (1974), Corticiaceae. 7, widespread. See Larsen & Gilbertson (*Norw. Jl Bot.* **24**: 99, 1977).

Dendrocyphella Petch (1922), Agaricales. 1, Sri Lanka. See Kost (*MR* **102**: 505, 1998).

Dendrodochium Bonord. (1851) = Clonostachys fide Tulloch (*Mycol. Pap.* **130**, 1972; status), Schroers *et al.* (*Mycol.* **91**: 365, 1999; syn. of *Clonostachys*), Schroers (*Stud. Mycol.* **46**: 1, 2001), Ramaley (*Mycotaxon* **90**: 181, 2004).

Dendrodomus Bubák (1915), anamorphic *Pezizomycotina*, Cpd.0eH.15. 1, Europe.

Dendrodontia Hjortstam & Ryvarden (1980), Corticiaceae. 1, Africa. See Hjortstam & Ryvarden (*Mycotaxon* **10**: 273, 1980).

Dendroecia Arthur (1906) = Ravenelia fide Sydow & Sydow (*Monographia Uredinearum seu Specierum Omnium ad hunc usque Diem Descriptio et Adumbratio Systematica* **3**, 1915), Dietel (*Nat. Pflanzenfam.* **6**, 1928; syn. of *Haploravenelia*).

Dendrogaster Buchholz (1901) = Hymenogaster fide Smith (*Mycol.* **58**: 100, 1966), Fogel (*Mycol.* **77**: 72, 1985).

Dendrographa Darb. (1895), Roccellaceae (L). 3, N. America; C. America. See Tehler (*CJB* **68**: 2458, 1990; cladistics), Sundin & Tehler (*Bryologist* **99**: 19, 1996), Lohtander *et al.* (*Bryologist* **101**: 404, 1998; species pairs, DNA), Myllys *et al.* (*Lichenologist* **31**: 461, 1999; phylogeny), Lumbsch *et al.* (*Mol. Phylogen. Evol.* **34**: 512, 2005; phylogeny), Tehler & Irestedt (*Cladistics* **23**: 432, 2007).

Dendrographiella Agnihothr. (1972), anamorphic *Pezizomycotina*, Hsy.≡ eP.28. 1 (on latex of *Hevea*), India. See Agnihothrudu (*Proc. Indian Acad. Sci.* series B **75**: 156, 1972).

Dendrographium Massee (1892), anamorphic *Pezizomycotina*, Hsy.≡ eP.27. 2, S. America; India.

dendrohyphidium, see hyphidium.

dendroid, tree-like in form; dendritic.

Dendroleptosphaeria Sousa da Câmara (1932) ? = Leptosphaeria fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Dendromyceliates K.P. Jain & R.K. Kar (1979), Fossil Fungi. 1 (Miocene), India. = Cryptophiale (Ascomycetes, inc. sed.) fide Sutton (*in litt.*).

Dendromyces Libosch. (1810) = Battarrea fide Stalpers (*in litt.*).

Dendrophagus Murrill (1905) [non *Dendrophagus* Toumey 1900, *Loranthaceae*] = Ganoderma fide Donk (*Verh. K. ned. Akad. Wet.* tweede sect. **62**: 1, 1974).

Dendrophoma Sacc. (1880) = Dinemasporium fide Sutton (*TBMS* **48**: 611, 1965).

Dendrophora (Parmasto) Chamuris (1987), Peniophoraceae. 3, widespread. See Chamuris (*Mycotaxon* **28**: 543, 1987).

Dendrophysellum Parmasto (1968), Corticiaceae. 1, former USSR. See Parmasto (*Consp. System. Corticiac.*: 146, 1968).

dendrophysis, see hyphidium.

Dendropleella Munk (1953) ? = Hendersonia Berk. fide Barr & Holm (*Taxon* **33**: 109, 1984).

Dendropolyporus (Pouzar) Jülich (1982) = Polyporus P. Micheli ex Adans. fide Ryvarden (*Syn. Fung.* **5**, 1991).

Dendrosarcos, see *Dendrosarcus*.

Dendrosarcus Paulet (1793), Fungi.

Dendroseptoria Alcalde (1948), anamorphic *Pezizomycotina*, Cpd.1bH.1. 1, Europe. See Diederich *et al.* (*Belg. Jl Bot.* **134**: 127, 2001).

Dendrosphaera Pat. (1907), Trichocomaceae. 1, Indo-China; East Indies. See Boedijn (*Bull. Jard. bot. Buitenz.* ser. 3 **13**: 472, 1935), Malloch *in* Samson & Pitt (Eds) (*Advances in Penicillium and Aspergillus systematics* **102**: 365, 1985; posn), Kuraishi *et al.* (*NATO ASI Series A: Life Sciences* **185**: 407, 1990; ubiquinones), Kuraishi *et al.* (*Antonie van Leeuwenhoek* **77**: 179, 2000; ubiquinones).

Dendrosphaeraceae Cif. ex Benny & Kimbr. (1980) = Trichocomaceae.

Dendrospora Ingold (1943), anamorphic *Pezizomycotina*, Hso.1bH.1. 9 (aquatic), British Isles. See Descals & Webster (*TBMS* **74**: 135, 1980), Roldán *et al.* (*Mycotaxon* **29**: 21, 1987; Spain), Sreekala & Bhat (*Frontiers in Microbial Biotechnology and Plant Pathology*: 295, 2002), Kendrick (*CJB* **81**: 75, 2003; morphogenesis), Descals (*MR* **109**: 545, 2005; diagnostics).

Dendrosporium Plakidas & Edgerton ex J.L. Crane (1972), anamorphic *Pezizomycotina*, Hsy.1eH.10. 1,

N. America; India. See Crane (*TBMS* **58**: 423, 1972), Kendrick (*CJB* **81**: 75, 2003; morphogenesis).

Dendrosporomyces Nawawi, J. Webster & R.A. Davey (1977), anamorphic *Agaricomycetes*. 1 (aquatic, with dolipore septa), Malaysia. See Nawawi *et al.* (*TBMS* **68**: 59, 1977).

Dendrostilbe Dearn. (1924) nom. dub., anamorphic *Pezizomycotina*. ? An error for *Dendrostilbella*.

Dendrostilbella Höhn. (1905), anamorphic *Claussenomyces*, Hsp.0eH.15. 7, widespread. See Seifert (*Stud. Mycol.* **27**: 1, 1985).

Dendrothele Höhn. & Litsch. (1907), Corticiaceae. 36, widespread. See Lemke (*CJB* **42**: 723, 1964; as *Aleurocorticium*), Legon *et al.* (*Mycologist* **16**: 114, 2002), Nakasone (*Nova Hedwigia* **83**: 99, 2006).

Dendrotrichoscypha Svrček (1977) = Mollisina fide Sharma (*Portug. Acta Biol.* **15**: 281, 1989; key), Huhtinen (*SA* **11**: 170, 1993).

Dendryphiaceae Corda (1840) ? = Pleosporaceae.

Dendryphiella Bubák & Ranoj. (1914) = Dendryphion fide Hughes (*CJB* **36**: 727, 1958), Ellis (*Dematiaceous Hyphomycetes*, 1971; 2 spp.), Michaelis *et al.* (*Mycol.* **79**: 514, 1987; genetics and systematics), Mohamad *et al.* (*MR* **93**: 400, 1989; separation of spp. by ELISA), Guo & Zhang (*Mycosystema* **18**: 236, 1999).

Dendryphion Wallr. (1833), anamorphic *Pleosporaceae*, Hso.≡ bP.26. 4, widespread. See Siboe *et al.* (*Mycotaxon* **73**: 283, 1999; Kenya), Farr (*Mycol.* **92**: 145, 2000; teleomorph), Farr *et al.* (*Mycol.* **92**: 145, 2000), Inderbitzin *et al.* (*CJB* **84**: 1304, 2006).

Dendryphiopsis S. Hughes (1953), anamorphic *Kirschsteiniothelia*, Hso.≡ eP.24. 5, widespread. See Hughes (*N.Z. Jl Bot.* **16**: 360, 1978), Subramanian & Sekar (*Kavaka* **15**: 87, 1987; teleomorph), Goh *et al.* (*Fungal Diversity* **1**: 85, 1998; ribosomal RNA analysis), Olivier & Loria (*FEMS Microbiol. Lett.* **168**: 235, 1998; PCR primers for detection), Schoch *et al.* (*Mycol.* **98**: 1041, 2006; phylogeny).

Dendryphiosphaera Lunghini & Rambelli (1978), anamorphic *Pezizomycotina*, Hso.≡ eP.1. 3, pantropical. See Lunghini & Rambelli (*G. bot. ital.* **112**: 185, 1978), Nawawi & Kuthubutheen (*Mycotaxon* **32**: 461, 1988), Castañeda Ruíz *et al.* (*Mycotaxon* **67**: 9, 1998).

denigrate, blackened.

Dennis (Richard William George; 1910-2003; England). Mycologist (1944-1951) then Head of Mycology (1951-1976), Royal Botanic Gardens, Kew. A great and prolific mycologist, widely travelled, with very wide experience of arctic, temperate and tropical fungi, but particularly an expert on discomycetes; also known for his interest in Celtic art and the Scottish islands. *Publs.* (with Wakefield q.v.) *Common British Fungi: a guide to the more common larger Basidiomycetes of the British Isles* (1950); Fungus flora of Venezuela and adjacent countries *Kew Bulletin* Additional Series (1970); *British Ascomycetes* (1981) [revised edn with supplement]; *Fungi of the Hebrides* (1986). *Biogs, obits etc.* Spooner & Roberts (*MR* **108**: 1097, 2004) [bibliography, portrait]; Spooner & Roberts (*Mycol.* **96**: 187, 2004).

Dennisiella Bat. & Cif. (1962), Coccodiniaceae. Anamorph *Microxyphium*-like. 7, widespread (esp. tropical). See Hughes (*Mycol.* **68**: 693, 1976), Reynolds & Gilbert (*Aust. Syst. Bot.* **18**: 265, 2005; Australia).

Dennisiodiscus Svrček (1976), Helotiales. 10, Europe; Papua New Guinea. See Baral & Krieglsteiner (*Beih. Sydowia* **6**, 1985), Nauta & Spooner (*Mycologist* **14**: 21, 2000; UK).

Dennisiomyces Singer (1955), Tricholomataceae. 5, S. America. See Singer (*An. Soc. Biol. Pernambuco* **13**: 225, 1955).

Dennisiopsis Subram. & Chandrash. (1977), Pezizales. 2, India. See van Brummelen (*Persoonia* **16**: 425, 1998; comparison with *Coprotus*).

Dennisographium Rifai (1977), anamorphic *Pezizomycotina*, Hsy.0eH.15. 1, Java. See Rifai (*Kew Bull.* **31**: 726, 1977), Seifert (*Mem. N. Y. bot. Gdn* **59**: 109, 1990).

dense body vesicle (DBV), cytoplasmic vesicle, associated with phosphorylated glucan metabolism, found in a variety of TEM morphological states ranging from a single (or several) electron-opaque core in an amorphous matrix to a highly structured, myelin-like arrangement of alternating electron-opaque and electron-translucent layers.

Densocarpa Gilkey (1954) = Stephensia fide Trappe (*TBMS* **65**: 496, 1975), Læssøe & Hansen (*MR* **111**: 1075, 2007; phylogeny).

Densospora McGee (1996), Zygomycota. 4, Australia. See McGee (*Aust. Syst. Bot.* **9**: 330, 1996), Gleason & McGee (*Australasian Mycologist* **22**: 73, 2004; ultrastr.).

dentate, toothed (Fig. 23.45). Cf. denticulate.

denticle, a small tooth-like projection esp. one on which a spore is borne.

Denticularia Deighton (1972), anamorphic *Pezizomycotina*, Hso.0eP.3. 5, widespread (esp. tropical). See de Hoog (*Persoonia* **10**: 51, 1978), Chamuris *et al.* (*Mycotaxon* **24**: 319, 1985), Alcorn *et al.* (*Australas. Pl. Path.* **28**: 115, 1999; Australia), Siboe *et al.* (*Mycotaxon* **73**: 283, 1999; Kenya).

denticulate, having small teeth. Cf. dentate.

Dentinaceae Kotl. & Pouzar (1972) = Hydnaceae.

Dentinum Gray (1821) ≡ Hydnum fide Hall & Stuntz (*Mycol.* **63**: 1113, 1971; key).

Dentipellis Donk (1962), Hericiaceae. 4, widespread. See Ginns (*Windahlia* **16**: 35, 1986; key).

Dentipratulum Domański (1965), Auriscalpiaceae. 1, Europe. See Domański (*Acta Mycologica* Warszawa **1**: 6, 1965).

Dentocircinomyces R.F. Castañeda & W.B. Kendr. (1990), anamorphic *Pezizomycotina*, Hso.0eH.10. 1 (on *Eucalyptus*), Cuba. See Castañeda & Kendrick (*Univ. Waterloo Biol. Ser.* **32**: 17, 1990).

Dentocorticium (Parmasto) M.J. Larsen & Gilb. (1974), Polyporaceae. 3, widespread. See Larsen & Gilbertson (*Norw. Jl Bot.* **24**: 99, 1977).

denuded, uncovered or glabrous by loss of scales, etc.

depauperate, poorly developed.

Depazea Fr. (1818) = Asteroma fide Sutton (*Mycol. Pap.* **141**, 1977).

Depazites Geinitz (1855), Fossil Fungi. 16 (Tertiary, Quaternary), Europe.

dependent, hanging down.

Dephilippia Rambelli (1959) = Circinotrichum fide Pirozynski (*Mycol. Pap.* **84**, 1962).

deplanate, flat.

depressed (1) (of a pileus), having the middle lower than the edge (Fig. 19N); (2) (of lamellae), sinuate (q.v.).

depside (depsidone), see Metabolic products.

Derexia Naras. (1970), anamorphic *Pezizomycotina*, Hso.0eH.1. 1 (on *Lecanium*), India; Java. See Narasimhan (*Indian Phytopath.* Suppl. Issue **23**: 20,

1970).

derived, of a character that has changed from the form in which it appeared in an ancester.

derm (**dermium**) (of basidiomata), an outer layer in which the hyphae are perpendicular to the surface (Lowag, 1941); cf. cortex;.

Dermapteromyces Thaxt. (1931), Laboulbeniaceae. 3, America (tropical). See Nannfeldt (*Svensk bot. Tidskr.* **43**: 468, 1949).

Dermascia Tehon (1935) ? = Lophodermium fide Darker (*CJB* **45**: 1399, 1967).

Dermatangium Velen. (1926) = Tremella Pers. fide Donk (*Persoonia* **4**: 179, 1966).

Dermatea Fr. (1849) ≡ Dermea.

Dermateaceae Fr. (1849), Helotiales. 33 gen. (+ 31 syn.), 315 spp. Much reduced compared with traditional treatments.

Lit.: Nannfeldt (*Nov. Acta Reg. Soc. Sc. Upsal.* ser. 4 **8** no. 2, 1932), Baral (*Z. Mykol.* **53**: 119, 1987), Gamundí (*Fl. criptog. Dermatocarpon W. Mann (1825) = Endocarpon fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

dermatocyst (**dermatocystidium**), see cystidium (1).

Dermatodea Vent. (1799) = Nephroma fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Dermatodothella Viégas (1944), Dothideomycetes. 1, Brazil.

Dermatodothis Racib. ex Theiss. & Syd. (1914), Dothideomycetes. 6, Asia; S. America. See Müller (*Sydowia* **28**: 148, 1976; key).

Dermatoidium Stautz [not traced] nom. dub., anamorphic *Pezizomycotina*.

Dermatomeris Reinsch (1890) = Mastodia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

dermatomycosis, see mycosis.

Dermatophilus (Van Saceghem) M.A. Gordon (1964), Actinobacteria. q.v.

Dermatophyte. A fungus parasitizing keratinized tissue (hair, skin, nails) of humans and animals and causing **dermatophytosis** (pl. **-es**) (ringworm, tinea). These fungi, which are typically anamorphic fungi (hyphomycetes) with teleomorphs in the *Arthrodermataceae* (*Onygenales*), have frequently been treated as a special group the 'Dermatophytes' or Ringworm Fungi. Ringworm is cosmop. and dermatophytes, or non- or weakly pathogenic dermatophyte-like fungi, occur widely in soil and other keratin containing substrata such as bird's nests or horns of some mammals. There are 3 main gen. (*Epidermophyton*, *Microsporum*, *Trichophyton* distinguished by characteristic macroconidia), + *c.* 30 syn., *c.* 40 spp. (1,000 names).

Derminus (Fr.) Staude (1857) nom. rej. ≡ Pholiota fide Donk (*Bull. Jard. Bot. Buitenzorg* Sér. 3 **18**: 271, 1949).

dermis (of lichens), the limiting layer of a thallus (obsol.).

Dermiscellum Hafellner, H. Mayrhofer & Poelt (1979), Physciaceae (L). 1, N. America. See Hafellner *et al.* (*Herzogia* **5**: 55, 1979), Nordin & Mattsson (*Lichenologist* **33**: 3, 2001; morphology, phylogeny), Scheidegger *et al.* (*Lichenologist* **33**: 25, 2001; evolution), Helms *et al.* (*Mycol.* **95**: 1078, 2003; phylogeny), Lendemer (*Bryologist* **106**: 311, 2003; nomencl.).

Dermocybe (Fr.) Wünsche (1877) = Cortinarius fide Kuyper (*in litt.*; a monophyletic taxon, recognition of which as a genus makes *Cortinarius* non-monophyletic).

Dermoloma J.E. Lange ex Herink (1959), Tricholomataceae. *c.* 15, widespread. See Svrček (*Česká Mykol.* **20**: 256, 1966; key), Arnolds (*Persoonia* **14**: 519, 1992), Arnolds (*Persoonia* **17**: 665, 2002; *Dermoloma magicum*).

Dermolomataceae Bon (1979) nom. rej. = Tricholomataceae.

Dermomycoides Granata (1919), ? Chytridiales. 2, Europe.

Dermosporium Link (1815) = Aegerita fide Saccardo (*Syll. fung.* **4**: 644, 1886).

Descalsia A. Roldán & Honrubia (1989), anamorphic *Pezizomycotina*, Hso.1bH.10. 1 (aquatic), Spain. See Roldán & Honrubia (*MR* **92**: 494, 1989).

Descematia Nieuwl. (1916) ≡ Sphaerocephalum.

descending (descendant) (of an annulus), having the free edge below the attached (cf. ascending).

Descolea Singer (1950), Cortinariaceae. *c.* 15, widespread. See Horak (*Persoonia* **6**: 231, 1971; key), Lago *et al.* (*Mycotaxon* **78**: 37, 2001; *Descolea-Setchelliogaster-Descomyces* complex), Peintner *et al.* (*Am. J. Bot.* **88**: 2168, 2001; phylogeny).

Descomyces Bougher & Castellano (1993), Cortinariaceae. 5, Australasia. Now widespread having spread with *Eucalyptus*. *Descomyces* is not yet conserved against *Hymenangium*. See Francis & Bougher (*Australasian Mycologist* **21**: 81, 2002).

Describing, naming and publishing, see Hawksworth (*Mycologist's handbook*: 48, 1974), Classification, Nomenclature, Species, Systematics.

Desertella Mouch. (1979), anamorphic *Pezizomycotina*, Hso.0eH.10. 1 (from soil), Egypt. See Mouchaca (*Revue Mycol.* Paris **43**: 71, 1979).

Desetangsia Nieuwl. (1916) ≡ Sphaerotheca Lév.

Deshpandiella Kamat & Ullasa (1973), Phyllachoraceae. Anamorph *Mycohypallage*. 1 (biotrophic on leaves), India. See Hawksworth (*SA* **5**: 128, 1986).

Deslandesia Bat. (1962) nom. inval. = Limacinula Höhn. fide Reynolds (*Bull. Torrey bot. Club* **98**: 157, 1971).

Desmaturus (Schltdl.) Kalchbr. (1880) = Lysurus fide Dring (*Kew Bull.* **35**: 1, 1980).

Desmazierella Crié (1878) nom. dub., anamorphic *Pezizomycotina*.

Desmazierella Lib. (1829), Chorioactidaceae. Anamorph *Verticicladium*. 2 (on conifer needles), Europe. See Benkert (*Gleditschia* **19**: 173, 1991), Landvik *et al.* (*Nordic Jl Bot.* **17**: 403, 1997; phylogeny), Meléndez-Howell *et al.* (*Mycotaxon* **68**: 53, 1998; ultrastr.), Harrington *et al.* (*Mycol.* **91**: 41, 1999; phylogeny), Hansen & Pfister (*Mycol.* **98**: 1029, 2006; phylogeny), Pfister *et al.* (*MR* **112**: 513, 2008).

Desmazières (Jean Baptiste Henri Joseph; 1787-1862; France). A merchant of Lille, the 'possesseur d'une belle fortune', and amateur mycologist. *Publs.* The exsiccatum series *Plantes Cryptogames du Nord de la France* (1825-1860), and his papers relating to these collections in *Annales de Science Naturelles* Paris and *Mémoires de la Société Scientifique de Lille*. *Biogs, obits etc.* Anon. (*Bulletin de la Société Royale de Botanique de Belgique* **1**: 102, 1862); Grummann (1974: 274); Stafleu & Cowan (*TL-2* **1**: 630, 1976).

Desmazieria Mont. (1852) [non *Desmazieria* Dumort. 1822, *Poaceae*] ≡ Niebla.

Desmella Syd. & P. Syd. (1919), Pucciniales. 3 (on *Pteridophyta*), America (tropical); Hawaii, Australia. See Cummins (*Annls mycol.* **38**: 335, 1940), Thirumalachar & Cummins (*Mycol.* **40**: 417, 1948), Hennen & Ono (*Mycol.* **70**: 569, 1978), Cummins & Hiratsuka (*Illustr. Gen. Rust Fungi* edn 3: 225 pp., 2003; placed in *Uropyxidaceae*).

Desmellopsis J.M. Yen (1969), Pucciniales. 1 (on *Aframomum* (*Zingiberaceae*)), Gabon. See Yen (*Rev. mycol.* **34**: 20, 1969), Cummins & Hiratsuka (*Illustr. Gen. Rust Fungi rev. edit.*, 1983; syn. of *Puccinia*).

Desmidiospora Thaxt. (1891), anamorphic *Pezizomycotina*, Hso.0bP.1. 2, N. America. See Clark & Prusso (*Mycol.* **78**: 865, 1986; on ants), Evans (*Trichomycetes and Other Fungal Groups* Robert W. Lichwardt Commemoration Volume: 119, 2001; review).

Desmopatella Höhn. (1924) = Phacidiella P. Karst. fide Sutton (*Mycol. Pap.* **141**, 1977).

Desmosorus Ritschel, Oberw. & Berndt (2005), Pucciniales. 1 (on *Cattleya* (*Orchidaceae*)), America (tropical); elsewhere on cultivated orchids. See Ritschel *et al.* (*Mycol. Progr.* **4**: 333, 2005).

Desmotascus F. Stevens (1919) = Botryosphaeria fide von Arx & Müller (*Beitr. Kryptfl. Schweiz* **11** no. 1, 1954).

Desmotelium Syd. (1937) = Chaconia fide Laundon (*Mycotaxon* **3**: 132, 1975).

Desmotrichum Lév. (1843) = Gonatobotrys fide Saccardo (*Syll. fung.* **4**: 169, 1886).

Desportesia I.V. Issi & Voronin (1986), Microsporidia. 1.

destroying angel, the pure white agaric, *Amanita virosa*, ingestion of 1 mg of which can prove fatal; toxins are cyclic polypeptides, esp. amanitins.

Destuntzia Fogel & Trappe (1985), Gomphaceae. 5, N. America. See Fogel & Trappe (*Mycol.* **77**: 732, 1985; key), Albee-Scott (*MR* **111**: 1030, 2007; phylogeny).

determinate (1) clearly marked; definite; (2) (of conidiophores), growth ceasing with the production of terminal conidia.

detersile (of villosity), removable so that the surface becomes bare.

Detonia Sacc. (1889) = Plicaria fide Korf (*Mycol.* **52**: 648, 1960), Moravec (*Mycotaxon* **30**: 473, 1987).
Detonina Kuntze (1891) ≡ Apiospora.
detoxification, the conversion of a toxin (e.g. an inhibitory phytoalexin) to non-toxic (non-inhibitory) products.
deuteroconidium (of dermatophytes), a spore-like cell, the outcome of the division of a hemispore (protoconidium).
deuterogamy, the condition in which other processes replace fusion of gametes, as in some fungi, the macroalgae, and phanerogams; secondary pairing.
Deuterolichenes (obsol.). Introduced by Mameli-Calvino (*Nuovo G. bot. ital.* n.s. **27**: 379, 1930) for *Pyrenotrichum* (q.v.). Also later used for sterile leprose and filamentous lichens as well as lichenized anamorphic fungi.
Deuteromycotina, see Anamorphic fungi, Kendrick (*Sydowia* **41**: 6, 1989; abandonment of term).
Deuterophoma Petri (1929) = Phoma Sacc. fide Kanciaveli & Ghikascvili (*Lav. Ist. prot. piante Georgia* **5**: 1, 1948), Sutton (*Mycol. Pap.* **141**, 1977).
devalidated (of names), names which would have been validly published under the *Code* except for the operation of Art. 13 (see Nomenclature). Such names may be 'revalidated' or 'taken up' by post-starting point authors. Formerly widely used in mycology prior to changes made in this Art. in 1983.
devil's cigar, *Urnula geaster* (see Seaver, *Mycol.* **29**: 60, 1937); **- snuffboxes**, puffballs.
Devriesia Seifert & N.L. Nick. (2004), anamorphic *Teratosphaeriaceae*. 5, widespread (temperate). See Seifert *et al.* (*CJB* **82**: 919, 2004), Crous *et al.* (*Stud. Mycol.* **58**: 1, 2007).
Dexhowardia J.J. Taylor (1970), anamorphic *Pezizomycotina*, Hso.0eH.6. 1, USA. See Taylor (*Mycopathologia* **40**: 306, 1970).
Dexteria F. Stevens (1917) = Hyalosphaera fide Rossman (*Mycol. Pap.* **157**, 1987).
Dextrinocystidium Sheng H. Wu (1996), ? Stereaceae. 2, New Zealand; Ivory Coast. See Wu (*Mycol.* **87**: 888, 1995).
Dextrinocystis Gilb. & M. Blackw. (1988), ? Hydnodontaceae. 1, USA. See Gilbertson & Blackwell (*Mycotaxon* **33**: 376, 1988).
Dextrinodontia Hjortstam & Ryvarden (1980), ? Hydnodontaceae. 1, Tanzania. See Larsson (*in litt.*), Hjortstam & Ryvarden (*Mycotaxon* **12**: 172, 1980) = *Trechispora* (Sistotremat.) fide.
dextrinoid (of spores, etc.), stained yellowish-brown or reddish-brown by Melzer's iodine (see Iodine); pseudoamyloid (Singer); cf. amyloid.
Dextrinosporium Bondartsev (1972) nom. dub. ? = Perenniporia fide Ryvarden (*Syn. Fung.* **5**, 1991).
dhose, a Malaysian fermented food produced my means of yeasts and peas.
Diabole Arthur (1922), Raveneliaceae. 1 (on *Mimosa* (0, III) (*Leguminosae*)), C. America; West Indies; Mexico; Brazil.
Diabolidium Berndt (1995), Raveneliaceae. 1 (on *Calliandra* (*Leguminosae*)), S. America. See Berndt (*Mycotaxon* **54**: 263, 1995), Cummins & Hiratsuka (*Illustr. Gen. Rust Fungi* edn 3: 225 pp., 2003; syn. of *Allotelium*).
Diaboliumbilicus I. Hino & Katum. (1955), Pezizomycotina. 1, Japan. See Hino & Katumoto (*Bulletin of the Faculty of Agriculture, Yamaguchi University* **6**: 40, 1955).
Diacanthodes Singer (1945), Meruliaceae. Anamorph *Bornetina*. 1, widespread. (+ mealy bugs) causes phthiriosis (root disease) of coffee. See Tomaszewski *et al.* (*Int. J. Syst. Evol. Microbiol.* **53**: 1204, 2003).
Diachanthodaceae Jülich (1982) = Meripilaceae.
Diachora Müll. Arg. (1893), Phyllachoraceae. Anamorph *Diachorella*. 5 (on *Leguminosae*), widespread (temperate). See Müller (*Trans. Bot. Soc. Edinb., Suppl.*: 69, 1986; key), Cannon (*Mycol. Pap.* **163**, 1991).
Diachorella Höhn. (1918), anamorphic *Diachora*, St.0fH.15. 5 (on *Leguminosae*), widespread. See Sutton (*The Coelomycetes*, 1980), Wang & Yuan (*Cryptog. bot.* **5**: 360, 1995; China).
Diacrochordon Petr. (1955), Pezizomycotina. 1, Germany. See Petrak (*Sydowia* **9**: 591, 1955).
Diadema Shoemaker & C.E. Babc. (1989), Diademaceae. 8 (esp. on *Poaceae*), widespread. See Shoemaker & Babcock (*CJB* **67**: 1349, 1989).
Diademaceae Shoemaker & C.E. Babc. (1992), Pleosporales. 3 gen. (+ 1 syn.), 30 spp.
Lit.: Shoemaker & Babcock (*CJB* **67**: 1349, 1989), Shoemaker & Babcock (*CJB* **70**: 1617, 1992), Barr (*SA* **12**: 27, 1993), Ahn & Shearer (*CJB* **76**: 258, 1998), Dong *et al.* (*MR* **102**: 151, 1998), Barreto & Torres (*Australas. Pl. Path.* **28**: 103, 1999), Simmons (*Mycotaxon* **75**: 1, 2000), Pryor & Bigelow (*Mycol.* **95**: 1141, 2003).
Diademosa Shoemaker & C.E. Babc. (1992), Diademaceae. 1, USA. See Shoemaker & Babcock (*CJB* **70**: 1617, 1992).
Diademospora B.E. Söderstr. & Bååth (1979), anamorphic *Pezizomycotina*, Hso.≡ eH.1. 1 (from soil), Sweden. See Söderström & Bååth (*TBMS* **72**: 340, 1979).
diageotropism, tendency to horizontal growth in relation to the earth surface.
diagnosis (1) an account, esp. the first (see Nomenclature), of the distinguishing characteristics of a taxonomic group; (2) determining a fungus or disease; **diagnostic**, characteristic; of use for identification.
Dialaceniopsis Bat. (1959), anamorphic *Pezizomycotina*, Cpd.1eH.15. 1, Uganda. See Batista (*An. Soc. Biol. Pernambuco* **16**: 141, 1959).
Dialacenium Syd. (1930) = Rhytidenglerula fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).
Dialhypocrea Speg. (1919), Hypocreaceae. 1 (from dead branches), Brazil. See Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).
Dialonectria (Sacc.) Cooke (1884) = Cosmospora fide Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).
Dialytes Nitschke (1867) nom. nud. = Diaporthe fide Wehmeyer (*University of Michigan Studies, Science Series* **9**: 1, 1933).
Diamantinia A.N. Mill., Laessøe & Huhndorf (2003), ? Xylariaceae. 1, Brazil. See Miller *et al.* (*Sydowia* **55**: 94, 2003), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004; phylogeny).
Diamphora Mart. (1821) nom. dub., ? Fungi.
Diandromyces Thaxt. (1918), Laboulbeniaceae. 1, Chile. See Nannfeldt (*Svensk bot. Tidskr.* **43**: 468, 1949).
Dianesea Inácio & P.F. Cannon (2002), Coccoideaceae. 1, Costa Rica. See Inácio & Cannon (*Fungal Diversity* **9**: 72, 2002).
Diaphanium Fr. (1836), anamorphic *Pezizomycotina*, Hsp.0eH.?. 2, Europe.

Diaphanopellis P.E. Crane (2005), Coleosporiaceae. 1 (on *Rhododendron* (*Ericaceae*)), Himalaya. See Crane (*Mycol.* **97**: 539, 2005).

diaphanous, transparent or nearly so.

Diaphoromyces Thaxt. (1926), Laboulbeniaceae. 3, widespread. See Weir & Rossi (*CJB* **75**: 791, 1997; NZ), Rossi & Weir (*Mycol.* **90**: 282, 1998).

Diapleella Munk (1953) = Kalmusia fide Eriksson (*SA* **9**: 8, 1990).

Diaporthaceae Höhn. ex Wehm. (1926), Diaporthales. 5 gen. (+ 30 syn.), 335 spp.

Lit.: Uecker (*Mem. N. Y. bot. Gdn* **49**: 38, 1989), Zhang *et al.* (*Phytopathology* **89**: 796, 1999), Mostert *et al.* (*Mycol.* **93**: 146, 2001), Castlebury *et al.* (*Mycol.* **94**: 1017, 2002), Says-Lesage *et al.* (*Phytopathology* **92**: 308, 2002), Castlebury *et al.* (*Mycoscience* **44**: 203, 2003), Myburg *et al.* (*Mycol.* **96**: 990, 2004), Rekab *et al.* (*MR* **108**: 393, 2004), Rossman *et al.* (*Mycoscience* **48**: 135, 2007; phylogeny).

Diaporthales Nannf. (1932). Sordariomycetidae. 10 fam., 144 gen., 1196 spp. Ascomata perithecial, usually aggregated into a pseudostroma, usually long-necked. Interascal tissue absent or of thin-walled unspecialized cells, deliquescing early. Asci usually thick-walled but not fissitunicate, with a conspicuous J- refractive apical ring, detached at maturity. Ascospores varied. Anamorphs varied, coelomycetous. Saprobes and plant parasites, mainly on bark and wood, cosmop. Fams:

(1) **Cryphonectriaceae**
(2) **Diaporthaceae**
(3) **Gnomoniaceae**
(4) **Melanconidaceae**
(5) **Melogrammataceae**
(6) **Pseudovalsaceae**
(7) **Schizoparmaceae**
(8) **Sydowiellaceae**
(9) **Togniniaceae**
(10) **Valsaceae**

Lit.: Barr (*Mycol. Mem.* **7**, 1978), Castlebury *et al.* (*Mycol.* **94**: 1017, 2002), Kobayashi (*Bull. Govt For. Exp. Stn Meguro* **226**, 1972; keys), Malloch (*in* Kendrick (Ed.), *The whole fungus* **1**: 153, 1979; *in* Reynolds (Ed.), *Ascomycete systematics*, 1981; wide concept), Merezhko & Smyk (*Flora Gribov Ukrainy, Diaportal'nye Griby*, 1991; Ukraine, keys), Müller & von Arx (1962, 1973; keys gen.), Rossman *et al* (*Mysoscience* **48**: 135, 2007), Smyk *et al.* (*Ukr. bot. Zh.* **46**: 46, 1989; SEM), Wehmeyer (*The genus Diaporthe*, 1933; *Univ. Michigan Stud.* sci. ser. **14**, 1942), Zhang & Blackwell (*Mycol.* **93**: 355, 2001; molecular phylogeny).

Diaporthe Nitschke (1870), Diaporthaceae. Anamorph *Phomopsis*. 92, widespread (esp. north temperate). Some are parasites, at least in the *Phomopsis* state, e.g. *D. phaseolorum* var. *batatatis* (storage rot of sweet potato, *Ipomoea*), *D. citri* (*Phomopsis* stem-end rot of citrus fruits), *D. perniciosa* (a connexion with die-back of fruit trees), *D. phaseolorum* (pod blight of lima bean, *Phaseolus lunatus*), *D. woodii* (lupinosis of sheep). See Wehmeyer (*The genus Diaporthe*, 1933; revision), Uecker (*Mem. N. Y. bot. Gdn* **49**: 38, 1989; ontogeny), Williamson *et al.* (*MR* **98**: 1364, 1994; toxins), Linders & Van de Aa (*MR* **99**: 1409, 1995; mating types), Zhang *et al.* (*Pl. Dis.* **81**: 1143, 1997; PCR detection), Phillips (*Mycol.* **91**: 1001, 1999; on *Vitis*), Scheper (*MR* **104**: 226, 2000; on *Vitis*), Mostert *et al.* (*Mycol.* **93**: 146, 2001; on *Vitis*), Castlebury *et al.* (*Mycol.* **94**: 1017, 2002; phylogeny), Moleleki *et al.* (*Eur. J. Pl. Path.* **108**: 909, 2002; S Africa), Says-Lesage *et al.* (*Phytopathology* **92**: 308, 2002; on *Helianthus*), Castlebury *et al.* (*Mycoscience* **44**: 203, 2003; phylogeny, generic limits), Pecchia *et al.* (*Mycopathologia* **157**: 317, 2004; on *Helianthus*), Rekab *et al.* (*MR* **108**: 393, 2004; phylogeny, on *Helianthus*), Vergara *et al.* (*Mycopathologia* **158**: 123, 2004; on *Helianthus*), Niekerk *et al.* (*Australas. Pl. Path.* **34**: 27, 2005; on *Vitis*), Janse van Rensburg *et al.* (*Stud. Mycol.* **55**: 65, 2006; on *Aspalathus*), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny).

Diaporthella Petr. (1924), ? Valsaceae. 3, Europe; N. America. See Barr (*Mycol. Mem.* **7**, 1978).

diaporthin, a wilt toxin from *Endothia parasitica* (Boller *et al.*, *Helv. chim. Acta* **40**: 875, 1957); antibacterial.

Diaporthopsis Fabre (1883) = Diaporthe fide Castlebury *et al.* (*Mycoscience* **44**: 203, 2003).

Diarimella B. Sutton (1980), anamorphic *Pezizomycotina*, St.0eH.15. 1, India. See Sutton (*The Coelomycetes*: 452, 1980), Vujanovic *et al.* (*CJB* **76**: 2037, 1998).

Diarthonis Clem. (1909) = Arthonia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

diaspore (1) any unit of dissemination, e.g. a spore, fragment of mycelium, sclerotium (Sernander, 1927); (2) (of lichens), particularly applied to vegetative propagules. See hormocyst, isidium, soredium, etc. (Fig. 22).

Diathrypton Syd. (1922) = Schiffnerula fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Diatractium Syd. & P. Syd. (1921), Diaporthales. 2 (biotrophic on leaves), C. & S. America. See Cannon (*SA* **7**: 23, 1988; possible rel. with *Phyllachoraceae*), Cannon (*MR* **92**: 327, 1989).

Diatrypaceae Nitschke (1869), Xylariales. 13 gen. (+ 20 syn.), 229 spp.

Lit.: Schrantz (*BSMF* **76**: 305, 1961; 27 gen., keys), Glawe & Rogers (*Mycotaxon* **20**: 401, 1984; Pacific NW, keys), Vasil'eva (*Mikol. Fitopatol.* **19**: 3, 1985; gen. relationships), Chlebicki (*TBMS* **86**: 441, 1986), Glawe & Rogers (*CJB* **64**: 1493, 1986), Rappaz (*Mycol. Helv.* **2**: 285, 1987; monogr., keys), Chacón & Medel (*Revta Mex. Micol.* **4**: 323, 1988), Eriksson & Hawksworth (*SA* **7**: 67, 1988; status), Dargan & Bhatia (*Nova Hedwigia* **48**: 405, 1989), Glawe (*Sydowia* **41**: 122, 1989; anamorphs), Ju *et al.* (*Mycotaxon* **41**: 311, 1991), Carmarán & Romero (*Boln Soc. argent. Bot.* **28**: 139, 1992; gen. concepts), Rogers *in* Hawksworth (Ed.) (*Ascomycete Systematics. Problems and Perspectives in the Nineties* NATO ASI Series vol. **269 269**: 321, 1994), DeScenzo *et al.* (*Phytopathology* **89**: 884, 1999), Peros *et al.* (*MR* **103**: 1385, 1999), Acero *et al.* (*Mycol.* **96**: 249, 2004), Trouillas & Gubler (*MR* **108**: 1195, 2004), Lardner *et al.* (*MR* **109**: 799, 2005), Carmarán *et al.* (*Fungal Diversity* **23**: 67, 2006).

Diatrypales Chadef. ex D. Hawksw. & O.E. Erikss. (1986) = Xylariales.

Diatrype Fr. (1849), Diatrypaceae. Anamorphs *Libertella*, *Cytosporina*. 59, widespread. See Janex-Favre (*Revue Mycol.* Paris **42**: 265, 1978; spore formation), Glawe & Rogers (*Mycotaxon* **20**: 401, 1984), Patil & Patil (*Indian J. Mycol. Pl. Path.* **13**: 134, 1985; 22 spp. India), Rappaz (*Mycol. Helv.* **2**:

285, 1987; key), Rappaz (*Mycotaxon* **30**: 209, 1987; *D. stigma* group), Romero & Minter (*TBMS* **90**: 457, 1988; asci), Dargan & Bhatia (*Nova Hedwigia* **48**: 405, 1989; key 11 spp. Himalayas), Chacón (*Docums Mycol.* **32** nos 127-128: 95, 2003; Mexico), Acero *et al.* (*Mycol.* **96**: 249, 2004; phylogeny), Vasilyeva & Stephenson (*Fungal Diversity* **17**: 191, 2004; USA), Chlebicki (*Czech Mycol.* **57**: 117, 2005; Czech Republic), Carmarán *et al.* (*Fungal Diversity* **23**: 67, 2006), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny).

Diatrypella (Ces. & De Not.) De Not. (1863), Diatrypaceae. Anamorph *Libertella*. 33, widespread. See Croxall (*TBMS* **33**: 45, 1950), Glawe & Rogers (*Mycotaxon* **20**: 401, 1984), Glawe (*Mem. N. Y. bot. Gdn* **49**: 51, 1989; anamorph), Prášil (*Česká Mykol.* **45**: 37, 1991; stroma), Chacón (*Docums Mycol.* **32** nos 127-128: 95, 2003; Mexico), Acero *et al.* (*Mycol.* **96**: 249, 2004; phylogeny, polyphyly), Vasilyeva & Stephenson (*Fungal Diversity* **19**: 189, 2005; USA).

Diatrypeopsis Speg. (1884) = Camillea fide Læssøe *et al.* (*MR* **93**: 121, 1989), Læssøe (*SA* **13**: 43, 1994; ? synonym of *Xylaria*).

Diatrypoidiella Manoharachary, Kunwar & Agarwal (2005) ? = Jattaea fide Manoharachary *et al.* (*Indian Phytopath.* **58**: 205, 2005).

Dibaeis Clem. (1909), Icmadophilaceae (L). 13, widespread (tropical). See Gierl & Kalb (*Herzogia* **9**: 593, 1993), Platt & Spatafora (*Lichenologist* **31**: 409, 1999; phylogeny), Stenroos *et al.* (*Mycol. Dibeloniella Nannf. (1932), Dermateaceae. Anamorph *Phialophora*-like. 1, Europe. See Nauta & Spooner (*Mycologist* **14**: 21, 2000; UK).

Dibelonis Clem. (1909) = Leptotrochila fide Nannfeldt (*Nova Acta R. Soc. Scient. upsal.*, 1932).

Dibelonis Clem. & Shear (1931) = Leptotrochila fide Nannfeldt (*Nova Acta R. Soc. Scient. upsal.*, 1932).

Diblastia Trevis. (1857) = Xanthoria fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Diblastospermella Speg. (1918) = Cicinnobella fide Petrak (*Sydowia* **5**: 328, 1951), Sutton (*Mycol. Pap.* **141**, 1977).

Diblepharis Lagerh. (1900) = Monoblepharis fide Fitzpatrick (*The lower fungi. Phycomycetes*, 1930).

Dibotryon Theiss. & Syd. (1915), Venturiaceae. Anamorph *Fusicladium*. 1, N. America. *D. morbosum* (syn. *Apiosporina morbosa*; black knot of *Prunus*). See Barr (*Prodr. Cl. Loculoasc.*, 1987), Barr (*Sydowia* **41**: 25, 1989), Fernando *et al.* (*Can. J. Pl. Path.* **27**: 364, 2005; diagnosis), Zhang *et al.* (*Phytopathology* **95**: 859, 2005; population biology), Zhang *et al.* (*Pl. Dis.* **89**: 815, 2005; detection), Winton *et al.* (*Mycol.* **99**: 240, 2007; phylogeny).

Dicaeoma Gray (1821) = Puccinia fide Dietel (*Nat. Pflanzenfam.* **6**, 1928).

Dicantharellaceae Jülich (1982) = Lachnocladiaceae.

Dicarpella Syd. & P. Syd. (1921), ? Melanconidaceae. Anamorph *Tubakia*. 4, N. America. See Reid & Dowsett (*CJB* **68**: 398, 1990), Barr (*Mycotaxon* **41**: 287, 1991), Belisario (*Mycotaxon* **41**: 147, 1991).

Dicarphus Raf. (1808) nom. nud. ? = Hydnum fide Donk (*Taxon* **5**: 75, 1956).

Dicaryomycota Raf. (1808) nom. nud. ? = Hydnum fide Donk (*Taxon* **5**: 75, 1956).

dicaryon, see dikaryon.

Dicellaeporisporites Kalgutkar (1997), Fossil Fungi. 2, Canada; Australia. See Kalgutkar (*Review of Palaeobotany and Palynology* **97**: 210, 1997).

Dicellaesporites Elsik (1968), Fossil Fungi. 22 (Tertiary), widespread.

Dicellispora Sawada (1944), anamorphic *Pezizomycotina*, Hso.0eP.?3. 1, Taiwan.

Dicellomyces L.S. Olive (1945), Brachybasidiaceae. 3 (on *Poaceae*, *Scirpus* and *Calamus*), Europe; India; N. America. See Parmasto (*Consp. System. Corticiac.*, 1968), McNabb & Talbot *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 317, 1973), Reid (*TBMS* **66**: 537, 1976), Berndt & Sharma (*MR* **102**: 1484, 1998; key).

Dicellomycetaceae Parmasto (1968) = Brachybasidiaceae.

Dicephalospora Spooner (1987), Rutstroemiaceae. 4, widespread. See Spooner (*Biblthca Mycol.* **116**, 1987), Zhuang (*Fungal Diversity* **3**: 187, 1999; spp. trop. China), Verkley (*Sydowia* **56**: 343, 2004).

Dichaena Fr. (1849) ≡ Polymorphum fide Hawksworth & Punithalingam (*TBMS* **60**: 501, 1973).

Dichaenaceae Fr. (1849) = Ascodichaenaceae.

Dichaenopsella Petr. (1952) ? = Polymorphum fide Sutton (*Mycol. Pap.* **141**, 1977).

Dichaenopsis Paoli (1905) = Stagonospora fide Butin (*Phytopath. Z.* **100**: 186, 1981).

Dichaetis Clem. (1931) ≡ Wentiomyces.

Dichantharellus Corner (1966), Lachnocladiaceae. 2, Malaysia. See Corner (*Monogr. Cantharelloid Fungi*: 99, 1966).

Dicheirinia Arthur (1907), Raveneliaceae. 12 (on *Leguminosae*), America (tropical); Mauritius; New Caledonia; Canary Islands; Madeira. See Cummins (*Mycol.* **27**: 151, 1935), Cummins (*Bull. Torrey bot. Club* **64**: 39, 1937), Walker *et al.* (*Australas. Pl. Pathol.* **35**: 1, 2006).

Dichelostroma Bat. & Peres (1963), anamorphic *Pezizomycotina*, Cpt.0eH.?. 1, USA. See Batista & Peres (*Publções Inst. Micol. Recife* **395**: 5, 1963).

Dichitonium Berk. & M.A. Curtis (1875) ? = Dendrodochium. See also *Oichitonium*. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Dichlaena Durieu & Mont. (1849), Trichocomaceae. Anamorph *Aspergillus*. 1, N. Africa.

Dichlamys Syd. & P. Syd. (1920) = Uromyces fide Thirumalachar (*Sydowia* **5**: 23, 1951).

Dichobotrys Hennebert (1973), anamorphic *Trichophaea*, Hso.0eH.7. 4, widespread. See Hennebert (*Persoonia* **7**: 193, 1973), Kendrick (*CJB* **81**: 75, 2003; morphogenesis).

Dichochaete Parmasto (2001), Hymenochaetaceae. 2, widespread. See Parmasto (*Folia cryptog. Estonica* **37**: 56, 2000).

Dichocladosporium K. Schub., U. Braun & Crous (2007) = Graphiopsis Trail fide Schubert *et al.* (*Stud. Mycol.* **58**: 95, 2007), Braun *et al.* (*Mycotaxon* **103**: 207, 2008).

Dichodium Nyl. (1888) = Physma fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

dichohyphidium, see hyphidium.

Dicholobodigitus G.P. White & Illman (1988), anamorphic *Pezizomycotina*, Hso.≡ bP.28. 1, Canada. See White & Illman (*CJB* **66**: 2149, 1988).

Dichomera Cooke (1878), anamorphic *Botryosphaeriaceae*, St.#eP.1/19. 41, widespread. See Butin (*Sydowia* **45**: 161, 1993; pleomorphy), Yuan (*Nova Hedwigia* **70**: 139, 2000; on *Eucalyptus*), Gehlot &

Purohit (*Journal of Mycology and Plant Pathology* **34**: 1, 2004; ultrastr.), Barber *et al.* (*MR* **109**: 1347, 2005; pleomorphy), Burgess *et al.* (*Australas. Pl. Path.* **34**: 557, 2005; Australia), Crous *et al.* (*Stud. Mycol.* **55**: 235, 2006; phylogeny).

Dichomitus D.A. Reid (1965), Polyporaceae. 7, Europe; N. America. See Reid (*Revta Biol.* Lisb. **5**: 149, 1964-5), Ipulet & Ryvarden (*Syn. Fung.* **20**: 87, 2005; Uganda).

Dichomyces Thaxt. (1893) = Peyritschiella fide Tavares (*Mycol. Mem.* **9**, 1985).

Dichonema Blume & T. Nees (1826) = Dictyonema C. Agardh ex Kunth fide Parmasto (*Nova Hedwigia* **29**: 99, 1978).

dichophysis, see hyphidium.

Dichopleuropus D.A. Reid (1965), Lachnocladiaceae. 1, Malaysia. See Reid (*Nova Hedwigia* Beih. **18**: 329, 1965).

Dichoporis Clem. (1909) = Strigula fide Hafellner & Kalb (*Biblthca Lichenol.* **57**: 161, 1995).

Dichosporidium Pat. (1903), Roccellaceae (L). 6, widespread (tropical). See Thor (*Op. Bot.* **103**, 1990), Henssen & Thor (*Nordic Jl Bot.* **18**: 95, 1998; ontogeny), Thor (*J. Jap. Bot.* **77**: 47, 2002; Japan, Taiwan), Thor (*Biblthca Lichenol.* **95**: 543, 2007; Malaysia).

Dichosporium Pat. (1899) ≡ Dichosporidium.

Dichostereaceae Jülich (1982) = Lachnocladiaceae.

Dichostereum Pilát (1926), Lachnocladiaceae. Anamorph *Spiniger*. 11, widespread. See Boidin & Lanquetin (*Mycotaxon* **6**: 277, 1977), Boidin & Lanquetin (*BSMF* **96**: 381, 1980; key), Kotkova (*Mikol. Fitopatol.* **38**: 40, 2004; Russia).

Dichothrix Theiss. (1912) [non *Dichothrix* Zanardini ex Bornet & Flahault. 1886, *Cyanobacteria*] ≡ Schistodes.

Dichotomella Sacc. (1914) = Nigrospora fide Hughes (*CJB* **36**: 727, 1958).

Dichotomocladium Benny & R.K. Benj. (1975), Syncephalastraceae. 5, widespread. See Benny & Benjamin (*Aliso* **8**: 338, 1975), Benny & Benjamin (*Mycol.* **85**: 660, 1993), Voigt & Wöstemeyer (*Gene* **270**: 113, 2001; phylogeny).

Dichotomomyces Saito ex D.B. Scott (1970), Trichocomaceae. Anamorph *Polypaecilum*. 1, Japan. See Malloch (*SA* **6**: 124, 1987; posn), Fort *et al.* (*Boln Soc. Micol. Madrid* **14**: 61, 1990).

Dichotomophthora Mehrl. & Fitzp. ex P.N. Rao (1966), anamorphic *Pezizomycotina*, Hso.≡ eP.26. 2, widespread (esp. tropical). See de Hoog & van Oorschot (*Proc. K. ned. Akad. Wet.* Ser. C, Biol. Med. Sci. **86**: 55, 1983), Hosoe *et al.* (*Phytochem.* **29**: 997, 1990; anthraquinone derivative from *D. lutea*), Eken (*Mycotaxon* **87**: 153, 2003; Turkey), Kendrick (*CJB* **81**: 75, 2003; morphogenesis).

Dichotomophthoropsis M.B. Ellis (1971), anamorphic *Pezizomycotina*, Hso.0-≡ hP.26. 2, India; USA. See Ellis (*Mycol. Pap.* **125**: 20, 1971), Rasheed *et al.* (*Mycol.* **82**: 390, 1990; India).

dichotomous, branching, frequently successively, into two more or less equal arms.

Dicladium Ces. (1852) = Colletotrichum fide Sutton (*CJB* **44**: 887, 1966).

Diclasmia Trevis. (1869) = Sticta fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

diclinous, having the oogonium and its antheridium on different hyphae. Cf. androgynous.

Diclonomyces Thaxt. (1931), Laboulbeniaceae. 3, pantropical. See Nannfeldt (*Svensk bot. Tidskr.* **43**: 468, 1949).

Dicoccum Corda (1829) nom. ambig., anamorphic *Pezizomycotina*. See Hughes & Pirozynski (*CJB* **50**: 2521, 1972).

Dicollema Clem. (1909) = Collema F.H. Wigg. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Dicrandromyces Thaxt. (1931) = Tetrandromyces fide Tavares (*Mycol. Mem.* **9**, 1985).

Dicranidion Harkn. (1885), anamorphic *Orbilia*, Hsp.1bH.10. 3, America. See Peek & Solheim (*Mycol.* **50**: 844, 1958), Pfister (*Mycol.* **89**: 1, 1997; review), Kendrick (*CJB* **81**: 75, 2003; morphogenesis).

Dicranocladium Sousa da Câmara (1931) nom. provis., anamorphic *Pezizomycotina*.

Dicranophora J. Schröt. (1886), ? Mucoraceae. 1 (on decaying agarics), widespread (north temperate). See Vuillemin (*Annls mycol.* **5**: 33, 1907), Dobbs (*TBMS* **21**: 167, 1938), Volgmayr & Krisai-Greilhuber (*MR* **100**: 583, 1996; development, ultrastr.), Voigt & Wöstemeyer (*Gene* **270**: 113, 2001; phylogeny).

Dicranophoraceae J.H. Mirza (1979) = Mucoraceae.
Lit.: Kirk (*in litt.*).

Dicranotropis Breddin [not traced] nom. dub., Fungi. ? Based on fungi on an insect.

Dicteridium Raf. (1815) nom. dub., Fungi. No spp. included.

dictydine granules, see plasmodic granules.

Dictyoarthrinium S. Hughes (1952), anamorphic *Pezizomycotina*, Hso.#eP.37. 2 or 4, widespread (tropical). See Hughes (*Mycol. Pap.* **48**: 29, 1952), Mena Portales *et al.* (*Revta Iberoamer. Micol.* **12**: 31, 1995; Cuba), Somrithipol (*Mycol.* **99**: 792, 2007; key).

Dictyoarthrinopsis Bat. & Cif. (1958), anamorphic *Pezizomycotina*, Hso.#eH.?. 1, Costa Rica. See Batista & Ciferri (*Atti Ist. bot. Univ. Lab. crittog. Pavia* sér. 5 **15**: 57, 1958).

Dictyoasterina Hansf. (1947), Microthyriaceae. 1, Africa. See Hughes *in* Sugiyama (Ed.) (*Pleomorphic Fungi: The Diversity and its Taxonomic Implications*: 103, 1987).

Dictyobole G.F. Atk. & Long (1902) = Lysurus fide Dring (*Kew Bull.* **35**: 1, 1980).

Dictyocatenulata Finley & E.F. Morris (1967), anamorphic *Pezizomycotina*, Hsy.#eH.23. 1, widespread. See Seifert *et al.* (*Mycol.* **79**: 459, 1987; gen. redescr.).

Dictyocephala A.G. Medeiros (1962) = Pantospora fide Deighton (*Mycol. Pap.* **140**, 1976).

Dictyocephalos Underw. ex V.S. White (1901), Phelloriniaceae. 1, widespread. See Long & Plunkett (*Mycol.* **32**: 696, 1940), Dios *et al.* (*Mycotaxon* **84**: 265, 2002), Fan & Liu (*Mycosystema* **23**: 306, 2004; China), Sarasini (*Gasteromiceti Epigei*: 406 pp., 2005).

Dictyochaeta Speg. (1923), anamorphic *Chaetosphaeria, Ascocodinaea*, Hso/Hsy.0eH/1eH.16. *c.* 65, widespread. See Hughes & Kendrick (*N.Z. Jl Bot.* **6**: 331, 1968), Gamundí *et al.* (*Darwiniana* **21**: 95, 1977), Kuthubutheen & Nawawi (*MR* **95**: 1211, 1991; Malaysian spp.), Kuthubutheen & Nawawi (*MR* **95**: 1220, 1991; Malaysian spp.), Kuthubutheen & Nawawi (*MR* **95**: 1224, 1991; key 59 spp.), Réblová *et al.* (*Sydowia* **51**: 49, 1999; teleomorph), Whitton *et al.* (*Fungal Diversity* **4**: 133, 2000; on *Pandanaceae*), Markovskaja & Treigiene (*Botanica Lithuanica* **7**: 93, 2001; Lithuania), Tsui *et al.* (*Cryp-*

tog. Mycol. **22**: 139, 2001; Hong Kong), Fernández *et al.* (*Mycol.* **98**: 121, 2006; phylogeny).

Dictyochaetopsis Aramb. & Cabello (1990), anamorphic *Chaetosphaeriaceae*, Hso.1-≡ eH.16. 12, widespread. See Arambarri & Cabello (*Mycotaxon* **38**: 12, 1990), Whitton *et al.* (*Fungal Diversity* **4**: 133, 2000; on *Pandanaceae*), Calduch *et al.* (*Mycol.* **94**: 1071, 2002; Brazil).

dictyochlamydospore, a non-deciduous multicelled chlamydospore composed of an outer wall separable from the walls of the component cells which are rather easily separated from each other, as in some *Phoma* spp. formerly ascribed to *Peyronellaea* (Luedemann, *Mycol.* **51**: 778, 1961).

Dictyochora Theiss. & Syd. (1914) nom. dub., Fungi.

Dictyochorella Theiss. & Syd. (1915) nom. dub., Fungi. See von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Dictyochorina Chardón (1932) nom. dub., Pezizomycotina. See Petrak (*Sydowia* **5**: 343, 1951).

Dictyocoprotus J.C. Krug & R.S. Khan (1991), Pyronemataceae. 1 (coprophilous), Mexico; USA. See Krug & Khan (*Mycol.* **83**: 103, 1991).

Dictyocyclus Sivan., W.H. Hsieh & Chi Y. Chen (1998), Parmulariaceae (L). 1, Taiwan. See Sivanesan *et al.* (*J. Linn. Soc.* Bot. **126**: 323, 1998).

Dictyodesmium S. Hughes (1951), anamorphic *Pezizomycotina*, Hsp.#eP.1. 3, USA; France. See Hughes (*Mycol. Pap.* **36**: 29, 1951), Zhao & Zhang (*Mycosystema* **24**: 12, 2005; China).

Dictyodochium Sivan. (1984), anamorphic *Gibbera*, Hsp.#eP.1/10. 1, India. See Sivanesan (*TBMS* **82**: 517, 1984).

Dictyodothis Theiss. & Syd. (1915), Dothideaceae. 2, America. See Eriksson (*Myconet* **5**: 2969, 2000).

Dictyographa Darb. (1897) = Darbishirella fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Dictyographa Müll. Arg. (1893) = Opegrapha Ach. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995), Grube (*Bryologist* **101**: 377, 1998; phylogeny), Ertz & Diederich (*Lichenologist* **39**: 143, 2007; synonymy).

Dictyolaceae Gäum. (1926) = Tricholomataceae. The *Dictyolaceae* have not yet been proposed as nom. rej. against *Tricholomataceae*.

Dictyolus Quél. (1886) = Arrhenia fide Kuyper (*in litt.*).

Dictyomollisia Rehm (1909) = Uleomyces fide von Arx (*Persoonia* **2**: 421, 1963).

Dictyomorpha Mullins (1961), Chytridiales. 2 (on *Oomycetes*), N. America. See Dick (*Straminipilous Fungi*: 670 pp., 2001).

Dictyonella Höhn. (1909), Saccardiaceae. 7, widespread (tropical). See von Arx (*Persoonia* **2**: 421, 1963), Hsieh *et al.* (*MR* **101**: 897, 1997; Taiwan), Inácio & Dianese (*MR* **102**: 695, 1998; Brazil).

Dictyonema C. Agardh ex Kunth (1822), Agaricomycetidae (L). 7, widespread (esp. tropical). See Parmasto (*Nova Hedwigia* **29**: 99, 1978), Chaves *et al.* (*Bryologist* **107**: 242, 2004; Costa Rica).

Dictyonema Reinsch (1875) nom. dub., ? Fungi.

Dictyonemataceae Tomas. ex Tomas. (1950) = Atheliaceae.

Dictyonematomyces Cif. & Tomas. (1954) = Dictyonema C. Agardh ex Kunth fide Parmasto (*Nova Hedw.* **29**: 108, 1972).

Dictyonia Syd. (1904), Helotiaceae. 2, widespread (tropical).

Dictyopanus Pat. (1900) = Panellus fide Burdsall & Miller (*Beih. Nova Hedwigia* **51**, 1975).

Dictyopeltella Bat. & I.H. Lima (1959), Micropeltidaceae. 2, widespread (tropical). See Batista (*Publções Inst. Micol. Recife* **56**, 1959).

Dictyopeltis Theiss. (1913), Micropeltidaceae. 6, pantropical. See Batista (*Publções Inst. Micol. Recife* **56**, 1959), Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Dictyopeplos Kuhl & Hasselt (1824) = Phallus fide Stalpers (*in litt.*).

Dictyophallus Corda (1842) = Phallus fide Stalpers (*in litt.*).

Dictyophora Desv. (1809) = Phallus fide Dring (*Mycol. Pap.* **98**, 1964).

Dictyophrynella Bat. & Cavalc. (1964), anamorphic *Pezizomycotina*, Hso.≡ eP.?. 1, Brazil. See Batista & Cavalcanti (*Portugaliae Acta Biologica* Série B **7**: 356, 1964).

Dictyoploca Mont. ex Pat. (1890) = Gymnopus (Pers.) Roussel fide Kuyper (*in litt.*).

Dictyopolyschema M.B. Ellis (1976), anamorphic *Pezizomycotina*, Hso.#eP.24. 1, British Isles. See Ellis (*More Dematiaceous Hyphomycetes*: 373, 1976).

dictyoporospore, a deciduous, multicelled porospore the component cells of which are firmly united and not enclosed by an outer wall, as in *Alternaria* (Luedemann, *Mycol.* **51**: 778, 1961).

Dictyoporthe Petr. (1955), Melanconidaceae. Anamorphs *Hendersonula*, *Coryneum*. 3, Pakistan; Taiwan. See Hsieh *et al.* (*MR* **101**: 1092, 1997; Taiwan), Jaklitsch & Barr (*Öst. Z. Pilzk.* **6**: 45, 1997; key).

Dictyopus Quél. (1886) = Boletus Fr. fide Singer (*Farlowia* **2**: 223, 1945).

Dictyorinis Clem. (1909) = Rinodina fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Dictyorostrella U. Braun (1999), anamorphic *Pezizomycotina*. 1, Canada. See Braun (*Schlechtendalia* **3**: 35, 1999).

dictyoseptate, having transverse and longitudinal cross walls (septa), like layers of cement between bricks; muriform.

dictyosomes, ± spherical vesicles associated with the edges of the membrane-bound sacs (cisternae) which constitute the golgi apparatus in *Oomycota* and other fungi as shown by electron microscopy.

Dictyospiropes M.B. Ellis (1976), anamorphic *Pezizomycotina*, Hso.#eP.10. 1, India. See Ellis (*More Dematiaceous Hyphomycetes*: 214, 1976).

dictyosporangium, a septate sporangium, as in *Dictyuchus*.

dictyospore, differs from an amerospore (q.v.) by being divided by intersecting septa in more than one plane; muriform spore. See Anamorphic fungi.

Dictyosporites Félix (1894), Fossil Fungi. 2 (Paleocene), widespread.

Dictyosporium Corda (1836), anamorphic *Pleosporales*, Hso.0bP.1. 28, widespread. See Sutton (*Proc. Indian Acad. Sci.* Pl. Sci. **94**: 229, 1985; disposition of names), Tzean & Chen (*MR* **92**: 497, 1989; 2 n.spp.), Chen & Tzean (*Fungal Science* Taipei **14**: 105, 1999; Taiwan), Goh *et al.* (*Fungal Diversity* **2**: 65, 1999), Arambarri *et al.* (*Mycotaxon* **78**: 185, 2001; Argentina), Photita *et al.* (*Mycotaxon* **82**: 415, 2002; Thailand), Cai *et al.* (*Sydowia* **55**: 129, 2003; Yunnan), Cai *et al.* (*Cryptog. Mycol.* **24**: 3, 2003; China, definition), Kodsueb *et al.* (*Cryptog. Mycol.* **27**: 111, 2006; Thailand), Tsui *et al.* (*Fungal Diver-*

sity **21**: 157, 2006; phylogeny), Cai *et al.* (*Persoonia* **20**: 53, 2008; phylogeny).

Dictyostomiopelta Viégas (1944), Micropeltidaceae. 1, Brazil.

Dictyothyriella Rehm (1914) = Micropeltis fide Clements & Shear (*Gen. Fung.*, 1931).

Dictyothyriella Speg. (1924), Micropeltidaceae. 1, Cape Horn.

Dictyothyrina Theiss. (1913), Micropeltidaceae. 2, America.

Dictyothyrium Grove (1932) ? = Mycoporum Flot. ex Nyl. fide Sutton (*Mycol. Pap.* **141**, 1977).

Dictyothyrium Theiss. (1912), Micropeltidaceae. *c.* 15, widespread (tropical).

Dictyotopileos Dilcher (1965), Fossil Fungi, Micropeltidaceae. 1 (Eocene), USA.

Dictyotremella Kobayasi (1971), Tremellaceae. 1, Papua New Guinea. See Kobayasi (*Bull. natn. Sci. Mus.* Tokyo, B **14**: 481, 1971).

Dictyotrichiella Munk (1953) = Capronia fide Müller *et al.* (*TBMS* **88**: 63, 1987), Janex-Favre (*Cryptog. Mycol.* **9**: 133, 1988; ontogeny), Untereiner (*Mycol.* **89**: 120, 1997; morphology), Untereiner & Naveau (*Mycol.* **91**: 67, 1999; phylogeny).

Dicyma Boulanger (1897), anamorphic *Ascotricha*, Hsy.0eP.10. 11, widespread. See Hawksworth (*Mycol. Pap.* **126**, 1971), von Arx (*Proc. k. ned. Akad. Wet.* Ser. C, Biol. Med. Sci. **85**: 21, 1982), Udagawa & Uchiyama (*Mycotaxon* **70**: 177, 1999; teleomorph), Davis *et al.* (*Am. J. Bot.* **90**: 1661, 2003; endophytic taxa), Watanabe *et al.* (*Mycoscience* **44**: 411, 2003; from *Basidiomycota*, Japan), Tavares *et al.* (*Fitopatol. Brasil* **29**: 148, 2004; Brazil).

Didonia Velen. (1934), ? Helotiales. 5, Europe. Perhaps part of the *Hyaloscyphaceae*. See Svrček (*Česká Mykol.* **46**: 41, 1992; status).

Didothis Clem. (1931) ≡ Uleodothis.

Didymaria Corda (1842) = Ramularia Unger fide Hughes (*CJB* **36**: 727, 1958), Braun (*Nova Hedwigia* Beih. **53**: 291, 1991).

Didymariopsis Speg. (1910) = Colletotrichum fide Deighton (*TBMS* **59**: 185, 1972).

Didymascella Maire & Sacc. (1903), ? Hemiphacidiaceae. 3 (on conifers), Europe; N. America. *D. thujina* damages *Thuja*. See Minter (*IMI Descr. Fungi Bact.*: no. 1334, 1998).

Didymascina Höhn. (1905) = Didymosphaeria fide Aptroot (*Nova Hedwigia* **60**, 1995).

Didymascus Sacc. (1896), ? Rhytismatales. 1, Siberia. See Korf (*Mycol.* **54**: 24, 1962).

Didymaster Bat. & H. Maia (1967) = Strigula fide Lücking *et al.* (*Lichenologist* **30**: 121, 1998).

Didymella Sacc. (1880), Pleosporales. Anamorphs *Ascochyta*, *Phoma*. *c.* 88, widespread. *D. applanata* (raspberry spur blight), *D. citrullina* (on cucurbits), *D. lycopersici* (tomato stem and fruit rots). See Corbaz (*Phytopath. Z.* **28**: 375, 1956), Holm (*Taxon* **24**: 475, 1975; nomencl.), Corlett (*CJB* **59**: 2016, 1981), Kaiser *et al.* (*Pl. Dis.* **81**: 809, 1997), Navas-Cortés *et al.* (*Phytoparasitica* **26**: 199, 1998; genetics), Silva-Hanlin & Hanlin (*MR* **103**: 153, 1999; phylogeny), Liew *et al.* (*Mol. Phylogen. Evol.* **16**: 392, 2000; phylogeny), Armstrong *et al.* (*Can. J. Pl. Path.* **23**: 110, 2001; mating types), Somai *et al.* (*Phytopathology* **92**: 997, 2002; molecular variation), Barve *et al.* (*Fungal Genetics Biol.* **39**: 151, 2003; mating types), Fatehi *et al.* (*Mycopathologia* **156**: 317, 2003; *A. pinodes* complex), Kothera *et al.* (*MR* **107**: 297, 2003; AFLP analysis), Lindqvist-Kreuze *et al.* (*Pl. Path.* **52**: 567, 2003; on *Rubus*), Boerema *et al.* (*Phoma Identification Manual* Differentiation of Specific and Infra-Specific Taxa in Culture: 470 pp., 2004), Chongo *et al.* (*Pl. Dis.* **88**: 4, 2004; genetic diversity, Canada), Koch & Utkhede (*Can. J. Pl. Path.* **26**: 291, 2004; molecular detection), Peever *et al.* (*Mol. Ecol.* **13**: 291, 2004; population structure), Lichtenzveig *et al.* (*Eur. J. Pl. Path.* **113**: 15, 2005; Israel), Aptroot (*CBS Diversity Ser.* **5**, 2006), Schoch *et al.* (*Mycol.* **98**: 1041, 2006; phylogeny).

Didymellina Höhn. (1918) = Mycosphaerella fide von Arx & Müller (*Stud. Mycol.* **9**, 1975), Braun *et al.* (*Mycol. Progr.* **2**: 3, 2003).

Didymellopsis (Sacc.) Clem. & Shear (1931), Xanthopyreniaceae. 4 (on lichens), Europe. See Grube & Hafellner (*Nova Hedwigia* **51**: 283, 1990).

Didymobotryaceae Nann. (1934) = Ophiocordycipitaceae.

Didymobotryopsis Henn. (1902) = Hirsutella fide Samson & Evans (*MR* **95**: 887, 1991).

Didymobotrys Clem. & Shear (1931) ≡ Didymobotryopsis.

Didymobotryum Sacc. (1886), anamorphic *Pezizomycotina*, Hsy.1eP.28. 7, N. America; Asia. See Seifert (*Mem. N. Y. bot. Gdn* **59**: 109, 1990; Indonesia), D'Souza & Bhat (*Mycol.* **94**: 535, 2002; India).

Didymochaeta Sacc. & Ellis (1898), anamorphic *Pezizomycotina*, Cpd.1-≡ eH.15. 1, N. America.

Didymochaetina Bat. & J.L. Bezerra (1965), anamorphic *Pezizomycotina*, Cpd.1eH.?. 1, Jamaica. See Batista & Bezerra (*Riv. Patol. veg., Pavia* Sér. 4 **1**: 44, 1965).

Didymochlamys Henn. (1897) [non *Didymochlamys* Hook. 1872, *Rubiaceae*] ≡ Kuntzeomyces.

Didymochora Höhn. (1918), anamorphic *Euryachora*, St.0eH.?. 1, Europe.

Didymocladiaceae Nann. (1934) = Hypocreaceae.

Didymocladium Sacc. (1886) = Cladobotryum fide Hughes (*CJB* **36**: 727, 1958).

Didymocoryne Sacc. & Trotter (1913), Helotiales. 2, widespread (north temperate).

Didymocrater Mart. (1821) nom. dub., ? Fungi.

Didymocrea Kowalski (1965), Pleosporales. 1, India. See Kowalski (*Mycol.* **57**: 404, 1965; devel.), Luttrell (*Am. J. Bot.* **62**: 186, 1975; development), Aptroot (*Stud. Mycol.* **37**, 1995; posn), Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999), Kruys *et al.* (*MR* **110**: 527, 2006; phylogeny).

Didymocyrtidium Vain. (1921), Dothideomycetes. 2, Europe.

Didymocyrtis Vain. (1921), Dothideomycetes. 1 (on *Caloplaca*), Finland.

Didymolepta Munk (1953), Leptosphaeriaceae. 2, Europe. See Eriksson & Hawksworth (*SA* **7**: 68, 1988), Barr (*Mycotaxon* **43**: 371, 1992).

Didymopeltis Bat. & I.H. Lima (1959) = Schizothyrium fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Didymopleella Munk (1953), Dothideomycetes. 4, Europe. See Munk (*Dansk bot. Ark.* **15**: 109, 1953).

Didymoporisporonites Sheffy & Dilcher (1971), Fossil Fungi. 10 (Eocene, Tertiary), China; USA.

Didymopsamma Petr. (1925) = Chaetosphaeria fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Didymopsis Sacc. & Marchal (1885), anamorphic *Pezizomycotina*, Hsy.1eH.1. 5, widespread.

Didymopsora Dietel (1899), Pucciniosiraceae. 6 (on dicots (0, III)), S. America; Africa. See Cunningham (*Mycol.* **60**: 769, 1968), Buriticá (*Rev. Acad. Colomb. Cienc.* **18**: 131, 1991).

Didymopsorella Thirum. (1950), Uropyxidaceae. 2 (on *Toddalia* (*Rutaceae*)), Africa; China; India; Sri Lanka. See Thirumalachar (*Sci. Cult.* **16**: 210, 1950).

Didymopycnomyces Cavalc. & A.A. Silva (1972) = Coenogonium Ehrenb. fide Lücking *et al.* (*Lichenologist* **30**: 121, 1998), Rivas Platas *et al.* (*Fungal Diversity* **23**: 255, 2006).

Didymosamarospora T.W. Johnson & H.S. Gold (1957) nom. dub., Fungi. See Kohlmeyer & Kohlmeyer (*Marine Mycology*, 1979).

Didymosamarosporella, see *Didymosamarospora*.

Didymosira Clem. (1909) ≡ Pucciniosira.

Didymosphaerella Cooke (1889), Montagnulaceae. See Aptroot (*Stud. Mycol.* **37**, 1995), Ramaley (*Mycotaxon* **78**: 435, 2001; on *Yucca*).

Didymosphaeria Fuckel (1870) nom. cons., Didymosphaeriaceae. Anamorphs *Fusicladiella*-like, *Phoma*-like. 23, widespread. See Kohlmeyer & Volkmann-Kohlmeyer (*MR* **94**: 685, 1990; redisp. marine spp.), Hyde (*Sydowia* **46**: 29, 1994), Aptroot (*Stud. Mycol.* **37**, 1995; key), Aptroot (*Nova Hedwigia* **60**: 325, 1995; excl. names), Hyde *et al.* (*Nova Hedwigia* **69**: 449, 1999; on palms).

Didymosphaeriaceae Munk (1953), Pleosporales. 4 gen. (+ 6 syn.), 50 spp.

Lit.: Scheinpflug (*Ber. schweiz. bot. Ges.* **68**: 325, 1958), Kohlmeyer & Volkmann-Kohlmeyer (*MR* **94**: 685, 1990), Aptroot (*Nova Hedwigia* **60**: 325, 1995), Aptroot (*Stud. Mycol.* **37**: 160 pp., 1995), Aptroot (*Stud. Mycol.* **37**, 1995), Hyde *et al.* (*Nova Hedwigia* **69**: 449, 1999).

Didymosphaerites Fiore (1932), Fossil Fungi. 1 (Eocene), Italy.

Didymosphaerites Pia (1927), Fossil Fungi. 1.

didymospore, differs from an amerospore (q.v.) in having one transverse septum. See Anamorphic fungi.

Didymosporiella Traverso & Migliardi (1911) nom. dub., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Didymosporina Höhn. (1916), anamorphic *Pezizomycotina*, Cac.1eP.19. 1, Europe. See Szabó (*Acta phytopath. entom. Hung.* **32**: 69, 1997).

Didymosporis Clem. & Shear (1931) ≡ Didymosporiella.

Didymosporium Nees (1816) nom. dub., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Didymosporium Sacc. (1880) nom. illegit., anamorphic *Pezizomycotina*, Cac.0eP.?. 1, Italy. See Sutton (*Mycol. Pap.* **141**, 1977).

Didymosporonites Sheffy & Dilcher (1971), Fossil Fungi. 4, USA.

Didymostilbe Bres. & Sacc. (1902) nom. dub., Fungi. See Sydow & Sydow (*Annls mycol.* **1**: 176, 1903).

Didymostilbe Henn. (1902), anamorphic *Peethambara*, Hsp.1eH.15. 8, Asia. See Seifert (*Stud. Mycol.* **27**: 130, 1985; 6 spp. Indonesia), Rossman *et al.* (*Mycol.* **93**: 100, 2001; phylogeny), Samuels *et al.* (*Tropical Mycology* **2**: 13, 2002; key).

Didymothozetia Rangel (1915), anamorphic *Pezizomycotina*, Hsp.1-≡ eH.?. 1, Brazil.

Didymothyriella Bat. & I.H. Lima (1959) = Plochmopeltis fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Didymotrichella Arnaud (1954), anamorphic *Pezizomycotina*, Hso.1eP.?27. 1, France. See Arnaud (*BSMF* **69**: 284, 1953).

Didymotrichia Berl. (1893) = Neopeckia fide von Arx & Müller (*Stud. Mycol.* **9**, 1975), von Arx & Müller (*Sydowia* **37**: 6, 1984).

Didymotrichiella Munk (1953) = Capronia fide Müller *et al.* (*TBMS* **88**: 63, 1987).

Didymotrichum Bonord. (1851) = Cladosporium fide Hughes (*CJB* **36**: 727, 1958).

Didymotrichum Höhn. (1914) = Dactylaria fide Bhatt & Kendrick (*CJB* **46**, 1968).

Didymozoophaga Soprunov & Galiulina (1951) = Arthrobotrys fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Diederichia D. Hawksw. (2003), anamorphic *Dothideomycetes*. 1 (on lichens), Spain. See Etayo & Diederich (*Mycotaxon* **60**: 415, 1996), Hawksworth (*Lichenologist* **35**: 206, 2003).

Diederimyces Etayo (1995), Verrucariaceae. Anamorph *Phaeosporobolus*. 1, Spain. See Etayo (*Nova Hedwigia* **61**: 190, 1995), Calatayud & Barreno (*Lichenologist* **35**: 279, 2003; teleomorph-anamorph connection).

Diedickea Syd. & P. Syd. (1913), anamorphic *Pezizomycotina*, Cpt.0eH.?. 3, widespread (tropical).

Diedickella Petr. (1922) = Stagonospora fide Clements & Shear (*Gen. Fung.*, 1931).

Diehlia Petr. (1951) ? = Phaeangellina fide Korf *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 249, 1973).

Diehliomyces Gilkey (1955), ? Pezizales. 1, widespread. *D. microsporus*; truffle-like fungus invading mushroom beds. See Læssøe & Hansen (*MR* **111**: 1075, 2007; phylogeny).

diel, a 24-hr periodicity. Cf. circadian, diurnal.

Dielsiella Henn. (1903) = Cycloschizon fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Dietel (Paul; 1860-1947; Germany). High school teacher, Leipzig. A life-long student of the *Pucciniales*, from 1887 to 1943 he published more than 150 papers on rusts. At the time, his work was generally accepted as the most authoritative on rust classification. *Publs.* Hemibasidii und Uredinales. *Engler & Prantl, Die Natürlichen Pflanzenfamilien* (1898); Unterklasse Hemibasidii (Ustilaginales und Uredinales). *Engler & Prantl, Die Natürlichen Pflanzenfamilien* (1928). *Biogs, obits etc.* Poeverlein (*Sydowia* **4**: 1, 1950) [bibliography, portrait]; Stafleu & Cowan (*TL-2* **1**: 649, 1976).

Dietelia Henn. (1897), Pucciniosiraceae. 12 (on dicots (0, III)), America (± tropical); Africa; Japan; Philippines; New Guinea. See Buriticá (*Rev. Acad. Colomb. Cienc.* **18**: 131, 1991), Gjærum *et al.* (*Lidia* **5**: 18, 2000; Uganda), Evans & Ellison (*Mycol.* **97**: 935, 2005; sp. on *Mikania*), Maier *et al.* (*MR* **111**: 176, 2007).

Dievernia M. Choisy (1931) = Ramalina fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

differential hosts, the special species or cultivars of host plants the reactions of which are used for determining physiologic races.

diffluent, breaking up in water.

diffract (of a pileus surface), cracked into small areas; areolate.

Diffractella Guarro, P.F. Cannon & Aa (1991), Lasiosphaeriaceae. 1 (from wood), Europe; Japan. See Guarro *et al.* (*SA* **10**: 79, 1991), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004).

diffuse, widely or loosely spreading and having no distinct margin; - **wall building**, see wall building.

digitate, with deep radiating divisions, finger-like.

Digitatispora Doguet (1962), Atheliaceae. 2 (marine), Europe; N. America. See Doguet (*Compte rendu hebdomadaire des Sciences de l'Academie des sciences* Paris **254**: 4338, 1962).

Digitatisporaceae Jülich (1982) = Atheliaceae.

Digitellus Paulet (1791), anamorphic *Lentinus*. 1. See Donk (*Taxon* **11**: 82, 1962).

Digitodesmium P.M. Kirk (1981), anamorphic *Pleosporales*, Hsp.0bP.1. 4, widespread. See Sutton (*Proc. Indian Acad. Sci.* Pl. Sci. **94**: 229, 1985), Ho *et al.* (*Mycol.* **91**: 900, 1999; Hong Kong), Cai *et al.* (*Nova Hedwigia* **75**: 525, 2002; Philippines), Cai *et al.* (*Sydowia* **55**: 129, 2003; Yunnan), Tsui *et al.* (*Fungal Diversity* **21**: 157, 2006; phylogeny), Cai *et al.* (*Persoonia* **20**: 53, 2008; phylogeny).

Digitodochium Tubaki & Kubono (1989), anamorphic *Pezizomycotina*, Hsp.1bH.1. 1, Japan. See Tubaki & Kubono (*Sydowia* **41**: 344, 1989).

Digitomyces Mercado, Calduch & Gené (2003), anamorphic *Pezizomycotina*, H?.?.?. 1, Taiwan. See Mercado Sierra *et al.* (*Mycol.* **95**: 860, 2003).

Digitopodium U. Braun, Heuchert & K. Schub. (2006), anamorphic *Pezizomycotina*, H?.?.?. 1 (on *Hemileia*), Zaire. See Braun *et al.* (*Schlechtendalia* **13**: 66, 2006).

Digitoramispora R.F. Castañeda & W.B. Kendr. (1990), anamorphic *Pezizomycotina*, Hso.0bP.19. 2, widespread. See Castañeda Ruiz & Kendrick (*Univ. Waterloo Biol. Ser.* **33**: 18, 1990), Somrithipol & Jones (*Nova Hedwigia* **77**: 373, 2003; Thailand).

Digitosarcinella S. Hughes (1984), anamorphic *Pezizomycotina*, Hso.1bH.1. 1, Brazil. See Hughes (*CJB* **62**: 2208, 1984).

Digitosporium Gremmen (1953), anamorphic *Crumenulopsis*, St.0bP.1. 1, Finland. See Gremmen (*Acta Bot. Neerl.* **2**: 233, 1953).

Digitothyrea P.P. Moreno & Egea (1992), Lichinaceae (L). 3, Africa; C. America. See Moreno & Egea (*Lichenologist* **24**: 215, 1992), Schultz & Büdel (*Lichenologist* **34**: 39, 2002; key), Schultz & Büdel (*Lichenologist* **35**: 151, 2003; phylogeny).

Digraphis Clem. (1909) = Graphis fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Diheterospora Kamyschko ex G.L. Barron & Onions (1966) = Pochonia fide Barron & Onions (*CJB* **44**: 861, 1966), Barron (*CJB* **63**: 211, 1985; 12 spp. from parasitized rotifers), Barron (*CJB* **69**: 494, 1991; segregation of *Rotipherophthora*), Gams & Zare (*Mycology Series* **19**: 17, 2003; review).

Dihyphis Locq. (1985), Fossil Fungi. 1, Estonia.

Dikarya, Fungi. (*Neomycota* Caval.-Sm.). A subkingdom for the (least inclusive clade that contains) *Ascomycota* and *Basidiomycota* (Hibbett *et al.*, *MR* **111**: 509, 2007).

dikaryon (adj. **dikaryotic**), a cell having two genetically distinct haploid nuclei.

dikaryoparaphysis, see hyphidium.

dikaryotization, the conversion of a homokaryon into a dikaryon typically by the fusion of 2 compatible homokaryons, but see Buller phenomenon; **illegitimate -**, the sporadic occurrence of a dikaryon in non-compatible di-mon matings.

dilacerate, torn asunder.

Dillenius (Johann Jacob; 1684-1747; Germany, later England). First Sherardian Professor of Botany, Oxford University (1728). Paid special attention to fungi (incl. lichen-forming species), and mosses. *Publs. Historia Muscorum* (1742) [includes all the then known lichen-forming fungi, many of which are supported by specimens in the fungal reference collection in Oxford (**OXF**)]. *Biogs, obits etc.* Anon. (*Oxford Dictionary of National Biography* concise edn **1**: 796, 1993); Grummann (1974: 9); Jørgensen *et al.* (*Botanical Journal of the Linnean Society* **115**: 261, 1994 [typification of many names of lichen-forming fungi]); Petersen (*Mycotaxon* **5**: 415, 1977 [discussion of mycological work]); Stafleu & Cowan (*TL-2* **1**: 655, 1976).

Dilophia Sacc. (1883) [non *Dilophia* Thomson 1853, *Cruciferae*] ≡ Lidophia.

Dilophospora Desm. (1840), anamorphic *Lidophia*, St.≡ eH.15. 1, widespread. See Walker & Sutton (*TBMS* **62**: 231, 1974; teleomorph), Riley *et al.* (*MR* **102**: 301, 1998; allozyme analysis).

Diluviicola K.D. Hyde, S.W. Wong & E.B.G. Jones (1998), Annulatascaceae. 1 (from freshwater), Brunei. See Hyde *et al.* (*Fungal Diversity* **1**: 141, 1998), Ho & Hyde (*Fungal Diversity* **4**: 21, 2000), Raja *et al.* (*Mycotaxon* **88**: 1, 2003).

Dimargaris Tiegh. (1875), Dimargaritaceae. 7 (mycoparasites of *Mucorales*), widespread. See Benjamin (*Aliso* **6**: 1, 1965; key), Mandelbrot & Erb (*Mycol.* **64**: 1124, 1972; hosts of *D. verticillata*), Saikawa (*J. Jap. Bot.* **52**: 200, 1977; septal ultrastr.), Jeffries & Young (*Ann. Bot.* **47**: 107, 1981; haustoria), Jeffries & Cuthbert (*Protoplasma* **121**: 129, 1984; ultrastr.), Jeffries & Young (*TBMS* **83**: 223, 1984; spore ultrastr.), Kirk & Kirk (*TBMS* **82**: 551, 1984), Tanabe *et al.* (*J. gen. appl. Microbiol.* Tokyo **51**: 267, 2005; phylogeny), James *et al.* (*Nature* **443**: 818, 2006; phylogeny), White *et al.* (*Mycol.* **98**: 872, 2006; phylogeny).

Dimargaritaceae R.K. Benj. (1959), Dimargaritales. 3 gen., 13 spp.

Lit.: Benjamin (*Aliso* **4**: 321, 1959), Benjamin (*Aliso* **5**: 11, 1961), Benjamin (*Aliso* **5**: 273, 1963), Benjamin (*Aliso* **6**: 1, 1965), Beblowska (*Acta Mycologica* Warszawa **27**: 271, 1991), Wrzosek & Gajowniczek (*Acta Mycologica* Warszawa **33**: 265, 1998), Tanabe *et al.* (*Mol. Phylogen. Evol.* **30**: 438, 2004).

Dimargaritales R.K. Benj. (1979). Kickxellomycotina. 1 fam., 4 gen., 14 spp. Fam.:

Dimargaritaceae

Lit.: Benjamin (*Aliso* **4**: 321, **5**: 273, **6**: 1, 1959-1965, *in* Kendrick (Ed.), *The whole fungus* **2**: 573, 1979), Tanabe *et al.* (*Mol. Phylogen. Evol.* **16**: 253, 2000; phylogeny), White *et al.* (*Mycol.* **98**: 860, 2006; molecular phylogeny), Hibbett *et al.* (*MR* **111**: 109, 2007), and see under Family.

Dimastigosporium Faurel & Schotter (1965), anamorphic *Pezizomycotina*, Ccu.0eH.?. 1 (coprophilous), Sahara. See Faurel & Schotter (*Revue Mycol.* Paris **30**: 156, 1964).

Dimaura Norman (1853) = Catolechia fide Hafellner (*Nova Hedwigia* **30**: 673, 1978).

Dimelaena Norman (1853), Caliciaceae (L). 8, widespread. See Sheard (*Bryologist* **80**: 100, 1977; palaeogeography, chemotaxonomy), Leuckert *et al.* (*Nova Hedwigia* **34**: 623, 1981; chemotypes), Mayrhofer *et al.* (*Mycotaxon* **58**: 293, 1996; S. hemisphere), Calatayud & Rico (*Bryologist* **102**: 39, 1999; chemotypes), Nordin & Mattsson (*Lichenologist* **33**:

3, 2001; phylogeny), Elvebakk & Moberg (*Lichenologist* **34**: 311, 2002; Chile), Rico *et al.* (*Lichenologist* **35**: 117, 2003; link with *Buellia*), Obermayer *et al.* (*Symb. bot. upsal.* **34** no. 1: 327, 2004; Tibet), Rico *et al.* (*Cryptog. Mycol.* **27**: 149, 2006; Iberian peninsula).

Dimera Fr. (1825) = Oedemium fide Hughes (*CJB* **36**: 727, 1958).

Dimerella Trevis. (1880) = Coenogonium Ehrenb. fide Santesson (*Symb. bot. upsal.* **12** no. 1: 1, 1952) but see Vězda & Farkas (*Folia geobot. phytotax.* **23**: 187, 1988; key 12 spp. Afr.), Alvarez Andrés & Carballal Durán (*Nova Hedwigia* **73**: 409, 2001; Iberian peninsula), Kauff & Lutzoni (*Mol. Phylogen. Evol.* **25**: 138, 2002; phylogeny), Grube *et al.* (*MR* **108**: 1111, 2004; phylogeny), Malcolm (*Australasian Lichenology* **54**: 19, 2004; New Zealand), Malcolm (*Australasian Lichenology* **56**: 25, 2005; Australasia), Rivas Platas *et al.* (*Fungal Diversity* **23**: 255, 2006; Costa Rica, reln with *Coenogonium*).

Dimeriaceae E. Müll. & Arx ex Arx & E. Müll. (1975) = Pseudoperisporiaceae.

Dimeriella Speg. (1908), Parodiopsidaceae. 2, Brazil. See Farr (*Mycol.* **71**: 243, 1979), Barr (*Prodr. Cl. Loculoasc.*, 1987; posn).

Dimeriellina Chardón (1939) = Auerswaldiella fide von Arx & Müller (*Beitr. Kryptfl. Schweiz* **11** no. 1, 1954).

Dimeriellopsis F. Stevens (1927) = Nematostoma fide Sivanesan (*SA* **6**: 201, 1987).

Dimerina Theiss. (1912), Pseudoperisporiaceae. Anamorph *Ectosticta*. *c.* 10 (on *Meliolaceae*, *Asterinaceae*), widespread (tropical). See Hansford (*Mycol. Pap.* **15**, 1946), Farr *et al.* (*CJB* **63**: 1983, 1985), Reynolds & Gilbert (*Aust. Syst. Bot.* **18**: 265, 2005; Australia).

Dimerinopsis Syd. & P. Syd. (1917) = Dimerina fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Dimeriopsis F. Stevens (1917) = Dimerina fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Dimerisma Clem. (1909) = Spheconisca fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Dimerium (Sacc. & P. Syd.) Sacc. & D. Sacc. (1905) nom. dub., Dothideomycetes. See also *Phaeostigme*. See Hughes (*Mycol. Pap.* **166**, 1993).

Dimerium (Sacc. & P. Syd.) Sacc. & D. Sacc. (1905), Parodiopsidaceae. Anamorph *Cicinnobella*. 1, Chile. See Hughes (*Mycol. Pap.* **166**, 1993).

Dimeromyces Thaxt. (1896), Laboulbeniaceae. 109 (on beetles), widespread. See Santamaria (*Nova Hedwigia* **58**: 177, 1994), Kaur & Mukerji (*Mycoscience* **37**: 61, 1996), Weir & Hammond (*Biodiv. Cons.* **6**: 701, 1997; on beetles), Terada (*Mycoscience* **41**: 39, 2000; Japan), Santamaría (*Fl. Mycol. Iberica* **5**, 2003; Iberian peninsula), Majewski (*Acta Mycologica* Warszawa **41**: 65, 2006; Poland).

Dimerospora Th. Fr. (1860) = Lecania fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Dimerosporiella Höhn. (1909) ≡ Dimerosporina.

Dimerosporiella Speg. (1908), Bionectriaceae. Anamorph *Acremonium*-like. 1 (on hyphae of *Meliola*), Brazil. See Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Dimerosporina Höhn. (1910) = Dysrhynchis fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Dimerosporiopsis Henn. (1901) = Antennularia fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Dimerosporium Fuckel (1870) = Asterina fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

dimerous (of basidia), having a constriction between the probasidium and the metabasidium, as in *Brachybasidium*.

dimidiate (1) shield-like; appearing to lack one half, or having one half very much smaller than the other; (2) (of a pileus), without a stalk and semi-circular; (3) (of lamellae), stretching only halfway to the stipe; (4) (of an ascomatal wall), having the outer wall covering only the top part.

dimitic, see hyphal analysis.

dimixis, see heterothallism.

di-mon, see Buller phenomenon.

dimorphic, having two forms; esp. of *Histoplasma*, *Sporothrix*, and other pathogens of humans and animals which have yeast and mycelial habits. See Romano (*in* Ainsworth & Sussman (Eds), *The Fungi* **2**: 181, 1966; review), Szaniszlo (Ed.) (*Fungal dimorphism.*, 1985), San-Blas (*Handb. Appl. Mycol.* **2**. *Humans, animals and insects*: 459, 1991; molec. aspects).

Dimorphocystidaceae Jülich (1982) = Pterulaceae.

Dimorphocystis Corner (1950) = Actiniceps fide Boedijn (*Persoonia* **1**: 11, 1959).

Dimorphomyces Omoifo (1997) nom. illegit., anamorphic *Pezizomycotina*, Hso.?.?. 1, Nigeria. See Omoifo (*Hindustan Antibiot. Bull.* **38**: 8, 1996).

Dimorphomyces Thaxt. (1893), Laboulbeniaceae. 27, widespread. See Weir & Rossi (*Mycol.* **93**: 171, 2001; Bolivia), Santamaría (*Fl. Mycol. Iberica* **5**, 2003; Iberian peninsula).

Dimorphomycetaceae S. Colla (1934) = Laboulbeniaceae.

Dimorphospora Tubaki (1958), anamorphic *Hymenoscyphus*, Hso.0eH.3+15. 1, widespread. See Tubaki (*J. Hattori bot. Lab.* **20**: 156, 1958), Belliveau & Bärlocher (*MR* **109**: 1407, 2005; phylogeny).

Dimorphotricha Spooner (1987), Hyaloscyphaceae. 1, Australia. See Spooner (*Biblthca Mycol.* **116**, 1987).

Dinemasporiella Bubák & Kabát (1912) = Pseudolachnea Ranoj. fide Sutton (*Mycol. Pap.* **141**, 1977).

Dinemasporiella Speg. (1910) nom. dub., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Dinemasporiopsis Bubák & Kabát (1914) = Pseudolachnea Ranoj. fide Sutton (*Mycol. Pap.* **141**, 1977).

Dinemasporis Clem. & Shear (1931) ≡ Dinemasporiella Speg.

Dinemasporium Lév. (1846), anamorphic *Phomatospora*, Ccu.0eH.15. 18, widespread. See Nag Raj (*Coelomycetous Anamorphs with Appendage-bearing Conidia*, 1993), Yamaguchi *et al.* (*Mycoscience* **46**: 367, 2005; Japan), Duan *et al.* (*Fungal Diversity* **26**: 205, 2007; key).

Dingleya Trappe (1979), Tuberaceae. 7 (hypogeous), Australia. See Trappe *et al.* (*Aust. Syst. Bot.* **5**: 597, 1992), O'Donnell *et al.* (*Mycol.* **89**: 48, 1997; phylogeny), Percudani *et al.* (*Mol. Phylogen. Evol.* **13**: 169, 1999; DNA), Hansen & Pfister (*Mycol.* **98**: 1029, 2006; phylogeny), Læssøe & Hansen (*MR* **111**: 1075, 2007; phylogeny).

dioecism (adj. **dioecious**), the condition in which the male and female sex structures are on different thalli, e.g. in certain *Laboulbeniales*; also reported in *Lecidea verruca* where the 'male' thalli are mostly

smaller (Poelt, *Pl. Syst. Evol.* **135**: 81, 1980). cf. monoecism, heterothallism.

Dioicomyces Thaxt. (1901), Laboulbeniaceae. 32, widespread. See Rossi (*Mycol.* **85**: 125, 1993), Kaur & Mukerji (*Mycoscience* **37**: 61, 1996), Santamaria (*MR* **106**: 615, 2002; revision).

Diomedella Hertel (1984), Lecanoraceae (L). 2, New Zealand; sub-Antarctic islands. See Hertel (*Nova Hedwigia* Beih. **79**: 445, 1984).

Dionysia Arnaud (1952) = Candelabrum fide Bottomley (*TBMS* **37**: 234, 1954).

Diorchidiella J.C. Lindq. (1957), Raveneliaceae. 2 (on *Mimosa* (*Leguminosae*)), S. America. See Lindquist (*Darwiniana* **11**: 416, 1957).

diorchidioid (of teliospores), 2-celled and with septum longitudinal.

Diorchidium Kalchbr. (1882), Raveneliaceae. *c.* 15 (on *Leguminosae*, 1 on *Rubiaceae*), widespread (esp. tropical). See Hennen *et al.* (*Mycol.* **90**: 1079, 1998), Wood (*South African Journal of Botany* **72**: 534, 2006; southern Africa).

Diorygma Eschw. (1824), Graphidaceae (L). 1, widespread. See Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995), Kalb *et al.* (*Symb. bot. upsal.* **34** no. 1: 133, 2004; monogr.), Archer (*Australasian Lichenology* **56**: 10, 2005; Australia), Archer (*Biblthca Lichenol.* **94**, 2006; Australia), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny), Watanuki (*Lichenology* **5**: 69, 2006; distribution), Archer (*Systematics & Biodiversity* **5**: 9, 2007; Solomon Is).

Diosporangium, see *Diasporangium*.

Dioszegia Zsolt (1957), anamorphic *Tremellaceae*. 13, widespread. See Wang *et al.* (*Antonie van Leeuwenhoek* **93**: 391, 2008).

Diphaeis Clem. (1909) = Rhizocarpon fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Diphaeosticta Clem. (1909) = Pseudocyphellaria fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Diphanis Clem. (1909) = Rhizocarpon fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Diphanosticta Clem. (1909) = Pseudocyphellaria fide Galloway (*Bull. Br. Mus. nat. hist.* Bot. **17**, 1988).

Diphloeis Clem. (1909) = Toninia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Diphragmium Boedijn (1960) = Diorchidium fide Berndt (*Mycotaxon* **59**: 253, 1996).

Diphratora Trevis. ex Jatta (1900) = Solenopsora fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

diphycophilous, fungi lichenized with both a green and a blue-green photobiont (Pike & Carroll, *in* Alexopoulos & Mims, *Introductory mycology*, edn 3, 1980).

Diphymyces I.I. Tav. (1985), Laboulbeniaceae. 7, widespread. See Santamaría (*MR* **97**: 791, 1993; Spain), Weir & Rossi (*CJB* **75**: 791, 1997; NZ).

Diplacella Syd. (1930), Diaporthales. 1, America (tropical).

diplanetism (adj. **diplanetic**) (of zoospores of *Oomycota*), a sequence of two motile flagellate phases with an interspersed mobile aplanosporic phase in the zoosporic part of the life-history; the aplanosporic phase as a walled cyst; motile phases may be monomorphic or dimorphic.

diplo- (prefix), two; twice; double.

diplobiontic, see *Diplobionticae*.

Diplobionticae. Subclass introduced by Nannfeldt (1932) for *Ascomycota* in which the life cycle consists of two thalli (bionts), like the gametophyte and sporophyte of many algae, e.g. *Spermophthora* is diplobiontic, because of its two generations, free from each other; cf. *Haplobionticae*.

Diplocarpa Massee (1895), Helotiales. 1, Europe. See Nauta & Spooner (*Mycologist* **14**: 21, 2000; UK).

Diplocarpon F.A. Wolf (1912), Helotiales. Anamorphs *Entomosporium*, *Marssonina*. 6, widespread. *D. rosae* (anamorph *Marssonina rosae*; black spot of rose), *D. earlianum* (anamorph *M. fragariae*; strawberry leaf scorch). See Ali *et al.* (*Proceedings, BCPC Conference* Pests & Diseases 2000: 251, 2000).

Diplocarponella Bat. (1957) = Stomiopeltis fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Diploceras (Sacc.) Died. (1915) = Seimatosporium fide Sutton (*TBMS* **64**: 483, 1975).

Diplochora Höhn. (1906) = Pseudophacidium fide Petrak (*Sydowia* **5**: 193, 1951).

Diplochora P. Syd. (1913) ≡ Diplochorella.

Diplochorella P. Syd. (1913), Dothideomycetes. 3, S. Africa; New Zealand. See von Arx & Müller (*Stud. Mycol.* **9**, 1975), Wagner & Wilkinson (*Pl. Dis.* **76**: 212, 1992), Johnston & Cannon (*N.Z. Jl Bot.* **42**: 921, 2004; New Zealand).

Diplochorina Gutner (1933), Dothideomycetes. 1, former USSR.

Diplochytridium Karling (1971) nom. inval., Chytridiaceae. 21. See Desjardin (*Sydowia* **42**: 17, 1990; culture).

Diplochytrium Tomaschek (1878) = Olpidium fide Karling (*Chytriomyc. Iconogr.*, 1977).

Diplocladiaceae Nann. (1934) = Hypocreaceae.

Diplocladiella G. Arnaud ex M.B. Ellis (1976), anamorphic *Pezizomycotina*, Hso.0bP.10. 7, widespread (esp. tropical). See Nawawi (*Mycotaxon* **28**: 297, 1987), Lee *et al.* (*Fungal Diversity* **1**: 165, 1998), Kendrick (*CJB* **81**: 75, 2003; morphogenesis), Cooper (*N.Z. Jl Bot.* **43**: 323, 2005; New Zealand).

Diplocladium Bonord. (1851) = Cladobotryum fide Hughes (*CJB* **36**: 727, 1958), Kirschner & Oberwinkler (*MR* **103**: 1152, 1999; exclusion of *D. gregarium*).

Diplococcium Grove (1885), anamorphic *Helminthosphaeria*, Hso.1eP.28. 20, widespread. See Sinclair *et al.* (*TBMS* **85**: 736, 1985), Subramanian & Sekar (*Kavaka* **15**: 87, 1987; teleomorph), Goh & Hyde (*Fungal Diversity* **1**: 65., 1998; key), Wang & Sutton (*CJB* **76**: 1608, 1998; *Selenosporella* synanamorph), Réblová (*Sydowia* **51**: 223, 1999; teleomorph), Braun *et al.* (*J. Econ. Taxon. Bot.* **25**: 284, 2001; India).

diploconidium, a binucleate conidium.

Diplocryptis Clem. (1909) = Cryptodiscus fide Sherwood (*Mycotaxon* **6**: 215, 1977).

Diplocystidiaceae Kreisel (1974), Boletales. 4 gen. (+ 1 syn.), 5 spp.

Lit.: Kreisel (*Feddes Repert.* **85**: 325, 1974), Miller & Miller (*Gasteromycetes. Morphological and Development Features with Keys to the Orders, Families, and Genera*: 157 pp., 1988), Pegler *et al.* (*British Puffballs, Earthstars and Stinkhorns* An Account of the British Gasteroid Fungi: 255 pp., 1995; as *Astraeaceae*), Hughey *et al.* (*Mycol.* **92**: 94, 2000; as *Astraeaceae*), Binder & Bresinsky (*Mycol.* **94**: 85, 2002; as *Astraeaceae*).

Diplocystis Berk. & M.A. Curtis (1869), Diplocystidiaceae. 1, West Indies. See Kreisel (*Feddes Repert.* **85**: 325, 1974).

Diploderma Link (1816) ? = Astraeus fide Stalpers (*in litt.*).

Diplodermaceae Fr. (1849) = Astraeaceae.

Diplodia Fr. (1834), anamorphic *Botryosphaeriaceae*, Cpd.1eP.1. 960, widespread. See Shear (*Mycol.* **25**: 274, 1933; teleomorphs), Zambettakis (*BSMF* **70**: 219, 1954; species concepts, 24 spp. accepted), Vajna (*Eur. J. For. Path.* **16**: 223, 1986; on *Quercus*), Wang *et al.* (*Mycol.* **78**: 960, 1986; TEM), Luque & Girbal (*Eur. J. For. Path.* **19**: 7, 1989; on *Quercus*), Swart *et al.* (*Phytopathol.* **81**: 489, 1991; variation), Swart *et al.* (*MR* **97**: 832, 1993; biometrics), Smith & Stanosz (*Phytopathol.* **85**: 699, 1995; population biology, USA), Ragazzi *et al.* (*Eur. J. For. Path.* **27**: 391, 1997; VCGs), Jacobs & Rehner (*Mycol.* **90**: 601, 1998; morphology, phylogeny), Crous & Palm (*Sydowia* **51**: 167, 1999; generic limits), Stanosz *et al.* (*MR* **103**: 1193, 1999; DNA, isoenzymes), Denman *et al.* (*Stud. Mycol.* **45**: 129, 2000; teleomorph), Wet *et al.* (*Pl. Dis.* **84**: 151, 2000; biogeography), Burgess *et al.* (*MR* **105**: 1331, 2001; genetic diversity), Zhou & Stanosz (*Mycol.* **93**: 516, 2001; phylogeny), Phillips (*Phytopath. Mediterr.* **41**: 3, 2002; on *Vitis*), Alves *et al.* (*Mycol.* **96**: 598, 2004; on *Quercus*), Burgess *et al.* (*MR* **108**: 1399, 2004; on *Pinus*), Van Niekerk *et al.* (*Mycol.* **96**: 781, 2004; on *Vitis*), Wingfield *et al.* (*Australas. Pl. Path.* **33**: 513, 2004; on *Pinus*), Luchi *et al.* (*J. Phytopath.* **153**: 37, 2005; molecular diagnostics), Alves *et al.* (*Fungal Diversity* **23**: 1, 2006; *D. cupressi*), Crous *et al.* (*Stud. Mycol.* **55**: 235, 2006; phylogeny), Smith & Stanosz (*Pl. Dis.* **90**: 307, 2006; molecular detection), Damm *et al.* (*Mycol.* **99**: 664, 2007; S Africa, on *Prunus*), Phillips *et al.* (*Mycol.* **97**: 513, 2007; genus concept, phylogeny).

Diplodiella (P. Karst.) Sacc. (1884) nom. dub., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Diplodiella Petr. (1953) nom. illegit., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Diplodina Westend. (1857), anamorphic *Cryptodiaporthe*, Cac.1-≡ eH.15. 5, widespread. See Sutton (*The Coelomycetes*, 1980), Wulf (*Nachricht. Deutsch. Pflanzenschutz.* **42**: 97, 1990; *D. acerina* endophytic and antagonistic to leaf-feeding insects), Bathgate *et al.* (*MR* **100**: 159, 1996; on *Banksia*, Australia).

Diplodinis Clem. (1931), anamorphic *Pezizomycotina*, Cpd.1eH.?. 1, Scandinavia.

Diplodinula Tassi (1902), anamorphic *Pezizomycotina*, Cpd.1eH.?. 68, widespread.

diplodioecious, see heterophytic.

Diplodiopsis Henn. (1904) = Parodiella fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

diplodiosis, in cattle and sheep, a neuromuscular paretic syndrome caused by *Stenocarpella maydis* (syn. *Diplodia maydis*) infected maize in South Africa.

Diplodites Babajan & Tasl. (1970), Fossil Fungi. 1 (Tertiary), former USSR.

Diplodothiorella Bubák (1916) = Sphaerellopsis Cooke fide Sutton (*Mycol. Pap.* **141**, 1977).

Diplogelasinospora Cain (1961), Sordariales. 2, Asia; N. America. See Udagawa & Horie (*J. Jap. Bot.* **47**: 297, 1972), Udagawa *in* Subramanian (Ed.) (*Taxonomy of fungi* **1**: 225, 1978; anamorph), Novotný (*Czech Mycol.* **53**: 203, 2001; Czech Republic), Cai *et al.* (*MR* **110**: 359, 2006; phylogeny), Cai *et al.* (*MR* **110**: 137, 2006; phylogeny).

Diplogramma Müll. Arg. (1891), Roccellaceae (L). 1. See Staiger (*Biblthca Lichenol.* **85**, 2002), Archer (*Telopea* **10**: 589, 2004; Australia, comparison with *Opegrapha*).

Diplogrammatomyces Cif. & Tomas. (1953) ≡ Diplogramma.

Diplographis Kremp. ex A. Massal. (1860) = Fissurina fide Staiger (*Biblthca Lichenol.* **85**, 2002).

diploheteroecious, see heterophytic.

Diploicia A. Massal. (1852), Caliciaceae (L). *c.* 4, widespread (temperate). See Elix *et al.* (*Mycotaxon* **33**: 457, 1988; chemistry), Matzer *et al.* (*Nordic Jl Bot.* **17**: 433, 1997; South Africa), Nordin (*Symb. bot. upsal.* **32** no. 1: 195, 1997; ultrastr.), Harada *et al.* (*J. Nat. Hist. Mus. Inst.* Chiba **5**: 97, 1999; Japan), Grube & Arup (*Lichenologist* **33**: 63, 2001; evolution), Molina *et al.* (*Lichenologist* **34**: 509, 2002; phylogeny, synonymy with *Diplotomma*), Helms *et al.* (*Mycol.* **95**: 1078, 2003; phylogeny).

diploid (1) (of a nucleus), having the $2n$ number of chromosomes; (2) (of a cell), having the $2n$ number of chromosomes in one (synkaryotic, $2n$) or two (dikaryotic, $n + n$) nuclei; (3) (of a mycelium), made up of dikaryotic diploid cells.

Diploidium G. Arnaud (1923) = Septoidium fide Ellis (*Dematiaceous Hyphomycetes*, 1971).

diploidization, the process by which a haploid cell (or mycelium) becomes a diploid (dikaryotic) cell (mycelium) having conjugate nuclei (Buller, 1941); cf. heterokaryotise.

diplokaryon, see synkaryon.

Diplolabia A. Massal. (1854) orth. var. = Dyplolabia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Diplolaeviopsis Giralt & D. Hawksw. (1991), anamorphic *Pezizomycotina*, Cpd.1eH.19. 1 (on lichens), Spain; USA. See Giralt & Hawksworth (*MR* **95**: 759, 1991), Diederich (*Herzogia* **16**: 41, 2003; USA).

Diplomitoporus Domański (1970), Polyporaceae. 11, widespread. See Gilbertson & Ryvarden (*N. Amer. Polyp.* **1**: 240, 1986).

diplomitotic nuclear cycle, occurrence of two mitotic phases of different ploidy in the nuclear cycle (Dick, 1987); karyogamy - mitosis - meiosis - mitosis - karyogamy -.

diplomonoecious, see homophytic.

Diplomyces Thaxt. (1895), ? Laboulbeniaceae. 3, widespread. See Rossi & Cesari Rossi (*G. bot. ital.* n.s. **112**: 63, 1978), Benjamin (*Aliso* **10**: 345, 1983), Majewski (*Acta Mycologica* Warszawa **19**: 183, 1983; Poland), Tavares (*Mycol. Mem.* **9**: 627 pp., 1985), Santamaría (*Fl. Mycol. Iberica* **5**, 2003; Iberian peninsula).

Diplonaevia Sacc. (1889), Helotiales. 23, widespread (north temperate). See Hein (*Sydowia* **36**: 78, 1983; key), Nannfeldt (*Nordic Jl Bot.* **4**: 791, 1985; key 10 spp. *Juncaceae*), Scheuer (*MR* **95**: 634, 1991), Nauta & Spooner (*Mycologist* **14**: 21, 2000; UK), Raitviir (*Mycotaxon* **87**: 359, 2003; Greenland), Raitviir (*Folia cryptog. Estonica* **40**: 43, 2003), Suková (*Czech Mycol.* **56**: 63, 2004; Czech Republic).

Diplonema P. Karst. (1889) [non *Diplonema* Kjellm. 1855, *Algae*] ≡ Amphinema.

Diploneurospora K.P. Jain & R.C. Gupta (1970), Fossil Fungi, Xylariales. 1 (Miocene), India.

diplont, the thallus of the diploid stage; the sporophyte.
Diploöspora Grove (1916), anamorphic *Pezizomycotina*, Hsy.1eH.?. 3, Europe. See Sreekala & Bhat (*Mycotaxon* **80**: 101, 2001; India).
Diplopeltis Pass. (1889) [non *Diplopeltis* Endl. 1837, *Sapindaceae*] ≡ Pycnoseynesia fide Sutton (*Mycol. Pap.* **141**, 1977).
Diplopeltopsis Henn. ex Höhn. (1911) = Asterothyrium Müll. Arg. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).
diplophase, the part of a life-history in which the cells are diploid.
Diplophlyctis J. Schröt. (1892), Endochytriaceae. 12, widespread. See Sparrow (*Aquatic Phycomycetes* Edn 2: 386, 1960; key), Dogma (*TBMS* **67**: 255, 1976; key chitinophilic spp.).
Diplophragmia Vain. (1934) = Lecidella fide Santesson (*The lichens and lichenicolous fungi of Sweden and Norway*, 1993).
Diploplacis Clem. & Shear (1931) = Sphaerellopsis Cooke fide Sutton (*Mycol. Pap.* **141**, 1977).
Diploplacosphaeria Petr. (1921) = Sphaerellopsis Cooke fide Sutton (*Mycol. Pap.* **141**, 1977).
Diploplenodomopsis Petr. (1923) = Diplodina fide Clements & Shear (*Gen. Fung.*, 1931).
Diploplenodomus Died. (1912), anamorphic *Pezizomycotina*, St.1eH.?. 2 or 3, Europe. See Boerema *et al.* (*Persoonia* **16**: 141, 1996).
Diplopodomyces W. Rossi & Balazuc (1977), Laboulbeniaceae. 1, Europe. See Rossi & Balazuc (*Revue Mycol.* Paris **41**: 528, 1977), Tavares (*Mycol. Mem.* **9**: 627 pp., 1985).
Diplorhinotrichum Höhn. (1902) = Dactylaria fide Bhatt & Kendrick (*CJB* **46**, 1968).
Diplorhynchus Arnaud (1952) nom. inval., anamorphic *Pezizomycotina*, Hso.0-≡ hH.1. 1, France. See Goos (*Mycol.* **79**: 1, 1987).
Diploschistaceae Zahlbr. (1905) = Thelotremataceae.
Diploschistella Vain. (1926) nom. rej., Gomphillaceae (L). 1, pantropical. See Lumbsch & Hawksworth (*Taxon* **36**: 764, 1987; nomencl.), Lücking *et al.* (*Lichenologist* **37**: 123, 2005; phylogeny), Lücking *et al.* (*Lichenologist* **38**: 131, 2006; key, Costa Rica).
Diploschistes Norman (1853), Thelotremataceae (L). *c.* 43, widespread. See Lumbsch (*J. Hattori bot. Lab.* **66**: 133, 1989; key 14 holarctic spp.), Lumbsch (*Nova Hedwigia* **56**: 227, 1993), Pant & Upreti (*Lichenologist* **25**: 33, 1993; key 14 spp. India & Nepal), Lumbsch & Tehler (*Bryologist* **101**: 398, 1998; cladistic analysis), Winka *et al.* (*Lichenologist* **30**: 455, 1998; DNA), Martín *et al.* (*Pl. Biol.* **2**: 571, 2000; morphology), Kauff & Lutzoni (*Mol. Phylogen. Evol.* **25**: 138, 2002; phylogeny), Lumbsch & Elix (*Biblthca Lichenol.* **86**: 119, 2003; Australia), Martín *et al.* (*Lichenologist* **35**: 27, 2003; phylogeny), Frisch *et al.* (*Biblthca Lichenol.* **92**: 517, 2006; phylogeny), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny), Hofstetter *et al.* (*Mol. Phylogen. Evol.* **44**: 412, 2007; phylogeny).
Diploschistomyces Werner (1976) nom. inval. ≡ Diploschistes.
Diplosclerophoma Petr. (1923) = Diplodina fide Sutton (*Mycol. Pap.* **141**, 1977).
Diplosis Clem. (1909) = Toninia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).
Diplosphaerella Grove (1912) = Delphinella fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).
Diplosporis Clem. (1906) ≡ Geminispora.
Diplosporites Pia (1927), Fossil Fungi. 1 (Oligocene), France.
Diplosporium Link (1824) = Oedemium fide Hughes (*CJB* **36**: 727, 1958).
Diplosporonema Höhn. (1917), anamorphic *Pezizomycotina*, Cac.≡ eH.10. 1, widespread.
diplospory, when a diploid nucleus is incorporated into cytoplasm influenced by adjacent meioses in the coenocytic gametangium, subsequently giving rise to oospores (in *Oomycetes*; Dick, *New Phytol.* **71**: 1151, 1972).
Diplostephanus Langeron (1922) = Emericella fide von Arx (*Gen. Fungi Sporul. Cult.* Edn 3, 1981).
diplostichous, in two lines or groups.
Diplostoma, see *Diploderma*.
diplostromatic, see stroma.
diplosynoecious, see homophytic.
Diplotheca (Zahlbr.) Räsänen (1943) [non *Diplotheca* Hochst. 1846, *Leguminosae*] = Lecidea fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).
Diplotheca Starbäck (1893), Myriangiaceae. 1 (on *Cactaceae*), America.
Diplothrix Vain. (1921) = Calloriopsis fide Santesson (*Svensk bot. Tidskr.* **45**: 300, 1951).
Diplotomma A. Massal. (1852) = Diploicia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).
Diplotomma Flot. (1849), Caliciaceae (±L). *c.* 29, widespread. See Singh & Awasthi (*Geophytology* **19**: 173, 1990; key 11 Indian spp.), Nordin (*Symb. bot. upsal.* **32** no. 1: 195, 1997; ultrastr.), Molina *et al.* (*Lichenologist* **34**: 509, 2002; phylogeny), Helms *et al.* (*Mycol.* **95**: 1078, 2003; phylogeny), Simon *et al.* (*J. Mol. Evol.* **60**: 434, 2005; introns).
Diplozythia Bubák (1904) nom. conf., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).
Diplozythiella Died. (1916), anamorphic *Pezizomycotina*, St.1eH.15. 1, India.
Dipodascaceae Engl. & E. Gilg (1924), Saccharomycetales. 6 gen. (+ 6 syn.), 71 spp.
Lit.: Hoog *et al.* (*Stud. Mycol.* **29**: 131 pp., 1986), Hoog *et al. in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 181, 1998), Hoog *et al. in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 209, 1998), Hoog *et al. in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 574, 1998), Smith *et al.* (*Antonie van Leeuwenhoek* **77**: 71, 2000), Ueda-Nishimura & Mikata (*Microbiology* Reading **146**: 1045, 2000), Suh *et al.* (*Mycol.* **98**: 1006, 2006; phylogeny).
Dipodascales = Saccharomycetales.
Dipodascopsis L.R. Batra & Millner (1978), Lipomycetaceae. 2, Europe; N. America. See Jansen van Rensburg *et al.* (*Syst. Appl. Microbiol.* **18**: 410, 1995; lipids, DNA), Smith & de Hoog *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 178, 1998), Smith *et al.* (*S. Afr. J. Sci.* **96**: 247, 2000; chemistry), Suh & Blackwell (*Insect-Fungal Associations* Ecology and Evolution: 244, 2005; ecology), Suh *et al.* (*Mycol.* **98**: 1006, 2006; phylogeny), Kurtzman *et al.* (*FEMS Yeast Res.* **7**: 1027, 2007; phylogeny).
Dipodascus Lagerh. (1892), Dipodascaceae. Anamorph *Geotrichum*. 16, widespread. See de Hoog *et al.* (*Stud. Mycol.* **29**, 1986; key), de Hoog *et al. in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 181, 1998), Smith & Poot (*Antonie van Leeuwenhoek* **74**: 229, 1998; DNA), Ueda-Nishimura & Mikata (*Microbiology* Reading **146**: 1045, 2000; rDNA secondary structures), Spatafora (*Cellular

Origin and Life in Extreme Habitats **4**: 591, 2002; ecology), Smith & Poot (*FEMS Yeast Res.* **3**: 301, 2003; phylogeny), Smith *et al.* (*Antonie van Leeuwenhoek* **83**: 317, 2003; chemistry, morphology), Bareetseng *et al.* (*Antonie van Leeuwenhoek* **85**: 187, 2004; ascospores), Hoog & Smith (*Stud. Dirinastromyces Cif. & Tomas. (1953) ≡ Dirinastrum.

Dirinastrum Müll. Arg. (1893) ? = Buellia See Tehler (*Op. Bot.* **70**, 1983).

Dirinella M. Choisy (1931) = Lecanora fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Dirinopsis De Not. (1846) = Dirina fide Tehler (*Op. Bot.* **70**, 1983).

Disaeta Bonar (1928) = Seimatosporium fide Shoemaker (*CJB* **42**: 411, 1964).

Disarticulatus G.F. Orr (1977) = Arachniotus fide von Arx (*Persoonia* **9**: 393, 1977).

disc (1) (**disk**) (of discomycetes), the round, plate-like or curved spore-producing part of the ascoma; (2) (of a pileus), the central part of the top surface.

Discales. Used by Le Gal (1953) for discomycetes.

Discaria (Sacc.) Sacc. (1889) [non *Discaria* Hook. 1830, *Rhamnaceae*] ≡ Plicaria.

Discella Berk. & Broome (1850) ? = Rhabdospora fide Sutton (*Mycol. Pap.* **141**, 1977).

Discellaceae Clem. & Shear (1931) = Mycosphaerellaceae.

Dischloridium B. Sutton (1977), anamorphic *Australiasca*, Hso.0eH.15. 9, widespread. See Seifert & Gams (*Mycotaxon* **24**: 459, 1985), Holubová-Jechová (*Česká Mykol.* **41**: 107, 1987), Srivastava (*Sydowia* **39**: 217, 1986).

disciform, round and flat.

Discina (Fr.) Fr. (1849), Discinaceae. 20, widespread (north temperate). See Donadini (*Bull. Soc. linn. Provence* **38**: 161, 1987; 17 spp.), Kimbrough *et al.* (*CJB* **68**: 317, 1990; similarity to *Gyromitra*), O'Donnell *et al.* (*Mycol.* **89**: 48, 1997; phylogeny), Harrington *et al.* (*Mycol.* **91**: 41, 1999; phylogeny), Vizzini (*Boll. Gruppo Micol. 'G. Bresadola'* **46**: 53, 2003; cytology).

Discina Bonord. (1851) nom. dub., Fungi. See Eckblad (*Nytt Mag. Bot.* **15**: 170, 1968).

Discinaceae Benedix (1961), Pezizales. 5 gen. (+ 12

syn.), 58 spp.

Lit.: Gibson & Kimbrough (*CJB* **66**: 1743, 1988), Kimbrough *et al.* (*CJB* **68**: 317, 1990), Kimbrough (*MR* **95**: 421, 1991), Abbott & Currah (*Mycotaxon* **62**: 1, 1997), Landvik *et al.* (*Nordic Jl Bot.* **17**: 403, 1997), O'Donnell *et al.* (*Mycol.* **89**: 48, 1997; phylogeny), Harrington *et al.* (*Mycol.* **91**: 41, 1999; phylogeny), Hansen & Pfister (*Mycol.* **98**: 1029, 2006; phylogeny), Læssøe & Hansen (*MR* **111**: 1075, 2007; phylogeny).

Discinella Boud. (1885), Helotiaceae. *c.* 12, widespread. See Dennis (*Mycol. Pap.* **62**, 1956), Anderson *et al.* (*Mycologist* **15**: 132, 2001).

Discinella P. Karst. (1891), ? Pezizales. 1, Europe.

Disciotis Boud. (1885), Morchellaceae. *c.* 4, widespread (north temperate). See O'Donnell *et al.* (*Mycol.* **89**: 48, 1997; phylogeny), Hansen & Pfister (*Mycol.* **98**: 1029, 2006; phylogeny).

Disciseda Czern. (1845), Agaricaceae. 15, widespread. See Moravec (*Sydowia* **8**: 278, 1954), Grgurinovic (*Larger Fungi of South Australia*: 725 pp. + 34 [m, 1997), Jeppson (*Windahlia* **22**: 33, 1995; peridial morphology), Moreno *et al.* (*Persoonia* **18**: 215, 2003).

Discoascina Beneš (1961), Fossil Fungi. 1 (Carboniferous), former Czechoslovakia.

Discocainia J. Reid & A. Funk (1966), Rhytismataceae. 3, widespread. Some authors place this in the *Helotiaceae*. See Sherwood (*Occ. Pap. Farlow Herb. Crypt. Bot.* **15**, 1980), Livsey & Minter (*CJB* **72**: 549, 1994).

discocarp, an ascoma in which the hymenium is uncovered when the asci and spores are mature; an apothecium.

Discocera A.L. Sm. & Ramsb. (1917) nom. rej. ? = Trapelia fide Hawksworth & David (*Taxon* **38**: 493, 1989), Rambold & Triebel (*Notes R. bot. Gdn Edinb.* **46**: 375, 1990; status).

Discochora Höhn. (1918) = Guignardia fide Bissett (*CJB* **64**: 1720, 1986), Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Discocistella Svrček (1962) ≡ Cistella.

Discocolla Prill. & Delacr. (1894), anamorphic *Pezizomycotina*, Hsp.≡ eH.?. 1 or 2, widespread (north temperate).

Discocurtisia Nannf. (1983), Dermateaceae. 1 (on grasses), N. America. See Nannfeldt (*TBMS* **75**: 292, 1983).

Discocyphella Henn. (1900) = Marasmius fide Kuyper (*in litt.*).

Discodiaporthe Petr. (1921) = Melanconis fide Wehmeyer (*Revision of Melanconis*, 1941).

Discodothis Höhn. (1909) = Rhagadolobium fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Discofusarium Petch (1921) = Fusarium fide Wollenweber & Reinking (*Die Fusarien*, 1935).

Discogloeum Petr. (1923), anamorphic *Pezizomycotina*, Cac.0eH.15. 2, Europe. See von Arx (*Biblthca Mycol.* **24**, 1970).

Discohainesia Nannf. (1932), ? Leotiomycetes. Anamorphs *Hainesia*, *Pilidium*. 1, N. America; Europe. The anamorph connection requires further research. See Shear & Dodge (*Mycol.* **13**: 135, 1921), Palm (*Mycol.* **83**: 787, 1991), Rossman *et al.* (*Mycol. Progr.* **3**: 275, 2004; phylogeny, anamorph).

discoid, flat and circular; resembling a disk (Fig. 23.5*a*, *b*).

discolourous, of a different colour, as of the two surfaces of a foliose lichen thallus.

Discomycella Höhn. (1912), ? Helotiales. 1, Java.

discomycete, one of the *Discomycetes*.

Discomycetella Sanwal (1953) ? = Miladina. The type cannot be located. fide Kimbrough (*Bot. Rev.* **36**: 91, 1970), Pfister (*Am. J. Bot.* **60**: 355, 1973).

Discomycetes. **Cup fungi**; class of *Ascomycota* formerly used for taxa with ascomata which are sessile, open, ± saucer-shaped or cup-shaped apothecia, but these may be covered by a membrane at first or be permanently closed and hypogeous, or have the hymenium borne on stipitate convoluted structures; the apothecia are generally ascohymenial in ontogeny, with unitunicate asci (inoperculate or operculate). The *Helotiales*, *Ostropales*, *Pezizales* and *Rhytismatales* are regularly included, but the name has also been applied to some *Dothideales*, *Patellariales* and *Lecanorales*. The class is not accepted in modern classification but 'discomycetes' still has value as a colloquial descriptive term.

Lit.: **General**: Boudier (1907, 1905-10; see Boudier), Nannfeldt (1932), Dennis (1978), Bellèmere (*BSMF* **83**: 393, 753, 1968; inoperc. ontogeny; *Revue mycol.* **41**: 233, 1977; ascus ultrastr.), Kimbrough (*Bot. Rev.* **36**: 91, 1970; classification; fam. key; *in* Parker, 1982, **1**: 232), Korf (1973), Kamaletdinova & Vassilyeva (*Cytology of discomycetes*, 1982; ultrastr.). Discosiella Syd. & P. Syd. (1912), anamorphic *Pezizomycotina*. See Subramanian & Reddy (*Proc. Indian natn Sci. Acad.* Part B. Biol. Sci. **75**: 111, 1972), Nag Raj (*CJB* **59**: 2519, 1981), Eriksson & Hawksworth (*SA* **11**: 56, 1992), Kobayashi *et al.* (*Mycoscience* **46**: 78, 2005; Japan).

Discosiellina Subram. & K.R.C. Reddy (1972), anamorphic *Pezizomycotina*, Cpt.0fH.1. 1, India. See Nag Raj (*CJB* **59**: 2531, 1981).

Discosiopsis Edward, Kr.P. Singh, S.C. Tripathi, M.K. Sinha & Ranade (1974) = Pestalotiopsis fide Sutton (*Mycol. Pap.* **141**, 1977).

Discosiospora A.W. Ramaley (1989) = Discosia fide Nag Raj (*Coelomycetous Anamorphs with Appendage-bearing Conidia*, 1993).

Discosphaera Dumort. (1822) nom. rej. prop. = Hypoxylon Bull. See Læssøe (*SA* **13**: 43, 1994; ? synonym of *Xylaria*).

Discosphaerina Höhn. (1917), Dothioraceae. Anamorphs *Kabatia*, *Kabatiella*, *Sarcophoma*, *Selenophoma*, *Hormonema*-like, *Aureobasidium*-like. 11, Europe; N. America. The genus has been confused with *Guignardia*. See Barr (*Contr. Univ. Mich. Herb.* **9**: 523, 1972), Holm *et al.* (*Karstenia* **39**: 59, 1999), Yurlova *et al.* (*Stud. Mycol.* **43**: 63, 1999; DNA), Lumbsch & Lindemuth (*MR* **105**: 901, 2001; phylogeny).

Discospora Arthur (1907) = Pileolaria fide Arthur (*Manual Rusts US & Canada*, 1934).

Discosporella Höhn. (1927) ≡ Conostroma fide Petrak (*Annls mycol.* **27**: 371, 1929).

Discosporiella Petr. (1923) = Cryptosporiopsis fide von Arx (*Verh. K. ned. Akad. Wet. Amst.* C **51**: 22, 1957).

Discosporina Höhn. (1927), anamorphic *Pezizomycotina*, Cac.0eH.15. 4, widespread.

Discosporiopsis Petr. (1921) = Phacidiopycnis fide Sutton (*Mycol. Pap.* **141**, 1977).

Discosporium Höhn. (1915), anamorphic *Cryptodiaporthe*, St.0eH.19. 3, widespread. See Sutton (*The Coelomycetes*, 1980).

Discosporium Sacc. & P. Syd. (1902), anamorphic *Pezizomycotina*, Hsp.0eP.?. 1, Italy.

Discostroma Clem. (1909), Amphisphaeriaceae. Anamorph *Seimatosporium*. 28, widespread. See Brockmann (*Sydowia* **28**: 275, 1976; key), Sivanesan (*TBMS* **81**: 325, 1983), Kang *et al.* (*Fungal Diversity* **1**: 147, 1998; DNA), Kang *et al.* (*MR* **103**: 53, 1999), Jeewon *et al.* (*Mol. Phylogen. Evol.* **25**: 378, 2002; phylogeny), Kang *et al.* (*Mycotaxon* **81**: 321, 2002), Jeewon *et al.* (*MR* **107**: 1392, 2003; phylogeny), Hatakeyama & Harada (*Mycoscience* **45**: 106, 2004; on *Paeonia*), Paulus *et al.* (*Sydowia* **58**: 76, 2006; key).

Discostromella Petr. (1924) = Leptostromella fide Clements & Shear (*Gen. Fung.*, 1931).

Discostromopsis H.J. Swart (1979) = Discostroma fide Sivanesan (*TBMS* **81**: 325, 1983).

Discotheciella Syd. & P. Syd. (1917), anamorphic *Pezizomycotina*, Cpt.1eH.?. 1, Philippines.

discothecium, an ascostroma resembling an apothecium but bearing cylindrical bitunicate asci and differing from a hysterothecium by the weathering away of the covering layer (Korf, *Mycol.* **54**: 25, 1962).

Discothecium Syd. & P. Syd. (1916) ≡ Discotheciella.

Discothecium Zopf (1897) = Endococcus fide Hawksworth (*Bot. Notiser* **132**: 283, 1979).

Discoxylaria J.C. Lindq. & J.E. Wright (1964), Xylariaceae. Anamorph *Hypocreodendron*. 1, Argentina; Mexico. See Rogers *et al.* (*Mycol.* **87**: 41, 1995).

Discozythia Petr. (1922), anamorphic *Pezizomycotina*, ?.0eH.?. 3, Europe.

discrete (1) separate; not joining; (2) (of a conidiogenous cell), not subtended by a conidiophore; cf. integrated.

discrete body, a non-functional cleistothecial initial of a dermatophyte in culture; pseudocleistothecium.

Discula Sacc. (1884), anamorphic *Apiognomonia*, *Gnomonia*, *Gnomoniella*, *Plagiostoma*, Cac.0eH.15. 15, Europe; N. America. See von Arx (*Verh. K. ned. Akad. Wet. Amst.* C **51**: 32, 1957), Petrak (*Sydowia* **15**: 221, 1962), Petrak (*Sydowia* **24**: 270, 1971), Swart *et al.* (*Phytophylactica* **22**: 143, 1990; *D. platani* on plane trees in S. Disculina Höhn. (1916), anamorphic *Dothideomycetes*, St.0eH.19. 1, Europe.

disinfectant, a substance for the destruction of pathogenic microorganisms.

disjunctor, a cell or projection, sometimes having a short existence, developing through the pores of septal lamellae of adjoining conidia in a chain (e.g. in *Monilinia*); a connective. See Batra (*Mycol.* **80**: 660, 1988).

disk, see disc.

Disparidicellites Kalgutkar & Janson. (2000), Fossil Fungi. 1, China. See Kalgutkar & Jansonius (*AASP Contributions Series* **39**: 94, 2000).

Disperma Theiss. (1916) [non *Disperma* J.F. Gmel. 1792, *Rubiaceae*] ≡ Dicarpella.

dispersal spore, a spore disseminated by wind, water, or other agent; diaspore.

Dispira Tiegh. (1875), Dimargaritaceae. 4 (mycoparasitic on *Mucorales* and *Chaetomium*), widespread. See Benjamin (*Aliso* **5**: 248, 1963; key), Kurtzman (*Mycol.* **60**: 915, 1968; parasitism & culture), Misra & Lata (*Mycotaxon* **8**: 372, 1979), White *et al.* (*Mycol.* **98**: 872, 2006; phylogeny).

dispore, one of the spores of a 2-spored basidium as opposed to a **tetraspore**, one of the spores of a 4-spored basidium (Corner, 1947). Cf. monospore.

Disporotrichum Stalpers (1984), anamorphic *Agaricales*, Hso.0eH.10. 1, Netherlands. See De Hoog & Gerrits (*Mycoses* **41**: 183, 1998; molec. diagn. clinical isol.).

dissepiment, a partition, e.g. that between the pores of a polypore.

Dissitimurus E.G. Simmons, McGinnis & Rinaldi (1987), anamorphic *Pezizomycotina*, Hso.≡ eP.3/10. 1 (from humans), USA. See Simmons *et al.* (*Mycotaxon* **30**: 247, 1987).

Dissoacremoniella Kiril. (1970), anamorphic *Pezizomycotina*, Hso.0eH.6. 1, former USSR. See Kirilenko (*Nov. sist. Niz. Rast.* **7**: 235, 1970).

dissociation, Leonian's name for mutation or saltation.

Dissoconium de Hoog, Oorschot & Hijwegen (1983), anamorphic *Mycosphaerella*, Hso.0-1eH.10. 2, widespread. See de Hoog & Takeo (*Antonie van Leeuwenhoek* **59**: 285, 1991; karyology), Crous *et al.* (*Sydowia* **51**: 155, 1999), Crous *et al.* (*Stud. Mycol.* **45**: 107, 2000; phylogeny), Crous *et al.* (*Mycol.* **93**: 1081, 2001; phylogeny), Crous *et al.* (*Stud. Mycol.* **50**: 195, 2004; on *Eucalyptus*), Hunter *et al.* (*Stud. Mycol.* **55**: 147, 2006; on *Eucalyptus*), Arzanlou *et al.* (*Persoonia* **20**: 24, 2008; phylogeny).

Dissoderma (A.H. Sm. & Singer) Singer (1974) = Squamanita fide Kuyper (*in litt.*).

Dissophora Thaxt. (1914), Mortierellaceae. 3, widespread (north temperate). See Carreiro & Koste (*CJB* **70**: 2177, 1982; growth temperature), Gams & Carreiro (*Stud. Mycol.* **31**: 85, 1985; taxonomy), Benny (*CJB* **73** Suppl. 1: S725, 1995), Voigt & Wöstemeyer (*Gene* **270**: 113, 2001; phylogeny), White *et al.* (*Mycol.* **98**: 872, 2006; phylogeny).

distal, situated away from either the centre of a body or the point of origin; terminal; cf. proximal.

Distichomyces Thaxt. (1905) = Rickia fide Thaxter (*Proc. Amer. Acad. Arts & Sci.* **48**: 363, 1912).

distichous, in two lines.

Distocercospora N. Pons & B. Sutton (1988), anamorphic *Mycosphaerellaceae*, Hso.≡ eP.10. 1, widespread. See Pons & Sutton (*Mycol. Pap.* **160**: 60, 1988), Crous & Braun (*CBS Diversity Ser.* **1**: 571 pp., 2003), Kirschner *et al.* (*Fungal Diversity* **17**: 57, 2004; Taiwan).

Distolomyces Thaxt. (1931), Laboulbeniaceae. 3, Europe; Asia. See Santamaría (*Fl. Mycol. Iberica* **5**, 2003; Iberian peninsula).

Distopyrenis Aptroot (1991), Pyrenulaceae. 8, widespread (tropical). See Harada (*Mycoscience* **41**: 491, 2000).

Distorimula F. San Martín, P. Lavín, Esqueda (1999), Xylariales. 1, Mexico. See San Martín *et al.* (*Mycotaxon* **73**: 263, 1999).

distoseptate (of septation), having the individual cells each surrounded by a sac-like wall distinct from the outer wall, as in *Drechslera* (Luttrell, *Mycol.* **55**: 672, 1963) (Fig. 22A-B). Cf. euseptate.

Distothelia Aptroot (2005), ? Monoblastiaceae (L). 1, Hong Kong. See Seaward & Aptroot (*Bryologist* **108**: 284, 2005).

distribution, see Geographical distribution.

Ditangifibula G.C. Adams (1996), anamorphic *Pezizomycotina*, Hso.?.?. 1, Alaska. See Adams *et al.* (*Mycol.* **87**: 911, 1995), Kirschner & Chen (*Stud. Mycol.* **50**: 337, 2004).

Ditangium P. Karst. (1867), anamorphic *Craterocolla*. 1, Europe. See Donk (*Persoonia* **4**: 165, 1966).

Dithelopsis Clem. (1909) = Thelopsis fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

dithiocarbamates, organic fungicides; **dimethyl-** (DMDC): thiram, ferbam, ziram; **ethylene-bis-** (EBDC): maneb, mancozeb, zineb.

Dithozetia Clem. & Shear (1931) ≡ Didymothozetia.

Ditiola Fr. (1822), Dacrymycetaceae. *c.* 10, widespread. See McNabb (*N.Z. Jl Bot.* **4**: 546, 1966), Govorova (*Mikologiya i Fitopatologiya* **28**: 1, 1994).

Ditiola P. Browne (1756) ? = Schizophyllum fide Donk (*Beih. Nova Hedwigia* **6**: 89, 1962).

Ditiola Schulzer (1860) ≡ Holwaya.

Ditmaria Lühnem. (1809) nom. dub., ? Fungi.

Ditopella De Not. (1863), Gnomoniaceae. 1 (on *Alnus* bark), Europe. See Reid & Booth (*CJB* **45**: 1479, 1967), Barr (*Mycol. Mem.* **7**: 232 pp., 1978), Castlebury *et al.* (*Mycol.* **94**: 1017, 2002; phylogeny).

Ditopellina J. Reid & C. Booth (1967), Diaporthales. 1, Europe. See Reid & Booth (*CJB* **45**: 1481, 1967), Stoykov & Denchev (*Mycol. Balcanica* **3**: 179, 2006; Bulgaria).

Ditopellopsis J. Reid & C. Booth (1967), Diaporthales. 4, N. America. See Barr (*Mycol. Mem.* **7**, 1978), Barr (*Mycotaxon* **41**: 287, 1991), Monod (*Beih. Sydowia* **9**: 1, 1993).

Ditremis Clem. (1909) nom. rej. = Anisomeridium fide McCarthy (*Aust. Syst. Bot.* **5**: 125, 1992; Australia), McCarthy (*Muelleria* **8**: 1, 1993), Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Ditylis Clem. (1909) = Tylophoron fide Tibell (*Beih. Nova Hedwigia* **79**: 597, 1984).

diurnal, in daylight hours. Cf. circadian, diel.

divaricate, divergent at right angles.

Diversispora C. Walker & Schüssler (2004), Diversisporaceae. 1, USA. See Walker & Schüssler (*MR* **108**: 982, 2004), Redecker & Raab (*Mycol.* **98**: 885, 2006; phylogeny).

Dixophyllum Earle (1909) = Russula fide Singer (*Agaric. mod. Tax.*, 1951).

DNA, see Molecular biology.

DNA fingerprinting. This relies on repetitive sequences which are dispersed through the genome and which have a high variability; these are valuable in the manufacture of genotype-specific probes for species or pathogenic races, e.g. in mycology in *Magnaporthe grisea* (Hamer *et al.*, *Proc. Nat. Acad. Sci., USA* **86**: 9981, 1989). DNA fingerprinting is of particular use in characterization of individual strains and populations, especially in medical mycology (e.g. Girordin *et al.*, *J. Infect. Dis.* **169**: 683, 1994). Most methods use the polymerase chain reaction (PCR, see Molecular Biology). Some more widely-used methods are listed below. In some cases more than one name or acronym has been appropriated to describe essentially the same method but with subtle variations (e.g. AP-PCR [arbitrarily primed PCR] has been used as a synonym for both RAPD [q.v.] and SSR-PCR [q.v.] by separate researchers; strictly speaking it is more accurately applied to the former as SSR-PCR does not involve 'arbitrary' primers).

RAPD (random amplified polymorphic DNA) analysis uses PCR with short primers to produce sufficient amounts of particular parts of a target DNA or RNA sequence that can then be compared in agarose gels; this is especially useful in studies of closely allied fungi where species-specific patterns can be found (Schaad *et al.*, *in* Hawksworth, 1994: 461), and when dealing with small samples (e.g. a single spore or old type collection). Problems with lack of reproducibility have led to this method being largely superseded by other, more consistent, methods (see below).

SSR-PCR / VNTR-PCR (simple sequence repeat PCR / variable number tandem repeat PCR). In general this method may be viewed as a more stringent version of RAPD involving the use of longer oligonucleotide primers and higher annealing temperatures. The primers tend to be made of repeated double, triple or even quadruple units [e.g. (CA)9, (CAG)5, (GACA)4] which are complementary to the flanking regions of variable number tandem repeats of the microsatellite DNA (see Bridge *et al.*, *Lett. Appl. Microbiol.* **24**: 426, 1997).

ISSR-PCR (inter-simple sequence repeat PCR). This method is a modified form of the SSR-PCR method that incorporates higher annealing temperatures and oligonucleotide primers comprising simple sequence repeat units anchored with so-called degenerate ends [e.g 5'-BDB(ACA)5 where 'B' denotes 'not A' and 'D' denotes 'not C'; see Grünig *et al.*, *MR* **105**: 24, 2001; use in dark septate endophytes]. This method is considered superior to many other fingerprinting methods owing to its genome-wide coverage (rather than being localised to particular 'hotspots') and the large number of fragments generated that result in complex banding patterns (see Taylor *et al.*, *Ann. Rev. Phytopathol.* **37**: 197, 1999).

AFLP (amplified fragment length polymorphism) is a technique that combines the resolving power of RAPD (q.v.) with the reproducibility of RFLP analyses (see *Molecular Biology*); first developed by Vos *et al.* (*Nuc. Acids Res.* **23**: 4407, 1995). Has since been used extensively in fungi even from a single spore (e.g. see Rosendahl & Taylor, *Mol. Ecol.* **6**: 821, 1997; use in arbuscular mycorrhizal fungi, Majer *et al.*, *MR* **100**: 1107, 1996; use with *Cladosporium*, Duncan & Cooke, *Mycologist* **16**: 59, 2002; use with *Phytophthora*).

SCARs (sequence-characterised amplified regions) are polymorphic bands (produced normally by one of the methods above and visualised on a polyacrylamide gel for optimal separation) which are found to be diagnostic for a particular population or individual. Such bands are excised from the gel and the DNA extracted and sequenced, allowing new specific primers to be created that may allow detection of the particular strain (e.g. Hermosa *et al.*, *Curr. Gen.* **38**: 343, 2001; SCAR marker in *Trichoderma*).

SSCP (single-strand conformational polymorphism) allows the separation of isolates that produce fragments of identical size from a given amplification. This is achieved by the use of native polyacrylamide gels and, in theory, can allow separation of samples differing in as little as a single base difference (e.g. Bonello *et al.*, *New Phytologist* **138**: 533, 1998; use with *Suillus*).

DGGE (denaturing gradient gel electrophoresis) is a sensitive method that enables the discrimination of similarly sized DNA fragments (obtained by PCR amplification of particular regions but using primers containing GC-rich clamps) on the basis of their actual sequence via the medium of an acrylamide gel containing a gradient of denaturing chemical (usually urea and/or formamide; alternatively temperature gradients may be used [i.e. TGGE]). DGGE has been employed widely in bacterial environmental studies where microbial consortia are present but has also been applied to fungal investigations (e.g. Vainio & Hantula, *MR* **104**: 927, 2000; use with wood-inhabiting fungi).

DNA sequencing. This involves determination of individual consecutive bases within a given region of DNA. Most sequence analysis is undertaken using the Sanger chain termination method (Sanger & Coulson, *J. Mol. Biol.* **93**: 441, 1975) although alternative methods are being developed. In practice the term DNA sequencing encompasses additional aspects of DNA analysis, including comparison of base sequences in particular parts of DNA (or RNA) molecules (for total genome sequencing see Genomics). Ribosomal gene clusters have been most used in phylogenetic studies by mycologists, particularly the genes coding for 5.8S, 18S and 28S rRNA (ribosomal RNA) genes and adjacent non-coding spacers (e.g. internal transcribed spacer [ITS] and intergenic spacer [IGS]) but also functional genes where appropriate (e.g. chitinase for *Trichoderma*, tef for *Fusarium* and *Trichoderma* and β-tubulin for *Botrytis* and *Penicillium*, etc.). The method involves the PCR method (see Molecular biology), and base sequences are determined either manually or by automated sequencing machines. Increasingly DNA sequencing is undertaken by capillary electrophoresis but so-called '(polyacrylamide) slab gel' DNA sequencers are still used. Sequences obtained can be subjected to phylogenetic analyses, including already available sequences accessible from on-line databanks. A basic

introduction to the method, which is now pivotal in fungal phylogenetic studies, is provided by Mitchell *et al.* (*Mycologist* **9**: 67, 1995).

Voucher specimens. In all molecular studies it is advisable to deposit reference material of the fungi actually used in an appropriate Reference Collection (see Collection and preservation).

DNA sequence libraries: *EMBL Nucleotide Sequence Database* (http://www.ebi.ac.uk/embl), maintained at the European Molecular Biology Laboratory's European Bioinformatics Institute; *GenBank* (http://www.ncbi.nlm.nih.gov/Genbank), maintained at the National Center for Biotechnology Information, National Institutes of Health, Bethesda, Md, USA; *DDBJ* (http://www.ddbj.nig.ac.jp), maintained at the DNA Data Bank of Japan. All three databases exchange new sequence data accessions on a daily basis; see also *Nucleic Acid Res.* **36**, 2008; database issue). Recent studies have raised concerns regarding the authenticity/validity of some identifications behind the holdings of these global databases, with suggestions that up to 20% are incorrectly named (see Bridge *et al.*, *New Phytologist* **160**: 43, 2003) reinforcing the need for responsible vouchering of specimens (see Vilgalys, *New Phytologist* **160**: 4, 2003). Validated sequence databases are available commercially which can allow users to make identifications with appropriate levels of confidence if the relevant databases are purchased. DNA sequencing is now being used to facilitate resolution of morphologically similar taxa (e.g. Pérez-Sierra & Henricot, *Mycologist* **16**: 42, 2002).

DNA barcoding. Since the Convention on Biological Diversity (1993) and the resulting Bonn Guidelines (2002), the possibility has been raised of distinguishing taxa mechanically by analogy with the way supermarket products of similar types are distinguished with a hand-held scanner reading a black and white striped product code. The potential for this so-called 'barcoding' of all living organisms is being addressed by the *Consortium for the Barcoding of Life* (CBOL; see http://barcoding.si.edu and www.dnabarcodes.org). For each organism, an initial specimen must be collected, followed by laboratory DNA analysis, database generation and data analysis. The supposition is that there is a single region of DNA in all living organisms characteristic for each individual species. In Animalia a region of the mitochondrial cytochrome oxidase c 1 (*cox I*) gene has been proposed for use. For Fungi this region does not seem to be universally suitable because multiple copies exist in some taxa and there may be large scale length variation (see Rossman, *Inoculum* **58**: 1, 2007). The large volume of work already undertaken with the rDNA gene cluster, especially the ITS regions, has led to it being proposed for use in the Fungi, qualified with further work on an additional appropriate region (as the ITS is not appropriate in all taxa due to multiple non-orthologous copies of the region; e.g. see O'Donnell & Cigelnik, *Mol. Phyl. Evol.* **7**: 103, 1997; for *Fusarium*).

Doassansia Cornu (1883), Doassansiaceae. 12 (on aquatic plants), widespread. Spore ball, immersed in host tissue, has cortex of sterile cells. See Vánky (*Sydowia* **34**: 167, 1981).

Doassansiaceae R.T. Moore ex P.M. Kirk, P.F. Cannon & J.C. David (2001), Doassansiales. 12 gen. (+ 4 syn.), 39 spp.

Lit.: Vánky (*Cryptog. Stud.* **1**: 159 pp., 1987), Begerow *et al.* (*CJB* **75**: 2045, 1998), Piepenbring *et al.* (*Protoplasma* **204**: 155, 1998), Vánky (*MR* **102**: 513, 1998), Begerow *et al.* (*MR* **104**: 53, 2000), Vánky (*Aust. Syst. Bot.* **14**: 385, 2001), Piepenbring (*Bot. Jb.* **24**: 241, 2003).

Doassansiales R. Bauer & Oberw. (1997). Exobasidiomycetes. 3 fam., 14 gen., 42 spp. Fams:

(1) **Doassansiaceae**
(2) **Melaniellaceae**.
(3) **Rhamphosporaceae**

For *Lit.* see under fam.

Doassansiella Zambett. (1970) nom. inval., anamorphic *Doassansiopsis*. 1. See Zambettakis (*Revue Mycol.* Paris **35**: 164, 1970).

Doassansiopsidaceae Begerow, R. Bauer & Oberw. (1998), Urocystidales. 2 gen., 14 spp.

Lit.: Vánky (*Cryptog. Stud.* **1**: 159 pp., 1987), Bauer *et al.* (*CJB* **75**: 1273, 1997), Begerow *et al.* (*CJB* **75**: 2045, 1998), Vánky (*Aust. Syst. Bot.* **14**: 385, 2001), Piepenbring (*Bot. Jb.* **24**: 241, 2003), Begerow *et al.* (*MR* **108**: 1257, 2004).

Doassansiopsis (Setch.) Dietel (1897), Doassansiopsidaceae. Anamorph *Doassansiella*. 13 (on aquatic plants), widespread. See Vánky (*Mycotaxon* **79**: 231, 2001), Vánky (*Mycotaxon* **95**: 1, 2006).

Doassinga Vánky, R. Bauer & Begerow (1998), Doassansiaceae. 1 (aquatic on *Callitrichaceae*), Europe. See Hoog *et al.* *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 574, 1998; review).

Dochmiopus Pat. (1887) = Crepidotus fide Singer & Smith (*A monograph on the genus Galerina Earle*, 1964).

Dochmolopha Cooke (1878) = Seimatosporium fide Shoemaker (*CJB* **42**: 411, 1964).

Dodge (Carroll William; 1895-1988; USA). Student, Middlebury College, Vermont (1912-1916); Fellow, Washington University, St Louis (1915-1918); Sergeant, US Army (1918-1920); Instructor in Botany (1921-1924) then Assistant Professor and Curator, Farlow Herbarium, Harvard University (1924-1931); Professor of Botany, Washington University and Mycologist, Missouri Botanic Garden (1931-1963). Noted for work on hypogeous fungi, medical mycology in Latin America, and on lichen-forming fungi, particularly from Antarctica; he also translated Gäumann's (q.v.) classic work *Comparative Morphology of the Fungi* into English. *Publs. Medical Mycology: Fungous Diseases of Men and other Mammals* (1935); Lichens and lichen parasites. *BANZ Antarctic Research Expedition 1929-1931. Reports* Series B **7** (1948); Some lichens of tropical Africa. I-V. *Beihefte zur Nova Hedwigia* (1953-1971). *Biogs, obits etc.* Randolph (*Mycol.* **82**: 160, 1990) [portrait].

Dodgea Malençon (1939) = Truncocolumella fide Smith & Singer (*Brittonia* **11**: 215, 1959).

Dodgella Zebrowski (1936), Fossil Fungi ? Chytridiomycetes. 3 (Eocene – ? Recent), widespread.

dog lichen, *Peltigera* spp., e.g. *P. canina*; used in folk lore for treatment of bites of a rabid dog.

dog stinkhorn, basidioma of *Mutinus caninus*.

Doguetia Bat. & J.A. Lima (1960) = Trichasterina fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Doidge (Ethel Mary; 1887-1965; England, later South Africa). Assistant to Pole Evans, the plant pathologist and mycologist (1908-1912) then Professional Assistant (1912-1929) then Principal Plant Pathologist

(1929-1942), Division of Botany and Mycology, Transvaal Department of Agriculture, Pretoria. Made contributions on South African fungi (especially rusts) and phytopathology, and compiled a monumental checklist of South African fungi. *Publs.* A preliminary study of the South African rust fungi. *Bothalia* (1927); South African rust fungi *Bothalia* (1928); The South African fungi and lichens to the end of 1945. *Bothalia* (1950). *Biogs, obits etc.* Grummann (1974: 396); Gunn (*Bothalia* **9**: 251, 1967, bibliography, portrait).

Dokmaia Promp. (2003) ? = Phaeoisaria fide Promputtha *et al.* (*Sydowia* **55**: 100, 2003).

Dolabra C. Booth & W.P. Ting (1964), Dothideomycetes. 1, Malaysia. See Booth & Ting (*TBMS* **47**: 237, 1964).

dolabrate (dolabriform), hatchet-like in form (Fig. 23.24).

dolabriform, having the shape of the head of an axe or cleaver (Fig. 23.24).

dolicho- (in Greek combinations), long.

Dolichoascus Thibaut & Ansel (1970), Saccharomycetales. 1 (in *Insecta*), widespread. See Batra *in* Subramanian (Ed.) (*Taxonomy of fungi* **1**: 187, 1978; typification).

Dolichocarpus R. Sant. (1949), Roccellaceae (L). 1, Chile. See Tehler (*CJB* **68**: 2458, 1990; cladistics), Grube (*Bryologist* **101**: 377, 1998; phylogeny), Follmann (*Mitteilungen aus dem Institut für Allgemeine Botanik Hamburg* **30-32**: 61, 2002; biogeography).

dolichospore, a long spore.

Dolichousnea (Y. Ohmura) Articus (2004), Parmeliaceae (L). 4, widespread. See Articus (*Taxon* **53**: 932, 2004), Arup *et al.* (*Mycol.* **99**: 42, 2007; phylogeny).

doliiform, barrel-like in form (Fig. 23.31).

Doliomyces Steyaert (1961), anamorphic *Amphisphaeriaceae*, Cpd.≡ eP.19. 2, India; S. America. See Nag Raj & Kendrick (*CJB* **50**: 45, 1972).

dolipore septum, a septum of a dikaryotic basidiomycete hypha which flares out in the middle portion forming a barrel-shaped structure with open ends as shown by electron microscopy; see Markham (*MR* **98**: 1089, 1994; review), Moore (*in* Hawksworth (Ed.), *Identification and characterization of pest organisms*: 249, 1994; summary diagr., Fig. 13), Moore & McAlear (*Am. J. Bot.* **49**: 86, 1962); septal pore swelling; cf. parenthesome.

dollar spot, a turf disease caused by *Sclerotinia homeocarpa*.

Domain (Empire, Superkingdom). A category in Classification (q.v.) above that of kingdom; all fungal phyla belong in kingdoms in the domain *Eukaryota*.

Domingoella Petr. & Cif. (1932), anamorphic *Pezizomycotina*, Hsy.0eP.?. 4, widespread (esp. tropical). See Deighton & Pirozynski (*Mycol. Pap.* **128**, 1972).

Domin-scale, A 10-point scale used in ecological tables to indicate the approximate cover of a surface by different taxa: + = single individuals; 1 = a few individuals; 2 = sparsely distributed; 3 = frequent but cover less than 4%; 4 = cover 4-10%; 5 = cover 11-25%; 6 = cover 26-33%; 7 = cover 34-50%; 8 = cover 51-75%; 9 = 76-90%; 10 = cover 91-100%.

Donadinia Bellem. & Mel.-Howell (1990), Sarcosomataceae. 1, Europe; Asia. See Harrington *et al.* (*Mycol.* **91**: 41, 1999; phylogeny), Hansen & Pfister (*Mycol.* **98**: 1029, 2006; phylogeny).

Donk (Marinus Anton; 1908-1972; Indonesia, later Netherlands). Student, later doctoral student, University of Utrecht (1927-1933); Mycologist, Buitenzorg Botanic Garden, Java (1934-1940); interned in prison camp (1942-1945) [saving many lives by culturing a yeast to produce much needed vitamins]; Head of Herbarium Bogoriense, Buitenzorg Botanic Garden, Java (1947-1955); Head of the Mycological Department, Rijksherbarium, Leiden (1956-1972); Corresponding Member (1954-1962) then Full Member (1962-1972), Royal Dutch Academy of Sciences. Outstanding taxonomist (especially of *Agaricomycetes*, q.v.), and nomenclaturalist. *Publs.* The generic names proposed for Hymenomycetes. I-XIII. *Reinwardtia* and *Taxon* various vols (1951-1963); The generic names proposed for *Agaricaceae*. *Beihefte zur Nova Hedwigia* (1962); A conspectus of the families of *Aphyllophorales*. *Persoonia* (1964). *Biogs, obits etc.* Maas Geesteranus (*Persoonia* **7**: 119, 1973) [bibliography, portrait]; Singer (*Mycol.* **65**: 503, 1973) [portrait]; Stafleu & Cowan (*TL-2* **1**: 671, 1976).

Donkella Doty (1950) = Clavulinopsis fide Donk (*Persoonia* **1**: 25, 1959) = Ramariopsis (Clavar.) fide, Petersen (*Mycol.* **70**: 660, 1978).

Donkia Pilát (1937) = Climacodon fide Maas Geesteranus (*Hydnaceous fungi of the eastern old world*, 1971).

Donkioporia Kotl. & Pouzar (1973), Fomitopsidaceae. 1, north temperate. See Kotlaba & Pouzar (*Persoonia* **7**: 214, 1973), Kleist & Seehann (*Z. Mykol.* **65**: 23, 1999; in buildings).

Dontuzia L.D. Gómez (1973), Pezizomycotina. 1, widespread (tropical). See Gómez (*Brenesia* **2**: 21, 1973).

Doratomyces Corda (1829), anamorphic *Microascaceae*. 1, widespread. See von Arx (*Gen. Fungi Sporul. Cult.* Edn 3, 1981; synonym of *Cephalotrichum*), Issakainen *et al.* (*Medical Mycology* **41**: 31, 2003; phylogeny, polyphyly), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny).

Doratospora J.M. Mend. (1930) = Rizalia fide Pirozynski (*Kew Bull.* **31**: 595, 1977).

dorsal, back or upper surface; the surface facing away from the axis, cf. ventral; sometimes used for the upper surface of foliose lichens.

Dothichiza Lib. ex Roum. (1880), anamorphic *Dothiora*, St.0eH.?. 15, widespread. See Petrak (*Sydowia* **10**: 201, 1957), Sutton (*Mycol. Pap.* **141**, 1977), Sutton & Livsey (*TBMS* **88**: 271, 1987).

Dothichloë G.F. Atk. (1894) = Balansia fide Diehl (*USDA agric. Monogr.* **4**, 1950), Reddy *et al.* (*Mycol.* **90**: 108, 1998).

Dothiclypeolum Höhn. (1916) = Thyriopsis fide Clements & Shear (*Gen. Fung.*, 1931).

Dothidasteris Clem. & Shear (1931) ≡ Dothidasteromella.

Dothidasteroma Höhn. (1909), Parmulariaceae. Anamorph *Melanoplaca*. 2, Asia; Australasia. See Swart (*TBMS* **91**: 581, 1988).

Dothidasteromella Höhn. (1910), Asterinaceae. 3, widespread. See Swart (*TBMS* **91**: 453, 1988), Hosagoudar *et al.* (*Journal of Mycopathological Research* **39**: 61, 2001).

Dothidea Fr. (1818) nom. cons., Dothideaceae. Anamorph *Asteromellopsis*. 20, widespread (temperate). See Silva-Hanlin & Hanlin (*MR* **103**: 153, 1999; DNA), Liew *et al.* (*Mol. Phylogen. Evol.* **16**: 392, 2000; phylogeny), Lumbsch & Lindemuth (*MR* **105**: 901, 2001; phylogeny), Shoemaker *et al.* (*Taxon* **52**:

623, 2003; nomencl.), Shoemaker & Hambleton (*CJB* **83**: 484, 2005), Schoch *et al.* (*Mycol.* **98**: 1041, 2006; phylogeny).

Dothideaceae Chevall. (1826), Dothideales. 13 gen. (+ 11 syn.), 79 spp.

Lit.: Butin (*Sydowia* **38**: 20, 1985), Hyde & Cannon (*Mycol. Pap.* **175**: 114 pp., 1999), Silva-Hanlin & Hanlin (*MR* **103**: 153, 1999; DNA), Lindemuth *et al.* (*MR* **105**: 1176, 2001), Schoch *et al.* (*Mycol.* **98**: 1041, 2006; phylogeny).

dothideaceous, having the asci in locules in a stroma, as in *Dothidea*.

Dothideales Lindau (1897). Dothideomycetidae. 4 fam., 57 gen., 350 spp. Ascomata perithecial, usually formed as lysigenous locules within stromatic tissue, dark brown. Hymenium not blueing in iodine. Interascal tissue in most cases absent. Asci ± cylindrical, thick-walled, fissitunicate, usually with a clearly defined ocular chamber but lacking other apical structures. Ascospores usually septate, if septate longitudinally asymmetrical, constricted at the primary septum but not always at the others, hyaline or brown, rarely ornamented. Mostly saprobes or necrotrophic parasites of plants. Fams:

(1) **Dothideaceae**
(2) **Dothioraceae**

The *Coccoideaceae* and *Planistromellaceae* are placed here provisionally as molecular data are lacking. *Lit.*: von Arx & Müller (*Stud. Mycol.* **9**, 1975, keys fams, gen.), Barr (*Prodromus to Class Loculoascomycetes*, 1987), Eriksson (*Opera Bot.* **60**, 1981), Schoch *et al* (*Mycol* **98**: 1041, 2006; phylogeny), Shoemaker *et al* (*Taxon* **52**: 623, 2003; nomencl.).

Dothideites Pat. (1893), Fossil Fungi. 1.

Dothidella Speg. (1880), Polystomellaceae. Anamorph *Stictochorella*. 3, widespread (tropical). See Wakefield (*TBMS* **24**: 282, 1940), Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962), Swart (*TBMS* **89**: 483, 1987).

Dothideodiplodia Murashk. (1927), anamorphic *Pezizomycotina*, St.1-≡ eP.19. 1, former USSR.

Dothideomycetes O.E. Erikss. & Winka (1997), Pezizomycotina. 11 ord., 90 fam., 1302 gen., 19010 spp. The largest and most varied class of the *Ascomycota*, including most ascolocular ascomycetes with J-bitunicate asci. Ascomata very varied, apothecial, perithecial or cleistothecial, at least nominally formed as lysigenous locules within stromatic tissue; hymenium sometimes gelatinous but not usually blueing in iodine. Interascal tissue frequently present, usually composed of branched or anastomosed paraphysoids or pseudoparaphyses, at least initially attached at both base and apex. Asci usually clavate or cylindrical, thick-walled, usually fissitunicate, rarely with apical structures. Ascospores almost always septate, longitudinally asymmetrical, constricted at the primary septum but not always at the others, sometimes muriform; hyaline or brown, not often ornamented. Saprobes, parasites, rarely lichen-forming, coprophilous, etc.

Subcl.:

(1) **Dothideomycetidae**
(2) **Pleosporomycetidae**

Several orders belong within the *Dothideomycetes* based on molecular data, but cannot be placed with confidence into a specific Subcl. These include the *Botryosphaeriales*, *Hysteriales*, *Jahnulales* and *Patellariales*. The *Microthyriales* are included here provisionally, as are a further 20 fams and a very large number of gen. without clear affinities, where molecular data are lacking. A number of orders and families placed within the *Dothideomycetidae* sensu *Dictionary* edn 9 are now included within an expanded *Eurotiomycetes*, notably the *Coryneliales* and *Pyrenulales*.

Lit.: von Arx & Müller (*Beitr. Kryptogfl. Schweiz* **11**(1), 1954; *Stud. Mycol.* **9**, 1975, keys fams, gen.), Barr (*Contr. Univ. Mich. Herb.* **9**: 523, 1972, N. Am.; *Mycol.* **71**: 935, 1979; *Prodromus to Class Loculoascomycetes*, 1987; orders, fams), Barr & Huhndorf (*in* McLaughlin *et al.* (Eds), *The Mycota* **7A**: 283, 2001), Benny & Kimbrough (*Mycotaxon* **12**: 1980; non-ostiolate gen.), Berbee (*Mol. Biol. Evol.* **13**: 462, 1996; evolution), Eriksson (*Opera Bot.* **60**, 1981), Hansford (*Mycol. Pap.* **15**, 1946; foliicolous spp.), Harris (*Mich. Bot.* **12**: 3, 1973; L,), Janex (*Revue bryol. lichén.* **37**: 421, 1971; ontogeny, L), Liew *et al.* (*Mol. Phylogenet. Evol.* **16**: 392, 2000; hamathecium, phylogeny), Lindemuth et al. (*MR* **105**: 1176, 2001; phylogeny), Lumbsch & Lindemuth (*MR* **105**: 901, 2001; phylogeny), Luttrell (*Phytopathology* **55**: 828, 1965, *in* Ainsworth *et al.* (Eds), *The Fungi* **4A**: 135, 1973; keys, gen.), Müller & von Arx (*Beitr. Sci. nat.*, Bot. sér. 12, **7**: 33, 1966; ontogeny), Pirozynski (*Kew Bull.* **31**: 595, 1977; trop. fungicolous spp.), Poelt (*in* Ahmadjian & Hale (Eds), *The Lichens*: 599, 1974 ['1973']; fams, L), Reynolds (*Ascomycete Systematics. The Luttrellian Concept*, 1981; centrum types), Schoch et al. (*Mycol.* **98**: 1041, 2006; phylogeny), Theissen & Sydow (*Ann. Myc.* **13**: 149, 1915; gen.), also under ascus, hamathecium.

Dothideomycetidae P.M. Kirk, P.F. Cannon, J.C. David & Stalpers ex C.L. Schoch, Spatafora, Crous & Shoemaker (2007), Dothideomycetes. Ascomata perithecial or formed as lysigenous locules within stromatic tissue, often developing from pigmented external mycelium. Interascal tissue absent. Asci usually clavate, sometimes almost orbicular, thick-walled and fissitunicate. Ascospores almost always septate, longitudinally asymmetrical, constricted at the primary septum but not always at the others, sometimes muriform; hyaline or brown, not often ornamented. Mostly saprobes or parasites of plants. Ords:

(1) **Capnodiales**
(2) **Dothideales**
(3) **Myriangiales**

The *Dothideomycetidae* is much reduced compared with its treatment in the *Dictionary* edn 9, which equates largely to the *Dothideomycetes* of this edn. See Schoch *et al.* (*Mycol.* **98**: 1041, 2006).

Dothideopsella Höhn. (1915) = Leptosphaeria fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

DR curve, a log-probit dosage-response curve (Horsfall, *Principles of fungicidal action*, 1956).

Drechmeria W. Gams & H.-B. Jansson (1985), anamorphic *Clavicipitaceae*, Hso.0eH.15. 2 (from nematodes and protozoans), widespread. See Gernandt & Stone (*Mycol.* **91**: 993, 1999; phylogeny), Gams & Zare (*Mycology Series* **19**: 17, 2003; review).

Drechslera S. Ito (1930) nom. cons., anamorphic *Pyrenophora*, Hso.≡ eP.26. *c.* 29 (graminicolous), widespread. See Shoemaker (*CJB* **37**: 880, 1959), Shoemaker (*CJB* **40**: 809, 1962; key 14 spp.), Pandey & Gupta (*Acta Mycologica* Warszawa **20**: 209, 1986; as a mycoparasite), Sivanesan (*Mycol. Pap.* **158**: 1, 1987; keys), Alcorn (*Ann. Rev. Phytopath.* **26**: 27, 1988; gen. taxonomy), Muchovej *et al.* (*Fitopatol. Brasil* **13**: 211, 1988; keys), Strobel *et al.* (*Phytoparasitica* **16**: 145, 1988; phytotoxins), Ondrej (*Česká Mykol.* **43**: 45, 1989; key 20 Czech spp.), Khazanov (*Opredelitel' Gribov-Vozbul. 'Gel'mintosporiozov' Rast. iz Rodov Bipolaris, Drechslera i Exserohilum*, 1992), Goh *et al.* (*Fungal Diversity* **1**: 85, 1998; ribosomal RNA analysis), Maraite (*Helminthosporium Blights of Wheat: Spot Blotch and Tan Spot* Proceedings of an International Workshop Held at CIMMYT, El Batan, Mexico, 9-14 February 1997: 6, 1998; nomencl.), Turgeon & Berbee (*Molecular Genetics of Host-Specific Toxins in Plant Disease*: 153, 1998; evolution), Jawhar *et al.* (*Cereal Research Communications* **28**: 87, 2000; *D. graminea* group), Mehta (*Fitopatol. Brasil* **26**: 590, 2001; on *Avena*), Zhang & Berbee (*Mycol.* **93**: 1048, 2001; phylogeny), Ondrej & Minaríková (*Petria* **12**: 267, 2002; morphology), Friesen *et al.* (*Phytopathology* **95**: 1144, 2005; on *Triticum*), Serenius *et al.* (*MR* **109**: 809, 2005; on *Hordeum*).

Drechslerella Subram. (1964), anamorphic *Orbilia*, Hso.≡ eH.1/10. 1, USA. See Scholler *et al.* (*Sydowia* **51**: 89, 1999; gen. concept & n. combs), Li *et al.* (*Mycol.* **97**: 1034, 2006; phylogeny), Yu *et al.* (*Mycotaxon* **96**: 163, 2006; teleomorph).

Drechsleromyces Subram. (1978), anamorphic *Pezizomycotina*, Hso.0fH.10. 1, USA. See Subramanian (*Kavaka* **5**: 93, 1977), Rubner (*Stud. Mycol.* **39**, 1996).

Dremuspora Sal.-Cheb. & Locq. (1980), Fossil Fungi. 1, Cameroon.

Drepanoconis J. Schröt. & Henn. (1896), Cryptobasidiaceae. 3, S. America. See Linder (*Ann. Mo. bot. Gdn* **16**: 343, 1929), Gómez & Kisimova-Horovitz (*Revta Biol. trop.* **45**: 1293, 1998; Costa Rica), Begerow *et al.* (*Mycol. Progr.* **1**: 187, 2002), Hendrichs (*Sydowia* **55**: 33, 2003; Central & South America).

Drepanomyces Thaxt. (1931), Ceratomycetaceae. 1, Sumatra; Sarawak. See Tavares (*Mycol. Mem.* **9**: 627 pp., 1985), Bameul (*Nouv. Rev. Entomol.* Nouv. sér. **10**: 19, 1993).

Drepanopeziza (Kleb.) Höhn. (1917), Dermateaceae. Anamorphs *Gloeosporidiella*, *Marssonina*, *Monostichella*. 14, widespread (temperate). See Rimpau (*Phytopath. Z.* **43**: 257, 1962; on *Ribes*, *Populus*, *Salix*; keys), Spiers (*Eur. J. For. Path.* **28**: 233, 1998; on *Populus*, New Zealand), Spiers & Hopcroft (*MR* **102**: 1025, 1998), Nauta & Spooner (*Mycologist* **14**: 21, 2000; UK).

Drepanospora Berk. & M.A. Curtis (1875), anamor-

phic *Pezizomycotina*, Hso.0-≡ hP.1/10. 2, widespread. See Goos (*Mycol.* **81**: 356, 1989).

DRIPs, An assemblage of protistans named from the initial letters of the original constituent organisms (*Dermocystidium*, **R**osette Agent, *Ichthyophonus*, *Psorospermium*). In phylogenetic trees derived from 18S rRNA, the DRIPs clade appears as a sister group to animals, fungi and choanozoans and usually basal to all three. Members of the group typically possess vesicular mitochondrial cristae and a walled trophic phase. All appear to be parasitic. More recently other taxa have been added: *Rhinosporidium* (See Herr *et al.*, 1999), *Anurofeca* (See Baker *et al.*, 1999) and *Amoebidium parasiticum* (See Ustinova *et al.*, *Protist* **151**: 253, 2000). See also Ragan *et al.* (*Proc. Natl. Acad. Sci. USA* **93**: 11907, 1996), Cavalier-Smith (**Biol. Rev. 73**: 203, 1998).

Drosella Maire (1935) = Chamaemyces fide Singer (*Agaric. mod. Tax.*, 1951).

Drosophila Quél. (1886) = Psathyrella fide Singer (*Agaric. mod. Tax.*, 1951) the name is used by, Romagnesi (*BSMF* **91**: 137, 1975).

Drudeola Kuntze (1891), anamorphic *Pezizomycotina*. 2, USA. See Sutton (*Mycol. Pap.* **141**, 1977).

Drummondia Bat. & H. Maia (1963) [non *Drummondia* Hook. 1828, *Musci*] ≡ Mycousteria fide Farr (*Mycol.* **78**: 280, 1986).

Drumopama Subram. (1957), anamorphic *Pezizomycotina*, Hsy.0eP.10. 1, India; Cuba. See Subramanian (*Proc. Indian Acad. Sci.* series B **46**: 333, 1957), Castañeda Ruiz & Kendrick (*Univ. Waterloo Biol. Ser.* **32**, 1990; Cuba).

Druparia Raf. (1808) nom. dub., Agaricomycetes. ? 'gasteromycetes'.

Drupasia Raf. (1809) ≡ Druparia.

druse, a stellate cluster of large crystals in a lichen thallus.

dry rot fungus (or **house fungus**), *Serpula lacrymans*; see Seehann & Hegarty (*Docs. Internat. Res. Group Wood Preserv.* IRG/WP/1337, 1988; bibliogr.), Watkinson (*Biodet. Abstr.* **8**: 161, 1994; review).

dry spore, a spore that becomes separated without slime from the cell producing it (Mason, 1937); cf. slime spore. See Xerosporae.

Dryadomyces Gebhardt (2005), anamorphic *Ophiostomataceae*, H?.?.?. 1 (from ambrosia beetles), Taiwan. See Gebhardt *et al.* (*MR* **109**: 693, 2005).

dryad's club, basidioma of *Clavaria pistillaris*.

dryad's saddle, basidioma of *Polyporus squamosus*.

Dryinosphaera Dumort. (1822) nom. dub., Pezizomycotina. Used for diverse perithecioid fungi.

Dryodon Quél. ex P. Karst. (1881) = Hericium Pers. fide Donk (*Taxon* **5**: 69, 1956).

Dryophila Quél. (1886) = Pholiota fide Patouillard (*Essai taxonomique sur les familles et les genres des Hyménomycètes*, 1900).

Dryophilum Schwein. (1834) nom. dub., Fungi. ? Based on insect galls.

Dryosphaera Jørg. Koch & E.B.G. Jones (1989), anamorphic *Pezizomycotina*, T. 2 (marine), widespread. See Kohlmeyer & Volkmann-Kohlmeyer (*CJB* **71**: 992, 1993).

dual phenomenon (in anamorphic fungi), the condition in which a fungus is made up of two culturally different elements or individuals (Hansen, *Mycol.* **30**: 442, 1938; Hansen & Snyder, *Am. J. Bot.* **30**: 419, 1943).

dual propagule (in a lichen), one comprising elements of both the fungal and the photosynthetic partner (e.g. isidium, soredium; see Lichens).

Dualomyces Matsush. (1987), anamorphic *Pezizomycotina*, Hso.0fH-P.10/11. 2, Taiwan. See Matsushima (*Matsush. Mycol. Mem.* **5**: 13, 1987).

Dubiocarpon S.A. Hutch. (1955), Fossil Fungi ? Ascomycota. 5 (Carboniferous), Europe; USA. See Baxter (*Paleont. Contrib. Univ. Kansas* **77**, 1975), Pirozynski (*Ann. Rev. Phytopath.* **14**: 237, 1976).

Dubiomyces Lloyd (1921) = Ustilaginoidea fide Diehl (*in litt.*) See, Stevenson & Cash (*Lloyd, The new fungus names*, 1936).

Dubitatio Speg. (1882), Massariaceae. Anamorph *Aplosporella*-like. 1 (on rotten wood), S. America (temperate). See Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Duboscqia Pérez (1908), Microsporidia. 3.

Dubujiana D.R. Reynolds & G.S. Gilbert (2005), Microthyriaceae. 1, Australia. See Reynolds & Gilbert (*Aust. Syst. Bot.* **18**: 282, 2005).

Duchesne (Ernest; 1874-1912; France). École du Service de Santé Militaire de Lyon (1894). Physician who noted, 32 years before Fleming (q.v.), that certain moulds kill bacteria. *Publs. Contribution à l'étude de la concurrence vitale chez les micro-organismes: antagonisme entre les moisissures et les microbes*, doctoral thesis (1897). *Biogs, obits etc.* Pouillard (*Médecine et armées* **31**: 527, 2003).

Ductifera Lloyd (1917), Auriculariales. *c.* 11, widespread (esp. tropical). See Wells (*Mycol.* **50**: 407, 1958), Weiss & Oberwinkler (*MR* **105**: 403, 2001).

Duddingtonia R.C. Cooke (1969), anamorphic *Orbiliaceae*. See Schenk *et al.* (*CJB* **55**: 977, 1977), Liou & Tzean (*Mycol.* **89**: 876, 1997; phylogeny), Ahrén *et al.* (*FEMS Microbiol. Lett.* **158**: 179, 1998; phylogeny), Ahren *et al.* (*MR* **108**: 1205, 2004; genetic diversity).

Duebenia Fr. (1849), Helotiales. 2, Europe. See Hein (*Willdenowia* Beih. **9**, 1976; key), Nauta & Spooner (*Mycologist* **13**: 65, 1999).

Dufourea Ach. (1809) nom. rej. = Xanthoria fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995), Kärnefelt & Thell (*Nova Hedwigia* **62**: 487, 1996; nomencl.).

Dufoureomyces Cif. & Tomas. (1953) = Dactylina Nyl. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Dufouria Trevis. (1861) = Xanthoria fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Dumontinia L.M. Kohn (1979), Sclerotiniaceae. 1 (on *Anemone* rhizomes), Europe. See Holst-Jensen *et al.* (*Mycol.* **89**: 885, 1997; phylogeny), Holst-Jensen *et al.* (*Nordic Jl Bot.* **18**: 705, 1999; phylogeny).

Dumortieria Westend. (1857), anamorphic *Pezizomycotina*, St.0eH.?. 2, Belgium. See Sutton (*Mycol. Pap.* **141**, 1977).

Dumoulinia Stein (1883) = Megalospora Meyen fide Sipman (*Biblthca Lichenol.* **18**, 1983).

Duosporium K.S. Thind & Rawla (1961), anamorphic *Pezizomycotina*, Hso.≡ eP.26. 1, India; China. See Thind & Rawla (*Am. J. Bot.* **48**: 862, 1961).

duplex (of the context), in two layers, that adjacent to the lamellae or tubes being harder than the one over it.

Duplicaria Fuckel (1870), Rhytismataceae. Anamorph *Crandallia*. 3, widespread (boreal; alpine). See Powell (*Mycol.* **65**: 1362, 1973), Johnston (*Mycol. Pap.* **176**: 239 pp., 2001).

Duplicariella B. Erikss. (1970), Rhytismataceae. 1,

Scandinavia. See Eriksson (*Symb. bot. upsal.* **19**: 20, 1970).

Duportella Pat. (1915), Peniophoraceae. 12, widespread. See Cunningham (*Trans. roy. Soc. N.Z.* Bot. **85**: 91, 1957), Hjortstam & Ryvarden (*Syn. Fung.* **4**: 19, 1990; key), Boidin *et al.* (*BSMF* **107**: 91, 1991; key trop. spp.) = Peniophora fide, Boidin *et al.* (*Mycotaxon* **56**: 445, 1998).

Duportellaceae Jülich (1982) = Peniophoraceae.

Duradens Samuels & Rogerson (1990), Sordariomycetidae. 1 (from wood), Guyana. See Samuels & Rogerson (*Mem. N. Y. bot. Gdn* **64**: 165, 1990), Kang *et al.* (*Mycoscience* **40**: 151, 1999), Huhndorf *et al.* (*Fungal Diversity* **20**: 59, 2005; phylogeny).

Durandia Rehm (1913) [non *Durandia* Boeck. 1896, *Cyperaceae*] ≡ Durandiella.

Durandiella Seaver (1932), Dermateaceae. Anamorphs *Corniculariella, Gelatinosporium*. 10, Europe; N. America. See Groves (*CJB* **32**: 116, 1954), Kriegl-steiner (*Z. Mykol.* **44**: 277, 1978; key 5 spp. Europ.).

Durandiomyces Seaver (1928) = Peziza Fr. fide Korf (*Mycol.* **48**: 711, 1956).

Durella Tul. & C. Tul. (1865) = Xylogramma fide Sherwood (*Mycotaxon* **5**: 1, 1977), Magnes (*Biblthca Mycol.* **165**: 177 pp., 1997), Medardi (*Docums Mycol.* **33** no. 131: 29, 2004).

Durietzia (C.W. Dodge) Yoshim. (1998), Lobariaceae (L). 5, S. America. See Yoshimura (*Recollecting Edvard August Vainio*: 90, 1998), Stenroos *et al.* (*CJB* **81**: 232, 2003; photomorphs).

Durietzia Gyeln. (1935) = Ionaspis fide Petterson (*Bot. Notiser*: 100, 1946).

Durispora K.D. Hyde (1994), Diaporthales. 2, Malaysia; Hong Kong. See Hyde (*Sydowia* **46**: 315, 1994), Photita *et al.* (*Nova Hedwigia* **71**: 101, 2000).

Durogaster Lloyd (1919) nom. dub., Fungi. Based on *Helosis brasiliensis* (*Balanophoraceae*) fide Stevenson & Cash (*Bull. Lloyd Libr.* **35**: 178, 1936).

Durosaccum Lloyd (1924) = Pisolithus fide Stalpers (*in litt.*).

Dussiella Pat. (1890), Clavicipitaceae. 2, America. See White (*Am. J. Bot.* **80**: 1465, 1993), Bischoff *et al.* (*Mycol.* **96**: 1088, 2004).

Dutch elm disease, see elm disease.

duvet (of dermatophytes), a soft, thick layer of hyphae like brushed-up cloth.

Dwayaangam Subram. (1978), anamorphic *Orbilia*, Hso.1bH.1. 7, N. America; Malaysia. See Barron (*CJB* **69**: 1402, 1991), Kohlmeyer & Volkmann-Kohlmeyer (*MR* **105**: 500, 2001), Sokolski *et al.* (*Mycol.* **98**: 628, 2006).

Dwayabeeja Subram. (1958), anamorphic *Pezizomycotina*, Hso.≡ fP.1/10. 4, widespread (esp. tropical).

Dwayaloma Subram. (1957), anamorphic *Pezizomycotina*, Hsp.1eP.?. 1, India. See Subramanian (*J. Indian bot. Soc.* **36**: 62, 1957).

Dwayalomella Brisson, Piroz. & Pauzé (1975), anamorphic *Pezizomycotina*, Cac/Ccu.1eH.15. 2, N. America. See Carris (*Mycol.* **81**: 638, 1989).

Dwayamala Subram. (1956) = Dendryphiella fide Kendrick & Carmichae *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 390, 1973).

Dwibahubeeja N. Srivast., A.K. Srivast. & Kamal (1995), anamorphic *Pezizomycotina*, Hso.0bP.1. 1, India. See Srivastava *et al.* (*MR* **99**: 395, 1995).

Dwibeeja Subram. (1995), anamorphic *Pezizomycotina*. 1, Singapore. See Subramanian (*Kavaka* **20/21**: 57, 1992/1993).

Dwiroopa Subram. & Muthumary (1986), anamorphic *Diaporthales*, St.0eP.1. 1, widespread. See Farr & Rossman (*Mycoscience* **44**: 443, 2003; morphology).

Dwiroopella Subram. & Muthumary (1986), anamorphic *Pezizomycotina*, St.1eP.15/19. 1, India. See Subramanian & Muthumary (*Proc. Indian Acad. Sci.* Pl. Sci. **96**: 202, 1986).

Dyadosporites Hammen (1954), Fossil Fungi. 2 (Cretaceous, Paleocene, Tertiary), China; Colombia.

Dyadosporonites Elsik (1968), Fossil Fungi. 11 (Cretaceous, Tertiary), India; N. America.

Dycticia Raf. (1808) ? = Clathrus fide Stalpers (*in litt.*).

Dyctionella, see *Dictyonella*.

Dyctiostomiopelta, see *Dictyostomiopelta*.

Dyctyoblastus Kremp. (1869) = Phlyctis fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Dyeing. Some lichens were formerly used (esp. in N. Europe and N. America) as dyes of animal fibres (e.g. wool). **Orchil** (from *Roccella* spp.) is one of the best known giving a reddish purple as did **cudbear** (*Ochrolechia tartarea*), both being direct dyes. These colours, which are fugitive to light, are a complex series of orcein derivatives formed from microaerophilic oxidation of orcinol-type secondary metabolites in the presence of ammonia. Other spp. such as **crottle** (*Parmelia saxatilis* and *P. omphalodes*) give yellowish buff to brown shades and are reactive dyes. These colours are light-fast and are produced by colourless lichen substances which have an aldehyde group such as the depsidone salazinic acid. The fruiting bodies of some macromycetes (e.g. agarics) have been less used and not historically, but they can give a range of pinks, blues, yellows, reds and browns (e.g. *Boletus, Cortinarius, Hydnellum, Hygrocybe* spp.) using mordants such as alum or iron. Lichens in particular should not be collected indiscriminately for dyeing purposes from natural or seminatural habitats as this is contrary to the conservation of biodiversity.

Lit.: Bolton (*Lichens for vegetable dyeing*, 1960; edn 2, 1982), Brough (*Syesis* **17**: 81, 1984; 250 tests on 42 Can. lichens), Cardon (*Guide des teintures naturelles*, 1990), Casselman (*Craft of the dyer: colour from plants and lichens of the Northeast*, 1980), Kok (*Lichenologist* **3**: 248, 1966; orchil dyes), Rice & Beebee (*Mushrooms for color*, edn 2, 1980), Richardson (*The vanishing lichens*, 1975), Solberg (*Acta Chem. Scand.* **10**: 1116, 1956; dyeing wool with lichens and lichen substances).

Dyonisia, see *Dionysia*.

Dyplolabia A. Massal. (1854), Graphidaceae. See Kalb & Staiger (*Hoppea* **61**: 409, 2000; revision), Archer (*Biblthca Lichenol.* **94**, 2006; revision), Staiger *et al.* (*MR* **110**: 765, 2006; phylogeny), Archer (*Systematics & Biodiversity* **5**: 9, 2007; Solomon Is).

Dyrithiopsis L. Cai, R. Jeewon & K.D. Hyde (2003), Amphisphaeriaceae. Anamorph *Monochaetiopsis*. 1, China. See Jeewon *et al.* (*Mycol.* **95**: 912, 2003).

Dyrithium M.E. Barr (1994), Pezizomycotina. 1, N. America; Puerto Rico. See Eriksson & Hawksworth (*SA* **13**: 191, 1995; nomencl.), Kang *et al.* (*Fungal Diversity* **2**: 135, 1999; application of name).

dysgonic (of dermatophytes), growing more slowly in culture, frequently with less aerial mycelium, than a normal, **eugonic**, strain. See Johnstone & La Touche (*TBMS* **39**: 442, 1956).

Dyslachnum Clem. (1909) = Lachnum fide Raitviir (*Scripta Mycol.* **1**: 1, 1970).

Dyslecanis Clem. (1909) = Lecania fide Hawksworth

et al. (*Dictionary of the Fungi* edn 8, 1995).

Dysrhynchis Clem. (1909), Parodiopsidaceae. 7, widespread (tropical). See Hosagoudar (*Persoonia* **18**: 123, 2002).

Dysticta Clem. (1909) = Sticta fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Dystictina Clem. (1909) = Sticta fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

dystrophic, inadequately nourished. Cf. eutrophic, oligotrophic.

E (1) the ratio of length to width (of spores, basidia, etc.); Corner (*New Phytol.* **46**: 195, 1947). Cf. Q; (2) Royal Botanic Garden, Edinburgh (UK); founded 1670; a direct grant institution of the Department of Agriculture and Fisheries for Scotland; see Fletcher & Brown (*The Royal Botanic Garden, Edinburgh, 1670-1970*, 1970), Hedge & Lamond (*Index of collectors in the Edinburgh herbarium*, 1970), Watling (*Trans. bot. Soc. Edinb.* **45**: 1, 1986).

e- (prefix) (**ex-**), from; out of; without; not having. See ex.

Earlea Arthur (1906) = Phragmidium fide Arthur (*Manual Rusts US & Canada*, 1934).

Earliella Murrill (1905), Polyporaceae. 1, N. America. See Ryvarden (*Mycotaxon* **23**: 169, 1985), Gilbertson & Ryvarden (*N. Amer. Polyp.* **1**: 249, 1986).

earth-balls, basidiomata of *Sclerodermatales*.

earth-stars, basidiomata of *Geastrum*.

earth-tongues, ascomata of *Geoglossum*.

Eballistra R. Bauer, Begerow, A. Nagler & Oberw. (2001), Eballistraceae. 3 (on *Poaceae*), widespread. See Bauer *et al.* (*MR* **416**: 416, 2001; phylogen.), Piepenbring (*Caldasia* **24**: 103, 2002; Colombia), Vánky & Vánky (*Lidia* **5**: 157, 2002; southern Africa), Thaung (*Australasian Mycologist* **24**: 29, 2005; Burma).

Eballistraceae R. Bauer, Begerow, A. Nagler & Oberw. (2001), Georgefischeriales. 1 gen., 3 spp.
Lit.: Bauer *et al.* (*MR* **105**: 423, 2001), Bauer *et al.* (*MR* **109**: 1250, 2005), Vánky (*Mycotaxon* **91**: 217, 2005).

Ebollia Minter & Caine (1980), anamorphic *Pezizomycotina*, St.0fH.1. 1, Chile. See Minter & Caine (*TBMS* **74**: 436, 1980).

Ecchyna Fr. ex Boud. (1885) = Phleogena fide Donk (*Persoonia* **4**: 160, 1966).

Ecchynaceae Rea (1922) = Phleogenaceae.

Eccilia (Fr.) P. Kumm. (1871) = Entoloma fide Kuyper (*in litt.*).

eccrinid, one of the *Eccrinales* or *Amoebidiales*.

Echidnocymbium Brusse (1987), Ramalinaceae (L). 1, S. Africa. See Brusse (*Mycotaxon* **29**: 173, 1987), Ekman (*Op. bot.* **127**: 148 pp., 1996; N America).

Echidnodella Theiss. & Syd. (1918), Asterinaceae. 12, widespread (esp. tropical). See Goos (*Mycotaxon* **73**: 455, 1999), Hosagoudar (*Indian Phytopath.* **58**: 194, 2005; India), Thaung (*Australas. Mycol.* **25**: 5, 2006; Myanmar).

Echidnodes Theiss. & Syd. (1918), Asterinaceae. Anamorph *Asterostomula*. *c.* 17, widespread (tropical). See Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995), Goos (*Mycotaxon* **73**: 455, 1999), Hosagoudar (*Indian Phytopath.* **58**: 194, 2005; India), Thaung (*Australas. Mycol.* **25**: 5, 2006; Myanmar).

echinate (dim. **echinulate**) (of spores, etc.), having sharply pointed spines (Fig. 20.2); spinose.

Echinella Massee (1895) = Pirottaea fide Nannfeldt (*Nova Acta R. Soc. Scient. upsal.*, 1932).

Echinoascotheca Matsush. (1995), ? Phaeotrichaceae. 1, Pakistan. See Matsushima (*Matsush. Mycol. Mem.* **8**, 1995).

Echinobotryaceae Nann. (1934) = Microascaceae.

Echinobotryum Corda (1831), anamorphic *Microascaceae*, Hsy.0eP.10. 1, widespread. Synanamorph *Doratomyces*.

Echinocatena R. Campb. & B. Sutton (1977), anamorphic *Pezizomycotina*, Hso.0eP.3. 1, India. See Campbell & Sutton (*TBMS* **69**: 126, 1977).

Echinochaetaceae Jülich (1982) = Polyporaceae.

Echinochaete D.A. Reid (1963), Polyporaceae. 4, widespread (tropical). See Reid (*Mem. N. Y. bot. Gdn* **28**: 187, 1976), Ryvarden & Johansen (*Prelim. Polyp. Fl. E. Afr.*: 315, 1980), Corner (*Beih. Nova Hedwigia* **78**: 105, 1984), Núñez & Ryvarden (*Syn. Fung.* **10**: 19, 1995), Silveira (*Mycotaxon* **93**: 1, 2005; S. Am.).

Echinochondrium Samson & Aa (1975), anamorphic *Pezizomycotina*, Hso.#eP.1. 1, Sri Lanka. bulbils with spines. See Samson & Aa (*Revue Mycol.* Paris **39**: 103, 1975).

Echinoderma (Locq. ex Bon) Bon (1991) = Lepiota fide Kuyper (*in litt.*).

Echinodia Pat. (1919), anamorphic *Echinoporia*. 1, Singapore.

Echinodiscus Etayo & Diederich (2000), Helotiales. 1 (lichenicolous), Europe. See Etayo & Diederich (*Bull. Soc. Nat. luxemb.* **100**: 64, 2000).

Echinodontiaceae Donk (1961), Russulales. 2 gen. (+ 2 syn.), 7 spp.
Lit.: Donk (*Taxon*: 263, 1951-63), Gross (*Mycopath. Mycol. appl.* **24**: 1, 1964), Brodo (*Bryologist* **76**: 260, 1973), Stalpers (*Taxon* **28**: 414, 1979), Stalpers (*Stud. Mycol.* **40**: 185 pp., 1996), Ginns (*Mycol.* **90**: 19, 1998), Tabata *et al.* (*Mycoscience* **41**: 585, 2000), Binder & Hibbett (*Mol. Phylogen. Evol.* **22**: 76, 2002), Larsson & Larsson (*Mycol.* **95**: 1037, 2003), Maijala *et al.* (*Mycol.* **95**: 209, 2003).

Echinodontium Ellis & Everh. (1900), Echinodontiaceae. 5, N. America; Japan. *E. tinctorium* (Indian paint fungus, conifer wood rot). See Thomas (*Publ. Dep. Agric. Can. For. Bio. Div.* **1041**, 1958), Gross (*Mycopath. Mycol. appl.* **24**: 1, 1964; key), Tabata *et al.* (*Mycoscience* **41**: 585, 2000; molecular phylogeny), Larsson & Larsson (*Mycol.* **95**: 1037, 2003; phylogeny).

Echinodothis G.F. Atk. (1894) ≡ Dussiella fide White (*Am. J. Bot.* **80**: 1465, 1993).

Echinomyces Rappaz (1987), Diatrypaceae. 2, Africa; Australia. See Læssøe (*SA* **13**: 43, 1994; ? synonymy with *Fassia*), Chacón (*Acta Bot. Mexicana* **49**: 15, 1999; Mexico).

Echinophallus Henn. (1898), Phallaceae. 1, East Indies. See Demoulin (*in litt.*), Boedijn (*Bull. Jard. bot. Buitenz.* ser. 3 **12**: 90, 1932) possibly based on *Phallus* 'egg' fide.

Echinoplaca Fée (1824), Gomphillaceae (L). 25, widespread (tropical). See Santesson (*Symb. bot. upsal.* **12** no. 1: 1, 1952), Vězda (*Folia geobot. phytotax.* **14**: 43, 1979), Vězda & Poelt (*Folia geobot. phytotax.* **22**: 179, 1987), Lücking (*Biblthca Lichenol.* **65**: 1, 1997).

Echinopodospora B.M. Robison (1970) = Apiosordaria fide Jong & Davis (*Mycol.* **66**: 467, 1974).

Echinoporia Ryvarden (1980), Schizoporaceae. Anamorph *Echinodia*. 2, widespread (tropical). See Ry-

varden & Johansen (*Prelim. Polyp. Fl. E. Afr.*: 325, 1980), Langer (*Biblthca Mycol.* **154**, 1994; syn of *Hyphodontia*).

Echinosphaeria A.N. Mill. & Huhndorf (2004), Helminthosphaeriaceae. Anamorph *Vermiculariopsiella*. 1, widespread. See Miller & Huhndorf (*MR* **108**: 29, 2004), Puja *et al.* (*Cryptog. Mycol.* **27**: 11, 2006).

Echinospora Mirza (1963) nom. inval. ≡ Apiosordaria.

Echinosporangium Malloch (1967) [non *Echinosporangium* Kylin 1956, *Rhodophyta*] ≡ Lobosporangium.

Echinosporella Contu (1992) = Calocybe fide Kuyper (*in litt.*).

Echinosporium Woron. (1913) = Petrakia fide Petrak (*Sydowia* **20**: 186, 1968).

Echinothecium Zopf (1898), ? Capnodiaceae. 2 (on lichens), Europe; N. America. See Navarro-Rosinés & Gómez-Bolea (*Folia Botanica Miscellanea* **6**: 61, 1989; Iberian peninsula), Calatayud *et al.* (*MR* **106**: 1230, 2002; confusion with *Lichenostigma*).

Echinotrema Park.-Rhodes (1955) = Trechispora fide Larsson (*MR* **98**: 1153, 1994).

Echinula Graddon (1977), Hyaloscyphaceae. 1, British Isles. See Graddon (*TBMS* **69**: 255, 1977).

echinulate, see echinate.

Echinus Haller (1768) ≡ Hydnum.

Echusias Hazsl. (1873) = Nitschkia fide Höhnel (*Annls mycol.* **17**: 130, 1919).

eclosion, an explosive series of movements which results in the release of a germinating inner spore from a rigid exosporium, as in *Hypoxylon fragiforme* (Chapela *et al.*, *CJB* **68**: 2571, 1990).

Ecology. Fungal ecology (**myco-**) is the entire field of ecological and coenological study in fungi. See Ainsworth & Sussman (*The Fungi* **3**, 1968; many chs), Allsopp *et al.* (Eds) (*Microbial diversity and ecosystem function*, 1995), Christensen (*Mycol.* **81**: 1, 1989; review, 186 refs.), Cooke (*Ecology* **29**: 376, 1948, lit. fungus sociology, ecology; *Bot. Rev.* **24**: 241, 1958; *Mycopath. Mycol. appl.* **48** (1), 1972, IMC 1 papers), Cooke & Rayner (*Ecology of saprotrophic fungi*, 1984), Dighton *et al.* (*The fungal community: its organization and role in the ecosystem*, edn 3, 2005), Dix & Webster (*Fungal ecology*, 1995) Gadd *et al* (Eds) (*Fungi in the environment. British Mycological Society Symposium Series* **25**, 2007), Gilbert (*La mycologie sur le terrain*, 1928), Grigorova & Norris (Eds) (*Techniques in microbial ecology*, 1990), Harley (*J. Ecol.* **59**: 887, 1971; in ecosystems), Lynch & Hobbie (Eds) (*Micro-organisms in action: concepts and applications in microbial ecology*, 1988), Morten Lange (*Dansk. bot. Arkiv* **13** (1), 1948; agarics of Maglemose), Nuss (*Zur Oekologie der Porlinge*, 1975), Pugh (*TBMS* **74**: 1, 1980; strategies), Ramsbottom (*Mushrooms and toadstools*, 1953), Schultz & Boyle (*MR* **109**: 661, 2005; review), Watling (*TBMS* **90**: 1, 1988; macromycetes), Weir (*Mycol.* **10**: 4, 1918; altitudinal range of forest fungi), Wicklow & Carroll (Eds) (*The fungal community*, 1981; wide ranging surveys, relationship to general ecological concepts; edn 2, 1992), Wilkins *et al.* (*Ann. appl. Biol.* **24**: 703, **25**: 472, **26**: 25, 1937-39; larger fungi).

Lichens are primary colonizers in plant succession, occurring in all pioneer terrestrial habitats. Single species may grow on a wide range of substrata or be restricted to particular types. Whole communities rather than individual species tend to be characteristic of particular substrata growing in a particular climatic region, though a few species are restricted to particular trees (e.g. *Lecanora populicola* on *Populus*), esp. those which are probably not really lichenized (e.g. *Arthopyrenia laburni* on *Laburnum*, *Stenocybe septata* on *Ilex*). On bark and rocks, pH, shade, nutrient enrichment, buffer and ion exchange capacities, air pollution, and disturbance affect the communities developed. Lichens tend to dominate habitats in which competition from other plants is minimal. Vertical zonation of communities occurs on freshwater and maritime rocks (see Aquatic fungi and Marine fungi) and trees (Kershaw, *Lichenologist* **2**: 263, 1964). See Barkman (*Phytosociology and ecology of cryptogamic epiphytes*, 1958), Brodo (*in* Ahmadjian & Hale, 1974: 401 ['1973']; substrate ecology), Seaward (Ed.) (*Lichen ecology*, 1977; comprehensive survey, glossary).

Ectomyces P. Tate (1927) = Termitaria fide Tate (*Parasitology* **20**: 77, 1968).
ectomycorrhiza, see mycorrhiza.
ectoparasite, a parasite living on the outside of its host.
ectoplacodial, see stroma.
Ectosphaeria Speg. (1921) = Diatrype fide Petrak & Sydow (*Annls mycol.* **32**: 23, 1934).
ectospore (1) an exogenous spore; (2) a basidiospore (obsol.).
Ectosticta Speg. (1912) = Rhizosphaera fide Clements & Shear (*Gen. Fung.*, 1931), Sutton (*Mycol. Pap.* **141**, 1977).
Ectostroma Fr. (1823) nom. dub., anamorphic *Pezizomycotina*. See Carmichael *et al.* (*Genera of Hyphomycetes*, 1980).
ectostroma, see stroma.
ectothecal (of ascomycetes), having the hymenium exposed.
Ectothrix (of ascomycetes), having the hymenium exposed.
ectothrix, living on the surface of hair.
Ectotrichophyton Castell. & Chalm. (1919) = Trichophyton fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).
ectotroph (adj. **ectotrophic**), see mycorrhiza.
ectotropic, curving out.
ectotunica, the outer wall of a bitunicate ascus.
ED, effective dose; **ED_{50}**, the effective dose for a 50% (usually lethal) response (Horsfall, *Principles of fungicidal action*, 1956).
edaphic, pertaining to the soil.
Edenia M.C. González, Anaya, Glenn, Saucedo & Hanlin (2007), Pleosporaceae. 1, Mexico. See González *et al.* (*Mycotaxon* **101**: 251, 2007).
Edhazardia J.J. Becnel, V.Sprague & T. Fukuda (1989), Microsporidia. 1.
Edible fungi. For an extensive review, see Boa (2004). Fungi are an important source of food in many countries, and may be cultivated or gathered from the wild. The size of the gathered wild edible fungus market globally has been estimated as several million tonnes with a value of at least US$2 billion in 2004 (Boa, 2004). Examples of countries where wild edible fungi are gathered for personal consumption, and for sale locally include: Malawi, Tanzania and other countries in an extensive regions of central and southern Africa where Miombo woodland is present; Chile, Guatemala, Mexico and the USA in the Americas; China, Nepal, North Korea, Russia, South Korea, Taiwan and Turkey in Asia; Belarus, the Czech Republic, France, Italy, Poland, Rumania, Russia, Spain, Turkey and Ukraine in Europe (Boa, 2004). Emigrants from countries of the former Soviet Union to Israel, Europe, Asia and Mexico to the USA tend to continue their collecting practices in the country of arrival. Wild edible fungi are gathered extensively for export, most notably matsutake (Tricholoma spp.) to Japan from China, and the Pacific northwest of Canada and the USA. Exports can constitute an important component of local and national economies. Species may be consumed for their nutritional value, which is generally undervalued (de Román *et al.*, 2006), or to enhance the flavour of meals.

The main species gathered or cultivated are fleshy basidiomycetes (esp. of *Agaricus*, *Amanita*, *Boletus*, *Cantharellus*, *Coprinus*, *Lactarius*, *Macrolepiota*, *Pleurotus*, *Russula*, *Termitomyces*, *Tricholoma* etc.), and some larger ascomycetes (e.g. *Cyttaria*, *Morchella*, *Terfezia* and *Tuber*). The range of species consumed often varies geographically (e.g. *Cyttaria* is only consumed in southern South America), but this pattern is becoming eroded with globalization of markets. Fleshy basidiomycetes and subterranean ascomycetes (*Terfezia* and *Tuber*) are more frequent in late summer and autumn; the other larger ascomycetes chiefly occur in spring. The edible part is generally the ascoma or basidioma but in *Laccocephalum mylittae* (blackfellows' bread of Australia), *Poria cocos* (Indian bread or tuckahoe of America; cf. stone-fungus), and some tropical species of *Lentinus* it is the sclerotium (which in *Lentinus* may weigh 10kg or more). Microfungi may also be significant components of food. In Taiwan young *Ustilago esculenta* in *Zizania aquatica* (Canadian rice) is used and in Mexico cobs of maize infected with *U. maydis* ('huitlacoche') is commonly eaten. Yeast (*Saccharomyces cerevisiae*) after autolysis (under the trade names Marmite, Vegex, etc.) is a food for humans and dry yeast such as *Candida utilis* (q.v.) is coming into use, as is mycoprotein (q.v.). Button mushrooms (*Agaricus* spp.), oyster (*Pleurotus* spp.), padi-straw (*Volvariella volvacea*), and shii-take (*Lentinula edodes*) mushrooms, and black truffles (Tuber melansporum) are commonly cultured (see Mushroom cultivation). *Agrocybe aegerita* is sometimes obtained by watering old poplar (*Populus*) wood.

Commercial collection of fungi from the wild is extensive and expanded greatly when countries in Eastern Europe became independent from the former Soviet Union. There was a surge in amounts of chanterelles (*Cantharellus* spp.) gathered and exported to western Europe in the 1990s while Italian companies constantly scout for new sources of *Boletus edulis* from around the world. *Lactarius deliciosus* (niscalos, rovelones) is gathered from the French Alps to western Spain to meet a large demand from Catalans (de Román & Boa, 2006). There are conservation (q.v.) concerns about use of wild edible fungi which are linked to loss of woodland habitat and to excessive harvesting. In some countries, guidelines or regulations concerning wild harvesting have been introduced, see e.g. Ławrynowicz (Conservation of fungi in Poland. *In* Perini (Ed.). *Conservation of fungi*, 25, 1997; regulations in Poland) while licenses must be bought in parts of Italy, a common practice now extended to matsutake areas in the Pacific northwest. The absolute amount gathered is thought to be less important than disturbance to soil when raking for some species (e.g. truffles and matsutake) and compaction from people walking in areas.

There are many ways to prepare edible fungi for the table. If flavour is important, then small pieces of the fungus can be spread throughout the food; if aroma is important, it may be better to place thin slices on top of the food. Various cook books are available which specialize in fungus recipes. Macrofungi may be eaten for ceremonial reasons (see Ethnomycology and Hallucinogenic fungi), and may also provide food for animals (see Animal mycophagists).

Lichens form a very important food for reindeer and caribou (*Bryoria*, *Cladonia*, Iceland moss, q.v.), and for invertebrates. Although not poisonous (except possibly those containing large amounts of vulpinic acid, e.g. *Letharia vulpina*, Wolf's moss, q.v.), lichens are not generally eaten by humans, with

only a few exceptions (e.g. rock tripe, shaybah, manna). See Dahl (*Bot. Rev.* **20**: 463, 1954), Llano (*Bot. Rev.* **10**: 1, 1944), Richardson (*The vanishing lichens*, 1975), Seaward (Ed.) (*Lichen ecology*, 1977).

Elaphocordyceps G.H. Sung & Spatafora (2007), Ophiocordycipitaceae. Anamorph *Verticillium*-like. 21 (mostly parasitic on *Elaphomyces*), widespread. See Sung *et al.* (*Stud. Mycol.* **57**, 2007).

Elaphomyces Nees (1820), Elaphomycetaceae. 25 (ectomycorrhizal, hypogeous), widespread. See Ko-

bayashi (*Nagaoa* **7**: 35, 1960; key 14 Jap. spp.), Trappe (*TMSJ* **17**: 209, 1976; variability), Samuelson *et al.* (*Mycol.* **79**: 571, 1987; ultrastr. ascospore ornam.), Zhang & Minter (*CJB* **67**: 909, 1989; key 5 spp. Canada),), Zhang (*MR* **95**: 973, 1991; key 7 spp. China), Pegler *et al.* (*British truffles*, 1993; key 5 Br. spp.), Landvik *et al.* (*Mycoscience* **37**: 237, 1997; DNA), Xu (*Mycosystema* **18**: 238, 1999; ecology), Miller *et al.* (*MR* **105**: 1268, 2001; phylogeny).

Elaphomycetaceae Tul. ex Paol. (1889), Eurotiales. 2 gen. (+ 6 syn.), 27 spp.

Lit.: Samuelson *et al.* (*Mycol.* **79**: 571, 1987), Zhang & Minter (*CJB* **67**: 909, 1989), Zhang (*MR* **95**: 973, 1991), Landvik & Eriksson (*Ascomycete Systematics. Problems and Perspectives in the Nineties* NATO ASI Series vol. **269** **269**: 225, 1994), Landvik *et al.* (*Mycoscience* **37**: 237, 1996), Xu (*Mycosystema* **18**: 238, 1999), Miller *et al.* (*MR* **105**: 1268, 2001), Geiser *et al.* (*Mycol.* **98**: 1053, 2006; phylogeny).

Elaphomycetales Trappe (1979) = Eurotiales.

Elasmomyces Cavara (1898) = Russula fide Miller *et al.* (*Mycol.* **98**: 960, 2006).

Elasmomycetaceae Locq. ex Pegler & T.W.K. Young (1979) = Russulaceae.

elater (1) a free capillitium-thread, e.g. in *Myxogastria* and *Farysia*; (2) a body with spiral or annular markings in the gleba of *Battarrea*.

Elateraecium Thirum., F. Kern & B.V. Patil (1966), anamorphic *Hiratsukamyces*. 3 (on *Salacia* (*Celastraceae*), *Desmodium* (*Leguminosae*)), India; S. Africa. Anamorph name for (I). See Laundon (*Mycotaxon* **3**: 133, 1975), Thirumalachar *et al.* (*Sydowia* **27**: 80, 1973-4; teleomorphs).

Elateromyces Bubák (1912) = Farysia fide Vánky (*in litt.*).

Elattopycnis Bat. & Cavalc. (1964), anamorphic *Pezizomycotina*, Cpt.0eH.?. 1, Brazil. See Batista & Cavalcanti (*Anais Congr. Soc. Bot. Brasil* **16**: 181, 1963).

Elderia McLennan (1961) = Stephensia fide Trappe (*Mycotaxon* **9**: 247, 1979), Læssøe & Hansen (*MR* **111**: 1075, 2007; phylogeny).

Electron microscopy, see Ultrastructure.

Electrophoresis. A method of chromatography (q.v.) in which charged particles (esp. DNA, RNA, proteins) are separated by their differential migration in an inert matrix by an electric field. Agarose provides a matrix of large pores particularly suitable for DNA and RNA electrophoresis, and polyacrylamide (**PAGE**) and starch provide matrices of smaller pore size more suitable for the separation of proteins (or for the single base resolution required for DNA sequencing). DNA and RNA migration is directly related to particle size, but proteins migration may be affected by both size and charge (size only if the dissociating system used). The extraction methods depend on whether proteins or nucleic acids are being examined, and the bands are stained for study. The technique is valuable for studying both total protein patterns and particular enzymes (inter- and extracellular), especially variation in one enzyme between isolates; the variants are **isozymes** (**isoenzymes**) and about 140 can be assayed (e.g. esterases, dehydrogenases, pectinases, phosphatases).

Automated and standardized units are available, which can operate with computer-linked gel-readers and increasingly, slab gels are being replaced by capillary (and other rapid 'cassette'-type) electrophoresis. The techniques have proved especially valuable in characterization of closely related strains of plant pathogenic fungi.

Pulsed field gel - (PFGE), a term used to describe a number of different techniques for separating large pieces of DNA, e.g. chromosomes. Different proprietary systems are available (e.g. CHEF, FIGE, PFGE), but all involve applying electric field to an electrophoresis gel as a series of pulses or variations rather than a single continuous constant field. See Boekhout *et al.* (*Ant. v. Leeuwenhoek* **63**: 157, 1993). Now use is less frequent in mycology, and mainly in bacteriology.

Lit.: Gabriel & Gersten (*Analyt. Biochem.* **45**: 1741, 1992; staining), Loxdale & Den Hollander (Eds) (*Electrophoretic studies on agricultural pests*, 1989), Paterson & Bridge (*Biochemical techniques for filamentous fungi* [*IMI Techn. Handbk* **1**], 1994), Hames (*Gel Electrophoresis of Proteins*, edn 3, 1998); capillary electrophoresis: Price *et al.* (*Med. Lit.: Lumbsch *et al.* (*Mol. Phylogen. Evol.* **31**: 822, 2004), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006), Lumbsch *et al.* (*MR* **111**: 1133, 2007).

Elletevera Deighton (1969), anamorphic *Mycosphae-*

rellaceae, Hso.≡ eP.10. 1 (on *Phyllachora*), N. America; Africa. See Deighton (*Mycol. Pap.* **118**: 17, 1969), Crous & Braun (*CBS Diversity Ser.* **1**: 571 pp., 2003).

Ellimonia Syd. (1930) = Inocyclus fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Elliottinia L.M. Kohn (1979), Sclerotiniaceae. 1, Europe. See Kohn (*Mycotaxon* **9**: 415, 1979), Diamandis (*Micologia 2000*: 143, 2000; conservation).

ellipsoidal (of spores, etc.), elliptical in optical section (Fig. 23.1).

Ellis (Job Bicknell; 1829-1905; USA). Student, Union College, Schenectady, New York (1849-1851) [with Tuckerman (q.v.) and Peck (q.v.)]; school teacher (1851-1864); served on the Union side in the American Civil War (1864-1865); teaching and farming (1865-1875). Pioneering North American mycologist, taking up mycology in 1878, describing more than 4,000 species, mainly in works published in *Bulletin of the Torrey Botanical Club* and *Journal of Mycology*; noted for his work on ascomycetes, particularly pyrenomycetes; with Everhart and Kellerman, founder of *Journal of Mycology*, the forerunner of *Mycol.* His specimens are in the fungal reference collection in New York Botanic Garden (NY). *Publs.* (with Everhart) *North American Pyrenomycetes* (1892). *Biogs, obits etc.* Barr, Huhndorf & Rogerson (Pyrenomycetes described by J.B. Ellis. *Memoirs of the New York Botanic Garden* **79**: 1, 1996); Cash (A record of the fungi named by J.B. Ellis. I-III. *USDA Special Publication, Plant Disease Survey* **2**: 1-165, 167-345, 347-518, 1952-1954); Grummann (1974: 187); Kaye (*Mycotaxon* **26**: 29, 1986); Kellerman (*Journal of Mycology* **12**: 41, 1906) [portrait]; Rodrigues (*Mycotaxon* **34**: 577, 1989) [index 202 types with amyloid rings]; Stafleu & Cowan (*TL-2* **1**: 742, 1976); see also the website: Ahn (*A Biography of Job Bicknell Ellis* http://sciweb.nybg.org/science2/hcol/intern/ellis1.asp).

Ellis (Martin Beazor; 1911-1996; Guernsey, later England). Mycologist (1946-1960) then Chief Mycologist (1960-1976), Commonwealth Mycological Institute, Kew. A taxonomist, primarily of pigmented hyphomycetes, the meticulous scholarship and superb artwork of his publications made identification of these organisms possible for the first time by the non-expert. *Publs. Dematiaceous Hyphomycetes* (1971); *More Dematiaceous Hyphomycetes* (1976); (with J.P. Ellis) *Microfungi on Land Plants* (1985); (with J.P. Ellis) *Microfungi on Miscellaneous Substrates* (1988). *Biogs, obits etc.* Sutton & Mordue (*MR* **101**: 510, 1997) [portrait].

Ellisembia Subram. (1992), anamorphic *Sordariomycetes*, Hso.≡ eP.1/19. 17, widespread. See Subramanian (*Proc. Indian natn Sci. Acad.* Part B. Biol. Sci. **58**: 183, 1992), Shenoy *et al.* (*MR* **110**: 916, 2006; phylogeny, polyphyly).

Ellisia Bat. & Peres (1965) [non *Ellisia* L. 1763, *Hydrophyllaceae*] ? = Heteroconium fide Carmichael *et al.* (*Genera of Hyphomycetes*, 1980).

Ellisiella Bat. (1956), anamorphic *Pezizomycotina*. 3, Portugal. See Batista (*An. Soc. Biol. Pernambuco* **14**: 19, 1956).

Ellisiella Sacc. (1881) = Colletotrichum fide Nag Raj (*CJB* **51**: 2463, 1973).

Ellisiellina Sousa da Câmara (1949) = Colletotrichum fide Sutton (*CJB* **44**: 887, 1966).

Ellisiodothis Theiss. (1914) ? = Muyocopron fide Sivanesan (*in litt.*).

Ellisiopsis Bat. (1956) = Beltraniella fide Pirozynski & Patil (*CJB* **48**: 567, 1970).

Ellisomyces Benny & R.K. Benj. (1975), Mucoraceae. 1, USA. See Beakes & Campos-Takaki (*TBMS* **83**: 607, 1984; sporangiolum ultrastr.), Beakes *et al.* (*CJB* **62**: 2677, 1984), Beakes *et al.* (*TBMS* **83**: 593, 1984; thallospore formation and ultrastr.), Voigt & Wöstemeyer (*Gene* **270**: 113, 2001; phylogeny).

Ellula Nag Raj (1980), anamorphic *Agaricomycetes*, St.0eH.2. 1 (with clamp connexions), Brazil. See Nag Raj (*CJB* **58**: 2013, 1980).

Ellurema Nag Raj & W.B. Kendr. (1986), Amphisphaeriaceae. Anamorph *Hyalotiopsis*. 1 (from leaves), India. See Kang *et al.* (*Fungal Diversity* **1**: 147, 1998; DNA), Kang *et al.* (*MR* **103**: 53, 1999), Kang *et al.* (*Mycotaxon* **81**: 321, 2002; phylogeny).

elm disease (Dutch elm disease), a vascular disease of elm (*Ulmus*) caused by *Ophiostoma ulmi* or the even more aggressive *O. novo-ulmi*; the last sp. may be related to one from Himalaya; anamorphs in *Pesotum*. See *IMI Descriptions* **361** (1973), *IMI Map* **36**, Holmes & Heybrock (*Phyt. classic* **13**, 1990; transl. early papers), Brasier (*Mycopath.* **115**: 155, 1991; *Nature* **372**: 227, 1994).

Elmeria Bres. (1912) [non *Elmeria* Ridl. 1905, *Saxifragaceae*] ≡ Elmerina.

Elmerina Bres. (1912), Auriculariales. 4, widespread (esp. tropical). See Imazeki (*Revue Mycol.* Paris **20**: 159, 1955; as *Protodaedalea*), Parmasto (*Nova Hedwigia* **39**: 101, 1984; monogr.), Reid (*Persoonia* **14**: 465, 1992), Núñez (*Mycotaxon* **61**: 177, 1997), Núñez (*Folia cryptog. Encoelia (Fr.) P. Karst. (1871) nom. cons., Sclerotiniaceae. Anamorph *Myrioconium*. *c*. 15, widespread (north temperate). See Korf & Kohn (*Mem. N. Y. bot. Gdn* **28**: 109, 1976), Arendholz & Sharma (*Mycotaxon* **20**: 633, 1984), Juzwik & Hinds (*CJB* **62**: 1916, 1984; anamorph), Zhuang (*Mycotaxon* **31**: 261, 1988), Verkley (*MR* **99**: 187, 1995; asci), Baral & Richter (*Boletus* **21**: 45, 1997; subgen. *Kirschsteinia*), Holst-Jensen *et al.* (*Mycol.* **89**: 885,

1997), Holst-Jensen *et al.* (*Nordic Jl Bot.* **18**: 705, 1999), Holst-Jensen *et al.* (*Mol. Biol. Evol.* **16**: 114, 1999; posn), Zhuang (*Mycotaxon* **72**: 325, 1999), Zhuang *et al.* (*Mycosystema* **19**: 478, 2000; phylogeny).

Encoeliella Höhn. (1910) = Unguiculariopsis fide Zhuang (*Mycotaxon* **32**: 1, 1988).

Encoeliopsis Nannf. (1932), Helotiaceae. 4, Europe; N. America. See Groves (*CJB* **47**: 1319, 1969), Zhuang (*Mycotaxon* **32**: 97, 1988).

Endacinus Raf. (1814) = Pisolithus fide Saccardo (*Syll. fung.* **7**: 148, 1888).

Endaematus Raf. (1814) nom. dub., Fungi.

Endematus (orthographic variant), see *Endaematus*.

endemic, native to one country or geographical region.

endo- (prefix), inside.

endoascospores, spore-like cells produced within ascospores (see Morgan-Jones, *CJB* **51**: 493, 1972).

endoascus, the often extensible inner wall layers of a bitunicate (q.v.) ascus.

endobasidial (of a conidiophore in a lichenized pycnidium), having a secondary sporing branch (obsol.); cf. exobasidial.

Endobasidium Speschnew (1901), Exobasidiaceae. 1, Samarkand (Asia). See Donk (*Reinwardtia* **4**: 116, 1956; basidiomycete affinities doubtful).

endobasidium, see basidium.

endobiotic, making growth inside living organisms.

Endoblastidium Codreanu (1931), ? Blastocladiales. 2 (in *Insecta*), Europe.

Endoblastoderma B. Fisch. & Brebeck (1894) = Candida fide Lodder (*Yeasts, a taxonomic study* 2nd edn, 1970).

Endoblastomyces Odinzowa ex Kudrjanzev (1960) = Issatchenkia fide Kurtzman & Fell (*Yeasts, a taxonomic study* 4th edn: 223, 1998).

Endobotrya Berk. & M.A. Curtis (1874), anamorphic *Pezizomycotina*, Cac.#eP.1. 1, N. America.

Endobotryella Höhn. (1909), anamorphic *Pezizomycotina*, St.#eP.1. 1, Europe.

Endocalyx Berk. & Broome (1876), anamorphic *Pezizomycotina*, Hsp.0eP.10. 9, widespread (tropical). See Montemartini Corte (*Atti Ist. bot. Univ. Lab. Crittog. Pavia* sér. 5 **20**: 260, 1963; key), Okada & Tubaki (*Mycol.* **76**: 300, 1984; cultural behaviour), Mena Portales & Mercado Sierra (*Revta Jardín bot. Nac.* Univ. Habana **5**: 53, 1984; Cuba).

Endocarpaceae Fée ex Zenker (1827) = Verrucariaceae.

Endocarpidium Müll. Arg. (1862) = Placidiopsis fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

endocarpinoid (of lichenized perithecia), sunk into the tissues of the thallus, as in *Endocarpon* (obsol.).

Endocarpiscum Nyl. (1864) = Heppia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Endocarpomyces E.A. Thomas ex Cif. & Tomas. (1953) ≡ Dermatocarpon Eschw.

Endocarpon Hedw. (1789), Verrucariaceae (L). *c.* 50, widespread (esp. temperate). See Singh & Upreti (*Candollea* **39**: 539, 1984; key 6 spp., India), Wagner (*CJB* **65**: 2441, 1987; ontogeny), Stocker-Wörgötter & Turk (*Pl. Syst. Evol.* **158**: 313, 1988; ultrastr.), Wagner & Letrouit-Galinou (*CJB* **66**: 2118, 1988; squamule development), McCarthy (*Lichenologist* **23**: 27, 1991; 10 spp. Australia), Harada (*Nova Hedwigia* **56**: 335, 1993; key 7 spp. Japan), Harada (*J. Nat. Hist. Mus. Inst.* Chiba **4**: 97, 1997; Micronesia), Breuss (*Öst. Z. Pilzk.* **9**: 147, 2000; Mexico), Geiser *et al.* (*Mycol.* **98**: 1053, 2006; phylogeny), Gueidan *et al.* (*MR* **111**: 1145, 2007; phylogeny), Aptroot *et al.* (*Biblthca Lichenol.* **97**, 2008; Costa Rica).

endocarpous (of gasteromycetes, etc.), having the mature hymenium covered over; angiocarpous.

Endocena Cromb. (1876), Acarosporaceae (L). 1 (sterile), S. America. See Stenroos & DePriest (*Am. J. Bot.* **85**: 1548, 1998; DNA).

Endochaetophora J.F. White & T.N. Taylor (1988), Fossil Fungi, Ascomycota. 1 (Triassic), Antarctica.

endochroic, see colour.

Endochytriaceae Sparrow ex D.J.S. Barr (1980), Chytridiales. 10 gen., 56 spp.

Lit.: Barr *et al.* (*Mycol.* **79**: 587, 1987), Chen & Chien (*Bot. Bull. Acad. sin.* Taipei **36**: 235, 1995), Longcore (*Mycol.* **87**: 25, 1995), Shin *et al.* (*CJB* **79**: 1083, 2001).

Endochytrium Sparrow (1933), Endochytriaceae. 7, widespread (temperate). See Karling (*Mycol.* **33**: 356, 1941).

Endocladis Clem. & Shear (1931) ≡ Endoramularia.

Endococcus Nyl. (1855), Dothideomycetes. 24 (on lichens), widespread (esp. temperate). See Hawksworth (*Bot. Notiser* **132**: 283, 1979), David & Etayo (*Lichenologist* **27**: 314, 1995; on *Collema*), Etayo & Breuss (*Öst. Z. Pilzk.* **10**: 315, 2001).

Endocochlus Drechsler (1935), Cochlonemataceae. 4, N. America; Kenya. See Drechsler (*Mycol.* **27**: 14, 1935), Drechsler (*Mycol.* **28**: 363, 1936), Drechsler (*Mycol.* **41**: 229, 1949), Dyal (*Sydowia* **27**: 293, 1976; keys parasites of nematodes and amoebae, bibliogr.).

Endocoenobium Ingold (1940), Endochytriaceae. 1, British Isles. See Canter (*J. Linn. Soc.* Bot. **91**: 95, 1985).

Endocoleroa Petr. (1969) = Venturia Sacc. fide Sivanesan (*Biblthca Mycol.* **59**, 1977).

Endocolium Syd. (1937), Pezizomycotina. 1, C. America.

endocommensal, an organism living as a commensal (see symbiosis) inside another (e.g. *Trichomycetes* in the gut of *Insecta*).

Endoconia Raf. (1819) nom. dub., ? Agaricomycetes. See Murrill (*Index Rafinesq.*, 1949).

Endoconidioma Tsuneda, Hambleton & Currah (2004), anamorphic *Dothideaceae*. 1, Canada. See Tsuneda *et al.* (*Mycol.* **96**: 1129, 2004).

Endoconidiophora Münch (1907) = Ceratocystis fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Endoconidium Prill. & Delacr. (1891), anamorphic *Gloeotinia*, Hsp.0eH.15. 3, widespread (temperate).

endoconidium, a conidium formed inside a hypha, e.g. as in *Thielaviopsis basicola*.

Endoconospora Gjaerum (1971), anamorphic *Pezizomycotina*, Hsp.0eH.15. 2, Norway; India. See Gjaerum (*Norw. Jl Bot.* **18**: 109, 1971), Braun & Hosagoudar (*Mycotaxon* **46**: 259, 1993).

Endocoryneum Petr. (1922), anamorphic *Pezizomycotina*, St.≡ eP.15. 2, Austria; Italy. See Marras *et al.* *in* Luisi *et al.* (Eds) (*Recent advances in oak decline*: 255, 1993).

Endocreas Samuels & Rogerson (1989) = Valsonectria fide Seifert & Samuels (*Mycol.* **89**: 512, 1997), Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Endocronartium Y. Hirats. (1969), Cronartiaceae. 4 (on *Pinus* (*Pinaceae*)), Europe; North America; Ja-

pan. A heterogeneous group of endo-cyclic rusts related to *Cronartium*. See Imazu & Kakishima (*Proc. 4(th) rust on pines working party* Tsukuba: 27, 1995), Vogler & Bruns (*Mycol.* **90**: 244, 1998; DNA seq. analysis).

endocyanosis, the inclusion of cyanobacteria inside the cells of another organism; in fungi, see *Geosiphon*.

Endocycla Syd. (1927) = Schizothyrium fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

endocyclic, see *Pucciniales* and Table 5.

endocystidium, see cystidium.

endocystidium-form, see *Pucciniales* and Table 5.

Endodermophyton Castell. (1910) = Trichophyton fide Sutton (*in litt.*).

Endodesmia Berk. & Broome (1871) [non *Endodesmia* Benth. 1862, *Clusiaceae*] ≡ Broomeola.

Endodesmidium Canter (1949), Synchytriaceae. 1 (on desmids), Europe.

Endodothella Theiss. & Syd. (1915) = Phyllachora Nitschke ex Fuckel (1870) fide Cannon (*Mycol. Pap.* **163**: 302 pp., 1991).

Endodothiora Petr. (1929), Dothioraceae. 1 (on *Dothidea*), former USSR.

endoectothrix, making growth in and on a hair.

endogenous (1) living inside; (2) immersed in the substratum; (3) undergoing development within.

Endogloea Höhn. (1915) = Phomopsis (Sacc.) Bubák. fide Sutton (*Mycol. Pap.* **141**, 1977).

Endogonaceae Paol. (1889), Endogonales. 4 gen., 27 spp.

Lit.: Morton & Benny (*Mycotaxon* **37**: 471, 1990; rev.), Yao *et al.* (*Kew Bull.* **50**: 349, 1995), Yao *et al.* (*Genera of Endogonales*: 229 pp., 1996), Jeffries & Dodd (*Appl. Microb. System.*: 73, 2000), Kyde & Gould (*Microbial Endophytes*: 161, 2000), Benny *et al. in* McLaughlin *et al.* (Eds) (*The Mycota* A Comprehensive Treatise on Fungi as Experimental Systems for Basic and Applied Research **7A**: 113, 2001), Gleason & McGee (*Australasian Mycologist* **22**: 73, 2004).

Endogonales Moreau ex R.K. Benj. (1979). Mucoromycotina. 1 fam., 4 gen., 27 spp. Endomycorrhizal and saprobic taxa transferred to *Glomerales* (q.v.) by Morton & Benny (1990). Fam.:
Endogonaceae

Lit.: Morton & Benny (1990), Pegler *et al.* (*British Truffles. A revision of British hypogeous fungi*, 1993), Warcup (*MR* **94**: 173, 1990; Australia), Yao *et al.* (*Kew Bull.* **50**: 349, 1995; gen. names, *Genera of Endogonales*, 1996; review), White *et al.* (*Mycol.* **98**: 860, 2006; molecular phylogeny), Hibbett *et al.* (*MR* **111**: 109, 2007), and see under Family.

Endogone Link (1809), Endogonaceae. *c.* 20 (saprobic or forming ectomycorrhiza), widespread (esp. temperate). See Gerdemann & Trappe (*Mycol. Mem.* **5**, 1974; key NW Am. spp.), Tandy (*Aust. J. Bot.* **23**: 849, 1975; Australia), Bonfante-Fasolo & Scannerini (*Mycopathologia* **59**: 117, 1976; ultrastr.), Trappe & Gerdemann (*Mycol.* **71**: 206, 1979), Berch & Fortin (*Mycol.* **75**: 328, 1983; zygospore germination), Berch & Fortin (*CJB* **61**: 899, 1983; axenic culture), Berch & Fortin (*CJB* **62**: 170, 1984), Berch & Castellano (*Mycol.* **78**: 292, 1986; sporulation in culture), Gibson *et al.* (*Mycol.* **79**: 433, 1987; cytochemistry), Jabaji-Hare *et al.* (*Mycol.* **80**: 54, 1988; fatty acids), Dalpé (*CJB* **68**: 910, 1990; culture), Warcup (*MR* **94**: 173, 1990; ectomycorrhizal association), Yao *et al.* (*Kew Bull.* **50**: 306, 1995), Yao *et al.* (*Genera of Endogonales*: 229 pp., 1996), Błaszkowski (*Mycotaxon* **63**: 131, 1997), Błaszkowski *et al.* (*MR* **102**: 1096, 1998), Gleason & McGee (*Australasian Mycologist* **22**: 73, 2004; ultrastr.), Goto & Maia (*Mycotaxon* **96**: 327, 2006; Brazil), James *et al.* (*Nature* **443**: 818, 2006; phylogeny).

Endogonella Höhn. (1913) = Glaziella fide Zycha *et al.* (*Mucorales*, 1969).

endogonidium, a gonidium having its development inside a receptable or gonidangium (obsol.).

Endogonopsis R. Heim (1966), ? Diplocystidiaceae. 1, S. Asia. See Heim (*Revue Mycol.* Paris **31**: 150, 1966) Possibly based on young *Astraeus* (Astr.), Heim (*Revue Mycol.* Paris **33**: 379, 1968), Heim (*C.R. Acad. Sci. Paris* D **268**: 1489, 1969).

Endohormidium Auersw. & Rabenh. (1869) = Corynelia fide Fitzpatrick (*Mycologia* 7 **34**: 464, 1943).

Endohyalina Marbach (2000), Caliciaceae (L). 2, neotropics. See Marbach (*Biblthca Lichenol.* **74**: 201, 2000).

endohypha, see hypha.

endokapylic, a thallus of a lichenicolous fungus in which no morphologically distinct lichenized structure is formed (Poelt & Vězda, 1984; Rambold & Triebel, *Bibl. Lich.* **48**, 1992).

Endolepiotula Singer (1963), Agaricaceae. 1, Argentina. Basidioma gasteroid.

endolithic, in stone (Kobluk & Kahle, *Bull. Can. Pet. Geol.* **25**: 208, 1977; fungi, bibliogr.); cf. epilithic. See also cryptoendolithic.

Endolpidium De Wild. (1894) = Olpidium fide Sparrow (*Aquatic Phycomycetes* Edn 2: 1187 pp., 1960).

Endomelanconium Petr. (1940), anamorphic *Austrocenangium*, St.0eP.1. 4, widespread. See Verkley & Aa (*Mycol.* **89**: 967, 1997; Papua New Guinea), Yanna *et al.* (*Fungal Diversity* **2**: 199, 1999; Hong Kong).

Endomeliola S. Hughes & Piroz. (1994), Meliolaceae. 1, New Zealand. See Hughes & Pirozynski (*N.Z. Jl Bot.* **32**: 53, 1994).

Endomyces Reess (1870), Endomycetaceae. 3 (on *Armillaria*), widespread (temperate). See Redhead & Malloch (*CJB* **55**: 1701, 1977), von Arx (*Antonie van Leeuwenhoek* **43**: 33, 1977), de Hoog *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 194, 1998), Suh *et al.* (*Mycol.* **93**: 317, 2001), Suh *et al.* (*MR* **109**: 261, 2005; ecology), Suh *et al.* (*Mycol.* **98**: 1006, 2006; phylogeny).

Endomycetaceae J. Schröt. (1893), Saccharomycetales. 4 gen. (+ 1 syn.), 6 spp.

Lit.: Weijman (*Antonie van Leeuwenhoek* **42**: 315, 1976), Redhead & Malloch (*CJB* **55**: 1701, 1977), Hoog *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 194, 1998), Suh *et al.* (*Mycol.* **93**: 317, 2001), Suh *et al.* (*Mycol.* **98**: 1006, 2006; phylogeny).

Endomycetales Gäum. & C.W. Dodge (1928) = Saccharomycetales.

Endomycetes (Endomycota). Class (or phylum) for sporogenous and asporogenous yeasts, *Taphrinales*, *Exobasidiales*, and *Ustilaginales* (von Arx, *Pilzkunde*, 1967); emended to include *Trichomycetes*, etc. by Kreisel (1969), and emended to exclude *Exobasidiales*, *Taphrinales* and *Ustilaginales* by von Arx (1981); supported by glyceraldehyde-3-phosphate dehydrogenase sequences (Smith, *Proc. natn. Acad. Sci., USA* **86**: 7063, 1989). See *Ustomycota*.

endomycobiont, a fungal biont in a symbiosis com-

pletely immersed in the tissues of the host (e.g. the fungal partner in a mycophycobiosis); an inhabitant (see symbiosis); also used of certain mycorrhizas; see also Endophyte.

Endomycodes Delitsch (1943), Saccharomycetales. 2, widespread.

Endomycopsella Boedijn (1960) = Saccharomycopsis Schiønning fide Boedijn (*Mycopathologia* **12**: 163, 1960), Kurtzman & Robnett (*Antonie van Leeuwenh.* **73**: 331, 1998).

Endomycopsis Dekker (1931) ≡ Guilliermondella fide von Arx & Yarrow (*Antonie van Leeuwenhoek* **50**: 799, 1984).

endomycorrhiza, see mycorrhiza.

Endomycota, see *Saccharomycotina*.

Endonema Pascher (1929) ≡ Pascherinema.

Endonevrum Czern. (1845) = Mycenastrum fide Stalpers (*in litt.*).

Endonius Raf. (1819) nom. dub., Fungi. No spp. included.

endo-operculation (of sporangial dehiscence in chytrids), operculum forced off and carried away by the emerging sporogenous contents (cf. exo-operculation).

endoparasite, a parasite living inside its host.

endoperidermal, within the periderm (Lambright & Tucker, *Bryologist* **83**: 170, 1980); endophloeodal + hypophloeodal.

endoperidium, the inner layer of the peridium.

Endoperplexa P. Roberts (1993), Auriculariales. 4, widespread. See Roberts (*MR* **97**: 471, 1993), Weiss *et al.* (*MR* **108**: 1003, 2004; phylogeny).

Endophallus M. Zang & R.H. Petersen (1989), Phallaceae. 1, China. ? A monstrosity from *Phallus*.

Endophis Norman (1852) nom. rej. = Leptorhaphis fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Endophlaea Cooke (1888) nom. dub., Pezizomycotina.

endophloeodic (endophloeodal, endophloeic) (of the thallus of a crustaceous lichen), almost entirely immersed in bark.

Endophragmia Duvernoy & Maire (1920) = Phragmocephala fide Kirk (*in litt.*), Ellis (*Mycol. Pap.* **72**, 1959; key).

Endophragmiella B. Sutton (1973), anamorphic *Echinosphaeria*, Hso.≡ eP.1. *c.* 75, widespread. See Hughes (*N.Z. Jl Bot.* **17**: 139, 1979; key), Castañeda Ruíz *et al.* (*MR* **102**: 548, 1998), Tsui *et al.* (*Cryptog. Mycol.* **22**: 139, 2001; Hong Kong), M[a]noharachary & Agarwal (*Journal of Mycopathological Research* **41**: 117, 2003; India), Miller & Huhndorf (*MR* **108**: 26, 2004; phylogeny).

Endophragmiopsis M.B. Ellis (1966), anamorphic *Pezizomycotina*, Hso.≡ eP.1. 1, India. See Hughes (*CJB* **61**: 1727, 1984).

Endophyllaceae Dietel (1897) = Pucciniaceae.

Endophyllachora Rehm (1913) = Phyllachora Nitschke ex Fuckel (1870) fide Clements & Shear (*Gen. Fung.*, 1931).

Endophylloides Whetzel & Olive (1917) = Dietelia fide Buriticá (*Rev. Acad. Colomb. Cienc.* **18**: 131, 1991).

endophyllous, living within (i.e., below the cuticle) leaves.

Endophyllum Lév. (1825), Pucciniaceae. *c.* 30 (on angiosperms), widespread. *E. sempervivi* (houseleek, *Sempervivum*, rust). The telial are aecidium-like, the spores produce basidia on germination. See Ashworth (*TBMS* **19**: 240, 1935; cytology, life-history), Buriticá (*Rev. Acad. Colomb. Cienc.* **18** no. 69: 131, 1991), Gjærum *et al.* (*Lidia* **5**: 83, 2000; Uganda).

Endophyte. An organism that occurs within a living plant, cf. epiphyte (qv). Endophyte has been used in a variety of ways, giving rise to semantic confusion and ambiguities. In its widest sense the term has been used to include organisms ranging from bacteria to parasitic angiosperms (e.g. mistletoes) that exist completely or partially within any part of any plant-like organism. With respect to fungi, endophyte has been used to refer to those present as mycorrhizas (qv), as pathogenic infections or saprobic colonizations, and as outwardly symptomless infections showing no signs of either disease, decay or fructification. The distinction between latent pathogens that cause disease only under specific environmental circumstances, or latent saprobes that only cause symptoms upon death of the host plant tissues, and those fungi which remain as symptomless infections is not always clear. While there is frequent use of the term in a restricted sense to refer to symptomless, mutualistic (q.v.) fungi within aerial plant parts the term is also used to include all organisms that grow endophytically regardless of their symptoms or disease effects, see Chanway (*CJB* **74**: 321, 1996), Stone *et al.* (*in* Bacon & White (Eds), *Microbial endophytes*: 3, 2000), Wennström (*Oikos* **71**: 535, 1994), Wilson (*Oikos* **73**: 274, 1995). Given its variety of usages, endophyte should be clearly defined when used.

Isolation techniques typically involve plating healthy, surface-sterilized plant tissues on agar media and observing the outgrowth of fungi, or incubation of washed plant tissues under humid conditions and subsequent collection and plating of discharged spores (see Bacon, *in* Labeda (Ed.), *Isolation of Biotechnological Organisms from Nature*: 259, 1990; Bills, in Redlin & Carris (Eds), *Endophytic Fungi in Grasses and Woody Plants*: 31, 1996; Cohen, *Mycologia* **91**: 917, 1999).

Conifer needles, particularly of the *Pinaceae* support a complex mycota of symptomless inhabitants including, notably, species of *Lophodermium* and other members of the *Rhytismataceae*. Several species may inhabit a single needle. Colonization occurs from flushing onwards, with the fungus remaining symptomless in the leaf for several years before fruiting. Incidence varies with needle age and events in the life of the needle can determine which species fruit after needle death (Millar & Richards, *Mitteilungen der Bundesforschungsanstalt für Forst- und Holtzwirtschaft* **108**: 57, 1975). Fungal endophytes in other woody plants have also been investigated (see Redlin & Carris (Eds), *Endophytic Fungi in Grasses and Woody Plants*, 1996; Wilson, *in* Bacon & White (Eds) *Microbial endophytes*: 389, 2000). These species are dispersed by spores and not transmitted by systemic infection of seeds, and while some show a high level of host specificity (e.g. Chapela *et al.*, *Physiol. & Mol. Pl. Path.* **39**: 289, 1991), others have a wide range of host plants. Some plants contain more than one endophyte (e.g. *Castanea*, see Bissegger & Sieber, *Mycologia* **86**: 648, 1994; *Picea*, see Müller & Hallaksela, *MR* **104**: 1139, 2000). In many cases the role of the endophyte is unknown although insect antagonism and anti-herbivory are often suspected. It is possible that many are latent pathogenic

or sabrobic infections held in a balanced antagonism with their host (Schulz *et al.*, *MR* **103**: 1275, 1999). There is also some indication that leaf endophytes may influence the onset of leaf senescence and abscission. Fungal endophytes of *Taxus* have the ability to produce taxol, an important anti-cancer drug (Stierle *et al.*, 1995).

Symptomless endophytes of grasses are mainly *Clavicipitaceae* (Glenn *et al.*, *Mycologia* **88**: 369, 1996; White & Reddy, *Mycologia* **90**: 226, 1998), with species of *Epichloë* and related anamorphic *Neotyphodium* spp. (Tredway *et al.*, *MR* **103**: 1593, 1999; Christensen *et al.*, *MR* **104**: 974, 2000) mainly on cool-season grasses, while *Balansia*, *Parepichloë*, and *Myriogenospora* are mainly on warm-season grasses. The fungi occur intercellularly and may fruit on leaves or inflorescences, some do not sporulate and are completely seed-transmitted (White, *Pl. Dis.* **71**: 340, 1987; Sampson, *TBMS* **18**: 337, 1935). While the fungi probably gain enhanced nutrition and greater protection against desiccation, predators and parasites, the host plants although sometimes displaying a degree of sterility often show increased drought tolerance, and are vegetatively invigorated (possibly due to fungally produced auxins, see Porter *et al.*, *J. Nat. Products* **42**: 309, 1979), and exhibit increased resistance to pathogenic fungi and to herbivorous insects, nematodes and mammals. Resistance in many cases is due to the production of toxic secondary metaboilites (qv) by the endophytic fungus. This is of particular importance where forage plants are involved (Lane *et al.*, *in* Bacon & White (Eds), *Microbial endophytes*: 341, 2000), and includes compounds such as pyrrolizidine alkaloids (lolines, active against insects), tremorgenic indole diterpene alkaloids (lolitrems, active against insects and mammals) and ergot alkaloids (mainly ergovaline, affecting mammals and insects). Some of the alkaloids have been implicated in mycotoxicoses (qv), such as lolitrems with staggers in livestock (mainly due to *Neotyphodium lolii* in *Lolium perenne*), or ergot peptides with fescue foot (*N. coenophialum* in *Festuca arundinacea*) and lysergic acid amides with sleepygrass and similar conditions (*Neotyphodium* in *Stipa robusta* and *Achnatherum inebrians*). Other compounds are known but their significance is less clear, including sesquiterpene alcohols which may have antifungal activity, and the widespread guanidium-containing pyrrolpyrazine alkaloid, peramine, which may be active against insects.

Lit.: endophytes of marine algae, Cubit (PhD Thesis, University of Oregon, USA., 1974); of liverworts, Duckett & Read (*New Phytol.* **129**: 439, 1995); of mosses, Petrini (*in* Fokkenna & van den Heuval (Eds), *Microbiology of the Phyllosphere*: 175, 1986); of ferns, Fisher (*New Phytol.***132**: 119, 1996), Swatzell *et al.* (*Int. Entolomina Arnaud (1952) nom. inval., Thelephoraceae. 1, Europe.

entomo- (prefix), of *Insecta*.

Entomocorticium H.S. Whitney, Bandoni & Oberw. (1987), Peniophoraceae. 1, Canada. See Whitney *et al.* (*CJB* **65**: 96, 1987).

Entomocosma Speg. (1918) ? = Pyxidiophora fide Blackwell (*Mycol.* **86**: 1, 1994).

entomogenous, living in or on insects, esp. as pathogens.

Entomogenous fungi. Range from commensals or mutualists, through ectoparasites which do not seriously affect their arthropod hosts, to pathogens that are lethal and include representatives of all the major groups of fungi. Excluding the laboulbeniomycetes, 750 spp. in 56 gen. known to be pathogens or parasites of arthropod pests. The terms entomopathogens, entomogenous mutualistic symbionts, entomogenous ectoparasites and entomogenous endoparasites have been proposed (Evans, *in* Pirozynski & Hawksworth (Eds), *Coevolution of fungi with plants and animals*: 149, 1988).

Septobasidium has symbiotic associations with scale insects, as has *Stereum sanguinolentum* with *Sirex* (Perkin, *Ann. appl. Biol.* **29**: 268, 1942), and a number of insects make use of fungi in their alimentary systems; e.g. Phaff *et al.* (*Ecology* **37**: 533, 1956; yeasts of *Drosophila*). See Brues (*Insect dietary*, 1946), Steinhaus (*Insect microbiology*, 1946; *Insect pathology*, edn 2, 1963), Shifrine & Phaff (*Mycol.* **48**: 41, 1956; yeasts and bark beetles), Madelin (*Endeavour* **19**: 181, 1960), Batra (Ed.) (*Insect-fungus symbiosis*, 1980).

Trichomycetes and *Laboulbeniales* have little effect on their hosts but the chytrid *Coelomomyces*, the oomycete *Lagenidium giganteum* (both mainly on mosquito larvae), and among zygomycetes the *Entomophthoraceae* (e.g. *Entomophthora*, *Erynia*, *Massospora*, *Neozygites*, *Zoophthora*) are important insect pathogens. Among ascomycetes *Ascosphaera*, *Cordyceps*, *Torrubiella*, and *Hypocrella* and its *Aschersonia* anamorph, frequently cause epizootics as do the hyphomycetes *Beauveria*, *Culicinomyces*, *Hirsutella*, *Metarhizium*, *Nomuraea*, *Paecilomyces*, and *Verticillium*. Several of these genera are being exploited as mycoinsecticides to control a range of arthropod pests (see mycopesticides).

Lit.: **General**: Brady (*Biocontrol News and Information* **2**: 281, 1981), Evans (see Misra & Horn, pp.

119-144; fungi on ants), Evans & Hywel-Jones (*in* Ben-Dov & Hodgson (Eds), *Soft scale insects*: 5, 1994; fungi on coccids), Evans & Prior (*in* Rosen (Ed.), *Armored scale insects*: 3, 1990; fungi on scales), Evans & Samson (*Mycologist* **1**: 152, 1987; fungi on spiders), Hajek (*in* Lumsden & Vaughan (Eds), *Pest Management: biologically based technologies*: 54, 1993; prospects for insect control), Madelin (*Ann. Entosordaria (Sacc.) Höhn. (1920) = Stereosphaeria fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Entosordaria Speg. (1920) nom. nud. = Anthostomella fide Francis (*Mycol. Pap.* **139**, 1975).

Entosthelia (Wallr.) Hue (1915) = Dermatocarpon Eschw. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

entostroma, see stroma.

Entropezites Poinar & H.R. Buckley (2007), Fossil Fungi. 1.

Entrophospora R.N. Ames & R.W. Schneid. (1979), Acaulosporaceae. 5, widespread. Unknown phylogenetic affiliation. See Ames & Schneider (*Mycotaxon* **8**: 347, 1979), Schenck *et al.* (*Mycol.* **76**: 685, 1984), Sieverding & Toro (*Mycotaxon* **28**: 209, 1987), Wu *et al.* (*Mycotaxon* **53**: 283, 1995), Wu *et al.* (*Mycol.* **87**: 582, 1995; aeroponic spore ontogeny), Yao *et al.* (*Genera of Endogonales*: 229 pp., 1996), Błaszkowski *et al.* (*Mycotaxon* **68**: 165, 1998), Wang *et al.* (*Mycoscience* **17**: 92, 1998), Fracchia *et al.* (*Nova Hedwigia* **77**: 383, 2003; isolation, culture and host colonization of *Entrophospora schenckii*), Redecker & Raab (*Mycol.* **98**: 885, 2006; phylogeny), Sieverding & Oehl (*J. Appl. Bot. Food Quality* Angew. Botan. **80**: 69, 2006).

Entrophosporaceae Oehl & Sieverd. (2006) = Acaulosporaceae.

Entyloma de Bary (1874), Entylomataceae. Anamorph *Entylomella*. *c.* 180 (on dicots), widespread. Spores hyaline or pale, intercellular. The sori are generally in leaves (causing leaf spots) and there is frequently an anamorphic stage; cf. *Entylomella* and *Cylindrosporium* s.l. *Entyloma dahliae* (on *Dahlia*), *E. australe* (on *Physalis*), *E. calendulae* (on *Calendula*), *E. ellisii* (on *Spinacia*), *E. fuscum* (on *Papaver* and *Glaucium*), *E. petuniae* (on *Petunia*). See Begerow *et al.* (*MR* **106**: 1392, 2002; phylog.), Piątek (*Mycotaxon* **93**: 323, 2005; on *Convolvulaceae*), Spooner & Legon (*Mycologist* **20**: 90, 2006; UK).

Entylomaster Vánky & R.G. Shivas (2006), Doassansiaceae. 2 (on *Araceae*), Australia; Europe (southern). See Vánky & Shivas (*Mycol. Balcanica* **3**: 13, 2006).

Entylomataceae R. Bauer & Oberw. (1997), Entylomatales. 2 gen., 225 spp.

Lit.: Boekhout *et al.* (*Stud. Mycol.* **38**: 175, 1995), Bauer *et al.* (*CJB* **75**: 1273, 1997), Begerow *et al.* (*CJB* **75**: 2045, 1998), Begerow *et al.* (*MR* **104**: 53, 2000), Adejumo *et al.* (*Mycopathologia* **150**: 85, 2001), Begerow *et al.* (*MR* **106**: 1392, 2002), Piepenbring (*Bot. Jb.* **24**: 241, 2003), Jackson (*Evolution* Lancaster, Pa. **58**: 1909, 2004), Zwetko & Blanz (*Biosystem. Ecol. Ser.* **21**: 241 pp., 2004), Boekhout *et al.* (*FEMS Yeast Res.* **6**: 63, 2005).

Entylomatales R. Bauer & Oberw. (1997). Exobasidiomycetes. 1 fam., 2 gen., 225 spp. Fam.:

Entylomataceae

For *Lit.* see under fam.

Entylomella Höhn. (1924), anamorphic *Entyloma*. 45, widespread. See Ciferri (*Omagiu lui Traian Săvulescu cu prilejul împlinirii a 70 de ani*: 175, 1959), Braun & Hill (*Mycol. Progr.* **1**: 19, 2002; anam., New Zealand).

Entylomellaceae Cif. (1959) = Entylomataceae.

Eoagaricus L. Krieg. (1923) ≡ Physalacria.

Eoaleurina Korf & W.Y. Zhuang (1986), Pyronemataceae. 1, C. & S. America. See Zhuang & Korf (*Mycotaxon* **26**: 361, 1986), Korf (*SA* **6**: 127, 1987).

Eocronartiaceae Jülich (1982), Platygloeales. 5 gen. (+ 1 syn.), 9 spp.

Eocronartium G.F. Atk. (1902), Eocronartiaceae. 1 (on *Musci*), Europe; N. America. See Stanley (*Trans. Am. microsc. Soc.* **59**: 407, 1940), Khan & Kimbrough (*CJB* **58**: 642, 1980; ultrastr.), Frieders & McLaughlin (*MR* **105**: 734, 2001; cytol., ultrastr., anam.).

Eoetvoesia Schulzer (1866) nom. dub., anamorphic *Pezizomycotina*.

Eolichen Zukal (1884) ? = Nectria. Affinities are unclear. fide Keissler (*Rabenh. Krypt.-Fl.* **9** 1(2), 1936).

Eolichenomyces Cif. & Tomas. (1954) ≡ Eolichen.

Eomycenella G.F. Atk. (1902) = Mycena fide Kuyper (*in litt.*).

Eomyces F. Ludw. (1894) nom. dub., Algae. Based on an achlorotic alga fide Batra (*in* Subramanian (Ed.), *Taxonomy of fungi* **1**: 187, 1978).

Eomycetopsis J.W. Schopf (1968), Fossil Fungi ? Fungi. 1, Australia.

Eopolyporoides Rigby (1982), Fossil Fungi. 1, Australia. See Playford *et al.* (*Publication* Geological Survey of Queensland **380**: 5, 1982).

Eopyrenula R.C. Harris (1973), Dacampiaceae (L). 3, widespread (north temperate). See Aptroot (*Biblthca Lichenol.* **44**, 1991; posn), Harris (*More Florida Lichens*, 1995), Johansson & Hermansson (*Graphis Scripta* **12**: 19, 2000; Sweden).

Eosphaeria Höhn. (1917), Lasiosphaeriaceae. Anamorph *Phialophora*-like. 1, Europe; N. America. See Petrini *et al.* (*TBMS* **82**: 554, 1984).

Eoterfezia G.F. Atk. (1902), Eoterfeziaceae. 1 or 2, N. America. No recent information is available. See van Brummelen *in* Hawksworth (Ed.) (*Ascomycete Systematics. Problems and Perspectives in the Nineties* NATO ASI Series vol. **269 269**: 400, 1994).

Eoterfeziaceae G.F. Atk. (1902), Pezizomycotina (inc. sed.). 1 gen., 2 spp.
Lit.: Jeng & Cain (*Mycotaxon* **3**: 387, 1976).

Epaphroconidia Calat. & V. Atienza (1995), anamorphic *Pezizomycotina*. 1, Spain; N. America. See Calatayud & Atienza (*MR* **99**: 850, 1995), Diederich (*Herzogia* **16**: 41, 2003; USA).

epapillate, having no papillae.

Ephebaceae Th. Fr. (1860) = Lichinaceae.

Ephebe Fr. (1825), Lichinaceae (L). 12, widespread. See Henssen (*Symb. bot. upsal.* **18** no. 1, 1963), Schultz & Büdel (*Lichenologist* **34**: 39, 2002; key), Schultz & Büdel (*Lichenologist* **35**: 151, 2003; phylogeny).

Ephebeia Nyl. (1875) = Ephebe fide Henssen (*Symb. bot. upsal.* **18** no. 1, 1963).

Ephebella Itzigs. (1857) nom. dub., Fungi. Apparently based on an alga fide Currah (*SA* **5**: 130, 1986).

Ephebomyces Cif. & Tomas. (1953) ≡ Ephebe fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Ephedracetes T.C. Huang (1981), Fossil Fungi. 1 (Miocene), Taiwan.

Ephedrosphaera Dumort. (1822) nom. rej. = Nectria fide Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Ephelidium C.W. Dodge & E.D. Rudolph (1955), anamorphic *Pezizomycotina*, ?.?.? (L). 1, Antarctica. See Dodge & Rudolph (*Ann. Mo. bot. Gdn* **42**: 136, 1955).

Ephelidium Speg. (1920) nom. conf., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Ephelina Sacc. (1889) = Leptotrochila fide Schüepp (*Phytopath. Z.* **36**: 236, 1959).

Epheliopsis Henn. (1908) = Eutypa fide Petrak (*Sydowia* **5**: 169, 1951), Ciferri (*Atti Ist. bot. Univ. Lab. Crittog. Pavia* sér. 5 **19**: 105, 1962), Rappaz (*Mycol. helv.* **2**: 285, 1987).

Ephelis Fr. (1849), anamorphic *Balansia, Epichloë*, Hsp.0fH.?. 5 (mostly on grasses), widespread (esp. tropical). See Ullasa (*Mycol.* **61**: 572, 1969), Govindu & Thirumalachar *in* Subramanian (Ed.) (*Taxonomy of fungi* **2**: 328, 1984), Morgan-Jones *et al.* (*Mycotaxon* **43**: 401, 1992; review), Phelps *et al.* (*Mycotaxon* **49**: 91, 1993), Phelps & Morgan-Jones (*Mycotaxon* **50**: 61, 1994), Kuldau *et al.* (*Mycol.* **89**: 431, 1997; phylogeny), Tanaka *et al.* (*MR* **105**: 811, 2001; Asia).

Ephemerellomyces M.M. White & Lichtw. (2004), Harpellales. 1, Norway. See White & Lichtwardt (*Mycol.* **96**: 893, 2004).

Ephemeroascus Emden (1973) = Coniochaeta fide van Emden (*TBMS* **61**: 599, 1973), García *et al.* (*MR* **110**: 1271, 2006; phylogeny, synonymy).

Ephemerocybe Fayod (1889) = Coprinellus fide Kuyper (*in litt.*).

epi- (prefix), upon.

epibasidium, see basidium.

Epibelonium E. Müll. (1963), Saccardiaceae. 1, France. See Müller (*Phytopath. Z.* **47**: 240, 1963).

epibiotic, living on the surface of another organism.

Epibotrys Theiss. & Syd. (1915) = Gilletiella fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Epibryon Döbbeler (1978), ? Pseudoperisporiaceae. 30 (on *Musci*), widespread. See Döbbeler (*Sendtnera* **5**: 19, 1998), Wubet *et al.* (*New Phytol.* **161**: 517, 2004; New Zealand), Döbbeler (*Nova Hedwigia* **82**: 257, 2006; Ecuador), Döbbeler (*MR* **111**: 1406, 2007).

epibryophilous, growing over bryophytes.

Epichloë (Fr.) Tul. & C. Tul. (1865), Clavicipitaceae. Anamorph *Neotyphodium*. 18, widespread. *E. typhina* (choke of grasses). See Doguet (*BSMF* **76**: 171, 1960; development), White (*Am. J. Bot.* **84**: 170, 1977; centrum), White (*Mycol.* **85**: 444, 1993; Br. spp.), Bacon & Hill (*Neotyphodium/Grass Interactions*, 1994), Schardl (*Ann. Rev. Phytopath.* **34**: 109, 1996; review), Chung *et al.* (*Phytopathology* **87**: 599, 1997; genetics), Schardl *et al.* (*Mol. Biol. Evol.* **14**: 133, 1997; coevolution with grasses), Bacon & White (*Microbial Endophytes*, 2000), Moon *et al.* (*Mycol.* **92**: 1103, 2000; evolution), White *et al.* (*Stud. Mycol.* **45**: 95, 2000), Craven *et al.* (*Sydowia* **53**: 44, 2001; hybridisation), Craven *et al.* (*Ann. Mo. bot. Gdn* **88**: 14, 2001; phylogeny), Schardl (*Fungal Genetics Biol.* **33**: 69, 2001; on *Festuca*), White *et al.* (*Symbiosis* **31**: 241, 2001; S America), Moon *et al.* (*Mycol.* **94**: 694, 2002; S hemisphere), White *et al.* (*Cellular Origin and Life in Extreme Habitats* **4**: 413, 2002; evolution), Bischoff & White (*Mycology Series* **19**: 125, 2003; review), Brem & Leuchtmann (*Evolution* Lancaster, Pa. **57**: 37, 2003; evolution), Leuchtmann (*Mycology Series* **19**: 169, 2003; biodiversity), Schardl & Moon (*Mycology Series* **19**: 273, 2003; review), Sullivan & Faeth (*Mol. Ecol.* **13**: 649, 2004; gene flow), Gentile *et al.* (*Mol. Phylogen. Evol.* **35**: 196, 2005; Argentina), Spooner & Kemp (*Mycologist* **19**: 82, 2005; UK), Li *et al.* (*Mycol.* **98**: 560, 2006; China), Yanagida *et al.* (*Mycol.* **97**: 1287, 2005; on *Agropyron*), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny), Moon *et al.* (*Mycol.* **99**: 895, 2007; on *Stipeae* and *Meliceae*).

Epichloea Giard (1889) nom. dub., Fungi.

epichroic, see colour.

Epichysium Tode (1790) nom. dub., Fungi. ? Based on insect debris fide Fries (*Syst. mycol.* **3**: 293, 1832).

Epicladonia D. Hawksw. (1981), anamorphic *Pezizomycotina*, Cpd.0-1eH.15. 3 (on lichens, esp. *Cladonia*), Europe. See Hawksworth (*Bull. Br. Mus. nat. Hist.* Bot. **9**: 15, 1981).

Epiclinium Fr. (1849), anamorphic *Pezizomycotina*, Ccu.1eH.?. 2, Europe; America.

Epicnaphus Singer (1960), Marasmiaceae. 3, S. America. See Raithelhuber (*Metrodiana* **4**: 52,, 1973).

Epicoccaceae Nann. (1934) = Pleosporaceae.

Epicoccospora Budathoki & S.K. Singh (1995), anamorphic *Pezizomycotina*, Hso.?.?. 1, Nepal. See Budathoki & Singh (*Indian Phytopath.* **48**: 103, 1995).

Epicoccum Link (1815), anamorphic *Pleosporaceae*, Hsp.#eP.1. 4, widespread. *E. nigrum, E. andropo-*

gonis (syn. *Cerebella andropogonis*) on *Sphacelia* of *Claviceps* and frequently mistaken as *Ustilaginales*. See Langdon (*Phytopathology* **32**: 613, 1942), Langdon (*Mycol. Pap.* **61**, 1955), Schol-Schwarz (*TBMS* **42**: 149, 1959), Madrigal & Melgarejo (*CJB* **73**: 425, 1995; antibiotic activity), Arenal *et al.* (*MR* **104**: 301, 2000; *Phoma* synanamorph), Arenal *et al.* (*Journal of Applied Microbiology* **93**: 36, 2002; diagnostics), Pažoutová & Kolínská (*Czech Mycol.* **54**: 155, 2003; phylogeny), Arenal *et al.* (*Mycotaxon* **89**: 465, 2004; phylogeny, *Phoma* synanamorph), Wang & Guo (*Mycosystema* **23**: 474, 2004; morphology, phylogeny), Mims & Richardson (*CJB* **83**: 1354, 2005; ultrastr.).

epicortex, a thin polysaccharide-like layer over the surface of the cellular upper cortex in thalli of some *Parmeliaceae* visible by SEM (Hawksworth, *in* Hale, *Smithson. Contr. bot.* **10**: 5, 1973) and which may have regular pores functioning in gas exchange (Hale, *Lichenologist* **13**: 1, 1981). See Hyvärinen (*Lichenologist* **24**: 267, 1992; environmental induction), Lumbsch & Kothe (*Mycotaxon* **43**: 277, 1992; *Coccocarpiaceae, Pannariaceae*).

Epicorticium Velen. (1926) = Phaeomarasmius fide Singer (*Agaric. mod. Tax.* edn 3, 1975).

Epicrea Petr. (1950), ? Clavicipitaceae. 1 (on stromata of *Hypocrella*), Ecuador. See Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

epicutis, see cutis.

Epicymatia Fuckel (1870) = Stigmidium fide Roux & Triebel (*Bull. Soc. linn. Provence* **45**: 451, 1994).

Epicyta Syd. (1926) = Aplosporella fide Clements & Shear (*Gen. Fung.*, 1931).

epidemic (1) (adj.), (of a disease of humans, but used of plants and animals), general and severe in a group for a time; (2) (n.), the disease itself; cf. epiphytotic, epizootic.

epidemiology, the study of disease incidence, distribution and control. See Plant pathogenic fungi.

Epidermella Tehon (1935) ? = Hypoderma De Not. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Epidermidophyton E. Lang (1879) nom. rej., anamorphic *Pezizomycotina*.

Epidermomyces Loeffler (1983) ≡ Epidermophyton Sabour.

Epidermophyton E. Lang (1879) nom. rej. = Epidermophyton Sabour.

Epidermophyton Sabour. (1907) nom. cons., anamorphic *Arthrodermataceae*, Hso.≡ eH.2. 2 (on humans), widespread. Macroconidia pyriform; microconidia absent. *E. floccosum* (syn. *E. inguinale* and *E. cruris*) on humans (glabrous skin) causing tinea cruris and tinea pedis. See Guého *et al.* (*Annales de l'Institut Pasteur* Microbiologie **136B**: 195, 1985; ultrastr.), Sundaram *et al.* (*Curr. Sci.* **55**: 406, 1986; morphology), Cabañes *et al.* (*Revta Iberoamer. Micol.* **10**: 14, 1993; nomencl., morphology), Weitzman *et al.* (*Manual of Clinical Microbiology* Edn 6: 791, 1995; review), Kawasaki *et al.* (*Mycopathologia* **134**: 121, 1996; phylogeny), Gräser *et al.* (*Medical Mycology* **37**: 105, 1999; phylogeny), Kane & Summerbell (*Manual of Clinical Microbiology*: 1275, 1999; review), Kano *et al.* (*Mycopathologia* **146**: 111, 1999; phylogeny), Untereiner *et al.* (*Mycol.* **96**: 812, 2004; phylogeny).

epidermophytosis, see dermatophytosis (esp. tinea cruris and tinea pedis).

Epidochiopsis P. Karst. (1892), anamorphic *Pezizomycotina*, ?.0eH.?. 1, Europe.

Epidochium Fr. (1849) = Tremella Pers. fide Donk (*Taxon* **7**: 193, 1958).

Epidrolithus Raf. (1836) ? = Leptogium fide Merrill (*Index Rafinesq.*, 1949).

epiflora, surface flora; sometimes applied (incorrectly) to the microbiota on seed surfaces; the epibiota.

epigeal (epigean, epigeic), on the earth.

epigeic (of lichens), not attached to any substrate but blowing about on the surface of the ground; see wandering lichens.

epigenous, growing on the surface.

Epiglia Boud. (1885) = Mniaecia fide Korf *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 249, 1973).

Epigloea Zukal (1889), Epigloeaceae (?L). 13 (on *Algae*), Europe; Antarctica. See Döbbeler (*Beih. Nova Hedwigia* **79**: 203, 1984; key), David (*SA* **6**: 217, 1987), Döbbeler (*Sendtnera* **2**: 277, 1994), Ceynowa-Gieldon (*Acta Mycologica* Warszawa **37**: 3, 2002; Poland), Cykowska & Flakus (*Polish Botanical Journal* **50**: 233, 2005; Poland), Pérez-Ortega & Barreno (*Nova Hedwigia* **83**: 523, 2006; Iberian peninsula).

Epigloeaceae Zahlbr. (1903), Pezizomycotina (inc. sed.) (±L). 1 gen. (+ 2 syn.), 13 spp.

Lit.: David (*SA* **6**: 217, 1987), Döbbeler (*Sendtnera* **2**: 277, 1994).

Epigloeomyces Cif. & Tomas. (1957) ≡ Epigloea.

epigynous, having the antheridium above the oogonium on one hypha.

epihymenium, a thin layer of interwoven hyphae on the surface of the hymenium (Corner, 1950; epithecium).

epikapylic, a thallus of a lichenicolous fungus in which a morphologically distinct lichenized structure is formed (Poelt & Vězda, 1984).

Epilichen Clem. (1909), ? Rhizocarpaceae (±L). 1 (on *Baeomyces*), widespread (north temperate). See Hafellner (*Beih. Nova Hedwigia* **62**, 1979).

Epilithia Nyl. (1853) = Gyalideopsis See Lücking *et al.* (*Lichenologist* **37**: 165, 2005).

epilithic, living on the surface of stones; cf. endolithic.

epinecral layer, see necral layer.

Epinectria Syd. & P. Syd. (1917) = Dimerosporiella Speg. fide Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

Epinyctis Wallr. (1831) = Lepraria fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Epipeltis Theiss. (1913) = Schizothyrium fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Epiphegia G.H. Otth (1870) ? = Massarina fide Aptroot (*Nova Hedwigia* **66**: 89, 1998).

Epiphloea Trevis. (1880), Lichinaceae (L). 1, Europe. See Gyelnik (*Rabenh. Krypt.-Fl.* **9** 2.2, 1940).

epiphloeodal, living upon bark.

Epiphora Nyl. (1876) [non *Epiphora* Lindl. 1837, *Orchidaceae*] = Plectocarpon fide Santesson (*The lichens and lichenicolous fungi of Sweden and Norway*, 1993).

epiphragm, the membrane over the young fruit-body in the *Nidulariaceae*.

epiphyllous, on the upper surface of a leaf; foliicolous.

Epiphyma Theiss. (1916) = Botryosphaeria fide von Arx & Müller (*Beitr. Kryptfl. Schweiz* **11** no. 1, 1954).

epiphyte, a plant living on another, but not as a parasite.

epiphytic (adj.), frequently = corticolous.

epiphytotic, an epidemic among plants.

epiplasm (of an ascus), the cytoplasm not used up in the 'free cell formation' of ascospores.

Epiploca Kleb. (1918) = Epipolaeum fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Epipolaeum Theiss. & P. Syd. (1918), Pseudoperisporiaceae. 17, widespread. See Shoemaker (*CJB* **43**: 631, 1965), Farr (*Mycol.* **71**: 243, 1979).

Episclerotium L.M. Kohn (1984), Helotiaceae. 2, Europe. See Malaval (*Docums Mycol.* **19**: 9, 1989; ascus ultrastr.).

Episeptum J.I.R. Larsson (1986), Microsporidia. 3. See Larsson (*Arch. Protistenk.* **131**: 257, 1986).

Episoma Syd. (1925) = Phaeostigme fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Episphaerella Petr. (1924), Pseudoperisporiaceae. 5, America; Africa. See Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962), Farr *et al.* (*CJB* **63**: 1983, 1985), Barr (*Mycotaxon* **64**: 149, 1997).

Episphaeria Donk (1962), Inocybaceae. 1, Europe. Perhaps *Strophariaceae*. See Donk (*Persoonia* **2**: 336, 1962).

epispore, see ascospore, Spore wall.

episporium, see Spore wall.

Episporogoniella U. Braun (1994), anamorphic *Pezizomycotina*, Hso.≡ eP.1. 1 (on *Bryophyta*), Brazil. See Braun (*Mycotaxon* **51**: 41, 1994).

Epistictum Trevis. (1869) = Dermatocarpon Eschw. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Epistigme Syd. (1924), anamorphic *Pezizomycotina*, Cpd.0eP.?. 1, S. Africa.

epistroma, see stroma.

Epitea Fr. (1832) = Phragmidium fide Dietel (*Nat. Pflanzenfam.* **6**, 1928) applying to *Caoma* stage.

epithalline, of a falsely thalline apothecial edge in lichenized fungi.

epithecium, tissue at the surface of an apothecium formed by the branching of the ends of the paraphyses above the asci; cf. epihymenium, pseudoepithecium.

Epithele (Pat.) Pat. (1900), Polyporaceae. 10, widespread. See Boquiren (*Mycol.* **63**: 937, 1971; key), Hjortstam & Ryvarden (*Syn. Fung.* **20**: 23, 2005).

Epitheliaceae Jülich (1982) = Polyporaceae.

epithelium, see cutis.

Epithelopsis Jülich (1976), Polyporaceae. 2, Australia; India; New Zealand. See Jülich (*Persoonia* **8**: 457, 1976), Lepp (*Australasian Mycologist* **23**: 53, 2004).

epithet (1) the second (specific) adjectival part of a Latinized binomial (the 'trivial' name of the zoologist); (2) the third or fourth (varietal, etc.) term.

Epithyrium (Sacc.) Trotter (1931), anamorphic *Sarea*, St.0eP.15. 1 (on conifer resin), widespread. See Hawksworth & Sherwood (*CJB* **59**: 357, 1981).

epitunica, see exosporium; Spore wall.

epitype, see Nomenclature, type.

Epixyla Raf. (1806) nom. dub., Fungi.

epixylic (epixylous), living on wood; lignicolous.

Epixylon Füisting (1867) = Hypoxylon Bull. fide Læssøe (*SA* **13**: 43, 1994).

epizoic, living on animals.

epizootic, an epidemic among animals.

epizootic lymphangitis, a disease of horses caused by *Histoplasma farciminosum*.

Epochniella Sacc. (1880) = Stemphylium fide Lindau (*Rabenh. Krypt.-Fl.* **1**: 207, 1907).

Epochnium Link (1809) = Monilia Bonord. fide Hughes (*CJB* **36**: 727, 1958).

epruinose, having no pruina.

Epulorhiza R.T. Moore (1987), anamorphic *Tulasnella*. 3 (mycorrhizal), widespread. See Currah *et al.* (*CJB* **68**: 1171, 1990; mycorrhizal sp.), Currah & Zelmer (*Rep. Tottori mycol. Inst.* **30**: 43, 1992), Roberts (*Rhizoctonia-forming fungi*, 1999), Gleason & McGee (*Australasian Mycologist* **21**: 12, 2002; septal pore cap ultrastructure), Ma *et al.* (*MR* **107**: 1041, 2003; molecular phylogeny).

equal (of a stipe), having the same diameter throughout.

Erannium Bonord. (1860) = Coleosporium fide Saccardo (*Syll. fung.* **18**: 774, 1906).

Erastia Niemelä & Kinnunen (2005), Polyporaceae. 2, widespread. See Niemelä & Kinnunen (*Karstenia* **45**: 76, 2005).

erasure phenomenon (in *Dictyostelium*), the loss by amoebae of the capacity to recapitulate when developing cultures are disaggregated and placed on a growth medium.

Erebonema A. Roem. (1845) nom. dub., anamorphic *Pezizomycotina*.

erect, upright; straight, not curved, up.

Eremascaceae Engl. & E. Gilg (1924), Eurotiomycetidae (inc. sed.). 1 gen., 2 spp.

Lit.: Hocking (*Handbook of Applied Mycology* Vol. 3. Foods and Feeds: 69, 1991), Berbee & Taylor (*Mol. Biol. Evol.* **9**: 278, 1992; DNA), Landvik *et al.* (*Mycoscience* **37**: 237, 1996; DNA), Anderson *et al.* (*MR* **102**: 541, 1998; DNA), Kurtzman & Robnett (*Antonie van Leeuwenhoek* **73**: 331, 1998), Lumbsch *et al.* (*Pl. Biol.* **2**: 525, 2000).

Eremascus Eidam (1883), Eremascaceae. 2, Europe; India. See Harrold (*Ann. Bot.* Lond. **14**: 127, 1950), Berbee & Taylor (*Mol. Biol. Evol.* **9**: 278, 1992; posn), Landvik *et al.* (*Mycoscience* **37**: 237, 1997; DNA), Geiser *et al.* (*Mycol.* **98**: 1053, 2006; phylogeny).

Eremastrella S. Vogel (1955), ? Psoraceae (L). 1, S. Africa; Australia. See Schneider (*Biblthca Lichenol.* **13**, 1980), Pietschman (*Nova Hedwigia* **51**: 521, 1990; posn), Lumbsch & Kothe (*Nova Hedwigia* **57**: 19, 1993; thalli).

Eremiomyces Trappe & Kagan-Zur (2005), Pezizaceae. 1 (hypogeous), S. Africa. See Ferdman *et al.* (*MR* **109**: 244, 2005), Læssøe & Hansen (*MR* **111**: 1075, 2007; phylogeny).

Eremodothis Arx (1976), Sporormiaceae. 1, India; Japan. See Udagawa & Ueda (*J. Jap. Bot.* **56**: 289, 1981), Kruys *et al.* (*MR* **110**: 527, 2006; phylogeny).

Eremomyces Malloch & Cain (1971), Eremomycetaceae. Anamorphs *Arthrographis*-like, *Trichosporiella*-like. 2 (coprophilous), widespread. See Malloch & Sigler (*CJB* **66**: 1929, 1988).

Eremomycetaceae Malloch & Cain (1971), ? Dothideomycetes (inc. sed.). 3 gen. (+ 1 syn.), 11 spp.

Lit.: Malloch & Sigler (*CJB* **66**: 1929, 1988), von Arx *et al.* (*Beih. Nova Hedwigia* **94**: 104 pp., 1988), Lumley *et al.* (*Mycotaxon* **74**: 395, 2000).

Eremotheca Theiss. & Syd. (1917) = Schizothyrium fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Eremothecella Syd. & P. Syd. (1917), Arthoniaceae (L). 6, widespread (tropical). See Sérusiaux (*SA* **11**: 39, 1992), Grube (*Bryologist* **101**: 377, 1998; phylogeny), Grube & Lücking (*MR* **105**: 1007, 2001; as-

cogenous hyphae).

Eremotheciaceae Kurtzman (1995), Saccharomycetales. 2 gen. (+ 3 syn.), 3 spp. Some authors treat this as a synonym of *Saccharomycetaceae*.

Lit.: Yamada *et al.* (*Bull. Fac. Agric. Shizuoka Univ.* **44**: 9, 1994), Kurtzman (*J. Industr. Microbiol.* **14**: 523, 1995), Prillinger *et al.* (*Yeast* Chichester **13**: 945, 1997), de Hoog *et al. in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 201, 1998), Wendland *et al.* (*Curr. Genet.* **35**: 618, 1999), Kurtzman & Robnett (*FEMS Yeast Res.* **3**: 417, 2003), Suh *et al.* (*Mycol.* **98**: 1006, 2006; phylogeny).

Eremothecium Borzí (1888), Eremotheciaceae. 2, widespread. See Batra (*USDA Tech. Bull.* **1469**, 1973; key), Rosing (*Mycol.* **79**: 157, 1987; ultrastr.), Kurtzman (*J. Industr. Microbiol.* **14**: 523, 1995), Prillinger *et al.* (*Yeast* Chichester **13**: 945, 1997; placement in *Saccharomycetaceae*), de Hoog *et al. in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 201, 1998), Suh *et al.* (*Mycol.* **98**: 1006, 2006; phylogeny).

ergoline alkaloids, from *Claviceps* sclerotia include both lysergic acid derivatives (esp. *C. purpurea*, *C. paspali*) and clavine alkaloids (esp. *C. fusiformis*, *C. gigantea*, *Sphacelia sorghi*). Cf. ergot.

ergometrine (D-lysergic acid propanolamide), an ergot alkaloid from *Claviceps purpurea* sclerotia (esp. Spanish and Portuguese); used in medicine against migraine. Cf. ergotamine.

ergosterol, the commonest sterol of fungi (hence also in lichens) first isolated from *Claviceps purpurea* sclerotia; yeast ergosterol is converted to vitamin D_2 by ultraviolet radiation. Commonly used as an index for living-fungal mass in decaying materials (Newell, Fungal biomass and productivity (*in*Paul (Ed.), *Methods in Microbiology* **30** *Marine Microbiology*) pp. 357-372, 2001).

Ergot (1) the *Claviceps* disease of cereals and other grasses, esp. *Claviceps africana* (on *Sorghum* spp.), *C. fusiformis* (on *Pennisetum*), *C. paspali* (on *Paspalum* spp.), and *C. purpurea* (on *Secale* and other grasses); (2) an ergot fungus; (3) (in trade), the sclerotia of ergot fungi.

Infection (of ovaries) of cereals and grasses is largely limited to outcrossing plants with flowers which open, and occurs by rain- or insect-borne conidia of the *Sphacelia* state which occur suspended in 'honey dew' exuded from the host florets in response to infection. Sclerotial development begins 2-3 weeks after infection. The sclerotia contain a range of alkaloids (of which the most important are lysergic acid derivatives; see Stoll & Hofmann, *in* Manske (Ed.) (*The alkaloids* **8**: 725, 1965); also ergometrine, ergotamine, ergotoxine, including the active principals not only of the poisonous properties of ergot but also of the therapeutic applications (e.g. in migraine, obstetrics, and as hallucinogens). The ergoline ring system is built up from *L*-triptophan and mevalonic acid. *N*-methyl group is derived from methionine.

Ergot of rye contaminating bread causes **ergotism** in humans which is of two main types: the gangrenous (St Anthony's Fire of the Middle Ages) and the spasmodic (see Barger, *Ergot and ergotism*, 1931; Bové, *The story of ergot*, 1970). Human exposure to low levels of ergolines still appears to be widespread and there have been severe outbreaks perhaps in France in 1951 (Fuller, *The day of St. Anthony's fire*, 1968, although mercury poisoning has also been suggested as a cause of this outbreak), and more recently in Ethiopia and India (*WHO Environmental Health Criteria* 105, 1990).

Claviceps paspali causes paspalum staggers in cattle, sheep, and horses (Hopkirk, *NZ Jl Agric.* **53**: 103, 1936) and *C. fusiformis* on *Pennisetum typhoides* has been associated with agalactia in sows resulting in the death of new-borne piglets (Loveless, *TBMS* **50**: 15, 1967).

Ergot of rye was once the only source of the medicinal ergot alkaloids but since the early 1960s semi-synthetic alkaloids have been prepared on a large scale from lysergic acid produced by *C. paspali* fermentations. Ergot alkaloids are also produced by other genera (Řeháček & Sajdl, *Ergot alkaloids*, 1990). See also Kren & Cvak (*Ergot: the genus Claviceps*, 518 pp., 1999), Schardl *et al.* (*Alkaloids Chem. Biol.* **63**: 45, 2006), White *et al.* (*Clavicipitalean fungi: evolutionary biology, chemistry, biocontrol and cultural aspects*, 2003). See hallucinogenic fungi.

Ergotaetia E.J. Quekett (1841) = Sphacelia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

ergotamine, a cyclic tripeptide derivative of lysergic acid from *Claviceps purpurea* sclerotia; used in medicine against migraine. Cf. ergometrine.

ergotism, ergot poisoning. See ergot.

ergotoxine, a mixture of ergocornine, ergocristine, and ergokryptine; cyclic tripeptide derivatives of lysergic acid from *Claviceps purpurea* sclerotia.

Ericianella Brond. (1828) = Bactridium fide Fries (*Summa veg. Scand.*, 1849).

Eriksson (Jakob; 1848-1931; Sweden). Professor and Director, Department of Plant Physiology and Agricultural Botany, Academy of Agriculture, Stockholm (1885-1913). He discovered physiologic races in rusts (see *Jahrbücher für Wissenschaftliche Botanik* **29**: 499, 1896). *Publs.* (with Hennings) *Die Getreideroste, ihre Geschichte und Natur, sowie Massregeln gegen dieselben* (1896) [first published in Swedish in *Medd. Kongl. Landtbruks Akad. Esper.* **38**, 1894]; Über die Specialisierung des Parasitismus bei den Getreiderostpilzen. *Bericht der Deutschen Botanischen Gesellschaft* (1894); Über die Mykoplasmatheorie. *Biologisches Zentralblatt* (1910); *Die Pilzkrankheiten der landwirtschaftlichen Kulturgegewachse* (1926) [in English, 1930; first printed in Swedish, 1910 and in English, 1912]. *Biogs, obits etc.* Stafleu & Cowan (*TL-2* **1**: 798, 1976).

Erikssonia Penz. & Sacc. (1898), Phyllachoraceae. 5 (biotrophic on leaves), widespread (tropical). See Stevenson (*Mycol.* **35**: 629, 1943).

Erikssonopsis M. Morelet (1971), Helotiaceae. 1, Europe. See Morelet (*Bulletin de la Société des Sciences naturelles et d'Archéologie de Toulon et du Var* **195**: 7, 1971).

Erinaceae Quél. (1886) = Bankeraceae.

Erinacella, see *Ericianella*.

erinaceous, prickly like a hedgehog.

Erinaceus Dill. ex Maratti (1822) = Hydnum fide Donk (*Persoonia* **8**: 279, 1975).

Erinella Quél. (1886) ≡ Lachnum.

Erinella Sacc. (1889) = Lachnum fide Spooner (*Biblthca Mycol.* **116**, 1987).

Erinellina Seaver (1951) = Lachnum fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Erineum Pers. (1822) nom. dub., Fungi. Gall on an

outgrowth caused by gall-mites (*Arachnida*; *Eriophydae*).

Eriocaulago Vánky (2005), ? Ustilaginaceae. 2 (on *Eriocaulaceae*), Africa; S. Asia; N. America. See Vánky (*Mycol. Balcanica* **2**: 113, 2005).

Eriocercospora Deighton (1969), anamorphic *Mycosphaerellaceae*, Hso.≡ eP.10. 2 (on *Asterinaceae*), widespread (tropical). See Deighton (*Mycol. Pap.* **118**: 5, 1969), Crous & Braun (*CBS Diversity Ser.* **1**: 571 pp., 2003).

Eriocercosporella Rak. Kumar, A.N. Rai & Kamal ex U. Braun (1998), anamorphic *Mycosphaerellaceae*, Hso.≡ eP.?. 2, India. See Braun (*Monogr. Cercosporella, Ramularia Allied Genera (Phytopath. Hyphom.)* **2**: 398, 1998).

Eriocladus Lév. (1846) nom. rej. ≡ Lachnocladium.

Eriocorys Quél. (1886) ≡ Strobilomyces.

Erioderma Fée (1825), Pannariaceae (L). 40, widespread (esp. tropical). See Elix *et al.* (*Aust. J. Chem.* **40**: 1581, 1987; biochemistry), Jørgensen (*Ann. bot. fenn.* **38**: 259, 2001; E Asia), Jørgensen (*Taxon* **50**: 525, 2001; nomencl.), Jørgensen & Arvidsson (*Nova Hedwigia* **73**: 497, 2001; sorediate spp.), Jørgensen & Arvidsson (*Nordic Jl Bot.* **22**: 87, 2002; S America), Jørgensen & Sipman (*Ann. bot. fenn.* **39**: 201, 2002; SE Asia), Wiklund & Wedin (*Cladistics* **19**: 419, 2003; phylogeny), Jørgensen & Arvidsson (*Symb. bot. upsal.* **34** no. 1: 113, 2004; Ecuador), Wedin & Wiklund (*Symb. bot. upsal.* **34** no. 1: 469, 2004; phylogeny), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny).

Eriomene (Sacc.) Clem. & Shear (1931) = Menispora fide Hughes (*CJB* **36**: 727, 1958).

Eriomenella Peyronel (1918) = Menispora fide Hughes (*CJB* **36**: 727, 1958).

Eriomoeszia Vánky (2005), ? Ustilaginaceae. 1 (on *Eriocaulaceae*), S. Asia; N. America. See Vánky (*Mycol. Balcanica* **2**: 105, 2005).

Eriomycopsis Speg. (1910), anamorphic *Pezizomycotina*, Hso.≡ eH.10. *c.* 13 (fungicolous), widespread. See Deighton & Pirozynski (*Mycol. Pap.* **128**, 1972), Braun & Mel'nik (*Mikol. Fitopatol.* **32**: 3, 1998; Russia), Johnston (*N.Z. Jl Bot.* **37**: 289, 1999; New Zealand).

Erionema Maire (1906) = Menispora fide Hughes (*CJB* **36**: 727, 1958).

Eriopezia (Sacc.) Rehm (1892), Hyaloscyphaceae. *c.* 30, Europe; New Zealand. See Korf (*Mycotaxon* **7**: 457, 1978), Spooner (*Biblthca Mycol.* **116**, 1987), Kobler (*Schweiz. Z. Pilzk.* **69**: 30, 1991).

Eriopeziza, see *Eriopezia*.

Erioscypha Kirschst. (1938) = Lachnum fide Korf (*Mycotaxon* **7**: 399, 1978).

Erioscyphella Kirschst. (1938) = Lachnum fide Korf (*Mycotaxon* **7**: 399, 1978), Haines & Dumont (*Mycotaxon* **19**: 1, 1984).

Eriosperma Raf. (1808) nom. dub., ? Agaricales.

Eriosphaera De Toni (1888) [non *Eriosphaera* F. Dietr. 1817, *Compositae*] ≡ Lasiosphaera.

Eriosphaerella Höhn. (1906) = Eriosphaeria fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Eriosphaeria Sacc. (1875), Trichosphaeriaceae. 6 (from wood and bark), Asia; Europe. See Réblová (*Czech Mycol.* **50**: 73, 1997), Shenoy *et al.* (*MR* **110**: 916, 2006).

Eriospora Berk. & Broome (1850), anamorphic *Stictidaceae*, Cpd.0fH.10. 5, Europe; S. America. See Petrak (*Sydowia* **1**: 94, 1947).

Eriosporangium Bertero ex Ruschenb. (1831) = Puccinia fide Jackson (*Mycol.* **24**: 62, 1932).

Eriosporella Höhn. (1916), anamorphic *Pezizomycotina*, St.1bH.15. 1, Europe. See Punithalingam (*MR* **107**: 917, 2003; cytology).

Eriosporina Tognini (1894) ? = Sirothecium fide Sutton (*Mycol. Pap.* **141**, 1977).

Eriosporium Vánky (2005), ? Ustilaginaceae. 2 (on *Eriocaulaceae*), Africa. See Vánky (*Mycol. Balcanica* **2**: 113, 2005).

Eriosporopsis Petr. (1947), anamorphic *Pezizomycotina*, Cpd.0fH.?. 1, Europe.

Eriothyrium Speg. (1888), anamorphic *Pezizomycotina*, Cpt.0eH.?. 5, S. America.

Erispora Pat. (1922), Pezizomycotina. 1, Philippines. Type material is lost and affinities are unclear, fide Rossman *et al.* (*Stud. Mycol.* **42**, 1999).

Ernakulamia Subram. (1996), anamorphic *Pezizomycotina*. 1, S.E. Asia. See Subramanian (*Kavaka* **22/23**: 67, 1994).

erogen, a substance controlling the induction and differentiation of sex organs; **erotactin**, a sperm attractant; **erotropin**, a substance inducing a chemotropic response in sex organs (Machlis, *Mycol.* **64**: 238, 1972). See hormones.

Eromitra Lév. (1846) ≡ Mitrophora.

erose (of a lamella, etc.), having delicate tooth-like projections from the edge.

Erostella (Sacc.) Sacc. (1906) = Togninia fide Barr *et al.* (*Mycotaxon* **48**: 529, 1993), Mostert *et al.* (*Mycol.* **95**: 646, 2003).

Erostrotheca G.H. Martin & Charles (1928) = Melanospora Corda fide von Arx & Müller (*Beitr. Kryptfl. Schweiz* **11** no. 1, 1954).

erratic (of lichen thalli), not fixed to the substratum and often blowing around, e.g. *Chondropsis semiviridis*, *Sphaerothallia esculenta* ('manna'); epigaeic; vagrant; wandering lichens.

Erratomyces M. Piepenbr. & R. Bauer (1997), ? Tilletiaceae. 5 (on leaves of *Leguminosae*), Australia; India; S. & N. America. See Castlebury *et al.* (*Mycol.* **97**: 888, 2005; phylog.).

erumpent, bursting through the surface of the substratum. Cf. perrumpent.

Eruptio M.E. Barr (1996), ? Mycosphaerellaceae. Anamorphs *Lecanosticta*, *Dothistroma*. 3, widespread. See Evans (*Mycol. Pap.* **153**, 1984; as *Mycosphaerella*), Barr (*Mycotaxon* **60**: 433, 1996), Crous (*MR* **103**: 607, 1999), Verkley *et al.* (*Mycol.* **96**: 558, 2004; phylogeny).

Erynia (Nowak. ex Batko) Remaud. & Hennebert (1980), Entomophthoraceae. 16 (on *Insecta*), widespread. See Remaudière & Hennebert (*Mycotaxon* **11**: 269, 1980), Humber (*Mycotaxon* **13**: 471, 1981), Humber (*Mycotaxon* **15**: 167, 1982), Butt & Beckett (*Protoplasma* **120**: 72, 1984; ultrastr. mitosis & spindle-pole body), Butt & Beckett (*Protoplasma* **120**: 61, 1984; ultrastr. mitosis & spindle-pole body), Descals & Webster (*TBMS* **83**: 669, 1984; aquatic spp.), Li & Humber (*CJB* **62**: 653, 1984), Ben-Ze'ev (*Mycotaxon* **25**: 1, 1986), Ben-Ze'ev (*Mycotaxon* **27**: 263, 1986), Ben-Ze'ev (*Mycotaxon* **28**: 403, 1987), Humber (*Mycotaxon* **34**: 441, 1989), Perry & Fleming (*Mycol.* **81**: 154, 1989; zygospore germination), Keller (*Sydowia* **43**: 39, 1991), Keller (*Sydowia* **45**: 252, 1993), Robel (*MR* **101**: 573, 1997; polymorphism), Li *et al.* (*Mycosystema* **17**: 91, 1998), Keller

& Petrini (*Sydowia* **57**: 23, 2005; key), Keller (*Sydowia* **58**: 38, 2006; Switzerland), Keller (*Sydowia* **59**: 75, 2007; Switzerland, n.sp.).

Eryniopsis Humber (1984), Entomophthoraceae. 3, Europe; USA. See Humber (*Mycotaxon* **21**: 257, 1984), Keller & Eilenberg (*Sydowia* **45**: 264, 1993), Keller & Petrini (*Sydowia* **57**: 23, 2005; key), Keller (*Sydowia* **59**: 75, 2007; Switzerland, n.sp.).

Eryporus Quél. (1886) = Boletinus fide Murrill (*N. Amer. Fl.* **9**: 133, 1910).

Erysibe Theophr. ex Wallr. (1833) nom. dub., anamorphic *Pucciniales*. Anamorph name mainly for (II).

Erysiphaceae Tul. & C. Tul. (1861), Erysiphales. 19 gen. (+ 40 syn.), 769 spp.

Lit.: Braun (*Beih. Nova Hedwigia* **89**: 700 pp., 1987), Braun (*The Powdery Mildews (Erysiphales) of Europe*: 337 pp., 1995), Cook *et al.* (*MR* **101**: 975, 1997), Saenz (*McIlvainea* **13**: 33, 1998), Takamatsu *et al.* (*Mycoscience* **39**: 441, 1998), Braun (*Schlechtendalia* **3**: 48, 1999), Saenz & Taylor (*CJB* **77**: 150, 1999), Braun & Takamatsu (*Schlechtendalia* **4**: 1, 2000), Mori *et al.* (*Mycol.* **92**: 74, 2000), Takamatsu (*Mycoscience* **45**: 147, 2004), Takamatsu & Matsuda (*Mycoscience* **45**: 340, 2004), Hirose *et al.* (*MR* **109**: 912, 2005), Takamatsu *et al.* (*MR* **110**: 1093, 2006), Wang *et al.* (*Mycol.* **98**: 1065, 2006; phylogeny), Takamatsu *et al.* (*MR* **112**: 299, 2008; phylogeny).

Erysiphales H. Gwynne-Vaughan (1922). Leotiomycetidae. 1 fam., 19 gen., 769 spp. Fam.:
Erysiphaceae

Lit.: **General**: Amano (*Host range and geographical distribution of the powdery mildew fungi*, 1987; compr. host & geogr. distr.), Bélanger *et al.* (Eds) (*The powdery Mildews: A comprehensive Treatise*, 2000), Blumer (*Beitr. Erysiphella Peck (1876) = Erysiphe fide Salmon (*Mem. Torrey bot. Club* **9**: 1, 1900).

Erysiphites Mesch. (1902), Fossil Fungi. 1 (Tertiary), former USSR.

Erysiphites Pampal. (1902), Fossil Fungi ? Fungi. 1 (Miocene), Sicily. See Salmon (*J. Bot. Lond.* **41**: 127, 1903).

Erysiphomycetidae = Leotiomycetidae. See *Erysiphales*; now placed within the *Leotiomycetes*.

For *Lit.* see fam.

Erysiphopsis Halst. (1899) = Erysiphe fide Salmon (*Mem. Torrey bot. Club* **9**: 1, 1900).

Erysiphopsis Speg. (1910), anamorphic *Pezizomycotina*. 1, S. America. See Petrak & Sydow (*Annls mycol.* **34**: 36, 1936).

Erythricium J. Erikss. & Hjortstam (1970), Corticiaceae. 3, widespread. See Eriksson & Hjortstam (*Svensk bot. Tidskr.* **64**: 165, 1970), Roux & Coetzee (*Pl. Dis.* **89**: 1158, 2005; pink disease in South Africa).

Erythrobasidiales R. Bauer, Begerow, J.P. Samp., M. Weiss & Oberw. (2006). Cystobasidiomycetes. 2 gen., 2 spp. No familes recognized.

Erythrobasidium Hamam., Sugiy. & Komag. (1988), anamorphic *Erythrobasidiales*. 1, Japan. See Hamamoto *et al.* (*J. gen. appl. Microbiol.* Tokyo **37**: 131, 1991; nomencl.), Fell *et al.* (*Int. J. Syst. Evol. Microbiol.* **50**: 1351, 2000; mol. phylogeny), Bauer *et al.* (*Mycol. Progr.* **5**: 41, 2006).

Erythrocarpon Zukal (1885), Chaetomiaceae. 1, Europe. Affinities are obscure, no recent research is available.

Erythrocarpum Sacc. (1891) ≡ Erythrocarpon.

Erythrodecton G. Thor (1991), Roccellaceae (L). 2, widespread. See Henssen & Thor (*Nordic Jl Bot.* **18**: 95, 1998; ontogeny), Thor (*Biblthca Lichenol.* **95**: 543, 2007; Malaysia).

Erythrogloeum Petr. (1953), anamorphic *Pezizomycotina*, St.0eH.15. 1, Costa Rica. See Ferreira *et al.* (*Fitopatol. Brasil* **17**: 106, 1992; anthracnose disease of *Hymenaea* spp.).

Erythrogymnotheca Yaguchi & Udagawa (1994), Trichocomaceae. 1, Japan. See Yaguchi *et al.* (*Mycoscience* **35**: 219, 1994).

Erythromada Huhndorf, A.N. Mill., F.A. Fernández & Lodge (2005), Sordariomycetes. 1, Puerto Rico. See Huhndorf *et al.* (*Fungal Diversity* **20**: 63, 2005).

Erythromyces Hjortstam & Ryvarden (1990), Hymenochaetaceae. 1, widespread. See Hjortstam & Ryvarden (*Mycotaxon* **37**: 55, 1990), Hjortstam *et al.* (*Kew Bull.* **53**: 805, 1998).

Erythrosphaera Sorokīn (1871) = Cephalotheca fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Esalque J.F. Hennen, M.B. Figueredo & A.A. Carvalho (2000), ? Raveneliaceae. 1 (on *Caesalpinia* (*Leguminosae*)), Brazil. See Hennen (*Mycol.* **92**: 315, 2000) Cf. *Hennenia*.

Eschatogonia Trevis. (1853), ? Acarosporaceae (L). 2, tropical. See Timdal (*Lichenologist* **40**: 31, 2008; Peru, key).

Escovopsis J.J. Muchovej & Della Lucia (1990), anamorphic *Hypocreales*, Hso.0eH.15. 2 (from attine ant nests), widespread. See Romero *et al.* (*Rev. Mex. Micol.* **3**: 231, 1987; as *Phialocladus*), Seifert *et al.* (*Mycol.* **87**: 407, 1995), Jacobs *et al.* (*Mycol.* **97**: 111, 2005; phylogeny).

esculent, of use as a food; see Edible fungi.

Esdipatilia Phadke (1981), anamorphic *Pezizomycotina*, Hsy.≡ eH.1. 1, India. See Phadke (*TBMS* **77**: 642, 1981).

eseptate, see aseptate.

Esfandiaria Petr. (1955) [non *Esfandiaria* Charif & Aellen 1955, *Chaenopodiaceae*] ≡ Esfandiariomyces.

Esfandiariomyces Ershad (1985), Pezizomycotina. 1, Iran. See Ershad (*Iranian Journal of Plant Pathology* **21**: 8, 1985).

esorediate (**esorediose**), having no soredia.

Esslingeriana Hale & M.J. Lai (1980), Parmeliaceae (L). 1, USA. See Kärnefelt *et al.* (*Pl. Syst. Evol.* **183**: 113, 1992; status), Mattsson & Articus (*Symb. bot. upsal.* **34** no. 1: 237, 2004; phylogeny).

Esteya J.Y. Liou, J.Y. Shih & Tzean (1999), anamorphic *Pezizomycotina*, Hso.?.?. 1, Taiwan; Europe. See Liou *et al.* (*MR* **103**: 243, 1999), Kubátová *et al.* (*Czech Mycol.* **52**: 227, 2000; Czech Republic).

Etheirodon Banker (1902) ≡ Steccherinum fide Banker (*Mycol.* **21**: 145, 1929).

Etheirophora Kohlm. & Volkm.-Kohlm. (1989), Hypocreomycetidae. 3 (marine), Atlantic Ocean; Pacific Ocean. See Kohlmeyer & Volkmann-Kohlmeyer (*MR* **92**: 416, 1989; key), Schoch *et al.* (*MR* **111**: 154, 2007; phylogeny).

Ethnomycology. Mycology as a branch of ethnology, i.e. the attitudes to, lore and use etc. of fungi by different ethnic, racial or national divisions of humanity. To date, most studies in ethnomycology have concentrated on edible and poisonous macrofungi (q.v.), and on the role of fungi, often hallucinogenic, in religion. Studies on other aspects, such as medicinal use of fungi, are only now beginning. In respect of edible and poisonous macrofungi, different human societies exhibit a full range of attitudes from indifference to strong interest, often resolved as either a powerful ignorance and fear of all macrofungi (typical of, for example, the Anglo-Saxon peoples) or an enthusiasm for using wild edible species combined with extensive practical experience of which species are to be avoided (typical of, for example, northern Slav people). Geographical coverage by existing ethnomycological work is patchy, and many human societies in Africa, Asia, the Pacific ocean islands and South America in particular remain completely unstudied or with tantalizing indications of a wealth of cultural experience still undocumented. Pioneering but unpublished work by Teng (q.v.) on the ethnomycology of China was confiscated during the country's 'cultural revolution', and is presumed destroyed. In addition to connexions with established and recognized religions, there are many beliefs linking fungi to the supernatural, for example through fairy rings (q.v.) or as a result of consumption of hallucinogenic fungi (q.v.).

Lit.: Adhikari & Durrieu (*BSMF* **112**: 31, 1996; Nepal), Akpaja *et al.* (*Int. J. Soc.* **15**: 139, 1981; Zambia), Prance (*Advances in economic botany* **1**: 127, 1984; use of fungi by Amazonian Indians), Rai *et al.* (*Mycologist* **7**: 192, 1993; ethnic use of medicinal mushrooms in central India), Redlinger (Ed.) (*The sacred mushroom seeker*, 1990), Saar (*J. Ethnopharmacology* **31**: 175, 1991; fungi in Khanty folk medicine, Siberia), Sillitoe (*Science in New Guinea* **21**: 3, 1995; ethnomycology in Papua New Guinea southern highlands), Vaidya & Rabba (*Mycologist* **7**: 131, 1993; fungi in folk medicine), Wasson & Wasson (*Mushrooms, Russia and history*, 2 vols. 1957). See also: Edible fungi, Hallucinogenic fungi, Soma.

etiology, see aetiology.

eu- (prefix), true; sometimes used, but wrongly for the subgenus or section including the type species of the generic name of which it is an infrageneric taxon.

Euacanthe Theiss. (1917), Scortechiniaceae. 1. See Nannfeldt (*Svensk bot. Tidskr.* **66**: 49, 1975), Subramanian & Sekar (*Kavaka* **18**: 19, 1993), Huhndorf *et al.* (*MR* **108**: 1384, 2004; phylogeny), Schoch *et al.* (*MR* **111**: 154, 2007; phylogeny).

Euactinomyces Langeron (1922) nom. dub., Fungi.

Eualectoria (Th. Fr.) Gyeln. (1934) ≡ Alectoria Ach.

Euantennaria Speg. (1918), Euantennariaceae. Anamorphs *Antennatula, Hormisciomyces*. 6, widespread. See Corlett *et al.* (*N.Z. Jl Bot.* **11**: 213, 1973), Hughes (*N.Z. Jl Bot.* **12**: 299, 1974), Hughes & Arnold (*Mem. N. Y. bot. Gdn* **49**: 198, 1989; anamorph).

Euantennariaceae S. Hughes & Corlett ex S. Hughes (1972), Capnodiales. 9 gen. (+ 6 syn.), 28 spp.

Lit.: Batista & Ciferri (*Saccardoa* **2**, 1963), Reynolds (*Taxon* **20**: 759, 1971; hyphal morph.), Hughes (*N.Z. Jl Bot.* **10**: 225, 1972), Reynolds (*Nova Hedwigia* **26**: 179, 1975; growth forms), Hughes (*Mycol.* **68**: 693, 1976; gen. names, anamorphs), Reynolds (*Mycotaxon* **8**: 417, 1979; stalked taxa), Sugiyama *et al.* (*Studies on Cryptogams in Southern Chile*: 169, 1984), Parbery & Brown (*Microbiology of the Phyllosphere*: 101, 1986), Reynolds (*Mycotaxon* **27**: 377, 1986; status), Hughes & Arnold (*Mem. N. Y. bot. Gdn* **49**: 198, 1989), Hughes & Seifert (*Sydowia* **50**: 192, 1998).

Euascomycetes. Class for pyrenomycetes, discomycetes and laboulbeniomycetes; cf. Hemiascomycetes, Loculoascomycetes.

Euascomycetidae. See *Ascomycota*.

Euaspergillus F. Ludw. (1892) = Aspergillus fide Raper & Fennell (*The genus Aspergillus*, 1965).

Eubelonis Clem. (1909) ? = Calycina fide Arendholz (*Mycotaxon* **36**: 283, 1988).

Eubelonis Höhn. (1926), Helotiaceae. 2, Europe. See Arendholz (*Mycotaxon* **36**: 283, 1988).

Eucantharomyces Thaxt. (1895), Laboulbeniaceae. 26, widespread. See Santamaría (*MR* **98**: 1303, 1994; asci).

eucarpic, developing reproductive structures on limited portions of the thallus; residual nucleate protoplasm remaining and capable of further mitotic growth and regeneration.

Eucaryota (Eucarya), see *Eukaryota*.

Eucasphaeria Crous (2007), ? Sordariomycetes. Anamorph *Ascochytopsis*-like. 1. See Crous *et al.* (*Fungal Diversity* **26**: 1, 2007).

Euceramia Bat. & Cif. (1962), Chaetothyriaceae. 1, Brazil.

Euceratomyces Thaxt. (1931), Euceratomycetaceae. 1, N. America. See Santamaría (*Nova Hedwigia* **61**: 65, 1995).

Euceratomycetaceae I.I. Tav. (1980), Laboulbeniales. 5 gen., 7 spp.

Lit.: Tavares (*Mycol. Mem.* **9**: 627 pp., 1985), Santamaria i del Campo (*L'ordre Laboulbenials (Fungi, Ascomycotina) a la Península Ibèrica i Illes Ballears [Thesis]*: 669 pp., 1990), Santamaría (*Nova Hedwigia* **61**: 65, 1995), Santamaría & Rossi (*Pl. Biosystems* **133**: 163, 1999).

euchroic, see colour.

Eucladoniomyces Cif. & Tomas. (1953) = Cladonia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Eucollema (Cromb.) Horw. (1912) ≡ Collema F.H. Wigg.

Eucorethromyces Thaxt. (1900) = Corethromyces fide Thaxter (*Memoirs of the American Academy of Arts and Sciences* **16**: 1, 1931).

eucortex (of lichens), a cortex composed of well-differentiated tissue.

Eucyphelis Clem. (1909) = Chaenotheca fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Eudacnus Raf. ex Merr. (1943) ≡ Endacinus.

Eudarluca Speg. (1908), ? Phaeosphaeriaceae. Anamorph *Sphaerellopsis*. 3 or 4 (on rusts), widespread. See Eriksson (*Bot. Notiser* **119**: 33, 1966; biology, systematics), Kranz (*Nova Hedwigia* **24**: 169, 1974; hosts), Yuan *et al.* (*MR* **102**: 866, 1998), Liesebach & Zaspel (*Rust Diseases of Willow and Poplar*: 231, 2005; genetic diversity), Nischwitz *et al.* (*MR* **109**: 421, 2005; evolution, host specialization), Pei & Yuan (*Rust Diseases of Willow and Poplar*: 243, 2005; biocontrol), Bayon *et al.* (*MR* **110**: 1200, 2006; genetic diversity).

Eudimeriolum Speg. (1912), Pseudoperisporiaceae. *c.* 8, widespread (tropical). See Hansford (*Mycol. Pap.* **15**, 1946), Farr (*Mycol.* **71**: 243, 1979), Samuels & Rogerson (*Brittonia* **42**: 105, 1990), Barr (*Mycotaxon* **64**: 149, 1997), Reynolds & Gilbert (*Aust. Syst. Bot.* **18**: 265, 2005; Australia).

Eudimeromyces Thaxt. (1918) = Dimeromyces fide Tavares (*Mycol. Mem.* **9**, 1985).

Euepixylon Füisting (1867), Xylariaceae. 2, Europe; E. Russia. See Læssøe (*SA* **13**: 43, 1994), Vassiljeva (*Nizshie Rasteniya, Griby i Mokhoobraznye Dalnego Vostoka Rossii* Griby **4**: 210, 1998).

euform, see *Pucciniales* and Table 5.

eugonic, see dysgonic.
eugonidium, a bright green lichen photobiont (e.g. *Trebouxia*) (obsol.).
Euhaplomyces Thaxt. (1901), Laboulbeniaceae. 1, British Isles. See Nannfeldt (*Svensk bot. Tidskr.* **43**: 468, 1949).
euhymenium, see hymenium.
Euhypoxylon Füisting (1867) ≡ Hypoxylon Bull.
Eukaryota. (Eukarya). The domain (empire, superkingdom) to which all **eukaryotes** belong; i.e. encompassing all organisms with one or more nuclei in their cells bounded by a nuclear membrane and with paired DNA-containing chromosomes (and also other complex organelles, e.g. Golgi bodies, mitochondria). The counterpart of the **Prokaryota (Prokarya, prokaryotes)** which is now generally divided into two separate kingdoms, *Archaea* (formerly *Archaebacteria*) and *Bacteria* (formerly *Eubacteria*; including also *Cyanobacteria*), and the viruses that lack the above structures. See Classification, Phylogeny.
eukaryote (adj. **eukaryotic**), one of the *Eukaryota* (q.v.); cf. prokaryote.
Eumela Syd. (1925), Pseudoperisporiaceae. 1, C. America. See Hansford (*Mycol. Pap.* **15**, 1946).
Eumicrocyclus, see *Eumycrocyclus*.
Eumisgomyces Speg. (1912) = Laboulbenia fide Spegazzini (*An. Mus. nac. Hist. nat. B. Aires* **27**: 70, 1915), Tavares (*Mycol. Mem.* **9**, 1985).
Eumitria Stirt. (1881) = Usnea fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).
Eumonoicomyces Thaxt. (1901), Laboulbeniaceae. 2 or 3, widespread.
eumorphic, well-formed.
Eumycetes. (Eumycota), true fungi; see *Fungi*.
eumycetoma, see mycetoma.
Eumycota (Eumycophyta), see *Eumycetes*.
Eumycrocyclus Hara (1915) ≡ Coccoidella.
Euoidium Y.S. Paul & J.N. Kapoor (1986) = Oidium Link (1824) fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).
Euopsis Nyl. (1875), Lichinaceae (L). 2, widespread. See Hafellner (*Beih. Nova Hedwigia* **79**: 241, 1984), Schultz & Büdel (*Lichenologist* **34**: 39, 2002; key).
Eupelte Syd. (1924), Asterinaceae. Anamorphs *Clasterosporium*, *Septoidium*-like. 3, widespread (tropical).
Eupenicillium F. Ludw. (1892), Trichocomaceae. Anamorph *Penicillium*. 46, widespread. See Udagawa & Horie (*Antonie van Leeuwenhoek* **39**: 313, 1973; ascospores), Pitt (*The genus Penicillium and its teleomorphic states Eupenicillium and Talaromyces*, 1979; keys), Stolk & Samson (*Stud. Mycol.* **23**, 1983), Berbee *et al.* (*Mycol.* **87**: 210, 1995; molec. data suggests affinity with *Aspergillus*), Leal *et al.* (*MR* **101**: 1259, 1997; polysaccharides), Ogawa *et al.* (*Mycol.* **89**: 756, 1997; DNA), Skouboe *et al.* (*MR* **103**: 873, 1999; phylogeny), Ogawa & Sugiyama (*Integration of Modern Taxonomic Methods for Penicillium and Aspergillus Classification*: 149, 2000; phylogeny), Pitt & Samson (*Integration of Modern Taxonomic Methods for Penicillium and Aspergillus Classification*: 51, 2000; types), Pitt *et al.* (*Integration of Modern Taxonomic Methods for Penicillium and Aspergillus Classification*: 9, 2000; accepted names), Prieto *et al.* (*CJB* **80**: 410, 2002; cell wall polysaccharides), Tuthill (*Mycol. Progr.* **3**: 3, 2004; genetic variation), Geiser *et al.* (*Mycol.* **98**: 1053, 2006; phylogeny), Horn & Peterson (*Mycol.* **100**: 12, 2008; on *Aspergillus* heads).
Eupezizella Höhn. (1926) = Hyaloscypha fide Huhtinen (*Karstenia* **29**: 45, 1989).
Euphoriomyces Thaxt. (1931), Laboulbeniaceae. 13, widespread. See Santamaría (*Revta Iberoamer. Micol.* **8**: 43, 1991; key).
Euplotespora Fokin, Di Giuseppe, Erra & Dini (2008), Microsporidia. 1. See Fokin *et al.* (*J. Eukaryot. Microbiol.* **55**: 214, 2008).
Eupropolella Höhn. (1917), Helotiales. 7, Europe. See Défago (*Sydowia* **21**: 1, 1967), Nauta & Spooner (*Mycologist* **14**: 21, 2000; UK).
Eupropolis De Not. (1863) = Phaeotrema fide Sherwood (*Mycotaxon* **5**: 50, 1977).
Eurasina G.R.W. Arnold (1970) = Helminthophora fide de Hoog (*Persoonia* **18**: 33, 1978).
Euricoa Bat. & H. Maia (1955) = Cylindrocarpon fide Kendrick & Carmichae *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 390, 1973).
European Council for Conservation of Fungi, see Conservation.
European mildew, see mildew.
European Mycological Association. Founded in 2003; recognized as the Committee for Europe within the International Mycological Association (q.v.); structure comprises individual and corporate members, an elected executive, with national representatives from European countries; organizes Congress of European Mycologists every three or four years, and various other meetings. Publications: *EMA Newsletter*. Website: www.euromould.org.
Europhium A.K. Parker (1957) = Grosmannia fide Benny & Kimbrough (*Mycotaxon* **12**, 1980), Solheim (*Nordic Jl Bot.* **6**: 199, 1986), von Arx (*SA* **5**: 310, 1986), Hausner *et al.* (*CJB* **78**: 903, 2000), Zipfel *et al.* (*Stud. Mycol.* **55**: 75, 2006).
Eurotiaceae Clem. & Shear (1931) = Trichocomaceae.
Eurotiales G.W. Martin ex Benny & Kimbr. (1980). Eurotiomycetidae. 3 fam., 49 gen., 928 spp. Stromata absent. Ascomata small, cleistothecial, usually solitary, rarely absent; peridium usually thin, membranous, usually brightly coloured, varied in structure and rarely acellular and cyst-like. Interascal tissue absent. Asci clavate or saccate, thin-walled, evanescent, sometimes formed in chains. Ascospores varied, small, aseptate, often ornamented and with equatorial thickening, without a sheath. Anamorphs prominent, many of industrial and medical importance (e.g. *Aspergillus*, *Penicillium*). Saprobic, mainly from soil or decaying plant materials.

Formerly used for ± all ascomycetes with cleistocarpic ascomata, many now placed within groups including ostiolate counterparts from which they have been derived. Fam.:
(1) **Elaphomycetaceae**
(2) **Thermoascaceae**
(3) **Trichocomaceae** (syn. *Aspergillaceae* auct., *Eurotiaceae*)

Lit.: Geiser *et al.* (*Mycol.* **98**: 1051, 2006; phylogeny), Geiser & LoBuglio (*in* McLaughlin *et al.* (Eds), *The Mycota* **7A**: 201, 2001), Guarro *et al.* (*Mycotaxon* **42**: 193, 1991; key 8 spherical-spored gen.), Fennell (*in* Ainsworth *et al.* (Eds), *The Fungi* **4A**: 45, 1973; keys gen.), Malloch (*in* Reynolds (Ed.), *Ascomycete systematics*: 73, 1981).
Eurotiella Lindau (1900) ≡ Allescheria Sacc. & P. Syd.
Eurotiomycetes O.E. Erikss. & Winka (1997), Pezizomycotina. 10 ord., 27 fam., 281 gen., 3401 spp.

Contains a morphologically high heterogenous assemblage of taxa, including *Penicillium* and its relatives, human pathogens, many of the black yeasts, and some lichenized families.

Subcl.:

(1) **Chaetothyriomycetidae**

(2) **Eurotiomycetidae**

(3) **Mycocaliciomycetidae**

Lit.: Ekman & Tønsberg (*MR* **106**: 1262, 2002), Geiser *et al.* (*Mycol* **98**: 1051, 2006), Lutzoni *et al.* (*Am. J. Bot.* **91**: 1446, 2004).

Eurotiomycetidae Doweld (2001), Eurotiomycetes. Stromata absent. Ascomata usually small, cleistothecial, rarely absent, often brightly coloured, varied in structure. Interascal tissue absent. Asci thin-walled, evanescent, sometimes formed in chains. Ascospores varied, small, aseptate, often ornamented and with equatorial thickening, without a sheath. Anamorphs prominent. Ords:

(1) **Coryneliales**

(2) **Eurotiales**

(3) **Onygenales**

For *Lit.* see ord. and fam.

Eurotiopsis Costantin ex Laborde (1897) = Monascus fide Malloch (*Mycol.* **62**: 738, 1970).

Eurotiopsis P. Karst. (1889) nom. dub., anamorphic *Pezizomycotina.*

Eurotites Mesch. (1892), Fossil Fungi. 1 (Oligocene), Europe.

Eurotium Link (1809), Trichocomaceae. Anamorph *Aspergillus.* 25, widespread. See Blaser (*Sydowia* **28**: 1, 1976; key), Pitt *in* Pitt & Samson (Eds) (*Advances in Penicillium and Aspergillus systematics* **102**: 383, 1985; nomencl.), Kozakiewicz (*Mycol. Pap.* **161**, 1989), Chang *et al.* (*J. gen. appl. Microbiol.* Tokyo **37**: 289, 1991; DNA), Pitt & Hocking (*Fungi and Food Spoilage* Edn 2: 593 pp., 1997; review), Samson (*Contributions to Microbiology* **2**: 5, 1999; review), Pitt & Samson (*Integration of Modern Taxonomic Methods for Penicillium and Aspergillus Classification*: 51, 2000; types), Pitt *et al.* (*Integration of Modern Taxonomic Methods for Penicillium and Aspergillus Classification*: 9, 2000; accepted names), Klich (*Identification of Common Aspergillus Species*: 116 pp., 2002; monograph), Zeng *et al.* (*FEMS Microbiol. Lett.* **237**: 79, 2004; DNA probes), Butinar *et al.* (*FEMS Microbiology Ecology* **51**: 155, 2005; hypersaline environments), Peterson (*Mycol.* **100**: 205, 2008; 4-locus phylogeny).

Euryachora Fuckel (1870), Dothideaceae. Anamorph *Placosphaeria*-like. *c.* 5, widespread (temperate). See Obrist (*Phytopath. Z.* **35**: 382, 1959).

Euryancale Drechsler (1939), Cochlonemataceae. 5, Japan; N. America. See Drechsler (*Mycol.* **31**: 410, 1939), Drechsler (*Mycol.* **47**: 364, 1955), Drechsler (*Mycol.* **51**: 787, 1959), Dyal (*Sydowia* **27**: 293, 1976; keys parasites of nematodes and amoebae, bibliogr.), Saikawa & Saito (*TBMS* **87**: 337, 1986; zygospores), Saikawa & Aoki (*TMSJ* **32**: 509, 1991), Saikawa & Katsurashima (*Mycol.* **85**: 24, 1993; ultrastr.), Saikawa & Aoki (*Nova Hedwigia* **60**: 571, 1995).

Euryporus Quél. (1886) = Suillus Gray fide Kuyper (*in litt.*).

Eurytheca De Seynes (1878), ? Myriangiaceae. 2, Europe; West Indies.

euseptate (of conidial septation), having cells separated by multilayered walls of similar structure to lateral walls, as in *Pyricularia* (Luttrell, *Mycol.* **55**: 672, 1963) (Fig. 22C); cf. distoseptate.

Eusordaria Zopf (1883) ? = Sordaria fide Lundqvist (*Symb. bot. upsal.* **20** no. 1: 269, 1972).

Eustegia Fr. (1823) [non *Eustegia* R. Br. 1810, *Asclepiadaceae*] ≡ Stegia.

Eustilbum Arnold (1885) nom. nud. = Dendrostilbella fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

eustroma, see stroma.

Eusynaptomyces Thaxt. (1931), Ceratomycetaceae. 5, widespread. See Scheloske (*Pl. Syst. Evol.* **126**: 267, 1976), Tavares (*Mycol. Mem.* **9**: 627 pp., 1985), Santamaría (*Fl. Mycol. Iberica* **5**, 2003; Iberian peninsula), Santamaria (*Nova Hedwigia* **82**: 349, 2006; Spain).

euthecium, an ascoma (cleistothecium, perithecium, apothecium) of an euascomycete; cf. pseudothecium.

Euthrypton Theiss. (1916) = Seuratia fide Meeker (*CJB* **53**: 2462, 1975).

euthyplectenchyma, see plectenchyma.

Euthythyrites Cookson (1947), Fossil Fungi, Asterinaceae. 3 (Oligocene, Miocene), Australia; India.

Eutorula H. Will (1916) = Torulopsis Berl. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Eutorulopsis Cif. (1925) ? = Torulopsis Berl. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

eutrophic, rich in nutrients; cf. dystrophic, oligotrophic.

eutrophication, nutrient enrichment, usually used when directly or indirectly caused by human influences.

Eutryblidiella (Rehm) Höhn. (1959) = Rhytidhysteron fide Samuels & Müller (*Sydowia* **32**: 277, 1979).

Eutypa Tul. & C. Tul. (1863), Diatrypaceae. Anamorphs *Libertella, Cytosporina.* 32, widespread (esp. temperate). See Glawe & Rogers (*Mycotaxon* **20**: 401, 1984), Rappaz (*Mycol. Helv.* **2**: 285, 1987; key), Carter (*Phytopath. Pap.* **32**, 1991; pathology), Ju *et al.* (*Mycotaxon* **41**: 311, 1991; anamorph), Larignon & Dubos (*Eur. J. Pl. Path.* **103**: 147, 1997; on *Vitis*), Peros *et al.* (*Phytopathology* **87**: 799, 1997), DeScenzo *et al.* (*Phytopathology* **89**: 884, 1999; DNA), Peros *et al.* (*MR* **103**: 1385, 1999; pathology), Cortesi & Milgroom (*Journal of Plant Pathology* **83**: 79, 2001; population analysis), Acero *et al.* (*Mycol.* **96**: 249, 2004; phylogeny), Chacón Zapata (*Brenesia* **62**: 41, 2004; Mexico), Trouillas & Gubler (*MR* **108**: 1195, 2004; California, on *Vitis*), Lardner *et al.* (*MR* **109**: 799, 2005; molecular diagnostics), Carmarán *et al.* (*Fungal Diversity* **23**: 67, 2006; phylogeny), Rolshausen *et al.* (*Phytopathology* **96**: 369, 2006; species concepts), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny), Lardner *et al.* (*Australas. Pl. Path.* **36**: 149, 2007; Australia, on *Vitis*).

Eutypella (Nitschke) Sacc. (1875) nom. cons., Diatrypaceae. Anamorphs *Cytosporina, Libertella.* 78, widespread. See Glawe & Rogers (*Mycotaxon* **20**: 401, 1984; Pacific NW, keys), Rappaz (*Mycol. Helv.* **2**: 285, 1987; key), Ju *et al.* (*Mycotaxon* **41**: 311, 1991; anamorph), Hyde (*MR* **99**: 1462, 1995; Australia), Nordén (*Windahlia* **22**: 65, 1995; Sweden), Acero *et al.* (*Mycol.* **96**: 249, 2004; phylogeny), Chacón Zapata (*Brenesia* **62**: 41, 2004; Mexico), Carmarán *et al.* (*Fungal Diversity* **23**: 67, 2006; phylogeny).

eutypoid, having groups of perithecia in a stroma with

the ostioles vertical and breaking through the surface individually. Cf. valsoid.

Eutypopsis P. Karst. (1878) = Endoxyla fide Barr (*Mycol. Mem.* **7**: 232 pp., 1978).

Euzodiomyces Thaxt. (1900), Euceratomycetaceae. 2, widespread. See Weir & Rossi (*Mycol.* **93**: 171, 2001; Bolivia), Santamaría (*Fl. Mycol. Iberica* **5**, 2003; Iberian peninsula).

evanescent, having a short existence; fugacious.

Evanidomus Caball. (1941), anamorphic *Pezizomycotina*, St.0eP.?. 1, Spain.

Everhartia Sacc. & Ellis (1882), anamorphic *Pezizomycotina*, Hsp.0-≡ hH.?. 3, widespread. See Moore (*Mycol.* **47**: 90, 1955), Yanna & Ho (*J. Linn. Soc. Bot.* **134**: 465, 2000; Hong Kong), Kirschner & Chen (*Stud. Mycol.* **50**: 337, 2004).

Evernia Ach. (1809), Parmeliaceae (L). *c.* 10, widespread. See Ahlner (*Acta phytogeogr. suec.* **22**, 1948), Bird (*CJB* **52**: 2427, 1974; N. Am.), Awasthi (*Bull. bot. Surv. India* **24**: 96, 1983; key 3 spp. India), Tavares (*Mycol. Mem.* **9**: 627 pp., 1985), Golubkova & Shapiro (*Nov. Sist. niz. Rast.* **24**: 144, 1987; 9 spp. former USSR), Feuerer & Marth (*Mitt. Inst. Allg. Botanik Hamburg* **27**: 101, 1997; pseudocyphellae), Kärnefelt *et al.* (*Nova Hedwigia* **67**: 71, 1998; anatomy), Mattsson & Wedin (*Lichenologist* **30**: 463, 1998), Mattsson & Wedin (*Lichenologist* **31**: 431, 1999), Wedin *et al.* (*MR* **103**: 1152, 1999; DNA), Crespo *et al.* (*Taxon* **50**: 807, 2001; genus concepts), Peršoh *et al.* (*Mycol. Progr.* **3**: 103, 2004; asci, photobionts), Thell *et al.* (*Mycol. Progr.* **3**: 297, 2004; phylogeny), Thell *et al.* (*Symb. bot. upsal.* **34** no. 1: 429, 2004; Scandinavia), Piercey-Normore (*New Phytol.* **169**: 331, 2006; photobionts).

Everniaceae Tomas. (1897) = Parmeliaceae.

Everniastrum Hale ex Sipman (1986), Parmeliaceae (L). 33, widespread (esp. tropical). See Sipman (*Mycotaxon* **26**: 235, 1986; key), Eriksson & Hawksworth (*SA* **10**: 37, 1991; nomencl.), Jiang & Wei (*Lichenologist* **25**: 57, 1993; key 9 spp. China), Elix (*Flora of Australia* **55**: 37, 1994), Thell *et al.* (*Mycol. Progr.* **3**: 297, 2004; phylogeny), Blanco *et al.* (*Mol. Phylogen. Evol.* **39**: 52, 2006; phylogeny), Divakar *et al.* (*Mol. Phylogen. Evol.* **40**: 448, 2006; tropical spp.).

Everniicola D. Hawksw. (1982), anamorphic *Pezizomycotina*, Cpd.1eH.15. 1 (on lichens, esp. *Evernia* and *Nephroma*), Europe; N. America. See Alstrup & Hawksworth (*Meddr Grønland* Biosc. **31**, 1990).

Everniomyces Cif. & Tomas. (1953) ≡ Evernia.

Everniopsis Nyl. (1860), Parmeliaceae (L). 2, C. & S. America. See Kärnefelt *et al.* (*Nova Hedwigia* **67**: 71, 1998; anatomy), Thell *et al.* (*J. Hattori bot. Lab.* **100**: 797, 2006).

Eversia J.L. Crane & Schokn. (1977), anamorphic *Pezizomycotina*, Hso.#eP.19. 1, widespread. See Crane & Schoknecht (*Mycol.* **69**: 539, 1977).

everted, turned inside out.

Evicentia Barreno (2000), Biatorellaceae (L). 2, Italy; USA. See Barreno & Schoeninger (*The Fourth IAL Symposium* Progress and Problems in Lichenology at the Turn of the Millennium, Barcelona, 3-8 September 2000. Book of Abstracts: addendum [i], 2000).

Evlachovaea Borisov & Tarasov (1999), anamorphic *Pezizomycotina*, Hso.?.?. 1, Russia. See Borisov & Tarasov (*Mikol. Fitopatol.* **33**: 250, 1999).

Evlachovaia Voronin (1986), Microsporidia. 1.

Evolution, see Coevolution, Fossil fungi, Kingdoms of fungi, Phylogeny.

Evulla Kavina (1939) ? = Neobulgaria fide Korf *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 249, 1973).

ex (1) (in citations, e.g. G. Arnaud ex M.B. Ellis), from; first validly published by the second author(s), see Nomenclature; (2) (prefix), see e-.

ex situ (Lat.), **ex-situ** (Engl.) (of an organism), one taken from its natural habitat; used of living cultures isolated from nature and maintained in Genetic resource collections, and also of non-viable material held in Reference collections; cf. *in situ*.

Exarmidium P. Karst. (1873), ? Hyponectriaceae. 9, widespread. See Barr & Boise (*Mycotaxon* **23**: 233, 1985), Wang & Hyde (*Fungal Diversity* **3**: 159, 1999).

exasperate, roughened with hard projecting points.

excavate, hollow out.

excentric (eccentric), (1) one sided; (2) (of a stipe), at one side or not in the centre of the pileus; cf. centric.

Excioconidium Plunkett (1925) = Chalara fide Nag Raj & Kendrick (*Monogr. Chalara Allied Genera*, 1975).

Excioconis Clem. & Shear (1931) ≡ Excioconidium.

exciple, see excipulum.

Excipula Fr. (1823) = Pyrenopeziza fide Nannfeldt (*Nova Acta R. Soc. Scient. upsal.*, 1932), Sutton (*Mycol. Pap.* **141**, 1977).

Excipulaceae Bonord. (1851), Helotiales.

Lit.: Petch (*TBMS* **26**: 53, 1943), Sutton *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 553, 1973), Sutton (*Coelomycetes*, 1980; descr., connexion).

Excipularia Sacc. (1884), anamorphic *Pezizomycotina*, Hsp.≡ eP.10. 2, Europe; Russia. See Petrak (*Sydowia* **16**: 357, 1963), Spooner & Kirk (*TBMS* **78**: 247, 1982), Yurchenko (*Mycena* **1**: 32, 2001; Belarus).

Excipulariopsis P.M. Kirk & Spooner (1982), anamorphic *Pezizomycotina*, Hsp.≡ eP.1. 1, India. See Kirk & Spooner (*TBMS* **78**: 251, 1982).

Excipulella Höhn. (1915) = Heteropatella fide Sutton (*Mycol. Pap.* **141**, 1977).

Excipulina Sacc. (1884) = Heteropatella fide Sutton (*Mycol. Pap.* **141**, 1977).

Excipulites Göpp. (1836), Fossil Fungi. 4 (Cretaceous, Tertiary), Europe.

excipulum (of ascomata), tissue or tissues containing the hymenium in an apothecium, or forming the walls of a perithecium; cf. **ectal -**, **medullary -**. **- proprium**, non-lichenized excipular tissue forming the margins of an apothecium of a lichenized fungus; **- thallinum**, lichenized excipular tissue of a lecanorine apothecium, external to an excipulum proprium (which may be much reduced), usually with a structure like that of the vegetative lichen thallus. See *Lit.* under apothecium, tissue types.

Exesisporites Elsik (1969), Fossil Fungi. 1 (Pleistocene), USA.

exhabitant, see symbiosis.

Exidia Fr. (1822), Auriculariaceae. *c.* 25, widespread. See Donk (*Persoonia* **4**: 166, 1966; syns), Lowy (*Fl. Neotrop.* **6**, 1970), Lowy (*Nova Hedwigia* **19**: 407, 1971; key), Weiss & Oberwinkler (*MR* **105**: 403, 2001; phylogeny), Selosse *et al.* (*New Phytologist* **155**: 183, 2002; ectomycorrhiza), Roberts (*Mycotaxon* **96**: 83, 2006; Jamaica).

Exidiaceae R.T. Moore (1978) = Auriculariaceae.

Lit.: Wells *et al.* (*Frontiers in Basidiomycote Mycology*: 237, 2004).

Exidiopsis (Bref.) Möller (1895), Auriculariaceae. *c* 30, widespread. See Wells (*Mycol.* **53**: 317, 1962;

key), Wells & Raitviir (*Mycol.* **69**: 987, 1977; former USSR), Roberts (*MR* **97**: 467, 1993; Brit. spp.), Roberts (*Mycotaxon* **87**: 25, 2003; Venezuela n.sp.), Weiss *et al.* (*MR* **108**: 1003, 2004; phylogeny).

exigynous, having the antheridial stalk arising directly from the oogonial cell above the basal septum.

Exiliseptum R.C. Harris (1986), Trypetheliaceae (L). 1, Brazil. See Harris (*Acta Amazon.* Supl. **14**: 55, 1984).

Exilispora Tehon & E.Y. Daniels (1927) = Leptosphaeria fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

exit tube, extension of the sporangium, produced prior to or during sporangial discharge, which enables sporangial contents to be released outside the host or substrate.

exo- (prefix), outside.

Exoascaceae G. Winter (1884) = Taphrinaceae.

Exoascus Fuckel (1860) = Taphrina fide Mix (*Kansas Univ. Sci. Bull.* **33**: 1, 1949).

Exobasidiaceae J. Schröt. (1888), Exobasidiales. 5 gen. (+ 1 syn.), 56 spp.

Lit.: Bauer *et al.* (*CJB* **75**: 1273, 1997), Begerow *et al.* (*CJB* **75**: 2045, 1998), Begerow *et al.* (*MR* **105**: 809, 2001), Begerow *et al.* (*Mycol. Progr.* **1**: 187, 2002), Crous *et al.* (*Australas. Pl. Path.* **32**: 313, 2003), Nagao *et al.* (*Mycoscience* **45**: 85, 2004).

exobasidial (1) having the basidia uncovered; (2) separated by a wall from the basidium; (3) (of a conidiophore in a lichenized pycnidium sporophore; obsol.), having no secondary branch (Steiner); cf. endobasidial.

Exobasidiales Henn. (1898). Exobasidiomycetes. 4 fam., 17 gen., 83 spp. Gall-forming plant parasites, esp. of *Ericaceae* and *Commelinaceae*. Fams:
(1) **Brachybasidiaceae**
(2) **Cryptobasidiaceae**
(3) **Exobasidiaceae**
(4) **Graphiolaceae**

Lit.: Donk (1951-63, VI: 1966: 280), Blanz (*Zeit. f. Myk.* **44**: 91, 1978; posn), Gäumann (1964: 358), Cunningham *et al.* (*Mycol.* **68**: 642, 1976; key).

Exobasidiellum Donk (1931) = Helicogloea fide Kirk (*in litt.*).

Exobasidiomycetes Begerow, Stoll & R. Bauer (2007), Ustilaginomycotina. 6 ord., 16 fam., 53 gen., 597 spp. Ords:
(1) **Doassansiales**
(2) **Entylomatales**
(3) **Exobasidiales**
(4) **Georgefischeriales**
(5) **Microstromatales**
(6) **Tilletiales**

For *Lit.* see ord. and fam.

Exobasidiomycetidae Jülich (1981), see *Exobasidiomycetes.*

For *Lit.* see fam.

Exobasidiopsis Karak. (1922) = Kabatiella fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Exobasidium Woronin (1867), Exobasidiaceae. *c.* 50 (on *Ericaceae*), widespread (esp. north temperate). *E. japonicum*, *Azalea* gall. See Savile (*CJB* **37**: 641, 1959; N. Am.), McNabb (*Trans. roy. Soc. N.Z.* Bot. **1**: 259, 1962; NZ), Nannfeldt (*Symb. bot. upsal.* **23** no. 2: 1, 1981; Eur.), Begerow *et al.* (*Mycol. Progr.* **1**: 187, 2002; phylog.), Boekhout *et al.* (*Int. J Syst. Evol. Microbiol.* **53**: 1655, 2003; probable paraphyly), Nagao *et al.* (*Mycoscience* **44**: 44, 2003; Japan), Li & Guo (*Mycotaxon* **96**: 323, 2006; China).

Exochalara W. Gams & Hol.-Jech. (1976), anamorphic *Pezizomycotina*, Hso.0eH.32. 2, widespread. See Mercado Sierra *et al.* (*Hifomicetes Demaciáceos de Cuba: Enteroblásticos* Monografie Museo Regionale di Scienze Naturali, Torino **23**, 1997), Ring & Gams (*Mycotaxon* **76**: 451, 2000).

exochthonous (of soil organisms), invaders ill-adapted to live in soil (Park, 1957); cf autochthonous.

exogenization, an hypothetical process whereby endogenously formed spores become exogenously formed: a mechanism proposed to support the evolution of basidiomycetes from the ancestral ascomycetes (Clemençon, *Persoonia* **9**: 363, 1977).

exogenous, undergoing development outside.

Exogone Henn. (1908) = Agyrium fide Höhnel (*Sber. Akad. Wiss. Wien* Math.-naturw. Kl., Abt. 1 **120**: 8, 1911).

exolete (of perithecia, pycnidia, etc.), long over-mature; empty.

Exomassarinula Teng (1940) ? = Melchioria fide Petrak (*Sydowia* **13**: 23, 1959), Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

exomycology, mycology of outer space.

exo-operculation (of sporangial dehiscence in chytrids), the operculum is hinged to the rim of the pore; 'true operculation'; cf. endo-operculation.

exoperidium, the outer layer of the peridium.

Exophiala J.W. Carmich. (1966), anamorphic *Capronia*, Hso.0-1eH-P.15. 28, widespread. See McGinnis & Ajello (*Mycol.* **66**: 518, 1974; 3 on fish), de Hoog (*Stud. Mycol.* **15**: 100, 1977), de Bievre *et al.* (*Bull. Soc. Fr. Myc. Med.* **16**: 345, 1987; physiological basis for taxonomy), de Hoog *in* Sugiyama (Ed.) (*Pleomorphic Fungi: The Diversity and its Taxonomic Implications*: 221, 1987; developmental cycle), de Hoog *et al.* (*Proc. 10th ISHAM Congr., Barcelona*: 168, 1988; taxonomy *E. jeanselmei* complex), Pedersen & Langvad (*MR* **92**: 153, 1989; spp. on fish), Kawasaki *et al.* (*Mycopathologia* **110**: 107, 1990; mitochondrial DNA of spp.), Matsumoto *et al.* (*J. Exophoma Weedon (1926), anamorphic *Pezizomycotina*. 1, N. America. See Sutton (*Mycol. Pap.* **141**, 1977).

exopropagule, a propagule formed outside the body (medical mycology).

Exormatostoma Gray (1821) nom. dub., ? Diaporthales.
exospore, see Spore wall.
Exosporella Höhn. (1912), anamorphic *Pezizomycotina*, Hsp.0fH.?. 1, Java.
Exosporiella P. Karst. (1892), anamorphic *Pezizomycotina*, Hsp.≡ eP.19. 1 (on *Corticium*), Europe.
Exosporina G. Arnaud (1921) ≡ Arnaudina.
Exosporina Oudem. (1904) nom. dub., anamorphic *Dothideomycetes*, Hsp.0eP.?. 1, widespread (temperate). See Seifert *et al.* (*Sydowia* **50**: 133, 1998; revision).
Exosporinella Bender (1932) ≡ Arnaudina.
Exosporium Link (1809), anamorphic *Pezizomycotina*, Hso/Hsp.≡ eP.26. 19, widespread. See Ellis (*Dematiaceous Hyphomycetes*, 1971), Ellis (*More Dematiaceous Hyphomycetes*, 1976).
exosporium, see Spore wall.
Exoteliospora R. Bauer, Oberw. & Vánky (1999), Melanotaeniaceae. 1 (on *Osmunda* (*Pteridophyta*)), N. America. See Bauer *et al.* (*Mycol.* **91**: 669, 1999).
exotic (1) (adj.), of another country; not indigenous; (2) (n), an - organism.
Exotrichum Syd. & P. Syd. (1914) ? = Crocicreas fide Höhnel (*Mykol. Unters.* **1**: 359, 1923).
expallant (of a pileus), becoming pale on drying.
expansin, see patulin.
expersate (of oospores in *Saprolegniaceae*), having one large refractive body surrounded by a homogeneous cytoplasm (Howard, *Mycol.* **63**: 684, 1971).
explanate, spread out.
explosive (of asci), see ascus.
Exserohilum K.J. Leonard & Suggs (1974), anamorphic *Setosphaeria*, Hso.≡ eP.26. 34, widespread. See Sivanesan (*Mycol. Pap.* **158**: 1, 1987; keys), Alcorn (*Ann. Rev. Phytopath.* **26**: 37, 1988; gen. taxonomy), Muchovej *et al.* (*Fitopatol. Brasil* **13**: 211, 1988; keys), Khazanov (*Opredelitel' Gribov-Vozbul. 'Gel'mintosporiozov' Rast. iz Rodov Bipolaris, Drechslera i Exserohilum*, 1992), Borchardt *et al.* (*Eur. J. Pl. Path.* **104**: 611, 1998; population analysis), Goh *et al.* (*Fungal Diversity* **1**: 85, 1998; ribosomal RNA analysis), Sun *et al.* (*Mycosystema* **23**: 480, 2004; phylogeny), Sun *et al.* (*Mycotaxon* **92**: 173, 2005; China).
exserted, sticking out; protruding (e.g. a mature ascus of *Ascobolus*).
Exserticlava S. Hughes (1978), anamorphic *Pezizomycotina*, Hso.≡ eP.6. 3, widespread (esp. tropical). See Hughes (*N.Z. Jl Bot.* **16**: 332, 1978), Tsui *et al.* (*Fungal Diversity* **7**: 135, 2001; revision).
exsiccatus (adj.; Latin), dried or dry, e.g. fungus (-i) exsiccatus (-i), planta (-ae) exsiccata (-ae), specimen (specimina) exsiccatum (-a); **exsiccatum** (n.; pl. **-a**), a dried specimen; **exsiccata** (n.; pl. **-ae**; preferred abbreviation, Exs.), a set of dried specimens (fide Jackson, 1928, and Stearn, 1968). Exsiccatae distributed to major reference collections are generally cited in systematic works; those with printed descriptions issued before 1 January 1953 can be the places of valid publication of new taxa (Art. 30.3; see Nomenclature), and separately published labels are acceptable after that date (note that label data were not always cited in some major nomenclators as sources of names, e.g. by Saccardo, 1882-1972).
Lit.: **General**, Sayre (*Mem. N.Y. bot. Gdn* **19**: 1, 1969, general cryptogamic exsiccatae, lichens; **19**: 277, 1975; collectors), Stafleu & Cowen (*TL-2*, **1-7**, 1976-88). **Fungi**, Pfister (*Mycotaxon* **23**: 1, 1985; compr. catalogue), Stevenson (*Beih. Nova Hedw.* **36**, 1971; N. Am.). **Lichens**, Hawksworth (*in* Seaward, 1977: 498; issued 1969-76), Hawksworth & Ahti (*Lichenologist* **22**: 1, 1990; issued 1976-89), Hawksworth & Seaward (*Lichenology in the British Isles 1568-1975*, 1977; UK), Hertel (*Mitt. Bot. StSamml., München* **18**: 297, 1982; labels), Lynge (*Nyt. Mag. Naturvid.* **55-60**, 1915-22; **79**: 233, 1939), Sayre (1969).
extenditunicate, see ascus.
extramatrical (1) living on or near the surface of the matrix or substratum; (2) VAM structures (mycelium, spores) developing outside roots of a phytobiont.
Extrawettsteinina M.E. Barr (1972), Pleosporaceae. 4, Europe; N. America. See Barr (*Prodr. Cl. Loculoasc.*, 1987).
Extrolite, An outwardly directed chemical compound produced during differentiation of a living organism; usually excreted but sometimes accumulated in the cell wall or membrane; being outwardly directed, they are always involved in interactions between the source organisms and adjacent organisms or the abiotic environment (Samson & Frisvad, *Stud. Mycol.* **49**: 1, 2004). The term includes 'secondary metabolites'. See also Chemotaxonomy, secondary metabolites.
extrusome, membrane-bound structure derived from vesicle of the Golgi system and anchored to the cell membrane by proteinaceous particles; contents extruded in respose to stimuli.
Extrusothecium Matsush. (1996) ? = Leptosphaerulina fide Matsushima (*Matsush. Mycol. Mem.* **9**: 10, 1996), Matsushima (*Matsush. Mycol. Mem.* **10**, 2001).
fabiform, see reniform.
Fabisporus Zmitrovich (2001), Polyporaceae. 5. See Zmitrovich (*Mycena* **1**: 93, 2001).
Fabospora Kudrjanzev (1960) = Kluyveromyces fide Batra *in* Subramanian (Ed.) (*Taxonomy of fungi* **1**: 187, 1978), Lachance (*The Yeasts. A Taxonomic Study*: 227, 1998).
Fabosporaceae E.K. Novák & Zsolt (1961) = Saccharomycopsidaceae.
Fabraea Sacc. (1881) = Leptotrochila fide Schüepp (*Phytopath. Z.* **36**, 1959).
Fabrella Kirschst. (1941), Hemiphacidiaceae. 1 (on *Tsuga*), N. America. See Korf (*Mycol.* **54**: 12, 1962), Gernandt *et al.* (*Mycol.* **93**: 915, 2001; phylogeny), Wang *et al.* (*Mol. Phylogen. Evol.* **41**: 295, 2006; phylogeny), Wang *et al.* (*Mycol.* **98**: 1065, 2006; phylogeny).
Fabreola Kuntze (1891) ≡ Urosporella.
facial eczema, see sporidesmin.
facultative (1) sometimes; not necessarily; not obligate (q.v.); (2) (of a parasite), having the power of living as a saprobe; able to be cultured on laboratory media; (3) **- synonym**, see synonym.
Faerberia Pouzar (1981), Polyporaceae. 1, Europe; Mexico. See Pouzar (*Česká Mykol.* **35**: 187, 1981), Estrada-Torres & Cifuentes (*Mycotaxon* **67**: 433, 1998; Mexico).
Faerberiaceae Pouzar (1983) = Polyporaceae. The *Favolaschiaceae* are listed as nom. rej. against *Tricholomataceae*.
Fairmania Sacc. (1906) = Microascus Zukal fide Malloch & Cain (*CJB* **49**: 859, 1971).

Fairmaniella Petr. & Syd. (1927), anamorphic *Pezizomycotina*, Cac.0eP.15. 1, widespread. See Sutton (*Mycol. Pap.* **123**, 1971), swart (*TBMS* **90**: 279, 1988; Australia), Crous *et al.* (*S. African Forestry Jl* **149**: 9, 1989; S Africa), Wingfield *et al.* (*S. African Forestry Jl* **173**: 53, 1995; Chile).

fairy butter, basidiomata of *Tremella albida*.

Fairy rings. Fungus rings, which are generally of basidiomycetes (some 60 recorded species), are very frequent in grass and grassland, and not uncommon in woods. There are three chief types: (1) those in which the development of the sporocarps has no effect on the vegetation, e.g. *Chlorophyllum molybdites*, *Lepista sordida*, myxomycete rings; (2) those in which there is increased growth of the vegetation, e.g. *Calvatia cyathiformis*, *Disciseda subterranea* (*Catastroma subterraneum*), the basidiomata of which are at the outer edge of the ring, *Lycoperdon gemmatum*, *Lepista personata*; (3) those in which the vegetation is damaged, sometimes so badly as to have an effect on its value, e.g. *Agaricus praerimosus* (*A. tabularis*), *Leucopaxillus giganteus*, *Marasmius oreades* (in British Isles), *Calocybe gambosa*. Rings of the third type are frequently made up of outer and inner rings in which the growth of the vegetation is strong with a ring of dead or badly damaged vegetation between. Rings of fungal origin are also sometimes seen as bare circles under trees with the black truffle, *Tuber melanosporum* as a mycorrhizal symbiont. These may occur because of chemicals produced by the fungus which inhibit growth of vegetation.

Rings start when mycelium grows outwards evenly from a central point of origin; the growth being at all times on the outer edge because of the band of decaying mycelium and used-up soil within the ring of active hyphae. The mean growth of a ring of *A. praerimosus* is 12 cm in radius every year (0-30 cm in any one year); that of one of *Calvatia cyathiformis* about 24 cm. From this, the ages of rings of these two fungi in Colorado, 60 and more than 200 m diam., were thought to be 250 and 420 years; parts of *A. praerimosus* rings were possibly 600 years old. A substantial but incomplete fairy ring was observed at the Roman fort of Richborough, near Sandwich, England, with its centre where the defence ditch is now located.

In European cultures, fungus rings have been attributed to supernatural causes (Hall, *Elves in Anglo-Saxon England: matters of belief, health, gender and identity*, 2007), and are often associated with various pagan beliefs (see: Ethnomycology).

Lit.: Shantz & Piemeisel (*J. Agric. Res.* **11**: 191, 1917), Bayliss Elliott (*Ann. appl. Biol.* **13**: 277, 1926), Parker-Rhodes (*TBMS* **38**: 59, 1955), Burnett & Evans (*Nature* **210**: 1368, 1966), Stevenson & Thompson (*J. theor. Biol.* **58**: 143, 1976; kinetics), Gregory (*Bull. BMS* **16**: 161, 1982; 'free' and 'tethered' rings).

fairy-ring champignon, the edible *Marasmius oreades*.

falcarindiol, an antifungal compound produced by carrot roots (Garrod & Lewis, *TBMS* **72**: 515, 1979).

falcate (falciform), curved like the blade of a scythe or sickle (Fig. 23.10).

Falcatispora K.L. Pang & E.B.G. Jones (2003) = Ascosalsum fide Pang *et al.* (*Nova Hedwigia* **77**: 13, 2003), Pang & Jones (*Nova Hedwigia* **78**: 269, 2004).

Falciascina Beneš (1961), Fossil Fungi. 1 (Carboniferous), former Czechoslovakia.

Falciformispora K.D. Hyde (1992), Pleosporaceae. 1 (marine), Mexico. See Hyde (*MR* **96**: 26, 1992).

Falcipatella Gucevič (1952) = Heteropatella fide Sutton (*Mycol. Pap.* **141**, 1977).

Falcipatellina Gucevič (1952) = Heteropatella fide Sutton (*Mycol. Pap.* **141**, 1977).

falciphore, see falx.

Falcispora Bubák & Serebrian. (1912) = Selenophoma fide Petrak (*Sydowia* **5**: 328, 1951).

Falcocladium S.F. Silveira, Alfenas, Crous & M.J. Wingf. (1994), anamorphic *Nectriaceae*, Hsy/Hsp.0-1eH.15. 2, Brazil. See Crous *et al.* (*Mycotaxon* **50**: 447, 1994), White & Reddy (*Mycol.* **90**: 226, 1998), Somrithpol *et al.* (*Sydowia* **59**: 148, 2007; review).

false membrane (of a smut), a tissue of sterile fungal cells limiting the sorus, as in *Sphacelotheca*.

false morel, see lorchel.

false truffle, see truffle.

falx, a 'fertile hypha' or conidiophore of *Zygosporium*, having the form of a bill-hook. Falces may be sessile or on special hyphae or **falciphores** (Mason, 1941).

Fanniomyces T. Majewski (1972), Laboulbeniaceae. 2, Europe; N. America. See Balazuc (*Revue Mycol. Paris* **43**: 393, 1979), Tavares (*Mycol. Mem.* **9**: 627 pp., 1985), Santamaria *et al.* (*Treb. Inst. Bot. Barcelona* **14**: 1, 1991; Europe).

farctate (of a stipe), having the centre softer than the outer layer; stuffed.

farinaceous (farinose), like meal in form or smell.

Farinaria Sowerby (1803) = Ustilago fide Fries (*Syst. mycol.* **3**, 1829).

Farinodiscus Svrček (1987) = Proliferodiscus fide Baral (*SA* **13**: 113, 1994).

Farlow (William Gilson; 1844-1919; USA). Graduate student, Department of Medicine (1866-1870) then assistant in cryptogamic botany under A. Gray (1870-1872), Harvard University; student of de Bary (q.v.), Strassburg, Germany (*c.* 1872-1874); Assistant Professor (1874-1879) then Professor (1879 onwards), Harvard University. A pioneer plant pathologist in North America, he and Thaxter (q.v.) were responsible for training several people later important in mycology and plant pathology. His writings were on plant diseases, fungi (including lichen-forming species) and bibliography. The fungal reference collection he established in Harvard (**FH**) and its library, both named after him, are among the most extensive in mycology. *Publs. Bibliographical Index of North American Fungi* (1905). *Biogs, obits etc.* Clinton (*Phytopathology* **10**: 1, 1920) [portrait]; Grumman (1974: 188); Pfister (*Bulletin of the Boston Mycological Club* **4**: 6, 1975 [Farlow, *Icones Farlowiana*, 1927]); Stafleu & Cowan (*TL-2* **1**: 813, 1976).

Farlowia Sacc. (1883) [non *Farlowia* J. Agardh 1876, *Algae*] ≡ Farlowiella.

Farlowiella Sacc. (1891), Pleosporales. Anamorph *Acrogenospora*. 2, Europe; Tristan da Cunha. See Zogg (*Beitr. Kryptfl. Schweiz* **11** no. 1, 1962), Goh *et al.* (*MR* **102**: 1309, 1998; anamorph), Lumbsch *et al.* (*Mol. Phylogen. Feracia Rolland (1905) nom. dub., Pezizomycotina. 1, Europe. Type material is lost and affinities are unclear. See Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999).

fermentation, chemical changes in organic substrates caused by enzymes, generally those of living micro-organisms. See Fermented food and drinks.

Fermented food and drinks. Fungi (esp. yeasts) and other organisms, particularly bacteria, have been used in the preparation of fermented foods for many centuries, long before their function was recognized or understood. Every country in east Asia has indigenous fermented food, prepared on a scale that ranges from single households to large commercial operations. Often referred to as 'oriental fermentation', the process makes the starting material more digestible or palatable in terms of texture, flavour, aroma, pH and appearance, and furnishes essential nutrients in the form of vitamins, proteins, amino acids and calories.

Fermented foods are the result of the action of specific microbial enzymes. Any enzyme used in the food industry can be manufactured if pure cultures of the appropriate micro-organism are available. Much of our understanding of the microbiology and biochemistry of oriental fermentation stems from work with pure cultures isolated from naturally fermented food products. As a result, most indigenous fermented foods can now be made from raw materials inoculated with cultures which have been obtained through a long selection process. One micro-organism or, more commonly, a combination of two or more micro-organisms work together to produce the final product.

Various substrates are used in fermentations: the most popular are soybeans and rice. Others include cassava, coconut, corn, fish, milk and peanuts. All these foods are staples in the diets of the people who normally consume the fermented foods. A koji or starter is prepared for every fermentation. Portions of the starter culture are then used to inoculate a larger batch of the same or a different substrate. Enzymes and by-products produced by the starter culture accelerate the rate of the next fermentation and provide a better growing environment for the succeeding organism(s). Cultures selected for starters are usually highly proteolytic, lipolytic, and/or amylolytic moulds and predominantly species of *Actinomucor*, *Aspergillus*, *Monascus*, *Mucor*, *Neurospora* or *Rhizopus*. The moulds break down macromolecules to produce amino acids, small fatty acids, vitamins and sugars, which ultimately add to the flavour and digestibility of the product. These smaller fermentation by-products are then used by bacteria to produce organic acids which lower pH and provide a favourable environment for yeasts. The yeasts chosen to complete a fermentation differ according to the desired product. The relatively high alcohol, salt or sugar content of fermented food helps to prolong its shelf life in places where refrigeration is not common.

Asian and Oriental foods and drinks based on fungal fermentations (frequently by *Aspergillus*) include: ang-kak (*Monascus purpureus*), hama-natto, lao-chao, oncom merah, ontojam, sufu, tape, tempeh, and the Japanese sake (rice wine), shoyn (soy sauce), miso (soy cheese), scocho (a distilled spirit) and mizaume (a sugar syrup from rice). Fermented milk drinks involving fungi include kefir (central and eastern Europe, Caucasus), kumiss (Russia), leben (Egypt), mazu (Armenia) and yoghurt (Bulgaria); bread (bakers yeast), *S. cerevisiae*. People who wish to avoid eating meat, often for ethical reasons, are

increasing in numbers in developed countries, and the globalized economy has meant that these fermented foods have become popular with them as alternatives to meat (see also Mycoprotein).

Fibulosebacea K. Wells & Raitv. (1987), Auriculariaceae. 1, Europe. See Wells & Raitviir (*TBMS* **89**: 344, 1987).

Fibulostilbum Seifert & Oberw. (1992), Chionosphaeraceae. 1, Brazil. See Seifert *et al.* (*Boln Soc. argent. Bot.* **28**: 215, 1992).

Fibulotaeniella Marvanová & Bärl. (1988), anamorphic *Agaricomycetes*. 1 (with clamp connexions, aquatic), Canada. See Marvanová & Bärlocher (*Mycotaxon* **32**: 340, 1988).

field mushroom (common mushroom), basidioma of the edible *Agaricus campestris*.

filamentous (1) thread-like; filamentose; (2) (of lichens), the photobiont forms a filament of cells which is surrounded by hyphae or cells of the mycobiont (e.g. *Cystocoleus*, *Racodium*, *Coenogonium*).

Filariomyces Shanor (1952), Laboulbeniaceae. 1, widespread. See Shanor (*Am. J. Bot.* **39**: 499, 1952), Tavares (*Mycol. Mem.* **9**: 627 pp., 1985), Lee & Na (*Korean J. Mycol.* **26**: 108, 1998; Korea).

Filaspora Preuss (1855) nom. rej. = Rhabdospora fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Filicupula Y.J. Yao & Spooner (1996), ? Pezizales. 1 (parasitic on liverworts), Europe. Affinities uncertain; ecology is not typical of the *Pezizales*. See Yao & Spooner (*Kew Bull.* **51**: 193, 1996).

filiform, thread-like (Fig. 23.2).

Filobasidiaceae L.S. Olive (1968), Filobasidiales. 1 gen., 4 spp.

Lit.: Mitchell *et al.* (*J. Med. Vet. Mycol.* **30**: 207, 1992), Fell & Statzell-Tallman *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 742, 1998), Kwon-Chung *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 663, 1998), Scorzetti *et al.* (*FEMS Yeast Res.* **2**: 495, 2002), Sivakumaran *et al.* (*Mycopathologia* **156**: 157, 2003), Guffogg *et al.*

(*Int. J. Syst. Evol. Microbiol.* **54**: 275, 2004), Suh *et al.* (*MR* **109**: 261, 2005).

Filobasidiales Jülich (1981). Tremellomycetes. 1 fam., 1 gen., 4 spp. Fam.:
Filobasidiaceae
Lit.: Jülich (*Higher taxa Basid.*: 347, 1981), Fell *et al.* (*IJSEM* **50**: 1351, 2000; mol. phylogeny).

Filobasidiella Kwon-Chung (1976), Tremellaceae. Anamorph *Cryptococcus*. 3, widespread. See Kwon-Chung *et al.* (*Stud. Mycol.* **38**, 1995; mol. phylogeny, ultrastr.), Fell *et al.* (*Int. J. Syst. Evol. Microbiol.* **50**: 1351, 2000; mol. phylogeny), Ginns & Malloch (*Mycol. Progr.* **2**: 137, 2003; parasitism of *Verticillium lecanii*), Sivakumaran *et al.* (*Mycopathologia* **156**: 157, 2003; genetics), Weiss *et al.* (*Frontiers in Basidiomycote Mycology*: 7, 2004), Yamada *et al.* (*Mycoses* **47**: 24, 2004; medically important spp.), Loftus *et al.* (*Science, Washington* **307**: 1321, 2005; *Cryptococcus neoformans* genome), Lin & Heitman (*Annual Review of Microbiology* **60**: 69, 2006; *Cryptococcus neoformans* species complex).

Filobasidium L.S. Olive (1968), Filobasidiaceae. Anamorph *Cryptococcus*. 4, Europe; N. America. See Kwon-Chung (*Int. J. Syst. Bacteriol.* **27**: 293, 1977), Kwon-Chung (*Stud. Mycol.* **38**, 1995; mol. phylogeny, ultrastr.), Fell *et al.* (*Int. J. Syst. Evol. Microbiol.* **50**: 1351, 2000; mol. phylogeny), Guffogg *et al.* (*International Journal of Systematic and Evolutionary Microbiology* **54**: 275, 2004; n.sp. Antarctica), Weiss *et al.* (*Frontiers in Basidiomycote Mycology*: 7, 2004), Golubev *et al.* (*MR* **110**: 957, 2006; n.sp. Russia).

Filoboletus Henn. (1900) = Mycena fide Kuyper (*in litt.*).

filoplasmodium, see plasmodium.

filopodium, a slender unbranched process (pseudopodium) from a plasmodium, as in *Schizoplasmodiopsis*. Cf. rhizopodium.

Filosporella Nawawi (1976), anamorphic *Pezizomycotina*, Hso.0fH.19. 6 (aquatic), widespread. See Dyko & Sutton (*Mycotaxon* **7**: 323, 1978), Marvanová *et al.* (*Nova Hedwigia* **54**: 151, 1992; UK), Gulis & Marvanová (*Mycotaxon* **68**: 313, 1998; Belarus), Marvanová & Bärlocher (*MR* **102**: 750, 1998; Canada).

Fimaria Velen. (1934) = Pseudombrophila fide Brummelen (*Persoonia* **13**: 213, 1986), van Brummelen (*Libri Botanici* **14**, 1995; synonymy with *Pseudombrophila*), Prokhorov (*Mikol. Fitopatol.* **32**: 14, 1998), Hansen *et al.* (*Mycol.* **97**: 1023, 2005; phylogeny).

fimbriate, edged; delicately toothed; fringed. Cf. fimbrillate.

fimbrillate, having a very small fringe. Cf. fimbriate.

Fimetaria Griffiths & Seaver (1910) ≡ Sordaria.

Fimetariaceae D.A. Griffiths & Seaver (1910) = Sordariaceae.

Fimetariella N. Lundq. (1964), Lasiosphaeriaceae. 1 (coprophilous), Europe; Canada. See Barr (*Mycotaxon* **39**: 43, 1990; posn), Krug (*CJB* **73**: 1905, 1995), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004).

fimicolous, living on animal droppings. Cf. coprophilous.

fine structure, see ultrastructure.

Finerania C.W. Dodge (1971) ? = Ramonia fide Galloway (*in litt.*).

finger-and-toe, see club root.

Finkia Vain. (1929), Lichinaceae (L). 1, C. America. See Moreno & Egea (*Acta Bot. Barcinon.* **41**: 1, 1992).

Fioriella Sacc. (1905) = Diplodina fide Sutton (*Mycol. Pap.* **141**, 1977).

fireplace fungi, fungi characteristic of burnt ground, etc. See pyrophilous fungi.

Fischer (Edward; 1861-1939; Switzerland). Student of de Bary (q.v.) in Strasburg; Professor of Botany and General Biology at the University and Director of the Botanic Garden and Botanical Institute, Berne (1897-1933). Produced major monographs for central Europe of various ascomycete and basidiomycete groups. *Publs. Die Uredineen der Schweiz* (1904); Tuberineae (1897, 1938) and Gasteromycetes (1900, 1933) in *Engler & Prantl, Die Natürlichen Pflanzenfamilien* (eds 1 and 2); Tuberaceae and Hemiasci in *Rabenhorst's Kryptogamen-Flora* (1897); (with Gäumann) *Biologie der Pflanzenbewohnenden Parasitischen Pilze* (1929). *Biogs, obits etc.* Grummann (1974: 640); Rytz (*Bericht der Schweizerischen Botanischen Gesellschaft* **50**: 793, 1940); Schopper (*Revue de Mycologie* Série 2 **5**: 47, 1940) [portrait]; Stafleu & Cowan (*TL-2* **1**: 834, 1976).

Fischerula Mattir. (1928), Pezizales. 2 (hypogeous), Italy; USA. See also *Leucangium*. See Trappe (*Mycol.* **67**: 934, 1975; key), O'Donnell *et al.* (*Mycol.* **89**: 48, 1997; ; close to *Leucangium* and a sister group of the *Morchellaceae*), Hansen & Pfister (*Mycol.* **98**: 1029, 2006; phylogeny), Venturella *et al.* (*Cryptog. Mycol.* **27**: 201, 2006; Sicily, ecology), Læssøe & Hansen (*MR* **111**: 1075, 2007; phylogeny).

fission (1) becoming two by division of the complete organism; cf. budding; (2) (of conidial liberation), secession by the separation of a double septum; cf. fracture, lysis.

fissitunicate, see ascus.

Fissolimbus E. Horak (1979), ? Marasmiaceae. 1, Papua New Guinea. See Horak (*Beih. Sydowia* **8**: 202, 1979).

Fissuricella Pore, D'Amatao & Ajello (1977), anamorphic *Pezizomycotina*, Hso.#eH.?. 1 (yeast-like), USA. See Pore *et al.* (*Sabouraudia* **15**: 71, 1977).

Fissurina Fée (1824), Graphidaceae (L). 1, widespread. See Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995), Staiger & Kalb (*Mycotaxon* **73**: 69, 1999; morphology), Staiger (*Biblthca Lichenol.* **85**, 2002; monogr.), Nakanishi *et al.* (*Bull. natn. Sci. Mus. Tokyo*, B **29**: 83, 2003; Japan), Aptroot (*Symb. bot. upsal.* **34** no. 1: 31, 2004; Taiwan), Kalb *et al.* (*Symb. bot. upsal.* **34** no. 1: 133, 2004), Aptroot & Rodrigues (*Cryptog. Mycol.* **26**: 273, 2005; Azores), Archer (*Telopea* **11**: 59, 2005; Australia), Archer (*Biblthca Lichenol.* **94**, 2006; Australia), Staiger *et al.* (*MR* **110**: 765, 2006; phylogeny), Archer (*Systematics & Biodiversity* **5**: 9, 2007; Solomon Is), Makhija & Adawadkar (*Lichenologist* **39**: 165, 2007; India, key).

fistular (**fistulose**), hollow, like a pipe.

Fistulariella Bowler & Rundel (1977) = Ramalina See Nimis (*Lichenologist* **30**: 427, 1998; generic concept), Nimis (*Lichenologist* **30**: 427, 1998).

Fistulina Bull. (1791), Fistulinaceae. Anamorph *Confistulina*. 6, widespread. *F. hepatica*, the edible beefsteak fungus, is the cause of brown oak (q.v.).

Fistulinaceae Lotsy (1907), Agaricales. 3 gen. (+ 5 syn.), 8 spp.
Lit.: Donk (*Taxon*: 263, 1964), Niemelä & Kotiranta (*Karstenia* **26**: 57, 1986), Guzmán (*Revta Mex. Micol.* **3**: 29, 1987), Rajchenberg & Greslebin (*Myco-

taxon **56**: 325, 1995), Hibbett *et al.* (*Proc. natn Acad. Sci. U.S.A.* **94**: 12002, 1996), Quanten (*Op. bot. Belg.* **11**: 352 pp., 1997), Binder *et al.* (*Systematics and Biodiversity* **3**: 113, 2005).

Fistulinales = Agaricales.

Fistulinella Henn. (1901), Boletaceae. 15, pantropical. See Singer (*Am. midl. Nat.* **37**: 527, 1946), Guzman (*Boln. Soc. mex. Micol.* **8**: 53, 1974; taxonomy and geography), Pegler & Young (*TBMS* **76**: 103, 1981).

Fitzpatrick (Harry Morton; 1886-1949; USA). Assistant (1908-1911), then Instructor (1911-1913), then Professor (1913-1949), Cornell University. A founder member of the Mycological Society of America, its first Secretary & Treasurer, later President and, finally, Historian. Highly respected as a teacher. *Publs.* Monograph of the Coryneliaceae *Mycol.* (1920); Monograph of the Nitschkiaceae *Mycol.* (1923); *The Lower Fungi. Phycomycetes* (1930). *Biogs, obits etc.* Barrus (*Mycol.* **43**: 249, 1951; bibliography, portrait); Stafleu & Cowan (*TL-2* **1**: 842, 1976).

Fitzpatrickella Benny, Samuelson & Kimbr. (1985), Coryneliaceae. 1 (on *Drimys*), Juan Fernández. See Benny *et al.* (*Bot. Gaz.* **146**: 232, 1985).

Fitzpatrickia Cif. (1928) ? = Acanthonitschkea fide Nannfeldt (*Svensk bot. Tidskr.* **66**: 49, 1975).

Fixatives. Fixation is the process by which biological tissues are preserved from decay while preserving their structure and organization. Fixed cells are killed, thereby terminating any ongoing biochemical activity, the purpose being to preserve the material in as close as possible to its natural state. Chemical fixatives:

Formal-acet-alcohol.
Formalin 13.0 ml
Acetic acid (glacial) 5.0 ml
Ethyl alcohol (50 per cent) 200.0 ml
Flemming's weak solution.
Chromic acid (1 per cent) 25.0 ml
Acetic acid (1 per cent) 10.0 ml
Water 60.0 ml
With addition of Osmic 5.0 ml
acid (2 per cent) before use.
Other fixatives:
Glutaraldehyde
Osmium tetroxide.

Flabellaria Pers. (1818) [non *Flabellaria* Cav. 1790, *Malpighiaceae*] ≡ Schizophyllum.

flabellate (flabelliform), like a fan; in the form of a half-circle.

Flabelliforma E.U. Canning, R. Killick-Kendrick & M. Killick-Kendrick (1991), Microsporidia. 3.

Flabellimycena Redhead (1984), ? Mycenaceae. 1, S. America. See Redhead (*CJB* **62**: 886, 1984).

Flabellocladia Nawawi (1985), anamorphic *Pezizomycotina*, Hso.1bH.1. 1 (aquatic), Malaysia. See Nawawi (*TBMS* **85**: 174, 1985).

Flabellomyces Kobayasi (1982) = Coenogonium Ehrenb. fide Kashiwadani (*Bull. natn. Sci. Mus.* Tokyo, B **9**: 159, 1983).

Flabellophora G. Cunn. (1965), Polyporaceae. 18, widespread (pantropical). See Corner (*Beih. Nova Hedwigia* **86**: 18, 1987; key with broad species concept), Ryvarden & Iturriaga (*Mycol.* **95**: 1066, 2003; Venezuela).

Flabellopilus Kotl. & Pouzar (1957) ≡ Meripilus fide Donk (*Verh. K. ned. Akad. Wet.* tweede sect. **62**: 1, 1974).

Flabellospora Alas. (1968), anamorphic *Pezizomycotina*, Hso.1bH.1. 3, widespread (tropical). See Alasoadura (*Nova Hedwigia* **15**: 415, 1968).

flaccid, not stiff; limp; flabby.

Flagelloscypha Donk (1951), Niaceae. *c.* 25, widespread. See Agerer (*Sydowia* **27**: 131, 1975; key), Handa & Harada (*Mycoscience* **46**: 265, 2005; Japan).

Flagellosphaeria Aptroot (1995), Xylariales. 1, Portugal. See Kang *et al.* (*Fungal Diversity* **2**: 135, 1999; uncertain posn).

Flagellospora Ingold (1942), anamorphic *Nectria*, Hso.0fH.15. 3, widespread. See Petersen (*Mycol.* **55**: 570, 1963; key), Jooste & van der Merwe (*S. Afr. J. Bot.* **56**: 319, 1990; ultrastr. *F. penicillioides*), Webster (*Nova Hedwigia* **56**: 455, 1993; telemorph), Scutari & Calvelo (*Ann. bot. fenn.* **32**: 55, 1995; ecology), Belliveau & Bärlocher (*MR* **109**: 1407, 2005; phylogeny).

flagellum (pl. **flagella**), cylindrical extension of a eukaryotic cell, bounded by a plasma membrane and containing an axoneme; two types can be distinguished by electron microscopy, the **whiplash** with a smooth continuous surface (as in *Chytridiomycota*) and the **tinsel**, characteristic of *Hyphochytriomycota*, with the surface covered with hair-like processes (**mastigonemes** or **flimmers**); **-ar apparatus**, complex consisting of one or more basal bodies which may bear flagella, may have microtubular and fibrous roots associated with their bases; **-ar fibrous roots**, roots composed of a bundle of filaments, frequently appearing cross-striated; **-ar hairs**, filamentous appendages usually arranged in one or more rows but not covering the entire surface of a flagellum; **-ar scales**, organic structures of discrete size and shape, often covering the whole surface of the flagellum external to the plasma membrane, usually assembled in the dictyosome. See Barr (*Mycol.* **84**: 1, 1992; terminology flagellar apparatus). See also axoneme, blepharoplast; and cf. cilium.

Flageoletia (Sacc.) Höhn. (1916) = Phomatospora fide Reid & Booth (*CJB* **44**: 445, 1966).

Flahaultia Arnaud (1952) nom. dub., Fungi. See Watling & Kendrick (*Naturalist* Hull **104**: 1, 1979).

Flakea O.E. Erikss. (1992) = Agonimia fide Aptroot *et al.* (*Biblthca Lichenol.* **57**: 19, 1995), Thor & Kashiwadani (*SA* **14**: 87, 1996; chemistry).

Flamingomyces R. Bauer, M. Lutz, Piątek, Vánky & Oberw. (2007), Urocystidaceae. 1 (on *Ruppia maritima* (*Ruppiaceae*)), Europe (southern). See Bauer *et al.* (*MR* **111**: 1199, 2007).

Flaminia Sacc. & P. Syd. (1902), ? Pucciniales. 1 (on *Xanthoxylon* (*Rosaceae*)), Brazil. May apply to *Aecidium* anamorph. See Sherwood (*Mycotaxon* **5**: 1, 1977).

Flammispora Pinruan, Sakay., K.D. Hyde & E.B.G. Jones (2004), Sordariomycetes. 1, Thailand. See Pinruan *et al.* (*Stud. Mycol.* **50**: 384, 2004).

Flammopsis Fayod (1889) = Pholiota fide Singer (*Agaric. mod. Tax.*, 1951).

Flammula (Fr.) P. Kumm. (1871) [non *Flammula* (DC.) Fourr. 1868, *Ranunculaceae*] = Pholiota fide Singer (*Agaric. mod. Tax.*, 1951).

Flammulaster Earle (1909), Inocybaceae. 20, widespread. See Vellinga (*Persoonia* **13**: 1, 1986; NW Europe), Horak & Moreau (*BSMF* **120**: 215, 2004).

flammulin, an anti-tumour antibiotic from *Flammulina velutipes* (Watanabe *et al.*, *Bull. chem. Soc. Japan*

37: 747, 1964).

Flammulina P. Karst. (1891), Physalacriaceae. 10, widespread (temperate). See Ingold (*TBMS* **75**: 107, 1980; *F. velutipes* mycelium, oidia, etc.), Hughes *et al.* (*Mycol.* **91**: 978, 1999; phylogeny), Methven *et al.* (*Mycol.* **92**: 1064, 2000; biogeography) enokitake.

flask fungi, *Ascomycota* with perithecioid ascomata.

Flaviporellus Murrill (1905) = Inonotus fide Ryvarden (*Syn. Fung.* **5**, 1991).

Flaviporus Murrill (1905), Meruliaceae. 13, widespread. See Ginns (*CJB* **58**: 1578, 1980).

Flavobathelium Lücking, Aptroot & G. Thor (1997), Dothideomycetes. 1, Costa Rica. See Lücking *et al.* (*Lichenologist* **29**: 221, 1997).

Flavocetraria Kärnefelt & A. Thell (1994), Parmeliaceae (L). 2, arctic-alpine; boreal. See Kärnefelt *et al.* (*Acta Bot. Fenn.* **150**: 81, 1994), Thell & Miao (*Ann. bot. fenn.* **35**: 275, 1998; phylogeny), Thell *et al.* (*Mycol. Progr.* **1**: 335, 2002; phylogeny), Bjerke & Elvebakk (*N.Z. Jl Bot.* **42**: 647, 2004; biogeography, S America), Thell *et al.* (*Symb. bot. upsal.* **34** no. 1: 429, 2004; biogrography, Scandinavia), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny).

Flavodon Ryvarden (1973) = Irpex fide Hjortstam & Larsson (*Windahlia* **21**, 1994).

Flavoparmelia Hale (1986), Parmeliaceae (L). 32, widespread. See Elix & Johnston (*Mycotaxon* **33**: 391, 1988), Elix (*Flora of Australia* **55**: 39, 1994), Thell *et al.* (*Cryptog. bot.* **5**: 120, 1995; asci), Crespo & Cubero (*Lichenologist* **30**: 369, 1998; phylogeny), Crespo *et al.* (*Lichenologist* **31**: 451, 1999; morphology, chemistry, phylogeny), Schumm (*Mitteilungen der Mikroskopischen Arbeitsgemeinschaft Stuttgart* **1999**: 46, 1999; key, Macaronesia), Eliasaro & Adler (*Mitteilungen aus dem Institut für Allgemeine Botanik Hamburg* **30-32**: 25, 2002; Brazil), Thell *et al.* (*Mycol. Progr.* **3**: 297, 2004; phylogeny), Thell *et al.* (*Symb. bot. upsal.* **34** no. 1: 429, 2004; biogeography, Scandinavia), Blanco *et al.* (*Mycol.* **97**: 150, 2005; phylogeny), Blanco *et al.* (*Mol. Phylogen. Evol.* **39**: 52, 2006; phylogeny, chemistry), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny).

Flavophlebia (Parmasto) K.H. Larss. & Hjortstam (1977) = Radulomyces fide Jülich (*Persoonia* **10**: 325, 1979).

Flavopunctelia (Krog) Hale (1984), Parmeliaceae (L). 5, widespread (temperate; tropical). See Ferraro (*Phytologia* **61**: 189, 1986; Argentina), Feuerer & Marth (*Mitteilungen aus dem Institut für Allgemeine Botanik Hamburg* **27**: 101, 1997; vegetative reproduction), Crespo & Cubero (*Lichenologist* **30**: 369, 1998; phylogeny), Lumbsch (*Chemical Fungal Taxonomy*: 345, 1998; chemistry), Crespo *et al.* (*Taxon* **50**: 807, 2001; phylogeny), Thell *et al.* (*Folia cryptog. Estonica* **41**: 115, 2005; phylogeography), Blanco *et al.* (*Mol. Phylogen. Evol.* **39**: 52, 2006; phylogeny), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny).

Flavoscypha Harmaja (1974) = Otidea fide Dissing (*in litt.*), Liu & Zhuang (*Fungal Diversity* **23**: 181, 2006).

Flegographa A. Massal. (1860) nom. rej. prop. = Phaeographis fide Lücking *et al.* (*Taxon* **56**: 1296, 2007; nomencl.).

Fleischeria Penz. & Sacc. (1901) = Hypocrella fide Rogerson (*Mycol.* **62**: 865, 1970).

Fleischhakia Auersw. (1869) = Preussia fide Clements & Shear (*Gen. Fung.*, 1931).

Fleischhakia Rabenh. (1878) = Psilopezia fide Seaver (*North American Cup Fungi* (Operculates), 1928).

Fleming (Alexander; 1881-1955; Scotland). Student (1901-1906) then Assistant Bacteriologist (1906-1908) then Lecturer (1908-1914 and 1918-1928) then Professor of Bacteriology (1928-1948), St Mary's Hospital, London; Captain, Army Medical Corps, Western Front (1914-1918). Discoverer of penicillin; Fellow of the Royal Society, London 1943; Nobel prize-winner (with Chain & Florey), 1945. *Publs.* On the bacterial action of cultures of a *Penicillium*, with special reference to their use in the isolation of *B. influenzae*. *The British Journal of Experimental Pathology* (1929). *Biogs, obits etc.* Brown, K. (*Penicillin Man: Alexander Fleming and the Antibiotic Revolution*, 2004); A. Maurois (*The Life of Sir Alexander Fleming*, 1959).

flesh, the trama, esp. of the pileus of an agaric or bolete.

fleshy (of sporocarp), soft, not cartilaginous-like or wood-like.

flexuous (flexuose), wavy.

flexuous hyphae (of *Pucciniales*), an unbranched or branched haploid hyphal projection from a pycnium, which may be diploidized by a pycniospore of opposite 'sex' (Craigie, see *Nature* **141**: 33, 1938). Cf. receptive body.

flimmergeissel, flagellum bearing two rows of tripartite tubular hairs. Cf straminipilous.

Floccaria Grev. (1827) = Penicillium Link fide Fries (*Syst. mycol.* **3**: 409, 1832).

flocci, cotton like groups or tufts.

Floccomutinus Henn. (1895) = Mutinus fide Demoulin & Dring (*Bull. Jard. bot. nat. Belg.* **45**: 365, 1975).

floccose, cottony; byssoid.

Floccularia Pouzar (1957), Agaricaceae. 6, widespread (north temperate). Probably a separate family is justified. See Pouzar (*Česká Mykol.* **11**: 49, 1957).

flocculent (of a liquid-culture), having small masses of cells throughout or as a deposit.

Flocculina P.D. Orton (1960) = Flammulaster fide Kuyper (*in litt.*).

flocculose, delicately cottony.

flor effect (of yeasts), formation of a pellicle; see yeasts.

flor yeasts, see yeast.

flora (1) the plants of a particular geographical area or habitat; (2) a description, catalogue or list of all or some groups of plants in a particular area. Formerly applied to fungi and lichens (i.e. **fungus -**, **lichen -**), but as fungi are not plants the term mycobiota (q.v.) is preferred.

Florey (Howard; 1898-1968; Australia). University of Adelaide (1917-1921); Oxford (1921-1926); Cambridge (1926-1931); Sheffield (1931-1935); Oxford (1935-1968). Pharmacologist who, with Chain (q.v.) organized the first large-scale production of penicillin, the fungal antibiotic discovered by Fleming (q.v.). *Biogs, obits etc.* Fenne (*Australian Dict. Biography* **14**: 188, 2002).

Food and beverage mycology. Fungi are important in the food and drinks industry as both positive and negative factors (see Food spoilage). Filamentous fungi and yeasts are used commercially in the manufacture of a large variety of foods and drinks. Perhaps the most well known use of fungi is in cheese making, notably *Penicillium camembertii* in camembert cheese and *P. roquefortii* for the manufacture of blue-veined cheeses such as roquefort, stilton, and Danish blue. They can also be eaten as themselves (see Edible fungi, Mushroom culture, Truffles), and more recently as mycoprotein (q.v.). However, in S.E. Asia particularly, fungi have been used for centuries for the production of various food fermenta-

tions (see Fermented food and drinks). The most well-known of these products is soya sauce, produced by seeding soy beans with *Aspergillus oryzae*.

Yeasts are used for the manufacture of bread, beer and wine (see Brewing, Wine making). In most cases *Saccharomyces cerevisiae* is involved, causing a fermentation of sugar to alcohol (production of wine and beer) and carbon dioxide (in bread, the alcohol evaporates during the baking process). *S. carlsbergensis* is used in the manufacture of lager. Occasionally strongly-flavoured or aromatic fungi are used to produce sauces, such as truffle-oil, or specialist drinks such as truffle-liqueurs. The IUMS has an International Commission on Food Mycology (see Societies and organizations).

Lit.: Beuchat (Ed.) (*Food and beverage mycology*, edn 2, 1987), Pitt & Hocking (*Fungi and food spoilage*, 1985), Querol & Fleet (Eds) (Yeasts in food and beverages. *The yeast handbook* **2**, 2006), Samson *et al.* (*Introduction to food-borne fungi*, edn 4, 1995), Hui & Khachatourians (Eds) (*Food biotechnology*, 1995). See also Mycotoxicoses, Yeasts.

Food spoilage. Can be caused by many fungi which invade and decompose harvested and processed foods and beverages, change their biochemical composition, hyper- (over-) synthesize enzymes, or produce health related effects due to various toxic metabolites. In general, fungi are responsible for a loss of 5-10% of food production in developing countries and up to 40% in some countries. Fungal contamination of food usually results in accumulation of several mycotoxins (e.g. viomellein, zearalenon, aflatoxins, ochratoxins, aurofusarin, fusarin, etc.). Most fungal toxins are not acutely toxic in low amounts, but have severe long-term effects causing cancer, nephro- or hepato-toxicoses (see Mycotoxicoses); some toxic metabolites have immuno-suppressive effects in humans and animals assisting in development of bacterial infections. Legislation exists in some countries to control mycotoxin levels in susceptible imported food commodities, e.g. ochratoxin A in coffee.

Development of food spoilage depends on intrinsic characteristics of the fungus and on external factors such as water, temperature, pH, preservatives, composition of the gaseous atmosphere, etc. Interactions of spoilage organisms with the environment and with each other determine conditions for food safety and quality (Roller, *Journal of Food Microbiology* **50**: 151-153, 1999). In most fresh, moist foods, fungi do not grow well due to competition from bacteria. In foods which have conditions such as lowered water activity (q.v.), pH or refrigerated temperatures, filamentous fungi and yeasts may proliferate. Fungi can contaminate dried foods such as nuts, spices, cereals, dried milk and meat, as well as salted fish, fruit, vegetables, meats, jams, confectionery and dairy products. Mycotoxins of contaminated products can withstand different types of processing, including heat treatment, and can persist, e.g. in flour and bread, even after the fungal source has been killed by milling and baking. Only a limited number of fungal species (spoilage consortia) can inhabit a given food type and cause spoilage there by secondary metabolites (Filtenborg *et al.*, *Int. J. Food Microbiol.* **33**: 85, 1996). It is thus possible to predict the number and identity of mycotoxins that can be found in a particular food product or feed stuff (Andersen & Thrane, *Mycotoxin Res.* **12**: 54, 1996; Frisvad *et al.*, *Chemical Fungal Taxonomy* : 289, 1998; Larsen *et al.*, *Biochem. Syst. Ecol.* **26**: 463, 1998). Common food spoiler fungi include *Absidia*, *Aspergillus*, *Botrytis cinerea*, *Byssochlamys*, *Fusarium*, *Mucor*, *Paecilomyces*, *Penicillium* (and their teleomorphs), *Rhizopus*, *Sclerotinia sclerotiorum*, *Syncephalastrum*, with *Aspergillus* and *Penicillium* dominating. Food-borne fungi which do not produce phytotoxic or herbicidal compounds or mycotoxins may serve as biological control agents. E.g. non-aflatoxigenic *Aspergillus parasiticus* and *A. flavus* strains out compete toxigenic strains of the same species in the field (Dorner & Cole *J. Stored Prod. Res.* **38**: 329, 2002).

Some fungi can resist pasteurization, e.g. *Byssochlamys*, *Neosartorya* and *Talaromyces*, which can be found in canned and bottled fruits, vegetables and juices. Yeasts are particularly preservative resistant and are found in beers, wines, cider, and soft drinks (*Saccharomyces cerevisiae*, *Brettanomyces bruxellensis*, *Zygosaccharomyces bailii*), and pickles and sauces (*Candida krusei*, *Pichia membranaefaciens*). Annual losses to the food industry caused by yeast spoilage are rather high (James *et al.*, *Methods in Biotechnology* **14**: 37, 2000). Techniques which attempt to preserve food and beverages by restricting oxygen entry into these products, which are rich in nutrients, are not promising strategies against yeasts, particularly in respect of growth and gas formation by *Z. bailii* (Rodrigues *et al.*, *Applied and Environmental Microbiology* **67**: 2123, 2001).

foot cell (1) a basal cell supporting the conidiophore in *Aspergillus*; (2) the basal cell of the conidium in *Fusarium*. See Sutton (*TBMS* **86**: 1, 1986; occurrence in anamorphic fungi).

Foraminella S.L.F. Mey. (1982) ≡ Parmeliopsis.

forate (of 'gasteromycete' basidiomata), invagination of the primordial tissue resulting in a series of pits; the type of development generally known as 'coralloid' of which it is the opposite (Dring, 1973).

Forensic mycology. Although a still scarcely developed tool, fungi can be of great value in forensic science. In addition to their importance in cases of poisoning, other examples of use include: determining the minimum interval since death (Hitosugi *et al.*, *Legal medicine* **8**: 240, 2006; Turner & Wiltshire, *Forensic Sci. Internat.* **101**: 113, 1999); or locating

clandestine burial sites such as mass graves (Carter & Tibbett, *J. Forensic Sci.* **48**: 4, 2003); determining the presence of illegal hallucinogenic substances in fungi (Nugent & Saville, *Forensic Sci. Internat.* **140**: 147, 2004). As fungal toxins have allegedly been used in biological warfare (Pearce, *New Scientist* **174**: 13, 2002), forensic mycology may also be potentially relevant in international law. See also Mycotoxicoses.

form (pl. **-a**) [**f.**; **ff.**, pl.], the lowest formal taxonomic rank regulated by the Code (see Classification, Nomenclature); **- category**, see Fossil fungi; **- genus**/ **- species**, one used for anamorphs (q.v.); **-a specialis** [**f. sp.**; **-ae speciales**, **f. spp.**, pl.], see special form.

-form (suffix), shape.

fornicate, arched; (of *Geastrum*), having the fibrous and fleshy layers of the fruit body becoming arched over the cup-like mycelial layer.

Forssellia Zahlbr. (1906) = Pterygiopsis fide Henssen (*Bryologist* **73**: 617, 1970).

Fossil fungi (Fungi fossiles). Although fungal fossils are probably not rare, rather little is known about fungi as fossils. The fossil record of Fungi extends back to the early Phanerozoic, and no doubt well into the Proterozoic (see Pirozynski, *Ann. Rev. Phytopath.* **14**: 237, 1976), with chytrid-like forms being recorded from the late Precambrian, and *Glomus*-like forms from the early Paleozoic (see Mycorrhiza). Some, such as the remarkable 9 m high *Prototaxites* have only recently been recognized, tentatively, as fungi (Kibby, *Field Mycology* **9**: 48, 2008); the reported survival of viable fungal spores in glacial ice about 140,000 years old has blurred the edges between fossil and living fungi (see Longevity). Substantial portions of larger soft and fleshy fruitbodies are very rarely found (mainly embedded in amber), and most fungal fossil material comprises spores and other microscopic structures such as hyphae. This has meant that it is not even easy to assess how many extant species are also represented as fossils. Some fossil fungi are assigned extant generic names (or sometimes names of higher taxa) modified by a suffix, usually *-ites* (e.g. *Pleosporites*, *Pleosporonites*, but n.b. names of some genera which are not fossils may also terminate in these letters, e.g. *Muellerites*), or are given new form-generic names. In addition, fossil fungi (typically dispersed spores) may be given terminological names denoting suprageneric form – **form categories** (*f. cat.*) within morphographic classifications developed by palynologists or coal petrologists.

Meschinelli (*in* Saccardo, *Syll. Fung.* **10**: 741, 1892; **11**: 657, 1895) and in his *Fungorum fossilium hucusque cognitorum iconographia* (1902; edn 1, 1898) described numerous species of fossil fungi, as sporocarps, spores and symptoms like those caused by extant parasitic fungi.

Gilled fungi have been reported from amber (Hibbett *et al.*, *Nature* **377**: 487, 1995; Cretaceous *Marasmius*-like basidiome). For basidiomycete fossils, see also: Dennis (*Mycol.* **62**: 578, 1970).

A fungus similar to Beauveria was gound overgrowing an ant in Dominican amber (Poinar & Thomas, *Cellular and molecular life sciences* **40**: 578, 1984). A species of *Aspergillus* has been described from Eocene Baltic amber in association with a collembolan insect (Dörfelt & Schmidt, *MR* **109**: 956, 2005). Carnivorous fungi been found from Cretaceous amber (Schmidt *et al.*, *Science* **318**: 1743, 2007) cannot be assigned to known extant genera, and it has been surmised that fungal devices for trapping prey, such as hyphal rings, may therefore have evolved more than once. For ascomycete fossils, see also: Sherwood-Pike & Gray (*Lethaia* **18**: 1, 1985), Stubblefield & Taylor (*Am. J. Bot.* **70**: 387, 1983).

There is little information about fossil lichens, but few who are familiar with these organisms have searched for them as fossils. Because cyanobacteria are well represented in Precambrian biotas and most groups of fungi were highly diversified during the Paleozoic, it seems likely that lichens were also components of the early terrestrial ecosystems. As many have a relatively durable thallus morphology and organization one might expect lichens to be preserved. There is some suggestion that certain Silurian and Devonian and even earlier enigmatic fossils may represent lichens (Retallack, *Palaebiol.* **20**: 523, 1994; Stein, *Am. J. Bot.* **80**: 93, 1993), but reports of Precambrian lichens appear to be based on abiotic features (see *Thuchomyces*). To date the best records are from Tertiary sediments (e.g. Sherwood-Pike, *Lichenologist* **17**: 114, 1985; Richardson & Green, *Lichenologist* **3**: 89, 1965). There are reports of lichens preserved in amber (Mägdefrau, *Ber. dtsch. bot. Ges.* **70**: 433, 1957, Baltic; Poinar *et al.*, *Science* **259**: 222, 1993).

There is even less information about chytrid-like (Taylor *et al.*, *Amer. J. Bot.* **79**: 1233, 1992; *Mycol.* **84**: 901, 1992), zygomycete-like (Pirozynski & Dalpé, *Symbiosis* **7**: 1, 1989) and myxomycete-like (Waggoner & Poinar, *J. Protozool.* **39**: 639, 1992) fossils.

Freynella Kuntze (1891) ≡ Coccosporium.

friable, readily powdered.

Friedman (Emerich Imre; 1921-2007; Hungary, later Israel, USA). Professor, Hebrew University, Jerusalem (1951-1968); Associate Professor then Professor and Director of the Polar Desert Research Center, Florida State University, Tallahassee (1968 onwards). A pioneer in the study of fungi in extreme environments, particularly of hyphomycetes living inside rocks, particularly in Antarctica and Chile; also involved in astrobiology, the search for extraterrestrial life. *Publs. Antarctic Microbiology* (1993). *Biogs, obits etc.* Anon. (*Daily Telegraph* [UK], 22 June 2007).

Friedmanniomyces Onofri (1999), anamorphic *Capnodiales*, Hso.?.?. 2 (cryptoendolithic), Antarctica. See Onofri *et al.* (*Nova Hedwigia* **68**: 176, 1999), Selbmann *et al.* (*Stud. Mycol.* **51**: 1, 2005; revision).

Fries (Elias Magnus; 1794-1878; Sweden). Born in Småland and went to school in Wexiö; an only child, Fries was first interested in flowering plants, following his father, but at age 12 his attention was taken by fungi; within five years he had knowledge of more than 300 species, to which he gave names; studied under Acharius (q.v.); student, University of Lund (1811-1814) [although he was awarded his degree for a thesis on flowering plants, at Lund was able to see the works of Persoon q.v.) and other mycologists and to get current names for some of his fungal specimens]; Associate Professor (1814-1824) then full Professor (1824-1834), University of Lund; Professor of Botany, Uppsala University (1834 onwards). With Persoon, the founder of Mycology. The *Systema Mycologicum*, though produced without the help of a compound microscope, is still one of the most important books on systematic mycology. It is specially important for hymenomycetes, but takes in all groups of fungi (e.g. there are more than 500 pyrenomycetes, in good order), and it advanced taxonomy of most fungi far more than any earlier work. With the exceptions of 'gasteromycetes', lichen-forming fungi, *Mycetozoa*, *Pucciniales* and *Ustilaginales*, names of all fungi mentioned in his *Systema Mycologicum* and *Elenchus Fungorum* have protected santioned status in nomenclature (q.v.). *Publs. Observationes mycologicae* (1815-1818) [index, Petersen, *Mycotaxon* **17**: 87-147, 1983]; *Systema Mycologicum* 3 vols (1821-1832) [reprint 1952]; *Elenchus Fungorum* (1828); *Lichenographia Europaea Reformata* (1831); *Epicrisis Systematis Mycologici* (June 1838) [edn 2 as *Hymenomycetes Europaei*, 1874 (reprinted 1963)]; *Summa Vegetabilium Scandinaviae* (1846-1849); *Monographia Hymenomycetum Sueciae* (1853) [reprint 1963]; in addition, he distributed 450 numbers of his *Scleromyceti Sueciae* exsiccati [pyrenomycetes and coelomycetes; see Holm & Nannfeldt (*Friesia* **7**:

10, 1964) and Pfister (*Mycotaxon* **3**: 185, 1975) for annotated check list], directed production of a series of *Icones Fungorum*, and produced various works on vascular plants. *Biogs, obits etc.* Dudley (*Journal of Mycology* **2**: 91, 1886); Eriksson (*Elias Fries och den Romantiska Biologien*, 1962); T.M. Fries & R. Fries (*Friesia* **5**: 135, 1955) [English translation of Fries' autobiography]; Grummann (1974: 474); Holm (*Symbolae Botanicae Upsalienses* **30** (3): 21, 1995); Krok (*Bibliotheca Botanica Suecicana*, 1925 [bibliography, 171 titles]); Lloyd (*Mycological Writings* **1**: 161, 1904); Lloyd (*Mycological Writings* **3**: 413, 1909); Lundström (*Trans. bot. Soc. Edinb.* **13**: 383, 1879); Nannfeldt (*Symbolae Botanicae Upsalienses* **22** (4): 24, 1979); Stafleu & Cowan (*TL-2* **1**: 878, 1976); Strid (*Catalogue of Fungus Plates Painted under the Supervision of Elias Fries*, 1994).

Fries (Theodore Magnus: 1832-1913; Sweden). Son of E.M. Fries (q.v.); Docent of Botany (1837-1862) then Assistant Professor of Botany and Practical Economy (1862-1877) then Professor of Botany and Practical Economy (1877-1899), University of Uppsala. Edited correspondence of Linnaeus and wrote some 170 publications on many aspects of biology and geography; probably responsible for accelerating acceptance of the concept of Schwendener (q.v.) that lichens are composed of at least two organisms; described many new species of lichen-forming fungi, especially from Europe. Specimens in the fungal reference collection in Uppsala (**UPS**). *Publs. Lichenes Arctoi* (1860); *Lichenographia Scandinavica* (1, 1871; 2, 1874). *Biogs, obits etc.* Grummann (1974: 475); Hemmendorff (*Svensk Botanisk Tidskrift* **8**: 109, 1914); Stafleu & Cowan (*TL-2* **1**: 889, 1976).

Friesia Lázaro Ibiza (1916) [non *Friesia* Spreng. 1818, *Euphorbiaceae*] = Ganoderma fide Donk (*Verh. K. ned. Akad. Wet.* tweede sect. **62**: 1, 1974).

Fulminariaceae Gobi (1900) = Harpochytriaceae.

Fulvia Cif. (1954) = Passalora fide von Arx (*Proc. K. ned. Akad. Wet.* Ser. C, Biol. Med. Sci. **86**: 15, 1983), Curtis *et al.* (*Curr. Genet.* **25**: 318, 1994; phylogeny), Okada *et al.* (*FEMS Immunol. Med. Microbiol.* **16**: 39, 1996; ubiquinones), Crous *et al.* (*Mycol.* **93**: 1081, 2001; phylogeny), Crous & Braun (*CBS Diversity Ser.* **1**: 571 pp., 2003; review).

Fulvidula Romagn. (1936) nom. nud. = Gymnopilus fide Singer (*Agaric. mod. Tax.*, 1951).

Fulvifomes Murrill (1914), Hymenochaetaceae. 6, widespread. See Wagner & Fischer (*Mycol.* **94**: 998, 2002).

Fulvisporium Vánky (1997), Ustilentylomataceae. 1 (on *Poaceae*), Australia. See Vánky *et al.* (*Mycotaxon* **64**: 59, 1997), Aime *et al.* (*Mycol.* **98**: 896, 2006; phylogeny).

Fulvoflamma Crous (2006), anamorphic *Rhytismatales*. 1. See Crous (*Stud. Mycol.* **55**: 56, 2006).

fumagillin, an antibiotic (epoxide) from *Aspergillus fumigatus*; an amoebicide (McCowen *et al.*, *Science, N.Y.* **113**: 202, 1951).

Fumago Pers. (1822) nom. conf., anamorphic *Pezizomycotina*. See Friend (*TBMS* **48**: 371, 1965).

Fumagopsis Speg. (1910), anamorphic *Pezizomycotina*. See Kendrick & Carmichae *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 390, 1973), van der Aa & van Oorschot (*Persoonia* **12**: 415, 1985), Wu & Sutton (*MR* **99**: 1450, 1995).

Fumagospora G. Arnaud (1911), anamorphic *Capnodium*, Cpd.#eP.?. 2, Europe. See Hughes (*Mycol.* **68**: 693, 1976).

fumigatin, a benzoquinone antibiotic from *Aspergillus fumigatus*; antibacterial (Anslow & Raistrick, *Biochem. J.* **32**: 687, 1938).

Fumiglobus D.R. Reynolds & G.S. Gilbert (2006), Capnodiaceae. 1, Panama. See Reynolds & Gilbert (*Cryptog. Mycol.* **27**: 252, 2006).

fumitremorgin, a tremorgenic metabolite (indole derivative) of *Aspergillus fumigatus* (Yamazaki *et al.*, *Tetrahedron Lett.* **14**: 1241, 1975).

fumonisin, B1, B2 (B1, B2), toxic metabolites of *Fusarium moniliforme* (ear rot of maize). Infected maize eaten by horses causes equine leukocephalomalacia (Plattner *et al.*, *Mycol.* **82**: 698, 1990).

Funalia Pat. (1900) = Trametes fide Ryvarden (*Gen. Polyp.*: 150, 1991).

fungaemia (fungemia), fungi in the blood.

fungal (1) (n.), a fungus (obsol.); (2) (adj.), see fungous.

FUNGI. 36 class., 140 ord., 560 fam., 8283 gen. (+ 5101 syn.), 97861 spp. (Carpomycetes, Eumycota, Eumycophyta, Eumycetes, Fungales, Hysterophyta, Inophyta, Mycota, Mycetes, Mycetoideum, Mycetales, Mycetalia, Mycophyta, Mycophytes, Mycophycophytes). Kingdom of *Eukaryota*; the true fungi. 6 phyla. Eukaryotic organisms without plastids, nutrition absorptive (osmotrophic), never phagotrophic, lacking an amoeboid pseudopodial phase; cell walls containing chitin and β-glucans; mitochondria with flattened cristae and peroxiomes nearly always present; Golgi bodies or individual cisternae present; unicellular or filamentous and consisting of multicellular coenocytic haploid hyphae (homo- or heterokaryotic); mostly non-flagellate, flagella when present always lacking mastigonemes; reproducing sexually or asexually, the diploid phase generally short-lived, saprobic, mutualistic, or parasitic.

The organisms studied by mycologists, fungi, are mosly placed here, but other belong to the kingdoms *Chromista* and *Protozoa* (see Kingdoms of fungi, Phylogeny). Some authors use *Eumycota* as the kingdom name which has the advantage of avoiding confusion with 'fungi' (e.g. Barr, 1992). The kingdom name *Fungi* is retained by Cavalier-Smith (1993) and Corliss (1994); as most fungi belong here, and as the name *Fungi* is immediately familiar to most students, we retain that here.

Various arrangements and ranks have been proposed for the main groupings of *Fungi*. The rank of phylum is adopted here as that is currently almost universally used (Barr, 1992; Bruns *et al.*, 1992; Corliss, 1994; Kendrick, 1992) and was already advocated by von Arx (*Sydowia* **37**: 1, 1984); some authors nevertheless prefer lower ranks, e.g. classes (Nishida & Sugiyama, *Molec. Biol. Evol.* **10**: 431, 1993). The 6 phyla accepted here are:

(1) **Ascomycota**
(2) **Basidiomycota**
(3) **Chytridiomycota**
(4) **Glomeromycota**
(5) **Microsporidia**
(5) **Zygomycota**

The *Deuteromycotina* is not accepted as a formal taxonomic category, as in the previous edition of the *Dictionary*; they are not a monophyletic unit, but are fungi which have either lost a sexual phase or which are anamorphs of other phyla (mainly *Ascomycota*; some *Basidiomycota*); with modern molecular or ultrastructural techniques such fungi can be assigned to existing taxa; see under Anamorphic fungi. See Classification, Kingdoms of fungi, Literature, Phylogeny.

Fungi fossiles, see Fossil fungi.

Fungi Imperfecti, see Anamorphic fungi; fungi having no sexual state, presumptively mitotic.

fungi suilli, see cep.

fungi, higher, see higher fungi.

fungi, lower, see lower fungi.

fungicidal, able to kill fungus spores or mycelium.

Fungicides. Substances which are able to kill fungi s.l., esp. if lethal at low concentration. The term is sometimes loosely applied to fungistatic and genestatic substances. **contact -**, those which kill fungi when applied to a substratum surface; **eradicant -**, those applied to a substratum in which a fungus is already present, or used in disease control after infection has been established; **protective -**, those used to protect an organism against infection by a fungal pathogen (*TBMS* **33**: 155, 1950); **systemic -**, substances which are fungicidal (or fungistatic) when taken up systemically by an infected organism, usually a plant (see below). Heat, light, and other radiations have fungicidal properties, see sterilization.

Many chemical substances are fungicidal or inhibit fungal growth. Even pure water sometimes inhibits spore germination (e.g. of *Sclerotinia fructicola*) while conversely very low concentrations of some fungicides may stimulate spore germination or even be a prerequisite for fungal growth by supplying an essential trace element (see Nutrition). Today hundreds of fungicides are available in thousands of formulations for specific uses. Sulphur (elemental or in combination) and inorganic compounds of copper and mercury were the first fungicides employed and

these three elements, frequently in organic combination, are still ingredients of important fungicides. Some of the more important fungicides (with indications of their main uses) are:

Sulphur: elemental sulphur (as flowers of sulphur, colloidal sulphur, wettable sulphur, etc.), lime sulphur.

Copper: bordeaux and burgundy mixtures (q.v.), cheshunt compound (q.v.), copper sulphate, basic copper sulphates, chlorides and carbonate, copper oxides (seed treatment), organo-coppers (copper oleate and resinate) (plant protection).

Mercury: mercuric chloride (corrosive sublimate) (wood preservation, soil treatment), mercurous chloride (calomel) (seed and soil treatment). Organomercurials are not now used in agriculture because of non-target effects.

Other inorganic compounds: borax and boric acid (storage decay of fruit), calcium hypochlorite (bleaching powder) (surface sterilization of biological material), potassium iodide (sporotrichosis), potassium dichromate, sodium fluoride, zinc chloride, and arsenic compounds (wood preservation), triphenyl tin salts (crop protection).

Organic compounds: formaldehyde (formalin) (seed and soil disinfection), 5-fluorocytosine (candidiasis, cryptococcosis), guanidines (dodine), dithiocarbamates (thiram, mancozeb, propineb), carboximides (iprodione), imidayols (prochloraz, imazalil), chlorinated hydrocarbons (chlorathalonil, didoran), methyl bromide and cresylic acid (soil sterilization), propionic acid (food preservation), propylene oxide (sterilization of biological materials), salicylanide (Shirlan) (plant protection, textile spoilage); see also antibiotics, copper, mercury, sulphur, systemic fungicides above and below.

Antibiotics: amphotericin (systemic mycoses), kasugamycin (systemic; rice blast), cycloheximide (crop protection and differential isolation of fungi), nystatin (candidiasis).

Systemic fungicides: (against plant diseases) acylalanines (furaxyl, metalaxyl), benzimidazoles (benomyl, carbendazim, thiabendazole), oxathiins (carboxin), pyrimidine derivatives (dimethirimol, ethirimol), triazoles (triadimefon, propinconazole). See Marsh (Ed.) (*Systemic fungicides*, 1972 [edn 2, 1977]).

Use of fungicides should be sparing, no more than necessary, and managed, ideally within the context of an integrated scheme, to avoid unnecessary pollution and the development of resistance. Methyl bromide is now rapidly being phased out of use from most countries because of its toxicity and effect on the ozone layer, although some use continues, notably in the USA. Alternating two different fungicides greatly lowers the risk of resistance development in a crop, as fungal strains which tolerate on fungicide are usually unable to survive the other (see Fungicide Resistance Action Committee, www.frac.info).

Branch* **1093**), Horsfall (*Fungicides and their action*, 1945; *Principles of fungicidal action*, 1956), Torgeson (Ed.) (*Fungicides, an advanced treatise*, **1**, *Agricultural and industrial applications. Environmental interactions*, 1967; **2**, *Chemistry and physiology*, edn 2, 1983), Waller & Lenné (*Plant pathologist's pocketbook*, 2001), Smith (Ed.) (*Fungicides in crop protection. 100 years of progress*. 2 vol., 1985 [BCPC Monogr. **31**], Nene & Thapliyal (*Fungicides in plant disease control*. edn 3, 1993), Whitehead (Ed.) (*The UK Pesticide Guide 2001*). For 'Definitions of fungicide terms' and 'Recommended methods' for testing fungicides, see *Phytopath.* (**33**: 624, 1943; **34**: 401, 1944); also Zehr (Ed.) (*Methods for evaluating plant fungicides, nematocides and bactericides*, 1978).

Fungicolous fungi. Fungi growing on other fungi as parasites ('mycoparasites') commensals, or saprobes; fungicoles. Reliable estimates of the total number of fungi involved are not available; Hawksworth (1981) traced records of 1100 spp. of anamorphic fungi alone on 2500 other spp. of fungi. The fungi may be 'necrotrophic' (destructive), or 'biotrophic' (forming balanced relationships). Destructive effects may be mediated at a distance, by contact and coiling via antibiotics or hyphal-wall degrading enzymes, or hyphal interference (contact necrotrophs) or by penetration of the hyphae of the host (invasive necrotrophs). Biotrophic mycoparasitism occurs externally via haustoria (haustorial biotrophs), or via specialized contact cells which may produce colacosomes (Bauer & Oberwinkler, *Bot. Acta* **104**: 53, 1991) and which achieve direct cytoplasmic continuity with the host through fine interhyphal channels (fusion biotroph), or internally by entry of the complete thallus of the mycoparasite into the host (intracellular biotrophs). For a description of these host-parasite interfaces see Jeffries & Young (*Interfungal parasitic relationships*, 1994). Fungicolous fungi are an excellent source of novel biologically active and chemically interesting compounds (Schmidt *et al.*, *J. Nat. Prod.* **70**: 1317, 2007).

Particularly destructive mycoparasites are *Trichoderma* spp. (also of value in biocontrol; see esp. Papavizas (*Ann. Rev. Phytopathol.* **23**: 23, 1985, Kubicek & Harman (*Trichoderma and Gliocladium* **1**. Basic biology, taxonomy and genetics, 1998), Harman & Kubicek (*Trichoderma & Gliocladium* **2**. Enzymes, biological control and commercial applications, 1998); both have very wide host ranges (Domsch *et al.*, 1980). Others are restricted to particular host taxa, usually fams., gen. or spp. Examples (**host**: fungi) are: **Mycetozoa**: *Aphanocladium album*, *Polycephalomyces* spp., *Leucopenicillifer*, *Nectria myxomyceticola* anamorph *Verticillium rexianum*). See Ing (*Bull. BMS* **8**: 25, 1974; key), Rogerson & Stephenson (*Mycol.* **85**: 456, 1993). **Oomycota**: esp. other *Oomycota*. e.g. *Pythium oligandrum* on *Pythium ultimum* (Whipps & Lumsden, *Biocontrol Sci. Technol.* **1**: 75, 1991). **Chytridiomycota**: chytrids esp. other *Chytridiales*, e.g. *Allomyes* by *Catenaria allomycis* (Sykes & Porter, *Mycol.* **72**: 288, 1980; Powell, *Bot. Gaz.* **143**: 176, 1982), *Allomyces* and *Polyphagus* by *Rozella* and *Rozellopsis* (Held, *Bot. Rev.* **47**: 451, 1981; Powell, *Mycol.* **76**: 1039, 1984). **Zygomycota**: *Chaetocladium*, *Piptocephalis*, *Dimargaris* etc. On other *Mucorales* (Benjamin, *Aliso* **4**: 321, 1959; Jeffries, *Bot. J. Linn. Soc.* **91**: 135, 1985); *Stachybotrys chartarum* and *Anguillospora pseudolongissima* on spores of *Glomus* and *Gigaspora* (Paulitz & Menge, *Phytopathol.* **76**: 351, 1986). **Ascomycota**: the zenith for fungicolous fungi. *Ampelomyces quisqualis* on numerous *Erysiphales*; *Cordyceps ophioglossoides* on *Elaphomyces*; *Gona-*

tobotrys simplex; *Hansfordia pulvinata* on *Cercospora* etc.; *Nectria magnusiana* (anamorph *Fusarium epistromum*) on *Diatrypella* spp.; *Nematogonum ferrugineum* on *Nectria coccinea*; *Coniothyrium minitans* on *Botryotinia* and *Sclerotinia* sclerotia; *Pseudofusidium hansfordii* on *Mycovellosiella*; *Sphaerulomyces coralloides* on aquatic hyphomycetes; *Syspastospora parasitica* on *Beauveria*, *Hirsutella*, *Paecilomyces* and *Verticillium* (Tribe, *TBMS* **40**: 489, 1957; Huang, *CJB* **55**: 289, 1977); *Tremella karstenii* on *Colpoma juniperi*; *Tympanosporium parasiticum* on *Nectria cinnabarina*; trop. foliicolous spp. (esp. *Meliolaceae*) support a vast array of fungi (Hansford, *Mycol. Pap.* **15**, 1946; Deighton & Pirozynski, *Mycol. Pap.* **128**, 1972); Pirozynski, *Kew Bull.* **31**: 595, 1977; Hughes, *Mycol. Pap.* **166**, 1993). See also Lichenicolous fungi. **Basidiomycota**: *Eudarluca caricis* (anamorph *Sphaerellopsis filum*) on 226 spp. *Pucciniales* (Kranz, *Nova Hedw.* **24**: 169, 1974); *Tuberculina persicina* on 26 spp. *Uredinales*; *Hypomyces* spp. (anamorphs *Apiocrea*, *Cladobotryum*) esp. common on decaying Agaricales and Boletales (Arnold, *Bibliogr. Mill. Univ. bibliotek Jena* **25**, 1976; bibliogr. host index; Rogerson & Samuels, *Mycol.* **86**: 839, 1994, on agarics); *Mycogone perniciosa* (wet bubble disease) on cult. mushrooms (*CMI Descr.* **499**, 1976); *Asterophora* spp. on *Russula*; *Amblyosporium spongiosum* esp. on *Lactarius* (Nicot & Durand, *BSMF* **81**: 623, 1965); *Helminthosphaeria* spp. on *Clavariaceae*; *Pseudoboletus parasiticus* on *Scleroderma*. See Nicot (*BSMF* **31**: 393, 1967); key spp. on agarics, Tubaki (*Nagaoa* **5**: 11, 1955), de Hoog (*Persoonia* **10**: 33, 1978, keys), *Verticillium biguttatum* on *Rhizoctonia solani* (Boogert *et al.*, *Soil Biol. Biochem.* **24**: 159, 1992) and mushroom culture.

See also Ecology, Lichenicolous fungi.

fungiform, mushroom-shaped.

fungistasis (1) see mycostasis; (2) (**fungistatic**) (of a substance, or of a concentration of a fungicide), inhibiting fungus growth but not fungicidal. Cf. genestasis.

Fungites Casp. (1907), Fossil Fungi (mycel.) Fungi. 4 (Oligocene), Baltic Sea; Pacific Ocean.

Fungites Hallier (1865), Fossil Fungi (mycel.) Fungi. 1 (Tertiary), Germany.

fungivorous, using fungi as food; **fungivore**, an organism which does this.

fungizone, trade name for amphotericin B (q.v.).

Fungodaster Haller ex Kuntze (1891) = Leotia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

fungoid, fungus-like.

Fungoidaster P. Micheli (1729) nom. inval. = Craterellus fide Pegler (*in litt.*).

Fungoides Tourn. (1719) nom. inval., Fungi. Used for a wide range of fungi (Ascomycota & Basidiomycota) with cup-like fruits, including discomycetes and *Nidulariales*.

fungology, mycology (obsol.).

fungoma, fungus ball formation.

fungophobia, a horror or dread of fungi (Hay, *British Fungi*: 6, 1887) (obsol.).

fungous, of, or having to do with, fungi; fungal.

funguria, the presence of fungi, particularly yeasts, in urine.

fungus (pl. **fungi**), (Lat. **fungus**, orig. *sfungus*, cognate with *spongia* from Gk *sphongis*, a sponge), champignon (Fr.), ciupercă (Rumanian), cogumelo (Port.), fungo (Ital.), gljiva and guba (Croat.), goba (Slovene), gomba (Hung.), grybas (kremblys) (Lith.), grzyb (Pol.), hongo (Span.), houba (Czech.), huba (Slovak), 真菌 (jun, chün) (Chin.), kavak (Hindi), kavaka (Sanskrit), këphurdhe (Albanian), 菌類 (kinrui) (Jap.), μύκης (Gk), makunã (Kikuyu), Pilz (Germ.), poonjalam (Tamil), seen (Estonian), sŋne (Latvian), sieni (Fin.), svamp (Scand.), zwam (Dutch), ГРИБ (Russ.), ГРЫБ ; (Byeloruss.), ГЪЬИВА and ГУБА (Serb.), ГЪБА (Bulgar.); 582.28 (Universal Decimal Classification); MACR.003 (semantic code; Perry & Kent, *Tools for machine literature searching*, 1958), one of the *Fungi*; [in Medicine: an abnormal sponge-like growth].

Fungus Adans. ex Kuntze (1898) = Agaricus L. fide Kirk (*in litt.*).

fungus ball, see aspergilloma.

fungus gnats, the *Mycetophilidae* (*Insecta*); see Mushroom culture.

fungus root, see mycorrhiza.

Fungus Tourn. ex Adans. (1763) ≡ Agaricus L.

fungus, ray, see ray fungi.

funicular, cord-like.

funicular cord (funiculus), the cord of hyphae by which the peridioles in *Nidulariaceae* (e.g. *Cyathus*) are at first fixed to the inner wall of the peridium; see splash cup.

Funicularius K.K. Baker & Zaim (1979), anamorphic *Pezizomycotina*, Hso.0eH.10. 1 (on mosquito), USA. See Baker & Zaim (*J. Invert. Path.* **34**: 200, 1979), Samson *et al.* (*Atlas of Entomopathogenic Fungi*: 187 pp., 1988).

funiculose (of hyphae), aggregated into rope-like strands, plectonematogenous (q.v.).

Funiliomyces Aptroot (2004), Amphisphaeriaceae. 1, Brazil. See Aptroot (*Stud. Mycol.* **50**: 309, 2004).

funoid, composed of rope-like strands or fibres; funicular (q.v.).

Furcaspora Bonar (1965), anamorphic *Pezizomycotina*, St.1bH.10. 3, USA. See Bonar (*Mycol.* **57**: 391, 1965), Punithalingam (*MR* **107**: 917, 2003).

furcate, forked.

Furcouncinula Z.X. Chen (1982) = Erysiphe fide Braun & Takamatsu (*Schlechtendalia* **4**: 3, 2000).

Furculomyces Lichtw. & M.C. Williams (1992), Legeriomycetaceae. 3 (in *Diptera*), Australia; USA. See Lichtwardt & Williams (*CJB* **70**: 1196, 1992),

White (*MR* **110**: 1011, 2006; phylogeny).

furfuraceous, covered with bran-like particles; scurfy.

Furia (A. Batko) Humber (1989), Entomophthoraceae. 17, widespread.

Fusamen (Sacc.) P. Karst. (1890), anamorphic *Pezizomycotina*, Cac.0eH.19+10. 5 (on *Salix*), Europe. See von Arx (*Biblthca Mycol.* **24**, 1970), Sutton (*The Coelomycetes*, 1980).

Fusariaceae Nann. (1934) = Nectriaceae.

fusaric acid (Fusarinsäure, Germ.), a pyridine-carboxylic acid from *Fusarium bulbigenum* var. *lycopersici*, *F. vasinfectum* and other *Hypocreaceae* able to induce wilt symptoms in tomato (Gäumann, *Phytopath.* **47**: 342, 1948, review; **48**: 670, 1958, mechanism of action). Cf. lycomarasmin.

Fusariella Sacc. (1884), anamorphic *Pezizomycotina*, Hso.≡ eP.15. 13, widespread (temperate). See Hughes (*Mycol. Pap.* **28**, 1949), Liu & Zhang (*Mycosystema* **25**: 145, 2006; China).

Fusariellites Babajan & Tasl. (1977), Fossil Fungi. 1 (Tertiary), former USSR.

Fusariopsis Horta (1919), anamorphic *Pezizomycotina*, Hsy.0eH.?. 1 (on humans), France. See Dodge (*Medical Mycology*: 860, 1935).

Fusarium Link (1809), anamorphic *Gibberella*, *Haematonectria*, Hso.≡ eH.15. *c.* 111 (saprobes and parasites), widespread. This important genus has fusoid, curved, septate macroconidia in slimy masses (sporodochia) on branched conidiophores. Smaller 0- or 1-septate microconidia and chlamydospores are common. A third conidial type, the mesoconidium, is recognized by some authors. The mycelium and spores are generally bright in colour. Important pathogens: *F. avenaceum* and *F. culmorum* (cereal foot rots), *F. bulbigenum* (*Narcissus* basal rot), *F. caeruleum* (dry rot of potato tubers), *F. conglutinans* (cabbage yellows), *F. oxysporum* (potato wilt) and its var. *cubense* (Panama disease of banana), *F. vasinfectum* (cotton wilt), and others. *F solani* is phylogenetically distinct. See Wollenweber & Reinking (*Die Fusarien*, 1935), Toussoun & Nelson (*A Pictorial Guide to the Identification of Fusarium Species*, 1969), Gerlach & Ershad (*Nova Hedwigia* **20**: 725, 1970; Iran), Booth (*The genus Fusarium*, 1971), Joffe (*Mycopath. Mycol.* **58**: 185, 2007; phylogeny).

Fusicladosporium Partr. & Morgan-Jones (2003) = Fusicladium fide Partridge & Morgan-Jones (*Mycotaxon* **85**: 360, 2003), Schubert *et al.* (*Schlechtendalia* **9**, 2003).

fusicoccin, a tricarboxylic terpene from *Fusicoccum amygdali* which induces stomatal opening (Turner & Granati, *Nature* **223**: 1070, 1969) and promotes spore germination and cell elongation. See also Chain *et al.* (*Physiol. Pl. Path.* **1**: 495, 1971; toxicity).

Fusicoccum Corda (1829), anamorphic *Botryosphaeria*, St.0eH.1. *c.* 91, widespread. *F. putrefaciens* (cranberry (*Vaccinium*) end rot). See Morgan-Jones & White (*Mycotaxon* **30**: 117, 1987; redescr. anamorph of *Botryosphaeria ribis*), Rayachhetry *et al.* (*Mycol.* **88**: 239, 1996; biocontrol), Gardner (*Mycol.* **89**: 298, 1997; Hawaii), Crous & Palm (*Sydowia* **51**: 167, 1999; review), Denman *et al.* (*Stud. Mycol.* **45**: 129, 2000; review), Phillips (*Mycotaxon* **76**: 135, 2000; on *Populus*), Smith *et al.* (*Mycol.* **93**: 277, 2001; on *Eucalyptus*), Zhou & Stanosz (*MR* **105**: 1033, 2001; phylogeny), Phillips (*Phytopath. Mediterr.* **41**: 3, 2002; on *Vitis*), Slippers *et al.* (*Mycol.* **96**: 1030, 2004; phylogeny), Slippers *et al.* (*Mycol.* **96**: 83, 2004; phylogeny), Crous *et al.* (*Stud. Mycol.* **55**: 235, 2006; phylogeny).

Fusicolla Bonord. (1851), anamorphic *Pezizomycotina*, Hsp.0eH.?. 5, widespread.

Fusicytospora Gutner (1934) = Phomopsis (Sacc.) Bubák. fide Petrak (*Sydowia* **1**: 61, 1947).

fusidic acid, an antibacterial antibiotic from *Fusidium coccineum* (Godfredsen, *Nature* **193**: 987, 1962); = ramycin (from *Micromucor ramanniana*).

Fusidites Mesch. (1902), Fossil Fungi. 1 (Oligocene), Europe.

Fusidium Link (1809) nom. rej., anamorphic *Pezizomycotina*. 1, widespread. See Booth (*Mycol. Pap.* **104**, 1966), Cooper (*N.Z. Jl Bot.* **43**: 323, 2005; New Zealand).

Fusidomus Grove (1929) = Fusarium fide Sutton (*Mycol. Pap.* **141**, 1977).

fusiform, spindle-like; narrowing toward the ends (Fig. 23.1).

fusiform rust (of pine), *Cronartium quercuum* (Czabator, *U.S. For. Serv. Res. Pap.* **65**, 1971).

Fusiformisporites Rouse (1962), Fossil Fungi. 8 (Tertiary), India; N. America.

Fusispora Fayod (1889) = Lepiota fide Singer & Smith (*A monograph on the genus Galerina Earle*, 1964).

Fusisporella Speg. (1910), anamorphic *Pezizomycotina*, Hsp.1eH.?. 1 or 2, America (tropical).

Fusisporium Link (1809) = Fusarium fide Wollenweber & Reinking (*Die Fusarien*: 5, 1935), Hughes (*CJB* **36**: 727, 1958).

Fusitheca Bonord. (1864) nom. dub., ? Fungi.

fusoid, somewhat fusiform.

Fusoidispora Vijaykr., Jeewon & K.D. Hyde (2005), Annulatascaceae. 1, Hong Kong. See Vijaykrishna *et al.* (*Sydowia* **57**: 272, 2005).

Fusoma Corda (1837) nom. dub., anamorphic *Pezizo-*

mycotina. See Hughes (*CJB* **36**: 727, 1958).

Fusticeps J. Webster & R.A. Davey (1980), anamorphic *Pezizomycotina*, Hso.≡ eP.1. 1 (aquatic), Malaysia. See Webster & Davey (*TBMS* **75**: 341, 1980), Hyde & Goh (*Mycoscience* **39**: 199, 1998).

fuzz-ball, see puff-ball.

fuzzy coat, the outer gelatinous coat of an ascus, esp. of one staining blue in iodine; see ascus.

G, Conservatoire et Jardin Botanique de la Ville de Genève (Geneva, Switzerland); founded 1817; funded by the city.

Gabarnaudia Samson & W. Gams (1974), anamorphic *Ceratocystidaceae*, Hso.0eH.15. 5, Europe; Asia. See Samson & Gams (*Stud. Mycol.* **6**: 88, 1974), Hausner & Reid (*CJB* **82**: 752, 2004; phylogeny), Gao *et al.* (*Mycosystema* **24**: 603, 2005; China).

Gabura Adans. (1763) nom. rej. = Collema F.H. Wigg. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Gaertneriomyces D.J.S. Barr (1980), Spizellomycetaceae. 3 (from soil), N. America; Europe. See Barr (*CJB* **58**: 2386, 1980).

Gaeumannia Petr. (1950) = Melchioria fide Müller & von Arx *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 87, 1973).

Gaeumanniella Petr. (1952), Pezizomycotina. 1, USA. See Petrak (*Sydowia* **6**: 162, 1952).

Gaeumannomyces Arx & D.L. Olivier (1952), Magnaporthaceae. Anamorph *Harpophora*. *c*. 11 (on grass roots), widespread. *G. graminis* (with 3 vars.; whiteheads and take-all (q.v.) of cereals). See Simonsen (*Friesia* **9**: 361, 1971; anamorph), Walker (*TBMS* **58**: 427, 1972), Weste (*TBMS* **59**: 133, 1972; root infection), Walker (*Mycotaxon* **11**: 1, 1980; taxonomy), Bryan *et al.* (*Appl. Environm. Microbiol.* **61**: 681, 1995), Fouly *et al.* (*Mycol.* **89**: 590, 1997; restriction analysis), Augustin *et al.* (*J. Phytopath.* **147**: 109, 1999; RAPDs), Bryan *et al.* (*MR* **103**: 319, 1999; DNA, host range), Ward & Bateman (*New Phytol.* **141**: 323, 1999; DNA), Gams (*Stud. mycol.* **45**: 187, 2000; anam.), Rachdawong *et al.* (*Pl. Dis.* **86**: 652, 2002; molecular identification), Wong (*MR* **106**: 857, 2002), Freeman & Ward (*Molecular Plant Pathology* **5**: 235, 2004; review), Saleh & Leslie (*Mycol.* **96**: 1294, 2004; phylogeny).

Gaillardiella Pat. (1895), Nitschkiaceae. 1 (from wood), S. America. See Petrak (*Sydowia* **4**: 158, 1950), Subramanian & Sekar (*Kavaka* **18**: 19, 1993), Huhndorf *et al.* (*MR* **108**: 1384, 2004).

Galactinia (Cooke) Boud. (1885) = Peziza Fr. fide Seaver (*North American Cup Fungi* (Operculates), 1928).

Galactiniaceae Berthet ex Le Gal (1969) = Pezizaceae.

Galactomyces Redhead & Malloch (1977), Dipodascaceae. 6, widespread. See de Hoog *et al.* (*Stud. Mycol.* **29**, 1986; key), de Hoog *et al. in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 209, 1998), Naumova *et al.* (*Antonie van Leeuwenhoek* **80**: 263, 2001; sibling species), Hoog & Smith (*Stud. Mycol.* **50**: 489, 2004; phylogeny), Pimenta *et al.* (*Int. J. Syst. Evol. Microbiol.* **55**: 497, 2005), Romano *et al.* (*The Yeast Handbook* **2**: 13, 2006; review), Suh & Blackwell (*MR* **110**: 220, 2006; in beetle guts), Suh *et al.* (*Mycol.* **98**: 1006, 2006; phylogeny).

Galactopus Earle (1909) = Mycena fide Singer (*Agaric. mod. Tax.*, 1951).

galeate, hooded; hat-shaped or helmet-shaped.

Galeoscypha Svrček & J. Moravec (1989), Pyronemataceae. 1, Europe. See Svrček & Moravec (*Česká Mykol.* **43**: 210, 1989).

Galera (Fr.) P. Kumm. (1871) [non *Galera* Blume 1825, *Orchidaceae*] = Galerina fide Kuyper (*in litt.*).

Galeraicta Preuss (1852) ? = Rabenhorstia fide Saccardo (*Syll. fung.* **3**: 1, 1884), Sutton (*Mycol. Pap.* **141**, 1977).

Galerella Earle (1909), Bolbitiaceae. 7, widespread. See Hausknecht & Contu (*Öst. Z. Pilzk.* **12**: 31, 2003).

Galerina Earle (1909), Strophariaceae. *c*. 250 (freq. bryophilous), widespread. See Kühner (*Le Genre Galera*, 1935), Smith & Singer (*A monograph on the genus Galerina Earle*, 1964), Barkman (*Coolia* **14**: 49, 1969; key 50 Dutch spp.), Wells & Kempton (*Lloydia* **32**: 369, 1969; Alaskan spp.), Pegler & Young (*Kew Bull.* **27**: 483, 1972; basidiospore form), Kühner (*BSMF* **88**: 41, 1973; alpine spp.), Kühner (*BSMF* **88**: 119, 1973; alpine spp.), Gulden *et al.* (*MR* **105**: 432, 2001; *G. marginata* complex), Wood (*Aust. Syst. Bot.* **14**: 615, 2001; Australia spp.), Gulden (*Mycol.* **97**: 823, 2005; polyphyly).

Galeromycena Velen. (1947) = Macrocystidia fide Pegler (*in litt.*).

Galeropsidaceae Singer (1962) nom. rej. = Bolbitiaceae. The *Galeropsidaceae* are listed as nom. rej. against *Cortinariaceae*.

Galeropsina Velen. (1947) = Psilocybe (Fr.) P. Kumm. fide Singer (*Agaric. mod. Tax.* 4th ed, 1986).

Galeropsis Velen. (1930), Bolbitiaceae. 16 (xerophytic), widespread. Perhaps *Agaricaceae*. See Singer (*Proc. K. ned. Akad. Wet.* Ser. C, Biol. Med. Sci. **66**: 106, 1963; key), Sarasini (*Gasteromiceti Epigei*: 406 pp., 2005).

Galerula P. Karst. (1879) nom. dub. ? = Galerina fide Singer & Smith (*A monograph on the genus Galerina Earle*, 1964).

Galiella Nannf. & Korf (1957), Sarcosomataceae. 8, widespread (north temperate). See Korf (*Mycol.* **49**: 107, 1957), Cabello (*Boln Soc. argent. Bot.* **25**: 395, 1988), Li & Kimbrough (*CJB* **74**: 1651, 1995; spore ontogeny), Zhuang & Wang (*Mycotaxon* **67**: 355, 1998; spp. China), Harrington *et al.* (*Mycol.* **91**: 41, 1999; phylogeny), Pant (*Mycotaxon* **79**: 315, 2001; India), Köpcke *et al.* (*Phytochem.* **60**: 709, 2002; chemistry), Hansen & Pfister (*Mycol.* **98**: 1029, 2006; phylogeny).

Gall. A predictable and consistent plant deformation that occurs in response to the stimulus of a foreign organism, often a swelling or outgrowth; a cecidium.

Fungi producing galls directly on plants include some *Exobasidiales* (Ing, *in* Williams, 1994: 67; key 35 Eur. sp.), *Pucciniales* (Preece & Hicks, *in* Williams (Ed.), 1994: 57; 87 Br. spp.) and *Plasmodiophorales* (Preece, *Mycologist* **16**: 27, 2002). The gall midges (*Cecidomyiidae*) have mycophagous larvae implicated in the gall reaction (Harris, *in* Williams (Ed.), 1994: 201); some are only mycophagous and do not cause galls; **ambrosia -s** are caused by *Macrophoma* and anamorphs of *Botryosphaeria* (Bisset & Borkent, *in* Pirozynski & Hawksworth (Eds), 1988: 203).

Lichens have been interpreted as galls induced by an alga in a fungus (Moreau & Moreau, *BSMF* **34**: 84, 1918; see also cephalodium) but there are significant differences (Hawksworth & Honegger, *in* Williams (Ed.), 1994: 77); **-s on lichens**, may be caused by some lichenicolous fungi (e.g. *Biatoropsis*, *Plec-*

tocarpon, *Polycoccum*, *Thamnogalla*), nematodes (Siddiqi & Hawksworth, *Lichenologist* **14**: 175, 1982), mites (Gerson & Seaward, *in* Seaward (Ed.), *Lichen ecology*: 69, 1977), or be of unknown origin (Grummann, *Bot. Jb.* **80**: 101, 1960).

See Mani (*Ecology of plant galls*, 1964), Redfern & Shirley (*British plant galls*, 2002), Williams (Ed.) (*Plant galls: organisms, interactions, populations*, 1994), Coevolution.

Gallacea Lloyd (1905), Gallaceaceae. 6, Australia; New Zealand. See Trappe & Claridge (*Australasian Mycologist* **22**: 27, 2003).

Gallaceaceae Locq. ex P.M. Kirk (2008), Hysterangiales. 2 gen., 9 spp.

Gallaicolichen Sérus. & Lücking (2007), Pezizomycotina (L). 1, Australasia; Hawaii. See Sérusiaux & Lücking (*Biblthca Lichenol.* **95**: 509, 2007).

Gallowaya Arthur (1906), Coleosporiaceae. 3 (on *Pinus* (0, III, microcyclic) (*Pinaceae*)), N. America; Siberia. *G. crowellii* on *Pinus*. See Dodge (*J. Agric. Res.* **31**: 641, 1925; morphology), Cummins & Hiratsuka (*Illustr. Gen. Rust Fungi rev. edit.*, 1983; syn. of *Coleosporium*).

Galorrheus (Fr.) Fr. (1825) [non *Galorrheus* Haw. 1812, *Euphorbiaceae*] ≡ Lactarius.

Galzinia Bourdot (1922), Corticiaceae. 9, widespread. See Rogers (*Mycol.* **36**: 70, 1944), Olive (*Mycol.* **46**: 794, 1954), Boidin & Gilles (*BSMF* **110**: 185, 1994; key).

Galziniella Parmasto (1968) = Sistotrema Fr. fide Eriksson *et al.* (*Cortic. N. Europ.* **7**, 1984).

Gambleola Massee (1898), Pucciniosiraceae. 1 (on *Berberis* (*Berberidaceae*)), India; Nepal. Sometimes included in *Pucciniosira*. See Buriticá (*Rev. Acad. Colomb. Cienc.* **18** no. 69: 131, 1991; as syn. of *Pucciniosira*).

gametangium (pl. **-ia**) (gametange), cell containing gametes or gametic nuclei; the gametangium may initially be diploid and is the site of meiosis, or haploid. See zygangium.

gamete, naked uninucleate haploid cell with the sole function of fusing with another gamete to produce a zygote; sometimes used for the sex-nuclei of coenogametes.

gametogenesis, the development of gametes.

gametophyte, a haploid or sexual plant; haplont or haplophase. Cf. sporophyte.

gametothallus, a thallus producing gametes; cf. sporothallus.

gamma particle, a DNA-containing cytoplasmic organelle in the zoospore of *Blastocladiella emersonii* (Myers & Cantino, *The gamma particle*, 1974; Barstow & Lovett, *Mycol.* **67**: 518, 1975).

Gamolpidium Vlădescu (1892), ? Chytridiales. 2, Rumania.

Gamonaemella Fairm. (1922) = Gamospora fide Clements & Shear (*Gen. Fung.*, 1931), Sutton (*Mycol. Pap.* **141**, 1977).

Gamosphaera Dumort. (1822) ≡ Nemania.

Gamospora Sacc. (1885) ? = Wiesneriomyces fide Sutton (*Mycol. Pap.* **141**, 1977).

Gamosporella Speg. (1888) nom. dub., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Gampsonema Nag Raj (1975), anamorphic *Pezizomycotina*, St.≡ eH.10. 1, widespread. See Nag Raj (*CJB* **53**: 1621, 1975).

Gamsia M. Morelet (1969), anamorphic *Pezizomycotina*, Hso.0eP.19. 2, widespread. See Morelet (*Annales de la Société des Sciences Naturelles et d'Archéologie de Toulon et du Var* **21**: 105, 1969).

Gamsiella (R.K. Benj.) Benny & M. Blackw. (2004), Mortierellaceae. 1, USA. See Benny & Blackwell (*Mycol.* **96**: 147, 2004), White *et al.* (*Mycol.* **98**: 872, 2006; phylogeny).

Gamsylella M. Scholler, Hagedorn & A. Rubner (1999), anamorphic *Orbiliaceae*, Hso.?.?. 6, widespread. See Scholler *et al.* (*Sydowia* **51**: 108, 1999), Li *et al.* (*Mycol.* **97**: 1034, 2005; phylogeny, synonymy with *Dactylellina*).

Gamundia Raithelh. (1979), Tricholomataceae. 6, Europe; S. America (temperate). See Raithelhuber (*Metrodiana* **8**: 34, 1979), Antonín (*Persoonia* **18**: 341, 2004; type studies European spp.), Antonín (*Mykol. Listy* **90-91**: 20, 2004; key European spp.), Antonín & Noordeloos (*A monograph of the genera Hemimycena*, □, 2004).

gangliform, having knots; knotted.

Gangliophora Subram. (1992), anamorphic *Pezizomycotina*, Hso.≡ eP.19. 1, Taiwan. See Subramanian (*Proc. Indian natn Sci. Acad.* Part B. Biol. Sci. **58**: 188, 1992).

Gangliophragma Subram. (1978) = Dactylella fide Subramanian (*Kavaka* **5**: 94, 1977), Rubner (*Stud. Mycol.* **39**, 1996).

gangliospore, Subramanian's (*Curr. Sci.* **31**: 410, 1962) term for aleuriospore in the sense of 'holoblastic conidium'.

Gangliostilbe Subram. & Vittal (1976), anamorphic *Pezizomycotina*, Hsy.≡ eP.1. 2, pantropical. See Subramanian & Vittal (*Kavaka* **3**: 70, 1975), Petrini (*Sydowia* **37**: 238, 1984; Ethiopia), Subramanian & Bhat (*Kavaka* **15**: 41, 1987; India), Mercado-Sierra *et al.* (*Nova Hedwigia* **64**: 455, 1997; Costa Rica).

Ganoderma P. Karst. (1881), Ganodermataceae. Anamorph *Thermophymatospora*. *c.* 80, widespread (esp. tropical). *G. applanatum* (wood decay); *G. lucidum* (wood decay); *G. philippii* (syn. *G. pseudoferreum*; root rot of cacao, coffee, rubber, tea, etc.); *G. orbiformum* (syn. *G. boninense*; root rot of palms). See Moncalvo & Ryvarden (*Syn. Fung.* **11**: 114 pp., 1997), Ryvarden (*Mycol.* **92**: 180, 2000), Hong & Jung (*Mycol.* **96**: 742, 2004; phylogeny).

Ganodermataceae Donk (1948), Polyporales. 4 gen. (+ 9 syn.), 117 spp.

Lit.: Steyaert (*Persoonia* **7**: 55, 1972; SE Asian spp.), Steyaert (*Bull. Jard. Bot. Nat. Belg.* **50**: 135, 1980; subgen. classif.), Zhao (*Biblthca Mycol.* **132**: 176 pp., 1989), Moncalvo *et al.* (*Ganoderma: Systematics, Phytopathology and Pharmacology* Proceedings of Contributed Symposium 59A, B, 5th International Mycological Congress, Vancouver, August 14-21, 1994: 31, 1995), Moncalvo *et al.* (*MR* **99**: 1489, 1995), Moncalvo *et al.* (*Mycol.* **87**: 223, 1995), Moncalvo & Ryvarden (*Syn. gasteroconidium, see gasterospore.
Gasterohymeniales. See *Hymenogastrales* and *Podaxales*.
gasteroid, of a form resembling a member of the gasteromycetes (q.v.); specifically, a fruit body enclosing the hymenium.
Gasteromycetes. Morphological category of *Basidiomycota*, traditionally based on homobasidiomycetes that do not actively discharge their spores (statismospores). The polyphyletic nature of the group has for a long time been known. Epigeous and hypogeous gasteromycetes occur in 4 of the 8 clades of the homobasidiomycetes recognized by Hibbett & Thorn (*The Mycota* **7B**, 2001). Gasteromycetes have been regarded as conspecific (*Gastrosuillus laricinus*), congeneric (*Hydnangium*, *Podohydnangium*), confamilial (*Chamonixia*, *Arcangeliella*) or conordinal (*Sclerodermataceae*, *Lycoperdaceae*) with taxa in the other *Basidiomycota*, while affinities of some groups have not yet been established; for recent information see under these taxa. Integration of gasteromycetes in a natural system of *Basidiomycota* inevitably leads to a taxonomic reduction of many higher taxa; these new placements are not yet universally accepted, particularly at the generic level.

The single-celled basidium (q.v.) is generally 4-spored but the basidiospores are not forcibly discharged and sterigmata may be absent. The basidia and basidiospores mature within the basidioma, which typically has a peridium (sometimes multilayered) covering a ± fleshy mycelial tissue ('gleba') in which the basidia are borne, eventually lining hymenial cavities. The gleba is frequently crossed by a columella and/or veins. After the decay of the gleba, the columella and capillitium (q.v.) may facilitate spore dispersal.

Gasteromycetes are mainly terrestrial and epigeous or hypogeous, partly saprobic and partly ectomycorrhizal; they are cosmopolitan, occurring especially in warm, dry areas.

Geastrales K. Hosaka & Castellano (2007). Phallomycetidae. 1 fam., 7 gen., 64 spp. Fam.:

Geastraceae

For *Lit.* see under fam.

Geastrum Pers. (1794), Geastraceae. *c.* 50, widespread. The earth stars. See Sunhede (*Syn. Fung.* **1**, 1990), Zhou & Yan (*Mycosystema* **21**: 485, 2002; China).

Geastrumia Bat. (1960), anamorphic *Pezizomycotina*, Ccu.1bH.1. 1, widespread. See Pirozynski (*Mycol.* **63**: 897, 1971), Williamson & Sutton (*Pl. Dis.* **84**: 714, 2000).

Geisleria Nitschke (1861) = Strigula fide Ernst (*Herzogia* **9**: 321, 1993), Roux *et al.* (*Biblthca Lichenol.* **90**: 96 pp., 2004).

Geisleriomyces Cif. & Tomas. (1953) ≡ Geisleria.

Geissodea Vent. (1799) = Cetraria fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

gel tissue, a mixture of gel and hyphae found in members of the *Leotiales* and *Tremellales*; the gel may arise either by direct secretion or by disintegration of hyphae: see Moore (*Mycol.* **57**: 114, 1965; *Am. J. Bot.* **52**: 389, 1965, ontogenesis; *Stain Technol.* **40**: 23, 1965, staining). Cf. gliatope.

Gelasinospora Dowding (1933), Sordariaceae. 24 (from dung, soil etc.), widespread. Placed into synonymy with *Neurospora* by some authors. See Cailleux (*BSMF* **87**: 536, 1972; key), von Arx (*Persoonia* **11**: 443, 1982; key), Khan & Krug (*Mycol.* **81**: 226, 1989), Beatty *et al.* (*MR* **98**: 1309, 1994; genetics), Stchigel *et al.* (*MR* **102**: 1405, 1998; Argentina), Dettman *et al.* (*Fungal Genetics Biol.* **34**: 49, 2001; phylogeny), García *et al.* (*MR* **108**: 1119, 2004; phylogeny, synonymy with *Neurospora*), Miller & Huhndorf (*Mol. Phylogen. Evol.* **35**: 60, 2005; phylogeny, anatomy), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny).

Gelasinosporites P. Briot, Lar.-Coll. & Locq. (1983), Fossil Fungi. 1, Australia.

gelatin, product obtained by boiling collagen, soluble in water above *c.* 40°C. Gels of *c.* 4-12% used to test ability of some microorganisms to liquefy or hydrolyse gelatin.

Gelatina Raf. (1806) = Tremella Pers. fide Merrill (*Index Rafinesq.*: 68, 1949).

Gelatinaria Flörke ex Wallr. (1831) nom. inval. ? = Nostoc fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Gelatinaria Raf. (1815) nom. dub., Fungi. No spp. included.

Gelatinipulvinella Hosoya & Y. Otani (1995), Leotiaceae. Anamorph *Aureohyphozyma*. 1, Japan. Perhaps better placed in the *Leotiaceae*, but both apothecial anatomy and ascus apex are atypical of this family.

Gelatinocrinis Matsush. (1995), anamorphic *Pezizomycotina*, Hsp.0eH.15. 1, Japan. See Matsushima (*Matsush. Mycol. Mem.* **8**: 20, 1995).

Gelatinodiscaceae S.E. Carp. (1976) = Leotiaceae.

Gelatinodiscus Kanouse & A.H. Sm. (1940), Helotiaceae. 1, USA. See Carpenter (*Mycotaxon* **3**: 209, 1976).

Gelatinopsis Rambold & Triebel (1990), Helotiaceae. 2 (on lichens and other fungi), Europe; N. America. Perhaps better placed in the *Leotiaceae*. See Rambold & Triebel (*Notes R. bot. Gdn Edinb.* **46**: 375, 1990), Aptroot *et al.* (*Nova Hedwigia* **64**: 155, 1997; France), Etayo *et al.* (*Lichenologist* **33**: 473, 2001; Spain).

Gelatinopycnis Dyko & B. Sutton (1979), anamorphic *Pezizomycotina*, St.0fH.15. 1, Germany. See Dyko & Sutton (*CJB* **57**: 375, 1979).

Gelatinosporis Clem. & Shear (1931) ≡ Gelatinosporium.

Gelatinosporium Peck (1873), anamorphic *Durandiella*, St.1eH.15. 1, USA. See DiCosmo (*CJB* **56**: 1665, 1978), Verkley (*Nova Hedwigia* **75**: 433, 2002).

gelatinous, jelly-like; used for the hyphae of tissues which become partly dissolved and glutinous with moisture.

Gelatoporia Niemelä (1985), Meruliaceae. 3, widespread (north temperate). See Niemelä (*Karstenia* **25**: 22, 1985), Spirin & Zmitrovich (*Karstenia* **43**: 67, 2003; Russia).

Gelatosphaera Bat. & H. Maia (1959) = Rhizosphaera fide Sutton (*Mycol. Pap.* **141**, 1977).

Geleenites Dijkstra (1949), Fossil Fungi. 1 (Cretaceous), Canada; Netherlands. See Jansonius *et al.* (*Pollen et Spores* **23**: 557, 1981; ? = Ascotricha (Xylar.)).

Gelidium J.V. Lamour. (1813), Algae. Algae.

Gelimycetes. Class within the *Orthomycotina* (q.v.) including *Auriculariales* p.p., *Dacrymycetales*, *Tremellales* p.p. and *Tulasnellales* (Cavalier-Smith *in* Rayner *et al.* (Eds), *Evolutionary biology of the fungi*: 339, 1987).

Gelineostroma H.J. Swart (1988), Rhytismatales. 2 (on *Arthrotaxis*), Australia. See Swart (*TBMS* **90**: 445, 1988), Johnston (*Aust. Syst. Bot.* **5**: 507, 1992), Johnston (*Aust. Syst. Bot.* **14**: 377, 2001).

Gelona Adans. (1763) nom. rej. = Pleurotus fide Donk (*Beih. Nova Hedwigia* **5**, 1962).

Gelopellaceae Zeller (1939) = Claustulaceae.

Gelopellis Zeller (1939), Claustulaceae. 6, S. America; Japan; Australia. See Homrich (*Revue Mycol.* Paris **34**: 6, 1969), Beaton & Malajczuk (*TBMS*: 478, 1986; Australia).

Geltingia Alstrup & D. Hawksw. (1990), Odontotremataceae. 2 (on lichens), widespread (esp. Arctic). See Rambold & Triebel (*Notes R. bot. Gdn Edinb.* **46**: 375, 1990), Diederich & Etayo (*Lichenologist* **32**: 423, 2000).

Geminaginaceae Vánky (2001), Ustilaginales. 1 gen., 1 spp.

Lit.: Vánky (*Mycoscience* **37**: 173, 1996), Piepenbring *et al.* (*Protoplasma* **204**: 202, 1998), Vánky (*MR* **102**: 513, 1998), Vánky (*Fungal Diversity* **6**: 131, 2001).

Geminago Vánky & R. Bauer (1996), Geminaginaceae. 1 (on *Sterculiaceae*), Africa (tropical). See Vánky & Vánky (*Lidia* **5**: 157, 2002; southern Africa).

Geminella J. Schröt. (1870) [non *Geminella* Turpin 1828, *Algae*] = Schroeteria fide Vánky (*in litt.*).

Geminispora Pat. (1893), ? Phyllachoraceae. 2 (on *Leguminosae*), Africa; S. America. See Cannon (*Mycol. Pap.* **163**, 1991).

Geminoarcus K. Ando (1993), anamorphic *Pezizomycotina*. 2, Japan. See Ando (*TMSJ* **34**: 110, 1993).

gemma (pl. **-ae**), (1) an asexual propagule borne singly or in chains at the ends of hyphae, referred to in older literature as a chlamydospore (*Saprolegniaceae*); (2) another term for oidia in *Agaricomycotina* (Gäumann, *The Fungi*: 449, 1928), rejected for this usage by Kendrick & Watling (*in* Kendrick (Ed.), *The whole fungus* **2**: 477, 1979).

Gemmamyces Casagr. (1969) = Cucurbitaria fide Petrak (*Sydowia* **23**: 265, 1970), Yuan & Wang (*Mycotaxon* **53**: 371, 1995; accepted genus).

Gemmaspora D. Hawksw. & Halıcı (2007), Verrucariales. 1 (lichenicolous), Middle East. See Hawksworth & Halici (*Lichenologist* **39**: 121, 2007).

Geneaceae Trappe (1979) = Pyronemataceae.

gene-for-gene (in host-parasite relationships), the correspondence for each gene determining resistance in the host of a specific and related gene determining virulence in the pathogen; first described by Flor in 1955 for *Melampsora lini* on flax (*Linum usitatissimum*), which has 29 resistance genes each of which the pathogen has avirulent counterparts (Lawrence *et al.*, *Phytopath.* **71**: 12, 1981). See Person (*CJB* **37**: 1101, 1959), Person *et al.* (*Nature* **194**: 561, 1962), Flor (*Ann. Rev. Phytopath.* **9**: 275, 1971), Parlevliet (*in* Pirozynski & Hawksworth (Eds), 1988: 19), Coevolution.

Geneosperma Rifai (1968) = Scutellinia fide Korf & Zhuang (*Acta Mycol. Sin.* Suppl. **1**: 90, 1986; 2 spp.), Moravec (*Mycotaxon* **58**: 233, 1996), Moravec (*Czech Mycol.* **50**: 85, 1997), Wang (*Bull. natn. Mus. Nat. Sci.* Taiwan **11**: 119, 1998; Taiwan).

genera, see genus.

generative hyphae, see hyphal analysis.

genestasis, inhibition of sporulation; **genistat**, a substance preventing or reducing sporulation in fungi without materially affecting vegetative growth; 'antisporulator' (Horsfall, 1947); cf. fungistatic.

Genetic engineering. The insertion or removal of inheritable genetic material from an organism so that its properties are transformed. The topic has a political dimension. Genetic engineering has been used to increase pathogenicity of nematophagous fungi (Ahman *et al.*, *Appl. and environmental microbiol.* **68**: 3408, 2002), to alter *Laccaria bicolor* for use as a biocontrol agent (Bills *et al* (*Mycol.* **91**: 237, 1999). Genes from fungi can also be inserted into plasmid genomes and expressed through *Escherichia coli* or *Saccharomyces cerevisiae*. Genetic engineering of plants to enhance their resistance to fungal diseases is also possible (e.g. transferring genes resistant to *Phytophthora infestans* from *Solanum bulbocastaneum* to *S. tuberosum*, see Song *et al.*, *Proc. nat. acad. sci.* **100**: 9128, 2003). See Bennett & Lasure (Eds) (*Gene manipulations in fungi*, 1985; *More gene manipulation in fungi*, 1991), Fincham (*Microbiol. Rev.* **53**: 148, 1989; review), Kinghorn & Turner (Eds) (*Applied molecular genetics of filamentous fungi*, 1992), Timberlake & Marshall (*Science* **244**: 1313, 1989), Biotechnology.

Genetic resource collections. Genetic resource collections which include fungal cultures are catalogued in Takishima *et al.* (Eds) (*Guide to World Data Center on Microorganisms with a list of culture collections worldwide*, 1989), and Sugawara *et al.* (Eds) (*World directory of collections of cultures of microorganisms*, edn 4, 1993). In 2008, these collections were maintaining some 476,299 fungal strains representing around 25,085 species or subspecies (http://wdcm.nig.ac.jp/statistics.html). Collections are given standard acronyms or abbreviations by the World Data Center, and a selection of those for the larger collections are included in this edn of the *Dictionary*. See also Reference collections. The chief collections of fungal cultures by region are as follows. **Africa**. South Africa (Plant Protection Research Institute, Pretoria); **Asia**. China (University of Hong Kong Culture Collection, Hong Kong); Japan (Institute for Fermentation, Osaka); South Korea (Center for Fungal Genetic Resources, Seoul National University, Seoul). **Australasia**. Australia (Mycology Culture Collection, Women's and Children's Hospital, Adelaide; Plant Pathogen Culture Collection, Indooroopilly, Queensland); New Zealand (International Collection of Microorganisms from Plants, DSIR, Auckland). **Caribbean**. Cuba (INIFAT, Havana). **Europe** Denmark (Culture Collection of Fungi, BioCentrum-DTU, Lyngby); France (Laboratoire de Cryptogamie, Muséum National d'Histoire Naturelle, Paris); Germany (Pilz-Referenz-Zentrum, Friedrich Schiller University, Jena); Italy (Industrial Yeasts Collection, Università di Perugia, Perugia) Netherlands (Centraalbureau voor Schimmelcultures, Baarn; Russia (All-Russian Collection of Microorganisms, Institute of Biochemistry and Physiology of Microorganisms, Pushchino, Moscow oblast'); Slovakia (Culture Collection of Yeasts, Institute of Chemistry, Bratislava); Sweden (Fungal Cultures, University of Goteborg, Goteborg; Culture Collection of Fungi, University of Uppsala, Uppsala); UK (CABI UK Centre, Egham [housing the collection of the former International Mycological institute and the holdings of the UK National Collection of Wood-Rotting Fungi and British Antarctic Survey]; the UK National Collection of Yeast Cultures, Norwich). **North America**. Canada (Canadian Collection of Fungal Cultures, Agriculture and Agri-Food Canada, Ottawa; University of Alberta Microfungus Collection, Edmonton, Alberta); USA (American Type Culture Collection, Washington, DC; ARS Collection of Entomopathogenic Fungi, Ithaca, NY; Pfaff Yeast Culture Collection, University of California, Davis, CA). **South America**. Brazil (Centro Especializado em Micologia Medica, Universidade Federal do Ceara, Ceara; Colecão de Culturas de Fungos, Instituto Oswaldo Cruz, Rio de Janeiro). See World Data Center for Microorganisms (http://wdcm.nig.ac.jp). See also Reference collections.

International collaboration is facilitated by the World Federation for Culture Collections which functions under the auspices of the IUBS and organises meetings of the International Congress of Culture Collections.

Culture **maintenance** is traditionally on slopes of appropriate media stored at laboratory or low temperature but now cryopreservation (see below) when applicable is the method of choice. Lyophilization (freeze-drying) of the fungus spore is an ideal method to facilitate distribution; this method is favoured by service collections (Smith *et al.* in Smith *et al.* Eds, 2001. *The UK National Culture Collection Biological Resource: Properties, maintenance and management.* pp 389. UK National Culture Collection, Egham). The properties of the fungus in culture may be unsta-

ble and subject to strain drift through loss of plasmids, spontaneous mutations or genetic recombination due to the presence of heterokaryons, the parasexual cycle or normal sexual events. Therefore conditions of storage should be selected that minimize the risk of such changes. Freezing and storage of fungi at ultra-low temperature such as in or above liquid nitrogen or in -140° to -150°C freezers appears to provide the ideal method. There are, however, several other methods that are used successfully. They range from continuous growth through methods that reduce rates of metabolism to the ideal situation where metabolism is halted, or to a level that for all practical purposes it can be treated as suspended. Microbial resource collections, large or small, set out to maintain organisms in a pure, viable and stable condition to make them available for future use. The method selected may depend upon the requirements of the use of the organism. These vary according to the numbers and range of fungi to be preserved and the facilities available. The cost of materials and labour involved and the desired level of stability and longevity required is also taken into consideration. Preservation methods that allow growth or metabolism can only be used for short-term storage, such methods are subculture, storage under a layer of mineral oil and storage in sterile water. Drying and freeze-drying techniques can be used for long-term storage of fungi but not all will survive. Storage in soil or in or above silica gel produce dry conditions that can allow the desiccated fungus to survive for 8 and up to 20 years. Freeze-drying, the removal of water, dehydration of fungi under reduced pressure by the sublimation of ice is a method widely used but generally only allows the fungus spore or other robust structures, such as sclerotia, to survive. The methods for the above preservation technique have been published widely.

Genetics. The text of this entry is unrevised and remains the same as for the ninth edition. In general, fungi appear to conform to the well- established patterns of genetical behaviour typical of other groups of organisms and species of *Saccharomyces, Neurospora*, and *Aspergillus* have been widely used in studies on formal genetics. They mostly exhibit haplo- and diplophases in their life-history, and thus undergo meiosis at some stage.

The use of monosporous cultures, and esp. of methods for the isolation of all the spores from one ascus or basidium, has made possible such detailed studies as the transmission of various mycelial characters and segregation of sex. Investigation of the stage of meiosis at which the allelomorphs segregate has been rendered possible in some ascomycetes (e.g. *Neurospora*) because the eventual products, the ascospores, exhibit a linear succession in the ascus, and the frequencies of genetical crossing-over for various characters have been deduced from such meiocyte analyses.

Incompatability mechanisms involving one (*Mucor*) or multiple genes (*Coprinus*) are known (see heterothallism). Mutants induced by X-rays, ultraviolet light, etc., have been shown to be deficient in their capacity to effect particular stages of protein synthesis (*Neurospora*) and fermentation (yeasts).

Genicularia Rifai & R.C. Cooke (1966) [non *Genicularia* Rouss. 1806, *Algae*] ≡ Geniculifera.

geniculate, bent like a knee.

Geniculifera Rifai (1975) = Arthrobotrys fide Oorschot (*Stud. Mycol.* **26**: 61, 1985), Rubner (*Stud. Mycol.* **39**, 1996), Koppenhöfer *et al.* (*Mycol.* **89**: 220, 1997; ecology), Liou & Tzean (*Mycol.* **89**: 876, 1997).

Geniculisynnema Okane & Nakagiri (2007), anamorphic *Nemania*. 1 (from termite nest), Japan. See Okane, I.; Nakagiri, A. (*Mycoscience* **48**: 240, 2007).

Geniculodendron G.A. Salt (1974), anamorphic *Caloscypha*, Hso.0eH.10. 1, Canada; Europe. See Paden *et al.* (*CJB* **56**: 2375, 1978), Harmaja (*Karstenia* **42**:

27, 2002; teleomorph), Schröder *et al.* (*Forest Pathology* **32**: 225, 2002; Germany).

Geniculospora Sv. Nilsson ex Marvanová & Sv. Nilsson (1971), anamorphic *Leotiomycetes*, Hso.1bH.1. 2 (aquatic), widespread. Probably polyphyletic. A connection with *Hymenoscyphus* has been claimed. See Nolan (*Mycol.* **64**: 1173, 1972), Ingold (*Guide to aquatic hyphomycetes*, 1975; synonymy with *Articulospora*), Belliveau & Bärlocher (*MR* **109**: 1407, 2005; phylogeny).

Geniculosporium Chesters & Greenh. (1964), anamorphic *Nemania, Entoleuca, Rosellinia, Podosordaria*, Hso.0eH.11. 4, widespread. See Rogers *et al.* (*Mycotaxon* **67**: 61, 1998; *Podosordaria* anam.), Ju & Rogers (*Mycotaxon* **73**: 343, 1999).

Geniopila Marvanová & Descals (1985), anamorphic *Pezizomycotina*, Hso.≡ eH.15. 1 (aquatic), former Czechoslovakia; British Isles.

genistat, see genestasis.

Genistella L. Léger & M. Gauthier (1932) [non *Genistella* Ortega 1773, *Papilionaceae*] ≡ Legeriomyces.

Genistellaceae L. Léger & M. Gauthier (1932) = Legeriomycetaceae.

Genistelloides S.W. Peterson, Lichtw. & B.W. Horn (1981), Legeriomycetaceae. 4 (in *Plecoptera*), USA. See Lichtwardt (*The Trichomycetes. Fungal associates of arthropods*, 1986), Williams & Lichtwardt (*Mycol.* **79**: 473, 1987), White & Lichtwardt (*Mycol.* **96**: 891, 2004; Norway), White (*MR* **110**: 1011, 2006; phylogeny).

Genistellospora Lichtw. (1972), Legeriomycetaceae. 5 (in *Diptera*), widespread. See Lichtwardt (*Mycol.* **64**: 167, 1972), Moss & Lichtwardt (*CJB* **54**: 2346, 1976; ultrastr.), Moss & Lichtwardt (*CJB* **55**: 3099, 1977; ultrastr.), Alencar *et al.* (*Memórias do Instituto Oswaldo Cruz* **98**: 799, 2003; Brazil), López Lastra *et al.* (*Mycol.* **97**: 320, 2005; Argentina), White (*MR* **110**: 1011, 2006; phylogeny).

genocentric, see reproductocentric.

genome, the total inheritable genetic material of an organims; a haploid set of chromosomes in eukaryotes. In *Saccharomyces cerevisiae* this is 12 Mgbases coding for some 6,000 genes; in *Neurospora crassa* the genome is much longer, 40 Mgbases; and *Aspergillus nidulans* has some 13,000 genes. See also Chromosome number.

Genomics. Uncertainty still exists concerning the exact meaning of the term, allowing its application to disparate activities. Several categories are now recognised which depend on the initial characteristics of interest: based on system attributes the topic can be divided into structural genomics and functional genomics (q.v.), but further divisions can be recognized when the relationships to other scientific disciplines or even the organisms being studied are considered; see Zhou *et al.* (*Microbial functional genomics*, 2004). A consensus exists, however, that the term encompasses 'the mapping, sequencing, and analysis of genomes' (Zhou *et al.*, ibid.). Techniques, results and discoveries made initially in studies of the molecular biology of bacteria and from ambitious projects such as the Human Genome Project (see The International Human Genome Mapping Consortium *Nature* **409**: 860, 2001) are now being applied increasingly to other living organisms, including the fungi (Prade & Bohnert, *Genomics of plants and fungi*, 2003). The advent of polymerase chain reaction (PCR, q.v.) technology together with automated high throughput capillary DNA sequencing facilities has led to a vast increase in total genome sequencing of fungi. In 1995, when the eighth edn of this *Dictionary* was published, only one entire genome sequence (*Saccharomyces cerevisiae*) had been generated; but by 2006, >40 'complete' fungal genomes were known (see Fitzpatrick *et al.*, *BMC Evol. Biol.* **6**: 99, 2006) with sequencing of many more underway.

Structural genomics, the 'genome-wide structural study of genes, proteins, and other biomolecules' (Zhou *et al.*, ibid.). This has allowed comparative studies (including size of genome; size and number of chromosomes; and number of potential genes) to be made across different completed fungal genomes leading to more detailed phylogenetic analysis (see Wanchanthuek *et al.*, *in* Sunnerhagen & Piskur (Eds) *Comparative genomics using fungi as models*, 2005).

Functional genomics, the elucidation of a 'systems level understanding of the functional aspects of biological systems...using genome-wide approaches' (Zhou *et al.*, ibid.). This involves the combination of whole-genome sequencing and bioinformatic analysis to examine the resultant total RNA, protein and metabolite profiles ('transcriptome', 'proteome' and 'metabolome', respectively). See Castrillo & Oliver, *in* Brown (Ed.) *The Mycota vol. XIII: Fungal genomics*, 2005. This methodology is being used increasingly to try to understand inter-taxon relationships, pathogenicity of fungi and ultimately to develop new targeted pharmaceutical or agrochemical products.

Lit.: Arora & Khachatourians (Eds) (*Fungal genomics. Applied mycology and biotechnology* **4**, 2004), Fitzpatrick *et al.* (*BMC Evol. Biol.* **6**: 99, 2006), Munro *et al.* (*in* Brown (Ed.) *The Mycota vol. XIII: Fungal genomics*, 2005), Thomson & Zhou, (*in* Zhou *et al.*, *Microbial functional genomics*, 2004), Sunnerhagen & Piškur (Comparative genomics using fungi as models. *Topics in current genetics* **15**: 289 pp., 2006).

genotype, the sum of the genetic potential of an organism; in some fungi only part of this is expressed at any given time. See holomorph, teleomorph, anamorph.

genus (pl. **genera**; adj. **generic**), (1) (in taxonomy), one of the principal ranks in the nomenclatural hierarchy (see Classification), the name of which forms the first part of a binomial species name (see species); (2) (more generally), a class of objects or concepts.

As in the case of the species (q.v.), there is no universally applicable criteria by which genera are distinguished, but in general the emphasis is now on there being several discontinuities in fundamental characters, especially concerning the nature of the reproductive structures. In the last century, however, features such as spore colour and septation were accorded a predominant role by some workers (see Anamorphic fungi).

Phylogen. Evol.* **41**: 295, 2006; phylogeny).

Geographical distribution. Knowledge of the geographical distribution of most fungi is inadequate. It is, however, possible to make a few generalizations. Almost every ecological niche has a specialized mycota (see Ecology), and the key factor determining fungal distribution is the substratum, whether it be a particular plant or animal, or some other material able to support their growth. Some fungi are extremely widespread compared with plants. This is especially true for species with no strong substratum preference (e.g. some generalist saprobes, lichen-forming ascomycetes, myxomycetes, polypores, opportunistic moulds, and soil fungi). Many common air-borne and soil moulds are ubiquitous. The thesis that most fungi are everywhere and that the environment selects (Gams, 1993) is probably true only for such species. Other fungi, particularly those with a narrow range of substrata are usually less widespread. Species which only occur in association with particular plants, for example, have distributions within the ranges of their associated organisms.

Some distributions can be related to continental drift, for example *Thamnomyces* spp. in west Africa and South America, *Cyttaria* spp. in Australasia and South America, and the wide distribution of some lichens (Sheard, *Bryologist* **80**: 100, 1977; Kärnefelt, *Bibl. Lich.* **38**: 291, 1990; Tehler, *Opera Bot.* **70**, 1988). Geographical distributions of the *Pucciniales* (Bisby, 1933) and *Erysiphales* (Hirata, 1966) have been stated to conform to the 'age and area' theory of Willis, which postulates that commonest genera are oldest, and the older the genus the wider its distribution. The geographical distribution of fungi with defined substratum preferences can depend not only on the presence of the substratum but also on its accessibility. On some Caribbean islands, for example, the absence of native terrestrial mammals has meant there are few species of dung-inhabiting fungi compared with continental America, even centuries after the introduction of horses (Richardson, pers. comm.; Minter *et al.*, *Fungi of the Caribbean*, 2001). Substratum accessibility may also be a factor in determining fungal biodiversity hotspots. Animal and plant diversity of tropical rain forests may favour generalist fungi over specialized species which have the problem of locating their substratum; the opposite may be the case in ecosystems with lower animal and plant diversity, such as temperate conifer forests. Natural distributions of many fungi have also been affected by acid rain, air pollution (q.v.), forest clearance, and accidental or deliberate disposal by humans (see Conservation).

Some lichen-forming species have exceptionally broad distributions, and wide disjunctions are known; many follow particular forest zones or rock types, and some are even bipolar (Du Rietz, *Acta Phytogeogr. Succ.* **13**: 215, 1940; Lynge, *Naturen* **12**: 367, 1941). Apart from continental drift, the wide distribution of some lichens has also been related to glaciations (Brodo & Hawksworth, *Opera Bot.* **42**, 1977); isolated populations of various species existed by the Cretaceous (Kärnefelt, 1990). In the *Caliciales*, small-spored genera are more likely to be distributed by long-range dispersal than those with large-spores (Tibell, *Bot. J. Linn. Soc.* **116**: 159, 1994).

Because of the importance of the geographical distribution of plant pathogenic fungi for disease control regulations and international movement of plant germ plasm, the distribution of the more important plant pathogenic fungi is comparatively well known. The *IMI Distribution Maps of Plant Diseases* (1943 on) cover over 1300 spp. and are constantly updated, with new editions issued as required.

There has been a renewed interest in mapping distributions in the last two decades, facilitated by developments in computer techniques. Most initiatives are at national level, and concentrate on species that are most easily recorded; dynamically created distribution maps are now also, however, available on-line at global, regional, national and subnational levels, although the information presented on those maps is usually very incomplete (see Internet). Kreisel compiled a bibliography of published distribution maps for non-lichenized fungi (*Feddes Rep.* **82**: 589, 1971, hymeno- and gasteromycetes, 1930-69; **83**: 741, 1973, hemi- and phragmobasidiomycetes; **84**: 619, 1973, basid. suppl.; **85**: 161, 1974, anamorphic fungi and endomycetes, 1941-72; **86**: 329, 1975, phycom.; **87**: 109, 1976, suppl.), and Hawksworth & Ahti (*Lichenologist* **22**: 1, 1990) include publications with maps.

Lit.: Diehl (*J. Wash. Acad. Sci.* **27**: 244, 1937), Bisby (*Am. J. Bot.* **20**: 246, 1933; *Bot. Rev.* **9**: 466, 1943), Gams (*in* Winterhoff (Ed.), *Fungi in vegetation science*: 183, 1992), Hirata (*Host range and geographical distributions of the powdery mildews*, 1966), Lumbsch *et al.* (Eds) (Phylogeography and biogeography of fungi. *MR* **112**, 2008), Pirozynski (*in* Ainsworth & Sussman (Eds), *The Fungi*, **3**: 487, 1968), Pirozynski & Weresub (*in* Kendrick (Ed.), *The whole fungus* **1**: 93, 1979), Pirozynski & Walker (*Aust. J. Bot.* Suppl. **10**, 1983; Pacific).

Major regional studies are cited in this *Dictionary* under systematic entries and also Discomycetes, Inventories, Lichens, Literature, Macromycetes, Plant pathogenic fungi, and Pyrenomycetes. See also Biodiversity, Numbers of fungi, and particular substrata.

Geomorium Speg. (1922) = Underwoodia fide Ga-

mundí (*Darwiniana* **11**: 418, 1957).

Geomyces Traaen (1914), anamorphic *Pseudogymnoascus, Gymnostellatospora*, Hso.0eP.1. 4, widespread (esp. north temperate). See Sigler & Carmichael (*Mycotaxon* **4**: 376, 1976), van Oorschot (*Stud. Mycol.* **20**, 1980), Hocking & Pitt (*Mycol.* **80**: 82, 1988), Kuraishi *et al.* (*Antonie van Leeuwenhoek* **77**: 179, 2000; ubiquinones), Vidal *et al.* (*Revta Iberoamer. Micol.* **17** [Special]: 22, 2000; phylogeny), Gianni *et al.* (*Mycoses* **46**: 430, 2003; skin infection), Jiang & Yao (*Mycotaxon* **94**: 55, 2005; phylogeny, development), Rice & Currah (*Mycol.* **98**: 307, 2006; phylogeny).

Geopetalaceae Jülich (1982) = Pleurotaceae. The diagnosis of the family by Jülich refers to *Geopetalum* as typified by Singer (= *Faerberia*).

Geopetalum Pat. (1887) = Hohenbuehelia fide Kuyper (*in litt.*).

Geopetalum Singer (1951) ≡ Geopetalum Pat.

Geophila Quél. (1886) [non *Geophila* D. Don 1825, *Rubiaceae*] = Psilocybe (Fr.) P. Kumm. fide Kuyper (*in litt.*).

geophilous, earth loving, e.g. of fungi having underground fruit bodies. Cf. terricolous.

Geopora Harkn. (1885), Pyronemataceae. 13, widespread (northern hemisphere). See Burdsall (*Mycol.* **60**: 504, 1968), Senn-Irlet (*Beitr. Kenntn. Pilze Mitteleur.* **5**: 191, 1989; key 8 spp.), Zhang & Yu (*Acta Mycol. Sin.* **11**: 8, 1992; 3 spp. China), Yao & Spooner (*MR* **100**: 72, 1996; key Brit. spp.), Hansen & Pfister (*Mycol.* **98**: 1029, 2006; phylogeny), Læssøe & Hansen (*MR* **111**: 1075, 2007; phylogeny), Perry *et al.* (*MR* **111**: 549, 2007; phylogeny).

Geoporella Soehner (1951) = Hydnotrya fide Trappe (*TBMS* **65**: 496, 1975).

Geopyxis (Pers.) Sacc. (1889), ? Pyronemataceae. 7 (Biotrophic, associated with conifer roots), widespread. See Thind *et al.* (*Acta Bot. Indica* **9**: 115, 1981; key Himalayan spp.), Kimbrough & Gibson (*CJB* **68**: 342, 1990; ultrastr.), Garnoeidner *et al.* (*Z. Mykol.* **52**: 201, 1991), Crous *et al.* (*S. Afr. J. Bot.* **62**: 89, 1996), Landvik *et al.* (*Nordic Jl Bot.* **17**: 403, 1997; DNA), Vrålstad *et al.* (*Mol. Ecol.* **7**: 609, 1998; mycorrhizal status), Zhuang & Liu (*Nova Hedwigia* **83**: 177, 2006).

Georgefischeria Thirum. & Naras. (1963), Georgefischeriaceae. 4 (witches' broom of *Rivea*, *Argyreia & Lettsomia* (*Convolvulaceae*)), India. See Bauer *et al.* (*MR* **105**: 416, 2001), Gandhe (*Frontiers in Microbial Biotechnology and Plant Pathology, (Prof. S.M. Reddy Commemoration Volume)*: 69, 2002).

Georgefischeriaceae R. Bauer, Begerow & Oberw. (1997), Georgefischeriales. 2 gen., 27 spp.

Lit.: Bauer *et al.* (*CJB* **75**: 1273, 1997), Begerow *et al.* (*CJB* **75**: 2045, 1998), Bauer *et al.* (*MR* **105**: 423, 2001), Begerow *et al.* (*Mycol. Progr.* **1**: 187, 2002), Begerow *et al.* (*MR* **108**: 1257, 2004).

Georgefischeriales R. Bauer, Begerow & Oberw. (1997). Exobasidiomycetes. 4 fam., 7 gen., 40 spp. Fams:

(1) **Eballistraceae**
(2) **Gjaerumiaceae**
(3) **Georgefischeriaceae**
(4) **Tilletiariaceae**

For *Lit.* see under fam.

Geoscypha (Cooke) Lambotte (1888) = Peziza Fr. fide Eckblad (*Nytt Mag. Bot.* **15**: 1, 1968).

Geosiphon F. Wettst. (1915), Geosiphonaceae. 1 (arbuscular mycorrhiza unknown), Europe. includes cyanobacteria (*Nostoc*) in vesicles; the only known example of endocyanosis (q.v.) in fungi. See Mollenhauer *in* Reisser (Ed.) (*Algae and symbiosis*: 339, 1992), Schüssler *et al.* (*Bot. Acta* **107**: 36, 1994; arbuscular mycorrhizal affinity), Schüssler *et al.* (*Protoplasma* **185**: 131, 1995; endocytobiosis), Gehrig *et al.* (*J. Mol. Evol.* **43**: 71, 1996; phylogeny), Schüssler *et al.* (*Protoplasma* **190**: 53, 1996; ultrastr.), Mollenhauer *et al.* (*Protoplasma* **193**: 3, 1998; nutrition), Schüssler & Kluge *in* McLaughlin *et al.* (Eds) (*The Mycota* A Comprehensive Treatise on Fungi as Experimental Systems for Basic and Applied Research **9**: 151, 2001), Schüssler (*Plant and Soil* **244**: 75, 2002; phylogeny, taxonomy, and evolution), Redecker & Raab (*Mycol.* **98**: 885, 2006; phylogeny).

Geosiphonaceae Engl. & E. Gilg (1924), Archaeosporales. 1 gen. (+ 1 syn.), 1 spp.

Lit.: Azcon-Aguilar & Barea (*Mycorrhiza* **6**: 457, 1996), Gehrig *et al.* (*J. Mol. Evol.* **43**: 71, 1996), van der Heijden *et al.* (*Nature* Lond. **396**: 69, 1998), Schüssler & Kluge *in* McLaughlin *et al.* (Eds) (*The Mycota* A Comprehensive Treatise on Fungi as Experimental Systems for Basic and Applied Research **7A**: 151, 2001), Schüßler *et al.* (*MR* **105**: 1413, 2001), Redecker (*Glomeromycota* Arbuscular mycorrhizal fungi and their relative(s). Version 01 July 2005.
http://tolweb.org/Glomeromycota/28715/2005.07.01 in The Tree of Life Web Project, http://tolweb.org: [unpaginated], 2005), Schüßler & Wolf *in* Declerck, Strullu & Fortin (Eds) (*Root-organ culture of mycorrhizal fungi*, 2005).

Geosiphonales Caval.-Sm. (1998) = Archaeosporales.

Geosiphonomyces Cif. & Tomas. (1957) ≡ Geosiphon.

Geosmithia Pitt (1979), anamorphic *Hypocreales*, Hso.0eH.32/33. 10, widespread. Species with *Talaromyces* anamorphs are unrelated. See Ogawa *et al.* (*Mycol.* **89**: 756, 1997; rDNA analysis), Ogawa & Sugiyama (*Integration of Modern Taxonomic Methods for Penicillium and Aspergillus Classification*: 149, 2000; teleomorph), Pitt *et al.* (*Integration of Modern Taxonomic Methods for Penicillium and Aspergillus Classification*: 9, 2000; accepted names), Heredia *et al.* (*Mycol.* **93**: 528, 2001; Mexico), Prieto *et al.* (*CJB* **80**: 410, 2002; cell wall polysaccharides), Kolařík *et al.* (*MR* **108**: 1053, 2004; morphology, phylogeny), Kubátová *et al.* (*Czech Mycol.* **56**: 1, 2004; ecology), Kolařík *et al.* (*MR* **109**: 1323, 2005), Yaguchi *et al.* (*Cryptog. Mycol.* **26**: 133, 2005; thermotolerant sp.), Kolařík *et al.* (*MR* **111**: 1298, 2007; with bark beetles).

Geotrichaceae Cif. ex Subram. (1962) = Dipodascaceae.

Geotrichella Arnaud (1954) nom. dub., anamorphic *Pezizomycotina*, Hso.0eP.40. 2 (on paper), France; N. America. See Sigler & Carmichael (*Mycotaxon* **4**: 349, 1976).

Geotrichites Stubblef., C.E. Mill., T.N. Taylor & G.T. Cole (1985), Fossil Fungi. 1 (on arachnoid in amber), Dominican Republic.

Geotrichoides Langeron & Talice (1932) = Trichosporon fide von Arx *et al.* (*Stud. Mycol.* **14**: 30, 1977).

Geotrichopsis Tzean & Estey (1991), anamorphic *Agaricomycetes*. 1 (with dolipore septa), Canada. See Tzean & Estey (*MR* **95**: 1351, 1991).

geotrichosis, disease in humans or animals caused by

Geotrichum.

Geotrichum Link (1809), anamorphic *Dipodascus, Galactomyces*, Hsy.0eH.39. 33, Europe; America. *G. candidum* (often as *Oospora lactis*) in milk. See Morenz (*Mykol. Schriftenreihe* **1**, 1963), Guého (*Antonie van Leeuwenhoek* **45**: 199, 1979; base comp. and taxonomy), Weijman (*Antonie van Leeuwenhoek* **45**: 119, 1979; carbohydrates and taxonomy), Olesen & Kier (*Nordic Jl Bot.* **4**: 365, 1984; SEM and TEM structure), de Hoog *et al.* (*Stud. Mycol.* **29**: 1, 1986; key), Guého *et al.* (*J. Clin. Microbiol.* **25**: 1191, 1987; DNA relatedness in *G. capitatum*), de Hoog & Amberger (*Antonie van Leeuwenhoek* **58**: 101, 1990; protein patterns in *Geotrichum* and teleomorphs), Jensen *et al.* (*Mycoses* **33**: 519, 1991; crossed immunoelectrophoresis to differentiate *G. candidum*), Watanabe *et al.* (*Mycoscience* **35**: 417, 1994; endoconidia), Pitt & Hocking (*Fungi and Food Spoilage* Edn 2: 593 pp., 1997; food-associated spp.), Hoog *et al.* in Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 574, 1998; review), Smith & Poot (*Antonie van Leeuwenhoek* **74**: 229, 1998; genetic characterization), Tsai & Hsieh (*Plant Pathology Bulletin* Taichung **8**: 9, 1999; selective medium), Smith *et al.* (*Antonie van Leeuwenhoek* **77**: 71, 2000; taxonomy), Marcellino *et al.* (*Appl. Environm. Microbiol.* **67**: 4752, 2001; from cheese), Gente *et al.* (*Int. J. Food Microbiol.* **76**: 127, 2002; chromosomes), Hoog & Smith (*Stud. Mycol.* **50**: 489, 2004; phylogeny, review), Suh & Blackwell (*MR* **110**: 220, 2006; on beetles), Suh *et al.* (*Mycol.* **98**: 1006, 2006; phylogeny), Wuczkowski *et al.* (*Int. J. Syst. Evol. Microbiol.* **56**: 301, 2006).

geotropism, see tropisms.

Geotus Pilát & Svrček (1953) = Arrhenia fide Redhead (*CJB* **62**: 865, 1984).

• **Gerdemannia** C. Walker, Błaszk., A. Schüssler & Schwarzott (2004) = Pacispora fide Kirk (*in litt.*).

Gerdemanniaceae C. Walker, Błaszk., A. Schüssler & Schwarzott (2004) = Pacisporaceae.

Gerhardtia Bon (1994) = Lyophyllum fide Kuyper (*in litt.*).

Gerlachia W. Gams & E. Müll. (1980) = Microdochium fide Samuels & Hallett (*TBMS* **81**: 473, 1983).

germ pore, a differentiated, frequently apical area, or hollow, in a spore wall (esp. in rusts) through which a **germ tube** (a germination hyphae) may come out; see Melendez-Howell (*Ann. Sci. nat. Bot.* sér. 12 **8**: 487, 1967; germ pore of basidiospores).

germ slit, a thin area of spore wall usually orientated along the long axis of the spore. In *Bryothele mira* the germ slit is transverse (Dobbeler, *Nova Hedw.* **66**: 337, fig. 3, 5, 1998).

germ tube, a germination hyphae which is formed by a germinating spore.

germicide, a substance causing destruction of microorganisms.

germination by repetition, producing secondary spores in place of germ tubes, as in *Heterobasidiomycetes* and *Sporobolomyces*.

Germslitospora Lodha (1978) = Coniochaeta fide Udagawa & Furuya (*TMSJ* **20**: 5, 1979), von Arx (*Gen. Fungi Sporul. Cult.* Edn 3, 1981), García *et al.* (*Mycol.* **95**: 525, 2003), García *et al.* (*MR* **110**: 1271, 2006; phylogeny).

Gerronema Singer (1951), Marasmiaceae. 13, widespread (esp. subtropical). See Singer (*Nova Hedwigia* **7**: 53, 1964; keys), Singer (*Fl. Neotrop.* **3**: 24, 1970; key 20 neotrop. spp.), Redhead (*CJB* **65**: 1551, 1986; emend. circumscr.), Lutzoni (*Syst. Biol.* **46**: 373, 1997; phylogeny), Redhead *et al.* (*Mycotaxon* **83**: 19, 2002; phylogeny), Bañares *et al.* (*Mycol.* **98**: 455, 2006; Canary Islands).

Gerulajacta Preuss (1855) nom. dub., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Gerwasia Racib. (1909), Phragmidiaceae. 9 (on *Rubus, Rosa* (*Rosaceae*)), East Indies; America (tropical); China; Indonesia; Japan; Nepal; Philippines. See Tai (*Farlowia* **3**: 95, 1947), Buriticá (*Rev. I.C.N.E.* **5**: 173, 1994), Berndt (*Frontiers in Basidiomycote Mycology*: 185, 2004; Costa Rica).

Geusia Rühl & Korn (1979), Microsporidia. 1.

ghost fungus, *Pleurotus nidiformis*, an Australian luminous agaric. See Willis (*Muelleria* **1**: 213, 1967).

Giacominia Cif. & Tomas. (1953) = Arthopyrenia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

giant puff-ball, *Langermannia gigantea*; see record fungi.

giant stone-fungus, *Polyporus tumulosus*; the pseudosclerotium may exceed $1 m^3$.

Gibbago E.G. Simmons (1986), anamorphic *Pleosporaceae*, Hso.#eP.26. 1, N. & S. America. See Simmons (*Mycotaxon* **27**: 108, 1986).

gibber, gibbous (q.v.).

Gibbera Fr. (1825), Venturiaceae. Anamorphs *Dictyodochium*, *Stigmina*-like. *c.* 28, widespread. See Müller (*Sydowia* **8**: 60, 1954), Eriksson (*Svensk bot. Tidskr.* **68**: 192, 1974; key 9 spp.), Sivanesan (*TBMS* **82**: 507, 1984; anamorphs), Samuels *et al.* (*Brittonia* **40**: 392, 1988), Barr (*Sydowia* **41**: 25, 1989; key 4 N. Am. spp.).

Gibberella Sacc. (1877), Nectriaceae. Anamorph *Fusarium*. 23 (saprobes and pathogens), widespread. *G. fujikuroi* (on cotton, maize, rice (Bakanae disease) and other crops in warm areas); *G. zeae* (frequently as *G. saubinetii*) (foot rot and ear blight (scab) of cereals). See also gibberellin. See Nirenberg & O'Donnell (*Mycol.* **90**: 434, 1998), O'Donnell *et al.* (*Mycol.* **90**: 465, 1998; phylogeny), Samuels *et al.* in Summerell (Ed.) (*The genus Fusarium*, 1998), Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999), O'Donnell *et al.* (*Mycoscience* **41**: 61, 2000), Aoki *et al.* (*Mycoscience* **42**: 461, 2001), Geiser *et al.* (*Mycol.* **93**: 670, 2001), Leslie (*Fusarium* Paul E. Nelson Memorial Symposium: 113, 2001; population genetics), Steenkamp *et al.* (*Molecular Plant Pathology* **2**: 215, 2001; molecular ecology), Britz *et al.* (*Sydowia* **54**: 9, 2002; *G. circinata*), Desjardins (*Ann. Rev. Phytopath.* **41**: 177, 2003; review), Mirete *et al.* (*Int. J. Food Microbiol.* **89**: 213, 2003; fumonisins), Zeller *et al.* (*Mycol.* **95**: 943, 2003; *G. konza*), Láday *et al.* (*Eur. J. Pl. Path.* **110**: 563, 2004; mtDNA), Leslie *et al.* (*Eur. J. Pl. Path.* **110**: 611, 2004; mating populations), Leslie *et al.* (*Appl. Environm. Microbiol.* **70**: 2254, 2004; Kansas), Phan *et al.* (*Stud. Mycol.* **50**: 261, 2004; Australia), Zeller *et al.* (*Mol. Ecol.* **13**: 563, 2004; USA), Adugna *et al.* (*Z. PflKrankh. PflPath. PflSchutz* **112**: 134, 2005; on *Coffea*), Geiser *et al.* (*Mycol.* **97**: 191, 2005; on *Coffea*), Lepoint *et al.* (*Appl. Environm. Microbiol.* **71**: 8466, 2005; on *Coffea*), Leslie *et al.* (*Mycol.* **97**: 718, 2005; *G. sacchari*).

gibberellin, a complex of hormone-like substances from *Gibberella fujikuroi* (anamorph *Fusarium moniliforme*) which causes overgrowth of higher

plants, first recognized as the cause of Bakanae disease of rice. Gibberellin A_1, A_2, A_3 and other fractions have been distinguished including **gibberellic acid** which has a similar physiological action to gibberellin A_1. Gibberellin is manufactured commercially for use in horticulture. See Stodola (*Source book on gibberellin* 1828-1957, 1958; 632 abstracts), Knapp (Ed.) (*Eigenschaften und Wirkungen der Gibberelline*, 1962), MacMillan & Takahashi (*Nature* **217**: 170, 1968; allocation of trivial names), Jefferys (*Adv. appl. Microbiol.* **13**: 283, 1970).

Gibberellulina Sousa da Câmara (1950) nom. dub., Sordariomycetidae. 1, Europe. See Rossman (*Stud. Mycol.* **42**, 1999).

Gibberidea (Fr.) Kuntze (1898) ≡ Cucurbitaria.

Gibberidea Fuckel (1870), Dothideomycetes. Anamorph *Pleurostomella*. 1, Europe. See Holm (*Svensk bot. Tidskr.* **62**: 217, 1968).

Gibberinula Kuntze (1898) ≡ Gibberidea Fuckel.

gibbous (of a pileus), having a swelling or wide umbo, or having a convex top and a flat underside; gibber, gibbose.

Gibellia Pass. (1886) ≡ Gibellina.

Gibellia Sacc. (1885), ? Melanconidaceae. 1 (from bark), Australia. See von Arx & Müller (*Beitr. Kryptfl. Schweiz* **11** no. 1, 1954).

Gibellina Pass. (1886), ? Magnaporthaceae. 3, Asia; Europe. *G. cerealis* on wheat. See Glynne *et al.* (*TBMS* **84**: 653, 1985).

Gibellula Cavara (1894), anamorphic *Torrubiella*, Hsy.0eH.15/16. 17, widespread. See Petch (*Annls mycol.* **30**: 386, 1932), Samson & Evans (*Mycol.* **84**: 300, 1992; on *Arachnida*), Tzean *et al.* (*Mycol.* **89**: 309, 1997; spp. from Taiwan), Selçuk *et al.* (*Mycol. Balcanica* **1**: 61, 2004; Turkey).

Gibellulopsis Bat. & H. Maia (1959), anamorphic *Plectosphaerellaceae*. 1, widespread. See Zare *et al.* (*Nova Hedwigia* **85**: 463, 2007).

Gibsonia Massee (1909) ? = Melanospora Corda fide Cannon & Hawksworth (*J. Linn. Soc.* Bot. **84**, 1982).

Gigantospora B.S. Lu & K.D. Hyde (2003), Xylariaceae. 1, USA. See Lu & Hyde (*Nova Hedwigia* **76**: 202, 2003).

Gigasperma E. Horak (1971), Gigaspermaceae. 2, Australasia; N. America. The genus is polyphyletic with some members belonging to *Boletales* and others to *Agaricales*. See Beaton & Malajczuk (*TBMS* **87**: 478, 1986), Castellano & Trappe (*Aust. Syst. Bot.* **5**: 613, 1992), Matheny *et al.* (*Mycol.* **98**: 982, 2006; see on-line supplementary material).

Gigaspermaceae Jülich (1982), Agaricales. 1 gen., 2 spp.

Lit.: Castellano & Trappe (*Aust. Syst. Bot.* **5**: 641, 1992), Kropp & Hutchison (*Mycol.* **88**: 662, 1996).

Gigaspora Gerd. & Trappe (1974), Gigasporaceae. 7, widespread. See Sward (*New Phytol.* **87**: 761, 1980), Sward (*New Phytol.* **87**: 661, 1981; spore ultrastr.), Walker & Sanders (*Mycotaxon* **27**: 169, 1986; emend.), Spain *et al.* (*Mycotaxon* **34**: 667, 1989), Tommerup & Sivasithamparam (*MR* **94**: 897, 1991), Maia *et al.* (*Mycol.* **85**: 883, 1993), Maia *et al.* (*Mycol.* **86**: 343, 1994; spore wall ultrastr., germination), Bentivenga & Morton (*Mycol.* **87**: 719, 1995; monogr. & key), Montecchi *et al.* (*Riv. Micol.* **39**: 269, 1996), Yao *et al.* (*Genera of Endogonales*: 229 pp., 1996), Gadhar *et al.* (*Can. J. Microbiol.* **43**: 795, 1997; polymorphism), Bago *et al.* (*New Phytol.* **139**: 581, 1998; molecular analysis), Lanfranco *et al.* (*Mol. Ecol.* **8**: 372, 1999; genetic variation), Redecker & Raab (*Mycol.* **98**: 885, 2006; phylogeny).

Gigasporaceae J.B. Morton & Benny (1990), Diversisporales. 2 gen., 39 spp.

Lit.: Azcon-Aguilar & Barea (*Mycorrhiza* **6**: 457, 1996), Bentivenga & Morton (*Proc. natn Acad. Sci. U.S.A.* **93**: 5659, 1996; fatty acids), van der Heijden *et al.* (*Nature* Lond. **396**: 69, 1998), Lanfranco *et al.* (*Mol. Ecol.* **8**: 37, 1999; sequence variability), Jeffries & Dodd (*Appl. Microb. System.*: 73, 2000), Schüßler *et al.* (*MR* **105**: 1413, 2001), Walker & Schüssler (*MR* **108**: 982, 2004), Redecker (*Glomeromycota* Arbuscular mycorrhizal fungi and their relative(s). Version 01 July 2005. http://tolweb.org/Glomeromycota/28715/2005.07.01 in The Tree of Life Web Project, http://tolweb.org: [unpaginated], 2005), Souza *et al.* (*MR* **109**: 697, 2005).

Gigasporites Carlie J. Phipps & T.N. Taylor (1996), Fossil Fungi. 1, Antarctica. See Phipps & Taylor (*Mycol.* **88**: 709, 1996).

Gilbertella Hesselt. (1960), Choanephoraceae. 1, widespread (tropical). *G. persicaria* pathogenic to peach (*Amygdalus persicae*). See Hesseltine (*Bull. Torrey bot. Club* **87**: 21, 1960), O'Donnell *et al.* (*CJB* **55**: 662, 1977; zygospore ontogeny), Powell *et al.* (*CJB* **59**: 908, 1981; ultrastr. chlamydospore), Powell *et al.* (*Protoplasma* **111**: 87, 1982; ultrastr. membrane), Whitney & Arnott (*Mycol.* **78**: 42, 1986), Whitney & Arnott (*Mycol.* **80**: 707, 1988; calcium oxalate chrystals), Benny (*Mycol.* **83**: 150, 1991), Michaelides *et al.* (*Mycol.* **89**: 609, 1997; zygosporogenesis), Donnell *et al.* (*Mycol.* **93**: 286, 2001; phylogeny), Voigt & Wöstemeyer (*Gene* **270**: 113, 2001; phylogeny), Papp *et al.* (*Acta Biolog. Hung.* **54**: 393, 2003; phylogeny).

Gilbertellaceae Benny (1991) = Choanephoraceae.

Lit.: Kirk (*in litt.*).

Gilbertia Donk (1934) nom. inval. = Amanita Pers. fide Kuyper (*in litt.*).

Gilbertiella R. Heim (1965) [non *Gilbertiella* Boutique 1951, *Annonaceae*] ≡ Gyrodon.

Gilbertina R. Heim (1966) = Gyrodon fide Pegler (*Kew Bull.* Addit. Ser. **9**, 1983).

Gilbertsonia Parmasto (2001), Fomitopsidaceae. 1, USA. See Parmasto (*Harvard Pap. Bot.* **6**: 179, 2001).

Gilchristia Redaelli & Cif. (1934) ≡ Zymonema.

Gilkeya M.E. Sm., Trappe & Rizzo (2007), Pyronemataceae. 1 (hypogeous), N. America. See Smith *et al.* (*Mycol.* **98**: 705, 2006), Læssøe & Hansen (*MR* **111**: 1075, 2007; phylogeny).

gill (of an agaric), commonly used in English for lamella (q.v.) which is to be preferred as a more international term; **- fungi**, members of the *Agaricales*.

Gilletia Torrend (1914) ≡ Telligia.

Gilletiella Sacc. & P. Syd. (1899), Dothideomycetes. Anamorph *Ascochyta*-like. 2 or 2 (on *Chusquea*), America. See Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962), Eriksson (*SA* **7**: 72, 1988).

Gillotia Sacc. & Trotter (1913), Mycosphaerellaceae. Anamorph *Asteromella*-like. *c.* 3, widespread (tropical). See von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Gilmania Bat. & Cif. (1962) = Chaetothyrium fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Gilmaniella G.L. Barron (1964), anamorphic *Pezizomycotina*, Hso.0eP.1/10. 7, widespread. See Moustafa & Ezz-Eldin (*MR* **92**: 502, 1989; key),

Umali *et al.* (*MR* **102**: 435, 1998; Hong Kong).
gilvous, pale yellow.
gin, see spirits.
Ginanniella Cif. (1938) = Urocystis fide Nagler (*Z. Mykol.* **53**: 331, 1987), Vánky (*Illustrated genera of smut fungi*, 1987).
ginger beer plant (Californian or American 'bees'), a mixture of a yeast (*Saccharomyces pyriformis*) and a bacterium (*Bacterium vermiforme*) used for fermenting a sugar solution to make a drink (Marshall Ward, *Phil. Trans. R. Soc., Lond.* **B 183**: 125, 1892). See Ramsbottom (*TBMS* **7**: 86, 1921); cf. tibi, tea fungus, teekwass.
Ginzbergerella Zahlbr. (1931) = Gyrocollema fide Henssen (*SA* **5**: 131, 1986).
Giraffachitina Locq. (1985), Fossil Fungi. 1, Estonia.
Girardia Gray (1821) = Bangia fide Henssen (*Symb. bot. upsal.* **18** no. 1, 1963).
Giulia Tassi (1904), anamorphic *Pezizomycotina*, Cpd.0eH.1. 1, Europe. See Pirozynski & Shoemaker (*CJB* **49**: 529, 1971).
Gjaerumia R. Bauer, M. Lutz & Oberw. (2005), Gjaerumiaceae. 3 (on *Liliaceae* s.l.), Europe (northern). See Bauer et al. (*MR* **109**: 1250, 2005).
Gjaerumiaceae R. Bauer, M. Lutz & Oberw. (2005), Georgefischeriales. 1 gen., 3 spp.
Lit.: Bauer *et al.* (*MR* **109**: 1250, 2005).
Glabrocyphella W.B. Cooke (1961), Marasmiaceae. 13, widespread. See Cooke (*Beih. Sydowia* **4**: 45, 1961), Redhead *et al.* (*Mycotaxon* **83**: 19, 2002; phylogeny).
Glabrotheca Chardón (1939), Pezizomycotina. 1, Venezuela.
glabrous, smooth; not hairy.
glaireous, slimy.
Glaphyriopsis B. Sutton & Pascoe (1987), anamorphic *Pezizomycotina*, Ccu.≡ eH-P.15. 2, Australia. See Sutton & Pascoe (*TBMS* **88**: 169, 1987).
Glarea Bills & F. Paláez (1999), anamorphic *Helotiales*, Hso.?.?. 1, Spain. See Bills *et al.* (*MR* **103**: 189, 1999).
Glaucinaria Fée ex A. Massal. (1860) = Diorygma fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995), Kalb *et al.* (*Symb. bot. upsal.* **34** no. 1: 133, 2004).
Glaucomaria M. Choisy (1929) ? = Lecanora fide Hafellner (*Beih. Nova Hedwigia* **79**: 241, 1984; status).
Glaucospora Rea (1922) = Melanophyllum fide Singer (*Agaric. mod. Tax.*, 1951).
glaucous, having a bluish-grey waxy bloom.
Glaxoa P.F. Cannon (1997), Tubeufiaceae. 1, Great Britain. See Cannon (*SA* **15**: 121, 1997), Kodsueb *et al.* (*Fungal Diversity* **21**: 105, 2006).
Glaziella Berk. (1880), Glaziellaceae. 1, widespread (tropical). See Landvik & Eriksson (*SA* **13**: 13, 1984; posn), Gibson *et al.* (*Mycol.* **78**: 941, 1987), Landvik *et al.* (*Nordic Jl Bot.* **17**: 403, 1997; phylogeny), Harrington *et al.* (*Mycol.* **91**: 41, 1999; phylogeny), Hansen & Pfister (*Mycol.* **98**: 1029, 2006; phylogeny), Læssøe & Hansen (*MR* **111**: 1075, 2007; phylogeny), Perry *et al.* (*MR* **111**: 549, 2007; phylogeny).
Glaziellaceae J.L. Gibson (1986), Pezizales. 1 gen. (+ 1 syn.), 1 spp.
Lit.: Landvik & Eriksson (*SA* **13**: 13, 1984; posn), Gibson *et al.* (*Mycol.* **78**: 941, 1986), Landvik & Eriksson (*SA* **13**: 13, 1994), Landvik *et al.* (*Nordic Jl Bot.* **17**: 403, 1997), Harrington *et al.* (*Mycol.* **91**: 41, 1999), Hansen & Pfister (*Mycol.* **98**: 1029, 2006; phylogeny), Hansen *et al.* (*Mycol.* **97**: 1023, 2005), Perry *et al.* (*MR* **111**: 549, 2007; phylogeny).
Glaziellales J.L. Gibson (1986) = Pezizales.
gleba, the sporing tissue in an angiocarpous sporocarp, esp. of gasteromycetes and hypogeous *Pezizales*; **glebal mass**, the projectile of *Sphaerobolus*.
glebula, a rounded process from a lichen thallus.
Glenospora Berk. & Desm. (1849) nom. rej. = Septobasidium. Used in medical mycology for unrelated fungi. fide Berndt (*in litt.*) Used in medical mycology for unrelated fungi; see, Petch (*TBMS* **12**: 105, 1927).
Glenosporaceae Nann. (1934) = Septobasidiaceae.
Glenosporella Nann. (1931) = Geomyces fide Carmichael (*CJB* **40**, 1962), van Oorschot (*Stud. Mycol.* **20**, 1980).
Glenosporopsis O.M. Fonseca (1943), anamorphic *Pezizomycotina*, Hso.0eP.1/4. 1 (on humans), Brazil. See Taborda *et al.* (*J. Clin. Microbiol.* **37**: 2031, 1999).
gleocystidium, see cystidium.
Gleophyllum, see *Gloeophyllum*.
gleoplerous hyphae (oil hyphae), hyphae with very long cells (or unicellular), with numerous oil drops in the plasma. See Jülich (*in* Gams (Ed.), *Kleine Kryptogamenflora* **II**(7), 1984).
gliatope, a site of heavy gel production (Moore, *Am. J. Bot.* **52**: 391, 1965). See gel tissue.
Glioannellodochium Matsush. (1989), anamorphic *Pezizomycotina*, Hsp.0eH.19. 1, Australia. See Matsushima (*Matsush. Mycol. Mem.* **6**: 19, 1989).
Glioblastocladium Matsush. (1989), anamorphic *Pezizomycotina*, Hso.0eH.10. 1, Australia. See Matsushima (*Matsush. Mycol. Mem.* **6**: 20, 1989).
Gliobotrys Höhn. (1902) = Stachybotrys fide Bisby (*TBMS* **26**: 133, 1943).
Gliocephalis Matr. (1899), anamorphic *Pyxidiophoraceae*, Hsy.0eH.15. 2, Asia; N. America. See Hawksworth (*Bull. Br. Mus. nat. hist.* Bot. **6**: 181, 1979), Jacobs *et al.* (*Mycol.* **97**: 111, 2005; phylogeny, morphology).
Gliocephalotrichum J.J. Ellis & Hesselt. (1962), anamorphic *Leuconectria*, Hso.0eH.15. 5, widespread. See Wiley & Simmons (*Mycol.* **63**: 575, 1971; key), Rossman *et al.* (*Mycol.* **85**: 685, 1993; teleomorph), Schoch *et al.* (*Stud. Mycol.* **45**: 45, 2000; phylogeny), Watanabe & Nakamura (*Mycoscience* **46**: 46, 2005; Japan), Decock *et al.* (*Mycol.* **98**: 488, 2006; French Guiana).
Gliocladiopsis S.B. Saksena (1954), Nectriaceae. 1, pantropical. See Barron (*The genera of hyphomycetes from soil*, 1968), Schoch *et al.* (*Stud. Mycol.* **45**: 45, 2000; phylogeny), Crous (*Taxonomy and Pathology of Cylindrocladium (Calonectria) and Allied Genera*: 278 pp., 2002; revision).
Gliocladium Corda (1840), anamorphic *Sphaerostilbella*, Hsy.0eH.15. 13, widespread. See also *Clonostachys*, *Trichoderma*. See Seifert (*Stud. Mycol.* **27**: 1, 1985; teleomorph), Schroers (*Stud. Mycol.* **46**: 1, 2001), Samuels *et al.* (*CBS Diversity Ser.* **4**, 2006; USA).
Gliocladochium Höhn. (1916) ≡ Periola.
Gliocoryne Maire (1909) = Pistillaria Fr. fide Corner (*Ann. Bot. Mem.* [A monograph of Clavaria and allied genera] **1**, 1950).
Gliodendron Salonen & Ruokola (1969) = Sterigmatobotrys fide Sutton (*Mycol. Pap.* **132**, 1973).
Gliomastix Guég. (1905), anamorphic *Hypocreales*,

Hso.0eP.15. 19, widespread. See Dickinson (*Mycol. Pap.* **115**, 1968; key), Gams (*Cephalosporium-artige Schimmelpilze*, 1971), Hammill (*Mycol.* **73**: 229, 1981; typification), Gams & Boekhout (*Proc. Indian Acad. Sci.* Pl. Sci. **94**: 273, 1985).

Glionectria Crous & S.L. Schoch (2000), Nectriaceae. Anamorph *Gliocladiopsis*. 1, widespread (pantropical). See Schoch *et al.* (*Stud. Mycol.* **45**: 45, 2000), Crous (*Taxonomy and Pathology of Cylindrocladium (Calonectria) and Allied Genera*: 278 pp., 2002; revision).

Gliophorus Herink (1958) = Hygrocybe fide Singer (*Agaric. mod. Tax.* edn 2, 1962).

Gliophragma Subram. & Lodha (1964), anamorphic *Pezizomycotina*, Hsy.1bH.10. 1, India. See Subramanian & Lodha (*CJB* **42**: 1059, 1964).

Gliostroma Corda (1837) nom. dub., anamorphic *Pezizomycotina*. See Holubová-Jechová (*Sydowia* **46**: 242, 1994).

gliotoxin, an antibiotic from *Gliocladium virens* (Webster & Lomas, *TBMS* **47**: 535, 1964), *Aspergillus fumigatus*, *Penicillium cinerascens* (Brian & Hemming, *Ann. appl. Biol.* **32**: 214, 1945; *Biochem. J.* **41**: 570, 1947); antibacterial and antifungal (has been used as a seed dressing). Cf. viridin.

Gliotrichum Eschw. (1822) nom. dub., ? Fungi.

Glischroderma Fuckel (1870), anamorphic *Pezizaceae*, St.0eP.6. 1, Europe. See Hennebert (*Persoonia* **7**: 183, 1973), Norman & Egger (*Mycol.* **91**: 820, 1999; phylogeny), Hansen *et al.* (*Mycol.* **93**: 958, 2001; phylogeny).

Glischrodermataceae Rea (1922) = Pezizaceae.

Globaria Quél. (1873) ≡ Bovista fide Demoulin (*Persoonia* **7**: 152, 1973).

Globifomes Murrill (1904), Polyporaceae. 1, N. America. See Gilbertson & Ryvarden (*N. Amer. Polyp.* **1**: 307, 1987).

Globipilea, see *Globopilea*.

Globoa Bat. & H. Maia (1962), Dothideomycetes. 1, Uganda. See Batista & Maia (*Beih. Sydowia* **3**: 54, 1962).

Globoasclerotes Stach & Pickh. (1957), Fossil Fungi. 1 (Carboniferous), Germany.

globoid (**globose**, **globular**, **globulose**), spherical or almost so (Fig. 23.1).

Globonectria Etayo (2002), Bionectriaceae. 1, Colombia. See Etayo (*Biblthca Lichenol.* **84**: 47, 2002).

Globopilea Beauseign. (1926) = Helvella fide Dissing (*Dansk bot. Ark.* **25** no. 1, 1966).

Globosasclerotes Stach & Pickh. (1957), Fossil Fungi. 1 (Carboniferous, Tertiary), Europe. See Stach & Pickhardt (*Palaeontologische Zeitschrift* **31**: 140, 1957).

Globosomyces Jülich (1980), Polyporales. 1, Borneo. See Jülich (*J. Linn. Soc.* Bot. **81**: 45, 1980).

Globosopyreno Lloyd (1923) nom. dub., ? Fungi.

Globosphaeria D. Hawksw. (1990), Sordariomycetes. 1 (on lichens, esp. *Normandina*), Tasmania. See Hawksworth (*Lichenologist* **22**: 301, 1990), Matzer (*Cryptog. Mycol.* **14**: 11, 1993).

Globuliciopsis Hjortstam & Ryvarden (2004), Polyporales. 2, S. America. See Hjortstam & Ryvarden (*Syn. Fung.* **18**: 22, 2004).

Globulicium Hjortstam (1973), Agaricomycetes. 1, Europe. *Hymenochaetales* or *Agaricales* (*Rickenella* clade). See Hjortstam (*Svensk bot. Tidskr.* **67**: 108, 1973).

Globuligera (Sacc.) Höhn. (1918) = Xylogramma fide Kutorga & Hawksworth (*SA* **15**: 1, 1997).

Globulina Speg. (1888), Dothideomycetes. 1, Brazil. See Rossman (*Mycol. Pap.* **157**, 1987).

Globulina Velen. (1934) [non *Globulina* Link 1820, *Chlorophyta*] = Unguiculella fide Svrček (*Česká Mykol.* **41**: 193, 1987).

Globuliroseum Sullia & K.R. Khan (1984), anamorphic *Pezizomycotina*, Hsp.0eH.1. 1, India. See Sullia & Khan (*Kavaka* **11**: 67, 1983).

glochidiate, covered with barbed bristles.

Gloeandromyces Thaxt. (1931), Laboulbeniaceae. 2, C. & S. America. See Nannfeldt (*Svensk bot. Tidskr.* **43**: 468, 1949).

Gloeoasterostroma Rick (1938) nom. conf., Russulales. See Rick (*Iheringia* Série Botânica **4**: 116, 1959).

Gloeocalyx Massee (1901) = Plectania fide Korf (*Mycol.* **49**: 102, 1957).

Gloeocantharellus Singer (1945), Gomphaceae. 3, N. & S. America. See Petersen (*The genera Gomphus and Gloeocantharellus in North America*, 1972), Vasco-P. & Franco-Molano (*Mycotaxon* **91**: 87, 2005; Colombian Amazonia).

Gloeocercospora D.C. Bain & Edgerton ex Deighton (1971) = Microdochium fide Rawla (*TBMS* **60**: 283, 1973; comparison with *Ramulispora*), Braun (*Monogr. Cercosporella, Ramularia Allied Genera (Phytopath. Hyphom.)* **1**, 1995), Heo *et al.* (*Pl. Path. J.* **15**: 242, 1999; Korea).

Gloeocorticium Hjortstam & Ryvarden (1986), Cyphellaceae. 1, Argentina. See Hjortstam & Ryvarden (*Mycotaxon* **25**: 551, 1986).

Gloeocoryneum Weindlm. (1964) = Leptomelanconium fide Morgan-Jones (*CJB* **49**: 1011, 1971).

Gloeocybe Earle (1909) = Lactarius fide Singer (*Agaric. mod. Tax.*, 1951).

Gloeocystidiellaceae Jülich (1982) = Stereaceae.

Gloeocystidiellum Donk (1931), Stereaceae. 7, widespread. Sensu lato 68 spp. See Donk (*Fungus* Wageningen **26**: 8, 1956), Eriksson & Ryvarden (*Cortic. N. Europ.* **3**: 405, 1975; key 10 Eur. spp.), Stalpers (*Stud. Mycol.* **40**: 59, 1996; key), Larsson & Larsson (*Mycol.* **95**: 1037, 2003; phylogeny).

Gloeocystidiopsis Jülich (1982) = Gloiothele fide Hjortstam & Larsson (*Windahlia* **21**, 1994).

Gloeocystidium P. Karst. (1889) = Dacryobolus fide Donk (*Persoonia* **3**: 199, 1964).

gloeocystidium, see cystidium.

Gloeodes Colby (1920), anamorphic *Pezizomycotina*, Cpt.0eH.?. 1, widespread. *G. pomigena* (sooty blotch of apple and citrus). See Williamson & Sutton (*Pl. Dis.* **84**: 714, 2000), Grabowski (*Phytopathologia Polonica* **34**: 5, 2004; Poland), Williamson *et al.* (*Mycol.* **96**: 885, 2004).

Gloeodiscus Dennis (1961), ? Dothideomycetes. 1, New Zealand. See Dennis (*Kew Bull.* **15**: 319, 1961).

Gloeodontia Boidin (1966), Stereaceae. 5, widespread. See Burdsall & Lombard (*Mem. N. Y. bot. Gdn* **28**: 16, 1976), Stalpers (*Stud. Mycol.* **40**: 59, 1996; key), Larsson & Larsson (*Mycol.* **95**: 1037, 2003; phylogeny).

Gloeoglossum E.J. Durand (1908) = Geoglossum fide Nannfeldt (*Ark. Bot.* **30A** no. 4: 1, 1942).

Gloeohaustoriales. Ordinal name proposed by Heim (*BSMF* **67**: 354, 1951) for *Antennopsis*, *Muiaria*, *Muiogone* and *Chantransiopsis*.

Gloeoheppia Gyeln. (1935), Gloeoheppiaceae (L). 4, widespread (desert areas). See Henssen (*Lichenolo-*

gist **27**: 261, 1995), Schultz & Büdel (*Lichenologist* **34**: 39, 2002), Schultz (*Bryologist* **110**: 286, 2007; USA).

Gloeoheppiaceae Henssen (1995), Lichinales (L). 3 gen., 8 spp.
Lit.: Henssen (*Lichenologist* **27**: 261, 1995).

Gloeohypochnicium (Parmasto) Hjortstam (1987), Russulales. 1, widespread. See Hjortstam (*Mycotaxon* **28**: 19, 1987), Larsson (*Mycol.* **95**: 1037, 2004; phylogeny).

Gloeolecta Lettau (1937) = Bryophagus fide Hawksworth *et al.* (*Lichenologist* **12**: 1, 1980).

Gloeomucro R.H. Petersen (1980), Hydnaceae. 9, widespread. See Petersen (*Mycol.* **72**: 301, 1980).

Gloeomucronaceae Jülich (1982) = Hydnaceae.

Gloeomyces Sheng H. Wu (1996), Stereaceae. 3, Taiwan; Japan. See Wu (*Mycotaxon* **58**: 47, 1996), Larsson & Larsson (*Mycol.* **95**: 1037, 2003; phylogeny).

Gloeopeniophora Höhn. & Litsch. (1907) = Peniophora fide Eriksson *et al.* (*Cortic. N. Europ.* **5**, 1978; as subgen.).

Gloeopeniophorella Rick (1934) nom. dub., Russulales.

Gloeopeziza Zukal (1891), Helotiaceae. 2 or 4 (on *Hepaticae*), widespread. See Döbbeler (*Sydowia* **38**: 41, 1986), Döbbeler (*Sendtnera* **3**: 103, 1996).

Gloeophyllaceae Jülich (1982), Gloeophyllales. 7 gen. (+ 12 syn.), 31 spp.
Lit.: Hof (*Some Wood-Destroying Basidiomycetes* **1**: 55, 1981), Corner (*Beih. Nova Hedwigia* **86**: 265 pp., 1987), Jung (*Biblthca Mycol.* **119**: 260 pp., 1987), Chamuris (*Mycol. Mem.* **14**: 247 pp., 1988), Hjortstam & Ryvarden (*Mycotaxon* **37**: 55, 1990), Nakasone (*Mycol. Mem.* **15**: 412 pp., 1990), Nakasone (*Mycol.* **82**: 622, 1990), Ryvarden & Gilbertson (*Syn. Fung.* **6**: 387 pp., 1993), Ginns (*Mycol.* **90**: 19, 1998), Thorn *et al.* (*Mycol.* **92**: 241, 2000), Hibbett & Donoghue (*Syst. Biol.* **50**: 215, 2001), Adair *et al.* (*FEMS Microbiol. Lett.* **211**: 117, 2002), Binder & Hibbett (*Mol. Phylogen. Evol.* **22**: 76, 2002), Schmidt *et al.* (*Z. Mykol.* **68**: 141, 2002), Yuan *et al.* (*Mycosystema* **23**: 173, 2004), Binder *et al.* (*Systematics and Biodiversity* **3**: 113, 2005), Moreth & Schmidt (*Holzforschung* **59**: 90, 2005).

Gloeophyllales Thorn (2007). Agaricomycetes. 1 fam., 8 gen., 33 spp. Fam.:
Gloeophyllaceae
For *Lit.* see under fam.

Gloeophyllum P. Karst. (1882), Gloeophyllaceae. 13, widespread. See David & Fiasson (*Bull. mens. Soc. linn. Lyon* **46**: 304, 1977; chemotaxonomy), Corner (*Beih. Nova Hedwigia* **86**: 61, 1987; key Malaysia spp.), Schmidt *et al.* (*Z. Mykol.* **68**: 141, 2002; species in buildings), Yuan *et al.* (*Mycosystema* **23**: 173, 2004; China).

Gloeoporus Mont. (1842), Meruliaceae. 26, widespread. See David (*BSMF* **88**: 209, 1972), Coelho *et al.* (*Mycol.* **98**: 821, 2006; Brazil).

Gloeopyrenia Zschacke (1937) = Protothelenella fide Mayrhofer (*Herzogia* **7**: 313, 1987), Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Gloeoradulum Rick (1959) nom. dub., Agaricomycetes.

Gloeosebacina Neuhoff (1924) = Stypella fide Donk (*Persoonia* **4**: 178, 1966).

Gloeosoma Bres. (1920) = Aleurodiscus fide Lemke (*CJB* **42**: 213, 1964).

Gloeosporidiella Petr. (1921), anamorphic *Drepanopeziza*, Cac.0eH.15. 12, widespread. See Rimpau (*Phytopath. Z.* **43**: 257, 1962), Constantinescu *et al.* (*Mycotaxon* **94**: 175, 2005; Sweden).

Gloeosporidiellaceae Melnik (1986) = Dermateaceae.

Gloeosporidina Petr. (1921), anamorphic *Apiognomonia*, Cac.0eH.15. 7, widespread. See Sutton & Pollack (*Mycol.* **65**: 1125, 1973), Kubono (*TMSJ* **34**: 261, 1993), Kubono *et al.* (*Mycoscience* **35**: 279, 1994; *Stromatinia* teleomorph), Butin & Kehr (*Eur. J. For. Path.* **28**: 297, 1998; *Apiognomonia* teleomorph), Yuan *et al.* (*Pl. Dis.* **84**: 510, 2000; on *Eucalyptus*, Australia).

Gloeosporidium Höhn. (1916) = Discula fide von Arx (*Biblthca Mycol.* **24**, 1970).

Gloeosporiella Cavara (1892), anamorphic *Pezizomycotina*, Hsp.1bH.1. 1, Europe. See Sutton (*Nova Hedwigia* **25**: 163, 1974).

Gloeosporina Höhn. (1916) = Asteroma fide Sutton (*Mycol. Pap.* **141**, 1977).

Gloeosporiopsis Speg. (1910) = Colletotrichum fide Petrak & Sydow (*Annls mycol.* **33**: 178, 1935).

Gloeosporium Desm. & Mont. (1849) = Marssonina. Used for many very diverse fungi, v. Arx (1970) lists 735 names and refers 288 to the *Colletotrichum* anamorph of *Glomerella cingulata* and others to 48 other gen. For the plant pathogens *G. album*, see *Phlyctema*; *G. concentricum*, *Cylindrosporium*; *G. musarum*, *Colletotrichum*; *G. perennans*, *Cryptosporiopsis*. fide von Arx (*Biblthca Mycol.* **24**: 203 pp., 1970).

Gloeostereum S. Ito & S. Imai (1933), Cyphellaceae. 1, Japan. See Petersen & Parmasto (*MR* **97**: 1213, 1993).

Gloeosynnema Seifert & G. Okada (1988), anamorphic *Agaricomycetes*, Hsy.0eH.21. 1 (with clamp connexions), Indonesia; Japan. See Seifert & Okada (*Mycotaxon* **32**: 471, 1988).

Gloeotinia M. Wilson, Noble & E.G. Gray (1954), Helotiales. Anamorph *Endoconidium*. 1, widespread. *G. granigena*; blind seed disease of grass seed. See Wilson *et al.* (*TBMS* **37**: 29, 1954), Griffiths (*TBMS* **41**: 461, 1958; sexuality), Hardison (*Mycol.* **54**: 201, 1962; hosts), Schumacher (*Mycotaxon* **8**: 125, 1975; nomencl.), Holst-Jensen *et al.* (*Mycol.* **89**: 885, 1997; nuclear rDNA phylogeny), Alderman (*Mycol.* **90**: 422, 1998; species separation).

Gloeotrochila Petr. (1947) = Cryptocline fide von Arx (*Verh. K. ned. Akad. Wet. Amst.* C **51**: 24, 1957).

Gloeotromera Ervin (1956) = Ductifera fide Wells (*Mycol.* **50**: 407, 1958).

Gloeotulasnella Höhn. & Litsch. (1908) = Tulasnella fide Olive (*Mycol.* **49**: 668, 1957).

Gloiocephala Massee (1892), Physalacriaceae. 30, widespread. See Antonín (*Fungus Flora of tropical Africa* **1**, 2007).

Gloiodon P. Karst. (1879), ? Bondarzewiaceae. 3, Europe. See Maas Geesteranus (*Proc. K. ned. Akad. Wet.* C **66**: 430, 1963), Stalpers (*Stud. Mycol.* **40**: 78, 1996; key), Desjardin & Ryvarden (*Sydowia* **55**: 153, 2003; monogr.).

Gloiosphaera Höhn. (1902), anamorphic *Pezizomycotina*, Hso.0eH.15. 2, Europe; N. America. See Wang (*Mycol.* **63**: 890, 1971), Pollack & McKnight (*Mycol.* **64**: 415, 1972).

Gloiosporae, having slimy spores. Cf. *Xerosporae*. See Wakefield & Bisby (*TBMS* **25**: 50, 1941).

Gloiothelaceae Boidin, Mugnier & Canales (1998) = Stereaceae.

Gloiothele Bres. (1920), Peniophoraceae. 6, widespread. See Ginns & Freeman (*Biblthca Mycol.* **157**, 1994), Legon & Pegler (*Mycologist* **16**: 177, 2002; *Gloiothele lactescens*), Larsson & Larsson (*Mycol.* **95**: 1037, 2003; phylogeny).

Glomeraceae Piroz. & Dalpé (1989), Glomerales. 2 gen. (+ 5 syn.), 86 spp.

Lit.: Pirozynski & Dalpé (*Symbiosis* **7**: 1, 1989), Morton & Benny (*Mycotaxon* **37**: 471, 1990; key), Azcon-Aguilar & Barea (*Mycorrhiza* **6**: 457, 1996), van der Heijden *et al.* (*Nature* Lond. **396**: 69, 1998), Schüßler *et al.* (*MR* **105**: 1413, 2001), Walker & Schüssler (*MR* **108**: 982, 2004), Redecker (*Glomeromycota* Arbuscular mycorrhizal fungi and their relative(s). Version 01 July 2005. http://tolweb.org/Glomeromycota/28715/2005.07.01 in The Tree of Life Web Project, http://tolweb.org: [unpaginated], 2005).

Glomerales J.B. Morton & Benny (1990). Glomeromycetes. 1 fam., 2 gen., 86 spp. Endomycorrhizal on plants. Fam:

Glomeraceae

Morton & Benny (*Mycotaxon* **37**: 471, 1990; rev., keys) recognized two suborders: *Glomineae* for the vesicular-arbuscular mycorrhiza (VAM) forming (1) and (2), and *Gigasporineae* for the arbuscular mycorrhiza forming (3) but inconsistent with molecular phylogeny, see Schwarzott et. al. (*Mol. Phylog. Evol.* **21**: 190, 2001).

Lit.: Thaxter (*Proc. Am. Acad. Arts & Sci.* **57**: 291, 1922; sporocarpic spp.), Gerdemann & Trappe (*Mycol. Mem.* **5**, 1974; rev.), Walker (*Mycotaxon* **18**: 443, 1983; spore wall morphology [murograph]), Powell & Bagyaraj (*VA Mycorrhiza*, 1984; review), Burdrett *et al.* (*CJB* **62**: 2128, 1984; arbuscule staining), Berch (*Front. Appl. Microbiol.* **2**: 161, 1986; review), Silvia & Hubbell (*Symbiosis* **1**: 259, 1986; aeroponic culture), Bonfonte-Falso (*Symbiosis* **3**: 249, 1987; review), Stubblefield & Taylor (*New Phytol.* **108**: 3, 1988; palaeomycology), Jabaji-Hare (*Mycol.* **80**: 622, 1988; lipid & fatty acid profiles), Morton (*Mycotaxon* **32**: 267, 1988, checklist 126 spp. and classific., **37**: 493, 1990; evolution, *Mycol.* **82**: 192, 1990; phylogeny, *Mycorrhiza* **2**: 97, 1993; review), Pirozynski & Dalpé (*Symbiosis* **7**: 1, 1989; rev. & palaeomycology), Schenck & Peréz (*Manual for the identification of VA mycorrhizal fungi*, 3rd edn, 1990), Allen (*The evolution of mycorrhizae*, 1991; *Mycorrhizal functioning*, 1992), Bruns *et al.* (*Mol. Phylog. Evol.* **1**: 231, 1992; phylogeny), Millner & Kitt (*Mycorrhiza* **2**: 9, 1992; soil-less culture), Streussy (*Mycorrhiza* **1**: 113, 1992; phylogeny), Read *et al.* (*Mycorrhizas in ecosystems*, 1992), Morton *et al.* (*Mycotaxon* **48**: 491, 1993; INVAM culture collection), Maia *et al.* (*Mycol.* **85**: 323, 1993; fixation & embedding), Simon *et al.* (*Nature* **363**: 67, 1993; phylogeny), Walker & Trappe (*MR* **97**: 339; names & epithets), Sancholle & Dalpé (*Mycotaxon* **49**: 187, 1993; fatty acids), Hass *et al.* (*Am. J. Bot.* **81**: 29, 1994; palaeomycology), Giovannetti & Gianinazzi-Pearson (*MR* **98**: 705, 1994; review), Gianinazzi-Pearson *et al.* (*Mycol.* **86**: 478, 1994; wall chemistry & phylogeny), Morton & Bentivegna (*Plant & Soil* **159**: 47, 1994; taxonomy), Bentivegna & Morton (*in* Pfegler & Linderman (Eds), *Mycorrhizae and plant health*: 283, 1983; systematics), Robson *et al.* (*Management of mycorrhizas in agriculture, horticulture, and forestry*, 1994), Gianinazzi & Schüepp (Eds) (*Impact of arbuscular mycorrhizas on sustainable agriculture and natural ecosystems*, 1994; taxonomy, biodiversity, Eur. culture collection), Mehrotra & Baijal (*in* Devivedi & Pandy (Eds), *Biotechnology In India*, p. 227, 1994), Morton *et al.* (*in* Varma & Hock (Eds), *Mycorrhiza: structure, function, molecular biology and biochemistry*: 669, 1995, *CJB* **73**(suppl. 1): S25, 1995; diversity), Yao *et al.* (*Kew Bull.* **50**: 349, 1995), Clapp (Ed.) Biol.* **50**), 1996), Dodd & Rosendahl (*Mycorrhizae* **6**: 275, 1996; identification system), Phipps & Taylor (*Mycol.* **88**: 707, 1996; fossils), Remy *et al.* (*Proc. Nat. Acad. Sci. USA* **91**: 11841, 1994; paleomycology), Sbrana *et al.* (*MR* **99**: 1249, 1995; biochemistry), Sanders *et al.* (*New Phytol.* **133**: 123, 1996; genetic diversity), Simon (*New Phytol.* **133**: 95, 1996; phylogeny), Linder (*in* Carrol & Tudzynski (Eds), *The mycota* **6B**, p. 117, 1997; review), Mehrotra (*Mycorrhiza News* **9**: 1, 1997), Hosny *et al.* (*Fung. Gen. Biol.* **22**: 103, 1997; DNA base composition), Redecker *et al.* (*Appl. Microbiol.* **63**: 1756, 1997; identification, *Fung. Genet. Biol.* **28**: 238, 1999; phylogeny, *Mol. Phylogen. Evol.* **14**: 276, 2000; phylogeny, *Science* **289**: 1884, 2000; phylogeny), Sanders (*Progr. Microbiol. Ecol.*, p. 77, 1997; biodiversity), Smith & Read (*Mycorrhizal Symbiosis*, 2nd ed.), Varma (Ed.) (*Mycorrhiza manual*, 1998), Wu & Lin (*Technical Manual Mycorrhizal Fungi*, 1998), Blackwell (*Science* **289**: 1884, 2000; phylogeny).

Glomerella Spauld. & H. Schrenk (1903), Glomerellaceae. Anamorph *Colletotrichum*. c. 11 (necrotrophic on plants), widespread (esp. tropical). *G. cingulata* on many hosts (*CMI Descript.* **315**, 1971); *G. acutata* on many hosts, *G. tucumanensis* on sugarcane. See Sutton *in* Bailey & Jeger (Eds) (*Colletotrichum: Biology, Pathology and Control*: 1, 1992; review), Uecker (*Mycol.* **86**: 82, 1994; ontogeny), Johnston & Jones (*Mycol.* **89**: 420, 1997; DNA), Cannon *et al. in* Prusky *et al.* (Eds) (*Colletotrichum: Host Specificity, Pathology and Host-Pathogen Interaction*: 1, 2000; sp. concepts), Guerber & Correll (*Mycol.* **93**: 216, 2001; *G. acutata*), Rodríguez-Guerra *et al.* (*Mycol.* **97**: 793, 2005; *G. lindemuthianum*), Cook *et al.* (*MR* **110**: 672, 2006; *G. truncata*), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny).

Glomerellaceae Locq. ex Seifert & W. Gams (2007), Hypocreomycetidae (inc. sed.). 2 gen. (+ 23 syn.), 71 spp.

Lit.: Sutton (*Colletotrichum: Biology, Pathology and Control*: 1, 1992), Sivanesan & Hsieh (*MR* **97**: 1523, 1993), Uecker (*Mycol.* **86**: 82, 1994), Johnston & Jones (*Mycol.* **89**: 420, 1997), Silva-Hanlin & Hanlin (*MR* **103**: 153, 1999), García Muñoz *et al.* (*Mycol.* **92**: 488, 2000), Prusky *et al.* (*Host specificity, Pathology, and Host–Pathogen Interactionos of Colletotrichum*: 400 pp., 2000), Guerber & Correll (*Mycol.* **93**: 216, 2001), Abang *et al.* (*Pl. Path.* **51**: 63, 2002), Guerber *et al.* (*Mycol.* **95**: 872, 2003), Lu *et al.* (*MR* **108**: 53, 2004), Lubbe *et al.* (*Mycol.* **96**: 1268, 2004), Du *et al.* (*Mycol.* **97**: 641, 2005), Farr *et al.* (*MR* **110**: 1395, 2006), Zhang *et al.* (*Mycol.* **98**: 1076, 2006).

Glomerilla Norman (1869), ? Verrucariaceae (?L). 1, Norway.

Glomerillaceae Norman (1869) = Verrucariaceae.

Glomerobolus Kohlm. & Volkm.-Kohlm. (1996), anamorphic *Stictidaceae*, Hso.?.?. 1, USA. See

Kohlmeyer & Volkmann-Kohlmeyer (*Mycol.* **88**: 329, 1996), Schoch *et al.* (*MR* **110**: 257, 2006; phylogeny, dispersal).

Glomeromycetes Caval.-Sm. (1998), Glomeromycota. 4 ord., 9 fam., 12 gen., 169 spp. Ords:
(1) **Archaeosporales**
(2) **Diversisporales**
(3) **Glomerales**
(4) **Paraglomerales.**
For *Lit.* see ord. and fam.

Glomeromycota C. Walker & A. Schüssler (2001), Glomeromycota. 4 ord., 9 fam., 12 gen., 169 spp. Ords:
(1) **Archaeosporales**
(2) **Diversisporales**
(3) **Glomerales**
(4) **Paraglomerales.**
For *Lit.* see ord. and fam.

glomerospore, an asexual reproductive structure [in *Glomeromycota*] formed at the end of a subtending hyphae, or a bulbous sporogenous cell, or from a sporiferous saccule, in this case with lateral or intercalary position, with or without a germinative component, presenting or not a germinal shield or orb, typically formed by fungi that form an arbuscular mutualistic symbiosis with most terrestrial plants (see Gotoa & Maia, *Mycotaxon* **96**: 129, 2006).

Glomerula Bainier (1903) = Actinomucor fide Hesseltine (*Mycol.* **47**: 344, 1955).

Glomerularia H. Karst. (1849) = Gonatobotrys fide Henderson (*Notes R. bot. Gdn Edinb.* **23**: 497, 1961).

Glomerularia Peck (1879) ≡ Glomopsis.

Glomerulomyces A.I. Romero & S.E. López (1989), anamorphic *Agaricomycetes*, Hso.0eH.6. 1 (with clamp connexions), Argentina. See Romero & López (*Mycotaxon* **34**: 432, 1989).

glomerulus (glomerule), a clump or cluster; frequently used for clusters of photobiont cells in lichens.

Glomites T.N. Taylor, W. Remy, Hass & Kerp (1995), Fossil Fungi. 1 (Devonian), Scotland. See Taylor *et al.* (*Mycol.* **87**: 561, 1995).

Glomopsis D.M. Hend. (1961), anamorphic *Herpobasidium.* 2, USA. See Donk (*Persoonia* **4**: 213, 1966), Mel'nik & Sheiko (*Nov. sist. Niz. Rast.* **35**: 90, 2001; Russia).

Glomorphites García Massini (2007), Fossil Fungi. 1. See García Massini, J.L. (*Int. J. Pl. Sci.* **168**: 673, 2007).

Glomospora D.M. Hend. (1961), anamorphic *Platygloeaceae.* 1, British Isles. See Henderson (*Notes R. bot. Gdn Edinb.* **23**: 497, 1961).

Glomosporiaceae Cif. (1963), Urocystidales. 3 gen. (+ 5 syn.), 59 spp.
Lit.: Hughes (*Mycol.* **68**: 693, 1976), Vánky & Berbee (*Mycotaxon* **33**: 281, 1988), Vánky (*Trans. Mycol. Soc. Japan* **32**: 145, 1991), Bauer *et al.* (*CJB* **75**: 1273, 1997), Begerow *et al.* (*CJB* **75**: 2045, 1998), Piepenbring *et al.* (*Protoplasma* **204**: 202, 1998), Vánky (*Mycotaxon* **70**: 35, 1999), Begerow *et al.* (*MR* **104**: 53, 2000), Andrade *et al.* (*Phytopathology* **94**: 875, 2004).

Glomosporium Kochman (1939) = Thecaphora.

Glomus Tul. & C. Tul. (1845), Glomeraceae. *c.* 85, widespread. Genus is non-monophyletic. See Gerdemann & Trappe (*Mycol. Mem.* **5**, 1974), Berch & Fortin (*CJB* **61**: 2608, 1983), Berch & Fortin (*CJB* **62**: 170, 1984), Jabaji-Hare *et al.* (*Mycol.* **76**: 1024, 1984; lipid composition), Morton (*Mycol.* **77**: 192, 1985; morphological variation), Bonfante-Fasolo *et al.* (*Biol. Cell* **57**: 265, 1986; chitin in cell wall), Bonfante-Fasolo & Schubert (*CJB* **65**: 539, 1987; spore wall ultrastr.), Koske & Gemma (*Mycol.* **81**: 935, 1989), Koske & Halvorsol (*Mycol.* **81**: 927, 1989), Almeida & Schenk (*Mycol.* **82**: 703, 1990), Schenck & Peréz (*Manual for the Identification of VA Mycorrhizal Fungi*, 1990), Chabot *et al.* (*Mycol.* **84**: 315, 1992; life cycle in root culture), Meier & Charvat (*Int. J. Pl. Sci.* **153**: 541, 1992; ultrastr. spore germ.), Yao *et al.* (*Mycologist* **6**: 132, 1992; ultrastr.), Wu & Silvia (*Mycol.* **85**: 317, 1993; spore ontogeny), Błaszkowski (*Mycorrhiza* **4**: 201, 1994), Cabello *et al.* (*Mycotaxon* **51**: 123, 1994), Gaspar *et al.* (*Mycotaxon* **51**: 129, 1994; lipid & fatty acid composition), Maia & Kimbrough (*Int. J. Pl. Sci.* **155**: 689, 1994; ultrastr.), Miller & Jeffries (*MR* **98**: 307, 1994; spore wall ultrastr.), Błaszkowski (*Mycol.* **87**: 732, 1995), Lanfranco *et al.* (*Mol. Ecol.* **4**: 61, 1995; identification), Walker *et al.* (*MR* **99**: 1500, 1995), Yao *et al.* (*Kew Bull.* **50**: 349, 1995), Dodd *et al.* (*New Phytol.* **133**: 113, 1996; genetic variation), Lloyd-Macgilp *et al.* (*New Phytol.* **133**: 103, 1996; genetic diversity), Morton (*Mycorrhiza* **6**: 161, 1996), Pfeiffer *et al.* (*Mycotaxon* **59**: 383, 1996), Spain *et al.* (*Mycotaxon* **60**: 137, 1996), Bentivenga *et al.* (*Am. J. Bot.* **84**: 1211, 1997; genetic variation), Błaszkowski (*Mycol.* **89**: 339, 1997), Błaszkowski & Tadych (*Mycol.* **89**: 804, 1997), Morton *et al.* (*MR* **101**: 625, 1997; synanamorph), Strullu *et al.* (*C.R. Acad. Sci. Paris* Sér. III **320**: 41, 1997; life cycle), Stürmer & Morton (*Mycol.* **89**: 72, 1997; development), Zhang *et al.* (*Mycosystema* **16**: 241, 1997), Maia & Kimbrough (*Int. J. Pl. Sci.* **159**: 581, 1998; ultrastr.), Sawaki *et al.* (*Mycoscience* **39**: 477, 1998; phylogeny & synanamorph), Vandenkoornhuyse & Leyval (*Mycol.* **90**: 791, 1998; genetic diversity), Walker & Vestberg (*Ann. Bot.* **82**: 601, 1998; synonymy), Schwarzott *et al.* (*Mol. Phylog. Evol.* **21**: 190, 2001; polyphyletic), Blaszkowski *et al.* (*Mycotaxon* **90**: 447, 2004; n.sp.), Blaszkowski *et al.* (*MR* **110**: 555, 2006; n.sp.), Redecker & Raab (*Mycol.* **98**: 885, 2006; phylogeny).

Gloniella Sacc. (1883), Hysteriaceae. 9, widespread (temperate). See Zogg (*Beitr. Kryptfl. Schweiz* **11** no. 3, 1962), Sivanesan *et al.* (*TBMS* **90**: 665, 1988; Indian spp.), Steinke & Hyde (*Mycoscience* **38**: 7, 1997; S. Africa), Lorenzo & Messuti (*MR* **102**: 1101, 1998; S. America), Checa *et al.* (*Mycol.* **99**: 285, 2007; Costa Rica).

Gloniopsis De Not. (1847), Hysteriaceae. 2 or 3, widespread (temperate). See Zogg (*Beitr. Kryptfl. Schweiz* **11** no. 3, 1962), Lorenzo & Messuti (*MR* **102**: 1101, 1998; S. America), Lee & Crous (*S. Afr. J. Bot.* **69**: 480, 2003; S. Africa), Checa (*Fl. Mycol. Iberica* **6**, 2004; Spain).

Glonium Muhl. (1813), Hysteriaceae. Anamorph *Cleistonium. c.* 13, widespread (temperate). See Speer (*BSMF* **102**: 101, 1986), Lorenzo & Messuti (*MR* **102**: 1101, 1998; S America), Vasil'eva (*Mikol. Fitopatol.* **34**: 3, 2000; Russian Far East), Lee & Crous (*S. Afr. J. Bot.* **69**: 480, 2003; S Africa), Messuti & Lorenzo (*Nova Hedwigia* **84**: 521, 2007; S America).

Glossifungites Lomnicki (1886), Fossil Fungi. 1 (Cretaceous), Poland.

Glossodium Nyl. (1855) = Icmadophila fide Rambold *et al.* (*Biblthca Lichenol.* **53**: 217, 1993).

glossoid cell, elongate (tongue-shaped) cell containing an elaborate extrusome (*Haptoglossa*).

Glotzia M. Gauthier ex Manier & Lichtw. (1969), Legeriomycetaceae. 6 (in *Ephemeroptera* and *Plectoptera*), widespread. See Lichtwardt (*The Trichomycetes. Fungal associates of arthropods*, 1986), Lichtwardt & Williams (*CJB* **68**: 1057, 1990), Williams & Lichtwardt (*CJB* **68**: 1045, 1990), White & Lichtwardt (*Mycol.* **96**: 891, 2004; Norway).

glucans, one of the main constituents of fungal walls. **R-glucans** are alkali insoluble; **S-glucans** are soluble.

Glugea Thélohan (1891), Microsporidia. 24.

Glugoides J.I.R. Larsson, D. Ebert, J. Vavra & Voronin (1996), Microsporidia. 1. See Larsson *et al.* (*Eur. J. Protist.* **32**: 251, 1996).

Glukomyces Beij. [not traced] nom. dub., ? Fungi.

gluten (1) a substance on the surface of some agarics, etc., which is sticky when wet; (2) spore mass in *Phallus*.

Glutinaster Earle (1909) = Tricholoma fide Singer (*Agaric. mod. Tax.*, 1951).

Glutinisporidium Thor (1930) nom. dub., ? Fungi. 1, Svalbard.

Glutinium Fr. (1849), anamorphic *Pezizomycotina*, Hso.?.?. 3, Europe; N. America.

Glutinoagger Sivan. & Watling (1980), anamorphic *Agaricomycetes*. 1 (with clamp connexions), Seychelles. See Sivanesan & Watling (*TBMS* **74**: 424, 1980).

glutinous, sticky; made up of, or covered with, gluten.

glyceollin, a phytoalexin (q.v.) from soybean (*Glycine max*).

Glycydiderma Paulet (1808) ≡ Geastrum.

Glycyphila Mont. (1851), anamorphic *Pezizomycotina*, Hso.?.?. 2, Europe.

Glyphidaceae Stizenb. (1862) = Graphidaceae.

Glyphidium A. Massal. (1860) ? = Arthonia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Glyphis Ach. (1814), Graphidaceae (L). 5, widespread (esp. tropical). See Pant (*Geophytology* **20**: 48, 1991; 2 spp. India), Archer (*Telopea* **10**: 589, 2004; Australia), Archer (*Telopea* **11**: 59, 2005; Australia), Staiger *et al.* (*MR* **110**: 765, 2006; phylogeny).

Glyphium Nitschke ex F. Lehm. (1886), Mytilinidiaceae. Anamorph *Peyronelia*. 4 or 6, widespread. See Sutton (*TBMS* **54**: 255, 1970), Goree (*CJB* **52**: 1265, 1974), Vasil'eva (*Mikol. Fitopatol.* **35**: 15, 2001; Russian Far East), Lumbsch *et al.* (*Symb. bot. upsal.* **34** no. 1: 9, 2004; phylogeny), Lorenzo & Messuti (*Boln Soc. argent. Bot.* **40**: 13, 2005; Argentina), Wedin *et al.* (*MR* **109**: 159, 2005; phylogeny), Geiser *et al.* (*Mycol.* **98**: 1053, 2006; phylogeny).

Glypholecia Nyl. (1853), Acarosporaceae (L). 5, Europe; N. America. See Hafellner (*Cryptog. bot.* **5**: 99, 1995), Lutzoni *et al.* (*Am. J. Bot.* **91**: 1446, 2004; phylogeny), Reeb *et al.* (*Mol. Phylogen. Evol.* **32**: 1036, 2004; phylogeny), Wedin *et al.* (*MR* **109**: 159, 2005; phylogeny), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny).

glypholecine, having particularly labyrinth-like lirella as in *Glypholecia*.

Glypholeciomyces Cif. & Tomas. (1953) = Glypholecia.

Glyphomyces Cif. & Tomas. (1953) ≡ Glyphis.

Glyphopeltis Brusse (1985), ? Psoraceae (L). 1, Europe; S. Africa. See Timdal (*Mycotaxon* **31**: 101, 1988), Timdal (*Cryptog. Bryol.-Lichénol.* **15**: 171, 1994; asci), Egea *et al.* (*Flechten Follmann* Contributions to Lichenology in Honour of Gerhard Follmann: 183, 1995).

Glyptoderma R. Heim & Perr.-Bertr. (1971), Agaricaceae. 1, America (tropical). See Heim & Perreau-Bertrand (*Revue Mycol.* Paris **36**: 90, 1971).

Glyptospora Fayod (1889) = Lacrymaria fide Kuyper (*in litt.*).

Gnaphalomyces Opiz = Lanosa fide Streinz (*Nom. fung.*: 302, 1862).

Gnomonia Ces. & De Not. (1863), Gnomoniaceae. Anamorphs *Asteroma*, *Cylindrosporella*, *Discula*, *Leptothyrium*, *Zythia*. 60, widespread. *G. platani* (plane (*Platanus*) scorch). See Bolay (*Ber. schweiz. bot. Ges.* **81**: 398, 1972), Barr (*Mycol. Mem.* **7**, 1978; key 35 spp.), Monod (*Beih. Sydowia* **9**: 1, 1983), Bolay (*Mycotaxon* **41**: 287, 1991; N. Am. spp.), Lappalainen & Yli-Mattila (*MR* **103**: 328, 1999; RAPDs), Castlebury *et al.* (*Mycol.* **94**: 1017, 2002), Sogonov *et al.* (*Sydowia* **57**: 102, 2005; type species), Moročko *et al.* (*Eur. J. Pl. Path.* **114**: 235, 2006; on *Fragaria*), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny), Green & Castlebury (*MR* **111**: 62, 2007; phylogeny, anamorph), Moročko & Fatehi (*MR* **111**: 603, 2007; on strawberry).

Gnomoniaceae G. Winter (1886) nom. cons., Diaporthales. 18 gen. (+ 26 syn.), 204 spp.

Lit.: Barr (*Mycol. Mem.* **7**: 1, 1978), Monod (*Beih. Sydowia* **9**: 1, 1983), Noordeloos *et al.* (*Persoonia* **14**: 47, 1989), Redlin & Rossman (*Mycol.* **83**: 200, 1991), Lappalainen & Yli-Mattila (*MR* **103**: 328, 1999), Zhang & Blackwell (*Mycol.* **93**: 355, 2001), Castlebury *et al.* (*Mycol.* **94**: 1017, 2002), Sogonov *et al.* (*Sydowia* **57**: 102, 2005), Rossman *et al.* (*Mycoscience* **48**: 135, 2007; phylogeny), Mejía *et al.* (*MR* **112**: 23, 2008; phylogeny).

Gnomoniella Sacc. (1881), Gnomoniaceae. Anamorphs *Asteroma*, *Discula*. 13, widespread. See Barr (*Mycol. Mem.* **7**, 1978), Monod (*Beih. Sydowia* **9**: 1, 1983), Redlin & Stack (*Mycotaxon* **32**: 175, 1988; on *Fraxinus*), Barr (*Mycotaxon* **41**: 287, 1991; N. Am. spp.), Farr *et al.* (*Sydowia* **53**: 185, 2001; phylogeny).

Gnomonina Höhn. (1917) ≡ Laestadia.

Gnomoniopsis Berl. (1892) = Gnomonia fide Bolay (*Ber. schweiz. bot. Ges.* **81**, 1972).

Gnomoniopsis Stoneman (1898) ≡ Glomerella.

gnotobiotic (of cultures), ones in which all the living components are known. Cf. axenic.

Godal Adans. (1763) nom. dub., anamorphic *Pezizomycotina*.

Godfrinia Maire (1902) = Hygrocybe fide Singer (*Agaric. mod. Tax.*, 1951).

Godronia Moug. & Lév. (1846), Helotiaceae. Anamorphs *Sporonema*, *Topospora*. 27, widespread (north temperate). See Groves (*CJB* **43**: 1195, 1965; key), Holm & Holm (*Nordic Jl Bot.* **11**: 675, 1991), Verkley (*Nova Hedwigia* **75**: 433, 2002; anamorph).

Godroniella P. Karst. (1884) = Myxormia fide Clements & Shear (*Gen. Fung.*, 1931), Tulloch (*Mycol. Pap.* **130**, 1972).

Godroniopsis Diehl & E.K. Cash (1929), Helotiaceae. Anamorphs *Micropera*, *Sphaeronaema*, *Dichaenopsella*. 2, N. America. See Petrak (*Sydowia* **6**: 336, 1952).

Goidanichia G. Arnaud (1954) ≡ Goidanichiella G. Arnaud ex G.L. Barron.

Goidanichia Tomas. & Cif. (1952) = Staurothele fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Goidanichiella G. Arnaud ex G.L. Barron (1968) ≡ Haplographium fide Gams *et al.* (*Mycotaxon* **38**: 149, 1990).

Goidanichiella G.L. Barron ex W. Gams (1990), anamorphic *Pezizomycotina*, Hso.0eH.15. 2, widespread. See Gams *et al.* (*Mycotaxon* **38**: 149, 1990), Hyde *et al.* (*Fungal Diversity* **11**: 119, 2002; Brunei).

Goidanichiomyces Cif. & Tomas. (1953) ≡ Goidanichia Tomas. & Cif.

Golbergia J. Weiser (1977), Microsporidia. 1.

Golgi body, Dictyosome with large numbers of cisternae which may be visible using light microscopy after staining.

Golovin (Petr Nikolaevich; 1897-1968; Russia, later Uzbekistan). Instructor, Salsk District Station of Plant Protection (1925); student, Institute of Plant Pathology, Leningrad (1925-*c.*1933); Plant Pathologist, Central-Asian Institute of Plant Protection, Tashkent (1930-1933); Senior Lecturer, Plant Anatomy & Morphology and Head of the Mycology Laboratory (1934-1943) then Professor of Non-flowering Plants, Central-Asian State University (1943-1951); Senior Scientist, V.L. Komarov Botanical Institute, Leningrad (1951-1962). Pioneer mycologist in central Asia, exploring the mycota and collecting in the central and western Tien-Shan mountains, the deserts of Kzyl-Kum and Kara-Kum, and the Pamirs (1934-1950); also significant work on the *Erisyphaceae*. Specimens are in the fungal reference collection, V.L. Komarov Botanical Institute, St Petersburg (*LE*). *Publs.* [*Fungus Flora in Central Asia. Parasitic Fungi in Central Asia*] (1949) [in Russian]; [Monographic survey on the genus *Leveillula* Arnaud (Parasitic fungi ? fam. Erysiphaceae)] and [Material for a monograph of the parasitic fungi (family Erysiphaceae) in the USSR]. *Notulae Systematicae e Sectione Cryptogamica Instuti Botanicae Nomine V.L. Komarovii Academiae Scientiarum, USSR* (1956) [in Russian]. *Biogs, obits etc.* Gorlenko & Dunin ([*Mikologiya i Fitopatologiya*] 3: 94, 1969) [portrait [in Russian].

Golovinia Mekht. (1967) = Drechslerella fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Golovinomyces (U. Braun) V.P. Gelyuta (1988), Erysiphaceae. Anamorph *Oidium* subgen. *Reticoloidium*. 32, widespread. *G. cichoracearum* (mildew of composites). See Braun (*Beih. Nova Hedwigia* **89**, 1987; key; as *Erysiphe* sect. *Golovinomyces*), Bardin *et al.* (*Pl. Path.* **48**: 531, 1999; genetic variation, as *Erysiphe*), Braun (*Schlechtendalia* **3**: 48, 1999; generic taxonomy), Cherepanov (*Mikol. Fitopatol.* **35**: 71, 2001; Russia, key), Vakalounakis & Klironomou (*Mycotaxon* **80**: 489, 2001; on cucurbits), Matsuda & Takamatsu (*Mol. Phylogen. Evol.* **27**: 314, 2003; host-parasite relations), Takamatsu & Matsuda (*Mycoscience* **45**: 340, 2004; evolution), Cunnington *et al.* (*Australas. Pl. Path.* **34**: 51, 2005; on *Solanaceae*, Australia), Takamatsu *et al.* (*MR* **110**: 1093, 2006; evolution), Voytyuk *et al.* (*Mycol. Balcanica* **3**: 131, 2006; Israel), Takamatsu *et al.* (*MR* **112**: 299, 2008; phylogeny).

Gomezina Chardón & Toro (1934) = Aphanostigme fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Gomphaceae Donk (1961), Gomphales. 13 gen. (+ 17 syn.), 287 spp.

Lit.: Corner (*Ann. Bot. Mem.* [A monograph of Clavaria and allied genera] **1**: 1, 1950), Donk (*Persoonia* **3**: 199, 1964), Corner (*Beih. Nova Hedwigia* **33**: 1, 1970), Marr & Stuntz (*Biblthca Mycol.* **38**: 232 pp., 1973), Petersen (*Biblthca Mycol.* **43**: 161 pp., 1975), Petersen (*Biblthca Mycol.* **79**: 261 pp., 1981), Parmasto & Ryvarden (*Windahlia* **18**: 35, 1988), Núñez & Ryvarden (*Sydowia* **46**: 321, 1994), Pine *et al.* (*Mycol.* **91**: 944, 1999), Villegas *et al.* (*Mycotaxon* **70**: 127, 1999), Humpert *et al.* (*Mycol.* **93**: 465, 2001), Hibbett & Binder (*Proc. R. Soc. Lond.* B. Biol. Sci. **269**: 1963, 2002), Binder *et al.* (*Systematics and Biodiversity* **3**: 113, 2005), Nouhra *et al.* (*Mycorrhiza* **15**: 55, 2005).

Gomphales Jülich (1981). Phallomycetidae. 3 fam., 18 gen., 336 spp. Fams:
(1) **Clavariadelphaceae**
(2) **Gomphaceae**
(3) **Lentariaceae**

Lit.: Villegas *et al.* (*Fungal Diversity* **18**: 157, 2005; spore characters).

Gomphidiaceae Maire ex Jülich (1982), Boletales. 4 gen. (+ 3 syn.), 30 spp. Associated with ectomycorrhizas of members of *Suillaceae* and *Rhizopogonaceae*, always in association with *Pinaceae* (north temperate). Autonomy of families in the suilloid clade (*Gomphidiceae*, *Rhizopogonaceae*, *Suillaceae*) is fairly weak, and the three families are maintained in the present edition for convenience only.

Lit.: Miller (*Mycol.* **63**: 1129, 1971), Agerer (*Nova Hedwigia* Beih. **53**: 127, 1991), Greselin (*Boll. Gruppo Micol. 'G. Bresadola'* **34**: 56, 1991), Besl & Bresinsky (*Pl. Syst. Evol.* **206**: 223, 1997), Miller & Aime (*Trichomycetes and Other Fungal Groups, Robert W. Lichwardt Commemoration Volume*: 315, 2001), Miller *et al.* (*Mycol.* **94**: 1044, 2002), Miller (*Mycol.* **95**: 176, 2003), Watling (*Edinb. J. Bot.* **61**: 41, 2004).

Gomphidius Fr. (1836), Gomphidiaceae. 10, widespread (esp. north temperate). See Watling (*British Fungus Flora* **1**: 77, 1970; key), Miller (*Mycol.* **63**: 1129, 1971; key), Singer (*Taxon* **22**: 445, 1973; typification), Agerer (*Beih. Nova Hedwigia* **53**: 127, 1991; ecology), Miller & Aime (*Mycol.* **94**: 1044, 2002; new spp.), Miller (*Mycol.* **95**: 176, 2003).

Gomphillaceae Walt. Watson ex Hafellner (1984), Ostropales (L). 23 gen. (+ 21 syn.), 318 spp.

Lit.: Vězda & Poelt (*Folia geobot. phytotax.* **22**: 179, 1987), Kalb & Vězda (*Biblthca Lichenol.* **29**: 80 pp., 1988; 43 spp. neotrop.), Lücking (*Biblthca Lichenol.* **65**: 109, 1997; Costa Rica), Dennetière & Péroni (*Cryptog. Bryol.-Lichénol.* **19**: 105, 1998; phylogeny), Lücking *et al.* (*Mycol.* **96**: 283, 2004; phylogeny), Lücking *et al.* (*Bryologist* **110**: 622, 2007; N America).

Gomphillus Nyl. (1855), Gomphillaceae (L). 4, widespread. See Kalb & Vězda (*Biblthca Lichenol.* **29**, 1988), Lücking (*Biblthca Lichenol.* **65**: 109, 1997; Costa Rica), Buck *in* Glenn *et al.* (Eds) (*Lichenogr. Thomsoniana*: 71, 1998), Dennetière & Péroni (*Cryptog. Bryol.-Lichénol.* **19**: 105, 1998; phylogeny), Lücking *et al.* (*Mycol.* **96**: 283, 2004; phylogeny), Ferraro & Lücking (*Bryologist* **108**: 491, 2005; Americas), Lücking *et al.* (*Lichenologist* **37**: 123, 2005; phylogeny), Lücking *et al.* (*Bryologist* **110**: 622, 2007; N America).

Gomphinaria Preuss (1851) = Acrotheca fide Saccardo (*Syll. fung.* **4**: 277, 1886).

Gomphogaster O.K. Mill. (1973), Gomphidiaceae. 1, USA. See Miller (*Mycol.* **65**: 227, 1973).

Gomphora Fr. (1825) ≡ Gomphus Pers. fide Petersen

(*The genera Gomphus and Gloeocantharellus in North America*, 1972).

Gomphos Kuntze (1891) ≡ Cortinarius.

Gomphospora A. Massal. (1852) ? = Schismatomma fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Gomphus (Fr.) Weinm. (1826) ≡ Gomphidius.

Gomphus Pers. (1797), Gomphaceae. 10, widespread (temperate). See Petersen (*The genera Gomphus and Gloeocantharellus in North America*, 1972).

Gonapodya A. Fisch. (1892), Gonapodyaceae. 2, widespread (temperate). See Karling (*Chytriomyc. Iconogr.*, 1977), Noyes Mollione & Longcore (*Mycol.* **91**: 727, 1999; ultrastr.), Gandhe & Kurne (*Zoos' Print Journal* **20**: 2059, 2006; reproduction).

Gonapodyaceae H.E. Petersen ex P.M. Kirk, P.F. Cannon & J.C. David (2001), Monoblepharidales. 2 gen., 7 spp.

Lit.: Mollicone & Longcore (*Mycol.* **91**: 727, 1999), Noyes Mollicone & Longcore (*Mycol.* **91**: 727, 1999), Steciow *et al.* (*Boln Soc. argent. Bot.* **36**: 203, 2001), Bullerwell *et al.* (*Nucl. Acids Res.* **31**: 1614, 2003).

Gonatobotrydiaceae Nann. (1934) = Ceratostomataceae.

Gonatobotrys Corda (1839), anamorphic *Melanospora*, Hso.0-1eH.8. 2 (fungicolous), widespread. See Whaley & Barnett (*Mycol.* **55**: 199, 1963; *G. simplex* on *Alternaria* and *Cladosporium*), Walker & Minter (*TBMS* **77**: 299, 1981; key), Vakili (*MR* **93**: 67, 1989; teleomorph).

Gonatobotrytites Pia (1927), Fossil Fungi. 1 (Eocene), Europe.

Gonatobotryum Sacc. (1880), anamorphic *Pezizomycotina*, Hso.0eH/1eP.5. 4 (fungicolous), widespread. See Kendrick *et al.* (*CJB* **45**: 591, 1968; conidiogenesis), Walker & Minter (*TBMS* **77**: 299, 1981; key).

Gonatophragmiella Rak. Kumar, A.N. Rai & Kamal (1994), anamorphic *Pezizomycotina*, Hso.≡ eP.?. 1, India. See Kumar *et al.* (*Indian Phytopath.* **47**: 129, 1994).

Gonatophragmium Deighton (1969), anamorphic *Acrospermum*, Hso.≡ eP.10. 2, widespread (tropical). See Takahashi & Teramine (*Ann. phytopath. Soc. Japan* **52**: 404, 1986; teleomorph), Rai (*MR* **100**: 1263, 1996; India), Siboe *et al.* (*Mycotaxon* **73**: 283, 1999; Kenya).

Gonatopyricularia Z.D. Jiang & P.K. Chi (1989) ≡ Pyriculariopsis.

Gonatorhodis Clem. & Shear (1931) ≡ Gonatorrhodiella.

Gonatorrhodiella Thaxt. (1891) = Gonatobotryum fide Walker & Minter (*TBMS* **77**: 299, 1981).

Gonatorrhodum Corda (1839), anamorphic *Pezizomycotina*, Hso.0eP.?3. 1 or 2, Europe.

Gonatosporium Corda (1839) = Arthrinium fide Hughes (*CJB* **36**: 727, 1958).

Gonatotrichum Corda (1842) ≡ Gonytrichum.

Gondwanamyces G.J. Marais & M.J. Wingf. (1998), Ceratocystidaceae. Anamorph *Knoxdaviesia*. 2 (on *Protea*), S. Africa. See Marais *et al.* (*Mycol.* **90**: 136, 1998), Viljoen *et al.* (*MR* **103**: 497, 1999; phylogeny), Wingfield *et al.* (*MR* **103**: 1616, 1999; phylogeny), Gibb & Hausner (*MR* **107**: 1442, 2003; introns), Roets *et al.* (*Stud. Mycol.* **55**: 199, 2006; phylogeny), Roets *et al.* (*CJB* **84**: 989, 2006; PCR detection).

Gongromeriza Preuss (1851) = Chloridium fide Hughes (*Friesia* **9**: 61, 1969).

Gongronella Ribaldi (1952), Cunninghamellaceae. 2, widespread. See Hessletine & Ellis (*Mycol.* **53**: 406, 1961), Hessletine & Ellis (*Mycol.* **56**: 568, 1964; key), Upadhyay (*Nova Hedwigia* **17**: 65, 1969; key), Kirk (*IMI Descr. Fungi Bact.* **131**, 1997), Voigt & Wöstemeyer (*Gene* **270**: 113, 2001; phylogeny).

Gongylia Körb. (1855) = Arthrorhaphis fide Hawksworth *et al.* (*Lichenologist* **12**: 13, 1980), Jørgensen & Santesson (*Taxon* **42**: 881, 1993), Fryday (*Bryologist* **107**: 231, 2004).

gongylidius (pl. **gongylidia**), a bulbous structure developed by fungi cultivated by termites.

Gongylocladium Wallr. (1833) ≡ Oedemium.

gonidial layer, photobiont layer in a lichen thallus (obsol.).

gonidimium, a hymenial alga (obsol.).

Gonidiomyces Vain. (1921) nom. dub., Pezizomycotina. 1, Philippines.

gonidium, photobiont (obsol.).

gonimium, a cyanobacterial cell in a lichen thallus (obsol.).

goniocyst (**goniocystula**), a group of algal cells derived from a single cell surrounded by a hyphal envelope forming a roundish structure which is not a soralium (e.g. the vegetative thallus '*Botrydina vulgaris*'; q.v.), (Fig. 22H). See Sérusiaux (*Lichenologist* **17**: 1, 1985).

goniocystangium, cup-like structure bearing goniocysts (q.v.) on foliicolous species of *Catillaria* (Vězda, 1980) and *Opegrapha* (Santesson, *Svensk Naturv.* 1968: 176, 1968; Sérusiaux, 1985).

Gonionema Nyl. (1855) = Thermutis fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Goniopila Marvanová & Descals (1985), anamorphic *Pezizomycotina*, Hso.0eH.21. 1 (aquatic), USA; Europe. See Marvanová & Descals (*J. Linn. Soc.* Bot. **91**: 14, 1985), Belliveau & Bärlocher (*MR* **109**: 1407, 2005; placement in *Helotiales*), Campbell *et al.* (*MR* **110**: 1025, 2006; placement in *Pleosporales*).

Goniosporium Link (1824) = Arthrinium fide Höhnel (*Mitt. bot. Inst. tech. Hochsch. Wien* ser. 2 **2**: 9, 1925).

goniosporous, having angled spores.

Gonohymenia J. Steiner (1902) = Lichinella fide Moreno & Egea (*Cryptog. Bryol.-Lichénol.* **13**: 237, 1992), Schultz & Büdel (*Lichenologist* **34**: 39, 2002).

Gonohymeniomyces Cif. & Tomas. (1953) ? = Psorotichia.

Gonolecania Zahlbr. (1924) = Byssolecania fide Santesson (*Svensk bot. Tidskr.* **43**: 547, 1949), Santesson (*SA* **10**: 137, 1991).

gonoplasm (of *Peronosporales*), the protoplasm, at the centre of an antheridium, which later undergoes fusion with the oosphere.

gonosphere, a zoospore of the *Chytridiales* (obsol.).

Gonothecis Clem. (1909) = Gyalectidium fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Gonothecium (Vain.) Clem. & Shear (1931) = Gyalectidium fide Santesson (*Symb. bot. upsal.* **12** no. 1: 1, 1952).

gonotocont, the organ in which meiosis takes place.

Gonsala (orthographic variant), see *Gonzala*.

Gonyella Syd. & P. Syd. (1919), anamorphic *Pezizomycotina*, Hso.1eP.?. 1, Europe.

Gonytrichella Emoto & Tubaki (1971) = Dicyma fide von Arx (*Proc. k. ned. Akad. Wet.* Ser. C, Biol. Med. Sci. **85**: 21, 1982).

Gonytrichum Nees & T. Nees (1818), anamorphic *Chaetosphaeria, Melanopsammella*, Hsy.0eP.15. 7, widespread. See Gams & Holubová-Jechová (*Stud. Mycol.* **13**, 1976; key), Persiani & Maggi (*Mycotaxon* **39**: 465, 1990; ontogeny), Réblová (*Stud. Mycol.* **45**: 149, 2000; review), Réblová & Winka (*Mycol.* **92**: 939, 2000; phylogeny), Fernández *et al.* (*Mycol.* **98**: 121, 2006; phylogeny, morphology).

Gonzala Adans. ex Léman (1821) = Peziza Fr. fide Streinz (*Nom. fung.*, 1862).

González Fragoso (Romualdo; 1862-1928; Spain). Student of medicine, Seville (*c.* 1879-1882); Keeper of Pacific Collections, Museo de Ciencias Naturales, Madrid (1884-1885); practising doctor, Seville (1885-1911) [providing expert support during the 1888 cholera epidemic in Toledo]; mycologist with state support (1911 onwards); President (1920) then Honorary Member (1921-1928), Real Sociedad Española de Historia Natural, Madrid. Pioneer of mycology in Spain, establishing a national fungal reference collection, and (with Ciferri, q.v.) making significant contributions to the mycota of the Dominican Republic. *Publs.* Contribución a la flora micológica del Guadarrama. Uredinales. *Trabajos del Museo Nacional de Ciencias Naturales. Madrid* vols 3-5 (1914); (with Ciferri) Hongos parásitos y saprofitos de la República Dominicana. *Estación Agronómica de Moca* (1928). *Biogs, obits etc.* Ciferri (*Estación Agronómica de Moca* Serie B, Botánica **12**: 1, 1928) [portrait].

Gooday (Graham William; 1942-2002; England). PhD Bristol (1968); Research Fellow, Leeds University (1967-1969) and with J.H. Burnett (q.v.), Oxford University (1969-1972); Lecturer to full Professor of Microbiology, Aberdeen (1972-2002). First recipient of Society for General Microbiology's Fleming Medal, 1976; FRSE, 1989; President, British Mycological Society, 1993. Over 200 papers, including studies of fungal sex hormones, hyphal growth, basidiomycete fruit body formation, chitin biosynthesis and degradation in a wide range of organisms (including fungi, parasites, fish, plants and man), algal cytology, and algal-invertebrate symbiosis; notable research achievements were autoradiographic confirmation of the apex as the site of wall synthesis in fungi, characterisation of the action of trisporic acid sex pheromone of *Mucor*, and biochemical characterisation of fungal chitin synthases and chitinases; an influential teacher and mentor to many other mycologists. *Publs*: Functions of trisporic acid. *Phil. Trans. Roy. Soc.* B **284**: 509, 1978; An autoradiographic study of hyphal growth of some fungi. *J. Gen. Microbiol.* **67**: 125 1971; The First Fleming Lecture. Biosynthesis of the fungal wall: Mechanisms and implications. *J. Gen. Microbiol.* **99**: 1, 1977.

Goosia B. Song (2003), Englerulaceae. 1, China. See Song (*Mycotaxon* **87**: 413, 2003).

Goosiella Morgan-Jones, Kamal & R.K. Verma (1986), anamorphic *Pezizomycotina*, Hso.0-≡ hH.2.10. 1, India. See Morgan-Jones *et al.* (*Mycol.* **78**: 496, 1986).

Goosiomyces N.K. Rao & Manohar. (1989), anamorphic *Pezizomycotina*, Hso.0bP.12. 1, India. See Rao & Manoharachary (*MR* **92**: 250, 1989).

Goossensia Heinem. (1958), Cantharellaceae. 1, Congo. See Heinemann (*Bull. Jard. Bot. État* **28**: 424, 1958).

Goplana Racib. (1900), Chaconiaceae. 12 (on dicots, (II, III)), widespread (tropical). See Ono & Hennen (*TMSJ* **24**: 369, 1983), Berndt (*Mycol.* **91**: 1045, 1999).

Gorgadesia Tav. (1964), Roccellaceae (L). 1, Cape Verde. See Tavares (*Revta Biol.* Lisb. **4**: 131, 1964), Follmann & Mies (*Courier Forschungsinstitut Senckenberg* **105**: 57, 1988), Tehler (*CJB* **68**: 2458, 1990; cladistics), Myllys *et al.* (*Bryologist* **101**: 70, 1998; phylogeny).

Gorgomyces M. Gönczöl & Révay (1985), anamorphic *Pezizomycotina*, Hso.0fH.1/10. 1 (nematophagous, aquatic), Hungary; Spain. See Gönczöl & Révay (*Nova Hedwigia* **41**: 453, 1985), Roldán (*Mycotaxon* **34**: 381, 1989).

Gorgoniceps (P. Karst.) P. Karst. (1871), Helotiaceae. 6, widespread. See Seaver (*Mycol.* **38**: 548, 1946), Korf (*Mycol.* **58**: 724, 1966), Huhtinen & Iturriaga (*Mycotaxon* **29**: 189, 1987; culture).

Gorlenko (Mikail Vladimirovich; 1908-1994; Russia). Graduated, Voronezh State University (1930); Phytopathologist then Director, Voronezh Plant Protection Station (1929-1941); Head of Laboratory then Director, Moscow Plant Protection Station (1941-1955); Head, Mycology and Algology Department, Lomonosov Moscow State University (1955-1994). He provided an academic infrastructure for mycology, through which his teams could work on physiology and evolution of parasitism and specialization, variability and genetics of plant pathogenic fungi, their cytology, soil fungi as antagonists of plant pathogens, antibiotics of fungal origin for plant protection, mushrooms cultivation and other topics; organizer and first Editor-in-Chief, *Mikologiya i Fitopatologiya* (1967-1994). *Publs.* [*Plant diseases and environment*] (1950) [in Russian, Chinese edn 1954]; *Response of Plant Immunity to Infectious Diseases* (1973) [in Russian]; (ed.) *Plant Life: Myxomycetes and Fungi* edn 2 vol. 2 (1991) [in Russian]. *Biogs, obits etc.* Anon. ([*Mikologiya i Fitopatologiya*] **22**: 273, 1988) [portrait, in Russian]); Anon. ([*Mikologiya i Fitopatologiya*] **29**: 66, 1995) [portrait, in Russian]; Litvinov, Novotelnova & Khokhryakov ([*Mikologiya i Fitopatologiya*] **3**: 287, 1969) [portrait, in Russian].

Gorodkoviella Vassilkov (1969) = Pachyella fide Dissing (*SA* **6**: 129, 1987).

gossamers, fine, floating mycelial nets produced by fungi on media lacking added carbon (Wainwright, *Mycologist* **1**: 182, 1987).

Goupilia Mérat (1834) ? = Scleroderma fide Stalpers (*in litt.*).

Govindua Bat. & H. Maia (1960), Microthyriaceae. 1, India. See Batista & Maia (*Revta Biol.* Lisb. **2**: 95, 1960).

Graamspora Locq. & Sal.-Cheb. (1980), Fossil Fungi. 1, Cameroon.

Gracilistilbella Seifert (2000), anamorphic *Stilbocrea*. 4, widespread. See Seifert & Samuels (*Stud. Mycol.* **45**: 18, 2000).

Graddonia Dennis (1955), Helotiales. 1, Europe. See Dennis (*Kew Bull.* **1955**: 359, 1955), Nauta & Spooner (*Mycologist* **14**: 65, 2000; UK).

Graddonidiscus Raitv. & R. Galán (1992), Hyaloscyphaceae. 3, Europe; N. America. See Galán *et al.* (*MR* **98**: 1137, 1994), Raitviir (*Scripta Mycologica* Tartu **20**, 2004).

Grahamiella Spooner (1981), Helotiaceae. 3, Europe. See Spooner (*TBMS* **76**: 265, 1981).

Grallomyces F. Stevens (1918), anamorphic *Pezizomycotina*, Hsy.0bP.19. 1, widespread (tropical). See Deighton & Pirozynski (*Mycol. Pap.* **105**, 1966), Heredia Abarca & Mercado Sierra (*Mycotaxon* **68**: 137, 1998; Mexico).

Gram, + or - (of bacteria), staining or not staining by Gram's method (see Methods).

Gramincola Velen. (1947) nom. dub., Agaricales.

Graminella L. Léger & M. Gauthier ex Manier (1962), Legeriomycetaceae. 3 (in *Ephemeroptera*), widespread. See Lichtwardt & Moss (*TBMS* **76**: 311, 1981), Lichtwardt (*The Trichomycetes. Fungal associates of arthropods*, 1986; key), Valle (*Mycol.* **99**: 442, 2007; Spain), Valle *et al.* (*Mycol.* **100**: 149, 2008; Mexico).

Graminelloides Lichtw. (1998), Legeriomycetaceae. 1 (in *Diptera*), Costa Rica. See Lichtwardt (*Rev. Biol. Trop.* **45**: 1349, 1997), Nelder *et al.* (*Fungal Diversity* **22**: 121, 2006; ecology and taxonomy).

graminicolous, living on *Gramineae*.

Grammothele Berk. & M.A. Curtis (1868), Polyporaceae. 8, widespread (tropical). See Ryvarden (*TBMS* **73**: 1, 1979), Ipulet & Ryvarden (*Syn. Fung.* **20**: 87, 2005; Uganda).

Grammotheleaceae Berk. & M.A. Curtis (1868), Polyporaceae. 8, widespread (tropical). See Ryvarden (*TBMS* **73**: 1, 1979), Ipulet & Ryvarden (*Syn. Fung.* **20**: 87, 2005; Uganda).

Grammothelopsis Jülich (1982), Polyporaceae. 4, Africa; S. America. See David & Rajchenberg (*Mycotaxon* **22**: 299, 1985), Ryvarden & de Meijer (*Syn. Fung.* **15**: 34, 2002; Brazil).

Granatisporites Elsik & Janson. (1974), Fossil Fungi. 5 (Paleocene), Canada. = Brachysporisporites (Fossil fungi) fide Kremp (*BMR Bull.* **192**: 76, 1978).

Grandigallia M.E. Barr, Hanlin, Cedeño, Parra & R. Hern. (1987), Dothideomycetes. 1, Venezuela. See Barr *et al.* (*Mycotaxon* **29**: 196, 1987).

Grandinia Fr. (1838) nom. rej., Agaricomycetidae. See Donk (*Taxon* **5**: 77, 1956) but see, Jülich (*Int. J. Mycol. Lichenol.* **1**: 27, 1982).

Grandiniella P. Karst. (1895) = Phanerochaete fide Eriksson *et al.* (*Taxon* **27**: 51, 1978).

Grandiniochaete Rick (1940) nom. dub., Agaricomycetidae. See Donk (*Taxon* **5**: 79, 1956).

Grandinioides Banker (1906) = Mycobonia fide Donk (*Taxon* **6**: 17, 1957).

Granmamyces J. Mena & Mercado (1988) = Weufia fide Mercado (*AnaNet* **10**: 8, 1990).

Granodiporites C.P. Varma & Rawat (1963), Fossil Fungi. 2, India.

granular (**granulate**, **granulose**) (of a surface), covered with very small particles. Fig. 20.4.

Granularia Roth (1791) = Nidularia Fr. fide Palmer (*Taxon* **10**: 54, 1961).

Granularia Sacc. & Ellis ex Sacc. (1882), anamorphic *Pezizomycotina*, Hsp.0eH.?. 1, N. America.

Granularia Sowerby (1815) = Urocystis fide Vánky (*in litt.*).

Granulina Velen. (1947) nom. dub., Agaricomycetes. 'gasteromycetes'.

Granulobasidium Jülich (1979), Cyphellaceae. 1, N. America. See Jülich (*Persoonia* **10**: 328, 1979), De Meulder (*AMK Mededelingen*: 30, 2005).

Granulocystis Hjortstam (1986) [non *Granulocystis* Hindák 1977, *Algae*] ≡ Leifia.

Granulodiplodia Zambett. ex M. Morelet (1973) = Sphaeropsis Sacc. fide Sutton (*Mycol. Pap.* **141**, 1977).

granuloma, a nodule of firm tissue formed as a reaction to chronic irritation.

Granulomanus de Hoog & Samson (1978), anamorphic *Torrubiella*, Hso.0fH.15. 1 (on *Arachnida*), British Isles. See Samson *et al.* (*Atlas of Entomopathogenic Fungi*: 187 pp., 1988).

Granulopyrenis Aptroot (1991), Requienellaceae (±L). 6, widespread (tropical). See Aptroot (*Biblthca Lichenol.* **44**: 91, 1991), Geiser *et al.* (*Mycol.* **98**: 1053, 2006; phylogeny).

Graphidaceae Dumort. (1822), Ostropales (L). 25 gen. (+ 59 syn.), 897 spp.

Lit.: Wirth & Hale (*Contr. US natn Herb.* **36**: 63, 1963; Mexico), Wirth & Hale (*Smithson. Contr. bot.* **40**, 1978; Dominican Republic), Nakanishi (*J. Sci. Hiroshima Univ.* B(2) **25**: 16, 1987), Harris (*Some Florida lichens*, 1990; gen. concepts), López de Silanes (*Clementeana* **3**: 25, 1997; key Iberian spp.), Winka *et al.* (*Lichenologist* **30**: 455, 1998), Archer (*Telopea* **8**: 273, 1999), Nakanishi & Harada (*Nat. Hist. Res.* **5**: 63, 1999), Staiger & Kalb (*Mycotaxon* **73**: 69, 1999), Archer (*Telopea* **8**: 461, 2000), Kauff & Lutzoni (*Mol. Phylogen. Evol.* **25**: 138, 2002), Kalb *et al.* (*Symb. bot. upsal.* **34** no. 1: 133, 2004), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny), Staiger *et al.* (*MR* **110**: 765, 2006), Archer (*Systematics & Biodiversity* **5**: 9, 2007; Solomon Is).

Graphidales Bessey (1907) = Ostropales.

Graphidastra (Redinger) G. Thor (1990), Roccellaceae (L). 2, paleotropical. See Thor (*Op. bot.* **103**: 80, 1991), Grube (*Bryologist* **101**: 377, 1998; phylogeny), Thor (*J. Jap. Bot.* **77**: 47, 2002; Japan, Taiwan), Sparrius *et al.* (*Lichenologist* **38**: 27, 2006; Thailand, Vietnam).

Graphidium Lindau (1909) ? = Paecilomyces fide Kendrick & Carmichae *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 390, 1973).

Graphidomyces E.A. Thomas ex Cif. & Tomas. (1953) = Graphis fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Graphidula Norman (1853) = Verrucaria Schrad. fide Staiger (*Biblthca Lichenol.* **85**, 2002).

Graphilbum H.P. Upadhyay & W.B. Kendr. (1975) = Pesotum fide Upadhyay & Kendrick (*Mycol.* **67**: 800, 1975), Mouton *et al.* (*S. Afr. J. Sci.* **90**: 293, 1994; review), Okada *et al.* (*CJB* **76**: 1502, 1998), Harrington *et al.* (*Mycol.* **93**: 111, 2001; phylogeny), Kim *et al.* (*FEMS Microbiol. Lett.* **222**: 187, 2003).

Graphina Müll. Arg. (1880) = Graphis fide Dharne & Raychoudhury (*Bull. bot. Surv. India* **10**: 267, 1969), Archer (*Telopea* **8**: 273, 1999), Archer (*Mycotaxon* **77**: 153, 2001; Australia), Archer (*Mycotaxon* **83**: 361, 2002; Solomon Is), Archer (*Mycotaxon* **88**: 143, 2003; Australia, Solomon Is), Archer (*Mycotaxon* **86**: 31, 2003), Makhija & Adawadkar (*Mycotaxon* **91**: 347, 2005; India), Staiger *et al.* (*MR* **110**: 765, 2006; phylogeny; 107842), Lücking *et al.* (*Taxon* **56**: 1296, 2007; nomencl.).

Graphinella Zahlbr. (1923) = Spirographa fide Santesson (*The lichens and lichenicolous fungi of Sweden and Norway*, 1993).

Graphinellaceae Walt. Watson (1929) = Odontotremataceae.

Graphinomyces Cif. & Tomas. (1953) ≡ Thalloloma fide Lücking & Hawksworth (*Taxon* **56**: 1274, 2007).

Graphiocladiella H.P. Upadhyay (1981) = Leptographium fide Tsuneda & Hiratsuka (*CJB* **62**: 2618,

1984; SEM conidiogenesis), Six *et al.* (*Mycol.* **95**: 781, 2003).

Graphiola Poit. (1824), Graphiolaceae. *c.* 5, widespread (tropical and glasshouses). *G. phoenicis* on *Phoenix*. See Cole (*Mycol.* **75**: 93, 1983), Begerow *et al.* (*Mycol. Progr.* **1**: 187, 2002; phylog.).

Graphiolaceae Clem. & Shear (1931), Exobasidiales. 2 gen. (+ 4 syn.), 6 spp.

Lit.: Oberwinkler *et al.* (*Pl. Syst. Evol.* **140**: 251, 1982), Cole (*Mycol.* **75**: 93, 1983), Blanz & Gottschalk (*Syst. Appl. Microbiol.* **8**: 121, 1986; affin. with *Exobasidium* and some graminicolous smuts from 5S ribosomal RNA data), Bauer *et al.* (*CJB* **75**: 1273, 1997), Begerow *et al.* (*CJB* **75**: 2045, 1998), Sjamsuridzal & Sugiyama (*J. gen. appl. Microbiol.* Tokyo **44**: 355, 1998), Begerow *et al.* (*Mycol. Progr.* **1**: 187, 2002).

Graphiolales = Exobasidiales.

Graphiolites Fritel (1910), Fossil Fungi. 1 (Eocene), France.

Graphiopsis Bainier (1907) = Phaeoisaria fide Mason (*Annotated Acct of Fungi rec'd I.M.I.*, 1937).

Graphiopsis Trail (1889), anamorphic *Davidiellaceae*. 1 (on *Paeonia*), widespread. See Braun *et al.* (*Mycotaxon* **103**: 207, 2008).

Graphiothecium Fuckel (1870), anamorphic *Pezizomycotina*, Hso.0eP.?. 6, widespread (north temperate). See Braun (*Sydowia* **45**: 81, 1993).

Graphis Adans. (1763), Graphidaceae (L). *c.* 386, widespread (esp. tropical). See Winka *et al.* (*Lichenologist* **30**: 455, 1998; DNA), Archer (*Telopea* **8**: 273, 1999; Australia), Nakanishi & Harada (*Natural History Research* **5**: 63, 1999; Micronesia), Archer (*Aust. Syst. Bot.* **14**: 245, 2001; Australia), Nakanishi *et al.* (*Bull. natn. Sci. Mus.* Tokyo, B **27**: 47, 2001; Thailand), Nakanishi *et al.* (*Bull. natn. Sci. Mus.* Tokyo, B **28**: 107, 2002; Vanuatu), Staiger (*Biblthca Lichenol.* **85**, 2002; revision), Bock & Hauck (*Lichenologist* **37**: 105, 2005; Africa), Adawadkar & Makhija (*Mycotaxon* **96**: 51, 2006; India), Archer (*Biblthca Lichenol.* **94**, 2006; Australia), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny), Staiger *et al.* (*MR* **110**: 765, 2006; phylogeny), Adawadkhar & Makhija (*Mycotaxon* **99**: 303, 2007; India), Archer (*Systematics & Biodiversity* **5**: 9, 2007; Solomon Is).

Graphium Corda (1837), anamorphic *Microascus, Pseudallescheria*, Hsy.0eH.19. *c.* 30, widespread. See also *Pesotum*, *Ophiostoma*. See Sutton & Laut (*Bi-mon. Res. Nts Can. For.* **26**: 25, 1970; conidiogenesis), Ellis (*Dematiaceous Hyphomycetes*, 1971; key), Wingfield *et al.* (*MR* **95**: 1328, 1991; gen. synonymy), Seifert & Okada *in* Wingfield *et al.* (Eds) (*Ceratocystis* and *Ophiostoma* Taxonomy, Ecology and Pathogenicity: 27, 1993; anamorphs of *Ophiostoma*), Issakainen *et al.* (*J. Med. Vet. Mycol.* **35**: 389, 1997), Issakainen *et al.* (*MR* **103**: 1179, 1999), Okada *et al.* (*CJB* **76**: 1495, 1999; 18S RNA analysis), Okada *et al.* (*Stud. Mycol.* **45**: 169, 2000; typification, phylogeny), Rainer *et al.* (*J. Clin. Microbiol.* **38**: 3267, 2000; genetic variation), Jacobs *et al.* (*Mycol.* **95**: 714, 2003), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny).

graphium (pl. **-ia**), the synnema of *Graphium*.

Graphostroma Piroz. (1974), Graphostromataceae. Anamorph *Nodulisporium*-like. 1, N. America. See Glawe & Rogers (*CJB* **64**: 1493, 1986; anamorph), Barr *et al.* (*Mycotaxon* **48**: 529, 1993; posn), Vassiljeva & Stephenson (*Fungal Diversity* **17**: 191, 2004; synonym of *Diatrype*), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny).

Graphostromataceae M.E. Barr, J.D. Rogers & Y.M. Ju (1993), Xylariales. 1 gen., 1 spp.

Lit.: Pirozynski (*CJB* **52**: 2129, 1974), Barr (*Mycol.* **77**: 549, 1985), Glawe & Rogers (*CJB* **64**: 1493, 1986), Barr *et al.* (*Mycotaxon* **48**: 529, 1993).

Graphyllium Clem. (1901), Hysteriaceae. 10, N. America. See Shoemaker & Babcock (*CJB* **70**: 1617, 1992; posn), Barr (*SA* **12**: 27, 1993), Checa *et al.* (*Mycol.* **99**: 285, 2007; Costa Rica).

Greeneria Scribn. & Viala (1887), anamorphic *Diaporthales*, Cac.0eP.15. 1, widespread. See Sutton (*The Coelomycetes*, 1980), Kao *et al.* (*Pl. Prot. Bull. Taiwan* **32**: 256, 1990; pathology of *G. uvicola*), Farr *et al.* (*Sydowia* **53**: 185, 2001; phylogeny, review).

gregarious, in companies or groups but not joined together.

Gregorella Lumbsch (2005), Arctomiaceae (L). 1, Europe. See Lumbsch *et al.* (*Lichenologist* **37**: 300, 2005).

Greletia Donadini (1980) = Smardaea fide Korf & Zhuang (*Mycotaxon* **40**: 413, 1991), Hansen *et al.* (*Mol. Phylogen. Evol.* **36**: 1, 2005; phylogeny).

Gremlia Nieuwl. (1916) ≡ Polycephalum.

Gremmenia Korf (1962) = Phacidium fide Reid & Pirozynski (*Mycol.* **60**: 526, 1968), Stone & Gernandt (*Mycotaxon* **91**: 115, 2005).

Gremmeniella M. Morelet (1969), Helotiales. Anamorph *Brunchorstia*. *c.* 3 (conifer canker), widespread (northern hemisphere). See also *Ascocalyx*. See Petrini *et al.* (*CJB* **67**: 2805, 1989), Bernier *et al.* (*Appl. Environm. Microbiol.* **60**: 1279, 1994; DNA), Hamelin & Rail (*CJB* **75**: 693, 1997; DNA), Hamelin *et al.* (*Phytopathology* **88**: 582, 1998; biogeography), Kaitera *et al.* (*MR* **102**: 199, 1998; Finland, Russia), Hamelin *et al.* (*MR* **104**: 527, 2000; PCR detection), Uotila *et al.* (*Forest Pathology* **30**: 211, 2000; hybridisation), Dusabenyagasani *et al.* (*CJB* **80**: 1151, 2002; molecular variation), Hantula & Tuomivirta (*CJB* **81**: 1213, 2003; Europe), Santamaría *et al.* (*Forest Pathology* **34**: 395, 2004; Spain), Wang *et al.* (*Mol. Phylogen. Evol.* **41**: 295, 2006; phylogeny), Wang *et al.* (*Mycol.* **98**: 1065, 2006; phylogeny).

Greville (Robert Kaye; 1794-1866; England, later Scotland). Trained in medicine, London and Edinburgh, then settling in Edinburgh. An ardent collector, he influenced Berkeley (q.v.) to study fungi rather than algae and mosses, and introduced him to W.J. Hooker. His fungal specimens are mostly in the fungal reference collection at Edinburgh Botanic Garden (**E**). His interests also included campaigning for the emancipation of slaves and, in natural history, diatoms, flowering plants and insects. *Publs. Scottish Cryptogamic Flora* (1823-1828); *Flora Edinensis* (1824). *Biogs, obits etc.* Balfour (*Transactions of the Botanical Society of Edinburgh* **8**: 463, 1866); Grummann (1974: 371); Stafleu & Cowan (*TL-2* **1**: 1009, 1976).

grex (1) see plasmodium; (2) (of cultivated plants) progeny of an artificial cross between known parents.

Grifola Gray (1821), Meripilaceae. 5, widespread (temperate). See Corner (*Beih. Nova Hedwigia* **96**: 63, 1989), Shen *et al.* (*Mycol.* **94**: 472, 2002; phylogeny).

Grifolaceae Jülich (1982) = Meripilaceae.

Griggsia F. Stevens & Dalbey (1919), ? Dothideomy-

cetes. 1, West Indies.

Grilletia Renault & C.E. Bertrand (1885), Fossil Fungi, Chytridiomycota. 1 (Carboniferous), France.

Grimmicola Döbbeler & Hertel (1983), Helotiaceae. 1 (on *Grimmia*), Marion Island. See Döbbeler & Hertel (*Sydowia* **36**: 34, 1983).

Griphosphaerella Petr. (1927) = Monographella fide Müller (*Revue Mycol.* Paris **41**: 129, 1977).

Griphosphaeria Höhn. (1918) = Discostroma fide Brockmann (*Sydowia* **28**, 1976).

Griphosphaerioma Höhn. (1918), Amphisphaeriaceae. Anamorphs *Labridella*, *Sarcostroma*. 2, N. America; Japan. See Shoemaker (*CJB* **41**: 1419, 1963), Kang *et al.* (*MR* **103**: 53, 1999), Ono & Kobayashi (*Mycoscience* **44**: 109, 2003).

griseofulvin ('fulvicin', 'grifulvin', 'grisactin'), a Cl-containing antibiotic from *Penicillium griseofulvum*, *P. nigricans*; described and named by Raistrick *et al.* in 1936, and independently as 'curling factor' by Brian *et al.* in 1946. See Brian (*Ann. Bot. Lond.* N.S. **13**: 59, 1949; *TBMS* **43**: 1, 1960; reviews); antifungal. Has been used as a systemic fungicide against plant pathogens (Rhodes *et al.*, *Ann. appl. Biol.* **45**: 215, 1957) and orally against dermatophyte infections in animals and humans (Gentles, *Nature* **182**: 476, 1958; Lauder & O'Sullivan, *Vet. Rec.* **70**: 949, 1958; Davies, *Antifungal chemotherapy*, 1980: 180).

Griseoporia Ginns (1984) = Gloeophyllum fide Ryvarden (*Syn. Fung.* **5**, 1991).

grisette, basidiomata of the edible *Amanita vaginata*.

growth form, see habit.

Growth rates. In fungi growth may be unrestricted or restricted.

(1) **Unrestricted growth** occurs when a fungus is grown in batch culture in a medium containing an excess of all nutrients. Under these conditions, growth is exponential and proceeds at the organism's maximum specific growth rate for the conditions (type of nutrients, temperature, pH etc.). Thus, $^{dM}{}_{dt} = \mu_{max}M$ where M = fungal biomass, t = time and μ_{max} = maximum specific growth rate. The fastest μ_{max} recorded for a fungus in batch culture on a glucose-mineral salts medium is 0.61 h^{-1} (doubling time of 1.1 h) for *Geotrichum candidum*. During unrestricted growth, the total hyphal length and the number of tips of a mycelium increase at the same μ_{max}, and consequently the ratio (G, the hyphal growth unit) between these parameters is a constant (Trinci, *J. Gen. Microbiol.* **81**: 225, 1974). Thus, unrestricted growth of a mycelium involves the duplication of a physiological unit of growth (G) consisting of a hyphal tip and a certain length of hypha. G is species- and strain-specific (Trinci, *in* Jennings & Rayner (Eds), *Ecology and physiology of the fungal mycelium*: 23, 1984) varying from *c.* 48 µm (*Penicillium chrysogenum*) to *c.* 682 µm (*Fusarium vaucerium*). (2) **Restricted growth** of a fungus occurs when not all nutrients (including O_2) are present in excess [e.g. in a chemostat culture (Righelato, *in* Smith & Berry (Eds), *The filamentous fungi* **1**: 79, 1975)] or when factors such as nutrient concentration, pH or mycelial morphology are altered sufficiently to affect μ_{max} [e.g. in submerged batch culture in which growth is decelerating because of nutrient depletion or in which mycelial pellets (spherical colonies) are formed (Trinci, *Arch. Mikrob.* **73**: 353, 1970)]. Batch growth of a fungus on a solid medium eventually results in the establishment of conditions (e.g. nutrient depletion, change in pH etc.) below the centre of the colony which are less favourable for growth than was initially the case. Consequently, mature colonies of fungi increase in radius at a linear rate (K_r). Thus, $R = R_0 + K_r(t_1 - t_0$ where t_0 = time at onset of linear expansion of colony and R_0 = colony radius at t_0. For colonies expanding in radius at a linear rate, growth in a peripheral ring of biomass (w, the peripheral growth zone) occurs at approximately μ_{max} but growth proceeds at below μ_{max} elsewhere in the col-

ony, often falling to zero or near zero at the colony centre, i.e. a colony is heterogeneous and growth of most of its biomass is restricted. Expansion in radius of a mature colony is described by the following equation (Trinci, *J. Gen. Microbiol.* **67**: 325, 1971) $K_r = w\mu$. It follows from this equation that K_r cannot be used to study the effect of an environmental variable on growth if the variable alters w.

Lichens are amongst the slowest growing organisms known; measured rates vary from 0.01-90 mm marginal growth p.a. (most in range 1.0-6.0 mm). Minutely crustose species are generally the slowest, and fruticose ones (e.g. *Ramalina menziesii*) the fastest. Some species have different growth rates in different geographical regions, and competition may limit growth of adjacent thalli (Pentecost, *Lichenologist* **12**: 135, 1980). Growth rates of some species are reported to be accelerated by chemicals (see Barashkova, *Problems of the North* **7**: 149, 1964). A few attempts at modelling lichen growth have been made (Hill, *Lichenologist* **13**: 265, 1981; Topham (*in* Seaward, *Lichen ecology*: 35, 1977; review).

For reviews see Gow & Gadd (Eds) (*The growing fungus*, 1995), Wessels (*in* Hawksworth (Ed.), *Frontiers in mycology*: 27, 1991; molec. aspect).

Gut fungi, Fungi enter animal guts with food, both non-flagellate (*Trichomycetes*) and flagellate (*Neocallimastigales*) gut fungi, which naturally grow and reproduce only there. Both groups may confer some benefits on their hosts, but are primarily commensals exploiting highly specialized environments. Many *Trichomycetes* attach to the gut lining, especially the hind gut, of diverse larval and adult arthropods. These guts may be somewhat anaerobic, but the non-flagellate gut fungi contain mitochondria and grow best aerobically (Lichtwardt, *in* Howard & Miller, *The Mycota. VI Human and Animal Relationships*: 315, 1996, review, bibliogr.). Flagellate *Neocallimastigales* inhabit the foregut or hindgut fermentation chambers of most herbivores. All lack mitochondria and are obligate anaerobes which colonize ingested plant material and aid its digestion (Li & Heath, *Can. J. Microbiol.* **39**: 1003, 1993; Trinci *et al.*, *MR* **98**: 129, 1994, reviews, bibliogr.). Unidentified chytrids also occur in sea urchin guts (Thorsen, *Mar. Biol.* **133**: 353, 1999) and may thus be more widespread.

guttate (1) having tear-like drops; (2) (of a pileus), marked as if by drops of liquid.

Guttularia W. Oberm. (1913) ? = Melanospora Corda fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

guttulate (of spores), having one or more oil-like drops (**guttules**) inside.

Gutturomyces Rivolta (1884) ? = Aspergillus fide Sutton (*in litt.*).

Gymnoascaceae Baran. (1872), Onygenales. 12 gen. (+ 10 syn.), 38 spp.

Lit.: Malloch (*Phytophylactica*, 1981)

Lit.:, von Arx (*Gen. Fungi Sporul. Cult.* Edn 3, 1981)Currah (*Mycotaxon* **24**: 1, 1985; monogr.), Ghosh (*Proc. Indian Acad. Sci.* (Pl. Sci.) **94**: 197, 1986; physio-ecology), Ghosh (*Kavaka* **12**: 1, 1986; phylogeny), Currah (*SA* **7**: 1, 1988; key gen.), Dalpé (*New Phytol.* **113**: 523, 1989), Bowman *et al.* (*Mol. Phylogen. Evol.* **6**: 89, 1996), Sugiyama *et al.* (*Mycoscience* **40**: 251, 1999; phylogeny), Iwen *et al.* (*J. Clin. Microbiol.* **38**: 375, 2000), Kuraishi *et al.* (*Antonie van Leeuwenhoek* **77**: 179, 2000), Sugiyama & Mikawa (*Mycoscience* **42**: 413, 2001), Sugiyama *et al.* (*Stud. Mycol.* **47**: 5, 2002), Untereiner *et al.* (*Stud. Mycol.* **47**: 25, 2002), Stchigel & Guarro (*MR* **111**: 1100, 2007).

Gymnoascales G. Winter (1884) = Onygenales.

Gymnoascoideus G.F. Orr, K. Roy & G.R. Ghosh (1977), Gymnoascaceae. Anamorph *Malbranchea*. 1, widespread. See Currah (*Mycotaxon* **24**: 1, 1985), Currah *in* Hawksworth (Ed.) (*Ascomycete Systematics. Problems and Perspectives in the Nineties* NATO ASI Series vol. **269 269**: 291, 1994; posn), Sugiyama *et al.* (*Mycoscience* **40**: 251, 1999; phylogeny), Solé *et al.* (*Stud. Mycol.* **47**: 141, 2002; phylogeny).

Gymnoascopsis C. Moreau & M. Moreau (1959) ? = Ascosorus fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Gymnoascus Baran. (1872), Gymnoascaceae. Anamorph *Malbranchea*. 8, widespread (north temperate). See Orr (*Mycotaxon* **5**: 470, 1977; key), von Arx (*Persoonia* **13**: 173, 1986; key 14 spp. s.l.), Sugiyama *et al.* (*Mycoscience* **40**: 251, 1999; DNA), Kuraishi *et al.* (*Antonie van Leeuwenhoek* **77**: 179, 2000; ubiquinones), Sugiyama & Mikawa (*Mycoscience* **42**: 413, 2001; phylogeny), Solé *et al.* (*Stud. Mycol.* **47**: 141, 2002; phylogeny), Sugiyama *et al.* (*Stud. Mycol.* **47**: 5, 2002; phylogeny), Geiser *et al.* (*Mycol.* **98**: 1053, 2006; phylogeny).

gymnocarpous (of a sporocarp), open, with the hymenium appearing and developing to maturity exposed and not enclosed. Cf. angiocarpous.

Gymnocaulon P.A. Duvign. (1956) = Stereocaulon Hoffm. fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Gymnochilus Clem. (1896) [non *Gymnochilus* Blume 1859, *Orchidaceae*] = Psathyrella fide Singer (*Agaric. mod. Tax.*, 1951).

Gymnocintractia M. Piepenbr., Begerow & Oberw. (1999) = Ustanciosporium fide Vánky (*in litt.*).

Gymnoconia Lagerh. (1894), Phragmidiaceae. 1 (on *Rubus* (0, I (=I$^{(III)}$, endocyclic pathway)) (*Rosaceae*)), widespread. *G. nitens* (orange rust of *Rubus*). See Laundon (*Mycotaxon* **3**: 133, 1975), Helfer (*Nova Hedwigia* **81**: 325, 2005; Europ. spp.).

Gymnocybe P. Karst. (1879) [non *Gymnocybe* Fr. 1825) nom. rej., *Musci*] = Pholiota fide Kuyper (*in litt.*).

Gymnoderma Humb. (1793) nom. rej., Thelephoraceae.

Gymnoderma Nyl. (1860) nom. cons., Cladoniaceae (L). 3, Asia; N. America. See Yoshimura & Sharp (*Am. J. Bot.* **55**: 635, 1968), Ahti (*Regnum veg.* **128**: 58, 1993), Wei & Ahti (*Lichenologist* **34**: 19, 2002; separation of *Cetradonia*), Zhou *et al.* (*J. Hattori bot. Lab.* **100**: 871, 2006; phylogeny).

Gymnodermatomyces Cif. & Tomas. (1953) ≡ Gymnoderma Nyl.

Gymnodiscus Zukal (1887) [non *Gymnodiscus* Less. 1831, *Compositae*] ≡ Zukalina.

Gymnodochium Massee & E.S. Salmon (1902), anamorphic *Pezizomycotina*, Hsp.1eH.?. 1, Europe.

Gymnoeurotium Malloch & Cain (1973) = Edyuillia fide Benny & Kimbrough (*Mycotaxon* **12**: 1, 1980).

Gymnogaster J.W. Cribb (1956), Agaricaceae. 1, Australia. See Cribb (*Pap. Dept. Bot. (formerly Biol.) Univ. Qd.* **3**: 109, 1956).

Gymnoglossum Massee (1891), Bolbitiaceae. 1, Australia. See Smith (*Mycol.* **58**: 122, 1966).

Gymnogomphus Fayod (1889) nom. dub., Boletales. The name is possibly a synonym of *Boletus*. See Singer (*Agaric. mod. Tax.* 4th ed: 758, 1986).

Gymnographa Müll. Arg. (1887) = Phaeographis fide Staiger (*Biblthca Lichenol.* **85**: 526 pp., 2002; monograph), Archer (*Telopea* **10**: 589, 2004), Archer (*Biblthca Lichenol.* **94**, 2006), Lücking (*Biblthca Lichenol.* **96**: 185, 2007).

Gymnographoidea Fink (1930) = Mazosia fide Aptroot (*in litt.*).

Gymnographomyces Cif. & Tomas. (1953) ≡ Gymnographa.

Gymnographopsis C.W. Dodge (1967), Graphidaceae (L). 3, widespread (southern hemisphere temperate). See Dodge (*Nova Hedwigia* **12**: 307, 1966), Egea & Torrente (*Cryptog. Bryol.-Lichénol.* **17**: 305, 1996; S Africa), Staiger (*Biblthca Lichenol.* **85**, 2002).

Gymnohydnotrya B.C. Zhang & Minter (1989), Discinaceae. 3, Australia. See Zhang & Minter (*MR* **92**: 192, 1989), Læssøe & Hansen (*MR* **111**: 1075, 2007; phylogeny).

Gymnomitrula S. Imai (1941) = Heyderia fide Maas Geesteranus (*Persoonia* 3: 81, 1964).

Gymnomyces Massee & Rodway (1898) = Russula fide Miller *et al.* (*Mycol.* **98**: 960, 2006) Gastroid forms are polyphyletic and have formerly been morphologically recognised as a separate genus.

Gymnopaxillus E. Horak (1966), Serpulaceae. 4, S. America (temperate); Australia. See Horak (*Nova Hedwigia* **10**: 335, 1966), Claridge *et al.* (*Aust. Syst. Bot.* **14**: 273, 2001; Australia).

Gymnopeltis F. Stevens (1924) = Lecideopsella fide Eriksson & Hawksworth (*SA* **9**: 15, 1991).

Gymnopilus P. Karst. (1879), ? Strophariaceae. *c.* 200, widespread. See Hesler (*Mycol. Mem.* **3**, 1969; 78 N. Am. spp., keys), Guzmán-Dávalos & Ovrebo (*Mycol.* **93**: 398, 2001; Costa Rica and Panama), Fausto-Guerra *et al.* (*Mycotaxon* **84**: 429, 2002; cultural studies), Rees *et al.* (*Mycotaxon* **84**: 93, 2002; phylogeny), Guzmán-Dávalos (*Mycol.* **95**: 1204, 2003; infrageneric classification), Holec (*Mykol. Listy* **93**: 10, 2005; key Czech Republic spp.), Holec (*Sborník Národního Musea v Praze* **61**: 52 pp., 2005; Czech Republic).

gymnoplast, see protoplast.

Gymnopuccinia K. Ramakr. (1951) = Didymopsorella fide Cummins & Hiratsuka (*Illustr. Gen. Rust Fungi rev. edit.*, 1983).

Gymnopus (Pers.) Roussel (1806) nom. rej., Marasmiaceae. *c.* 300, widespread. Segregate of *Collybia*, containing most of its species, as the genus *Collybia* was previously polyphyletic. See Antonín & Noordeloos (*Libri Botanici* **17**, 1997; European spp.), Antonín *et al.* (*Mycotaxon* **63**: 359, 1997; taxonomy), Moncalvo *et al.* (*Syst. Biol.* **49**: 278, 2000; phylogeny), Ortega *et al.* (*Mycotaxon* **85**: 67, 2003; thermophilic taxa), Mata *et al.* (*Fungal Diversity* **16**: 113, 2004; Costa Rica; mating system), Wilson *et al.* (*Sydowia* **56**: 137, 2004; Java and Bali), Wilson & Desjardin (*Mycol.* **97**: 667, 2005; phylogeny), Mata *et al.* (*Sydowia* **58**: 191, 2007).

Gymnopus (Quél.) Quél. ex Moug. & Ferry (1887) ≡ Rostkovites.

Gymnosphaera Tassi (1902) [non *Gymnosphaera* Blume 1828, *Cyatheaceae*] = Stagonospora fide Saccardo & Saccardo (*Syll. fung.* **18**: 361, 1906).

Gymnosporangium R. Hedw. ex DC. (1805), Pucciniaceae. Anamorph *Roestelia*. *c.* 57 (on *Rosaceae* (0, I); on *Cupressaceae* (III)), widespread. *G. gaeumannii*, *G. nootkatense* and *G. paraphysatum* have II; *G. bermudianum* is autoecious (I, III on *Juniperus*); *G. juniperi-virginianae* (apple (*Malus*)-cedar (*Juniperus*) rust of USA); *G. fuscum* (pear (*Pyrus*)-juniper (*Juniperus*) rust); *G. clavipes* (quince (*Cydonia*) rust). See Kern (*Revised taxonomic account of Gymnosporangium*, 1972; key, 400 refs.), Yun *et al.* (*Plant Pathology Journal* **21**: 310, 2005; aecial hosts).

Gymnosporium Corda (1833) nom. dub., anamorphic *Pezizomycotina*. See Hughes (*CJB* **36**: 727, 1958).

Gymnostellatospora Udagawa, Uchiy. & Kamiya (1993), Myxotrichaceae. 1, Japan. See Sigler *et al.* (*Mycoscience* **41**: 495, 2000; key), Tsuneda & Currah (*Mycol.* **96**: 627, 2004; morphogenesis), Rice & Currah (*Mycol.* **98**: 307, 2006; phylogeny, comparison with *Pseudogymnoascus*).

Gymnotelium Syd. (1921) = Gymnosporangium fide Kern (*Revised taxonomic account of Gymnosporangium*, 1972).

gymnothecium, an ascoma in which the peridium is a loose hyphal network, typical of *Gymnoascaceae*.

Gymnotrema Nyl. (1858) = Glyphis fide Staiger (*Biblthca Lichenol.* **85**, 2002).

Gymnoxyphium Cif., Bat. & I.J. Araujo (1963), anamorphic *Pezizomycotina*, St.1eH.?. 2, USA; Brazil. See Ciferri *et al.* (*Quad. Lab. crittogam., Pavia* **31**: 85, 1963).

gynophore (of *Pyronemataceae*), the multinucleate female structure undergoing development.

Gyoerffyella Kol (1928), anamorphic *Pezizomycotina*, Hso.0-≡ hH.?1. 9 (aquatic), Europe; N. America. See Marvanová *et al.* (*Persoonia* **5**: 29, 1967; key), Marvanová (*TBMS* **65**: 555, 1975), Dudka & Mel'nik (*Mikol. Fitopatol.* **24**: 13, 1990; USSR spp.), Mulenko (*Polish Bot. Stud.* **5**: 79, 1993; Poland), Descals (*MR* **109**: 545, 2005; diagnostic features).

Gypsoplaca Timdal (1990), Gypsoplacaceae (L). 1, widespread. See Timdal (*Biblthca Lichenol.* **38**: 419, 1990), Arup *et al.* (*Mycol.* **99**: 42, 2007; sister group relations with *Parmeliaceae*).

Gypsoplacaceae Timdal (1990), Lecanorales (L). 1 gen., 1 spp.

Lit.: Timdal (*Biblthca Lichenol.* **38**: 419, 1990), Goward *et al.* (*Bryologist* **99**: 439, 1996), Arup *et al.* (*Mycol.* **99**: 42, 2007; sister group relations with *Parmeliaceae*).

Gyraria Nees (1816) = Tremella Pers. fide Donk (*Persoonia* **4**: 179, 1966).

gyrate (**gyrose**), curved to the back and to the front in turn; folded and wavy; convoluted like a brain; (of an apothecioid ascoma), concentrically folded, e.g. *Umbilicaria*.

Gyratylium Preuss (1855) ? = Sphaeropsis Sacc. fide Sutton (*Mycol. Pap.* **141**, 1977).

Gyrocephalus Bref. (1888) = Guepinia Fr. fide Donk (*Persoonia* **4**: 145, 1966).

Gyrocephalus Pers. (1824) nom. rej. = Gyromitra fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Gyrocerus Corda (1837) ? = Circinotrichum fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Gyrocollema Vain. (1929), Lichinaceae (L). 1, C. America. See Moreno & Egea (*Acta Bot. Barcinon.* **41**: 1, 1992).

Gyrocratera Henn. (1899) = Hydnotrya fide Trappe (*TBMS* **65**: 496, 1975).

Gyrodon Opat. (1836), Paxillaceae. 10, widespread. See Bruns *et al.* (*Mol. Ecol.* **7**: 257, 1998; phylogeny), Kretzer & Bruns (*Mol. Phylogen. Evol.* **13**: 483, 1999; phylogeny), Nagasawa (*Rep. Tottori Mycol. Inst.* **39**: 1, 2001; Japan).

Gyrodontaceae Heinem. (1951) = Paxillaceae.

Gyrodontium Pat. (1900), Coniophoraceae. 3, widespread. See Maas Geesteranus (*Persoonia* **3**: 187, 1964), Carlier *et al.* (*Cryptog. Mycol.* **25**: 261, 2004; phylogeny).

Gyroflexus Raith. (1981), Hymenochaetales. 1, widespread. *Hymenochaetales* or *Agaricales* (*Rickenella* clade). See Raithelhuber (*Die Gattung Clitocybe* **1**: 17, 1981).

Gyrolophium Kunze ex Krombh. (1831) = Dictyonema C. Agardh ex Kunth fide Parmasto (*Nova Hedwigia* **29**: 99, 1978).

Gyromitra Fr. (1849) nom. cons., Discinaceae. *c.* 18, widespread (esp. north temperate). *G. esculenta* (the lorchel) has a heat-labile toxin, **gyromitrin** (q.v.),

and is carcinogenic. See Azema (*Docums Mycol.* **10**: 1, 1979), Gibson & Kimbrough (*CJB* **66**: 1743, 1988; ascosporogenesis), Kimbrough (*MR* **95**: 421, 1991; septal structure), Crous *et al.* (*S. Afr. J. Bot.* **62**: 89, 1996), Abbott & Currah (*Mycotaxon* **62**: 1, 1997; N. Am.), Landvik *et al.* (*Nordic Jl Bot.* **17**: 403, 1997; phylogeny), O'Donnell *et al.* (*Mycol.* **89**: 48, 1997; phylogeny), Percudani *et al.* (*Mol. Phylogen. Evol.* **13**: 169, 1999; phylogeny), Huhtinen & Ruotsalainen (*Karstenia* **44**: 25, 2004; Finland), Medel (*Mycotaxon* **94**: 103, 2005; Mexico).

gyromitrin (N-formylhydrazone), heat-labile, carcinogenic, cellular toxin produced by *Gyromitra esculenta* (the lorchel; false morel); breaks down to monomethylhydrazine (MMH), which is also extremely toxic.

Gyromitrodes Vassilkov (1942) = Pseudorhizina fide Pouzar (*Česká Mykol.* **15**: 42, 1961).

Gyromium Wahlenb. (1812) ≡ Umbilicaria.

Gyromyces Göpp. (1844), Fossil Fungi ? Fungi. 1 (Carboniferous), Germany.

Gyrophana Pat. (1897) = Serpula fide Cooke (*Mycol.* **49**: 197, 1957).

Gyrophanopsis Jülich (1979), Meruliaceae. 2, widespread. See Jülich (*Persoonia* **10**: 329, 1979), Stalpers & Buchanan (*N.Z. Jl Bot.* **29**: 333, 1991).

Gyrophila Quél. (1886) = Tricholoma fide Singer & Smith (*A monograph on the genus Galerina Earle*, 1964).

Gyrophora Ach. (1803) ≡ Umbilicaria.

Gyrophora Pat. (1887) ≡ Gyrophana.

Gyrophoraceae Zenker (1827) = Umbilicariaceae.

Gyrophoromyces E.A. Thomas ex Cif. & Tomas. (1953) ≡ Umbilicaria.

Gyrophoropsis Elenkin & Savicz (1910) = Umbilicaria fide Wei (*An Enumeration of Lichens in China*, 1991), Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Gyrophragmium Mont. (1843), Agaricaceae. 1, widespread (subtropical). See Kreisel (*Feddes Repert.* **83**: 577, 1973), Migliozzi & Camboni (*Micol. Ital.* **30**: 36, 2001), Vellinga (*MR* **108**: 354, 2004; phylogeny; some species belong in *Agaricus*).

Gyrophthorus Hafellner & Sancho (1990), Pezizomycotina. 2 (lichenicolous), Europe. See Hoffmann & Hafellner (*Biblthca Lichenol.* **77**: 1, 2000).

Gyropodium E. Hitchc. (1825) = Calostoma fide Fischer (*Nat. Pflanzenfam.* **5b**: viii, 1938).

Gyroporaceae Binder & Bresinsky (2002), Boletales. 1 gen. (+ 4 syn.), 10 spp.

Lit.: Bruns & Gardes (*Mol. Ecol.* **2**: 233, 1993), Castro & Freire (*Persoonia* **16**: 123, 1995), Bruns *et al.* (*Mol. Ecol.* **7**: 257, 1998), Hughey *et al.* (*Mycol.* **92**: 94, 2000), Nagasawa (*Rep. Tottori Mycol. Inst.* **39**: 1, 2001), Watling (*Aust. Syst. Bot.* **14**: 407, 2001), Binder & Bresinsky (*Mycol.* **94**: 85, 2002), Buchanan & May (*N.Z. Jl Bot.* **41**: 407, 2003), Bruns & Shefferson (*CJB* **82**: 1122, 2004).

Gyroporus Quél. (1886), Gyroporaceae. 10, widespread. See Nagasawa (*Rep. Tottori Mycol. Inst.* **39**: 1, 2001; Japan), Li *et al.* (*Fungal Diversity* **12**: 123, 2003; China), Watling *et al.* (*British Fungus Flora. Agarics and Boleti* Rev. & Enl. Edn **1**: 173 pp., 2005; UK).

Gyrostomomyces Cif. & Tomas. (1953) ≡ Gyrostomum.

Gyrostomum Fr. (1825) = Glyphis fide Hale (*Bull. Br. Mus. nat. hist.* Bot. **8**: 227, 1981), Staiger (*Biblthca Lichenol.* **85**: 526 pp., 2002; monograph).

Gyrostroma Naumov (1914), anamorphic *Hypocreales*, St.0eH.?. 3, America; former USSR. See Samuels *et al.* (*CBS Diversity Ser.* **4**, 2006).

Gyrothecium Nyl. (1855) = Sporastatia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Gyrothrix (Corda) Corda (1842), anamorphic *Pezizomycotina*, Hso.0eH.6. 20, widespread (esp. tropical). See Cunningham (*Mycol.* **66**: 127, 1974; key), Arambarri *et al.* (*MR* **101**: 1529, 1997).

Gyrothyrium Arx (1950) = Schizothyrium fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Gyrotrema A. Frisch (2006), Thelotremataceae (L). 2, S. America (tropical). See Frisch (*Biblthca Lichenol.* **92**: 379, 2006).

Gyrotrichum Spreng. (1827) ≡ Circinotrichum.

H, Botanical Museum, University of Helsinki (Finland); founded *c.* 1750.

H bodies, pairs of sporidia of *Tilletia* fused in pairs while still attached to the promycelium.

Haasiella Kotl. & Pouzar (1966), Tricholomataceae. 2, Europe. See Kotlaba & Pouzar (*Česká Mykol.* **20**: 135, 1966), Redhead *et al.* (*Mycotaxon* **83**: 19, 2002).

habitat, natural place of occurrence of an organism.

Habrostictis Clem. (1909) nom. dub., anamorphic *Pezizomycotina*. See Hein (*Willdenowia* Beih. **9**, 1976).

Habrostictis Fuckel (1870) = Orbilia fide Baral (*SA* **13**: 113, 1994).

Haddowia Steyaert (1972), Ganodermataceae. 3, widespread (pantropical). See Steyaert (*Persoonia* **7**: 108, 1972), Ryvarden (*Syn. Fung.* **19**: 19, 2004).

Haddowiaceae Jülich (1982) = Ganodermataceae.

Hadotia Maire (1906) = Lophodermium fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

hadromycosis, term coined by Pethybridge (*Sci. Proc. Roy. Dublin Soc.* **15**: 63, 1916) for a plant disease in which the pathogen is confined to the xylem; tracheomycosis. 'Vascular wilt' is the preferred term when wilting is a symptom. Cf. wilt.

Hadronema Syd. & P. Syd. (1909), anamorphic *Pezizomycotina*, Hso.1eP.?. 3, widespread.

Hadrospora Boise (1989), Phaeosphaeriaceae. 2, widespread. See Boise (*Mem. N. Y. bot. Gdn* **49**: 308, 1989), Webster (*Nova Hedwigia* **57**: 141, 1993), Tanaka & Harada (*Mycoscience* **44**: 245, 2003; Japan).

Hadrosporium Syd. (1938), anamorphic *Pezizomycotina*, Hsp.≡ eP.19. 1, Australia.

Hadrotrichum Fuckel (1865), anamorphic *Xylariales*, Hsp.0eP.10. 5, widespread (temperate).

Haematomma A. Massal. (1852) nom. cons., Haematommataceae (L). 53, widespread. See Rogers (*Lichenologist* **14**: 115, 1982; Australia), Rogers & Bartlett (*Lichenologist* **18**: 247, 1986; NZ), Kalb *et al.* (*Biblthca Lichenol.* **59**: 199, 1995), Staiger & Kalb (*Biblthca Lichenol.* **59**: 3, 1995), Lumbsch *et al.* (*Nova Hedwigia* **86**: 105, 2008; phylogeny, chemistry).

Haematommataceae Hafellner (1984), Lecanorales (L). 1 gen. (+ 1 syn.), 53 spp.

Lit.: Rogers (*Lichenologist* **17**: 307, 1985), Honegger (*New Phytol.* **103**: 785, 1986), Rogers & Bartlett (*Lichenologist* **18**: 247, 1986), Brodo & Culberson (*Bryologist* **89**: 203, 1986), Rogers & Hafellner (*Lichenologist* **20**: 167, 1988), Kalb *et al.* (*Biblthca Lichenol.* **59**: 199, 1995), Staiger & Kalb (*Biblthca Lichenol.* **59**: 3, 1995), Lumbsch *et al.* (*Nova Hedwigia* **86**: 105, 2008; phylogeny, chemistry).

Haematommatomyces Cif. & Tomas. (1953) ≡ Ophioparma.

Haematomyces Berk. & Broome (1875) nom. dub., Fungi. Based on resin.

Haematomyxa Sacc. (1884), Pezizomycotina. 2, N. America. See Pirozynski (*SA* **6**: 130, 1987), Kutorga & Hawksworth (*SA* **15**: 1, 1997).

Haematonectria Samuels & Nirenberg (1999), Nectriaceae. Anamorph *Fusarium*-like. 5 (saprobes and pathogens), widespread. Molecular data suggest that *Neocosmospora* is at least closely related. See Samuels & Brayford (*Sydowia* **46**: 75, 1994), Spatafora & Blackwell (*Mycol.* **85**: 912, 1994), O'Donnell (*Sydowia* **48**: 57, 1996), Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999), O'Donnell (*Mycol.* **92**: 919, 2000; phylogeny, as *Nectria*), Summerbell & Schroers (*J. Clin. Microbiol.* **40**: 2866, 2002; phylogeny, medical strains), Leslie & Summerell (*Fusarium Labor. Manual*, 2006; review), Samuels *et al.* (*CBS Diversity Ser.* **4**, 2006; USA), Zhang *et al.* (*Mycol.* **98**: 1076, 2006; phylogeny), Dupont *et al.* (*Mycol.* **99**: 526, 2007; colonization of cave paintings).

Haematostereum Pouzar (1959) = Stereum fide Donk (*Persoonia* **3**: 199, 1964).

haerangium, the sporulating organ of certain ascomycetes (e.g. *Fugascus*, *Ceratostomella*), classed by Falck as *Herangiomycetes*, in which the 8 ascospores developed from the **octophore** are contained by a membrane and surrounded by a circle of hairs (the **tentacle**) around the ostiole of the perithecium (Falck, 1947).

Hafellia Kalb, H. Mayrhofer & Scheid. (1986), Caliciaceae (L). 5, widespread. See Sheard (*Bryologist* **95**: 79, 1992; key 5 spp., N. Am.), Posswald *et al.* (*Muelleria* **8**: 133, 1994; Tasmania), Nordin (*Symb. bot. upsal.* **32** no. 1: 195, 1997; ultrastr.), Nordin & Mattsson (*Lichenologist* **33**: 3, 2001; phylogeny), Scheidegger *et al.* (*Lichenologist* **33**: 25, 2001; evolution), Etayo & Marbach (*Lichenologist* **35**: 369, 2003; key corticolous spp., Canary Is), Helms *et al.* (*Mycol.* **95**: 1078, 2003; phylogeny), Miądlikowska *et al.* (*Mycol.* **98**: 1088, 2006; phylogeny).

Hagenia Eschw. (1824) [non *Hagenia* J.F. Gmel. 1791, *Angiospermae*] = Anaptychia fide Kurokawa (*Beih. Nova Hedwigia* **6**, 1962).

Haglundia Nannf. (1932), Dermateaceae. 5, Europe. See Gamundí (*Fl. criptog. Tierra del Fuego* **10**, 1987), Dougoud (*Schweiz. Z. Pilzk.* **70**: 136, 1992), Nauta & Spooner (*Mycologist* **13**: 146, 1999; UK).

Hainesia Ellis & Sacc. (1884), anamorphic *Discohainesia*, Ccu.0eH.15. 5, widespread. Synanamorph *Pilidium*. See Sutton & Gibson (*IMI Descr. Fungi Bact.*, 1977), Palm (*Mycol.* **83**: 787, 1992; synanamorph of *Pilidium*), Punithalingam & Spooner (*MR* **101**: 1228, 1997; sp.n. from England).

hair (in *Agaricales*), one of the hair-shaped epicuticular elements forming a pilose covering or down under a lens and not homologous with a cystidium, pseudoparaphysis, or seta, e.g. in *Lachnella*, *Crinipellis* (as restricted by Singer, 1962: 61).

Halbania Racib. (1889), Asterinaceae. 1, Java.

Halbaniella Theiss. (1917) = Actinopeltis fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Halbanina G. Arnaud (1918) = Cirsosia fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

Hale (Mason Ellsworth jr, 1928-1990; USA). Born in Connecticut; influenced by A.W. Evans (1868-1959) while at Yale University; PhD, University of Wisconsin (1953); learnt microchemical techniques from Asahina (q.v.); lichenologist at the Smithsonian Institution (1957-1990). Made a unique contribution to understanding the *Parmeliaceae*, preparing monographs of numerous segregate genera and also later of lichen-forming Ostropales; his keys and textbooks contributed to a revival of interest in lichen-forming fungi of North America; made some 80,000 collections from the arctic, antarctic, and esp. the tropics as well as the USA; these are in the Smithsonian Institution (USA); also a collector and user of old printing machines. *Publs. Lichen Handbook* (1957); *How to Know the Lichens* (1979) [edn 2]; *Biology of Lichens* (1983) [edn 3]; (with V. Ahmadjian) [eds] *The Lichens* (1973, published 1974]). *Biogs, obits etc.* Ahmadjian (*Endocytobiosis and Cell Research* **7**: 1, 1990) [portrait]; Culberson (*Bryologist* **94**: 90, 1991) [portrait]; Grummann (1974: 189); Lawrey (*Lichenologist* **22**: 405, 1990) [portrait]; Sipman & Seaward (*International Lichenological Newsletter* **23**(2): 42, 1990).

Halecania M. Mayrhofer (1987), Catillariaceae (L). 12, Europe; N. America. See Mayrhofer (*Herzogia* **7**: 383, 1987), Coppins (*Lichenologist* **21**: 217, 1989; UK), Boom & Elix (*Lichenologist* **37**: 237, 2005; Asia).

Haleomyces D. Hawksw. & Essl. (1993), ? Verrucariaceae. 1 (on lichens, esp. *Oropogon*), widespread (neotropical). See Hawksworth & Esslinger (*Bryologist* **96**: 349, 1993).

Haligena Kohlm. (1961), Halosphaeriaceae. 1 (marine), widespread. See Johnson *et al.* (*CJB* **65**: 931, 1987), Sakayaroj *et al.* (*Mycol.* **97**: 804, 2005; phylogeny, morphology).

haline, found near the sea shore (obsol.).

Halisaria Giard (1889) nom. dub., ? Fungi.

Hallingea Castellano (1996), Gallaceaceae. 3, S. America. See Castellano & Muchovej (*Mycotaxon* **57**: 339, 1996).

Hallucinogenic fungi. Various fungi contain chemicals which, when consumed by humans and other animals can cause hallucinations. **Teonanácatl**, basidiomata of *Psilocybe* (*P. mexicana*, etc.; see Singer and Singer & Smith, *Mycol.* **50**: 239, 1958), *Stropharia*, *Paneolus*, *Lycoperdon cruciatum*, *L. mixtecorum*, etc., eaten by Mexican Indians during magical ceremonies to induce cerebral effects; sclerotia ('ergots') of species of the ascomycete genus *Claviceps* were similarly consumed in ancient Greece as part of the mystic ceremonies at Eleusis; the strong association of toadstools, particularly the fly agaric, with elves, fairies, gnomes and other imaginary little people may have its origins in the hallucinatory effects of consuming that species. Various crystalline active principles have been isolated from these fungi, e.g **psilocybin** and, most famously, the hallucinogenic drug LSD: at least some of these active principles are may be toxins. Possible uses have been extensively and controversially explored by the military. In many countries people who consume hallucinogenic fungi or hallucinogenic drugs derived from fungi are censured and there is frequently legislation to prevent an

activity which is viewed as harmful to society in general and the consumers themselves in particular. In response to this, a substantial underground culture has developed, with many internet sites offering advice on how to cultivate or otherwise obtain so called 'magic' mushrooms, and a tourist industry for devotees to visit countries where consumption is permitted. Certain species of *Copelandia*, *Panaeolus* and *Psilocybe* are commonly used and a range of vernacular names, such as 'blue meanies' or 'shrooms', has evolved for these fungi. Much psychedelic art, literature and music has been inspired through fungal-induced hallucinations, particularly since the 1960s, and there is some evidence that native Mexican art was similarly influenced.

Lit.: Castañeda (*The teachings of Don Juan*, 1968), Heim, Wasson *et al.* (*Les champignons hallucinogènes du Mexique*, 1958; *Nouvelles investigations sur les champignons hallucinogènes*, 1967 [reprinted from *Archiv. Halosphaeriales Kohlm. (1986) = Microascales.

Halosphaeriopsis T.W. Johnson (1958), Halosphaeriaceae. 1 (marine), widespread. See Jones *et al.* (*Bot. Mar.* **27**: 129, 1984), Spatafora *et al.* (*Am. J. Bot.* **85**: 1569, 1998; phylogenetic analysis), Kong *et al.* (*MR* **104**: 35, 2000; DNA), Campbell *et al.* (*Mycol.* **95**: 530, 2003; phylogeny).

Halospora, see *Holospora*.

Halotthia Kohlm. (1963), ? Zopfiaceae. 1 (marine), Europe. See Kohlmeyer (*Nova Hedwigia* **6**: 9, 1963).

Halstedia F. Stevens (1920) = Phyllachora Nitschke ex Fuckel (1870) fide Petrak (*Annls mycol.* **32**: 317, 1934).

Halteromyces Shipton & Schipper (1975), Cunning-

hamellaceae. 1, Australia. See Shipton & Schipper (*Antonie van Leeuwenhoek* **41**: 337, 1975), Voigt & Wöstemeyer (*Gene* **270**: 113, 2001; phylogeny).

Halysiomyces E.G. Simmons (1981), anamorphic *Pezizomycotina*, Hso.1-≡ eH.4. 1, USA. See Simmons (*Mycotaxon* **13**: 408, 1981).

Halysium Corda (1837) nom. conf., anamorphic *Pezizomycotina*. See Hughes (*CJB* **36**: 727, 1958).

hamanatto, an edible oriental product obtained by the fermentation of soybeans with *Aspergillus oryzae*; tao-cho (Malaysia); tao-si (Philippines).

hama-natto, see Fermented food and drinks.

Hamaspora Körn. (1877), Phragmidiaceae. 14 (on *Rubus* (*Rosaceae*)), Africa; Asia; Australasia. See Monoson (*Mycopathologia* **37**: 263, 1969), Gjærum *et al.* (*Lidia* **5**: 74, 2000; Uganda).

Hamasporella Höhn. (1912) = Hamaspora fide Dietel (*Nat. Pflanzenfam.* **6**, 1928).

hamate (hamose, hamous), hooked (Fig. 23.35); unciate. Cf. hamulate.

hamathecium (Eriksson, *Opera Bot.* **60**: 15, 1981), a neutral term for all kinds of hyphae or other tissues between asci, or projecting into the locule or ostiole of ascomata; usually of carpocentral origin; interascal tissues. Eriksson recognized seven categories (see Fig. 14A-F):

(A) **Interascal pseudoparenchyma**, carpocentral tissues unchanged or compressed between developing asci; e.g. *Wettsteinina*.

(B) **Paraphyses**, hyphae originating from the base of the cavity, usually unbranched and not anastomosed; e.g. *Pyrenula*, *Xylaria*.

(C) **Paraphysoids** (trabecular pseudoparaphyses; tinophyses), interascal or pre-ascal tissue stretching and coming to resemble pseudoparaphyses; often only remotely septate, anastomosing and very narrow (see Barr, *Mycol.* **71**: 935, 1979); e.g. *Patellaria*, *Melanomma*.

(D) **Pseudoparaphyses** (cellular pseudoparaphyses; cataphyses), hyphae originating above the level of the asci and growing downwards between the developing asci, finally becoming attached to the base of the cavity and often also then free in the upper part; often regularly septate, branched and anastomosing and broader; e.g. *Pleospora*.

(E) **Periphysoids**, short hyphae originating above the level of the developing asci but not reaching the base of the cavity; e.g. *Nectria*, *Metacapnodium*.

(F) **Periphyses**, hyphae confined to the ostiolar canal; unbranched and not anastomosing; can occur in conjunction with (B), (D) or (E); e.g. *Gibberella*, *Pyrenula*.

(G) **Hamathecial tissue absent** (not figured), e.g. *Dothidea*.

Hamatocanthoscypha Svrček (1977), Hyaloscyphaceae. *c.* 13, widespread (temperate). See Huhtinen (*Karstenia* **29**: 45, 1990; key), Raitviir (*Scripta Mycol.* **20**, 2004).

Hamigera Stolk & Samson (1971), Trichocomaceae. Anamorph *Merimbla*. 1. See Pitt (*The genus Penicillium and its teleomorphic states Eupenicillium and Talaromyces*, 1979), Ogawa & Sugiyama (*Integration of Modern Taxonomic Methods for Penicillium and Aspergillus Classification*: 149, 2000), Pitt *et al.* (*Integration of Modern Taxonomic Methods for Penicillium and Aspergillus Classification*: 9, 2000), Bills *et al.* (*MR* **105**: 1273, 2001; anamorph), Geiser *et al.* (*Mycol.* **98**: 1053, 2006; phylogeny), Peterson (*Mycol.* **100**: 205, 2008; 4-locus phylogeny).

hamulate (hamulose), having little hooks. Cf. hamate.

Handkea Kreisel (1989) = Lycoperdon Pers. fide Larsson & Jeppson (*MR* **112**: 4, 2008).

hanging drop, see van Tieghem cell.

Hansen (Emil Christian; 1842-1909; Denmark). Microbiologist and Director of the Physiological Department of the Carlsberg Laboratories, Copenhagen. Specialized in yeasts and coprophilous fungi. *Publs.* De Danske Gjøningssvampe (Fungi fimicoli Danici) *Videnskabelige Meddelelser fra Dansk Naturhistorisk Forening i Kjøbenhavn* (1876, published 1877); *Practical Studies in Fermentation: being Contributions to the Life-history of Micro-organisms* (1896) [translation by A.K. Miller]. *Biogs, obits etc.* Stafleu & Cowan (*TL-2* **2**: 46, 1979).

Hansenia Lindner (1905) = Hanseniaspora fide von Arx (*Gen. Fungi Sporul. Cult.* Edn 3, 1981).

Hansenia P. Karst. (1879) [non *Hansenia* Turcz. 1884, *Umbelliferae*] = Trametes fide Donk (*Persoonia* **1**: 173, 1960).

Hansenia Zikes (1911) = Hanseniaspora fide von Arx (*Gen. Fungi Sporul. Cult.* Edn 3, 1981).

Hansenia Zopf (1883) = Strattonia fide Lundqvist (*Symb. bot. upsal.* **20** no. 1, 1972).

Hanseniaspora Zikes (1911), Saccharomycodaceae. Anamorph *Kloeckera*. 10, widespread. See Meyer *et al.* (*Antonie van Leeuwenhoek* **44**: 79, 1978), Boekhout *et al.* (*Int. J. Syst. Bacteriol.* **44**: 781, 1994), Smith *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 214, 1998), Esteve-Zarzoso *et al.* (*Antonie van Leeuwenhoek* **80**: 85, 2001; phylogeny), Cadez *et al.* (*FEMS Yeast Res.* **1**: 279, 2002; genetic diversity), Cadez *et al.* (*Int. J. Syst. Evol. Microbiol.* **53**: 1671, 2003; n. spp.), Capece *et al.* (*Journal of Applied Microbiology* **98**: 136, 2005; strain diversity), Cadez *et al.* (*Int. J. Syst. Evol. Microbiol.* **56**: 1157, 2006; phylogeny), Pramateftaki *et al.* (*FEMS Yeast Res.* **6**: 77, 2006; mitochondrial genome), Suh *et al.* (*Mycol.* **98**: 1006, 2006; phylogeny).

Hansenula Syd. & P. Syd. (1919) = Pichia. Still used in applied environments. fide Kreger-van Rij (Ed.) (*Yeasts, a taxonomic study* 3rd edn, 1984), Kurtzman (*Antonie van Leeuwenhoek* **50**: 209, 1984), Barnett *et al.* (*Yeasts: Characteristics and Identification* 2nd edn, 1990), Kurtzman *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 273, 1998), Middelhoven (*Hansenula polymorpha* Biology and Applications: 1, 2002), Boekhout (Ed.) (*FEMS Yeast Res.* **7**: 1081, 2007; special journal issue).

Hansenulaceae E.K. Novák & Zsolt (1961) = Pichiaceae.

Hansford (Clifford George; 1900-1966; England, later Jamaica, Uganda, Sri Lanka, Australia, Botswana). Microbiologist, Department of Agriculture, Jamaica; Government Mycologist, Department of Agriculture, Uganda (1926-1946); Plant Pathologist, Tea Research Institute, Sri Lanka (1946-1957); mycologist, Waite Institute, Adelaide; cotton research, Botswana. A pioneer of the mycota of East Africa, in particular Uganda; also noted as an expert on *Meliola* and related genera. Collections in **EA** (**IMI**, **K**). *Publs.* The Meliolineae. A monograph. *Sydowia* Beiheft (1961); Iconographia Meliolinearum. *Sydowia* Beiheft (1963). *Biogs, obits etc.* Ainsworth (*Brief Biographies of British Mycologists* p. 85, 1996).

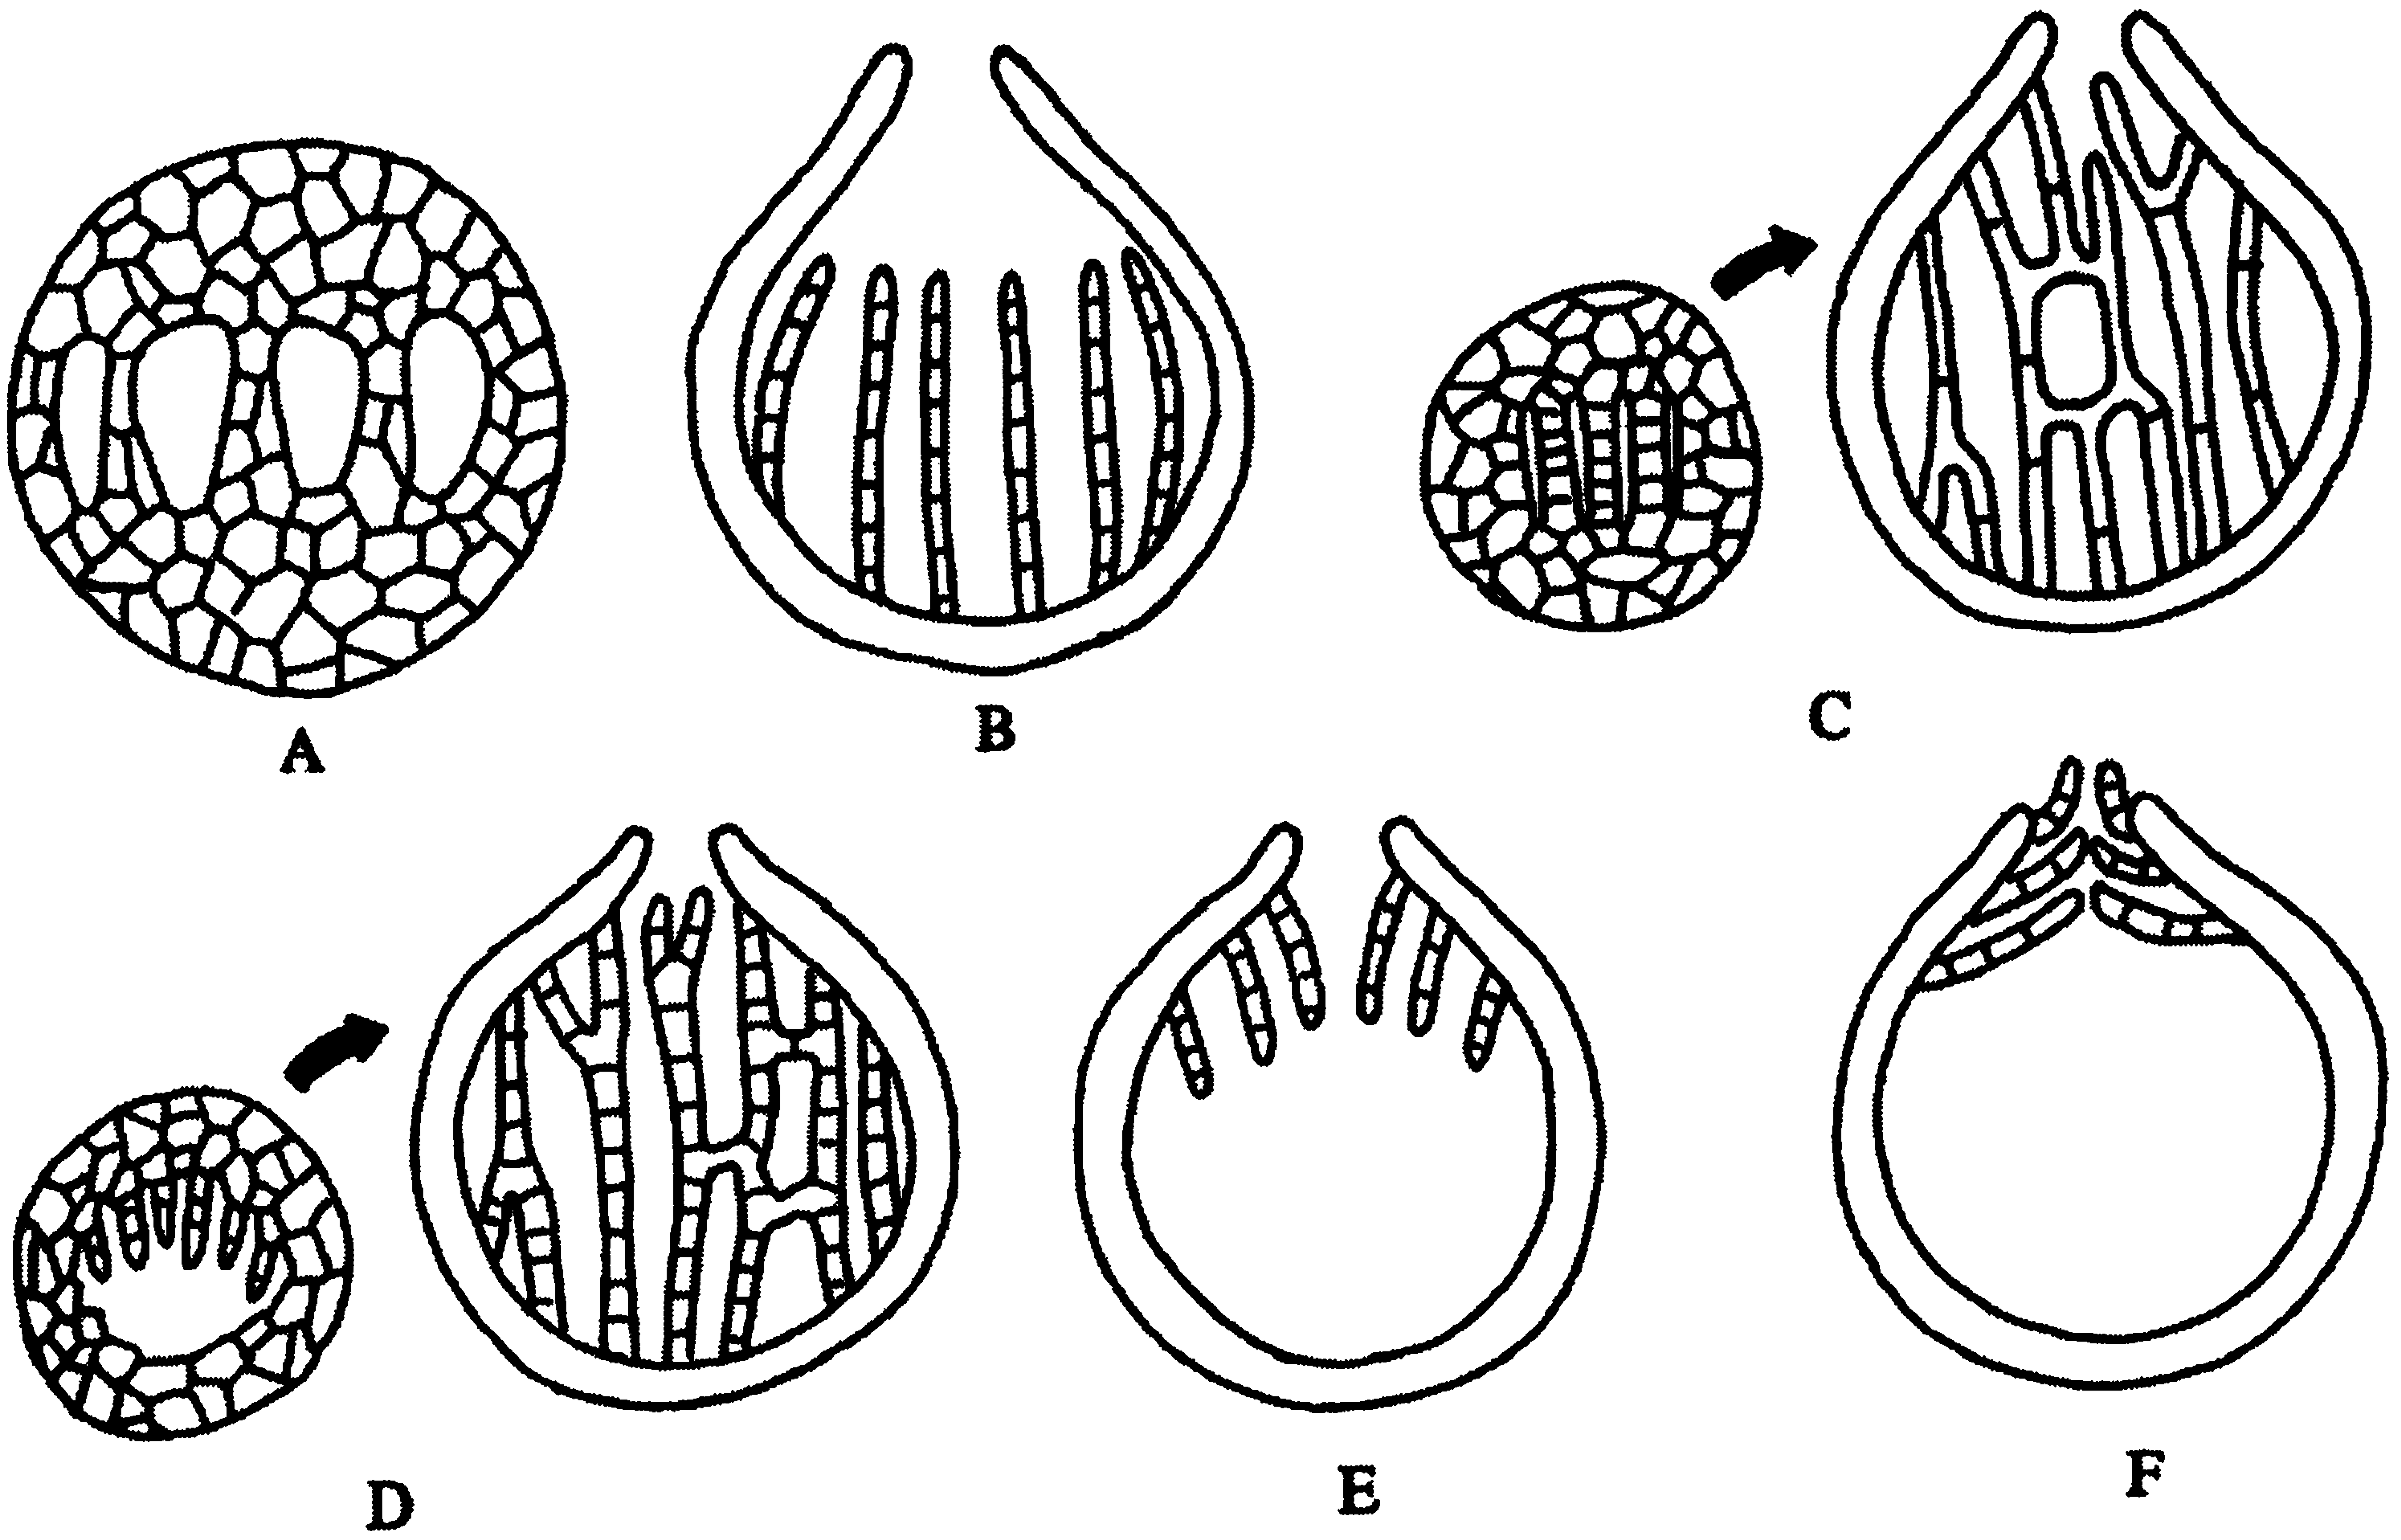

Fig. 15. Hamathecium terminology, following Eriksson (1981). See text for explanation.

Hansfordia S. Hughes (1951), anamorphic *Pezizomycotina*, Hso.0eP.11. 12, widespread. See Deighton (*TBMS* **59**: 531, 1972), von Arx (*Sydowia* **35**: 10, 1982; syn. with *Dicyma*), Gené *et al.* (*MR* **104**: 1404, 2000; Spain).

See Glawe (*Mycol.* **77**: 880, 1985; anamorph), Barr (*Mycotaxon* **41**: 287, 1991), Jaklitsch & Voglmayr (*Stud. Mycol.* **50**: 229, 2004; key), Rossman *et al.* (*Mycoscience* **48**: 135, 2007; review).

Hapalopera Fott (1942) = Phlyctidium (A. Braun) Rabenh. fide Sparrow (*Aquatic Phycomycetes* Edn 2: 1187 pp., 1960) but see Batko (1975); = *Rhizophydium* fide, Karling (*Chytriomyc. Iconogr.*, 1977).

Hapalophragmiopsis Thirum. (1950) = Hapalophragmium fide Monoson (*Mycol.* **69**: 21, 1977), Cummins & Hiratsuka (*Illustr. Gen. Rust Fungi rev. edit.*, 1983), Lohsomboon *et al.* (*MR* **96**: 461, 1992).

Hapalophragmites Ramanujam & Ramachar (1980), Fossil Fungi, Phragmidiaceae. 1, India. See Ramanujam & Ramachar (*Records of the Geological Survey of India* **113**: 82, 1980).

Hapalophragmium Syd. & P. Syd. (1901), Raveneliaceae. 14 (on *Leguminosae*), Africa (tropical). See Monoson (*Mycol.* **69**: 22, 1977; key), Lohsomboon *et al.* (*MR* **96**: 461, 1992), Thaung (*Australasian Mycologist* **24**: 29, 2005; Burma).

Hapalopilaceae Jülich (1982) = Polyporaceae.

Hapalopilus P. Karst. (1881), Polyporaceae. 5, widespread. See Ko *et al.* (*Mycol.* **93**: 270, 2001).

Hapalosphaeria Syd. (1908), anamorphic *Pezizomycotina*, Cpd.0eH.15. 1 (in anthers), Europe.

Haplaria Link (1809) = Botrytis fide Hennebert (*Persoonia* **7**: 188, 1973).

Haplariella Sacc. (1931) = Haplariella Syd. & P. Syd. fide Carmichael *et al.* (*Genera of Hyphomycetes*, 1980).

Haplariella Syd. & P. Syd. (1908), anamorphic *Pezizomycotina*, Cpd.0eH.?. 1, S. America.

Haplariopsis Henn. (1908) ≡ Haplariella Syd. & P. Syd.

Haplariopsis Oudem. (1903), anamorphic *Pezizomycotina*, Hsy.1eH.?. 1, Europe.

haplo- (prefix), one only; single.

Haplobasidion Erikss. (1889), anamorphic *Pezizomycotina*, Hso.0eP.3. 3, Europe; Asia. See Ellis (*Mycol.*

Pap. **67**, 1957; key).
haplobiontic, see Haplobionticae; cf. diplobiontic.
Haplobionticae. Subclass of *Ascomycota* in which the life cycles consists of one thallus (biont); cf. Diplobionticae. Introduced by Nannfeldt (1932).
Haploblastia Trevis. (1860) = Strigula fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).
Haplocarpon M. Choisy (1936) = Porpidia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995), Fryday (*Lichenologist* **37**: 1, 2005).
Haplochalara Linder (1933) = Catenularia fide Mason (*Mycol. Pap.* **5**: 121, 1941).
haploconidium (of *Tremellales*), a uninucleate conidium.
Haplocybe Clem. (1909) ? = Ombrophila Fr. fide Nannfeldt (*Nova Acta R. Soc. Scient. upsal.*, 1932).
Haplocystis Sorokīn (1874), ? Chytridiales. 1, Italy.
Haplodina Zahlbr. (1930), Roccellaceae (L). 3, China.
haplodioicious, see heterothallism.
Haplodothella Werderm. (1923) = Vestergrenia Rehm fide von Arx & Müller (*Beitr. Kryptfl. Schweiz* **11** no. 1, 1954).
Haplodothis Höhn. (1911) = Mycosphaerella fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).
haplogonidia (haplogonimia), gonidia (gonimia) in ones, not in groups (obsol.).
Haplographa Anzi (1860) = Lithographa fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).
Haplographiaceae E. Castell. & Chalm. (1919) = Hyaloscyphaceae.
Haplographites Félix (1894), Fossil Fungi. 2 (Tertiary), Europe.
Haplographium Berk. & Broome (1859), anamorphic *Dematioscypha*, Hso.0eH.10. 15, widespread (esp. temperate). See Zucconi & Pagano (*Mycotaxon* **46**: 11, 1993; gen. limits), Kendrick (*CJB* **81**: 75, 2003; morphogenesis).
haploheteroecious, see heterothallism.
haploid (1) (of a nucleus), having the *n* number of chromosomes; (2) (of a cell), having 1 haploid nucleus; (3) (of a mycelium), made up of haploid cells;.
Haplolepis Syd. (1925), anamorphic *Pezizomycotina*. 2, Europe. See Sutton (*Mycol. Pap.* **141**, 1977).
Haploloma Trevis. (1857), ? Lecanorales. 1 (on lichens), Europe.
Haplomela Syd. (1925) = Melanconium fide Clements & Shear (*Gen. Fung.*, 1931).
haplomitotic A nuclear cycle, occurrence of one mitotic haploid phase in the nuclear cycle (Dick, 1987); karyogamy - meiosis - mitosis - karyogamy -.
haplomitotic B nuclear cycle, occurrence of one mitotic diploid phase in the nuclear cycle (Dick, 1987); karogamy - mitosis - meiosis - karyogamy -.
haplomonoecious, see homothallism.
Haplomyces Thaxt. (1893), Laboulbeniaceae. 3, N. America; Europe. See Santamaría (*Fl. Mycol. Iberica* **5**, 2003; Iberian peninsula), De Kesel & Krastina-De Kesel (*Acta Mycologica* Warszawa **41**: 55, 2006; Latvia).
haplomycosis, see adiaspiromycosis.
haplont, the thallus of the haplophase; the gametophyte.
Haplopeltheca Bat., J.L. Bezerra & Cavalc. (1963), Micropeltidaceae. 1, Brazil. See Batista *et al.* (*Publções Inst. Micol. Recife* **388**: 5, 1963).
Haplopeltis Theiss. (1914) = Muyocopron fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).
haplophase, the part of the life history in which the cells are haploid.
Haplophoma Riedl & Ershad (1977) = Phomopsis (Sacc.) Bubák. fide Sutton (*in litt.*).
Haplophyse Theiss. (1916), ? Rhytismatales. 1, Hawaii.
Haploporaceae Jülich (1982) = Polyporaceae.
Haploporus Bondartsev (1953) ≡ Haploporus Bondartsev & Singer.
Haploporus Bondartsev & Singer (1944), Polyporaceae. 1, Europe. See Eriksson (*Symb. bot. upsal.* **16** no. 1: 160, 1958), Niemalä (*Ann. bot. fenn.* **8**: 237, 1971), Zeng & Bai (*Acta Mycol. Sin.* **12**: 12, 1993; China), Piątek (*Polish Botanical Journal* **48**: 81, 2003; Belarus), Zmitrovich *et al.* (*International Journal of Medicinal Mushrooms* **7**: 489, 2005; medicinal properties *Haploporus suaveolens*).
Haplopyrenula Müll. Arg. (1883) = Vizella fide Santesson (*Svensk bot. Tidskr.* **43**: 547, 1949).
Haplopyrenulomyces Cif. & Tomas. (1953) ≡ Haplopyrenula.
Haplopyxis Syd. & P. Syd. (1920) = Uromyces fide Baxter (*Mycol.* **55**: 73, 1963).
Haploravenelia Syd. (1921) = Ravenelia fide Berndt (*in litt.*) Not used by, Arthur (*Manual Rusts US & Canada*, 1934) or, Cummins (*Rust fungi on legumes and composites in North America*, 1978).
Haplospora Räsänen (1943) nom. inval. ≡ Haplopyrenula.
Haplosporangium Thaxt. (1914) = Mortierella fide Gams (*Persoonia* **9**: 381, 1977).
Haplosporella, see *Aplosporella*.
Haplosporidium Caullery & Mesnil (1899) nom. dub., ? Fungi.
Haplosporidium Speg. (1912), anamorphic *Pezizomycotina*, Cpd.0eH.?. 1, Argentina. See Trotter (*Syll. Fung.* **25**: 178, 1925; ? = *Chaetophoma*), Clements & Shear (*Gen. Fung.*: 357, 1931; ? = *Asteroma*).
Haplosporium Mont. (1843) nom. dub., Fungi. See Petrak & Sydow (*Annls mycol.* **27**: 114, 1929).
Haplostroma Syd. & P. Syd. (1916) = Coccodiella fide Müller & von Arx *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 87, 1973).
haplostromatic, see stroma.
Haplostromella Höhn. (1917) nom. nud. = Strasseria fide Sutton (*Mycol. Pap.* **141**, 1977).
haplosynoecious, see homothallism.
Haplotelium Syd. (1922) = Uromyces fide Dietel (*Nat. Pflanzenfam.* **6**, 1928).
Haplotheciella Höhn. (1918) = Didymella fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).
Haplothecium Theiss. & Syd. (1915) = Glomerella fide von Arx & Müller (*Beitr. Kryptfl. Schweiz* **11** no. 1, 1954).
Haplothelopsis Vain. (1921) = Thelopsis fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).
Haplotrichella Arnaud (1954) = Gliomastix fide Carmichael *et al.* (*Genera of Hyphomycetes*, 1980).
Haplotrichum Eschw. (1824) nom. dub., Pezizomycotina.
Haplotrichum Link (1824), anamorphic *Botryobasidium*, Hso.0eH.3. See Hughes (*CJB* **36**: 727, 1958; = *Acladium*), Holubová-Jechová (*Česká Mykol.* **30**: 3, 1976), Partridge *et al.* (*Mycotaxon* **77**: 201, 2001), Partridge *et al.* (*Mycotaxon* **82**: 41, 2002; key).
Haplovalsaria Höhn. (1919) = Didymosphaeria fide Aptroot (*Nova Hedwigia* **60**, 1995).
Hapsidascus Kohlm. & Volkm.-Kohlm. (1991), Pe-

zizomycotina. 1 (marine), Belize. See Kohlmeyer & Volkmann-Kohlmeyer (*SA* **10**: 113, 1991).

Hapsidomyces J.C. Krug & Jeng (1984), Pezizaceae. 1 (coprophilous), Venezuela. See Krug & Jeng (*Mycol.* **76**: 748, 1984), Hansen *et al.* (*Mol. Phylogen. Evol.* **36**: 1, 2005; phylogeny).

Hapsidospora Malloch & Cain (1970), Hypocreales. Anamorph *Acremonium*-like. 1 (from compost), Canada. See Suh & Blackwell (*Mycol.* **91**: 836, 1999; phylogeny), Rossman *et al.* (*Mycol.* **93**: 100, 2001; ? placement in *Bionectriaceae*).

hapteron (1) an aerial organ of attachment of some fruticose lichens (e.g. *Alectoria sarmentosa* subsp. *vexillifera*) formed by a secondary branch which becomes attached to the substratum; (2) attachment organ at base of a funicular cord in *Nidulariaceae*.

Haptocara Drechsler (1975), anamorphic *Pezizomycotina*, Hso.≡ eH.6. 1 (on nematodes), USA. See Drechsler (*Am. J. Bot.* **62**: 1072, 1975).

Haptocillium W. Gams & Zare (2001), anamorphic *Ophiocordycipitaceae*. 12 (on nematodes), widespread. See Gams & Zare (*Nova Hedwigia* **72**: 334, 2001), Glockling & Holbrook (*Mycologist* **19**: 2, 2005), Sung *et al.* (*Stud. Mycol.* **57**, 2007; phylogeny).

haptonema, filamentous appendage (usually coiled) consisting of the plasma membrane, a sheath of endoplasmic reticulum, and a core of several microtubules anchored near the kinetosome.

Haptospora G.L. Barron (1991), anamorphic *Hypocreales*, Hso.1bH.15. 3 (endoparasitic in rotifers), West Indies; New Zealand. See Barron (*CJB* **69**: 503, 1991).

Haradaea Denchev (2006) = Microbotryum fide Vánky (*in litt.*) but see, Denchev *et al.* (*Mycol. Balcanica* **3**: 71, 2006).

Haraea Sacc. & P. Syd. (1913), Meliolaceae. 1 or 2 (from leaves), Japan; West Indies.

Haraella Hara & I. Hino (1955) [non *Haraella* Kudô 1930, *Orchidaceae*] ≡ Hinoa.

Harikrishnaella D.V. Singh & A.K. Sarbhoy (1972) = Chaetomella fide Sutton & Sarbhoy (*TBMS* **66**: 297, 1976).

Hariotia P. Karst. (1889) [non *Hariotia* Adans. 1763, *Cactaceae*] ≡ Delphinella.

Hariotula G. Arnaud (1917) = Cyclotheca fide Müller & von Arx (*Beitr. Kryptfl. Schweiz* **11** no. 2, 1962).

Harknessia Cooke (1881), anamorphic *Wuestneia*, St.0eP.19. 44, widespread. Probably referable to the *Cryptosporellaceae*, but more research is needed. See Sutton (*Mycol. Pap.* **123**, 1971; key), Nag Raj & DiCosmo (*Biblthca Mycol.* **80**, 1981), Sutton & Pascoe (*MR* **92**: 431, 1989; development of ostiole), Crous *et al.* (*Mycol.* **85**: 108, 1993; S. Afr. spp.), Nag Raj (*Coelomycetous Anamorphs with Appendage-bearing Conidia*, 1993), Castlebury *et al.* (*Mycol.* **94**: 1017, 2002), Lee *et al.* (*Stud. Mycol.* **50**: 235, 2004; phylogeny, fam. placement), Rossman *et al.* (*Mycoscience* **48**: 142, 2007).

Harknessiella Sacc. (1889), Dothideomycetes. 1, N. America.

Harmandiana B. de Lesd. (1914) nom. dub., ? Dothideomycetes.

Harmoniella V.N. Boriss. (1981), anamorphic *Pezizomycotina*, Hso.0eP.10. 1, British Islesraine. See Borissova (*Mikol. Fitopatol.* **15**: 89, 1981).

Harpagomyces Wilcz. (1911), anamorphic *Pezizomycotina*, Hso.0bP.1. 1, Europe.

Harpella L. Léger & Duboscq (1929), Harpellaceae. 5 (in *Diptera*), widespread. See Lichtwardt (*Mycol.* **59**: 482, 1967), Reichle & Lichtwardt (*Mycol.* **81**: 103, 1972; ultrastr.), Moss & Lichtwardt (*CJB* **58**: 1035, 1980; ultrastr., taxonomy), Lichtwardt (*The Trichomycetes. Fungal associates of arthropods*, 1986; key), Alencar *et al.* (*Memórias do Instituto Oswaldo Cruz* **98**: 799, 2003; Brazil), White (*MR* **110**: 1011, 2006; phylogeny).

Harpellaceae L. Léger & Duboscq ex P.M. Kirk & P.F. Cannon (2007), Harpellales. 5 gen., 40 spp.

Lit.: Moss (*TBMS* **65**: 115, 1975), Moss & Young (*Mycol.* **70**: 944, 1978), Lichtwardt (*The Trichomycetes. Fungal associates of arthropods*: 343 pp., 1986), Benny *in* McLaughlin *et al.* (Eds) (*The Mycota* A Comprehensive Treatise on Fungi as Experimental Systems for Basic and Applied Research **7A**: 147, 2001), Lichtwardt (*Cellular Origin and Life in Extreme Habitats* **4**: 577, 2002).

Harpellales Lichtw. & Manier (1978). Kickxellomycotina. 2 fam., 38 gen., 200 spp. Thallus simple or branched, septate, with basal holdfast; asexual reproduction by lateral, monosporous, elongate sporangia (trichospores), which upon release exhibit one or more basally attached appendages; sexual reproduction by biconical zygospores; endocommensals or parasites of freshwater arthropods (normally *Insecta*). Fams:

(1) **Harpellaceae**
(2) **Legeriomycetaceae**

Lit.: Lichtwardt (1986; fam. key, *Am. J. Bot.* **51**: 836, 1964; culture), Lichtwardt & Manier (*Mycotaxon* **7**: 441, 1978; taxonomy), Manier (1969; taxonomy), Moss & Lichtwardt (*CJB* **54**: 2346, 1976, **55**: 3099, 1977; ultrastr.), Moss & Young (*Mycol.* **70**: 944, 1978; phylogeny), Moss *et al.* (*Mycol.* **67**: 120, 1975; sexual reproduction), Moss (1979), Peterson & Lichtwardt (*TBMS* **88**: 189, 1987; antigenic variation), White *et al.* (*Mycol.* **98**: 860, 2006; molecular phylogeny), Hibbett *et al.* (*MR* **111**: 109, 2007), and see under Familes.

Harpellomyces Lichtw. & S.T. Moss (1984), Harpellaceae. 3 (in *Diptera*), widespread. See Lichtwardt (*The Trichomycetes. Fungal associates of arthropods*, 1986), Santamaria & Girbal (*An. Jard. bot. Madr.* **55**: 219, 1997; Spain), Lichtwardt *et al.* (*Mycol.* **93**: 764, 2001; Canada), White (*MR* **110**: 1011, 2006; phylogeny), White *et al.* (*Mycol.* **98**: 872, 2006; USA).

Harpezomyces Malloch & Cain (1973) ≡ Chaetosartorya.

Harpidiaceae Vězda ex Hafellner (1984) = Lichinaceae.

Harpidium Körb. (1855), Lichinaceae (L). 2, Europe; N. America. See Sancho & Crespo (*Lazaroa* **5**: 265, 1983), Henssen *et al.* (*Bot. Acta* **101**: 49, 1987; posn), Schultz *et al.* (*Bryologist* **103**: 802, 2000; N America), Schultz & Büdel (*Lichenologist* **34**: 39, 2002; key).

Harpocephalum G.F. Atk. (1897) = Periconia fide Ellis (*Dematiaceous Hyphomycetes*, 1971).

Harpochytriaceae Wille (1900), Monoblepharidales. 1 gen. (+ 2 syn.), 6 spp.

Lit.: Gaurilof *et al.* (*CJB* **58**: 2098, 1980), Gaurilof *et al.* (*CJB* **58**: 2090, 1980), Paquin *et al.* (*Curr. Genet.* **31**: 380, 1997), Einax & Voigt (*Organ. Divers. Evol.* **3**: 185, 2003).

Harpochytriales R. Emers. & Whisler (1968) = Chytridiales.

Harpochytrium Lagerh. (1890), Harpochytriaceae. 6, widespread (north temperate). See Jane (*J. Linn. Soc. Lond.* **53**: 28, 1946), Gaurilof *et al.* (*CJB* **58**: 2090, 1980; ultrastr.), Paquin *et al.* (*Curr. Genet.* **31**: 380, 1997; within *Monoblepharidales*), James *et al.* (*Mycol.* **98**: 860, 2006; phylogeny).

Harpographium Sacc. (1880), anamorphic *Pezizomycotina*, Hsy.0eP.10. 10, widespread. See Morris (*Am. midl. Nat.* **68**: 319, 1962), Deighton (*TBMS* **85**: 738, 1985).

Harpophora W. Gams (2000), anamorphic *Gaeumannomyces*. 4, widespread. See Gams (*Stud. Mycol.* **45**: 192, 2000), Freeman & Ward (*Molecular Plant Pathology* **5**: 235, 2004; review), Saleh & Leslie (*Mycol.* **96**: 1294, 2004; on *Zea*).

Harposporella Höhn. (1925) nom. dub., anamorphic *Pezizomycotina*. See Sutton (*Mycol. Pap.* **141**, 1977).

Harposporium Lohde (1874), anamorphic *Podocrella*, Hso.0fH.15. *c.* 29, widespread (temperate). See Drechsler (*Mycol.* **38**: 1, 1946), Saikawa & Endo (*TMSJ* **27**: 341, 1986; TEM nematode infection), Barron & Szuarto (*CJB* **69**: 1284, 1991), Hodge *et al.* (*MR* **101**: 1377, 1997; *Hirsutella* synanamorph), Glockling (*MR* **102**: 891, 1998), Gams & Zare (*Mycology Series* **19**: 17, 2003), Chaverri *et al.* (*Mycol.* **97**: 433, 2005).

Harpostroma Höhn. (1928), anamorphic *Leptosillia*, St.0fH.?. 1, Europe.

Hartiella Massee (1910) = Calostilbella fide Mason (*Mycol. Pap.* **2**: 29, 1925).

Hartig (Heinrich Julius Adolph Robert; 1839-1901; Germany). Teacher at Forestry Academy Eberswalde, 1866-1878, then Professor of Botany, Munich. Noted for his work on forest tree pathogens and symbionts. *Publs. Wichtige Krankheiten der Waldbaume* (1874) [English translation *Phytopathological Classics* **12**, 1975]; *Die Zersetzungserscheinungen des Holzes der Nadelholzbäume und der Eiche* (1878); *Lehrbuch der Baumkrankheiten* (1882) [in French, 1891; in English, 1894; as *Lehrbuch der Pflanzenkrankheiten*, 1900]. *Biogs, obits etc.* Meinecke (*Phytopathology* **5**: 1, 1915) [portrait]; Merrill *et al.* (*Phytopathological Classics* **12**, 1975) [bibliography, portrait]; Ostrofsky & Ostrofsky (*Review of Tropical Plant Pathology* **7**: 237, 1993).

Hartig net, the intercellular hyphal network formed by an ectomycorrhizal fungus upon the surface of a root.

Hartigiella P. Syd. (1900) = Meria fide Vuillemin (*Annls mycol.* **3**: 340, 1905).

Harzia Costantin (1888), anamorphic *Melanospora*, Hso.0eP.1. 3, widespread. See Holubová-Jechová (*Folia geobot. phytotax.* **9**: 315, 1974).

Harziella Costantin & Matr. (1899), anamorphic *Pezizomycotina*, Hso.0eH.15. 1 (on *Lepista nuda*), Europe. See Fontana (*Allionia* **6**: 35, 1960).

Harziella Kuntze (1891) ≡ Trichocladium.

Hasegawaea Y. Yamada & I. Banno (1987), Schizosaccharomycetaceae. 1, Japan. See Yamada & Banno (*Yeast* Special Issue **5**: S393, 1989), Jeffery *et al.* (*Antonie van Leeuwenhoek* **72**: 327, 1997; lipid composition).

Hassallia Trevis. (1848), Algae. Algae.

Hassea Zahlbr. (1902), Dothideomycetes (L). 1, USA.

Hassiella T.N. Taylor, Krings & Kerp (2006), Fossil Fungi. 1, British Isles.

Hasskarlinda Kuntze (1891) ≡ Corallomyces Fr.

hastate, like a spear-head or arrow-head in form.

Hastifera D. Hawksw. & Poelt (1986) = Micarea Fr. (1825) [nom. cons.] fide Hafellner (*Herzogia* **9**: 167, 1992).

Hauerslevia P. Roberts (1998), Auriculariales. 1, Europe. See Roberts (*Cryptog. Mycol.* **19**: 277, 1998).

haustorial cap, an electron-dense, cap-like mass at the end of a lobe of the haustorial apparatus of *Exobasidium camelliae* (Mims, *Mycol.* **74**: 188, 1982).

haustorium, a special hyphal branch, esp. one within a living cell of the host, for absorption of food (see Karling, *Am. J. Bot.* **19**: 41, 1932). Honegger (*New Phytol.* **103**: 785, 1986) distinguishes three main types of fungus-plant cell interactions: (1) **wall-to-wall apposition** with no penetration; (2) **intracellular haustoria** where the fungus penetrates into the plant cell, with or without the formation of special sheath, neckband, or collar; (3) **intraparietal haustoria** where penetration is restricted to the wall layers (common in some groups of lichens).

Haustoria of *Phytophthora* (Blackwell, *TBMS* **36**: 138, 1953), of *Peronosporales* (Fraymouth, *TBMS* **39**: 79, 1956); in lichens (Honegger, 1986); evolution in rusts (Rajendren, *Bull. Torrey bot. Cl.* **99**: 84, 1972); ultrastructure (Beckett *et al.*, *Atlas of fungal ultrastructure*, 1974); cf. rhizoid. Used in addition, by de Bary, for organs of attachment (appressoria).

Hawksworthia Manohar., N.K. Rao, D.K. Agarwal & Kunwar (2004), anamorphic *Pezizomycotina*. 1, India. See Manoharachary *et al.* (*Indian Phytopath.* **57**: 499, 2004).

Hawksworthiana U. Braun (1988), anamorphic *Pezizomycotina*, Hso.0-1eH.10. 1 (on lichens), north temperate. See Braun (*Monogr. Cercosporella, Ramularia Allied Genera (Phytopath. Hyphom.)* **1**, 1995), Hafellner *et al.* (*Mycotaxon* **84**: 293, 2002; N America).

Haynaldia Schulzer (1866) [non *Haynaldia* Schur 1866, *Gramineae*] = Helicostylum fide Hesseltine (*Mycol.* **47**: 344, 1955).

hazard groups (of fungi), see Safety, Laboratory.

Hazardia J. Weiser (1977), Microsporidia. 1.

Hazlinszkya Körb. (1861) ? = Melaspilea fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

heart rot, decay of the inner wood of trees, caused by basidiomycetes.

heather rags, common name for *Hypogymnia physodes*.

Hebeloma (Fr.) P. Kumm. (1871), Strophariaceae. *c.* 150, widespread (esp. north temperate). See Bruchet (*Bull. Soc. linn. Lyon* **39** Suppl. 6: 1, 1970; key European spp.), Smith *et al.* (*The veiled species of Hebeloma in the western United States*, 1983; key N. Amer. spp.), Vesterholt (*Nordic Jl Bot.* **9**: 289, 1989; key Europ. spp. sect. *Hebeloma*), Vesterholt (*Symb. bot. Upsal.* **30** no. 3: 129, 1995; key Europ. spp. *H. crustuliniforme*-complex), Aanen & Kuyper (*Mycol.* **91**: 783, 1999; taxonomy), Marmeisse *et al.* (*Hebeloma – Ectomycorrhizal fungi, key genera in profile*, 1999; ecology), Aanen *et al.* (*Mycol.* **92**: 269, 2000; phylogeny), Moncalvo *et al.* (*Syst. Biol.* **49**: 278, 2000; phylogeny), Bon (*Docums Mycol.* **31** no. 123: 3, 2002; key European spp.), Aanen & Kuyper (*Persoonia* **18**: 285, 2004; species concept), Vesterholt (*Fungi of Northern Europe* **3**: 146 pp., 2005; N. Europ. spp.), Boyle *et al.* (*MR* **110**: 369, 2006; molecular phylogeny Europ. spp.).

Hebelomataceae Locq. (1977) nom. rej. = Strophariaceae.

Hebelomatis Earle (1909) = Hebeloma fide Singer (*Agaric. mod. Tax.*, 1951).

Hebelomina Maire (1925), Strophariaceae. 4, N. Africa; Europe. The genus is polyphyletic and contains albino forms of both *Hebeloma* (*H. domardiana*) and *Gymnopilus* (*H. neerlandica*). See Huijsman (*Persoonia* **9**: 485, 1978; distinction from *Hebeloma*), Gennari (*Rivista di Micologia* **45**: 311, 2002; key), Fraiture & Hayova (*Acta Mycologica* Warszawa **41**: 177, 2006).

Hectocerus Raf. (1806) nom. nud., Fungi. See Merrill (*Index Rafinesq.*, 1949).

Hegermila Raitv. (1995), Hyaloscyphaceae. 4, S. America. See Raitviir & Järv (*Eesti NSV Tead. Akad. Toim.* Biol. seer **44**: 23, 1995).

Heim (Roger; 1900-1979; France). Préparateur (1927-1929) then assistant (1929-1933) then Deputy Director (1933-1945), then Professor (1945-1973) and Director (1951-1965), Muséum National d'Histoire Naturelle, Paris; a member of the French resistance during World War II, arrested by the Gestapo, interned in Buchenwald and subsequently awarded the Croix de Guerre. Widely travelled; main interests: larger basidiomycetes, mycetism, termite fungi, tropical mycology and ethnomycology (q.v.) with Wasson (q.v.). *Publs.* Le genre *Inocybe*. *Encyclopédie Mycologique* (1938); *Les Champignons d'Europe* (1969) [edn 2]; *Les Champignons Toxiques et Hallucinogènes* (1973); *Termites et Champignons* (1977). *Biogs, obits etc.* Ainsworth (*TBMS* **76**: 177, 1981) [portrait]; Batra (*Mycol.* **72**: 1063, 1981) [portrait]; Dorst (*Comptes Rendu de l'Académie des Sciences, Paris* **290**: 120, 1980); Grummann (1974: 326); Romagnesi (*BSMF* **96**: 117, 1980) [portrait]; Stafleu & Cowan (*TL-2* **2**: 137, 1979).

Heimatomyces Peyr. (1873) = Chitonomyces fide Thaxter (*Memoirs of the American Academy of Arts and Sciences* **12**: 187, 1896).

Heimiella Boedijn (1951) [non *Heimiella* Lohmann 1913, *Haptophyceae*] ≡ Heimioporus.

Heimiella Racov. (1959) nom. illegit., anamorphic *Pezizomycotina*, Cpd.1eH.?. 1, France; Rumania. See Racovitza (*Mémoires du Museum National d'Histoire Naturelle* Paris **10**: 193, 1959).

Heimiodiplodia Zambett. (1955) = Botryodiplodia fide Petrak (*Sydowia* **16**: 353, 1963).

Heimiodora Nicot (1960), anamorphic *Pezizomycotina*, Hso.0eH.10. 1 (from soil), Thailand. See Benjamin (*Aliso* **5**: 278, 1963; posn), Rao & Pande (*Perspectives in Mycological Research* **2** (Prof. G.P. Agarwal Festschrift): 17, 1990).

Heimiomyces Singer (1942) = Xeromphalina fide Kuyper (*in litt.*).

Heimioporus E. Horak (2004), Boletaceae. *c.* 15, widespread (mainly (sub)tropical). See Singer (*Am. midl. Nat.* **37**: 527, 1946; as *Heimiella*), Corner (*Beih. Nova Hedwigia*: 1, 1970; as *Heimiella*), Pegler & Young (*TBMS* **76**, 1981; as *Heimiella*), Horak (*Sydowia* **56**: 237, 2004).

Heinemannomyces Watling (1999), Agaricaceae. 1, Peninsular Malaysia. See Watling (*Belg. Jl Bot.* **131**: 133, 1998), Vellinga (*MR* **108**: 354, 2004; phylogeny).

Heleiosa Kohlm., Volkm.-Kohlm. & O.E. Erikss. (1996), Dothideomycetes. 1, USA. See Kohlmeyer *et al.* (*CJB* **74**: 1830, 1996).

helenin (helenine), an antiviral antibiotic from *Penicillium funiculosum*; considered to be RNA of viral origin (Banks *et al.*, *Nature* **218**: 545, 1968).

Heleococcum C.A. Jørg. (1922), Bionectriaceae. 4 (in soil and sediments etc.), widespread. See Tubaki (*TMSJ* **8**: 5, 1967), Rehner & Samuels (*CJB* **73** Suppl. 1: S816, 1995; phylogeny), Udagawa *et al.* (*Mycoscience* **36**: 37, 1995), Rossman *et al.* (*Stud. Mycol.* **42**: 248 pp., 1999), Rossman *et al.* (*Mycol.* **93**: 100, 2001; rDNA phylogeny), Bilanenko *et al.* (*Mycotaxon* **91**: 497, 2005; Mongolia).

Helgardia Crous & W. Gams (2003), anamorphic *Oculimacula*, H?.?.?. 4, widespread. See Crous *et al.* (*Eur. J. Pl. Path.* **109**: 845, 2003).

Helhonia B. Sutton (1980), anamorphic *Pezizomycotina*, St.1eH.15. 1, Europe. See Sutton (*The Coelomycetes*: 600, 1980).

Heliastrum Petr. (1931), Pezizomycotina. 1, Philippines.

Helicascus Kohlm. (1969), Pleosporales. 1 (marine), widespread. See Kohlmeyer (*CJB* **47**: 1471, 1969), Hyde (*Bot. Mar.* **34**: 311, 1991), Tam *et al.* (*Bot. Mar.* **46**: 487, 2003).

Helicia Dearn. & House (1925) [non *Helicia* Lour. 1790, *Proteaceae*] = Cylindrocolla fide Sutton (*Mycol. Pap.* **141**, 1977).

Helicobasidiaceae P.M. Kirk (2008), Helicobasidiales. 3 gen. (+ 4 syn.), 17 spp.

Helicobasidiales R. Bauer, Begerow, J.P. Samp., M. Weiss & Oberw. (2006). Pucciniomycetes. 1 fam., 3 gen., 17 spp. Fam.:
Helicobasidiaceae
For *Lit.* see under gen.

Helicobasidium Pat. (1885), Helicobasidiaceae. Anamorphs *Thanatophytum*, *Tuberculina*. *c.* 6, widespread. *H. purpureum* (syn. *H. brebissonii* sensu Donk) (anamorph *Thanatophytum crocorum*) is the cause of violet root rot in a number of plants. See Donk (*Persoonia* **4**: 156, 1966; synonymy), Aimi *et al.* (*Curr. Microbiol.* **44**: 148, 2002; cytology), Lutz *et al.* (*MR* **108**: 227, 2004), Lutz *et al.* (*Mycol.* **96**: 1316, 2004), Nakamura *et al.* (*MR* **108**: 641, 2004; violet root rot).

Helicobasis Clem. & Shear (1931) ≡ Helicobasidium.

Helicobolomyces Matzer (1995), anamorphic *Arthonia*, Hso.0-≡ hH.1. 1 (on lichens), neotropics. See Grube *et al.* (*Lichenologist* **27**: 28, 1995), Lücking *et al.* (*Global Ecology and Biogeography* **12**: 21, 2003).

Helicobolus Wallr. (1833) = Phloeospora fide Sutton (*Mycol. Pap.* **141**, 1977).

Helicocephalidaceae Boedijn (1959), Zoopagales. 3 gen., 12 spp.
Lit.: Boedijn (*Sydowia* **12**: 355, 1958), Borowska (*Acta Mycologica* Warszawa **32**: 129, 1997), Benny *et al.* in McLaughlin *et al.* (Eds) (*The Mycota* A Comprehensive Treatise on Fungi as Experimental Systems for Basic and Applied Research **7A**: 113, 2001).

Helicocephalum Thaxt. (1891), Helicocephalidaceae. 4 (obligate parasites of nematode eggs), widespread. See Thaxter (*Bot. Gaz.* **16**: 201, 1891), Drechsler (*Mycol.* **26**: 33, 1934), Drechsler (*Mycol.* **35**: 134, 1943), Arnaud (*BSMF* **68**: 181, 1952; possible anamorphic Ascomycota), Barron (*TBMS* **65**: 309, 1975), Watanabe & Koizumi (*TMSJ* **17**: 1, 1976), Kitz & Embree (*Mycol.* **81**: 164, 1989), Roux & Botha (*Proc. Elect. Microsc. Soc. S. Afr.* **25**: 40, 1994; SEM), Roux (*S. Afr. J. Bot.* **62**: 104, 1996), Roux (*S. Afr. J. Bot.* **62**: 285, 1996), Borowska (*Acta Mycologica* Warszawa **32**: 129, 1997; possible ana-

morphic *Ascomycota*).

Helicoceras Linder (1931), anamorphic *Pezizomycotina*, Hsy.≡ eP.1. 4, widespread (north temperate). See Moore (*Mycol.* **47**: 90, 1955; key).

Helicocoryne Corda (1854) = Helicoma fide Hughes (*CJB* **36**: 727, 1958).

Helicodendron Peyronel (1918), anamorphic *Lambertella*, Hso.0-≡ hP.3. *c.* 27 (aero-aquatic), widespread. See Glen-Bott (*TBMS* **38**: 17, 1955), Moore (*Mycol.* **47**: 90, 1955; key), Abdullah (*TBMS* **81**: 638, 1983), Goos *et al.* (*TBMS* **84**: 423, 1985; keys), Abdullah (*Nova Hedwigia* **44**: 339, 1987), Abdullah *et al.* (*Nova Hedwigia* **63**: 425, 1996; Spain), Voglmayr (*Pl. Syst. Evol.* **205**: 185, 1997; Austria), Voglmayr & Fisher (*MR* **101**: 1122, 1997), Tsui & Berbee (*Mol. Phylogen. Evol.* **39**: 587, 2006; phylogeny), Wang *et al.* (*Mycol.* **98**: 1065, 2006; phylogeny).

Helicodesmus Linder (1925) = Helicodendron fide Linder (*Ann. Mo. bot. Gdn* **16**: 329, 1929).

Helicofilia Matsush. (1983), anamorphic *Pezizomycotina*, Hso.0-≡ h-bP.1. 1, India. See Matsushima (*Matsush. Mycol. Mem.* **3**: 11, 1983), Goos (*Mycol.* **79**: 1, 1987).

Helicogermslita Lodha & D. Hawksw. (1983), Xylariaceae. 4, widespread. See Læssøe & Spooner (*Kew Bull.* **49**: 1, 1994), Rappaz (*Mycol. Helv.* **7**: 99, 1995), Lee & Crous (*Sydowia* **55**: 109, 2003; South Africa), Petrini (*N.Z. Jl Bot.* **41**: 71, 2003; key, New Zealand), Ju *et al.* (*Mycol.* **96**: 1393, 2004; key).

Helicogloea Pat. (1892), Phleogenaceae. *c.* 20, widespread. See Baker (*Mycol.* **38**: 630, 1946), Donk (*Persoonia* **4**: 157, 1966), Roberts (*Mycotaxon* **87**: 187, 2003; Caribbean), Kirschner (*Frontiers in Basidiomycote Mycology*: 165, 2004; anam.).

Helicogonium W.L. White (1942), Endomycetaceae. 1 (on *Corticium*), Canada. See Malloch & Hoog *in* Kurtzman & Fell (Eds) (*Yeasts, a taxonomic study* 4th edn: 197, 1998), Baral (*Nova Hedwigia* **69**: 1, 1999), Suh *et al.* (*Mycol.* **98**: 1006, 2006; phylogeny).

Helicogoosia Hol.-Jech. (1991), anamorphic *Pezizomycotina*, Hso.0-≡ hP.1. 1, Czech Republic. See Holubová-Jechová (*Mycotaxon* **41**: 445, 1991).

Helicoma Corda (1837), anamorphic *Tubeufia*, Hso.0-≡ hH.10. 45, widespread. See Goos (*Mycol.* **78**: 744, 1986; key), Castañeda Ruíz *et al.* (*MR* **102**: 58, 1998; Cuba), Tsui & Berbee (*Mol. Phylogen. Evol.* **39**: 587, 2006; phylogeny), Tsui *et al.* (*Mycol.* **98**: 94, 2006; phylogeny).

Helicomina L.S. Olive (1948) = Pseudocercospora fide Deighton (*Mycol. Pap.* **140**, 1976), Crous & Braun (*CBS Diversity Ser.* **1**: 571 pp., 2003).

Helicominites Barlinge & Paradkar (1982), Fossil Fungi, anamorphic *Pezizomycotina*. 1 (Cretaceous), India.

Helicominopsis Deighton (1960), anamorphic *Pezizomycotina*, Hso.0-≡ hH.10. 1, Sierra Leone. See Deighton (*Mycol. Pap.* **78**: 20, 1960), Goos (*Mycol.* **79**: 1, 1987).

Helicomyces Link (1809), anamorphic *Acanthostigma*, Hso.0-≡ hH.10. 12 (aero-aquatic), widespread. See Goos (*Mycol.* **77**: 606, 1985; keys), Réblová & Barr (*Sydowia* **52**: 258, 2000; teleomorph), Kodsueb *et al.* (*Mycol.* **96**: 667, 2004; Hong Kong), Schoch *et al.* (*Mycol.* **98**: 1041, 2006; phylogeny), Tsui *et al.* (*Mycol.* **98**: 94, 2006; phylogeny).

Helicomycetaceae Nann. (1934) = Tubeufiaceae.

Helicomyxa R. Kirschner & Chee J. Chen (2004), anamorphic *Hyaloriaceae*. 1, Taiwan. See Kirschner & Chen (*Stud. Mycol.* **50**: 338, 2004).

Helicoön Morgan (1892), anamorphic *Tubeufiaceae*, Hso.0-≡ hH.10. 19, N. America; Europe. See Moore (*Mycol.* **47**: 90, 1955; key), Goos (*TBMS* **87**: 115, 1986; key 8 spp.), van der Aa & Samson (*MR* **98**: 74, 1994; key amendment), Goh & Hyde (*MR* **100**: 1485, 1996; key), Voglmayr (*MR* **101**: 337, 1997), Chang (*Bot. Bull. Acad. sin.* Taipei **42**: 149, 2001; Taiwan), Tsui & Berbee (*Mol. Phylogen. Evol.* **39**: 587, 2006; phylogeny).

Helicoönites Kalgutkar & Sigler (1995), Fossil Fungi, anamorphic *Pezizomycotina*. 1 (Eocene), Canada. See Kalgutkar & Sigler (*MR* **99**: 519, 1995).

Helicopsis P. Karst. (1889) = Helicoma fide Linder (*Ann. Mo. bot. Gdn* **16**: 302, 1929).

Helicorhoidion S. Hughes (1958), anamorphic *Pezizomycotina*, Hso.0-≡ hH-P.10. 5, widespread. See Sutton (*Sydowia* **41**: 336, 1989; relationships), Hyde *et al.* (*MR* **103**: 1409, 1999; on palms).

Helicosingula P.S. van Wyk, Marasas, Baard & Knox-Dav. (1985), anamorphic *Pezizomycotina*, Hso.0-≡ hP.1. 1, S. Africa. See van Wyk *et al.* (*TBMS* **85**: 183, 1985), Crous *et al.* (*CBS Diversity Ser.* **2**, 2004).

Helicosporangium H. Karst. (1865) ? = Papulospora fide Kendrick & Carmichae *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 390, 1973).

helicospore, a non-septate or septate spore, with a single (usually elongated) axis curved through at least 180° but may describe one or more complete rotations, in two or three dimensions (cf. amerospore, scolecospore); any protuberances, other than setulae, $<^1/_4$ spore body length (cf. staurospore). See Goos (*Mycol.* **79**: 4, 1987; terminology). See also Anamorphic fungi.

Helicosporella Arnaud (1954) nom. inval., anamorphic *Pezizomycotina*, Hso.0-≡ hP.1. 1, Europe.

Helicosporiaceae Nann. (1934) = Tubeufiaceae.

Helicosporiates Kalgutkar & Sigler (1995), Fossil Fungi, anamorphic *Pezizomycotina*. 1 (Eocene), Canada. See Kalgutkar & Sigler (*MR* **99**: 520, 1995).

Helicosporidium Keilin (1921), Chlorococcaceae. 2 (in *Insecta* and *Acari*), widespread (tropical). See Wesier (*J. Protozool.* **17**: 436, 1970; ? *Ascomycota*), Lindegren & Hoffman (*J. Invert. Path.* **27**: 105, 1976; ? *Protozoa*), Avery & Undeen (*J. Invert. Path.* **49**: 246, 1987; effect on mosquitoes), Eriksson & Hawksworth (*SA* **8**: 68, 1989; posn), Tartar *et al.* (*Int. J. Syst. Evol. Microbiol.* **52**: 273, 2002; member of *Chlorophyta*).

Helicosporina Arnaud (1954) nom. inval., anamorphic *Pezizomycotina*.

Helicosporina G. Arnaud ex Rambelli (1960), anamorphic *Pezizomycotina*, Hso.0-≡ hP.10. 1, Italy. See Sutton (*in litt.*; ? Synonym of *Troposporella*).

Helicosporium Nees (1816), anamorphic *Tubeufia*, Hso.0-≡ hP.10. 20, widespread. See Goos (*Mycol.* **81**: 356, 1989; key), Schoch *et al.* (*Mycol.* **98**: 1041, 2006; phylogeny), Tsui & Berbee (*Mol. Phylogen. Evol.* **39**: 587, 2006; phylogeny), Tsui *et al.* (*Mycol.* **98**: 94, 2006; phylogeny).

Helicostilbe Höhn. (1902), anamorphic *Pezizomycotina*, Hsy.0-≡ hP.10. 1, Austria.

Helicostilbe Linder (1929) = Trochophora fide Moore (*Mycol.* **47**: 90, 1955).

Helicostylum Corda (1842), Mucoraceae. 2, widespread. See Upadhyay (*Mycol.* **65**: 735, 1973; key), Benny (*Mycol.* **87**: 253, 1995; key), Voigt & Wöste-

meyer (*Gene* **270**: 113, 2001; phylogeny), Schmidt *et al.* (*Microbial Ecology* **56**: in press, 2008; coenocytic 'snow molds').

Helicothyrium I. Hino & Katum. (1961), anamorphic *Pezizomycotina*, Cpt.0-≡ hH.?. 1, Japan. See Hino & Katumoto (*Bulletin of the Faculty of Agriculture, Yamaguchi University* **11**: 11, 1961).

Helicotrichum Nees & T. Nees (1818) = Helicosporium fide Hughes (*CJB* **36**: 727, 1958).

Helicoubisia Lunghini & Rambelli (1979), anamorphic *Pezizomycotina*, Hso.0-≡ hP.10. 1, Ivory Coast. See Lunghini & Rambelli (*Micol. Ital.* **8**: 21, 1979), Pinnoi *et al.* (*Sydowia* **56**: 72, 2004).

Heliocephala V.G. Rao, K.A. Reddy & de Hoog (1984), anamorphic *Pezizomycotina*, Hso.≡ eP.1. 1, India; S. Africa. See Kuyper (*in litt.*), Decock *et al.* (*Mycol.* **90**: 330, 1998; S Africa), White *et al.* (*Stud. Mycol.* **45**: 95, 2000; India).

Heliocybe Redhead & Ginns (1985) = Neolentinus fide Rune (*MR* **98**: 543, 1994).

Heliomyces Lév. (1844) = Marasmius fide Singer (*Agaric. mod. Tax.*, 1951).

heliophilous, preferring direct sunlight. Cf. anheliophilous.

heliozooid, amoeba-like, but having well-marked ray-like pseudopodia.

Heliscella Marvanová (1980), anamorphic *Pezizomycotina*, Hso.1bH.15. 2 (aquatic), widespread. See Marvanová (*TBMS* **75**: 224, 1980).

Heliscina Marvanová (1980), anamorphic *Pezizomycotina*, Hso.1eH/1bH.19. 2 (aquatic), Czech Republic. See Marvanová (*TBMS* **75**: 227, 1980).

Heliscus Sacc. (1880), anamorphic *Nectria*, Hsp.≡ eH.15. 4 (aquatic), widespread. See Petersen (*Mycol.* **55**: 570, 1963; key), Baschien *et al.* (*Nova Hedwigia* **83**: 311, 2006; phylogeny).

Helmichia J.I.R. Larsson (1982), Microsporidia. 2. See Larsson (*Protistologica* **18**: 353, 1982).

Helminthascus Tranzschel (1898), ? Clavicipitaceae. 1 (on *Insecta*), former USSR.

Helminthocarpon Fée (1837), Graphidaceae (L). 2, tropical. See Awasthi & Joshi (*Norw. Jl Bot.* **29**: 165, 1979), Aptroot (*Myconet* **2**: 15, 1999).

Helminthocarponomyces Cif. & Tomas. (1953) nom. dub., ? Graphidaceae. See Lücking & Hawksworth (*Taxon* **56**: 1274, 2007).

helminthoid, worm-like in form; vermiform.

Helminthopeltis Sousa da Câmara (1950), ? Microthyriaceae. 1, Europe. See Sousa da Câmara (*Agron. lusit.* **12**: 102, 1950).

Helminthophana Peyr. (1873) = Arthrorhynchus fide Thaxter (*Proc. Amer. Acad. Arts & Sci.* **36**: 395, 1901).

Helminthophora Bonord. (1851), anamorphic *Pezizomycotina*, Hso.≡ eH.15. 1 (fungicolous), widespread (temperate). See de Hoog (*Persoonia* **10**: 55, 1978).

Helminthosphaeria Fuckel (1870), Helminthosphaeriaceae. Anamorph *Diplococcium*. 2 or 8 (on *Clavulina*, *Peniophora* and wood), widespread (north temperate). See Samuels *et al.* (*Mycol.* **89**: 141, 1997), Goh & Hyde (*Fungal Diversity* **1**: 65, 1998; anam.), Réblová (*Mycotaxon* **70**: 387, 1999), Réblová (*Sydowia* **51**: 223, 1999), Miller & Huhndorf (*MR* **108**: 26, 2004; phylogeny).

Helminthosphaeriaceae Samuels, Cand. & Magni (1997), Sordariomycetidae (inc. sed.). 8 gen. (+ 6 syn.), 163 spp.

Lit.: Samuels *et al.* (*Mycol.* **89**: 141, 1997), Goh & Hyde (*Fungal Diversity* **1**: 65, 1998), Goh & Hyde (*CJB* **76**: 1698, 1998), Réblová (*Sydowia* **51**: 223, 1999), Réblová (*Mycotaxon* **70**: 387, 1999), Wang & Sutton (*CJB* **76**: 1608, 1998), Huhndorf *et al.* (*Mycol.* **96**: 368, 2004), Miller & Huhndorf (*MR* **108**: 26, 2004).

helminthosporal, a terpenoid mycotoxin from the *Drechslera* anamorph of *Cochliobolus sativus* toxic to wheat and barley.

Helminthosporiaceae Corda (1837) = Massarinaceae.

Helminthosporiopsis Speg. (1880) nom. dub., anamorphic *Pezizomycotina*. See Seifert (*Sydowia* **45**: 103, 1993).

Helminthosporites Chitaley & M.T. Sheikh (1971), Fossil Fungi. 1 (Palaeocene), India.

Helminthosporites Pia (1927), Fossil Fungi. 1 (Carboniferous), Europe.

Helminthosporium Link (1809) nom. cons., anamorphic *Massarinaceae*, Hso.≡ eP.27. *c.* 35 (lignicolous), widespread. *Bipolaris*, *Drechslera*, *Exserohilum* were once placed within this genus. Molecular data suggests placement in the *Massarinaceae*; the link with *Splanchnonema* (*Pleomass.*) needs further study. See Ellis (*Mycol. Pap.* **82**, 1961; key 10 spp.), Luttrell (*Mycol.* **55**: 643, 1963; spore development; terminology for characters), Subramanian & Sekar (*Kavaka* **15**: 87, 1987; teleomorph), Olivier *et al.* (*Mycol.* **92**: 736, 2000; phylogeny), Errampalli *et al.* (*J. Microbiol. Meth.* **44**: 59, 2001; PCR detection), Eriksson & Hawksworth (*Mycol.* **95**: 426, 2003; phylogeny).

helminthosporoside, a host-specific toxin produced by *Drechslera sacchari* in sugarcane (Strobel & Steiner, *Physiol. Pl. Pathol.* **2**: 129, 1972).

Helmisporium Link (1809) nom. rej. prop. = Helminthosporium fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Helocarpaceae Hafellner (1984), Lecanorales. 1 gen., 4 spp.

Lit.: Hafellner (*Beih. Nova Hedwigia* **79**: 241, 1984).

Helocarpon Th. Fr. (1860), Helocarpaceae (L). 4, widespread. See Borghesi & Fantini (*Bollettino del Circolo Micologico 'Giovanni Carini'* **41**: 29, 2001; Pacific Northwest), Andersen & Ekman (*MR* **109**: 21, 2005; phylogeny).

Helochora Sherwood (1979), ? Phyllachoraceae. 1 (from leaves of *Puya*), Chile. See Cannon (*Stud. Mycol.* **31**: 49, 1989), Pearce & Hyde (*Fungal Diversity* **6**: 83, 2001).

Helodiomyces F. Picard (1913), Ceratomycetaceae. 1, Europe; N. Africa. See Santamaría (*Fl. Mycol. Iberica* **5**, 2003; Iberian peninsula).

Helolachnum Torrend (1910) = Lachnum fide Nannfeldt (*Nova Acta R. Soc. Scient. upsal.*, 1932).

Helopodium Ach. ex Michx. (1803) = Cladonia fide Hawksworth *et al.* (*Dictionary of the Fungi* edn 8, 1995).

Helostroma Pat. (1902) = Microstroma fide Saccardo (*Michelia* **1**: 273, 1878).

Helote Hazsl. (1881) ≡ Microglossum Gillet fide Durand (*Annls mycol.* **6**: 387, 1908).

Helotiaceae Rehm (1886) nom. cons., Helotiales. 117 gen. (+ 73 syn.), 826 spp.

Lit.: Dennis (*Mycol. Pap.* **62**, 1956; UK), Korf *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 249, 1973), Korf (*Acta Mycol. Sin.* Suppl., 1973) The *Helotiaceae* as recognized here is still very varied in

form despite removal of the *Leotiaceae* and transfer of *Encoelia* to the *Sclerotiniaceae*, and it is likely that it will be further divided in future.

Lit.:, Baral (*Z. Mykol.* **53**: 119, 1987), Zhuang (*Mycotaxon* **32**: 97, 1988; key 19 gen. *Encoelioideae*) See also *Leotiaceae*, Petrini *et al.* (*CJB* **67**: 2805, 1989), Verkley (*Persoonia* **15**: 405, 1994; asci), Verkley (*The Ascus Apical Apparatus in Leotiales* An Evaluation of Ultrastructural Characters as Phylogenetic Markers in the Families *Sclerotiniaceae*, *Leotiaceae* and *Geoglossaceae*: 209 pp., 1995), Korf *et al.* (*Taxon* **45**: 683, 1996; nomencl.), Triebel & Baral (*Sendtnera* **3**: 199, 1996), Döbbeler (*Biodiv. Cons.* **6**: 721, 1997), Gamundí & Romero (*Fl. criptog. Tierra del Fuego* **10**: 130 pp., 1998), Gamundí & Romero (*Fl. criptog. Tierra del Fuego* **10** no. 5, 1998), Monreal *et al.* (*CJB* **77**: 1580, 1999), Verkley (*Stud. Mycol.* **44**: 180 pp., 1999), Baral & Marson (*Micologia 2000*: 23, 2000), Vrålstad *et al.* (*New Phytol.* **155**: 131, 2002), Wang *et al.* (*Mycol.* **98**: 1065, 2006; phylogeny), Wang *et al.* (*Mol. Phylogen. Evol.* **41**: 295, 2006).

Helotiales Nannf. ex Korf & Lizoň (2000). Leotiomycetes. 10 fam., 501 gen., 3881 spp. Stromata usually absent, if present sclerotial. Ascomata apothecial, usually small, often brightly coloured, sessile or stipitate, cupulate or discoid, rarely convex, sometimes surrounded by conspicuous hairs; wall tissues often separated into 2-3 distinct layers with differing cell types. Interascal tissue of simple paraphyses, variously shaped, the apices sometimes swollen. Asci usually small, thin-walled, without separable wall layers, with an apical pore surrounded by a J+ or J- ring which is rather varied in form (14 types in Verkley, 1995). Ascospores usually small, simple or transversely septate, mostly hyaline, usually not quite longitudinally symmetrical, usually smooth. Anamorphs varied, not known from many, hyphomycetous or coelomycetous. Saprobes and plant parasites, few lichenized or lichenicolous.

Inoperculate discomycetes; cup fungi. The taxonomy of the order is unsettled, and molecular data are inadequate to elucidate relationships in many cases. Fams:
(1) **Ascocorticiaceae**
(2) **Dermateaceae**
(3) **Helotiaceae**
(4) **Hemiphacidiaceae**
(5) **Hyaloscyphaceae**
(6) **Loramycetaceae**
(7) **Phacidiaceae**
(8) **Rutstroemiaceae**
(9) **Sclerotiniaceae**
(10) **Vibrisseaceae**

Helvellella S. Imai (1932) = Pseudorhizina fide Eckblad (*Nytt Mag. Bot.* **15**: 1, 1968).

hemi- (prefix), half; in part. Cf. semi-.

Hemialysidium Hol.-Jech. (1992) nom. inval., anamorphic *Pezizomycotina*, Hso.?.?. 1, Europe. See Holubova-Jechova (*Abstracts, XI Congress of European Mycologists* Kew, England, 7-11 September 1992: 19, 1992).

hemiamyloidity, The red colouration when iodine solutions are applied to the hymenium of most *Ascomycetes* (Baral, *Mycotaxon* **29**: 399, 1987).

hemiangiocarpous (of a sporocarp), opening before quite mature.

Hemiasci (sensu Varitchak, *Botaniste* **25**: 370, 1933), *Dipodascus* + *Ascoidea*.

Hemiascomycetes. *Ascomycota* in which the asci are not produced in ascomata. In addition the thallus usually comprises poorly developed mycelium or is represented by separate cells; mainly included in *Saccharomycetales* here.

hemiascospore, ascospore of a hemiascus.

Hemiascosporiaceae L.R. Batra (1973) = Ascodesmidaceae.

Hemiascosporium L.R. Batra (1973) = Eleutherascus fide von Arx (*Persoonia* **9**: 393, 1977), Batra *in* Subramanian (Ed.) (*Taxonomy of fungi* **1**: 187, 1978).

hemiascus, the atypical multispored ascus of the *Hemiasci* (q.v.).

Hemibasidiomycetes. See *Pucciniales* and *Ustilaginales*.

Hemibeltrania Piroz. (1963), anamorphic *Pezizomycotina*, Hsy.0eP.10. 8, widespread (esp. tropical). See Castañeda Ruíz *et al.* (*MR* **102**: 930, 1998), Shin & Braun (*Mycotaxon* **67**: 317, 1998), Cooper (*N.Z. Jl Bot.* **43**: 323, 2005; New Zealand).

Hemicarpenteles A.K. Sarbhoy & Elphick (1968), Trichocomaceae. Anamorph *Aspergillus*. 2, widespread. See Kuraishi *et al.* (*NATO ASI Series A: Life Sciences* **185**: 407, 1990; ubiquinones), Chang *et al.* (*J. gen. appl. Microbiol.* Tokyo **37**: 289, 1991; DNA), Pitt *et al.* (*Integration of Modern Taxonomic Methods for Penicillium and Aspergillus Classification*: 9, 2000; accepted names), Tamura *et al.* (*Integration of Modern Taxonomic Methods for Penicillium and Aspergillus Classification*: 357, 2000; phylogeny), Udagawa & Uchiyama (*Mycoscience* **43**: 3, 2002; separation of *H. acanthosporus*).

hemicompatible, see compatible.

Hemicorynespora M.B. Ellis (1972), anamorphic *Chaetosphaeria*, Hso.0-1eH-P.25. 9, widespread (tropical). See Ellis (*Mycol. Pap.* **131**: 19, 1972), Mercado Sierra *et al.* (*Mycotaxon* **63**: 155, 1997; Mexico), Sivanesan & Chang (*MR* **101**: 845, 1997; key, teleomorph).

Hemicorynesporella Subram. (1992), anamorphic *Pezizomycotina*, Hso.≡ eP.24. 1, Solomon Islands. See Subramanian (*Proc. Indian natn Sci. Acad.* Part B. Biol. Sci. **58**: 189, 1992).

Hemicybe P. Karst. (1879) = Lentinellus fide Singer (*Agaric. mod. Tax.*, 1951).

Hemicyphe Corda (1831) nom. dub., ? Fungi.

Hemidiscia Lázaro Ibiza (1916) = Postia fide Donk (*Verh. K. ned. Akad. Wet.* tweede sect. **62**: 1, 1974).

Hemidothis Syd. & P. Syd. (1916), anamorphic *Pezizomycotina*, St.0fH.?. 1 or 2, America (tropical). See Petrak (*Annls mycol.* **27**: 374, 1929), Sydow (*Annls mycol.* **28**: 193, 1930).

hemifissitunicate, see ascus.

hemiform, see *Pucciniales* and Table 5.

Hemigaster Juel (1895), Hemigasteraceae. 1, Sweden. See Singer (*Agaric. mod. Tax.* 4th ed: 845, 1986).

Hemigasteraceae Gäum. & C.W. Dodge (1928), Agaricales. 1 gen., 1 spp.

Lit.: Singer (*Agaric. mod. Tax.* 4th ed, 1986), Reijnders (*MR* **104**: 900, 2000).

Hemiglossum Pat. (1890), Helotiales. 2, China; Japan. See Imai (*J. Fac. Agric. Hokkaido Imp. Univ.* **45**: 155, 1941), Zhuang (*Mycotaxon* **32**: 97, 1988; posn).

Hemigrapha (Müll. Arg.) R. Sant. ex D. Hawksw. (1975), ? Parmulariaceae. 9 (on lichens), widespread. See Matzer (*Mycol. Pap.* **171**, 1996), Diederich & Wedin (*Nordic Jl Bot.* **20**: 203, 2000; on *Peltigerales*).

Hemigyalecta, see *Semigyalecta*.

Hemihysteriaceae Sacc. & Traverso (1907) = Asterinaceae.

Hemileccinum Šutara (2008) = Boletus Fr. fide Kuyper (*in litt.*).

Hemileia Berk. & Broome (1869), Pucciniales. *c.* 40 (on angiosperms (II, III only)), widespread (esp. tropical). *H. vastatrix* (coffee rust). See Gopalkrishnan (*Mycol.* **43**: 271, 1951; morphology), Stevenson & Bean (*Spec. Publ.* Div. Mycol. Dis. Survey, USDA **4**, 1953; annotated bibliogr.), Rajendren (*Mycol.* **59**: 918, 1967; telial urediniospores ($II^{(III)}$) in which meiosis occurs in *H. vastatrix*), Rajendren (*Mycopath. Mycol. Appl.* **47**: 81, 1972; morphology), Fulton (Ed.) (*Coffee rust in the Americas*, 1984), Anon. (*IMI Descr. Fungi Bact.* **162**, 2004), Gouveia *et al.* (*Mycol.* **97**: 396, 2005; RAPD), Ritschel (*Biblthca Mycol.* **200**: 132 pp., 2005; monogr.).

Hemileiopsis Racib. (1900) = Hemileia fide Dietel (*Nat. Pflanzenfam.* **6**, 1928) but see, Ono *et al.* (*Mycol.* **78**: 253, 1986; suggests this might be the nomenclaturally correct name for *Hemileia*).

Hemilichenes, Lichens of uncertain systematic position because sporocarps are unknown (obsol.); usually = *Phycolichenes*, *Deuterolichenes*.

Hemimycena Singer (1938), Mycenaceae. *c.* 50, widespread. Perhaps *Marasmiaceae*. See Courtecuisse (*Agarica* **6**: 108, 1985; France), Gröger (*Boletus* **12**: 59, 1988; *Hemimycena cucullata* in Germany), Desjardin (*Mycotaxon* **42**: 187, 1991; USA), Lepp (*Australasian Mycologist* **23**: 105, 2004; *Hemimycena tortuosa* in Australia), Moreau *et al.* (*Mycotaxon* **91**: 323, 2005; new cistophilous sp.).

Hemimyriangium J. Reid & Piroz. (1966) = Molleriella fide von Arx & Müller (*Stud. Mycol.* **9**, 1975).

hemiparasite, a facultative parasite.

Hemiphacidiaceae Korf (1962), Helotiales. 9 gen. (+ 6 syn.), 26 spp.

Lit.: Korf (*Mycol.* **54**: 481, 1962), Reid & Cain (*Mycol.* **54**: 481, 1962), Sherwood-Pike *et al.* (*CJB* **64**: 1849, 1986), Minter (*Shoot and Foliage Diseases in Forest Trees* Proceedings of a Joint Meeting of the Working Parties: Canker & Shoot Blight of Conifers, Foliage Diseases: 65, 1995), Gernandt *et al.* (*Mycol.* **89**: 735, 1997), Gernandt *et al.* (*Mycol.* **93**: 915, 2001), Stone & Gernandt (*Mycotaxon* **91**: 115, 2005), Wang *et al.* (*Mycol.* **98**: 1065, 2006; phylogeny).

Hemiphacidium Korf (1962) = Sarcotrochila fide Reid & Cain (*Mycol.* **54**: 481, 1962), Stone & Gernandt (*Mycotaxon* **91**: 115, 2005; phylogeny, placement), Wang *et al.* (*Mycol.* **98**: 1065, 2006; phylogeny).

Hemipholiota (Singer) Bon (1986) = Pholiota fide Kuyper (*in litt.*).

Hemisartorya J.N. Rai & H.J. Chowdhery (1976) = Neosartorya fide von Arx (*Gen. Fungi Sporul. Cult.* Edn 3, 1981).

Hemiscyphe, see *Hemicyphe*.

Hemisphaeria Klotzsch (1843) nom. rej. prop. ≡ Daldinia.

Hemisphaeriales Theiss. (1913). Obsol., a poorly defined assemblage including *Microthyriales* and several other groups with flattened ascomata.

Hemisphaeropsis Petr. (1947), anamorphic *Pezizomy-*

cotina, Cpt.1eP.?. 1, USA.

Hemispora Vuill. (1906) = Wallemia fide Carmichael *et al.* (*Genera of Hyphomycetes*, 1980).

Hemisporaceae M. Ota (1928) = Wallemiaceae.

hemispore (esp. of dermatophytes), (1) a cell at the end of a filament, which later becomes by division deuteroconidia; protoconidium (after Vuillemin); (2) one of the two cells produced by a primary trans-septum in an ascospore (Eriksson, *Ark. Bot.* II **6**: 339, 1967), see septum.

Hemistropharia Jacobsson & E. Larss. (2007), Cortinariaceae. 1, USA. See Jacobsson & Larsson (*Mycotaxon* **102**: 235, 2007).

Hemisynnema Subram. (1995), anamorphic *Pezizomycotina*, Hsy.≡ eP.1. 1, Malaysia. See Subramanian (*Kavaka* **20/21**: 58, 1992).

Hemithecium Trevis. (1853), Graphidaceae (L). 1, pantropical. See Nakanishi *et al.* (*Bull. natn. Sci. Mus.* Tokyo, B **29**: 83, 2003; Japan), Adawadkar & Makhija (*Mycotaxon* **92**: 387, 2005; India), Archer (*Telopea* **11**: 59, 2005; Australia), Makhija *et al.* (*Mycotaxon* **93**: 365, 2005; India), Archer (*Biblthca Lichenol.* **94**, 2006; revision), Archer (*Systematics & Biodiversity* **5**: 9, 2007; Solomon Is).

Hemmesomyces Gilb. & Nakasone (2003), Corticiaceae. 1, Hawaii. See Gilbertson & Nakasone (*Mycol.* **95**: 467, 2003).

Hendersonia Berk. (1841) nom. rej. = Stagonospora fide Swart & Walker (*TBMS* **90**: 633, 1988; redisposition spp. on *Eucalyptus*).

Hendersonia Sacc. (1884) ≡ Hendersonia Berk.

Hendersoniella (Sacc.) Sacc. (1902) ≡ Hendersoniella Tassi fide Sutton (*Mycol. Pap.* **141**, 1977).

Hendersoniella Tassi (1900), anamorphic *Pezizomycotina*, Cpd.?.?. 1, Italy. See Sutton (*Mycol. Pap.* **141**, 1977).

Hendersonina E.J. Butler (1913), anamorphic *Pezizomycotina*, St.0-1eP.15. 1, Asia.

Hendersoniopsis Höhn. (1918), anamorphic *Pezizomycotina*, St.≡ eP.15. 1, widespread (temperate).

Hendersoniopsis Woron. (1922) = Stenocarpella fide Sutton (*Mycol. Pap.* **141**, 1977).

Hendersonula Speg. (1880), anamorphic *Botryosphaeriales*, St.≡ eP.19. 5 (on fungi), widespread (tropical). See Sutton & Dyko (*MR* **93**: 466, 1989; revision, key).

Hendersonulina Petr. (1951), anamorphic *Pezizomycotina*, St.≡ eP.?. 6, widespread. See Petrak (*Sydowia* **5**: 421, 1951).

Hendersonulina Tassi (1902), anamorphic *Pezizomycotina*, Cpd.≡ eP.?. 43, widespread. See Sutton (*Mycol. Pap.* **141**, 1977).

Hendrickxia P.A. Duvign. (1942) = Everniopsis fide Santesson (*Svensk bot. Tidskr.* **43**: 547, 1949).

Henicospora P.M. Kirk & B. Sutton (1980), anamorphic *Pezizomycotina*, Hso.≡ eP.2. 5, widespread. See Kirk & Sutton (*TBMS* **75**: 249, 1980), Kuthubutheen & Nawawi (*MR* **98**: 677, 1994; Malaysia).

Hennebertia M. Morelet (1969), anamorphic *Pezizomycotina*, Hso.0eP.10+19. 1, Europe. See Hennebert (*TBMS* **51**: 749, 1968).

Hennenia Buriticá (1995), Pucciniales. 1 (on *Annona* (*Annonaceae*)), Colombia. See Buriticá C. (*Revta Acad. colomb. cienc. exact. fis. nat.* **19**: 465, 1995) Cf. *Esqualia*.

Hennings (Paul Christoph; 1841-1908; Germany). Self-taught, beginning as a postal worker; worked at Kiel Botanic Garden (1860-1864, 1874-1879); assistant (1880-1891) then Kustos (1891-1902) then Professor (1902-1908), Berlin Botanic Garden; Royal Professor (1902-1908). Described over 120 fungal genera and many species mainly from tropical material (particularly Africa, but also the Amazon basin, India, Japan and New Guinea), sent to Berlin by contemporary collectors; also an amateur poet. Collections mostly in Berlin (**B**); Batista *et al.*, Fungi Paraenses, *Publicaçoes. Instituto de Micologia da Universidade do Recife* **506**, 1966, listed Hennings' specimens in the Emílio Goeldi Museum, Pará. *Publs.* Fungi. In O. Warburg [ed.] *Monsunia. Beiträge zur Kenntnis der Vegetation des Süd- und Östasiatischen Monsungebietes* (1899, published 1900); also numerous papers published in *Engler's Botanisches Jahrbücher* and *Hedwigia* from *c.* 1891 onwards. (*Biogs, obits etc.* Grummann (1974: 18); Lindau (*Hedwigia* **48**: 1, 1909; bibliography); Perkins (*Botanical Gazette* **47**: 239, 1909); Stafleu & Cowans (*TL-2* **2**: 157, 1979).

Henningsia Möller (1895), Meripilaceae. 1, widespread (neotropical). See Ryvarden (*Gen. Polyp.*: 158, 1991), Corner (*Mycologist* **9**: 127, 1995; close to *Rigidoporus*).

Henningsiella Rehm (1895), Schizothyriaceae. 2, S. America.

Henningsina Möller (1901) = Phylacia fide Dennis (*Kew Bull.* **12**: 297, 1959), Müller & von Arx *in* Ainsworth *et al.* (Eds) (*The Fungi* **4A**: 87, 1973), Læssøe (*SA* **13**: 43, 1994; ? synonym of *Xylaria*).

Henningsomyces Kuntze (1898), Marasmiaceae. *c.* 20, widespread. See Reid (*Persoonia* **3**: 118, 1964), Agerer (*Persoonia* **7**: 389, 1973).
